Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

6. That an Outline Plan of Works shall not be required for
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

7. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent business zoned property:
7am - 10pm on any day: Leq 55 dB(A)
10pm - 7am on any day: Leq 45 dB(A)
 - b. At the boundary of any adjacent mixed use zoned property:
7am - 10pm on any day: Leq 60 dB(A)
10pm - 7am on any day: Leq 55 dB(A)
8. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

existing noise levels and predicted new noise levels and predicted new noise levels to confirm compliance with this condition.

9. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and must not exceed existing noise levels.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in the New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Soil Instability/Unstable Ground

12. The site is subject to potential geotechnical hazards. The potential for earthworks or building construction to have adverse effects on the site or surrounding properties resulting from filled weak ground shall be assessed in any outline plan of works for any such activities.

Contaminated Site

13. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit.
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling.

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Advice Notes

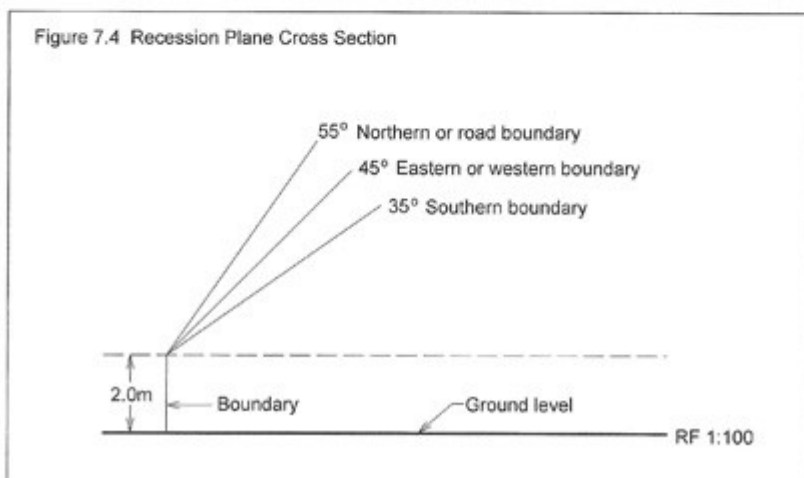

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.
2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is

The Proposed Auckland Unitary Plan (notified 30 September 2013)

known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

2643 Otahuhu Telecommunications Site

Designation Number	2643
Requiring Authority	Chorus New Zealand Ltd
Location	12 Piki Thompson Way, Otahuhu
Rollover Designation	Yes
Legacy Reference	Designation J14-26, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, the antennas on the mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.
3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
6. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).
7. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

8. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 8m;
 - b. Front yard: 2.5m;
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
 - d; Maximum building coverage: 40%.

This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures. Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition.

For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Outline Plans

9. That an Outline Plan of Works shall not be required for:
- a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

- b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1: 1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Soil Instability/Unstable Ground

16. The site is subject to potential geotechnical hazards. The potential for earthworks or building construction to have adverse effects on the site or surrounding properties resulting from filled weak ground shall be assessed in any outline plan of works for any such activities.

Contaminated Site

17. Should an Outline Plan of Works involve earthworks and/ or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential

The Proposed Auckland Unitary Plan (notified 30 September 2013)

contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit.
- b. Very minor earthworks/ excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling.

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Protected Trees

18. All excavations within the dripline of any scheduled tree shall be under the direct supervision of a competent arborist. An outline plan shall be submitted for any such works. This shall include a mitigation plan prepared by a competent arborist.

19. All work involving trimming of a scheduled tree shall be carried out by a competent arborist in accordance with accepted arboriculture practice.

20. There shall be no storage of product, materials, spoil or machinery within the dripline of any scheduled tree on site.

Operational Planning

21. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions.
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

20. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2644 Clevedon Telecommunications Site

Designation Number	2644
Requiring Authority	Chorus New Zealand Ltd
Location	1 Clevedon Kawakawa Road, Clevedon
Rollover Designation	Yes
Legacy Reference	Designation 103, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The height of any new mast and any antennas (mounted on a mast of building) shall not exceed 9m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Outline Plans

5. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

6. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am-10pm on any day: Leq 50 dB(A)
10pm- 7am on any day: Leq 40 dB(A)
7. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 6 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.
8. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 6, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
9. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

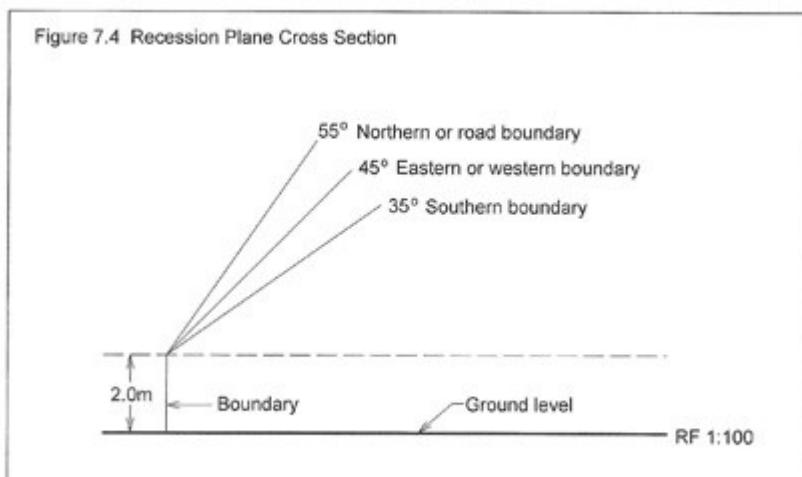

Radiofrequency Fields

10. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2645 Pakuranga Telecommunications Site

Designation Number	2645
Requiring Authority	Chorus New Zealand Ltd
Location	6 Grammar School Road, Pakuranga Heights
Rollover Designation	Yes
Legacy Reference	Designation 104, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am-10pm on any day: Leq 50 dB(A)
10pm-7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.
9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

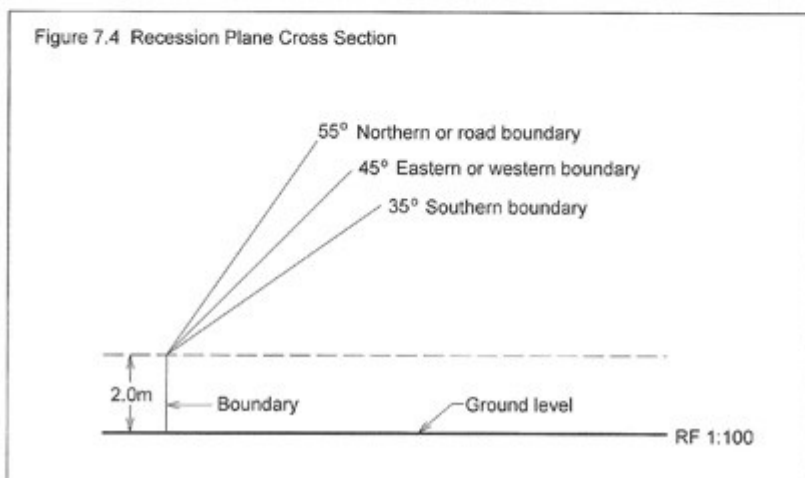

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New

Location	477C Redoubt Road, Manukau Central
Rollover Designation	Yes
Legacy Reference	Designation 105, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up generation) shall not exceed the following noise limits:
 - a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the sit, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2647 Kawakawa Bay Telecommunications Site

Designation Number	2647
Requiring Authority	Chorus New Zealand Ltd
Location	2 Bertram Road, Kawakawa Bay
Rollover Designation	Yes
Legacy Reference	Designation 106, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility; or
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7am-10pm on any day: Leq 50 dB(A)
10pm- 7am on any day: Leq 40 dB(A)

8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2648 East Tamaki Telecommunications Site

Designation Number	2648
Requiring Authority	Chorus New Zealand Ltd
Location	135 Harris Road, East Tamaki
Rollover Designation	Yes
Legacy Reference	Designation 108, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ground level (excluding any lightning rod).

2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2649 Mangere Telecommunications Site

Designation Number	2649
Requiring Authority	Chorus New Zealand Ltd
Location	63 Ashgrove Road (Corner Bader Drive), Mangere

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rollover Designation	Yes
Legacy Reference	Designation 109, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. at the boundary of any adjacent residential zoned property:
7am-10pm on any day: Leq 50 dB(A)
10pm- 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

sensitive boundaries) to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 6, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

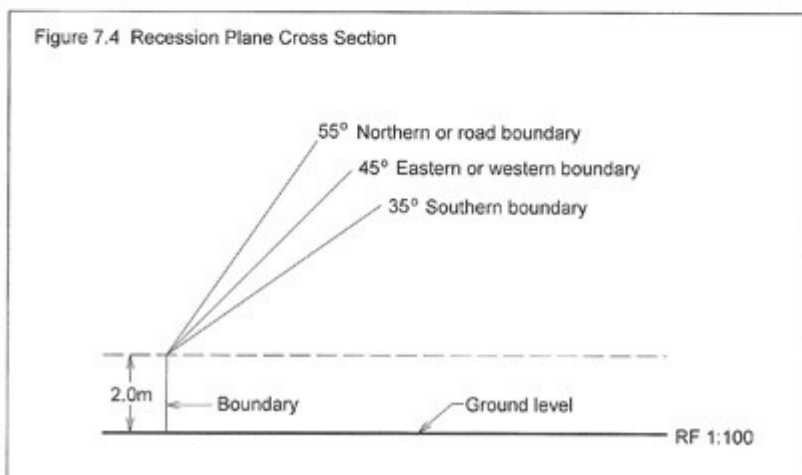

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2650 Whitford Telecommunications Site

Designation Number	2650
Requiring Authority	Chorus New Zealand Ltd
Location	7 Whitford Wharf Road, Whitford
Rollover Designation	Yes
Legacy Reference	Designation 110, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast of building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Outline Plans

5. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility; or
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

6. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am-10pm on any day: Leq 50 dB(A)
10pm- 7am on any day: Leq 40 dB(A)
7. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 6 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on

The Proposed Auckland Unitary Plan (notified 30 September 2013)

circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.

8. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 6, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

9. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

10. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2651 Otara Telecommunications Site

Designation Number	2651
Requiring Authority	Chorus New Zealand Ltd
Location	176 Bairds Road, Otara
Rollover Designation	Yes
Legacy Reference	Designation 112, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2652 Manukau Telecommunications Site

Designation Number	2652
Requiring Authority	Chorus New Zealand Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	20 Lakewood Court, Manukau City
Rollover Designation	Yes
Legacy Reference	Designation 114, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2653 Manurewa Telecommunications Site

Designation Number	2653
Requiring Authority	Chorus New Zealand Ltd
Location	175 Great South Road, Manurewa
Rollover Designation	Yes
Legacy Reference	Designation 115, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2654 Beachlands Telecommunications Site

Designation Number	2654
Requiring Authority	Chorus New Zealand Ltd
Location	Whitford-Maraetai Road (Section 2 SO 433361 and Section 4 SO 433361), Beachlands
Rollover Designation	Yes
Legacy Reference	Designation 117, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).

2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:

- Any internal building works (excluding equipment generating external noise);
- Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

- 4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up generation) shall not exceed the following noise limits:
 - a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:
 - 7am - 10pm on any day: Leq 50 dB(A).
 - 10pm - 7am on any day: Leq 40 dB(A).
- 5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the sit, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
- 6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
- 7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

- 8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2655 Runciman Telecommunications Site

Designation Number	2655
Requiring Authority	Chorus New Zealand Ltd
Location	180 Flanagan Road, Drury
Rollover Designation	Yes
Legacy Reference	Designation 44, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and any antennas (mounted on a mast or building) shall not exceed 25m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a.
 - i. At the boundary of any adjacent residential zoned property: or
 - ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am - 10pm on any day: Leq 50 dB(A).
10pm - 7am on any day: Leq 40 dB(A).

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm with the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2656 Waiau Pa Telecommunications Site

Designation Number	2656
Requiring Authority	Chorus New Zealand Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	McKenzie Road (Lot 13 DP37599), Waiau Pa
Rollover Designation	Yes
Legacy Reference	Designation 19, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a.
 - i. At the boundary of any adjacent residential zoned property: or
 - ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power

The Proposed Auckland Unitary Plan (notified 30 September 2013)

generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Requiring Authority	Chorus New Zealand Ltd
Location	7B Hall Street, Pukekohe
Rollover Designation	Yes
Legacy Reference	Designation 20, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2658 Glenbrook Telecommunications Site

Designation Number	2658
Requiring Authority	Chorus New Zealand Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	Brookside Road (Pt Allotment 318 PSH of Waiuku East), Waiuku
Rollover Designation	Yes
Legacy Reference	Designation 23, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Designation Number	2659
Requiring Authority	Chorus New Zealand Ltd
Location	Charles Road (Lot 2 DP 23793), Karaka
Rollover Designation	Yes
Legacy Reference	Designation 24, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 25m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7 am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1 :1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2660 Puni Telecommunications Site

Designation Number	2660
Requiring Authority	Chorus New Zealand Ltd
Location	11 Mauku Road, Pukekohe
Rollover Designation	Yes
Legacy Reference	Designation 27, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).

2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.

3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.

4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property or at the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2661 Awhitu West Telecommunications Site

Designation Number	2661
Requiring Authority	Chorus New Zealand Ltd
Location	Awhitu Road (Pt Allotment 18 PSH of Waitara), Waiuku
Rollover Designation	Yes
Legacy Reference	Designation 29, Auckland Council District Plan (Franklin Section) 2000

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property or at the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	2662
Requiring Authority	Chorus New Zealand Ltd
Location	Hunua Road (Pt Allotment 24 PSH of Hunua and Pt Allotment 24B PSH of Hunua), Hunua
Rollover Designation	Yes
Legacy Reference	Designation 31, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 25m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7 am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radiofrequency Fields

7. 2663 Hunua Telecommunications Site

Designation Number	2663
Requiring Authority	Chorus New Zealand Ltd
Location	Paparimu Road (Lot 1 DP 139880), Hunua
Rollover Designation	Yes
Legacy Reference	Designation 32, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 25m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the notional boundary 20m from the facade of any dwelling , or at the site boundary, whichever is closest to the dwelling:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7 am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1 :1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2664 Puketutu Telecommunications Site

Designation Number	2664
Requiring Authority	Chorus New Zealand Ltd
Location	75 Main Road (near Puketutu Road), Bombay
Rollover Designation	Yes
Legacy Reference	Designation 36, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Outline Plans

1. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

2. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 2 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

4. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 2, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

5. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

6. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

3004 Waiuku Substation

Designation Number	3004
Requiring Authority	Counties Power Ltd
Location	Cornwall Road (part of Lot 2 DP 384042), Waiuku
Rollover Designation	Yes
Legacy Reference	Designation 150, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Five years from being operative in the Unitary Plan, unless given effect to prior

Purpose

Electricity supply purposes.

Conditions

1. Establishment of Substation on Site

The Outline Plan of Works for the establishment of the substation on the site must comply with the following:

- a. The works to give effect to the designation must be undertaken in general accordance with the information submitted by Counties Power in support of the Notice of Requirement contained in the document titled: Notice

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of Requirement for a Designation for a New Electricity Substation in Waiuku, Notice of Requirement and assessment of Environmental Effects dated August 2007 prepared by Boffa Miskell and additional information dated 12 October 2007 (and any subsequent addenda or errata provided by the requiring authority at or before the hearing of the Notice of Requirement on 25 February 2008).

b. The Outline Plan of Works to be submitted pursuant to section 176A of the Resource Management Act 1991 to establish the substation on site shall include the following:

- i. Construction Management Plan;
- ii. Traffic Management Plan;
- iii. Property and Landscape Management Plan; and
- iv. Design and layout of the substation.

c. The Construction Management Plan to be submitted pursuant to section 176A of the Resource Management Act 1991 and required by Condition 1.b.i. must include:

- i. Indicative plan/report for the sequence of activities (inclusive of earthworks and volumes) proposed;
- ii. The timing of the activities;
- iii. The name and contact details of project manager;
- iv. The expected duration of the works;
- v. The requiring authority must also circulate the Construction Management Plan prior to construction commencing to all directly adjoining neighbours, Glenbrook Vintage Railway and occupiers of 121 Collingwood Road;
- vi. An accidental discovery protocol for archaeological remains and a commitment to include site works methodology incorporating the supervision of the earthworks by an iwi representative; and
- vii. Silt, dust and sediment controls associated with earthworks.

d. The Traffic Management Plan to be submitted pursuant to section 176A of the Resource Management Act 1991 and required by Condition 1.b.ii. must be prepared by a suitably qualified person for the purposes of working on, or in close proximity to roads and public places.

e. The Property and Landscape Management Plan to be submitted pursuant to section 176A of the Resource Management Act 1991 and required by Condition 1.c.ii. shall detail species, gardening and maintenance specifications. The Property and Landscape Plan must incorporate the following elements:

- i. Identification of all hard and soft landscape works (including fences) and how landscaping will provide a buffer between the activity and adjacent Glenbrook Vintage Railway reserve, nearby dwellings and roads;
- ii. Details of the intended species, preferably natives, plant sizes at the time of planting, their likely heights on maturity and how planting will be staged, established and maintained;
- iii. A commitment to replacing planting if the initial work fails;
- iv. Provisions and methods to ensure landscaping works do not unduly interfere with any overland flow path;
- v. A water supply to ensure that all plantings are maintained in perpetuity;
- vi. A colour scheme to mitigate adverse visual effects and ensure low reflectivity of external surfaces of structures on the site;
- vii. Maintenance and upkeep of structures;
- viii. Demonstrate evidence of consultation and input with Glenbrook Vintage Railway in the landscape design;
- ix. Demonstrate evidence of consultation with the owner of 121 Collingwood Road on stormwater design and treatment;
- x. Plantings shall be designed so as to comply with Electricity (Hazards from Trees) Regulations 2003 or successor; and
- xi. Substation compound and building shall be setback at least 3m from all boundaries.

The Property and Landscape Management Plan must be given effect to as soon as reasonably possible following the approval of the plan and no later than the first planting season following completion of the works on the site. The landscaping must be irrigated and maintained for the life of the substation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

f. The substation must be designed and constructed in such a manner as to comply with the following noise emission standards. The noise level measured within the notional boundary (a line 20m from the façade of any dwelling) or legal boundary (where this is closer) of any existing dwelling shall not exceed the following limits:

7.00 am – 8.00 pm	50dBA L10
8.00 pm – 7.00 am	40dBA L10
10.00 pm – 7.00 am	65dBA

The noise levels must be measured and assessed in accordance with the requirements of NZS 6801:1991 Measurement of Sound and NZS 6802:1991 Assessment of Environmental Sound.

g. The requiring authority must submit, to Auckland Council within three months of commissioning the substation, an acoustic design certificate provided by a qualified acoustic engineer confirming that the design will ensure compliance with the performance standard set out in condition 1.f.

2. Timeframe of Designation

Pursuant to section 184(1)(c) of the Resource Management Act 1991, the expiry period for the designation for construction, operation and maintenance of an electricity substation at a nominal voltage of up to 110kV on part of a property legally described as Lot 2 DP 384042, shall be ten years.

3. Decommissioning Existing Substation

Within one year of the commencement of operation of the new substation, the existing substation on Kitchener Road shall be decommissioned and a decommissioning plan shall be submitted to Auckland Council pursuant to section 176A of the Resource Management Act 1991.

4. Earthworks Associated with any Site Development

a. Prior to commencing any earthworks the Requiring Authority must install all the necessary erosion and sediment control measures as shown in the Auckland Council's TP 90 and be responsible for preventing, controlling and stopping the loss of soil and silt and any damage caused by earthworks on adjacent properties. All necessary erosion and sediment measures once installed are to be maintained to ensure continual operation until the development has been completed and the site fully stabilized.

b. All earthworks must occur between the hours of 7.00 am and 6.00 pm Monday to Saturday.

5. Overland Flow

a. The finished land level and grade of the earthworks and land forming must be such that it does not impede, restrict or block the existing overland flow from adjacent properties and that an adequate flow path over the site shall be maintained.

b. The finished land level and grade of the earthworks and land forming must be such that it does not divert, redirect and concentrate runoff onto adjacent properties.

6. Noise during Construction

That the Requiring Authority must comply with the noise standards set out in Acoustic Construction Noise NZS 16803:1999 at all times while any construction works are being constructed on site.

7. Site Access

The site must be secure from unauthorised public access at all times during construction.

8. Lighting

All exterior on-site lighting must be positioned and aimed within the site, away from adjacent properties and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

public roads so as to minimise the level of spill light and glare.

9. Hazardous Substances

The Requiring Authority must ensure that any transformer oil storage areas are bunded. Bunds shall be sufficient capacity to contain the release from the total volume of all storage vessels located in each bunded area.

10. Surface Water

The Requiring Authority must maintain and regularly clean all stormwater catch pits, channels, grates, pipes and other stormwater collection systems to ensure they operate in an effective manner.

11. Electrical Interference

The Requiring Authority must make every reasonable effort to ensure that the electrical supply substation is operated, managed and controlled so that there is no electrical interference with television or radio reception at any adjacent property including complying with the requirements of the Radio Communications Regulations 2001, the Ministry of Economic Development's Radio Spectrum Management "Compliance Guide" (November 2004) and relevant Gazetted Notices.

Advice Notes

1. The Requiring Authority will need to obtain all other necessary resource consents and permits, including those under the Building Act 2004 and any resource consents required by Auckland Council under the regional plans.
2. The Requiring Authority is advised that once the designation has been formalised, any minor alteration or omissions to the designated area should be rectified through alterations of the designation pursuant to section 181 of the Resource Management Act 1991.
3. The Requiring Authority is advised of its statutory obligations under section 172 of the Resource Management Act 1991, which include the following:
 - a. Within 30 working days of receiving Council's recommendation, the Requiring Authority is required to advise Council whether it accepts or rejects the recommendation in whole or in part;
 - b. The Requiring Authority shall only modify the requirement if, and only if the modifications are recommended by Council or are not inconsistent with the requirement as notified; and
 - c. Where the Requiring Authority rejects the recommendation in whole or in part, or modifies the requirement, the authority shall give reasons for its decision.
4. Counties Power should ensure that prior to construction, formal contact is made and permission or consents are obtained as required from the operators of any network utilities where their services and facilities may be affected by the construction works for the project.
5. As soon as reasonably possible following its purchase of the site, Counties Power should carry out initial planting in line with the anticipated requirements of the Property and Landscape Management Plan, particularly near the boundary with the Glenbrook Vintage Railway. The purpose of this initial planting is to ensure that some screening is established on site before the substation is built. When the site is developed for its designated purpose, as far as reasonably possible these existing plants should be incorporated into the Property and Landscape Management Plan.
6. That an Outline Plan of Works pursuant to section 176A of the Resource Management Act 1991 shall be submitted to Auckland Council prior to construction. These detailed plans will need to show the measures that will be implemented to avoid, remedy or mitigate any adverse effects on the environment. These details will also confirm whether any resource consents may be required.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. That pursuant to sections 35 and 36 of the Resource Management Act 1991 the actual and reasonable costs incurred by Council in monitoring conditions of this recommendation shall be paid by Counties Power.

3005 Pukekohe to Tuakau Line

Designation Number	3005
Requiring Authority	Counties Power Ltd
Location	104 Manukau Road, Pukekohe to Buckland Road, Buckland (to Waikato District Council boundary)
Rollover Designation	Yes
Legacy Reference	Designation 151, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Five years from being operative in the Unitary Plan, unless given effect to prior

Purpose

Electricity distribution - Pukekohe to Tuakau 110kV overhead electricity line.

Conditions

1. Plan Information

That the works to give effect to the new Designation for the construction, operation, maintenance and modification of one overhead electricity line of up to 110kV nominal voltage, shall be in accordance with:

- a. The Notice of Requirement;
- b. The Assessment of Environmental Effects prepared by Boffa Miskell, titled Counties Power, Notice of Requirement for a Designation for 110kV Electricity Line from Pukekohe Substation to Proposed Tuakau Substation, Volumes I, II and III and the additional information supplied to Council dated 11 December 2007 and 24 January 2008 (and any subsequent addenda or errata provided by the requiring authority at or before the hearing of the Notices of Requirement on 18 and 19 February 2008);
- c. The Designation plans prepared by Boffa Miskell titled 'Counties Power, Proposed Corridor for New Electricity Line', Drawings 01104-000 to 01104-013, 01104-017 to 01104-018 provided as further information but superseded by Drawings 01104_19 and 01104_20 presented at the hearing. NB Drawings 01104-000 (providing an overview of the route), 01104 019 and 01104 020 are appended as Figures 1-3;
- d. The designation is to provide for the construction, operation, maintenance and modification of one overhead electricity line of up to 110kV nominal voltage comprising a maximum of three conductors (i.e. lines), one earth wire and one fibre optic cable, and local electricity distribution lines where it would be appropriate and promote efficiency of the network, these supported above ground level by poles spaced at an average of at least 80m apart plus all necessary ancillary fixtures and fittings; and
- e. Subject to any amendments required by the following conditions and any other minor alterations proposed by Counties Power to the satisfaction of Auckland Council.

2. Buckland Screen Planting

Counties Power, when formulating the Outline Plan, shall liaise with Ontrack, Auckland Council and the Buckland Community Centre to ascertain an appropriate and practical extent of screen planting through Buckland village alongside the poles and will provide detail of such planting in the Outline Plan. The purpose of such planting will be to supplement the mitigation provided by undergrounding of the local lines and the extent and placement of screen planting shall also take into account the requirements of Ontrack to ensure the safe

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and efficient operation of the railway corridor.

3. Maximum Number of Pylons

The maximum number of pylons used as part of the support structures for the line shall be restricted to two (2) to overcome topographical features.

4. Nuisance Mitigation

That Counties Power and its contractors take all reasonable steps to prevent or mitigate any nuisance to adjacent properties during construction.

5. Construction Management Plan

Prior to the commencement of any earthworks or construction activity on the designated site excluding site investigations, Counties Power shall prepare a Construction Management Plan and submit that plan for the approval of the Auckland Council. The Construction Management Plan shall include the procedures, methods and measures to be applied to address the following:

- a. Exclusion of the public from the construction site;
- b. Dust arising due to construction;
- c. Prior notification to landowners of the use of machinery likely to generate vibration effects to dwellings, where such vibrations may be felt in the process to be followed to ensure that such effects are addressed;
- d. Maintenance of road, rail and property access during construction;
- e. Movement of construction traffic on local roads;
- f. Hours of operation of trucks and service vehicles;
- g. A single point of contact to field general enquiries and complaints from the public;
- h. The control of stormwater, runoff, sediment and contaminants during construction;
- i. Methods for earthworks, stormwater control, sediment control, replanting of any exposed areas; and
- j. Traffic management around the local roads during construction.

6. Liaison Person

That a permanent liaison person shall be immediately appointed by Counties Power for the duration of the works and be a readily accessible point of contact for persons affected by the designation and construction works. Counties Power shall advise the liaison person's name and contact details to affected parties. This person must be available for ongoing consultation on all matters of concern to affected persons and provide a timetable as to the construction works to adjoining property owners and occupiers.

7. Maximum Capacity of Transmission Line

The electricity line is to comprise a maximum of one 110kV circuit (comprising 3 conductor wires and an earth wire) plus lower voltage circuits where required and a maximum of one fibre optic cable, supported on poles generally as described in section 4.2 of the Assessment of Environmental Effects submitted with the application, or on pylons if required to cross the gully at grid reference V11 on Drawing 01104-006 to X12 on Drawing 01104-007.

8. Width of the Designation

The width of the designation is generally to be in accordance with the representations shown on Drawings 01104-000 to 01104-013 submitted as part of the application.

9. Written Approval

Counties Power is to grant its written approval (as requiring authority) under sections 176(1)(b) and 178(1) of the Resource Management Act 1991 to enable the New Zealand Railways Corporation, or any other party authorised by New Zealand Railways Corporation, to undertake any activity on the land that is authorised by the existing rail designation and / or to undertake any other activity on the land that will not prejudice Counties Power's rights under its occupancy agreement with New Zealand Railways Corporation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. Removal of Local Transmission Lines

Counties Power shall mitigate the visual impact of the new line by removing some existing local transmission lines as follows:

- a. The removal of the existing 400V overhead local lines on the eastern side of Station Road (adjacent to the A and P showgrounds) within 1 year of the commissioning of the Pukekohe - Tuakau 110kV line;
- b. Unless removed earlier, the second set of overhead local lines (currently at 11kV but planned to be upgraded to 22kV) on the eastern side of Station Road and adjacent to the A and P Showgrounds shall be removed within 2 years of the zoning of the A and P Showgrounds land for high density urban intensification being notified as part of a Plan Change;
- c. The existing local lines on the eastern side of Station Road from alongside Lot 1 DP 101010 to alongside Lot 2 DP 91559 shall be removed within 2 years of the zoning of this land for Residential use being notified as part of a Plan Change.
- d. Removal of the existing lines where the route passes Residential zoned land in Buckland, generally as shown on Drawing 01104_019 (supplied at the hearing) – refer appended Figure 2;
- e. Removal of the existing lines in the vicinity of the War Memorial in Buckland;
- f. Removal of the existing lines where the route passes Residential zoned land in Tuakau, generally as shown on Drawing 01104_20 (supplied at the hearing) – refer appended Figure 3; and
- g. Removal of the existing lines in Ryders Road not marked for removal on Drawing 01104_20 (refer appended Figure 3) once development plans for the area are sufficiently clear.

Note:

Conditions a., b. and c. seek to ensure that over time, both sets of local overhead lines are removed from Station Road adjacent to the land mentioned in them, given the potential for this land to be subject to urban intensification in the future as shown in the Franklin District Growth Strategy 2051;

11. Colour of Poles

Counties Power shall provide, as part of the Outline Plan of Works, details of pole placement and provide an assessment of whether a darker coloured pole is appropriate given the location and background of the poles. Council shall audit these details as part of the Outline Plan process to ensure that the use of darker poles in the locations stated is the most appropriate way to reduce the visual impact of the line when viewed within its visual catchment.

12. Archaeological Assessment

That an archaeological site inspection be carried out along the notified designation corridor as part of the detailed design and Outline Plan of Works process. This inspection should:

- a. locate on the ground all recorded cultural heritage sites in the vicinity of the designation;
- b. identify any previously unrecorded archaeological or other cultural heritage sites within and adjacent to the designation; identify what if any effect(s) the construction of the power line and associated works will have on these sites, and how any effects can be avoided;
- c. Identify any original or pre 1900 features of the railway within the designation; identify what if any effect(s) the construction of the power line and associated works will have on these features and how any effects can be avoided. Embankments, cuts and any structures such as bridges and culverts constructed prior to 1900 could be considered archaeological, and as such, could require an Authority to Modify from the New Zealand Historic Places Trust if they are affected;
- d. Make any further relevant recommendations in relation to the requirements of the Historic Places Act 1993 and the Resource Management Act 1991 based on the results of the site inspection;
- e. Counties Power shall consult with the New Zealand Historic Places Trust on the findings of the archaeological site inspection so that the New Zealand Historic Places Trust can confirm the need for any Authority/Authorities to Modify under the Historic Places Act 1993; and
- f. A copy of the archaeological site inspection shall be provided to the Council as part of any Outline Plan of Works required by section 176A of the Resource Management Act 1991.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13. Iwi Consultation

a. Counties Power shall consult with iwi regarding the possible existence of archaeological sites within the proposed designation corridor before detailed design work commences and as part of the archaeological site inspection of the transmission line route.

b. The outcome of such consultation shall be provided to the Council as part of any Outline Plan of Works required by section 176A of the Resource Management Act 1991.

14. Review of Designation Width

Within three months of the construction and successful commissioning of the electricity line, Counties Power shall review the area of land subject to the designation, taking into account the location of the line as constructed, and the access agreements with landowners along the route. Where appropriate, Counties Power will seek to alter the location and the width of the designation corridor so as to provide reasonably for the safe and efficient operation, maintenance and modification of electricity line. Alterations to the location and width of the designation corridor shall recognise that the designation originally sought may be wider than necessary to provide for the safe and efficient operation, maintenance and modification of the electricity line.

15. Term of Designation

For the purposes of section 184(1)(c) Resource Management Act 1991, the term during which the Designations shall not lapse unless given effect to is ten (10) years commencing from the end of the appeal period on the decision of Counties Power or the determination of any appeals on this designations for a 110kV transmission line.

Advice Notes

1. The requiring authority will need to obtain all other necessary resource consents and permits, including those under the Building Act 2004 and any regional consents required from Environment Waikato and Auckland Council.

2. The requiring authority is advised that once the Designations have been formalised, any minor alterations or omissions to the designated areas should be rectified through alterations to the Designations pursuant to section 181 of the Resource Management Act 1991.

3. The requiring authority is advised of their statutory obligations under section 172 of the Resource Management Act 1991, which include the following:

- a. Within 30 working days of receiving the Council's recommendation, the requiring authority is required to advise the Council whether it accepts or rejects the recommendation in whole or in part;
- b. The requiring authority shall only modify the requirements if, and only if, the modifications are recommended by the Council or are not inconsistent with the requirements as notified; and
- c. Where the requiring authority rejects the recommendation in whole or in part, or modifies the requirements, the authority shall give reasons for its decision.

4. Counties Power should ensure that prior to construction, formal contact is made, and permission or consents are obtained as required, from the operators of any network utilities where their services and facilities may be affected by the construction works for the project.

5. An Outline Plan of Works, pursuant to section 176A of the Resource Management Act 1991, shall be submitted to Auckland Council prior to construction. These detailed plans will need to show the final route and measures that will be implemented to avoid, remedy or mitigate any adverse effects on the environment. These details will also confirm whether any resource consents may be required.

6. Pursuant to sections 35 and 36 of the Resource Management Act 1991 the actual and reasonable costs incurred by Council in monitoring conditions of this recommendation shall be paid by Counties Power.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. Counties Power shall work with other parties involved in Plan Change 22 (to the Franklin District Plan) process to ascertain whether an alternative route for the line is possible through the plan change area.

Figure 3: Drawing 01104 020

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3006 Opaheke Substation

Designation Number	3006
Requiring Authority	Counties Power Ltd
Location	9 Ponga Road, Opaheke
Rollover Designation	Yes
Legacy Reference	Designation 13, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity supply purposes.

Conditions

Sutton Road Future Road Widening

1. The Substation security fence shall be set back at least 14m from the Sutton Road / western boundary (being the location of this boundary as it existed in the Notice of Requirement).

Note:

In the future the Council may require up to 12m of the site to widen Sutton Road of which 4m can be landscaped (refer to Figure 1 prepared by the former Papakura District Council).

Noise

2. The substation must be operated in such a manner as to comply with the following noise emission standards. The noise level measured within the notional boundary of any existing dwelling shall not exceed the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

following limits:

- a. Daytime 0700-2000 L10 = 50dBA
- b. Night-time 2000-0700 L10 = 40dBA

The noise levels must be measured and assessed in accordance with the requirements of NZ6801:1991 Measurement of Sound and NZS6802:1991 Assessment of Environmental Sound.

Earthworks Associated with any Site Development

3. All retaining walls, earthworks, reinforcements and stability works must be constructed and completed immediately after cutting and or prior to filling to minimize the likelihood of any instability.

4. Prior to commencing any earthworks the requiring authority must install all the necessary erosion and sediment control measures as shown in the Auckland Council's TP 90 and be responsible for preventing, controlling and stopping the loss of soil and silt and any damage caused by the earthworks on adjacent properties. All necessary erosion and sediment measures once installed are to be maintained to ensure continual operation until the development has been completed and the site fully stabilized.

5. The requiring authority must control runoff, mitigate and prevent soil erosion, sediment loss and trap pollutants from entering adjacent lands, street curb and channels/ natural and artificial water bodies.

6. All existing drainage systems must be protected from any release of silt, accidental or otherwise from the site. This also involves measures to prevent soil being spread onto the road and access way.

7. All earthworks and areas of bare earth shall be re-vegetated or re-grassed within 3 months of completion of the earthworks. Where regeneration of the grass is not sufficient, areas of bare soil shall be "hydro-seeded" or otherwise sown with the appropriate ground cover vegetation.

8. The requiring authority must limit the dispersal of dust from the earthworks to adjacent sites by implementing a watering regime in order to ensure that the areas of bare soil are dampened (up until the bare soil is revegetated).

9. In the event of any excavated material being spilled on a public road, the requiring authority must take immediate action at their cost to clean/repair the road or reimburse the Auckland Council the expenses of cleaning and/or reinstating the damaged road.

10. All earthworks must occur between the hours of 7.00am and 6.00pm Monday to Saturday.

Overland Flow

11. The finished land level and grade of the earthworks and land forming must be such that it does not impede, restrict or block the existing overland flow from adjacent properties and that an adequate flow path over the site shall be maintained.

12. The finished land level and grade of the earthworks and land forming must be such that it does not divert, redirect and concentrate runoff onto adjacent properties.

Lighting

13. All exterior on-site lighting must be positioned and aimed within the site, away from adjacent properties and public roads so as to minimise the level of spill light and glare.

Hazardous Substances

14. The requiring authority must ensure that any transformer oil storage areas are bunded. Bunds shall be sufficient capacity to contain the release from the total volume of all storage vessels located in each bunded area.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Surface Water

15. The requiring authority must maintain and regularly clean all storm water catch pits, channels, grates, pipes and other storm water collection systems to ensure they operate in an effective manner.

Electrical Interference

16. The requiring authority must make every reasonable effort to ensure that the electrical supply substation is operated, managed and controlled so that there is no electrical interference with television or radio reception at any adjacent property including complying with the requirements of the Radiocommunications Act 1989, the Radiocommunications Regulations 2001, the Ministry of Economic Development's Radio Spectrum Management "Compliance Guide" (November 2004), and relevant Gazetted Notices.

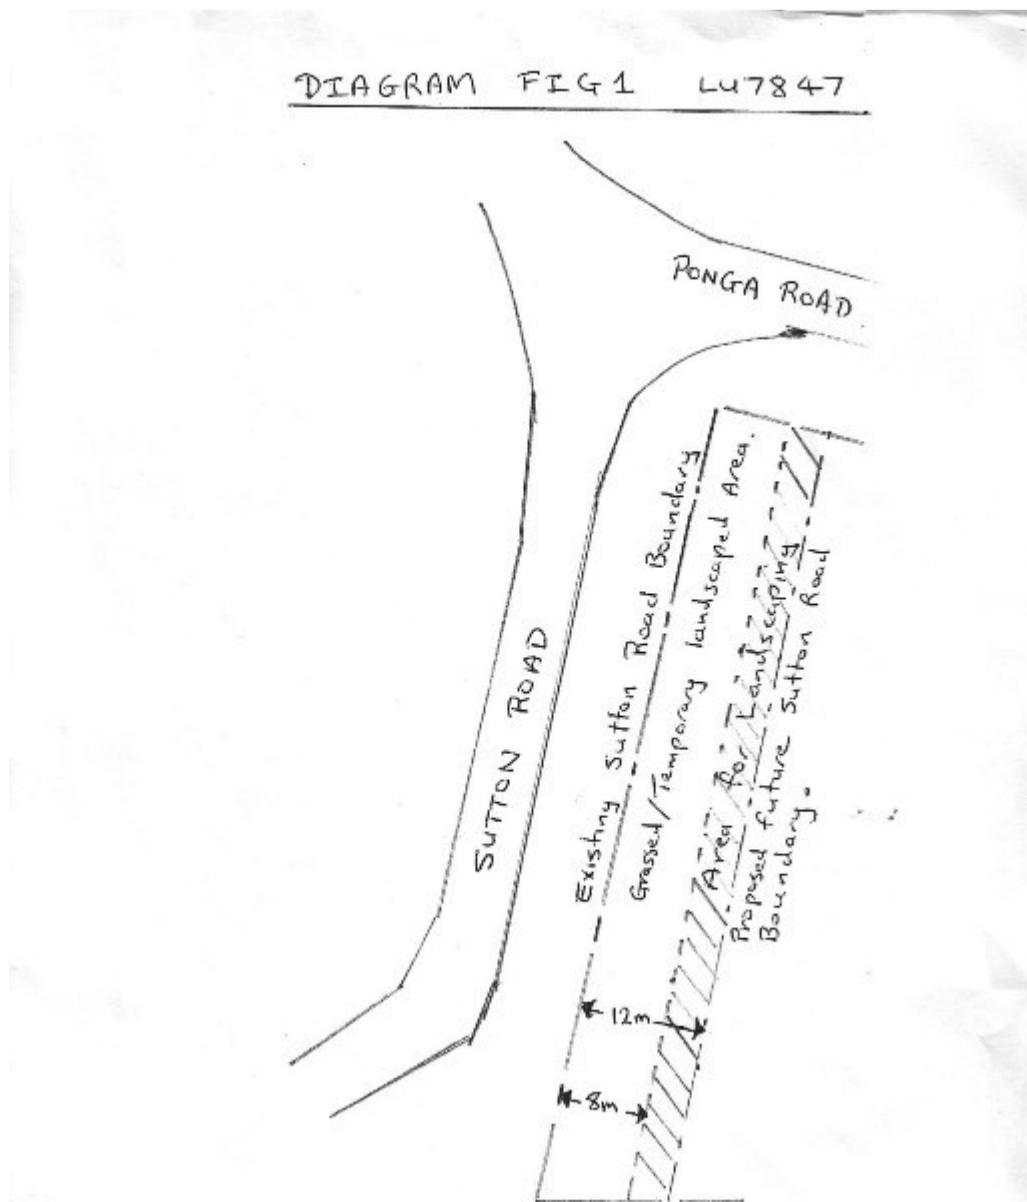

Advice Note

1. It is noted that the submitted and approved Outline Plan of Works for the establishment of the substation includes a landscape plan that identifies the possible need for the alteration or removal of trees at 9 Ponga Road in a specified area and such work can be undertaken as part of the designated works to enable emergency maintenance or for the planned installation, upgrade or replacement of equipment which cannot be installed for the existing vehicle entrance.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

R3008 Glenbrook Substation

Designation Number	R3008
Requiring Authority	Counties Power Ltd
Location	Whitham Road (Lot 1 DP 175576), Glenbrook
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	10 years from being operative in the Unitary Plan

Purpose

The purpose of the proposed designation is to provide for existing and future electrical supply infrastructure. The proposed designation scope is:

- The operation, maintenance and upgrading of an existing substation and associated ancillary structures and activities required for electricity supply and distribution.
- The provision of works required for electricity supply and distribution.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

General

1. A period of 10 years will be sought to implement the works.
2. Any additional consents/approvals (for example, National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health, matters requiring regional consent) will be obtained prior to works commencing.
3. Unless Section 176A(2) applies, an Outline Plan of Works shall be submitted to the territorial authority to allow the territorial authority to request changes before construction commences. The Outline Plan of Works will include:
 - a. The height, shape, and bulk of the public work, project, or work; and
 - b. the location on the site of the public work, project, or work; and
 - c. The likely finished contour of the site; and
 - d. the vehicular access, circulation, and the provision for parking; and
 - e. The landscaping proposed; and
 - f. any other matters to avoid, remedy, or mitigate any adverse effects on the environment
4. In addition to the matters set out in Condition 2, the Outline Plan will also include, commensurate to the scale of works proposed, a Construction Management Plan which addresses the following:
 - a. The proposed earthworks methodology including (as applicable) storage and reuse of topsoil; on- and off-site disposal of soil and silt and dust control;
 - b. Traffic management for delivery of equipment, materials and general construction activities;
 - c. Any temporary equipment storage;
 - d. Methods of complying with the National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health; and
 - e. In relation to the Glenbrook site; a liaison plan formulated to advise New Zealand Steel Limited of the nature and duration of works.

Transpower

5. Counties Power shall obtain the written approval of Transpower as Requiring Authority under Section 176 of the Act prior to works commencing.
6. Counties Power shall liaise with Transpower during the detailed design and subsequent construction processes prior to undertaking any work pursuant to this designation to ensure that the proposed works are integrated and managed in a manner suitable to both parties.

Accidental Discovery Protocols

7. If any archaeological sites, urupa, traditional sites, taonga (significant artefacts), or koiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tangata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.
 - e. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the NZ Historic Places Trust is obtained

Amenity

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. The works shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at the designation boundary under maximum normal operating conditions (ie, when there are no faults in the transmission system).

9. All works shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

10. Any masts, antennas, aerials and the other radiocommunication facilities shall at all times comply with NZS 2772.1 1999 and any subsequent amendments to that standard

11. Bulk and Location controls to be determined in Area A and Area B.

Operational Noise

12. Any new equipment (such as transformers, fans and circuit breakers) shall be designed and operated to ensure that the following noise limits shall not be exceeded:

a. $L_{Aeq}(15 \text{ min})$ 70dB at the boundary of Lot 1 DP 202203 and Allotment 363 and 343, Parish of Waiuku, East Blocks X XIII Awhitu SD.

All noise levels must be measured in accordance with the New Zealand Standard on the Measurement of Environmental Sound (NZS 6801: 2008) and assessed in accordance with the New Zealand Standard on Acoustic - Environmental Noise (NZS 6802: 2008).

Construction Noise

13. All construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics– Construction Noise at locations set out in section 6.2 of that standard.

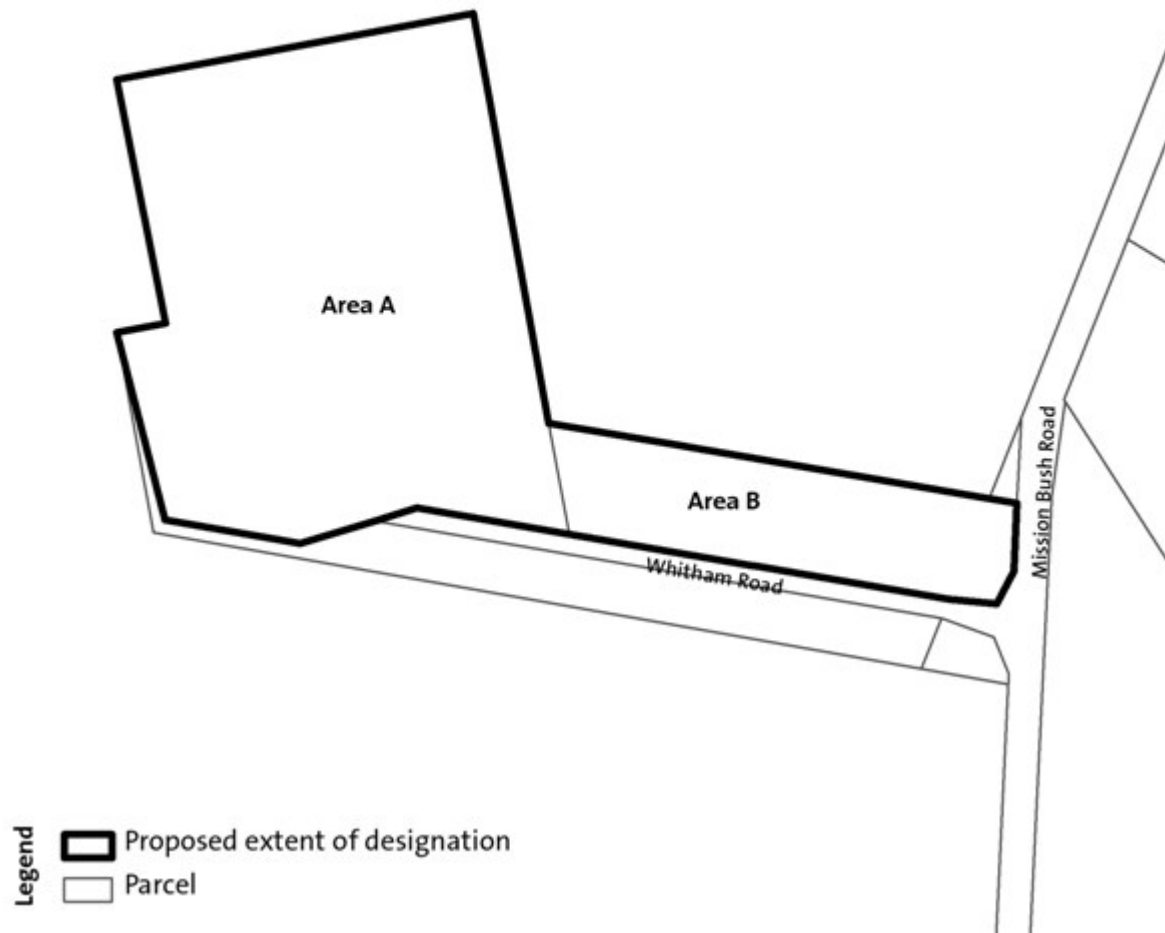

14. The noise limits set out in Condition 13 above shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects.

Counties Power Glenbrook Designation Diagram

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Counties Power Glenbrook Designation Diagram
Date: 31 July 2013 | Revision: 0

Kordia Ltd

Designation Schedule - Kordia Ltd

Number	Purpose	Location
3300	Microwave transmission corridor ...	100 Victoria Street West, Central Auckland to 539 Scenic Drive, Waiatarua
3301	Broadcasting and telecommunications facility ...	539 Scenic Drive, Waiatarua
3302	Broadcasting and telecommunications facility ...	Kaipara Hills Road (Pt Allotment 201 Psh Tauhoa), Kaipara Hills
3303	Broadcasting and telecommunications facility ...	192 Browns Bay Road, Pine Hill
3304	Broadcasting and telecommunications facility ...	Repeater Road (Pt Allotment 33 Psh of Atou and Pt Allotment 65A Psh of Atou), Hunua Ranges

3300 Microwave Transmission Corridor

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	3300*
Requiring Authority	Kordia Ltd
Location	100 Victoria Street West, Auckland Central to 539 Scenic Drive, Waiaatarua
Rollover Designation	Yes
Legacy Reference	Designation 301, Auckland Council District Plan (Central Area Section) 2005; Designation B08-02, Auckland Council District Plan (Isthmus Section) 1999; and Designation K2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

*Joint Kordia Ltd and Television New Zealand Ltd (Designation 300) designation from 100 Victoria Street West, Auckland Central to Ponsonby Road, Ponsonby. Kordia Ltd only designation from Ponsonby Road to 501 Scenic Drive, Waiaatarua.

Purpose

Microwave transmission corridor - a protection corridor of specified height (elevation above sea level) and width through which no building, structure or tree can pass to ensure continuity of a microwave linking / transmission path from the Television New Zealand Studios at 100 Victoria Street West, Central Auckland to the Waiaatarua transmission tower at 539 Scenic Drive, Waiaatarua.

Conditions

1. All masts, antennas, aerials and other facilities must comply with New Zealand Standard NZS6609: 1990 or any amendments, at all times.

The following table shows, at specific points along the path of the corridor, the width of the corridor and the base-height of the corridor. Intermediate widths and heights shall be determined by extending straight lines between adjacent points.

Path Length (KM)	Corridor Width (m)	Maximum Obstruction Height above Mean Sea Level (m)
0.000 (a)	6.8	62.6
0.025	6.8	63.0
0.050	6.8	63.4

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3301 Waiatarua Broadcasting and Telecommunications Facility

Designation Number	3301
Requiring Authority	Kordia Ltd
Location	539 Scenic Drive, Waiatarua
Rollover Designation	Yes
Legacy Reference	Designation K1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Description

Broadcasting and telecommunications facility - the continued operation of the existing broadcasting and telecommunications facility including two lattice towers of 121.9m and 27.5m height, a transmission building with roof top antenna mounting gantry, broadcasting and telecommunication antennas, and ancillary and associated works including power transformer, back-up power generator etc.

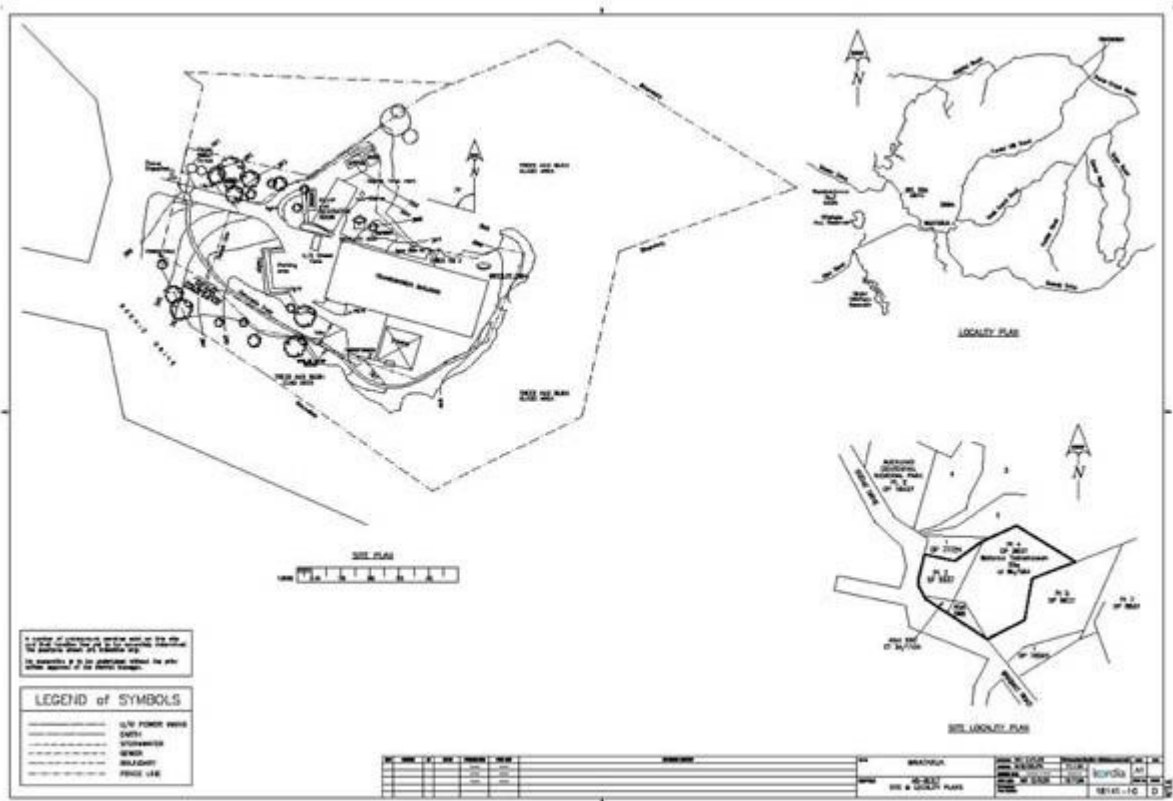

Conditions

1. The Notice shall be given effect to in accordance with the requirement/application and assessment of effects on the environment prepared by Hey Consulting 2011 Limited, and Plans titled 'Waiatarua Tower Layout' being drawing number 18141-101, 'Waiatarua Tower Locations', "Waiatarua Tower No 2 Antenna Locations" 18141-102, "Waiatarua Building East Gantry Antenna Locations" 18141-103 and "Waiatarua Site Plan" being drawing Ref 18141-010.
2. An Outline Plan is not required for the addition and replacement of antennas on the existing tower provided the antenna including the mount, the shroud, and ancillary equipment shall fit within the dimensions of a square shape in plan view that, when measured from the centre of the tower, does not increase the effective visual width of the tower by more than 50% (see attached Diagram 1).
3. An Outline Plan is not required for the addition or replacement of antennas attached to or above the existing transmission building provided that:
 - a. No gantry, pipe mount or antenna extends to an elevation greater than 3m above the roof line of the building; and/or
 - b. No antenna affixed to a building measures greater than 1.2m in dimension.
4. No new structures shall be erected on the site without submission of an Outline Plan of works pursuant to section 176A of the Resource Management Act 1991 other than the antennas set out in conditions 2 and 3 above.
5. Structures which are either intended to replace existing structures or any temporary structures erected for the purposes of allowing maintenance or repair of existing structures are permitted provided that any temporary or replaced structures are removed once any such replacement, maintenance or repair has been completed.
6. Only two telecommunications tower shall be on the site with the main tower having a maximum height of 121.9m and a secondary tower having a maximum height of 27.5m including any attachments.
7. Radio frequency radiation emissions from the site shall comply with NZS 2772.1:1999 Radio Frequency Fields (Maximum Exposure Levels - 3kHz to 300GHz).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3302 Kaipara Hills Broadcasting and Telecommunications Facility

Designation Number	3302
Requiring Authority	Kordia Ltd
Location	Kaipara Hills Road (Pt Allotment 201 Psh Tauhoa), Kaipara Hills
Rollover Designation	Yes
Legacy Reference	Designation 970, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Broadcasting and telecommunications facility - the continued operation of the existing broadcasting and telecommunications facility including a monopole mast of 23m height, a transmission building with ancillary and associated works including power transformer, back-up power generator etc.

Conditions

1. General

The activity shall proceed in general accordance with the Notice Of Requirement submitted to council, dated 31st August 2000, and attached plans drawn by Connell Wagner Ltd, Numbered 4290NT/A01, A02, C01, C02, and C03, and plans drawn by Woodward-Clyde (NZ) Ltd Numbered AA28110026/01/A-001 and AA28110026/01/S-001 including the recessive colour scheme proposed.

2. Additional Equipment

The following equipment shall be permitted to be attached to or erected on the mast and associated structures or elsewhere on the site, on a permanent basis without the provision of an Outline Plan pursuant to section 176A of the Resource Management Act in terms of conditions 1 above:

- A steel unipole mast of up to 23m height with an additional 2m lightning rod located at the top of the mast;
- Up to six (6) dish antennas with a diameter greater than 2.5m, but less than 5.0m;
- Broadcasting, telecommunication and radio communication antennas including whip, grid, yagi, dipoles and panels or similar ancillary equipment, but no single antenna shall have a solid frontal surface area of greater than 5.0m² or 2.5m in diameter in the case of dish antennas unless otherwise specified in (b) above;
- Up to two single storey equipment shelters with a combined floor area of less than 50m²; and
- A vehicular access track between the level area of the proposed mast and the road adjacent together with an area for parking and turning adjacent to the main structures.

3. New Structures

No new structures shall be erected on the site without the submission of an Outline Plan pursuant to section 176A of the Resource Management Act other than those provided for in condition 2 above, or structures on the site, or any other temporary structures erected for the purposes of allowing maintenance or repair of existing structures (providing that such temporary structures will be removed once any such maintenance or repair has ceased).

4. Radio Frequency Exposure

- The Broadcasting and telecommunications facility shall be operated so that it satisfies the requirements of NZS2772.1:1999 in respect of all areas to which the public may have access.
- A report from a suitably qualified person shall be submitted to the satisfaction of the Consents Manager within three months of the installation commencing operation, confirming that the site is operating in accordance with the NZS2772.1:1999.
- If the levels do not comply with NZS2772.1:1999, operation shall cease until such time as measures are put

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in place to ensure compliance with the standard.

5. Landscaping

A landscape plan and ongoing plant maintenance programme, involving screen planting of indigenous shrubs and small trees around the facility, with the intent of providing screening for the ancillary buildings and compound, shall be submitted to the Consents Manager, within six months of the date of commencement of the work on the site for the designation. This landscape planting is to form a continuation of the existing vegetation, which extends down the southern slopes of the site. Planting shall be completed by the end of the first planting season following the commencement of work on the site.

6. Archaeological Sites

In the event of an archaeological site being uncovered work is to cease immediately in the vicinity of the discovery and the NZ Historic Places trust is to be contacted so that appropriate action can be taken before work may recommence.

7. Silt Retention

Before commencement of any works, adequate silt retention structures as detailed in the Auckland Council Technical Publication No. 90 "Erosion and Sediment Control Guidelines for Land Disturbing Activities in the Auckland Region" shall be installed. These structures shall be maintained and cleaned out as necessary until such time as complete grass cover or other non-erodible surfacing, has been re-established over the site.

8. Access and Parking

All access, parking and manoeuvring areas shall be formed to a permanent all weather metalled standard to the dimensions set out in the council's "Standards for Engineering Design and Construction", prior to the commencement of the activity.

Note:

A geotechnical report will be required to be submitted with the application for Building Consent. The report shall address the stability of the site and the control of stormwater from the creation of an impermeable surface.

Note:

The Requiring Authority is advised that the site on which the proposed development is situated could be subject to Natural Hazards that may require the Council to invoke a s36(2) Notice Pursuant to the Building Act 1991 at the time a Building Consent is issued for any structure on the land.

9. Administration Fee

The applicant shall pay to Council the administrative fee for processing of this Notice of Requirement within one month of the requirement being confirmed or prior to the us commencing, whichever is the sooner.

10. Monitoring Condition

The applicant shall pay to Council a monitoring charge of the actual and reasonable costs to be paid within one month of the Requirement being Confirmed or prior to the Activity commencing/prior to any site works commencing/whichever is the sooner.

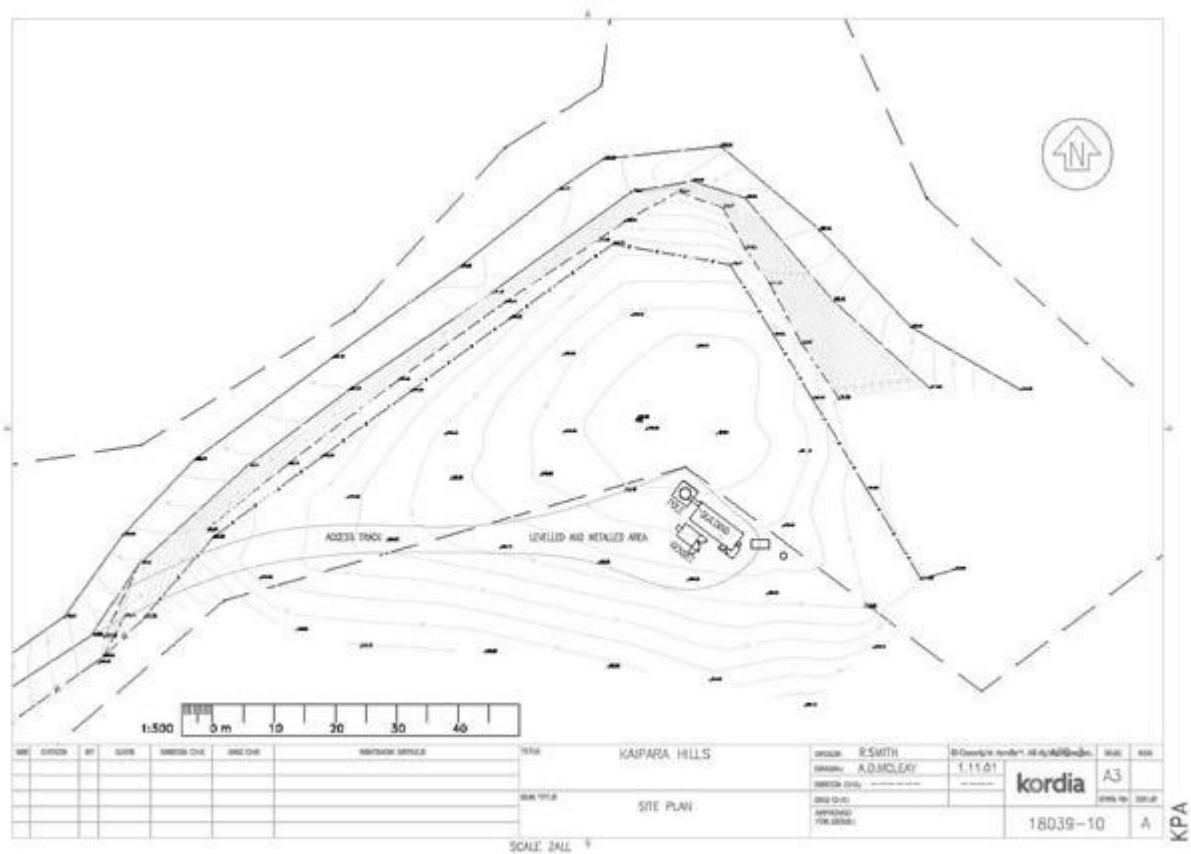

Note:

Please note that this charge covers on site visit only. Should other site visits/works be required to ensure compliance, then further charges will be payable as set out in Council's "Schedule of Fees and Charges".

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3303 Pine Hill Broadcasting and Telecommunications Facility

Designation Number	3303
Requiring Authority	Kordia Ltd
Location	192 Browns Bay Road, Pine Hill
Rollover Designation	Yes
Legacy Reference	Designation 184, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Broadcasting and telecommunications facility - the continued operation of the existing broadcasting and telecommunications facility including a monopole mast of 27.5m height, a transmission building with ancillary and associated works and activities.

Conditions

1. The following equipment shall be permitted to be attached to or erected on the existing mast, on a permanent basis without the provision of any outline plan of works pursuant to section 176A of the Resource Management Act 1991:
 - a. Broadcasting, telecommunication and radio communication antennas including, whip, grid, yagi, dipoles and panels or similar ancillary equipment, but no single antenna dish or panel shall have a solid frontal surface area of greater than 0.6m² or dimension greater than 1.2m in length or 0.6m in width;
 - b. Any dish shaped antenna greater than 0.3m in diameter must be attached to the mast at an elevation no greater than 18m;
 - c. Up to two dish shaped antennas of 1.2m in diameter at a max height above ground of 14m; and
 - d. No part of an antenna may project a horizontal distance greater than 1.4m from the face of the mast measured radially on an axis from the centre of the mast to the furthestmost edge of the antenna.
2. Antennas may only be mounted on the Mast and or the telecommunications building. No antennas or additional masts may be mounted else where on the site or the access to the site from Browns Bay Road.
3. No new structures shall be erected on the site without submission of an Outline Plan of works pursuant to section 176A of the Resource Management Act 1991 other than the antennas set out in condition 1.
4. Structures which are either intended to replace existing structures or any temporary structures erected for the purposes of allowing maintenance or repair of existing structures are permitted (provided that such temporary structures will be removed once any such maintenance or repair has ceased).
5. Only one monopole telecommunications mast shall be on the site with a maximum height of 27.5m including any attachments (makes provision for a lightening rod).
6. The maximum area of buildings permitted on the site shall be a sum total of 40m² and shall have a height no greater than 5m above ground.
7. All new antennas shall be grey (or similar) in colour with a reflectivity less than 33% as measured by the British Standard BS5252 colour range.
8. Radio frequency radiation emissions shall comply with Resource Management (National Environmental

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Standards for Telecommunication Facilities) Regulations 2008 – Clause 4 Telecommunication facilities generating radiofrequency fields.

9. The noise levels generated by the activity must at all times comply with section 10.5 of the Auckland Council District Plan (North Shore Section) 2002.

10. Kordia shall retain financial responsibility for all equipment and telecommunications activities from the site either through commercial agreement with clients or ownership of equipment.

11. Kordia is responsible for ensuring that any third parties services located on the mast do not interfere with the transmission of telecommunication and radiocommunication services.

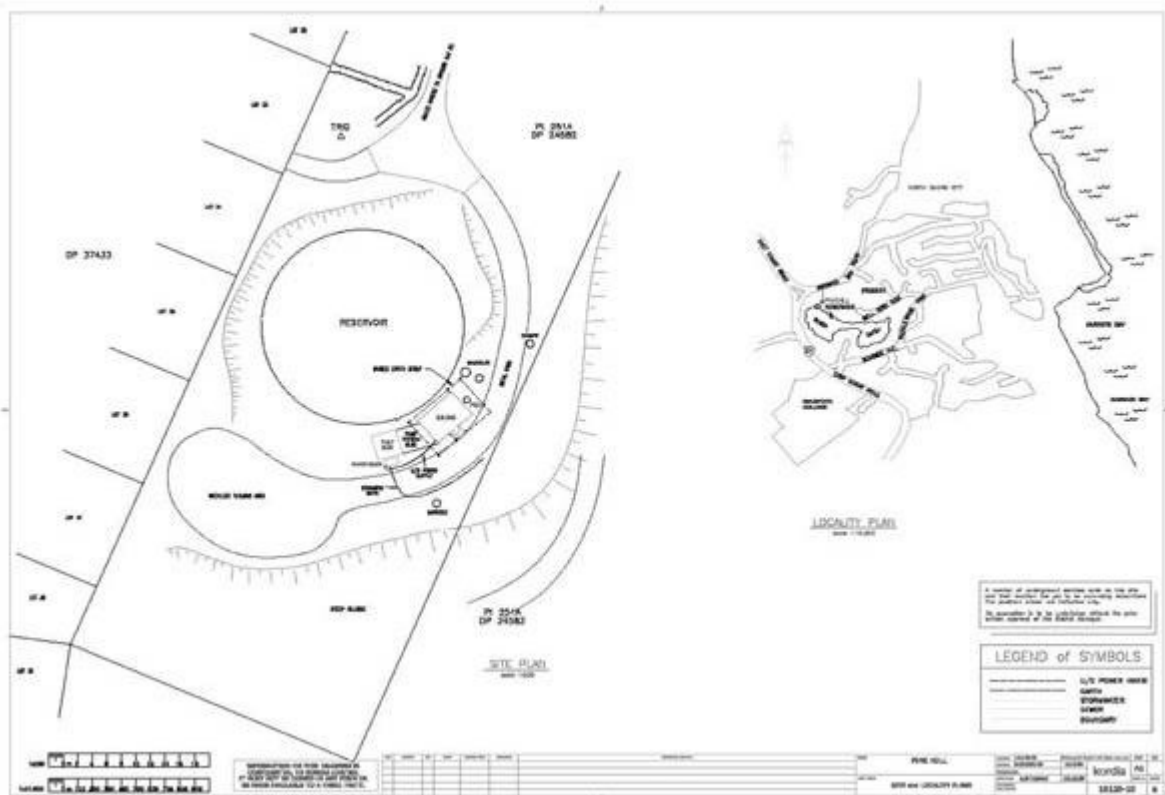

Advice Notes

1. Any works outside the 'envelope of effects' established by the conditions of the Notice of Requirement (as above) will require an alteration to the designation to be lodged and processed in accordance with Section 181 of the Resource Management Act 1991.

2. Prior to undertaking any works on site the applicant/requiring authority must first obtain written consent from Water Care Services Limited who are responsible for the underlying designation with 'prior status' (Designation 102) in accordance with Section 176 of the Resource Management Act 1991.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3304 Hunua Broadcasting and Telecommunications Facility

Designation Number	3304
Requiring Authority	Kordia Ltd
Location	Repeater Road (Pt Allotment 33 Psh of Atou and Pt Allotment 65A Psh of Atou), Hunua Ranges
Rollover Designation	Yes
Legacy Reference	Designation 17, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Broadcasting and telecommunications facility - the continued operation of the existing broadcasting and telecommunications facility including a lattice tower of 20m height, a transmission building with ancillary and associated works including power transformer, back-up power generator etc.

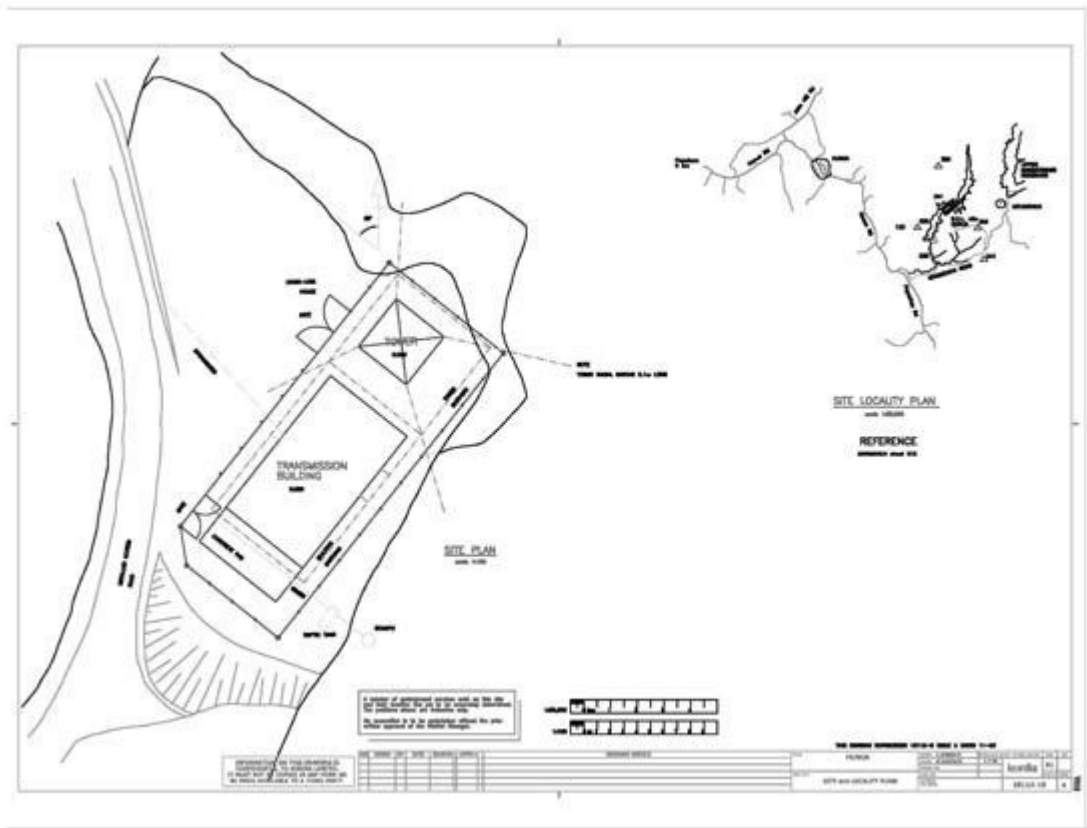

Conditions

1. The Notice shall be given effect to in accordance with the requirement/application and assessment of effects on the environment prepared by Hey Consulting 2011 Limited, and Plans titled 'Hunua Tower Layout' being drawing number 18115-101, 18115-101mod and 'Hunua Site and Locality Plans' being drawing Ref 18115-102.
2. An Outline Plan is not required for the addition and replacement of antennas on the existing tower provided the antenna including the mount, the shroud, and ancillary equipment shall fit within the dimensions of a square shape in plan view that, when measured from the centre of the tower, does not increase the effective visual width of the tower by more than 50% (see attached Diagram 1).
3. No new structures shall be erected on the site without submission of an Outline Plan of works pursuant to section 176A of the Resource Management Act 1991 other than the antennas set out in condition 2 above.
4. Structures which are either intended to replace existing structures or any temporary structures erected for the purposes of allowing maintenance or repair of existing structures are permitted provided that any temporary or replaced structures are removed once any such replacement, maintenance or repair has been completed.
5. Only one telecommunications tower shall be on the site with a maximum height of 20m including any attachments. This includes the provision for a lightning rod.
6. Radio frequency radiation emissions from the site shall comply with NZS 2772.1:1999 Radio Frequency Fields (Maximum Exposure Levels - 3kHz to 300GHz).

3912	Corrections purposes (non-custodial facility) ...	11 Roulston Street, Pukekohe

3900 Auckland Prison

Designation Number	3900
Requiring Authority	Minister of Corrections
Location	530 Paremoremo Road, Paremoremo
Rollover Designation	Yes
Legacy Reference	Designation 120, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Auckland Prison.

Conditions

1. The following condition (comprising parts a, b, c and d) applies to the whole of designation 3900 Auckland Prison:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

a. Maximum Capacity

- i. That a maximum of 681 prisoners be accommodated within the penal institution at Paremoremo.
- ii. Under this designation, no new buildings or external alterations are to be made to existing buildings to accommodate the extra 31 prisoners, additional to the previous maximum of 650 prisoners.

b. Landscaping

- i. The requiring authority shall carry out landscaping on the site in accordance with the attached Landscape Plan.
- ii. All planting associated with the landscape plan shall be maintained regularly until fully established and kept in a tidy condition, including replacement if any planting dies or is destroyed. The replacement of any planting shall be of the same type, grade and size as the one it replaces, unless otherwise approved in writing by council, and shall be planted no later than the next planting season (i.e. April to September) following discovery of the need for replacement.

c. Parking

To alleviate the apparent parking shortage associated with the eastern wing, the requiring authority shall construct a further eight (8) car parks within 100 metres from the eastern wing.

d. Noise

The requiring authority shall ensure that the following maximum noise limits shall be complied with at all times at the boundaries of the subject site (excluding the boundary of Lot 3 DP 64 525, which continues to be covered by Condition 2b)) as follows:

7am - 10pm	10pm - 7am
55 dBH L10	40 dBA L10 75 dBA Lmax

Noise will be measured in accordance with NZS 6802:1991, Assessment of Environment Sound, and NZS 6803P:1984, the Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work. Noise standards shall not apply to noise for emergency and warning purposes.

2. The following conditions (2a - 2g) relate only to Lot 3 DP 64525 situated on the corner of Iona Avenue and Sanders Road:

a. Odour

No activity undertaken on Lot 3 DP 64525 shall create any intrusive odour that is, or is likely to be, either objectionable or offensive in the opinion of an enforcement officer, and is able to be detected beyond the boundary of the Prison designation.

b. Noise

Prior to the establishment of any activity on Lot 3 DP 64525 that may generate noise less than but within 5dBA of the noise standards specified in the table below, an Acoustic Design Report shall be obtained from a suitably qualified Acoustic Engineer confirming that the activity will not exceed the noise levels specified below:

Maximum Permitted Noise Level measured at the boundary of Lot 3 DP 64525			
Mon - Sat Inclusive	Mon - Sat inclusive	Sun & Public Holiday	All other times
7am - 10 pm	8pm - 11pm	7am - 12am	
50 dBA L10	45 dBA L10	45 dBA L10	40 dBA L10 75 dBA Lmax

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise will be measured in accordance with NZS 6802:1991 Assessment of Environmental Sound and NZS 6803P:1984 The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work and noise standards shall not apply to noise for emergency and warning purposes.

c. Outdoor Lighting

i. Outdoor lighting on Lot 3 DP 64525, shall be so selected, located, aimed, shielded, adjusted and screened as to ensure that glare resulting from the lighting complies with the standards specified in the table below.

Outdoor lighting measured horizontally or vertically at the boundary of Lot 2 DP 64525 (being the property owned by Mr P & Mrs M Rudd as at 4/2/02) shared with Lot 3 DP 64525	
7am and 10pm	added illuminance no more than 125 lux
10pm and 7am	added illuminance no more than 20 lux

ii. All outdoor lighting shall be directed downward and shielded from Lot 2 DP 64525 subject to achieving necessary security requirements.

d. Vibration

No activity on Lot 3 DP 64525 shall be permitted to create vibration levels (acceleration in metres per second squared) relative to frequency which affect occupants of adjacent buildings by exceeding the base curves of Figures 2a (z axis), 3a (x and y axis), and 4a (combined xyz axis) of International Standard ISO 2631-2:1989 - Evaluation of human exposure to whole-body vibration - Part 2: Continuous and shock-induced vibration in buildings (1 to 80 Hz).

Vibration will be measured in accordance with ISO 2631:1989, AS 2973: 1987 and AS 2187.2:1993

e. Tree Planting

A buffer strip, to achieve a continuous visual screen of activities occurring on Lot 3 DP 64525 as viewed from Lot 2 DP 64525, shall be planted on Lot 3 DP 64525 alongside the boundary with Lot 2 DP 64525 ("the Rudd property") in accordance with the diagrams entitled "Proposed Plan of Iona Avenue Boundary Showing Fences & Trees to Rudd Property with Corrections". The buffer strip is to be established no later than the planting season following November 2009.

The buffer strip planting is to be mulched and watered for a minimum period of two years following the initial planting and maintained continuously thereafter, by the Requiring Authority. All newly planted trees that die or decline such that in the opinion of the council's Monitoring Officer they are or will be of no screening value, must be replaced. The replacement trees should be of the same type, grade and size and planted no later than the following planting season (May to August), following instruction to do so by council. At any time, the specified plant species may be altered if prior approval is provided in writing by council.

f. Access to Lot 3 DP 64525

Heavy vehicle access to Lot 3 DP 64525 will not be allowed from the road frontage of Iona Road.

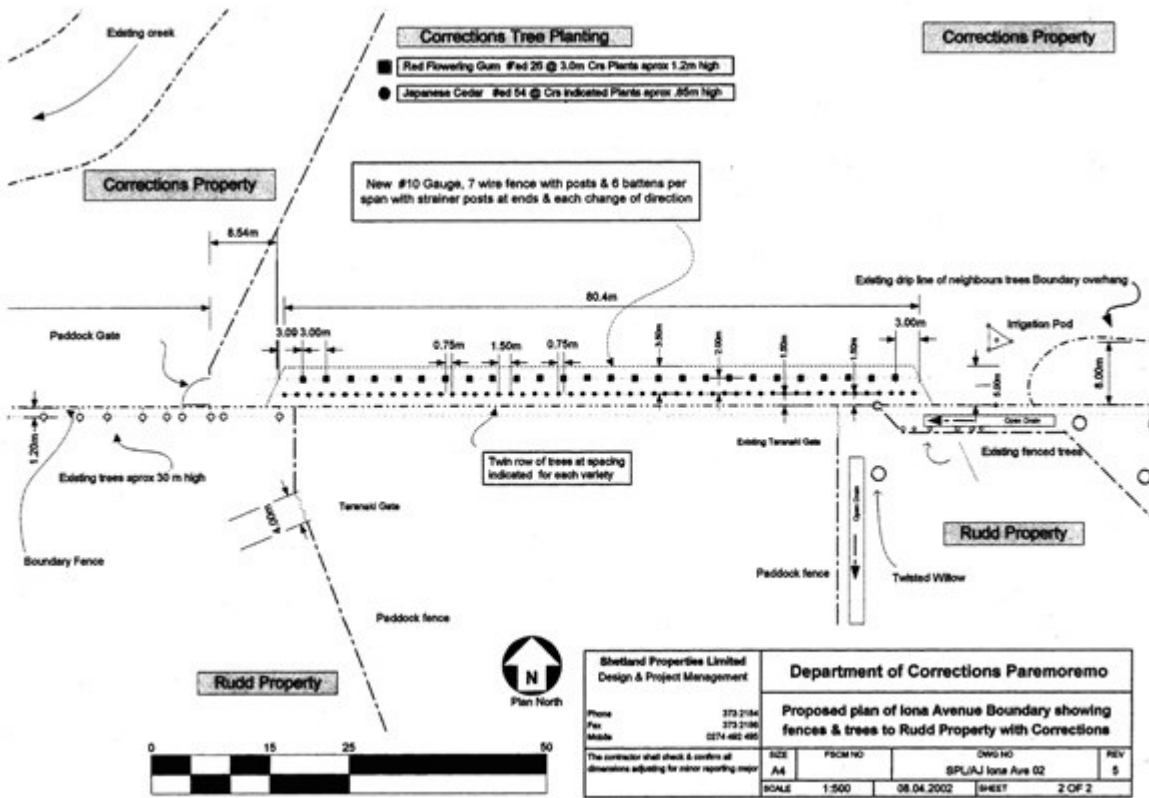

g. Security Fencing

Security fencing will not be erected on the common boundary between Lots 2 & 3 DP 64525.

3903 Mt Eden Prison

Designation Number	3903
Requiring Authority	Minister of Corrections
Location	1 Lauder Road, Mt Eden
Rollover Designation	Yes
Legacy Reference	Designation D08-25, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Mt Eden Prison.

Conditions

The site is comprised of two areas as shown on the diagram annexed as Corrections Auckland Unitary Plan, Heritage Precinct, Date: 7 June 2012/Revision O, namely Area A (heritage precinct), and Area B (other areas). Conditions shall apply to each area as set out below –

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions Applicable to Area A - Heritage Precinct

1. Other than as provided for in condition 2 below, no additions or alterations shall be made to the walls or exterior of the original prison building contained in Area A other than in accordance with an outline plan of works submitted and processed in terms of Section 176A of the RMA.

2. The requiring authority may undertake without an outline plan of works procedure:

- a. Minor modifications and alterations to the walls and exterior of the original prison building which are consistent with any approved conservation plan; and/or
- b. The construction of a sally port at the main entry where such sally port is constructed inside the external walls of the original prison building.

3. The requiring authority may undertake such activities in, and modifications and alterations to, the interior of the existing buildings within Area A as it thinks fit.

Conditions Applicable to Area B - Other Areas

4. No buildings or structures shall be erected in the area shown as Area B other than in accordance with an outline plan of works submitted and processed in terms of Section 176A of the RMA provided that nothing in this condition shall preclude the construction of any sallyport constructed in accordance with condition 2 above.

Conditions Applicable to All Areas

5. In light of the fact that security remains the paramount consideration within the prison, nothing in these conditions shall preclude the erection of security fencing or equipment and structures necessary for maintaining security such as closed circuit television structures.

Heritage Precinct Plan

3904 Non-Custodial Facility - Jellicoe Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	3904
Requiring Authority	Minister of Corrections
Location	118 Jellicoe Road, Panmure
Rollover Designation	Yes
Legacy Reference	Designation F15-33, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Conditions

No conditions.

Attachments

No attachments.

3905 Non-Custodial Facility - Queens Road

Designation Number	3905
Requiring Authority	Minister of Corrections
Location	222 Queens Road, Panmure
Rollover Designation	Yes
Legacy Reference	Designation F15-38, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Conditions

No conditions.

Attachments

No attachments.

3906 Non-Custodial Facility - Portage Road

Designation Number	3906
Requiring Authority	Minister of Corrections

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	18 Portage Road, New Lynn
Rollover Designation	Yes
Legacy Reference	Designation DeptJ1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Conditions

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Attachments

No attachments.

3907 Non-Custodial Facility - Newsome Street

Designation Number	3907
Requiring Authority	Minister of Corrections
Location	3-5 Newsome Street, Onehunga
Rollover Designation	Yes
Legacy Reference	Designation H09-09, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community Work centres and probation offices, excluding prisons.

Conditions

1. That the proposed 25 off-street carparking spaces shall be sealed, arranged and marked in accordance with the "proposed plan" (Job No.1/25661/1) prepared by the Works Consultancy Services and tendered at the Planning Hearing on 17 September 1991.
2. That all on-site activities apart from clerical work and any occasional emergency repairs shall cease between the hours of 8pm on any day and 7am the following day.
3. That no more than 80 detainees shall report to the Centre at any one time.
4. That all loading and unloading activities associated with the activity shall be restricted to within the site.
5. That security shall be provided and retained on the site to the satisfaction of the Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Proposed Plans

3908 Non-Custodial Facility - Fort Richard Road

Designation Number	3908
Requiring Authority	Minister of Corrections
Location	23 Fort Richard Road, Otahuhu
Rollover Designation	Yes
Legacy Reference	Designation J14-16, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Conditions

1. The geological feature on the site being part of the Robertson Hill scoria cone and tuff ring shall not be excavated, physically investigated, damaged, or altered other than in accordance with an outline plan submitted and processed in terms of section 176A of the RMA.

3909 Non-Custodial Facility - Canning Crescent

Designation Number	3909
Requiring Authority	Minister of Corrections
Location	24 Canning Crescent, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 178, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Conditions

No conditions.

3910 Wiri Comprehensive Corrections Facilities

Designation Number	3910
Requiring Authority	Minister of Corrections
Location	20 Hautu Drive and 24 Kiwi Tamaki Road, Wiri
Rollover Designation	Yes
Legacy Reference	Designation 288, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Comprehensive corrections facilities comprising a women's corrections facility (Auckland Region Women's Corrections Facility or ARWCF) and a men's corrections facility (MCF).

Conditions

The conditions that accompany this designation apply to the designated site as a whole, except where specified as applying only to the ARWCF or the MCF.

The conditions reference the following plans:

- The Indicative Concept Plan for the ARWCF (Figure 2, 3 February 2004, DB0901);
- The Development Plan for the MCF (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011);
- The Heritage Areas Plan (Figure 2, Revision F, prepared by Boffa Miskell, dated 25 March 2011); and
- The Quantitative Risk Assessment and Mitigation Plan (Figure 3, Revision B, prepared by Boffa Miskell,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

dated 17 May 2011.

The Indicative Concept Plan for the ARWCF is referred to in Condition 1(a). This condition of the original designation required the initial works for the ARWCF, which was established in 2006, to be in general accordance with this indicative concept plan. Condition 1(a) does not limit future activities on the site in so far as they are consistent with the designation and other conditions.

The Heritage Areas Plan identifies those parts of the site identified as heritage areas and remnant cultural landscape features. This plan is referred to in conditions 3, 37 and 38 which set out specific limitations that apply to these areas.

The Development Plan for the MCF shows the indicative location of its secure and non secure facilities, and the controls on development in conditions 81, 82, 83, 84 and 85.

For the purposes of these conditions, 'site' means the entire area of land subject to Designation 3910, unless specified in the condition as either the ARWCF or the MCF site. Reference to 'the Minister' in these conditions refers to the Minister of Corrections or their successor (where their successor is the requiring authority).

The designation is for the construction, operation, maintenance and upgrading of comprehensive corrections facilities and associated facilities and the authorisation of all ancillary activities and facilities including, but not limited to:

- any preliminary or future earthworks not covered by existing consents
- entry buildings
- visitor carparks
- staff carparks
- administration and staff amenities
- visits centres
- inmate receptions
- industries
- kitchens/laundries
- programmes
- health centres
- meeting houses
- high security accommodation
- high medium security accommodation
- medium low security accommodation
- low security accommodation
- self care (inner security area) accommodation
- self care (middle security area) accommodation
- atea
- inmate atea
- village green
- gymnasiums
- playing fields
- stormwater management ponds
- internal roading
- security fences, security walls, surveillance equipment and lighting
- landscaping and 'set back' buffer areas

and shall extend to all of the land shown within the extent of the designation boundary on plan DB0901, figure 2, indicative concept plan dated 3 February 2004 as amended by the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011) and these conditions.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The designation shall be subject to the following conditions:

Scope of the Designation

1.

a. The initial works for the ARWCF to give effect to the designation shall be generally in accordance with the Notice of Requirement for the ARWCF dated 28 May 2002, and the indicative concept plan, Figure 2, 3 February 2004, DB0901, subject to any amendments required by the conditions that follow. However, nothing in this condition shall limit future activities on the site in so far as they are consistent with the designation and other conditions.

b. All works and activities for the MCF shall be generally in accordance with the Notice of Requirement for Alteration to Designation 288 dated 1 November 2010, subject to any amendments required by the conditions that follow. However, nothing in this condition shall limit future activities on the site in so far as they are consistent with the designation and other conditions.

c. The comprehensive corrections facilities on the site shall be limited to the ARWCF and a MCF.

d. Any secure facilities associated with the ARWCF shall be generally located within the area identified as 'Indicative Extent of ARWCF Secure Facilities' on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011).

e. Any secure facilities associated with the MCF shall be generally located within the area identified as 'Indicative Extent of prison Secure Facilities' on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011).

f. Any non-secure facilities associated with the MCF shall be generally located within the area identified as 'Indicative Extent of prison Non Secure Facilities' on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011).

2. That for a distance of 45m from the northern boundary of the site, adjoining the land of Wiri Oil Services Ltd, no new buildings or activities shall be constructed or carried out. This condition shall not apply to horticultural activities or to maintenance of grounds, or to maintenance, alteration or use of the existing building.

3. No buildings (excluding security fencing and lighting, security and communication devices, including poles for lighting and surveillance equipment) shall be constructed within that part of the Corrections' designation, identified as area "A" on the Heritage Areas Plan (prepared by Boffa Miskell, Figure 2, Revision F, dated 25 March 2011).

4.

a. The accommodation units of the ARWCF shall be located at least 134 metres from the Wiri Oil Services Limited boundary and the outside of the secure perimeter fence shall be located at least 100 metres from that boundary.

b. All inmate accommodation, staff administration and kitchen buildings to be used by staff and inmates within 200m of the Wiri Oil Services boundary shall have mechanical ventilation. The ventilation system shall be capable of having suitable filtration systems installed to minimise odour and VOCs, to the satisfaction of the Manager – Resource Consents based on results of the monitoring required by condition 35.

5. An easement for an esplanade strip and/or access strip for a coastal recreational walkway for the benefit and use of the public shall be granted in the Council's favour at no cost to the Council by the Minister generally along the boundary of the subject land with the Manukau Harbour on the following basis:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. The easement in perpetuity shall adjoin the mark of mean high water springs of the Manukau Harbour, unless the topography requires that it be located away from the coast. The legal documents relating to the easement shall be prepared by the Council's solicitors at the Minister's expense, executed by or on behalf of the Minister and registered on the certificate of title of the land prior to commencement of the proposed activity.
- b. The esplanade strip and access strip shall be of sufficient width to allow cycle and pedestrian access through the area.
- c. The route of the formed walkway shall be determined jointly by the Minister and the Council and shall minimise the impact upon the part of the Corrections' designation identified as area "C" on plan '21095' dated 9 October 2003 (as amended by the Heritage Areas Plan prepared by Boffa Miskell, Figure 2 Revision F, dated 25 March 2011). The construction and maintenance of the walkway will be undertaken by the Council, at such time as it deems fit to do so.
- d. The Minister shall construct and maintain as a minimum a standard post and wire fence along the boundary of the esplanade strip and the access strip easement, within 6 months of the creation of the easement.
- e. The Minister shall take all reasonable steps to place and maintain signs at the boundaries of the Minister's property along the walkway and at the public entrances to the walkway, prior to its use. The Minister shall consult with the Council, with regard to the wording of signage with a view to ensuring that, to the extent practicable, the signage does not discourage the public from using the walkway.
- f. The walkway shall be available to the public during hours of daylight every day of the year except in specified circumstances, to be agreed between the Minister and Council.
- g. During the event of the specific circumstances referred to in Condition 5(f), the Minister shall make available an alternative walkway to continue this public access.

Advice Note:

Easements have been created further to this condition and are registered against Identifier 368904 (North Auckland).

Traffic

6. The principal access to the ARWCF shall be off Hautu Drive, while access for an "emergency situation" may be provided off other adjacent roads. For the purposes of this condition, an "emergency situation" is defined as a situation requiring alternative vehicular access by the Department of Corrections, New Zealand Police, New Zealand Fire Service and/or an Ambulance, New Zealand Defence Force, Civil Defence and includes situations relating to the escape of any inmate.
7. Adequate onsite parking, loading, access and manoeuvring areas be provided at all times for all types of vehicles anticipated to visit the facilities. All onsite parking, loading, access and manoeuvring shall be formed, drained, sealed and marked out in accordance with council's Engineering Quality Standards and Figure 8.5 of Chapter 8 of the Auckland Council District Plan (Manukau Section) 2002. Full engineering drawings in respect of these works shall be submitted to and approved by the council, as part of the Outline Plan of Works.
8. In the event that the McLaughlins Road frontage of the site requires upgrading due to the Minister's construction, establishment, operation and/or maintenance of the facility, and becomes a public road, this shall be constructed to Business Road standards for half a road frontage in accordance with Rule 9.9.2.11(a)(iv) of the Auckland Council District Plan (Manukau Section) 2002. A payment, which shall be agreed between the Minister and the council, shall be paid to the council prior to commencement of the road frontage upgrading (such payment to be applied to the upgrade and to take into account any payments made to the owners of the road for its upgrade).
9. Cul de sacs in accordance with council's Engineering Quality Standards shall be fully formed and vested in the council and at no cost to the council as continuations of Hautu Drive and Ha Crescent prior to the commencement of Construction Work (as defined in chapter 18 of the District Plan). These areas shall include any necessary service berms and footpaths in addition to a standard front berm. Full engineering drawings in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

respect of these works shall be submitted to and approved by the Council.

Landscape and Urban Design

10. An Integrated Design and Mitigation Strategy (IDMS) shall be prepared for the entire designated site and submitted for the approval of the Manager – Resource Consents as part of the outline plan of works for the establishment of the MCF. The Manager-Resource Consents, the Department of Conservation, Ngati Te Ata, Te Akitai (and any other mana whenua group subsequently recognised), Vision Manukau and the Volcanic Cones Society shall be given an opportunity to review and comment on the draft IDMS (including for the avoidance of doubt, the visual mitigation strategy, ecological planting strategy, and comprehensive landscape plan) at least three (3) months prior to its submission with the outline plan of works.

The IDMS shall include the matters set out below.

IDMS Principles and Functions

- a. The IDMS must set out the overarching principles that will shape a visual mitigation strategy, an ecological planting strategy, and a comprehensive landscape plan.
- b. The IDMS shall address building placement, scale and form in relation to the surrounding and proposed landscape context and, in particular, shall identify viewshafts to Maunga Matukutureia from the southern part of the ARWCF, the marae on the CYFS facility, and the Weymouth/Puhinui walkway that are to be protected to the fullest extent practicable. The IDMS shall specify building materials and colour, proposed screening and planting, proposed pest control measures, proposed site preparation and remediation, plant species selection, plant establishment and ongoing maintenance and monitoring requirements.
- c. The IDMS should establish how it is proposed to integrate the development when viewed from the Clendon residential area, ARWCF and CYFS facility, and the means proposed to integrate the scale, form and bulk of the buildings and structures in the western and southern portion of the site in relation to the open space.
- d. All buildings and external structures shall be designed and finished in materials and colours that are generally visually recessive.

IDMS Components

- e. The IDMS shall include the following components, each of which shall give effect to the IDMS and its overarching principles:
 - i. A Visual Mitigation Strategy for the entire site. This shall include but not be limited to:
 - Key visual objectives including the identification and management of views towards the site from surrounding residential, commercial and public open space areas (particularly from the Weymouth/Puhinui Walkway and adjacent DoC reserve) and the objective of maintaining views of Maunga Matukutureia to the fullest extent practicable;
 - The use of mass planting where appropriate within a minimum 8 metre planting strip along all boundaries of the site to enable the screening and/ or visual integration of built forms within the site and with the surrounding landscape character, including the maintenance of the existing landform within this 8 metre planting strip (except where mounding or additional soil depth is required to achieve the optimum growth of plants). The 8 metre planting strip shall not apply to the following locations:
 - At the Hautu Drive, Ha Crescent, McLaughlins Road and Kiwi Tamaki Road vehicle and pedestrian entrances;
 - Either side of the access strip to Kiwi Tamaki Road; and
 - Parking areas, access drives and other hard surfaces associated with the ARWCF existing as at 1 May 2011.
 - ii. An Ecological Planting Strategy, to enhance the ecological attributes of the site, and in particular the south-west corner of the site, providing a buffer between the facilities and the Puhinui Creek. The strategy shall promote the use of eco-sourced species where appropriate.;
 - iii. A Comprehensive Landscape Plan for the entire site, including but not limited to:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Planting proposals for the retained wetland area and any stormwater ponds;
- Planting proposals for the entry and parking areas;
- Planting proposals within the required minimum 8 metre planting strip along all boundaries of the site, except in the locations excluded above;
- New parking areas designed with landscaped dividers or islands to provide separate parking bays each containing not more than 100 carparking spaces. The dividers or islands shall be planted with well developed specimen trees capable of growing to a height of approximately 6 metres within 10 years of planting. When determining tree and shrub species, safety aspects such as sight distances must not be compromised;
- Consideration of any planting and/or public amenities on adjoining public land to enable the co-ordinated management of the site's boundaries;
- The name (including botanical), numbers, location, spacing and size of the plant species, details on the timing of planting, and details of existing planting to be retained (where practicable);
- A landscape management programme, including implementation and maintenance, setting out the methods for pest control (including, if necessary, pest proof fencing along the boundary of the site and the Matukuturua Stonefields Historic reserve), use of sacrificial planting (where appropriate), fertilising, and if necessary irrigation, to ensure continued growth of the plants. The landscape management programme shall detail existing and proposed soil depths, sufficient to ensure the optimum growth of the plants. These minimum soil depths may either be achieved using existing ground conditions where appropriate, or through mounding and/or through the provision of additional soil.

iv. A report by a suitably qualified and experienced urban designer and landscape architect on how the design achieves the principles of the IDMS, including how the design achieves a good interface with surrounding areas.

11. The Minister shall not be in breach of Condition 10 if any one or more of the named groups specified do not wish to provide comment.

12. The outcomes of the engagement on the IDMS as specified in condition 10, including the comments provided by the parties and any changes made as a consequence, shall be documented and provided to the Manager – Resource Consents with the outline plan of works for the establishment of the MCF.

13. The Minister will cover the reasonable expenses of the parties named in condition 10 to commission any expert review of the IDMS, subject to the parties discussing the potential for joint engagement of an expert and subject to the Minister's approval of the scope of works and professional services fee proposals, prior to any expert advice or reports being commissioned by the parties.

14.

a. In the event that further outline plans are required and/or submitted for the site, the IDMS shall be updated in accordance with the conditions described above.

b. Unless and until any outline plan is required and/or submitted for further development undertaken at the ARWCF, only the planting including screening, pest and predator control, site preparation, species selection, and ongoing maintenance and monitoring aspects of the initial IDMS shall apply to the existing ARWCF.

15. Except for the screen and mass planting within the minimum 8 metre planting strip along all boundaries of the site, the landscape plan may be altered at any time, provided the changes to the plan are in general accordance with the IDMS and landscape plan which was approved by the Manager – Resource Consents as submitted with the outline plan.

16. The Minister shall implement the comprehensive landscape plan, the ecological planting strategy and the visual mitigation strategy within 12 months of completion of construction of the MCF and shall thereafter maintain all specified works and plantings to the satisfaction of the Manager – Resource Consents.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Existing Landscaping Plans

17. Until such time as the IDMS required under condition 10 is approved by the Manager – Resource Consents, the following conditions (18-24) shall apply.

18. The visual mitigation and ecological planting plan for the ARWCF approved by the Council with the outline plan of works for the ARWCF on 10 September 2004 shall apply to the site.

19. The visual mitigation and ecological planting plan may be altered at any time with the approval of the Manager – Resource Consents. In that regard, the Manager – Resource Consents shall not unreasonably withhold his or her approval, and in particular will not refuse approval to changes to the plan made necessary as a result of expansion of facilities within the site on the sole ground that such expansion is not consistent with the plan as originally approved.

20. The general landscaping plan for the ARWCF approved by the Council with the outline plan of works for the ARWCF on 10 September 2004 shall apply to the site.

21. The general landscaping plan required under condition 20 above may be altered at any time, provided the changes to the plan are in general accordance with the plan which was approved by the Council.

22. The Minister shall implement the visual mitigation screening strategy within 6 months of completion of initial building construction for the ARWCF and shall thereafter maintain the planting to the satisfaction of the Council.

23. The Minister shall implement the ecological planting within 6 months of completion of initial building construction for the ARWCF and shall thereafter maintain the planting to the satisfaction of the Council.

24. The Minister shall implement the remainder of the general landscaping plan within 15 years of the ARWCF being occupied.

Lighting

25. All exterior lighting plans shall be submitted to the Manager – Resource Consents prior to the commencement of Construction Work. The lighting plans shall show and describe the location, type and intensity of lighting for facilities where external lighting is planned on the site and be approved to the satisfaction of the Manager – Resource Consents, taking into account the security requirements of the corrections facility.

Noise

26. All sleeping areas within the ARWCF shall be provided with acoustic insulation against noise from the adjacent Quarry and Business 5 and 6 zones so that internal noise within the ARWCF resultant from offsite activities does not exceed L10 35dBA 35dB LA10 and Lmax 55 dBA with external doors and windows closed. These spaces shall also be provided with alternative ventilation in accordance with the requirements of the New Zealand Building Code, subject to the satisfaction of the Manager – Resource Consents.

27. Any noise from construction work (as defined in Chapter 18 of the Auckland Council District Plan (Manukau Section) 2002) emanating from the site shall comply with the relevant requirements of the Auckland Council District Plan (Manukau Section) 2002.

28. Sound levels shall be measured and monitored by the Minister in accordance with New Zealand Standard NZS 6802:1999, Assessment of Environmental Sound and the results of the monitoring shall be compiled in a report to be submitted to the Manager – Resource Consents within 6 months of the opening of the ARWCF.

29. Should the results of the monitoring required by Condition 28 indicate that the facility does not comply with the noise limits specified, then discussions shall take place between the Minister and the Manager – Resource

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Consents to resolve this matter and remedy it as soon as is reasonably practicable.

Air

30. The Minister shall undertake monitoring of VOCs, including benzene, in relation to the ARWCF to the satisfaction of the Manager – Resource Consents, the results of which shall be forwarded to the Manager – Resource Consents as and when required. Monitoring shall be conducted simultaneously at two locations:

- a. One at the northern façade of the closest building to the northern boundary of the site which is required to have mechanical ventilation pursuant to condition 4(b); and
- b. The other at a location adjacent to the southern boundary of the site.

31. Monitoring required under condition 30 shall consist of passive sampling with 3M badges in accordance with NIOSH Method 1500 & 1501 or equivalent method approved by the Manager – Resource Consents, to produce monthly average concentrations, and shall be undertaken:

- a. For a period of 12 months commencing not more than one month from the date of confirmation of this designation; and
- b. In any further 12 month period or periods following receipt of written notice from the Manager – Resource Consents that there has been a significant change in the operations at the WOSL site. Results shall be recorded and made available to the Manager – Resource Consents on request. A report on the monitoring programme shall be presented to the Manager – Resource Consents at the end of each 12 month monitoring period. For the purposes of this condition and condition 32 below, a "significant change in the operations at the WOSL site" includes:
 - The commissioning of new fuel tanks within 100 metres of the northern boundary of the ARWCF site; and/or
 - Increases in total storage tank capacity on the WOSL site of more than 40% above 116 million litres, being the capacity on the WOSL site that existed at the confirmation of this designation; and/or
 - Any other change that, in the opinion of the Manager – Resource Consents, could give rise to significant increases in the concentration of VOCs, including benzene, on the ARWCF site.

32. In addition to monitoring required under condition 31 the Minister shall, from the date that the ARWCF opens, commence a field odour monitoring programme for the succeeding 12 months and repeat this five years thereafter and/or in any 12 month period or periods following receipt of written notice from the Manager – Resource Consents that there has been a significant change in the operations at the WOSL site.

- a. The monitoring shall be undertaken by an individual whose olfactory sensitivity complies with the requirements of an odour panellist used in dynamic olfactometry as stipulated in AS/NZS 4323.3:2001 (Stationary Source Emissions — Determination of Odour Concentration by Dynamic Olfactometry).
- b. Odour shall be assessed at no less than five locations in the vicinity of the ARWCF. At least one location will be on the northern boundary fence, and another in a position near the accommodation unit that is closest to that fence.
- c. The odour assessment method shall follow the "single measurement" procedures set out in the German Standard VDI 3940 (Determination of Odorants in Ambient Air by Field inspections).
- d. The location, day, time and atmospheric conditions shall be recorded at the time the assessments are made.
- e. Subject to (g) below, assessments at each location shall as far as practicable be undertaken once per week, with no less than 50 assessments undertaken of each site over the 12 month period. The assessment day and time shall be determined in conjunction with the Manager – Resource Consents and Wiri Oil Services Limited, and shall aim to ensure that:
 - i. The assessments achieve a representative measure of odours at the ARWCF and account for activities at WOSL that may have the potential to cause odour; and
 - ii. Information that is necessary for the Manager – Resource Consents to review the monitoring regime pursuant to (g) below to focus monitoring upon times when odour events are more likely is collected as efficiently as possible.
- f. Results shall be recorded and made available to the Manager – Resource Consents on request. A report on the monitoring programme shall be presented to the Manager – Resource Consents at the end of each 12 month monitoring period.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

g. The Manager – Resource Consents may, if it considers it appropriate having regard to the monitoring results received pursuant to paragraph (e) above, require changes to be made to the monitoring regime so as to focus upon times and/or days of the week when odour events are more likely to occur. Such changes will be made by written notice provided to the Minister or his or her representatives. For the avoidance of doubt, no such alteration to the monitoring regime shall increase its duration beyond 12 months, require monitoring to be undertaken at more than five locations on the site, or require a total of more than 50 assessments of each site to be undertaken during the monitoring period.

33. The Minister shall from the date the ARWCF opens log all air quality complaints received. The complaint details shall include:

- a. The date, time, position and nature of the complaint;
- b. Location within the corrections facility of the complaint and, unless the complainant elects not to supply those details, their name, phone number and address; and
- c. Any remedial actions undertaken. Details of any complaints received shall be provided to the Manager – Licencing & Compliance within seven days of receipt of the complaint(s).

34. If the Council reaches the view that an odour nuisance and/or health effects may be occurring within the site, based on:

- a. The frequency or nature of odour complaints received by the Council (pursuant to condition 33 or otherwise); and/or
- b. Monitoring required under conditions 30, 31 and 32, the Manager – Resource Consents will appoint an independent air quality expert to undertake an investigation and make recommendations pursuant to condition 35 below. The independent air quality expert will be chosen by the Manager – Resource Consents, Wiri Oil Services Ltd and Department representatives. The costs of such expert will be paid for by the Department.

35. In the event that an independent air quality expert is appointed under Condition 34, he or she shall be instructed to undertake an investigation of the site over a period of not less than two weeks and not more than six weeks to determine whether, in his or her professional view, the installation of the filtration equipment specified in condition 4(b) is justified so as to mitigate or avoid odour nuisance and/or health effects.

36. In the event that the independent air quality expert recommends the installation of filtration equipment under condition 35 above, the Minister shall ensure that the specified filtration equipment is fully installed and operational within three months of the date the recommendation is received by the Minister.

Archaeological or Cultural Artefacts

37. The small triangle of land in the south-western corner of the subject site, which includes remnants of a historic stone wall, stone structures, a midden and the spring, shall be excluded from any earthworks and building development (excluding fencing). This area of land is identified as area "C" on plan '21095', dated 9 October 2003 (as amended by the Heritage Areas Plan prepared by Boffa Miskell, Figure 2, Revision F, dated 25 March 2011).

38. The Minister shall carry out consultation with Ngati Te Ata and Te Akitai (and any other mana whenua group subsequently recognised), for any works that are proposed by the Minister within an area identified as a "Remnant Cultural Landscape Feature" shown on the Heritage Areas Plan, prepared by Boffa Miskell, Figure 2, Revision F, dated 25 March 2011. In this regard, consultation should address the following:

- a. Whether any matters pertaining to tangata whenua protocols need to be addressed;
- b. Whether the works afford appropriate acknowledgement of the status of the Area of Significance to Tangata Whenua;
- c. Whether the works take into account the necessary tangata whenua protocols; and
- d. Whether there is a need for tangata whenua monitors to be appointed to monitor earthworks on any part of the site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Minister shall not be in breach of this condition if any tangata whenua group declines to consult.

39. In the event of archaeological features being uncovered (e.g. shell midden, hangi, oven stones, pit depressions, defensive ditches, artefact material, gardening soils or koiwi tangata (human skeletal remains), work shall cease within a 10m radius of the discovery and the Manager – Resource Consents, the New Zealand Historic Places Trust Regional Archaeologist and the appropriate iwi authorities shall be contacted within 72 hours so that appropriate action can be taken.

Advice Note:

The requirement set out in Condition 39 above includes the appropriate iwi authorities and the New Zealand Historic Places Trust being given a reasonable time to record and recover archaeological features discovered before work may recommence there. Work should not recommence until the New Zealand Historic Places Trust has given approval for work to continue.

Ecological Protection

40. Any works that create the potential for inflows of sediment and nutrients into waterways (e.g. the Puhinui Creek mangrove area) and the Manukau Harbour shall comply with the Auckland Regional Council sediment control guidelines and Council requirements.

Advice Note:

At the time the Notice of Requirement for the alteration for the designation for the MCF was lodged, the relevant sediment control guidelines are ARC Technical Publication 90 "Erosion & Sediment Control Guidelines for Land Disturbing Activities in the Auckland Region".

Community Impact Forum (CIF)

41.

a. The Minister shall establish and coordinate a Community Impact Forum (CIF) and appoint an independent chairperson in consultation with the Minister of Māori Affairs and the Council on such terms and conditions as the Minister sees fit; and

b. The CIF shall include the prison management from both the ARWCF and the MCF, the Community Liaison Officer (CLO) for the Comprehensive Corrections Facilities on the site, the Council, and one representative from those of the Manurewa, Papakura, Mangere-Otahuhu, and Otara-Papatoetoe Local Boards that wish to be involved. The Minister shall also invite, as a minimum, 1 representative from the following parties to join the membership of the CIF:

- Mana whenua representatives, being Ngati Te Ata, Te Akitai (and other mana whenua group subsequently recognised) and 1 other tangata whenua representative appointed on the nomination of the Tangata Whenua Committee;
- Local resident and community groups;
- Local business community;
- Department of Corrections including relevant service areas;
- Department of Conservation;
- Ministry of Social Development;
- Child Youth and Family Services;
- Management of the Korowai Manaaki Youth Justice Facility;
- Management of the Weymouth Northern Residential Centre;
- Housing New Zealand;
- Counties Manukau District Health Board;
- Māori service providers to the Comprehensive Corrections Facilities;
- Pacific Island service providers to the Comprehensive Corrections Facilities;
- Te Puni Kōkiri;
- Other social infrastructure and service providers (both government and not for profit) that the CIF agrees as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

appropriate for example; local NGOs, youth representatives, local schools, and early childhood education centres/ kindergartens;

- New Zealand Police (including representatives from Counties Manukau Police District);
- Wiri Oil Services Limited; and
- New Zealand Transport Agency.

CIF Purpose

42. The purpose of the CIF is as follows:

- a. To provide a forum for community and stakeholder involvement through which any issues of community interest or concern can be raised and responded to in relation to the construction of the MCF and the presence and operation of the ARWCF and the MCF including any Outline Plans of Works prepared by Corrections.
 - b. To provide a forum for Corrections to inform the CIF and its members concerning actions taken through its relationships with service providers and government agencies to facilitate the effective provision of social infrastructure, social support and health services to the ARWCF and MCF and to seek the input of the CIF and its members on these matters.
 - c. To develop, review, implement and report on a Social Impact Monitoring Plan (SIMP) that will be used by Corrections in conjunction with other agencies with relevant responsibilities to address any adverse social and cultural effects and community based service delivery and rehabilitation needs attributable to the presence and operation of the ARWCF and the MCF.
 - d. To receive and consider the findings of the SIMP to allow the relevant agencies on the CIF (including Corrections) to respond as appropriate in accordance with condition 52.
 - e. With reference to the SIMP, to identify and promote opportunities to provide mutual benefit for the Comprehensive Corrections Facilities and the local community (for example the provision of local goods and services and employment opportunities) and to support where relevant the achievement of the community outcomes outlined in Tomorrow's Manukau – Manukau Apopo 2006-2016 or other succeeding documents, strategies or frameworks such as Local Board plans.
 - f. To provide a forum for the promotion of policy and programme integration and crosssector collaboration at the local and regional levels, where the effects of the ARWCF and the MCF have relevance to other policy areas;
 - g. To consider issues relating to compliance with designation conditions;
 - h. To recommend project and scheduling priorities to the Social Impact Fund Allocation Committee established under condition 55 for consideration, scheduling and funding.
- CIF Operating Procedures

43. The CIF shall be formed prior to the commencement of the Construction Work on the MCF and no later than 1 February 2012. The CIF shall have its first meeting in February 2012 following appointment of the independent social impact assessment specialist pursuant to condition 48 and circulation of the draft brief for preparation of the SIMP pursuant to condition 51(a). Meetings shall be convened once every 3 months thereafter, unless otherwise sought by the majority of its members.

44. Meetings will be held at times and locations that maximise representation and attendance.

45. The Minister will offer an honorarium to CIF members (including the independent chair appointed pursuant to condition 41(a)) for participants not members of Government Agencies to cover the reasonable expenses in attending meetings. The amount of this honorarium will be at the sole discretion of the Minister. The Minister shall also be responsible for any direct costs of running the meetings.

46. The Minister shall not be in breach of Condition 41 if any one or more of the parties, specified in Condition 41, either do not wish to be members of the CIF or do not attend particular meetings.

47. The CIF shall formulate its Terms of Reference that will include:

- a. Defined roles and responsibilities of its members, to achieve the purposes of the CIF.
- b. A process for reviewing membership and roles of the Minister and other groups and agencies involved in the CIF.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. Procedural matters for the running and recording of meetings, including decision making and quorums for meetings.
- d. The establishment of a working group for the purpose of managing the preparation of the SIMP required by Condition 49 and subsequent annual reviews of the SIMP.

Social Impact Monitoring Plan (SIMP)

48. A suitably qualified independent social impact assessment (SIA) specialist (whose appointment shall be agreed by the Council) shall be engaged by 1 January 2012 to prepare a Social Impact Monitoring Plan (SIMP).

49. The Purpose of the SIMP is to provide a framework to identify, assess, monitor, manage, and re-assess the social and cultural effects (positive and negative) of the ARWCF and MCF on the community, and also provide an annual report on compliance with designation conditions.

SIMP Content and Procedure

50. The SIMP will be based on best practice guidelines and procedures for social impact assessment and shall include:

- a. A social impact assessment, which shall be undertaken by the independent SIA specialist, to provide a baseline of potential effects.
- b. Alignment with the community outcomes sought in Tomorrow's Manukau – Manukau Apopo 2006-2016 or other succeeding documents, strategies or frameworks such as Local Board plans.
- c. A set of indicators covering the drivers and outcomes of potential social and cultural effects attributable to the presence and operation of the ARWCF and/or the MCF. This may include:
 - Changes in demand associated with the ARWCF and MCF on social infrastructure and social services (such as health, housing, education, police);
 - Capacity of the social infrastructure and service providers to respond to increases in demand for social infrastructure and social services associated with the ARWCF and MCF;
 - Community views (positive and negative) associated with the ARWCF and the MCF (e.g. concerning matters such as community safety, the future of the community and its children, and community aspirations);
 - Details of any formalised arrangements and agreements between the Minister and other government agencies in relation to providing supporting services or funding for prison-related activities;
 - Number of prison staff living in or moving into the local area, their transport requirements and accommodation needs;
 - Number of prisoner families living in or moving into the local area, their transport requirements and accommodation needs;
 - Number of released prisoners living in or moving into the local area, their transport requirements and accommodation needs;
 - Number of visitors, their transport requirements and accommodation needs;
 - Changes in local crime statistics, including gang activity;
 - Employment and training opportunities within the local community;
 - Employment and training opportunities for prisoner rehabilitation purposes;
 - Opportunities for training and employment at the Comprehensive Corrections Facility(s);
 - Other relevant indicators as identified and agreed to by the CIF from time to time.
- d. An annual report on compliance with designation conditions.
- e. An annual report on the identification, monitoring, evaluation and management of the effects outlined in the SIMP indicators, together with a summary of matters raised with the CIF and how they have been responded to by the CIF and its members.

51. The following procedures shall apply to the preparation of the initial SIMP and to subsequent annual reviews:

- a. A draft brief to the appointed SIA specialist detailing the scope of work for preparing the initial SIMP shall be prepared by the Minister and agreed with the Council prior to the first meeting of the CIF and shall be circulated

The Proposed Auckland Unitary Plan (notified 30 September 2013)

to the CIF's members prior to the CIF's first meeting.

b. The contents of the final brief to the independent SIA specialist shall be considered and agreed by a majority of CIF members at the first meeting of the CIF.

c. The initial SIMP shall be prepared by the independent SIA specialist with the participation and input of the Minister, the Tangata Whenua Committee, CIF and CLO.

d. The initial SIMP shall be prepared prior to the commencement of Construction Work on the MCF and within 6 months of the approval of the brief to the independent SIA specialist (whichever is the earlier).

e. The SIMP shall be reviewed by an independent SIA specialist annually thereafter with the participation and input of the Minister, the Tangata Whenua Committee, CIF and CLO.

f. Both the initial SIMP and subsequent annual reviews will be made publicly available through the Department of Corrections website and by any other suitable means, and shall be forwarded to the Manager – Resource Consents, the Manurewa Local Board and the CIF, and to the Manukau Library and Te Matariki Clendon Library.

Matters Arising from the SIMP

52. Any social and cultural effects attributable to the presence and operation of the ARWCF and/or the MCF (in whole or in part) and identified through the SIMP shall be dealt with by the Minister according to the following process:

a. The Minister in conjunction with the Tangata Whenua Committee, CIF and the independent social impact assessment specialist will determine where responsibility lies to address any social/cultural effect identified in the SIMP (specifically, whether it is the responsibility of the Minister, other parties, or the Minister in combination with other parties to deal with the social/cultural effect identified).

b. Where there is disagreement between the Minister and the CIF as to:

i. Whether the social and cultural effects are attributable to the ARWCF and/or the MCF (in whole or in part);

ii. The measures required to be undertaken to avoid, remedy or mitigate those effects; or

iii. Whether it is the Minister's responsibility to address any issue (in whole or in part);

an independent and appropriately qualified and experienced arbitrator, agreeable to the Council and the Minister, shall be promptly engaged at the Minister's cost to determine the cause of the social and cultural effects and the measures to be undertaken to avoid, remedy or mitigate the social/cultural effect identified. The independent arbitrator shall consider the findings of the SIMP, the views of the CIF members including the reasons for disagreement, and shall determine whether the effects are attributable to the ARWCF and/or MCF, and if necessary, appropriate measures required to be undertaken to avoid, remedy or mitigate the effects. The independent arbitrator shall also determine whether any matter is within the Minister's responsibility to address, in the event of any disagreement in that regard. The independent arbitrator shall, as soon as possible, issue his or her decision on the matter. In making the decision, the independent arbitrator shall be entitled to seek such further information and hear from the parties as he or she thinks fit.

c. The Minister shall take all reasonable steps to ensure that social and cultural effects identified in the SIMP as attributable to the ARWCF and/or the MCF (in whole or in part), or any effects identified in a decision by an independent arbitrator appointed pursuant to condition 52(b) above, and which are within the Minister's responsibility to address (whether in whole or in part), are appropriately avoided, remedied or mitigated as soon as practicable. To the extent that any matter is outside the responsibility of the Minister to address, he or she will request appropriate Ministers, or any other relevant party, to take such measures as are necessary to avoid, remedy or mitigate the adverse effects of those matters.

d. The Minister shall have available at least \$250,000 budgeted each year ("the social impact fund") to ensure that those social and cultural effects identified in Condition 52(c) as being attributable to the ARWCF and/or the MCF within the Minister's responsibility are appropriately avoided, remedied or mitigated.

e. Any unused portion of the social impact fund made available in any given year pursuant to this condition shall accumulate from year to year to a maximum of \$500,000.

f. The fund and maximum shall be CPI adjusted at 1 July each year. Tangata Whenua Committee and Māori stakeholder consultation

53.

a. The Minister shall establish a Tangata Whenua Committee for the purpose of consultation and advice

The Proposed Auckland Unitary Plan (notified 30 September 2013)

regarding any matters of cultural concern that might arise with respect to the operation or programmes of either of the prisons on the site.

b. Unless otherwise agreed, the Committee shall meet at least 3 monthly and be cochaired by those representatives acknowledged as being mana whenua. The first meeting of the Committee shall take place no later than 6 months following the confirmation of the alteration to Designation 288 and shall be facilitated by the manager of the ARWCF.

c. The membership of the Committee shall include 1 representative from each of the following:

- Ngati Te Ata;
- Te Akitai Waiohau
- Te Kawerau Iwi Tribal Authority
- Huakina Development Trust
- Ngāi Tai Umupuia Te Waka Tōtara Trust ;
- Ngāti Paoa Trust;
- Ngāti Tamaoho Trust;
- Ngāti Whātua o Ōrākei Māori Trust Board;
- Waikato-Tainui Te Kauhanganui Incorporated.

d. The Committee shall determine its own procedures and may, with the Minister's approval, invite other relevant tangata whenua to appoint representatives in addition to those named in this condition.

e. The Minister will offer an honorarium to committee members for participants not members of Government Agencies to cover the reasonable expenses in attending meetings. The amount of this honorarium will be at the sole discretion of the Minister. The Minister shall also be responsible for the direct costs of running the meetings.

f. The Minister shall not be in breach of this condition if any one or more of the parties specified either do not wish to be members or do not attend particular meetings.

54. Prior to the submission of the Outline Plan of Works, the Minister shall ensure that comments are sought from Māori stakeholders groups, including but not limited to those set out below, on the operation of the proposed MCF. The comments will inform the operation of the proposed MCF, particularly as it relates to the rehabilitation and reintegration of Māori prisoners. A report recording these comments will be provided to the Manager – Resource Consents with the Outline Plan of Works. These Māori stakeholder groups may include but are not limited to the following:

- Ngati Te Ata;
- Te Akitai Waiohau;
- Te Kawerau Iwi Tribal Authority;
- Hoani Waititi Marae Trust;
- Manukau Urban Māori Authority;
- Huakina Development Trust;
- Māori Women's Welfare League;
- National Māori PHO Coalition;
- Ngāi Tai Umupuia Te Waka Tōtara Trust;
- Ngāti Paoa Trust;
- Ngāti Tamaoho Trust;
- Ngāti Whātua o Kaipara ki te Tonga (Ltd);
- Ngāti Whātua o Ōrākei Māori Trust Board;
- Orakei Marae;
- Ruapotaka Marae;
- Manurewa Marae;
- Te Wananga O Aotearoa;
- Tumutumu Marae Trustees Committee;
- Waikato Raupatu Lands Trust;
- Waipareira Trust.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Social Impact Fund Allocation Committee ("SIFAC")

55. The Minister shall establish a Social Impact Fund Allocation Committee whose purpose is to allocate, review and oversee the funds made available by the Minister under condition 52(d) for the purposes recommended to it from the CIF and/or the Tangata Whenua Committee.

- a. The SIFAC shall be chaired by the chairperson appointed to the CIF.
- b. There shall be no more than 7 members of the SIFAC of whom at least 2 shall be appointed by the Minister (one of whom shall be appointed in consultation with the Minister of Māori Affairs), at least 2 shall be appointed by the Council, and up to 2 may be co-opted by the SIFAC following its establishment.
- c. Other than the Chair, no member may also be a member of the CIF unless that is the unanimous resolution of the SIFAC.
- d. The SIFAC shall determine its own proceedings but must report on its activities annually to the Minister and the Manager – Resource Consents. The SIFAC must determine a quorum for the purpose of any significant decision or recommendation.
- e. The Minister shall provide a secretariat to the SIFAC – who may be the Community Liaison Officer.
- f. A member shall be appointed for a term of 3 years and may be reappointed at the end of any such term. A vacancy created by a member retiring or resigning for any reason may be filled in such manner as the SIFAC determines.
- g. The Minister will offer an honorarium to SIFAC members for participants not members of Government agencies to cover the reasonable expenses in attending meetings. The amount of this honorarium will be at the sole discretion of the Minister.
- h. The SIFAC shall cease to exist when the fund created under condition 52(d) ceases and all allocations and reviews have been finalised.

Community Liaison Officer (CLO)

56. The Minister shall appoint an appropriately qualified Community Liaison Officer (CLO) in accordance with the following provisions:

- a. The CLO shall be appointed in consultation with the Council, and on terms and conditions agreed in consultation with the Council, by 1 December 2011.
- b. The responsibilities of the CLO shall include:
 - i. Providing advice to the CIF on appropriate Terms of Reference prior to its first meeting;
 - ii. Ongoing liaison with the independent SIA specialist;
 - iii. Proactively engaging with stakeholders and community, including the members of the CIF
 - iv. Assistance in the preparation of the SIMP;
 - v. Attendance at community meetings and forums as required to engage on issues of relevance to the MCF (including during its construction) and ARWCF; and
 - vi. Attendance at CIF, SIFAC and Tangata Whenua Committee meetings where invited.
- c. The CLO shall be remunerated by Corrections.

Existing ARWCF Community Liaison Group

57. Until such time as the CIF required under Condition 41 is established, the following conditions (58-62) relating to the existing community liaison group for the ARWCF shall apply.

58. The Minister shall establish and co-ordinate a community liaison group which shall comprise a minimum of one representative of each of the following parties:

- The Council;
- Ngati Te Ata and Te Akitai (and any other mana whenua group subsequently recognised);
- Local residential community landowners/community;
- Department of Corrections Management team;
- New Zealand Police;
- Wiri Oil Services Limited.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The community liaison group will be an ongoing point of contact between Corrections and the community. The group shall be formed within four months of building construction commencing and shall have its first meeting at that time.

59. The Minister shall be responsible for convening the meetings of the community liaison group and shall cover the direct costs of running those meetings and the costs associated with any actions which are agreed to as a result of the meetings.

60. The Minister shall provide an opportunity for the Community Liaison Group to meet at least twice during any 12 month period and also when otherwise sought by the majority of its members.

61. The Minister shall not be in breach of Conditions 58–60 if any one or more of the named groups, specified in Condition 58, either do not wish to be members of the ARWCF Community Liaison Group or do not attend particular meetings.

62. At a minimum, matters to be considered, and recommendations made on, by the Community Liaison Group shall include the following:

- a. Any strategy to be developed by the Minister to ensure that opportunities are provided to the local community for employment associated with the construction and operation of the ARWCF.
- b. A notification network and community response guidelines in the event of an escape from the ARWCF facilities, as well as a point of contact of the facilities for members of the community to call if any issues arise.

Emergency Planning

63. An upgraded emergency management plan (“EMP”) for the ARWCF and the proposed MCF, incorporating evacuation management, shall be developed in consultation with Wiri Oil Services Limited and New Zealand Transport Agency and be submitted to the Council, for the approval of the Council Civil Defence Controller, in conjunction with the Chief Fire Officer Manukau, and the District Commander Counties-Manukau Police. The EMP shall include 24 hour contact details for the facilities in the event of an emergency.

64. The upgraded EMP shall be prepared in two stages. The first stage shall be the upgraded EMP for the ARWCF and shall be submitted to the Council (Civil Defence Controller) within three (3) months of the alteration to the designation being confirmed. The plan shall be developed to particularly address the potential for a vapour cloud explosion from the Wiri Oil terminal. It will include identification of “safe areas” to which people can be evacuated in the event of such an emergency, which may include areas within or outside of the ARWCF secure perimeter (including if required within the non-secure perimeter area of the MCF).

65. Any safe areas identified in the EMP as being outside of the ARWCF and necessary for the emergency evacuation of women prisoners, shall be identified on the Outline Plan of Works for the MCF and be reserved during both construction and operation of the MCF (provided that, during construction, such areas may be moved within the site, provided sufficient area and safe access from the ARWCF is maintained at all times).

66. The upgraded EMP for the ARWCF shall incorporate the findings of a structural assessment of all existing buildings at ARWCF in relation to the 0.5 x 10⁻⁶ risk contour for a vapour cloud explosion for the future growth scenario as modeled in the Sherpa Report¹ from the Wiri Oil terminal. The structural assessment shall be undertaken by a suitably qualified engineer as soon as practicable and shall identify the safe buildings at ARWCF within or to which people can be evacuated in the event of an imminent risk of vapour cloud explosion from the Wiri Oil terminal.

67. The plan will also include procedures by which the total and overnight accommodated population numbers on site are managed, recorded and reported to ensure compliance with the thresholds stated in condition 112.

68. The second stage shall be the upgraded EMP for the MCF and shall be submitted to the Council (Civil

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Defence Controller) prior to the occupation of the MCF.

Wastewater Drainage

69. Adequate provisions shall be made for the disposal of wastewater. This shall involve the extension of the existing public systems from an adequate system to and within the site to provide each building with individual connection points and provision for the upstream catchment(s) in accordance with the Engineering Performance Standards of the District Plan. Engineering plans shall be submitted to Watercare Services and shall be certified as approved prior to the commencement of Construction Work on site.

Water Supply

70. Adequate provision shall be made for the supply of water. This shall include the extension of the existing public system to provide buildings with connection points and provision for surrounding district in accordance with Council's Engineering Performance Standards of the District Plan. Engineering plans shall be submitted to Watercare Services and shall be certified as approved prior to the commencement of Construction Work on site.

Water Quality Pond Management

71. The Minister shall provide Manager – Resource Consents with a copy of the Stormwater Quality Pond Management Operation and Maintenance Plan (that shall include but not be limited to the following):

- a. Outfall structure maintenance of Pond No's 3 and 5.
- b. Post-storm event maintenance procedure.
- c. The frequency of regular maintenance and inspections.
- d. General inspection checklists for all aspects of the stormwater management systems.

72. The Minister shall provide Manager – Resource Consents with a copy of the as-built plans (that shall include but not be limited to the following):

- a. As-built plans of the stormwater management system shall be submitted to the Manager – Resource Consents within thirty days (30) after completion of the stormwater management system;
- b. The surveyed locations and elevations of all stormwater structures, which shall be measured to the nearest 0.1 metre with co-ordinates expressed in terms of the New Zealand Mapping Grid and DOSLI datum;
- c. Stormwater management device details including locations, dimensions, volumes, flood levels, sections, treatment efficiencies, inlet, discharge rates and outlet structures'
- d. Elevations of all inflow and outflow structures;
- e. All flowpath dimensions including emergency flowpaths and the relationship to the Annual Exceedence Probability; and
- f. Documentation of any discrepancies between the approved plans and the 'as-built' plans.

Land Modification

73. All land modification works shall be undertaken in such a manner as to ensure that beyond the boundary of the site there shall be no 'dust' or 'soil erosion/siltation', which in the opinion of the Manager – Resource Consents, is objectionable, offensive or has the potential to create an adverse effect on the receiving environment.

74. If considered necessary by the Manager – Resource Consents, control measures consisting of an all-weather construction entrance will be installed. Such control measures will consist of a stabilised pad of aggregate on a filter cloth base at the construction site entrance/exit to ensure that any vehicles leaving the site do not deposit soil and other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Minister of Correction's expense. Any major movement of excavated material from the site may require the installation of a wheel wash for trucks at the construction site entrance.

75. The Minister shall ensure that the land within the site and the land on adjoining properties shall remain stable at all times with respect to the approved on-site excavation works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

76. Adequate provision shall be made during the earthworks construction for the protection and/ or relocation of all existing public drains within the site. Any damage to public drains that may occur during the development shall be the Minister's responsibility.

Network Utility Services

77. Power and telephone services shall be installed underground to provide service connections to the correctional facility and shall be located entirely within the boundaries of the site.

Maximum Prisoner Accommodation

78. Prisoner accommodation within the MCF shall be limited to that required for the management of 1060 prisoners.

79. Prisoner accommodation within the ARWCF shall be limited to that required for the management of 480 prisoners. This condition is subject to conditions 112 and 113.

In addition to the other conditions above, the following conditions (80 – 107 and 115 – 121 and 123- 124) shall only apply to the MCF.

Security Level at the MCF

80. There shall be no maximum security prisoner accommodation at the MCF.

Development Controls

81. Building heights shall not exceed the RL height limits in the separate areas shown on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011):

Area 1: RL 24.5 metres or four storeys, whichever is the lower.

Area 2: RL 19.5 metres.

(RL above DOSLI datum 1946).

Exemptions from this condition are as follows:

Area 1:

- Sloping roofs (limited to either gable or hip) and rooftop projections, including lift rooms and plant not exceeding 3 metres above the height limit in condition 81(a) above.
- Lighting, security and communication devices, including poles for lighting and surveillance equipment not exceeding 6 metres above the height limits in condition 81(a) above.

Area 2:

- Sloping roofs (limited to either gable or hip) and rooftop projections, including lift rooms and plant not exceeding 2 metres above the height limits in condition 81(b) above.
- Lighting, security and communication devices, including poles for lighting and surveillance equipment not exceeding 2 metres above the height limits in condition 81(b) above.

82. The external face of the secure perimeter wall or fence shall not exceed an overall height of 6 metres above finished ground level, provided that the maximum height of the wall or fence shall not exceed RL 27.5 metres in Area 1 and RL 21.5 metres in Area 2 as shown on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011). The exterior face of the secure perimeter shall be no closer than 13.5 metres to the external boundaries of the site.

For the purposes of this condition 'finished ground level' shall be measured at the exterior side of the secure perimeter wall or fence.

83. Site coverage shall be no greater than 32% of Area 1 and 20% of Area 2 as shown on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011):

The Proposed Auckland Unitary Plan (notified 30 September 2013)

For the purposes of this condition the area used to calculate 'site coverage' means that portion of Areas 1 and 2 shown on the Development Plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011) covered by buildings. Included in the term "buildings" for the purpose of this definition are accessory buildings, and those parts of the site covered by overhanging buildings, but not fences or walls, eaves, pergolas, slatted open decks, or similar structures of a substantially open nature.

84. The Gross Floor Area ("GFA") for all buildings within Areas 1 and 2, as shown on the development plan (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011), shall not exceed a total of 75,000m².

For the purposes of this condition 'GFA' means the following: GFA is the sum of the gross area of the several floors of all buildings on a site, measured from the exterior faces of the exterior walls, or from the centre lines of walls separating two buildings or, in the absence of walls, from the exterior edge of the floor.

Except as otherwise provided, where floor to floor vertical distance exceeds 6m, the GFA of the building or part of the building so affected shall be taken as the volume of that space in cubic metres divided by 3.6.

In particular, GFA includes:

- Basement space except as specifically excluded by this definition;
- Elevator shafts, stairwells and lobbies at each floor unless specifically excluded by this definition;
- Interior roof space providing headroom of 2.4m or more whether or not a floor has been laid;
- Floor spaces in interior balconies and mezzanines;
- Floor space in terraces (open or roofed), external balconies, breezeways, porches if more than 50% of the perimeter of these spaces is enclosed, except that a parapet not higher than 1.2m or a railing not less than 50% open and not higher than 1.4m shall not constitute an enclosure;
- All other floor space not specifically excluded.

The GFA of a building shall not include:

- Uncovered steps;
- Interior roof space having less than 2.4m headroom;
- Floor space in terraces (open or roofed), external balconies, breezeways or porches. (A "breezeway" is a roofed outdoor area). Provided that not more than 50% of the perimeter of these spaces is enclosed and provided that a parapet not higher than 1.2m or a railing not less than 50% open and not higher than 1.4m, shall not constitute an enclosure;
- Pedestrian circulation space;
- Space for stairs, escalators and elevators servicing a floor or that part of a floor used only for carparking or loading;
- Required off-street parking and/or loading spaces;
- Carparking in basement space (including manoeuvring areas, access aisles and access ramps).
- Non-habitable floor space in approved structures.

85. The sum total of all buildings within the MCF secure facilities area identified on the Development Plan for the MCF (Figure 1, Revision B, prepared by Boffa Miskell, dated 12 May 2011) shall be designed to accommodate the requirement for the management of a maximum of 1060 prisoners.

Traffic

86.

- a. The principal operational access to the MCF (being the access for staff, service providers and visitors) shall be from either Hautu Drive or Kiwi Tamaki Road.
- b. Except as provided for by Condition 87 below, should Hautu Drive be the road that services the principal operational access for the MCF, the following mitigation works shall be undertaken by the Minister or their nominee prior to the occupation of the MCF, and operational limits maintained during its operation:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

i. Works on the Hautu Drive/Roscommon Road intersection as follows:

- Increase the right-turn bay out of Hautu Drive to a minimum length of 50 metres; and
- Increase the right-turn bay on Roscommon Road into Hautu Drive to a minimum length of 100 metres.

ii. Other operational controls as follows:

- Public visiting hours shall not start or finish during the periods 6.30am - 9.30am or between 4.00pm and 6.30pm on weekdays.
- Custodial shift change-overs shall not occur within the period between 6.30am – 9.30am and 4.00pm – 6.30pm.

c. Except as provided for by Condition 87 below, should Kiwi Tamaki Road be the road that services the principal operational access for the MCF then the following mitigation works shall be undertaken by the Minister or their nominee prior to the occupation of the MCF, and operational limits maintained during its operation:

i. Works on the Kiwi Tamaki Road /Roscommon Road/Bolderwood Place intersection as follows:

- Signalisation of the Kiwi Tamaki Road /Roscommon Road/ Bolderwood Place intersection;
- Increase the right turn bay on Roscommon Road into Kiwi Tamaki to a minimum length of 100 metres; and
- Provide a right turn bay out of Kiwi Tamaki Road to a minimum length of 50 metres.

ii. Other operational controls as follows:

- Public visiting hours shall not start or finish during the periods 6.30am - 9.30am or between 4.00pm and 6.30pm on weekdays.
- Custodial shift change-overs shall not occur within the period between 6.30am – 9.30am and 4.00pm – 6.30pm

87. A traffic impact assessment ("TIA") of the potential traffic effects of the MCF operation on the Hautu Drive/Roscommon Road or Kiwi Tamaki Road/Roscommon Road intersection shall be undertaken by a qualified traffic engineer and submitted to the Council with the Outline Plan of Works. The TIA shall include consultation with the New Zealand Transport Agency and Auckland Transport. The assessment shall model the traffic effects of the MCF on the intersection, taking into account the operational characteristics of the prison, including staff numbers, shift patterns, and visitor hours to determine whether the mitigation works and/or operational controls imposed by Condition 86 are required. In the event that the TIA determines the intersection performance can be maintained to a level of service acceptable to the Council and Auckland Transport, without some or all of the mitigation works or operational limits set out in Condition 86, then only such mitigation works or operational controls as are necessary to maintain a level of service acceptable to the Council and Auckland Transport are required.

88. A TIA of the potential construction traffic effects of the MCF on the Hautu Drive/Roscommon Road, Kiwi Tamaki Road/ Roscommon Road/ Bolderwood Place and/or McLaughlins Road (Vogler Drive)/Roscommon Road intersection shall be undertaken (whichever is used for construction traffic) by a qualified traffic engineer and submitted to the Council with the Outline Plan of Works. The TIA shall include consultation with the New Zealand Transport Agency and Auckland Transport, and shall determine the traffic effects of the construction of the MCF on the intersection(s), taking into account the construction duration, methodology, earthwork requirements and construction traffic access. In the event that the TIA determines the intersection performance cannot be maintained to a level of service acceptable to the Council and Auckland Transport, then such temporary works as are necessary shall be undertaken and maintained for the duration of construction to ensure an appropriate level of service.

Post operation monitoring condition

89.

- a. A traffic assessment survey of the actual traffic effects of the operation of the MCF on either Hautu Drive/Roscommon Road or the Kiwi Tamaki Road/Roscommon Road/Bolderwood Place intersection (depending on which one is used as the principal operational access) shall be undertaken by an independent and qualified traffic engineer on an annual basis commencing one year after the occupation of the MCF until such time as the MCF is fully occupied, or five years have elapsed since the initial occupation of the MCF, whichever occurs first.
- b. The traffic assessment survey shall be submitted to Manager – Resource Consents and Auckland Transport

The Proposed Auckland Unitary Plan (notified 30 September 2013)

for review within 2 months of a survey under the above condition.

c. The assessment should consider weekday and weekend peak trip generation, intersection Level of Service and queuing at the relevant intersection resulting from the operation of the MCF.

d. In the event that the traffic assessment survey determines either that:

i. The observed queuing into or out of the principal operational access exceeds the queue storage for these movements; or

ii. The traffic assessment survey determines that the existing level of service for the Roscommon Road through movements at the relevant intersection is "C" (Ausroad standards) or better (excluding traffic attributable to the men's prison) at the time of the survey, and as a result of traffic attributable to the men's prison the level of service for Roscommon Road through movements at the intersection are below the accepted limit of level of service "C" (Ausroad standards), then additional mitigation works within the legal road will be required to produce a level of service "C" (Ausroads standards) on Roscommon Road through the intersection.

e. Where the traffic assessment survey determines that the existing Level of Service for the Roscommon Road through movements at the intersection (excluding traffic attributable to the MCF) is below Level of Service "C" at the time of survey (i.e. either Level of Service "D" or "E"), then additional mitigation works within the legal road will only be required to maintain the existing Level of Service on Roscommon Road through the intersection.

f. Any additional mitigation works required by this condition shall be detailed in a mitigation plan which accompanies the traffic assessment survey referred to in this condition. The mitigation plan shall be provided to Manager – Resource Consents and Auckland Transport for approval together with the traffic assessment survey. The approved additional mitigation works shall be undertaken by the Minister or their nominee within 12 months of the approval by Manager – Resource Consents and Auckland Transport of the mitigation plan.

90. Any of the mitigation works required under Conditions 7 and 86-89 shall be undertaken by the Minister or their nominee at their cost.

Travel Demand Management

91. The Minister or their nominee shall submit a framework Travel Demand Management Plan ("TDMP") with the Outline Plan of Works for the MCF, for the purposes of encouraging increased use of public transport and active modes (such as walking and cycling) and ride share schemes as a means of travel to the site. The TDMP plan shall be prepared to the satisfaction of the authorised representative of Auckland Transport and shall address, but not be restricted to the following:

- a. Working with Auckland Transport to promote the aims outline above;
- b. Promotion of safe and sustainable travel for all users of the prison facility;
- c. Monitoring, review and amendment as appropriate of the facilities for active modes, public transport and ride share schemes; and
- d. How active modes, public transport and ride share will be encouraged and promoted.

The effectiveness of the TDMP shall be reviewed annually by the Minister or their nominee. The results of the review, including any new measures to encourage increased use of public transport and active modes, shall be reported within 2 months of the review to Auckland Transport.

Parking and Cycle Facilities

92. The parking required for the MCF under condition 7 shall include the allocation of at least 20 parking spaces for multi-occupancy vehicles and be located as close as practicable to the staff entrance. The use of these parking spaces shall be monitored, reviewed and supply adjusted as part of the Travel Demand Management Plan. Provision shall also be made for at least 10 covered and secured cycle stands for staff and 5 cycles stands for visitors, and a minimum of 2 (if not already provided) showers/changing rooms within the staff facilities.

Kiwi Tamaki Road

93. All reasonable steps shall be undertaken by the Minister to secure appropriate access arrangements to and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

from the MCF over the adjoining property to Kiwi Tamaki Road. In the event that such access is secured it shall serve as the principal access for the MCF and Hautu Drive shall only be used for emergency purposes, but Hautu Drive will continue to be the principal access to the ARWCF. In the event, however, that access from Kiwi Tamaki Drive cannot be secured, Hautu Drive will be the principal access for the MCF.

Lighting

94. All external lighting shall be designed by an appropriately qualified illumination engineer to comply with Australian Standard AS4282, and the final external lighting design plan shall be submitted to the **Manager – Resource Consents** for approval prior to the commencement of Construction Work in relation to the MCF.

Noise

95. The noise levels from activities within the MCF measured at the following receiving locations shall not exceed:

Receiving Location	Average Maximum Level dBL _{Aeq}		Maximum dBL _{Amax}
	Mon-Sun 7am-10pm	At all other times	
At the boundary of any residential zone, at the boundary of Child Youth and Family Services' Korowai Manaaki Youth Justice Residence and at the inner security area of the ARWCF	50	40	65

96. External facades to all sleeping areas in the MCF shall be designed to achieve an indoor noise level of LA_{eq} 35dB with external doors and windows closed. The design shall be based on a level of LA_{eq} 70dB measured at any point on the boundary of the MCF site based on the source of noise being at 60m inside the neighbouring sites. The spectrum of the noise on the boundary shall be that prescribed in the table below. The design shall take into account the typical reverberation time of the receiving rooms.

63Hz	125Hz	250Hz	500Hz	1000Hz	2000Hz	4000Hz	dBa
79dB	72dB	71dB	66dB	64dB	64dB	59dB	70dB

These spaces shall also be provided with alternative ventilation in accordance with or better than the requirements of the New Zealand Building Code to the satisfaction of the Manager – Resource Consents.

97. Noise levels shall be measured and assessed in accordance with the requirements of New Zealand Standard NZS 6801:2008 “Acoustics - Measurement of Environmental Sound” and New Zealand Standard NZS 6802:2008 “Acoustics - Environmental Noise”.

98. Construction noise shall not exceed the limits specified in and shall be measured in accordance with New Zealand Standard NZS 6803:1999 “Acoustics – Construction Noise”.

99. Construction vibration shall not exceed the limits specified in Table 3 of the German standard DIN 4150-3:1999 “Structural Vibration – Effects of Vibration on Structures” and shall be measured in accordance with these standards.

100. A Construction Noise and Vibration Management Plan showing how construction activities will comply with New Zealand Standard NZS 6803:1999 “Acoustics – Construction Noise” and German Standard DIN 4150-3:1999 “Structural Vibration – Effects of Vibration on Structures” shall be prepared and submitted for the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

approval of the Manager – Resource Consents prior to the commencement of Construction Work in relation to the MCF.

Screening

101. Buildings shall be designed to ensure that there are no direct views between prisoner accommodation and the Children Youth and Family Korowai Manaaki Residential Facility at 24 Kiwi Tamaki Road (Pt Lot 1 DP 177225).

102. Buildings shall be designed and/or visual barriers used to ensure that prisoners within the ARWCF are not visible to prisoners within the MCF, and to ensure that prisoners within the MCF are not visible to prisoners within the ARWCF.

Contamination

103. Prior to the commencement of Construction Work on the MCF site, a Contaminated Land Management Plan (“CLMP”) shall be prepared by a suitably experienced person and submitted to the Manager – Resource Consents for approval. The CLMP shall make reference to the site investigations undertaken, and provide procedures and methods for the management (i.e. treatment and/or removal) of any contaminated soils or water on the site, during and post construction.

Community Safety Management Plan (CSMP)

104. Prior to occupation of the MCF, the Minister shall provide to the Council a Community Safety Management Plan (“CSMP”) that includes the following matters:

a. Response to a prison escape:

The CSMP shall set out procedures to be followed in the event of an escape and a notification procedure for neighbours and the surrounding community.

b. Visitor management:

The CSMP shall set out procedures to be followed to manage visitors’ behaviour on site. This shall specify practices such as visits by appointment only and subject to approval from the site manager, requirements for identification to be presented, police checks and spot checks of visitors’ cars for drugs and other contraband. Visitor ablution facilities shall be provided on-site.

Name, signage and visibility

105. The name of the MCF must not draw any association with any local feature or place name.

106. All signage relating to the prison shall be located within the MCF site and kept to a practicable minimum size and number.

107. Where practicable, marked prison vehicles shall not use residential streets.

Quantitative Risk Assessment and Mitigation

108. The Minister shall meet, at least annually, with Wiri Oil Services Limited to discuss any relevant compliance issues arising, information exchange or revisions that may be required to the deed between the Department of Corrections and Wiri Oil Services Limited dated 7 March 2011. That deed addresses the management and mitigation of any effects arising from the potential risk of vapour cloud explosion on the prison site or reverse sensitivity effects on WOSL arising from AWRCF activities, including the requirement for further risk assessment should either party be contemplating any material change to the factors modelled in the Sherpa Report referred to in condition [66]. The results of this consultation shall be reported to the Manager – Resource Consents as soon as practicable.

109. The Minister shall facilitate the installation at the Wiri Oil Services Ltd Terminal of an early warning detection system as soon as practicable and no later than 31 December 2013, in accordance with the agreement set out in the deed between the Department of Corrections and Wiri Oil Services Limited (WOSL)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

dated 7 March 2011. The system will provide for the detection of overfill or other loss of containment events at the WOSL site and reduction in the amount of flammable vapour released. A report by a suitably qualified expert setting out the outcomes of an investigation into options for an early warning detection system and a recommendation as to the preferred option shall be provided by the Minister to the Manager – Resource Consents within 6 months of the confirmation of the alteration to the designation.

110. Within 3 months following installation of the early warning detection system or, in the event that no such system is completed or installed, by 31 December 2013, the Minister shall provide a Quantitative Risk Assessment (QRA) to WOSL and the Manager – Resource Consents. The Minister, Council and WOSL shall jointly engage a suitably qualified expert to prepare that QRA. The QRA shall confirm:

- a. Whether the level of risk at the ARWCF is now within the “negligible” band as calculated by means of the Australian NSW Department of Planning (DoP) Hazard Industry Planning Advisory Paper (HIPAP) No 4 Risk Criteria for Land Use Safety Planning² (“HIPAP 4 criteria”) or such equivalent criteria as agreed between the Minister, WOSL and the Council;
- b. In addition to the installation of an early warning detection system at the Wiri Oil terminal whether any other mitigation or management measures are required at the ARWCF (or otherwise on the Designation 288 site), to ensure the level of risk at the ARWCF site posed by the Wiri Oil terminal achieves the lowest reasonably practicable ALARP, or such equivalent risk assessment criteria as agreed between the Minister, WOSL and the Council. These mitigation or management measures shall include, but are not limited to:
 - i. Buffer areas where night time population is avoided;
 - ii. Decommissioning of existing buildings at ARWCF whose purpose is to accommodate night time population where this is now considered inappropriate;
 - iii. Structural works that may be required for buildings;
 - iv. Additional detection or early warning systems; and
 - v. Any other recommended measures.

111. The Minister shall implement on the designation 3910 site as soon as practicable on completion of the QRA, any other mitigation or management measures pertaining to that site that are recommended by the QRA conducted under condition 110(b), including structural upgrades, to ensure the lowest practicable risk is met, to the satisfaction of Council.

112. A further QRA shall be undertaken by a suitably qualified expert (engaged jointly between the Minister, Council and WOSL) and shall be provided to the Council and WOSL by the Minister where the population within the existing ARWCF (as at 1 May 2011) exceeds any of the following triggers:

- a. A total daytime population (all buildings) of 580 (including prisoners, staff, service providers and visitors) within the Indicative Extent of ARWCF Secure Facilities on the Quantitative Risk Assessment and Mitigation Plan (Figure 3, Revision B, prepared by Boffa Miskell, dated 17 May 2011);
- b. Introduction of any overnight population (including prisoners and staff) within existing buildings 1-3 identified on the Quantitative Risk Assessment and Mitigation Plan (Figure 3, Revision B, prepared by Boffa Miskell, dated 17 May 2011);
- c. An increase in any overnight population (including prisoners and staff) in existing buildings 4-13 or otherwise within the Indicative Extent of ARWCF Secure Facilities on the Quantitative Risk Assessment and Mitigation Plan (Figure 3, Revision B, prepared by Boffa Miskell, dated 17 May 2011) above 466; or
- d. Any relocation within existing buildings of overnight population closer to the WOSL boundary above the overnight population shown on the Quantitative Risk Assessment and Mitigation Plan (Figure 3, Revision B, prepared by Boffa Miskell, dated 17 May 2011).

113. A further QRA shall also be undertaken by a suitably qualified expert (engaged jointly between the Minister, Council and WOSL) and shall be provided to the Council and WOSL by the Minister prior to the lodgement of an Outline Plan of Works for any new building on the Designation 288 site within the Future

The Proposed Auckland Unitary Plan (notified 30 September 2013)

WOSL Growth Scenario Risk Contour identified on the Quantitative Risk Assessment and Mitigation Plan (Figure 3, Revision B, prepared by Boffa Miskell, dated 17 May 2011).

114. The QRA required under conditions 112 and 113 shall assess the level of risk for development or activity that exceeds any of these triggers based on the HIPAP 4 criteria, or such equivalent risk assessment criteria as agreed between the Minister, WOSL and the Council. If the risk can be mitigated to meet the individual and societal risk assessment criteria, the appropriate mitigation measures must be put in place by the Minister prior to the occupation of the buildings in the manner set out in condition 110. If the level of risk cannot be adequately mitigated to meet the appropriate risk assessment criteria, the proposed development or activity shall not proceed.

Advice Note:

For clarity, where a QRA is required under conditions [109]-[114], the assessment shall evaluate both the existing and future growth scenarios outlined in the Deed identified in condition [108]. A copy of the Deed is available for inspection at Council offices.

Construction Management Plan

115. A Construction Management Plan ("CMP") shall be submitted to the Manager – Resource Consents prior to the commencement of Construction Work on the MCF.

The CMP shall include specific details relating to the construction and management of all works associated with the MCF, including:

- a. A Construction Lighting Management Plan to control glare and spill light from temporary lighting during the construction period;
- b. A Construction Noise and Vibration Management Plan to demonstrate how compliance will be achieved with conditions 98, 99 and 100;
- c. The Construction Traffic Impact Assessment required to be submitted with the Outline Plan of Works in accordance with condition 88;
- d. The methods to ensure compliance with Land Modification conditions 73-76; and
- e. The following information:
 - i. Details of the Community Liaison Officer appointed by Corrections under condition 56), including their contact details (phone, facsimile, postal address, email address);
 - ii. Details of the site or project manager, including their contact details (phone, facsimile, postal address, email address);
 - iii. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
 - iv. An outline construction programme of the works;
 - v. Any means to ensure that no damage occurs to street trees through the construction period;
 - vi. The means to ensure the protection of services such as pipes and water mains within the road reserve;
 - vii. Measures to be adopted to maintain the site in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
 - viii. Location of workers offices and conveniences (e.g. portaloos);
 - ix. Procedures for ensuring that occupiers in the immediate vicinity of construction areas are given prior notice of the commencement of Construction Work and are informed about the expected duration of the works;
 - x. Means of ensuring the safety of the general public during construction; and
 - xi. Means of ensuring compliance of construction activities with Civil Aviation Rules Part 77 Objects and Activities Affecting Navigable Airspace.

Prison Operations

116. For so long as the MCF on the site is used to accommodate sentenced prisoners, the Minister shall operate a rehabilitation and reintegration programme at the site that incorporates a fundamental aim of reducing reoffending by prisoners as a component of the MCF operation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

117. The Minister shall incorporate a prisoner education programme (which may be part of its rehabilitation programme) as a component of the MCF operation.

118. The Minister shall give due regard to providing employment or contracting opportunities to suitably qualified Counties-Manukau area individuals and businesses as part of the construction and operation of the MCF.

119. The Minister shall provide a standard of primary on-site healthcare to prisoners at the MCF that is reasonably equivalent to the standard of primary healthcare available to the public.

120. The Minister shall monitor the MCF visitor carpark security, and will take all reasonable steps to avoid any loitering by prisoner visitors or associates in and around the carpark.

121. The Minister shall ensure that any graffiti appearing within the MCF site will be removed in a timely manner.

122. The Minister will ensure that communication protocols are established between the operators of ARWCF and the MCF to ensure that any changes to operations at either prison that could potentially impact on the other prison must be considered by both parties to enable potential adverse impacts to be addressed.

123. The Kaitiaki plan with Ngati Te Ata dated 1 March 2011 must be attached to any operating contract for the MCF.

Reserve Contribution

124. The Minister shall pay a reserve contribution in respect of the development of the MCF, which shall be calculated at a rate of 0.5% of the assessed value of the development and pro-rated for the FTE staffing complement as a fraction of the total expected maximum on-site population. For the avoidance of doubt, no reserve contribution shall be made that includes a calculation of the prisoner population. The reserve contribution shall be paid prior to release of any building consent for the MCF development.

Advice Note:

Indicatively only, and based on the projections given at the hearing, this would equate to a reserve contribution of \$736,000, from an estimated capital cost of \$368 million and total expected population of 1770 (1060 prisoners + 710 staff).

3911 Non-Custodial Facility - Porchester Road

Designation Number	3911
Requiring Authority	Minister of Corrections
Location	17 Porchester Road, Papakura, Auckland
Rollover Designation	Yes
Legacy Reference	Designation 29, Plan Change 13, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Conditions

No conditions.

Attachments

No attachments.

3912 Non-Custodial Facility - Roulston Street

Designation Number	3912
Requiring Authority	Minister of Corrections

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	11 Roulston Street, Pukekohe, Auckland
Rollover Designation	Yes
Legacy Reference	Designation 83, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Corrections purposes (non-custodial facility), including community work centres and probation offices, excluding prisons.

Minister for Courts

Designation Schedule - Minister for Courts

Number	Purpose	Address
4100	Judicial, court, tribunal and related purposes ...	65-71 Albert Street, Auckland Central
4101	Judicial, court, tribunal and related purposes ...	24 Waterloo Quadrant, Auckland Central
4102	Judicial, court, tribunal and related purposes ...	250-260 Great South Road, Papakura
R4103	Judicial, court, tribunal and related purposes ...	415-421 Great North Road, Henderson
4104	Manukau District Courthouse ...	30 Manukau Station Road, Manukau City Centre
4105	Judicial, court, tribunal and related purposes ...	25 Stadium Drive, Pukekohe

4100 Auckland District Courthouse

Designation Number	4100
Requiring Authority	Minister for Courts
Location	65-71 Albert Street, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 294, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Judicial, court, tribunal and related purposes including collection of fines and reparation, administration, support, custodial services, and ancillary activities. Works include development and operation of land and buildings for the aforementioned purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. Development of the site shall be in accordance with the underlying development controls for the site except in the following circumstances:

- a. The maximum Floor Area Ratio can be sought without requiring the inclusion of bonus features within the development; and
- b. Future development of the site is not subject to any development control related to the provision of glazing on road frontages.

4101 Auckland High Court

Designation Number	4101
Requiring Authority	Minister for Courts
Location	24 Waterloo Quadrant, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 295, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Judicial, court, tribunal and related purposes including collection of fines and reparation, administration, support, custodial services, and ancillary activities. Works include development and operation of land and buildings for the aforementioned purposes.

Conditions

1. Development of the site shall be in accordance with the underlying development controls for the site except in the following circumstances:

- a. The maximum Floor Area Ratio can be sought without requiring the inclusion of bonus features within the development; and
- b. Future development of the site is not subject to any development control related to the provision of glazing on road frontages.

2. No alteration shall be made to the interior or exterior of the original courthouse building other than in accordance with an outline plan submitted and processed in terms of Section 176A of the Resource Management Act 1991.

3. In light of the fact that security remains a paramount consideration within the Courthouse, nothing in these conditions shall preclude the alterations and works necessary for maintaining security except that with respect to the original courthouse building, early consultation with the Council is required in order that the heritage impact of the alterations and works may be determined.

R1403 Henderson Courthouse

Designation Number	R4103
Requiring Authority	Minister for Courts
Location	415-421 Great North Road, Henderson
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	10 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Judicial, court, tribunal and related purposes including collection of fines and reparation, administration, support, custodial services, and ancillary activities. Works include development and operation of land and buildings for the aforementioned purposes.

Conditions

General

1. Where conditions of consent reference particular design or construction standards these may be updated with the agreement of the requiring authority to reflect changes in standards applying at the time of submission of Outline Plan under section 176A of the Resource Management Act 1991 or construction.

Built Form

2. Buildings must not exceed the 72.5m in height or 18 storeys.

3. With reference to Figure 1, development on site must not project beyond:

- A 45 degree recession plane measured from a point 8.5m vertically above ground level along the northern boundary of identified public open space zones; and
- A 45 degree recession plane measured from a point 16.5m vertically above ground level along the western

The Proposed Auckland Unitary Plan (notified 30 September 2013)

boundaries of identified public open space zones.

4. Any part of the new courthouse building projecting above 24.5m (or 6 storeys) in height must be setback from the road, side and rear façades by a minimum of 6m.

5. Prior to the submission of an Outline Plan for redevelopment of the site, concept plans shall be submitted to Council's Urban Design Team for comment.

Yards

6. No building shall be located closer than 10m from the Opanuku Stream site boundary as shown in Figure 2.

7. No building shall be located within the side (5m) and rear yards (10m) as shown in Figure 2.

Transportation

8. A Comprehensive Integrated Transport Assessment (ITA) shall be submitted with any Outline Plan of Works for any major buildings or works on the site that generate a significant additional transport demand. At a minimum, the following shall be provided:

- a. Forecasts of future travel demand over time by mode of travel and recommendations for an appropriate mix of parking, travel management measures, pedestrian, cycle and passenger transport facilities to meet this demand;
- b. An indication of the form, timing and manner in which the above will be provided;
- c. Measures to:
 - i. Monitor travel demand and patterns against those forecast and to revise as necessary forecast travel demand by mode;
 - ii. Review the effectiveness of the measures proposed within the ITA including the travel plan;
 - iii. Review and confirm the appropriateness of parking, travel management measures, pedestrian, cycle and passenger transport facilities provided pursuant to these conditions of consent; and
- d. An assessment of how parking demand and the requirement for off-site parking may reduce over time as the provision and uptake of public transport and other measures to reduce travel by private vehicle increases.

9. Prior to any construction works commencing on site, a Temporary Traffic Management Plan (TTMP) shall be submitted to the Council's Manager, for approval. The TTMP must be prepared by a qualified and experienced Site Traffic Management Supervisor and shall be approved in writing prior to works commencing. No work shall commence on site until written approval of the Traffic Management Plan is provided by Council.

Construction

10. Prior to the redevelopment of the site into a courthouse, the Requiring Authority must submit a Construction Management Plan ("CMP") to Council for approval. At a minimum, the CMP shall include the following:

- a. Details of the site or project manager, including their contact details;
- b. An outline construction programme of works;
- c. Measures to be adopted to maintain the land in a tidy conditions in terms of disposal and storage of rubbish, storage and unloading of construction materials and similar construction activities;
- d. Location of workers offices and conveniences;
- e. Procedures for controlling sediment run-off and dust mitigation measures;
- f. Measures to protect riparian vegetation along the Opanuku Stream during construction activities; and
- g. In the event of the discovery of any unrecorded archaeological features, an Accidental Discovery Protocol;

The approved CMP is to be implemented and maintained for the duration of the project.

11. The Requiring Authority must prepare, and submit for approval with the CMP, a Communications Plan that details procedures for communicating with the public and the owners and occupiers of properties in the immediate vicinity of the construction area throughout the construction period. The Communications Plan must

The Proposed Auckland Unitary Plan (notified 30 September 2013)

include a copy of the TTMP prepared under condition 7 as well as procedures for:

- a. Giving notice of the commencement of construction activities;
- b. Providing information about the expected duration of work, including a programme of works; and
- c. Giving notice of any changes to the programme of works.

The approved Communications Plan is to be implemented and maintained for the duration of the project.

Noise & Vibration

12. Prior to the commencement of works, the Requiring Authority will submit a Construction Noise & Vibration Management Plan (CNVMP) to the Council's Manager for approval. The approved CNVMP must be implemented and maintained throughout the entire demolition and construction periods.

13. The CNVMP must describe the measures to be adopted, as far as practicable, to meet the requirements of NZS6803:1999 Acoustics — Construction Noise. The CNVMP must refer to noise management measures set out in Annexure E of NZS6803:1999, and as a minimum must address the following:

- a. Construction sequence;
- b. Machinery and equipment to be used, including the use of non—percussive machinery where practicable;
- c. Hours of operation, including times and days when noisy construction work would occur;
- d. The design of noise mitigation measures such as temporary barriers or enclosures;
- e. Construction noise and vibration limits for specific areas;
- f. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptance outcomes;
- g. Vibration Monitoring Measures;
- h. Methods for monitoring and reporting on construction noise & vibration;
- i. Methods for receiving and responding to complaints about construction; and
- j. Reporting procedures.

Public Utilities

14. Adequate provision shall be made for the disposal of wastewater and the provision of water supply.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Figure 2 –Yards (Not to Scale)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4104 Manukau Courthouse

Designation Number	4104
Requiring Authority	Minister for Courts
Location	30 Manukau Station Road, Manukau City Centre
Rollover Designation	Yes
Legacy Reference	Designation 179, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Manukau District Courthouse: judicial, court, tribunal and related purposes including collection of fines and reparation, administration and support services, and ancillary activities (for example food and beverage kiosk). Works include development and operation of land and buildings for the aforementioned purposes.

Conditions

1. General

An outline plan of works for any development that triggers additional parking demand, loading or access requirements to the site will be assessed against the relevant assessment criteria under Rule 4.2.1.2.4.1 of the Proposed Unitary Plan.

2. Access to the Primary Road Network

No direct vehicular access to Manukau Station Road shall be allowed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. Assessment Criteria — Parking and Vehicle Circulation

3.1 General

When assessing an Outline Plan of Works, Council will have regard to the extent to which the proposed development or redevelopment meets the criteria set out in this condition.

3.2 Provision of Parking

As part of an Integrated Transport Assessment (ITA) provided in terms of condition 6 any Outline Plan of Works shall provide a robust assessment of the parking demand to be generated by a proposed development or redevelopment and demonstrate the parking provision to meet the estimated demand:

- a. On the site;
- b. On a site sufficiently close to it for constant use by vehicles in connection with the site; and/or
- c. In accordance with condition 3.5.

3.2.1 Assessment of Number of Parking Spaces to be Provided

The extent to which the proposed development or redevelopment provides an adequate number of parking spaces on the site, on a site sufficiently close to it for constant use by vehicles in connection with the site, and in accordance with clauses 4.5 and 9.2 to accommodate the estimated parking demand.

3.2.2 Diminution of Land Available

The extent to which the total parking area that is made available in respect of a new building in compliance with the requirements for off — road parking is not diminished by the subsequent construction of any structure by the storage of goods, or by any other activity.

3.2.3 Allocation of Parking Spaces

The extent to which the requiring authority or other occupier of the site allocates or manages the parking spaces so as to prevent staff, fleet vehicles, visitors or particular occupiers associated with that site from utilising the parking.

3.3 Provision of Loading Space

The extent to which adequate provision is made for loading space for any activity within the designation which generates delivery trips by heavy vehicles

3.4. Design of Parking and Circulation Areas

3.4.1 Vehicle Dimensions

The extent to which each new parking space to be provided in terms of this Section is in accordance with the dimensions specified in accepted standards.

3.4.2 Reverse Manoeuvring

The extent to which parking areas are designed to ensure that vehicles are not required to reverse either onto or off the site; and are not required to execute more than a three point turn to exit the site.

3.4.3 Design and Constructional Details

The extent to which new public and private parking areas comply with the following requirements:

- a. The new parking spaces and access drives and aisles required in respect of the site in question shall, before the commencement of the corresponding new activity on that site, be formed, sealed and permanently marked or laid out in accordance with approved plans to the Council's satisfaction;
- b. The new parking areas shall be maintained at all times so as not to create a dust nuisance;
- c. Stormwater drainage from the parking area shall be constructed to the satisfaction of the Council;
- d. Provision shall be made to illuminate access driveways and pedestrian areas within new public parking areas used during the hours of darkness. Illumination shall not be directed towards any adjacent residentially zoned

The Proposed Auckland Unitary Plan (notified 30 September 2013)

land;

e. New parking areas and signs and markings shall be maintained so that at all times they remain legible and available for use by vehicles; and

f. The design and layout of new parking areas shall be such that vehicles are not required to reverse a distance greater than 30m to enter or exit any right angled parking space (or 10m for any other angled or parallel parking space) or to exit any parking aisle in the event that the parking spaces within the aisle are occupied.

3.5. Acceptance of Cash in Lieu of Parking Spaces

a. Where it is not reasonable or practicable to make provision for the new parking requirement in respect of new or redeveloped buildings on the designated site, on the site or sufficiently close to it for constant use by vehicles in connection with the site, the Minister may with the agreement of the Council instead of providing the required number of carparks, make payment to the Council of a sum of money not exceeding the cost including land value, of providing the parking requirement on that site. Alternatively the Minister may, with the agreement of Council make payment of a sum based on the cost of providing any parking shortfall on land in the vicinity of the site or the cost of providing parking on a nearby site set aside for carparking purposes, providing that this sum does not exceed that specified above.

b. Any payment made under subsection (a) of this rule shall contribute to satisfying the parking provision in respect of the new or redeveloped buildings on the site, and shall be kept in a separate account in the Council's name and applied by the Council from time to time as opportunity offers in the acquisition of land and the making of provision for parking as close as, is reasonable and practicable to the site in respect of which the parking area was required to be provided.

c. Notwithstanding the above Council may apply not more than half of any payment made under Section (a) of this rule on passenger transport infrastructure in the vicinity of the site provided that the site and use of the site in question would benefit from the provision of this infrastructure. When the cash in lieu of parking is used by Council to provide parking spaces, a number of parking spaces equivalent to their respective contribution to the cost of formulation will be made available for use by the owners of the designated sites for which cash in lieu of parking has been accepted.

4. Traffic Management Works

Any outline plan of works submitted by the requiring authority for any development or redevelopment that is likely to have an impact on the transportation network of the designated site shall be assessed having regard to the potential transportation related effects of the development or redevelopment proposed to be undertaken pursuant to the designation.

The requiring authority shall include in its outline plan of works its proposals for dealing with the potential transportation related effects of the development or redevelopment and any off-site works or contribution to off site works it proposes to deal with those effects.

The requiring authority shall be required to meet the reasonable costs of all new access and traffic management works (including any additional land required to accommodate these works) associated with the development or redevelopment to the extent that such works are required to meet safety, access, egress, or amenity considerations related to the development or redevelopment or where the works are required to mitigate the likely adverse effects from the development or redevelopment on the safety or operation of the transport network.

5. Travel Plan

a. A Travel Plan shall be developed for the Manukau Courthouse with any major buildings or works on the site that generate a significant additional transport demand. This Plan shall be designed to reduce dependency on private car travel, and manage staff and visitor travel to achieve travel mode split targets developed as part of the travel planning process.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. The Travel Plan and its implementation shall include the provision of infrastructure, initiatives and facilities to support the use of travel alternatives. At a minimum, the following shall be provided:

- i. Covered, secure cycle parking to meet demand identified within the ITA and located in a convenient location and designed in accordance with current standards (e.g. Australian Standard AS 2890.3-1993 parking facilities part 3 Bicycle parking facilities);
- ii. Changing facilities and lockers appropriate for walkers, cyclists and motorbike users;
- iii. Ongoing educational and information advising and encouraging staff and visitors of how to access and use alternative forms of travel to motorcar and car pooling opportunities for staff; and
- iv. Any management practices designed to reduce travel demand to the Court and in particular demand for car parking spaces.

c. The Travel Plan shall be maintained and reviewed over time at not less than 3 year intervals and at the time of outline plan of works for significant extension to buildings, and updated as necessary. The recommendations of each updated travel plan must be implemented.

6. Integrated Transport Assessment (ITA)

An ITA shall be submitted with any outline plan of works for any major buildings or works on the site that generate a significant additional transport demand. At a minimum, the following shall be provided:

- a. Forecasts of future travel demand by mode of travel and recommendations for an appropriate mix of parking, travel management measures, pedestrian, cycle and passenger transport facilities to meet this demand;
- b. An indication of the form, timing and manner in which the above will be provided;
- c. Measures to:
 - i. Monitor travel demand and patterns against those forecast and to revise as necessary forecast travel demand by mode;
 - ii. Review the effectiveness of the measures proposed within the ITA including the travel plan; and
 - iii. Review and confirm the appropriateness of parking, travel management measures, pedestrian, cycle and passenger transport facilities provided pursuant to these conditions of consent; and
- d. An assessment of whether off-site parking may be reduced, taking into account surveyed data about the modal share of court users at the time of the ITA being prepared.

7. Parking to be Provided

No occupation or use of any expansion to the Courthouse shall take place until the parking identified within any approved outline plan has been provided.

8. Built Form

When assessing an outline plan, Council will have regard to the following matters taking into account the role and function of a courthouse and associated needs including security:

- a. The extent to which the proposed design provides for informal surveillance of public and semi-public areas within and adjacent to the development, including streets, walkways and open spaces, by:
 - i. Designing the proposal in accordance with good practice for Crime Prevention Through Environmental Design (CPTED) and in particular, facilitating passive surveillance of public spaces;
 - ii. The use of lighting design to provide security for buildings and enhance the safety of public spaces; and
 - iii. Avoiding blind corners and concealed alcoves near lifts, stairwells, car parks and walkways.

9. Landscaping

Any outdoor storage or rubbish collection area shall be screened from public view by landscape design and/or the erection of a fence, and maintained in a tidy condition when viewed from the public open space zone or public road.

Advice Notes

1. It is recommended that a Memorandum of Understanding or other appropriate agreement be prepared between Auckland Transport and the requiring authority documenting their mutual understanding in respect of:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. The timing, procurement processes for work that the Ministry of Justice will contribute towards, and design of any road works that may affect or facilitate access to the site; and
- b. Liaison and support relating to development and maintenance of a travel plan and associated initiatives.

2. All works within the legal road corridor (boundary to boundary) require a 'Corridor Access Request (CAR) approved by Auckland Transport. All works include inter alia open cut trenching and trenchless techniques for utility installations.

3. Application for a CAR is made online to www.beforeudig.co.nz where relevant background details are required including Notice of Requirement /OPW or certificate of compliance, traffic management plans etc.

4. Please note that a CAR may require up to 15 days to process and construction hours may be restricted on Level 2 or 3 roads, as defined in the Code of Practice for Temporary Traffic Management, ("COPTTM" of NZTA) to those that may be permitted under this consent.

5. The Requiring Authority will be required to submit a Temporary Traffic Management Plan (TTMP) for the Project or the relevant Project stage where construction activities are likely to have a significant effect on the safety and operation of the adjoining road network. This shall be prepared by a suitably qualified person in accordance with the Code of Practice for Temporary Traffic Management (COPTTM).

4300 Ardmore Training Area

Designation Number	4300
Requiring Authority	Minister of Defence
Location	Approximately 720ha of land bound by Ardmore Quarry Road to the northeast and Hunua Road to the south, Ardmore (refer to Figure 1 below)
Rollover Designation	Yes
Legacy Reference	Designation 2, Auckland Council District Plan (Papakura Rural Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Description

Defence purposes (as defined by section 5 of the Defence Act 1990) - military training area.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Defence Areas are administered by the New Zealand Defence Force (NZDF) and are currently occupied by NZDF, its contractors and licensees. The Areas are a Defence Work and may be utilised for any or every purpose required by section 5 of the Defence Act 1990, which are as follows:

- a. The defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;
- b. The protection of the interests of New Zealand, whether in New Zealand or elsewhere;
- c. The contribution of forces under collective security treaties, agreements or arrangements;
- d. The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- e. The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and
- f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

Conditions

1. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with section 176A(2)(b) of the Resource Management Act 1991, no outline plan is required for those activities.

2. For the avoidance of doubt, maintenance activities do not require an outline plan.

- f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

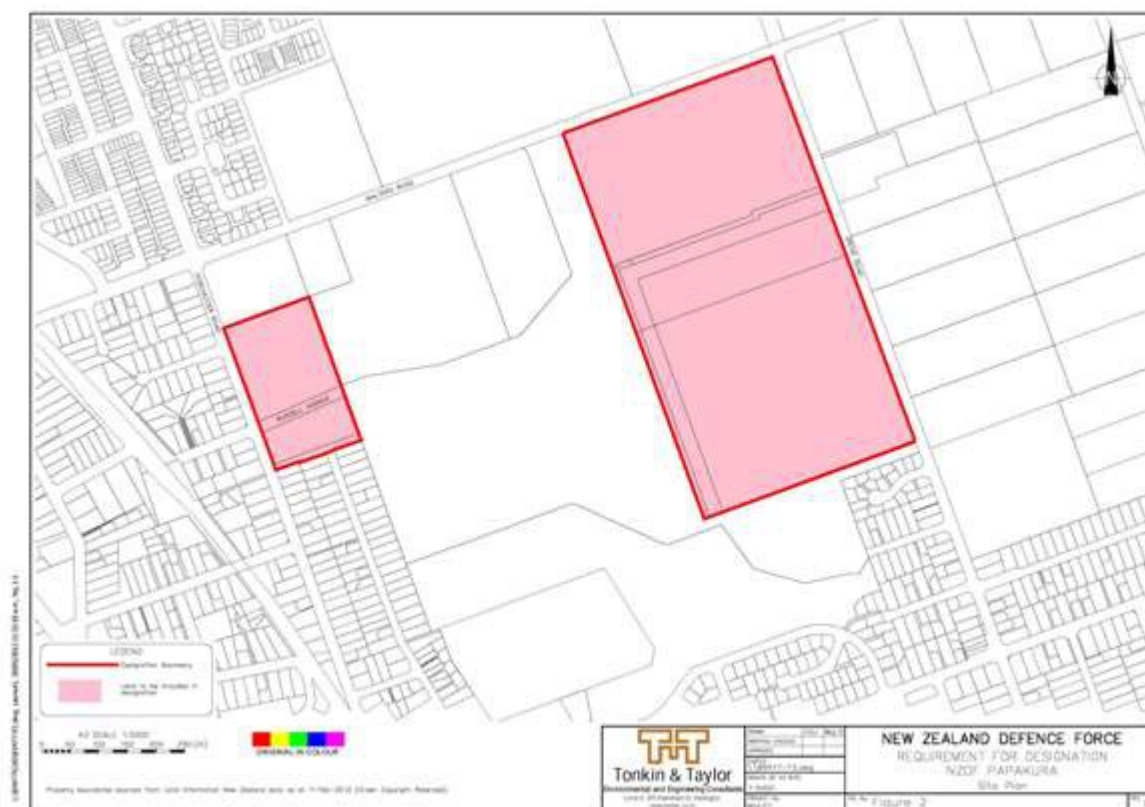

Conditions

Yards

1. The following yards shall apply in respect of designation boundaries except the boundary with the Coastal Marine Area (where no yard shall apply):

All boundaries: 3m

Building height

2. 9m

Height in Relation to Boundary

3. Buildings must not project beyond a 45 degree recession plane measured from a point 2.5 m vertically above ground level where the designation boundary adjoins a residential zoned site.

Building length

4. Where sites adjoining the designation boundary are zoned residential, those parts of any building which exceed a height of 5 metres and are within 10 metres of the designation boundary are to be wholly confined within the arms of a 130 degree angle formed by two lines intersecting any point on an adjacent residential boundary such that each line forms an angle of 25 degrees with that boundary.

Exceptions and notes for conditions 1-4:

Building height, bulk and location controls apply only in respect of new buildings and additions to existing buildings.

The following structures are excluded from all building height, bulk and location controls:

- a. Perimeter security fencing up to a height of 4m;
- b. Flagpoles; and
- c. Lighting standards up to a maximum height of 12.5m, and lighting standards exceeding a height of 12.5m subject to an outline plan.

Noise limits

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. The $L_{Aeq}(15 \text{ min})$ noise level and maximum noise level (L_{AFmax}) arising from any activity within the designated area, other than noise from construction, demolition or maintenance, measured at or within the boundary of a property in the residential zones outside the designated area, must not exceed the following limits:

Monday to Saturday 7am-10pm	$L_{Aeq}(15 \text{ min})$ 55dB
Sunday 9am-6pm	$L_{Aeq}(15 \text{ min})$ 55dB
All other times	$L_{Aeq}(15 \text{ min})$ 45dB $L_{eq}(15 \text{ min})$ 60dB at 63 Hz $L_{eq}(15 \text{ min})$ 55dB at 125 Hz L_{AFmax} 75dB

Construction, demolition and maintenance noise limits

6. Noise from construction and demolition activities must meet the requirements of Tables 2 and 3 of New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999). The measurement and assessment of construction noise must be in accordance with New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999) and the requirements of annex A of New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999) must be used if it is necessary to assess the measured L_{eq} levels in high background noise areas.

Exceptions to noise limits:

- a. Military helicopter operations except that:
 - i. There shall not be more than 50 landings and 50 take-offs per calendar year;
 - ii. Over-flying of dwellings by landing helicopters is to be avoided;
 - iii. Military helicopter landings and take-offs will be limited to between the hours of 0700 – 2200; and
 - iv. Landing shall take place at the maximum practical distance from nearby residences (this will be dependent upon ground conditions).
- b. Emergency helicopter operations;
- c. Parade ground activities, gun salutes and other activities for ceremonial occasions, including preparation for such occasions;
- d. Noise from safety signals, warning devices or emergency pressure relief valves, provided they do not sound for more than a reasonable period; and
- e. Noise associated with outdoor recreational activities and sporting events.

Lighting

7. Lighting in all areas shall conform to the following:

- a. At no time between the hours of 10pm and 7am shall any outdoor lighting be used in a manner that the use of such lighting causes an added illuminance in excess of 20 lux measured horizontally or vertically at any point along any boundary of any adjoining site which is zoned Residential (and outside the designated area); and
- b. All outdoor lighting shall be shielded in such a manner that light emitted by the fixture is projected below a horizontal plane running through the lowest point in the fixture where that light is emitted, or is shielded in such a manner that the lowest edge of the shield is at or below the centre line of the light source.

Aerials and Antennae

8. Telecommunication and radio communication aerials and antennae that comply with the limits prescribed in NZS 2772.1 (1999) New Zealand Standard for radiofrequency fields – maximum exposure levels between 3 kHz and 300 GHz shall be permitted in all parts of the designated area. Where aerials and antennae are attached to buildings, their height plus that of any support structure shall not exceed the height limit of the area by more than five metres.

Administration

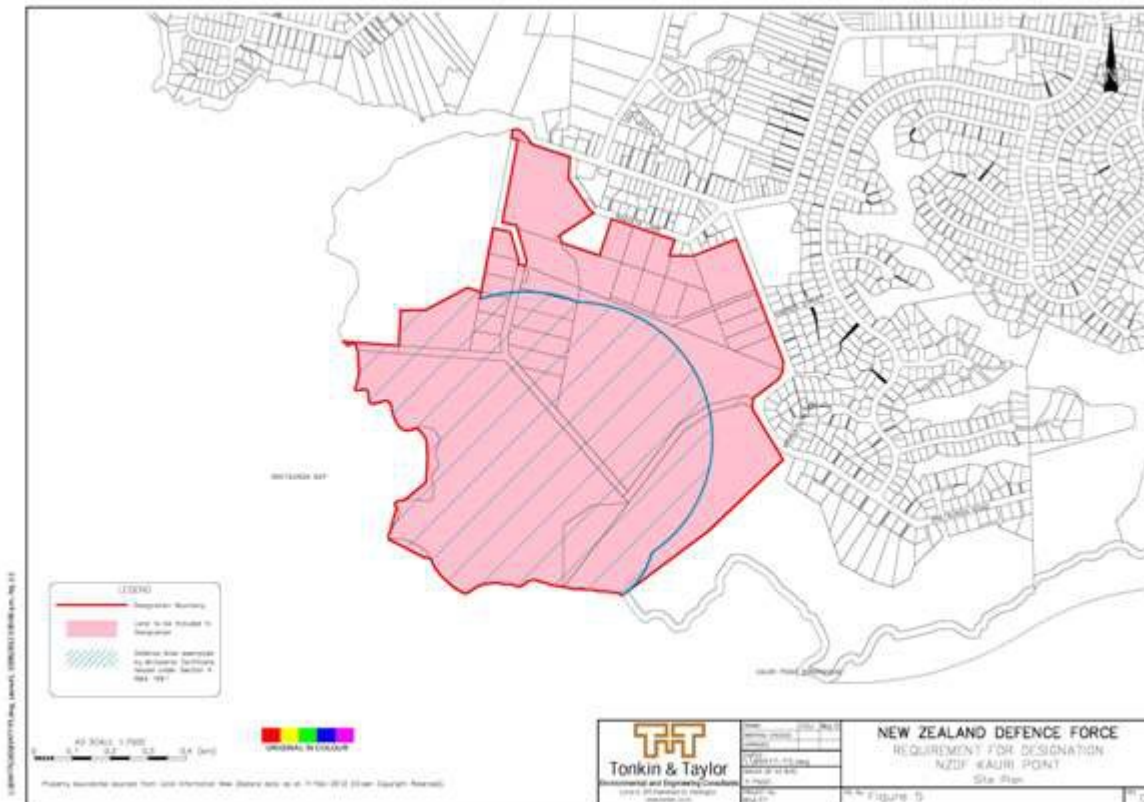

9. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. For the avoidance of doubt, maintenance activities do not require an outline plan.

Description

Defence purposes (as defined by section 5 of the Defence Act 1990) - naval base.

The Defence Areas are administered by the New Zealand Defence Force (NZDF) and are currently occupied by NZDF, its contractors and licensees. The Areas are a Defence Work and may be utilised for any or every purpose required by section 5 of the Defence Act 1990, which are as follows:

- The defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;
- The protection of the interests of New Zealand, whether in New Zealand or elsewhere;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. The contribution of forces under collective security treaties, agreements or arrangements;
- d. The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- e. The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and
- f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;

- c. The contribution of forces under collective security treaties, agreements or arrangements;
- d. The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- e. The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

Conditions

Yards

1. DNB - South Yard: Calliope Road

a. The following yards shall apply in respect of designation boundaries except the boundary with the Coastal Marine Area (where no yard shall apply):

Calliope Road and Spring Street: 3m

All other boundaries: 1.2m; and

b. The following yard shall apply in respect of the cliff top:
10m

For the purposes of this control, cliff top is defined as the point at which the gradient of the slope (as approached from the top of the slope) reaches a gradient steeper than 1 in 0.5.

2. DNB - South Yard: Philomel

The following yard shall apply in respect of the designation boundary with Spring Street:
5m

Building height

3. DNB - South Yard: Calliope Road
9m

4. DNB - South Yard: Philomel and DNB - South Yard: Dockyard
18m

Height in Relation to Boundary

5. DNB - South Yard: Calliope Road and DNB - South Yard: Philomel Buildings must not project beyond a 45 degree recession plane measured from a point 2.5 m vertically above ground level where the designation boundary adjoins a residential zoned site.

Building length

6. DNB - South Yard: Calliope Road Where sites adjoining the designation boundary are zoned residential, those parts of any building which exceed a height of 5 metres and are within 10 metres of the designation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

boundary are to be wholly confined within the arms of a 130 degree angle formed by two lines intersecting any point on an adjacent residential boundary such that each line forms an angle of 25 degrees with that boundary.

Exceptions and notes for conditions 1-6:

Building height, bulk and location controls apply only in respect of new buildings and additions to existing buildings.

The following structures are exempt from the following building height, bulk and location controls:

a. Perimeter security fencing up to a height of 3 m is exempt from all height, bulk and location controls.

Flagpoles are exempt from:

i. yard control at DNB - South Yard: Philomel;

ii. building height control at DNB - South Yard: Calliope Road, Philomel, and Dockyard; and

iii. height in relation to boundary at DNB - South Yard: Calliope Road and Philomel;

b. Lighting standards up to a maximum height of 12.5m, and lighting standards exceeding a height of 12.5m subject to an outline plan, are exempt from:

i. yard control at DNB - South Yard: Calliope Road and Philomel;

ii. building height control at DNB - South Yard: Calliope Road, Philomel, and Dockyard;

iii. height in relation to boundary control at DNB - South Yard: Calliope Road, and Philomel; and

iv. building length at DNB – South Yard: Calliope Road;

c. Structures in the DNB - South Yard: Calliope Road that provide pedestrian or vehicular access to or from the cliff are exempt from yard and building height controls;

d. Structures associated with the operation of any Main Gate at DNB – South Yard: Philomel, including but not limited to offices and security features, are exempt from yard and height controls;

e. Lift motors, fly towers, machinery rooms, water towers, towers, turrets, provided they do not exceed 3m above permitted height and do not exceed 10% of the area of the roof to the storey below are exempt from all building height, bulk and location controls at DNB – South Yard: Philomel and Dockyard;

f. Cranes and derricks, and structures necessary to accommodate cranes and derricks and ship superstructures, up to 25m are exempt from building height control at DNB – South Yard: Dockyard; and

g. Structures that are necessary to provide for access from the cliff top to buildings below, in not more than three locations, are exempt from the building height control at DNB – South Yard: Philomel.

Noise limits

7. The LAeq(15 min) noise level and maximum noise level (LAFmax) arising from any activity within the designated area, other than noise from construction, demolition or maintenance, measured at or within the boundary of a property in the residential zones outside the designated area, must not exceed the following limits:

Monday to Saturday 7am-10pm	LAeq(15 min) 55dB
Sunday 9am-6pm	LAeq(15 min) 55dB
All other times	LAeq(15 min) 45dB Leq(15 min) 60dB at 63 Hz Leq(15 min) 55dB at 125 Hz LAFmax 75dB

Construction, demolition and maintenance noise limits

8. Noise from construction and demolition activities must meet the requirements of Tables 2 and 3 of New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999). The measurement and assessment of construction noise must be in accordance with New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999) and the requirements of annex A of New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999) must be used if it is necessary to assess the measured Leq levels in high background noise areas.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Exceptions to noise limits:

- a. Military helicopter operations except that:
 - i. There shall not be more than 50 landings and 50 take-offs per calendar year;
 - ii. Over-flying of dwellings by landing helicopters is to be avoided;
 - iii. Military helicopter landings and take-offs will be limited to between the hours of 0700 – 2200; and
 - iv. Landing shall take place at the maximum practical distance from nearby residences (this will be dependent upon ground conditions).
- b. Emergency helicopter operations;
- c. Parade ground activities, gun salutes and other activities for ceremonial occasions, including preparation for such occasions;
- d. Noise from safety signals, warning devices or emergency pressure relief valves, provided they do not sound for more than a reasonable period; and
- e. Noise associated with outdoor recreational activities and sporting events.

Tree Protection

9. DNB - South Yard: Calliope Road

Pohutukawa trees over 3 m in height on the cliff top shall be removed or pruned only for the reasons of:

- a. Adverse tree health;
- b. Human safety;
- c. Cliff stability; and
- d. Risk of property damage, including to buildings, vehicles, roads, and underground services.

10. Trimming and maintenance of all native trees on the cliff top is to be undertaken by a qualified arborist. For the purposes of this control, cliff top is defined as the point at which the gradient of the slope (as approached from the top of the slope) reaches a gradient steeper than 1 in 0.5, plus the first 10m back from the top of the cliff top.

Lighting

11. Lighting in all areas shall conform to the following: a. At no time between the hours of 10pm and 7am shall any outdoor lighting be used in a manner that the use of such lighting causes an added illuminance in excess of 20 lux measured horizontally or vertically at any point along any boundary of any adjoining site which is zoned Residential (and outside the designated area); and b. All outdoor lighting shall be shielded in such a manner that light emitted by the fixture is projected below a horizontal plane running through the lowest point in the fixture where that light is emitted, or is shielded in such a manner that the lowest edge of the shield is at or below the centre line of the light source.

Aerials and Antennae

12. Telecommunication and radio communication aerials and antennae that comply with the limits prescribed in NZS 2772.1 (1999) New Zealand Standard for radiofrequency fields – maximum exposure levels between 3 kHz and 300 GHz shall be permitted in all parts of the designated area. Where aerials and antennae are attached to buildings, their height plus that of any support structure shall not exceed the height limit of the area by more than 5m.

Administration

13. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.

14. For the avoidance of doubt, maintenance activities do not require an outline plan.

Designation Number	4309
Requiring Authority	Minister of Defence
Location	West of Jim Titchener Parade and Cautley Street, Devonport (refer to Figure 8 below)
Rollover Designation	Yes
Legacy Reference	Designation 92, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Description

Defence purposes (as defined by section 5 of the Defence Act 1990) - naval base.

The Defence Areas are administered by the New Zealand Defence Force (NZDF) and are currently occupied by NZDF, its contractors and licensees. The Areas are a Defence Work and may be utilised for any or every purpose required by section 5 of the Defence Act 1990, which are as follows:

- a. The defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;
- b. The protection of the interests of New Zealand, whether in New Zealand or elsewhere;
- c. The contribution of forces under collective security treaties, agreements or arrangements;
- d. The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- e. The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and
- f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

Conditions

Yards

1. The following yards shall apply in respect of designation boundaries except the boundary with the Coastal Marine Area (where no yard shall apply):

All boundaries: 3m

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Building height

2. 12.5m

Height in Relation to Boundary

3. Buildings must not project beyond a 45 degree recession plane measured from a point 2.5 m vertically above ground level where the designation boundary adjoins a residential zoned site.

Building length

4. Where sites adjoining the designation boundary are zoned residential, those parts of any building which exceed a height of 5 metres and are within 10 metres of the designation boundary are to be wholly confined within the arms of a 130 degree angle formed by two lines intersecting any point on an adjacent residential boundary such that each line forms an angle of 25 degrees with that boundary.

Maximum site coverage

5. North Yard: Sports fields The maximum permitted site coverage or cumulative total area of buildings must not exceed 35%.

Minimum permeable area

6. DNB - North Yard: Sports fields The minimum permeable area must not be less than 25%.

Exceptions and notes for conditions 1-6:

Building height, bulk and location controls apply only in respect of new buildings and additions to existing buildings.

The following structures are excluded from all building height, bulk and location controls:

- a. Perimeter security fencing up to a height of 4m;
- b. Flagpoles; and
- c. Lighting standards up to a maximum height of 12.5m, and lighting standards exceeding a height of 12.5m subject to an outline plan.

Noise limits

7. The LAeq(15 min) noise level and maximum noise level (LAFmax) arising from any activity within the designated area, other than noise from construction, demolition or maintenance, measured at or within the boundary of a property in the residential zones outside the designated area, must not exceed the following limits:

Monday to Saturday 7am-10pm	LAeq(15 min) 55dB
Sunday 9am-6pm	LAeq(15 min) 55dB
All other times	LAeq(15 min) 45dB Leq(15 min) 60dB at 63 Hz Leq(15 min) 55dB at 125 Hz LAFmax 75dB

Construction, demolition and maintenance noise limits

8. Noise from construction and demolition activities must meet the requirements of Tables 2 and 3 of New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999). The measurement and assessment of construction noise must be in accordance with New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999) and the requirements of annex A of New Zealand Standard on Acoustics – Construction Noise (NZS 6803: 1999) must be used if it is necessary to assess the measured Leq levels in high background noise areas.

Exceptions to noise limits:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Military helicopter operations except that:
 - i. There shall not be more than 50 landings and 50 take-offs per calendar year;
 - ii. Over-flying of dwellings by landing helicopters is to be avoided;
 - iii. Military helicopter landings and take-offs will be limited to between the hours of 0700 – 2200; and
 - iv. Landing shall take place at the maximum practical distance from nearby residences (this will be dependent upon ground conditions).
- b. Emergency helicopter operations;
- c. Parade ground activities, gun salutes and other activities for ceremonial occasions, including preparation for such occasions;
- d. Noise from safety signals, warning devices or emergency pressure relief valves, provided they do not sound for more than a reasonable period; and
- e. Noise associated with outdoor recreational activities and sporting events.

Lighting

7. Lighting in all areas shall conform to the following:
- a. At no time between the hours of 10pm and 7am shall any outdoor lighting be used in a manner that the use of such lighting causes an added illuminance in excess of 20 lux measured horizontally or vertically at any point along any boundary of any adjoining site which is zoned Residential (and outside the designated area); and
 - b. All outdoor lighting shall be shielded in such a manner that light emitted by the fixture is projected below a horizontal plane running through the lowest point in the fixture where that light is emitted, or is shielded in such a manner that the lowest edge of the shield is at or below the centre line of the light source.

Aerials and Antennae

8. Telecommunication and radio communication aerials and antennae that comply with the limits prescribed in NZS 2772.1 (1999) New Zealand Standard for radiofrequency fields – maximum exposure levels between 3 kHz and 300 GHz shall be permitted in all parts of the designated area. Where aerials and antennae are attached to buildings, their height plus that of any support structure shall not exceed the height limit of the area by more than 5m.

Administration

9. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.
10. For the avoidance of doubt, maintenance activities do not require an outline plan.

Designation Number	4310
Requiring Authority	Minister of Defence
Location	Brigham Creek Road, Kowhai Road, Kauri Road and Bristol Road, Whenuapai (refer to Drawing 9A-1 below)
Rollover Designation	Yes
Legacy Reference	Designation MD1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Description

Defence purposes (as defined by section 5 of the Defence Act 1990) - air base.

The Defence Areas are administered by the New Zealand Defence Force (NZDF) and are currently occupied by NZDF, its contractors and licensees. The Areas are a Defence Work and may be utilised for any or every purpose required by section 5 of the Defence Act 1990, which are as follows:

- a. The defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;
- b. The protection of the interests of New Zealand, whether in New Zealand or elsewhere;
- c. The contribution of forces under collective security treaties, agreements or arrangements;
- d. The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- e. The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and
- f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

Conditions

Aircraft Noise

1. Aircraft operations on the RNZAF Airbase shall not exceed a day/night (Ldn) level of:
 - a. 65dBA outside the Airnoise Boundary (Ldn 65 dBA Contour) shown on the Airbase Noise map; and
 - b. 55dBA outside the Outer Control Boundary (Ldn 55 dBA Contour) shown on the Airbase Noise map.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

For the purpose of this control noise will be measured in accordance with the NZS 6805:1992 and calculated, as stated in NZS 6805:1992, using FAA Integrated Noise Model (INM) and records of actual aircraft operations and calculated as a 90 day rolling logarithmic average.

Exceptions to noise limits:

- a. The aircraft is landing in an emergency;
- b. The aircraft is landing at the Airbase as an alternative in adverse weather conditions; or
- c. The aircraft is using the airfield as part of a search and rescue operation or civil emergency.

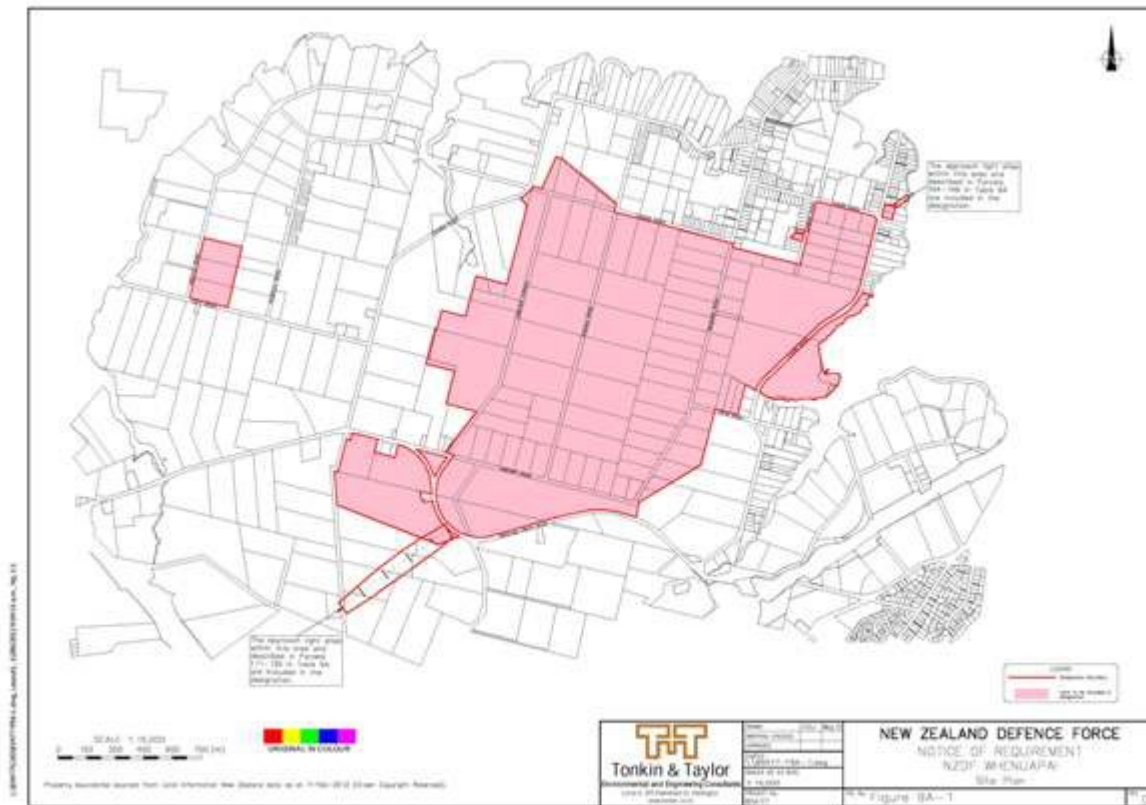

Administration

2. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with s176A(2)(b) RMA, no outline plan is required for those activities.

3. For the avoidance of doubt, maintenance activities do not require an outline plan.

4311 Whenuapai Airfield Approach and Departure Path Protection

Designation Number	4311
Requiring Authority	Minister of Defence
Location	Vicinity of Whenuapai Airfield
Rollover Designation	Yes
Legacy Reference	Auckland Council District Plan (Waitakere Section) 2003; and Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Description

Defence purposes (as defined by section 5 of the Defence Act 1990) - protection of approach and departure paths.

The Defence Areas are administered by the New Zealand Defence Force (NZDF) and are currently occupied by NZDF, its contractors and licensees. The Areas are a Defence Work and may be utilised for any or every purpose required by section 5 of the Defence Act 1990, which are as follows:

- The defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;
- The protection of the interests of New Zealand, whether in New Zealand or elsewhere;
- The contribution of forces under collective security treaties, agreements or arrangements;
- The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and
- The provision of any public service.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

Conditions

Restrictions Relating to Approach Paths

1. The approval in writing of the New Zealand Defence Force is required prior to the erection of any building, change in use of any land or building, or any subdivision of land, and prior to any building or resource consent application for such works/activities, within the areas of the designation shown on the planning maps as 'land use and subdivision subject to NZDF approval'. These areas are generally within 1,000 metres of the runways.
2. No obstacle shall penetrate the approach and departure path obstacle limitation surfaces shown on the planning maps and explained by the text "Explanation of Protection Surfaces Whenuapai Airfield" and Diagram MD1A below without the prior approval in writing of the New Zealand Defence Force. This restriction shall not apply to any building being erected which has a height of not more than 9.0 metres above natural ground level.

Explanation of Surfaces

The protection surfaces have been developed in accordance with NZ Civil Aviation Circulars (AC) 139-6 and AC 139-10. Where two or more surfaces (whether takeoff, approach, transitional, horizontal or conical surfaces) coincide, the lower shall apply.

1. Takeoff, Approach and Transitional Surfaces

The Takeoff and Approach surfaces coincide and commence at 60 metres from the end of the runway threshold. The width of the start of the surface is 300 metres for Runways 03 and 21 and 180 metres for Runways 08 and 26. Each surface diverges in width each side at a rate of 1:6.6 (15%) and extends at a gradient of 1 in 50 (2%) for a total distance of 15 kilometres. As a result, maximum permitted building altitude increases with distance from the Airfield.

The Transitional Side Surfaces, which restrict building altitudes either side of the runway, are imposed either side of the aerodrome strip. The Transitional Side Surface slopes upward from the edge of the aerodrome strip at a gradient of 1:7 (14.3%) to the inner edge of the Inner Horizontal Surface at a height of 45 metres above the Aerodrome Elevation and at an elevation of 76.3 metres above mean sea level (AMSL). The effect of these surfaces on maximum building altitude is illustrated in Diagram MD1A.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Inner Horizontal and Conical Surfaces.

The Inner Horizontal Surface is a horizontal “near circular” plane extending 4000 metres out from the edge of the aerodrome strip at a height of 45 metres above the Aerodrome Elevation and at an elevation of 76.3 metres above mean sea level (AMSL). The Conical Surface is an upward sloping surface that extends outwards from the outer edge of the Inner Horizontal Surface at a gradient of 5% to an elevation of 150m above the Aerodrome Elevation and at an elevation of 181.3 metres above mean sea level (AMSL). The effect of these surfaces on maximum permitted altitude of buildings and other objects is illustrated in Diagram MD1A.

Lapse Date	Given effect to (i.e. no lapse date)

Description

Defence purposes (as defined by section 5 of the Defence Act 1990) - air weapons range danger template.

The Defence Areas are administered by the New Zealand Defence Force (NZDF) and are currently occupied by NZDF, its contractors and licensees. The Areas are a Defence Work and may be utilised for any or every purpose required by section 5 of the Defence Act 1990, which are as follows:

- a. The defence of New Zealand, and of any area for the defence of which New Zealand is responsible under any Act;
- b. The protection of the interests of New Zealand, whether in New Zealand or elsewhere;
- c. The contribution of forces under collective security treaties, agreements or arrangements;
- d. The contribution of forces to, or for any of the purposes of, the United Nations, or in association with other organisations or States and in accordance with the principles of the Charter of the United Nations;
- e. The provision of assistance to the civil power either in New Zealand or elsewhere in time of emergency; and
- f. The provision of any public service.

The Governor-General of New Zealand, continues to raise and maintain Armed Forces on behalf of Her Majesty the Queen. Given the obligations placed on the New Zealand Defence Force by the Crown to meet the Crown's military defence needs, including those imposed by any enactment or by the policies of the government, the function of the Defence Areas include, at all times, to provide for the following functions of the New Zealand Defence Force (including visiting forces and third parties contracted to the New Zealand Defence Force):

- i. Defence Force command, land operations, sea operations, air operations, training, logistic support, ship berthing and docking, construction, repair, maintenance, munitions handling and storage, administration, and communication, and for the acquisition and improvement of the skills necessary for such functions;
- ii. Resources, accommodation and facilities for these functions;
- iii. Accommodation for members of the New Zealand Defence Force and any visiting force, training, recreational, welfare and medical facilities for them;
- iv. Facilities for the storage of matériel, food and fuel, and the conservation and display of historic material;
- v. Facilities for the construction, repair and maintenance of vessels, aircraft, vehicles and other equipment, including the vessels, aircraft, vehicles and equipment of forces of other nations;
- vi. To provide for the rapid and efficient deployment of the New Zealand Defence Force; and
- vii. Any other activity required in the delivery of New Zealand Defence Force outputs as described annually in the Departmental Forecast Report: New Zealand Defence Force.

Conditions

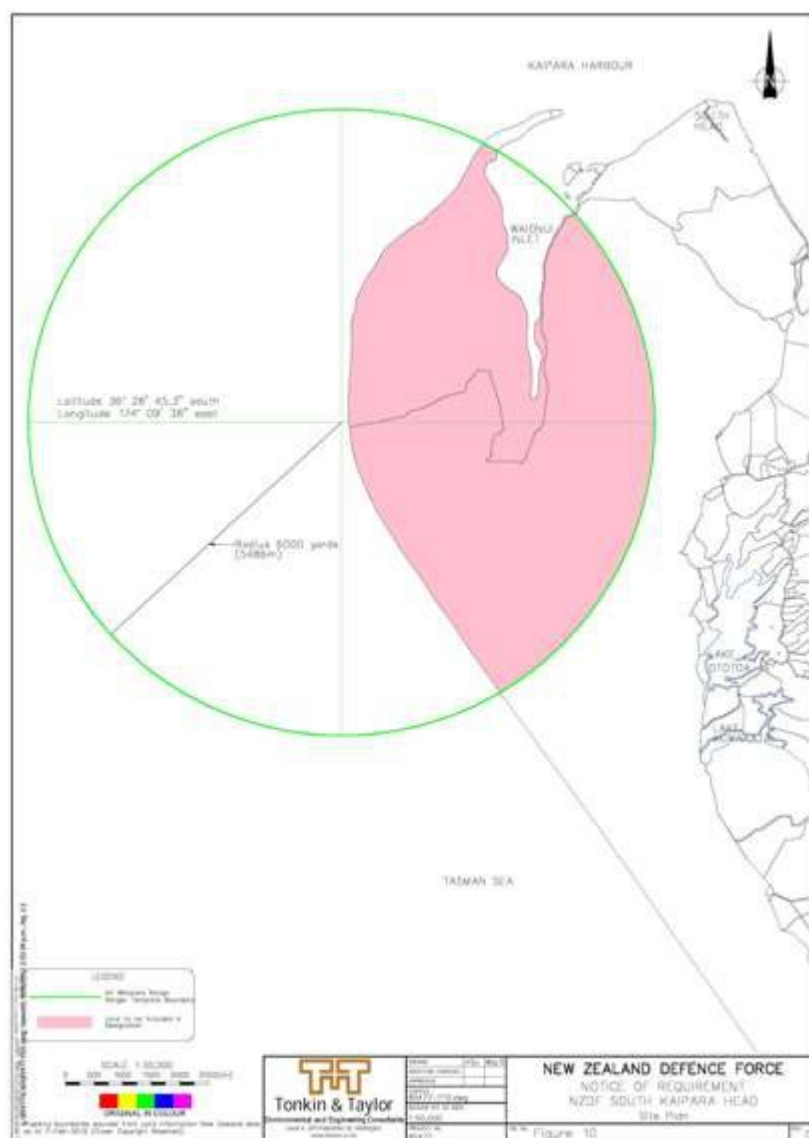

1. Works and projects that comply with the permitted activity rules of the underlying zoning are incorporated into this designation and, in accordance with section 176A(2)(b) of the Resource Management Act 1991, no outline plan is required for those activities.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. For the avoidance of doubt, maintenance activities do not require an outline plan.

Minister of Education

Standard Conditions for All Education Designations

The Minister requires each designation to be subject to the following explanatory notes and conditions:

Explanatory Notes

1. Each of these designations enables the establishment of a school that is able but is not required to cater for all of the school years listed in the purpose.
2. *“Educational Purposes”* for the purposes of these designations shall, in the absence of specific conditions to the contrary:
 - a. Enable the use of the facilities on the designated site by and for the educational benefit of any school age students (ie: years 0 to 13) regardless of whether they are enrolled at an institution located on that designated site.
 - b. Enable the provision of supervised care and study opportunities for students outside school hours in school facilities.
 - c. Enable the provision of community education (eg: night classes for adults) outside school hours in school facilities.
 - d. Include but not be limited to the provision of academic, sporting, social and cultural education including through:
 - i. Formal and informal recreational, sporting and outdoor activities and competitions whether carried out during or outside school hours;
 - ii. Formal and informal cultural activities and competitions whether carried out during or outside school hours; and
 - iii. The provision of specialist hubs and units (including language immersion units and teen parenting units) for students with particular educational requirements or special needs.
 - v. Enable the use of facilities for purposes associated with the education of students including school

The Proposed Auckland Unitary Plan (notified 30 September 2013)

assemblies, functions, fairs and other gatherings whether carried out during or outside school hours.

vi. Enable the provision of associated administrative services; car-parking and vehicle manoeuvring; and health, social service and medical services (including dental clinics and sick bays).

vii. Enable housing on site for staff members whose responsibilities require them to live on site (e.g. school caretakers) and their families.

3. Where any standard condition below conflicts with a specific condition on a designation, the site specific condition takes precedence.

Conditions

Height in Relation to Boundary

1. Any new building or building extension (excluding goal posts and similar structures) shall comply with the height in relation to boundary controls [attached to this Schedule] from any adjoining land zoned primarily for a residential purpose, or zoned for an open space/outdoor recreation purpose.

Noise

2. The operation of the school shall comply with the following noise limits at the boundary of any site zoned primarily for a residential purpose, or in the case of a rural zone, at a point 20m from the facade of any dwelling, or the site boundary, whichever is closest to the dwelling:

Daytime	Noise Level (Leq) dBA
Mon – Sun, 7.00am – 10.00pm (0700 -2200)	55
Mon – Sun, 10.00pm – 7.00am (2200 -0700)	45

These noise levels shall not apply to noise from standard school outdoor recreational activities occurring between 0800 and 1800 hours Monday to Saturday.

Noise levels shall be measured and assessed in accordance with NZS 6801: 2008 “Measurement of Environmental Sound” and NZS 6802:2008 “Environmental Noise”.

Noise from construction shall not exceed the limits recommended in, and shall be measured in accordance with, New Zealand Standard NZS 6803:1999 “Acoustics – Construction Noise”.

On-Site Car Parking- Schools

3. Additional on-site car parking shall be provided at the rate of two carparks per new classroom or classroom equivalent, except where the Council accepts, on the basis of a specifically commissioned parking study by an appropriately qualified engineer and/or transportation planner, that a lesser level is appropriate. For the avoidance of doubt, this condition shall only apply where there is a net increase in the number of classrooms or classroom equivalents.

On-Site Car Parking- Early Childhood Education (Preschool)

4. In addition to any car parking required for the school, on-site car parking for early childhood education (preschool) shall be provided at the rate of one car park per every 10 children the facility is licensed or designed to accommodate, plus one per each full time equivalent staff member required for the license or design capacity of the centre, except where the Council accepts, on the basis of a specifically commissioned parking study by an appropriately qualified engineer and/or transportation planner, that a lesser level is appropriate.

Scheduled Trees

5. No tree or group of trees specifically scheduled in the District Plan may be cut, damaged, altered, injured, destroyed or partly destroyed, or works undertaken within the drip line of any such tree(s), other than in accordance with an outline plan submitted and processed in accordance with s176A of the Resource

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Management Act 1991. This condition shall not apply to minor trimming or maintenance undertaken by hand operated secateurs or pruning shears in accordance with accepted arboricultural practice, or where removal or trimming is required to safeguard life or property.

Scheduled Heritage Buildings

6. No additions or alterations shall be made to any building or group of buildings specifically scheduled for a heritage purpose in the District Plan, other than in accordance with an outline plan submitted and processed in accordance with s176A of the Resource Management Act 1991. This condition shall not apply to internal alterations unless the interior of the building forms part of the scheduled heritage item in the District Plan.

Outline Plan

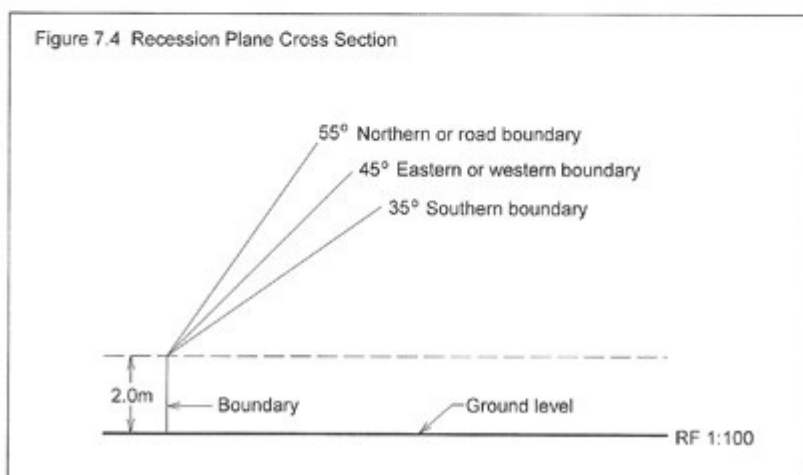

7. That an outline plan of works shall not be required for:

- a. Any internal building works other than those that result in a net increase in the number of classrooms or classroom equivalents;
- b. General building maintenance and repair work including but not limited to re-painting, re-cladding and re-roofing;
- c. Installing, modifying and removing playground furniture and sports structures (e.g. goal posts);
- d. Amending any internal pedestrian circulation routes/pathways;
- e. Installing, maintaining or repairing any in ground infrastructure services such as stormwater, sewerage and water lines and connections, including any ancillary earthworks;
- f. Provision of landscaping and gardens, provided that it does not conflict with any designation condition or alter landscaping required as mitigation as part of an outline plan for other works; or
- g. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

4508	Educational purposes - intermediate school (years 7 - 8)	182 Birkdale Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4509	Educational purposes - primary school (years 0 - 8)	213 Birkdale Road
4510	Educational purposes - primary school (years 0 - 8)	10 Salisbury Road
4511	Educational purposes - secondary school (years 7 - 13)	140 Birkdale Road
4512	Educational purposes - primary school (years 0 - 8)	77 Mokoai Road
4513	Educational purposes - primary school (years 0 - 8)	40 Browns Bay Road
4514	Educational purposes - primary school (years 0 - 8)	77 Aberdeen Road, Castor Bay
4515	Educational purposes - primary school (years 0 - 8)	2-6 Onetaunga Road, Birkenhead
4516	Educational purposes - primary school (years 0 - 8)	18 Kerr Street
4517	Educational purposes - primary school (years 0 - 8)	48 Forrest Hill Road, Forrest Hill
4518	Educational purposes - primary school (years 0 - 8)	145 Glamorgan Drive
4519	Educational purposes - secondary school (years 7 - 13)	52 Kaipatiki Road, Glenfield
4520	Educational purposes - intermediate school (years 7 - 8)	138 Chivalry Road, Glen Field
4521	Educational purposes - primary school (years 0 - 8)	83A Chivalry Road, Glen Field
4522	Educational purposes - primary school (years 0 - 8)	9 Isobel Road, Greenhithe
4523	Educational purposes - primary school (years 0 - 8)	82 Jutland Road, Takapuna
4524	Educational purposes - primary school (years 0 - 8)	16 McGlashan Place, Beach Haven
4525	Educational purposes - kura kaupapa Māori (years 0 - 13) and may include early childhood education (preschool)	7 Ceres Court, Rosedale
4526	Educational purposes - secondary school (years 7 - 13)	30 Ashley Avenue, Torbay
4527	Educational purposes - primary school (years 0 - 8)	27 Ralph Eagles Place, Torbay
4528	Educational purposes - primary school (years 0 - 8)	13 Agathis Avenue/ Galaxy Drive
4529	Educational purposes - primary school (years 0 - 8)	34 Manuka Road, Glenfield
4530	Educational purposes - primary school (years 0 - 8)	4 Wykeham Place, Glenfield
4531	Educational purposes - primary school (years 0 - 8)	34 Sheakespeare Road, Milford
4532	Educational purposes - primary school (years 0 - 8)	37 Sunrise Avenue, Murrays Bay
4533	Educational purposes - secondary school (years 7 - 13)	1 Kauri Glen Road
4534	Educational purposes - primary school (years 0 - 8)	145-147 Lake Road
4535	Educational purposes - primary school (years 0 - 8)	69 Onewa Road, Northcote
4536	Educational purposes - primary school (years 0 - 8)	14 Sartors Avenue
4537	Educational purposes - primary school (years 0 - 8)	31 Fraser Avenue, Northcote
4538	Educational purposes - primary school (years 0 - 8)	140 Kyle Road, Greenhithe
4539	Educational purposes - primary school (years 0 - 8)	126 Oteha Valley Road, Albany
4540	Educational purposes - primary school (years 0 - 8)	50 Spencer Road, Albany
4542	Educational purposes - secondary school (years 7 - 13)	564 East Coast Road
4543	Educational purposes - primary school (years 0 - 8)	598-602 Paremoremo Road (Cutts Crescent), Albany
4544	Educational purposes - primary school (years 0 - 8)	40 Sartors Avenue
4545	Educational purposes - primary school (years 0 - 8)	15 Russell Street

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4546	Educational purposes - primary school (years 0 - 8)	36 Sunnybrae Road
4547	Educational purposes - primary school (years 0 - 8)	35 Lyford Crescent
4548	Educational purposes - secondary school (years 7 - 13)	210 Lake Road, Takapuna
4549	Educational purposes - primary school (years 0 - 8)	40 Northcote Road, Takapuna
4550	Educational purposes - primary school (years 0 - 8)	23 Auburn Street, Takapuna
4551	Educational purposes - primary school (years 0 - 8)	84 Target Road, Takapuna
4552	Educational purposes - primary school (years 0 - 8)	56 Deep Creek Road
4553	Educational purposes - primary school (years 0 - 8)	2a Morrison Avenue
4554	Educational purposes - primary school (years 0 - 8)	136 Verran Road, Birkenhead
4555	Educational purposes - intermediate school (years 7 - 8)	113 Becroft Drive, Forrest Hill
4556	Educational purposes - primary school (years 0 - 8)	138 Chivalry Road, Glenfield
4557	Educational purposes - secondary school (years 7 - 13)	30 Forrest Hill Road, Takapuna
4558	Educational purposes - secondary school (years 7 - 13)	2 Wairau Road, Takapuna
4559	Educational purposes - primary school (years 0 - 8)	13-17 Compton Street
4560	Educational purposes - primary school (years 0 - 8)	54 Seaview Road
4561	Educational purposes - primary school (years 0 - 8)	1349 Ahuroa Road
4562	Educational purposes - primary school (years 0 - 8)	24 Mahoenui Valley Road, Albany
4563	Educational purposes - primary school (years 0 - 8)	1220 Dairy Flat Highway, Dairy Flat
4564	Educational purposes - primary school (years 0 - 8)	65 Alec Craig Way, Whangaparoa
4565	Educational purposes - primary school (years 0 - 8)	29 Rata Street Helensville
4566	Educational purposes - primary school (years 0 - 8)	40 Station Road, Huapai
4567	Educational purposes - secondary school (years 7 - 13)	36 Rautawhiri Road, Helensville
4568	Educational purposes - primary school (years 0 - 8)	12 School Road Kaipara
4569	Educational purposes - primary school (years 0 - 8)	979 Kaipara Coast Highway, Kaukapakapa
4570	Educational purposes - primary school (years 0 - 8)	26 Hauraki Road, Leigh
4571	Educational purposes - secondary school (years 7 - 13)	2-30 Woodcocks Road, Warkworth
4572	Educational purposes - primary school (years 0 - 8)	952 Matakana Road, Matakana
4573	Educational purposes - primary school (years 0 - 8)	280 Centreway Road, Orewa
4574	Educational purposes - primary school (years 0 - 8), secondary school (years 7 - 13) and educational purposes	80 Riverside Road, Orewa
4575	Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool)	86 Marie Road, Orewa
4576	Educational purposes - primary school (years 0 - 8)	4 Bathgate Road, RD2 Wellsford
4577	Educational purposes - primary school (years 0 - 8)	10 Fordyce Road, Helensville
4578	Educational purposes - primary school (years 0 - 8)	20 Albert Hall Drive, Whanaparua
4579	Educational purposes - primary school (years 0 - 8)	19 School Road, State Highway 18, Riverhead

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4580	Educational purposes - secondary school (years 7 - 13)	287 and 287A Rodney Street Wellsford
4581	Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool)	2 Longmore Lane, Silverdale
4582	Educational purposes - primary school (years 0 - 8)	62 Dawson Road Snells Beach
4583	Educational purposes - primary school (years 0 - 8), intermediate school (years 7 - 8) and secondary school (years 7 - 13) and may include early childhood education (preschool)	28 Bonita Avenue, Stanmore Bay
4584	Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool)	30 and 36 Waiora Road, Whangaparaoa
4585	Educational purposes - primary school (years 0 - 8)	1 Okahukura Road, Taporā
4586	Educational purposes - primary school (years 0 - 8)	15 Tauhoa Road, RD 4 Warkworth
4587	Educational purposes - primary school (years 0 - 8)	14 Cottle Road, RD 2 Henderson
4588	Educational purposes - primary school (years 0 - 8)	8 Pakiri Block Road, RD 4 Wellsford

4500 Albany Junior High School

Designation Number	4500
Requiring Authority	Minister of Education
Location	19, 286 and 298 Appleby Road, Albany
Rollover Designation	Yes
Legacy Reference	Designation 159, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - junior high school (years 7 - 10).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. Along the Albany Highway frontage, buildings shall be located not closer than 14 metres from the boundary. Where the designation adjoins land zoned for residential or recreational purposes, buildings should be located not less than 10 metres from the boundary. All these setbacks should be observed unless written consent is obtained from any landowners or occupiers who are considered by the territorial authority to be adversely affected and that consent is submitted to the Council for consideration under section 176A of the Resource Management Act 1991. Provided that no such written consent shall authorise a building on the designated site to exceed the height in relation to boundary control of the relevant underlying zone or allow the length of that part of the building infringing the yard to be greater than 10 metres.

2. Buildings shall not exceed 15 metres in height, provided that where buildings or parts of buildings locate closer than 20 metres to any designation boundary, which adjoins land zoned for residential, or recreational purposes buildings shall not exceed 8 metres in height.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. All parking associated with the school shall be provided on-site, at a minimum rate of one space for every 10 pupils aged 16 or over plus one space for every employee. All drop off and pick up points, including a bus-bay, shall be located on site. All parking spaces, accessways and manoeuvring areas should be formed and finished with an all-weather dustfree surface, drained and marked out.

4. No access to the school is to be obtained directly off Albany Highway. Access shall be provided from Appleby Road and from two entry points from the proposed subdivision to the south. The detailed access arrangements, including the distribution of different types of access (buses, student drop-off and pick up and staff, student and visitor vehicles) between the three access points, shall be determined by a Traffic Effects Report, which is required to be submitted in accordance with Condition (5).

5. The Outline Plan of Works shall include, among other things, a stormwater management plan providing details of stormwater control measures for the development and silt control measures for the construction process, and a traffic effects report pursuant to Section 176A(3)(f) of the RMA (without limiting the consideration of any other matters to avoid, remedy or mitigate any adverse effects on the environment).

a. The stormwater run-off management plan should detail the volume of stormwater likely to be generated from the site upon development including proposals for stormwater containment and discharge. Before submitting the stormwater management plan to the Council, the Requiring Authority will consult with tangata whenua over the design and make any necessary alterations.

b. The traffic effects report will address, among other things, access issues and the effects of traffic and means of mitigation.

c. Any proposals contained in either the stormwater management plan or the traffic effects report shall comply with the then current standards imposed and administered by the relevant authority responsible for stormwater discharges and roads.

6. A minimum of 80% of the site shall have a permeable surface.

No attachments.

4501 Albany School

Designation Number	4501
Requiring Authority	Minister of Education
Location	6 Bass Road, Albany
Rollover Designation	Yes
Legacy Reference	Designation 29, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

Attachments

The Proposed Auckland Unitary Plan (notified 30 September 2013)

No attachments.

4502 Albany Senior High School

Designation Number	4502
Requiring Authority	Minister of Education
Location	536 and 546 Albany Highway, Albany
Rollover Designation	Yes
Legacy Reference	Designation 17, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - senior high school (years 11 - 13).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The roll of the school shall not exceed 1,500 pupils.

Buildings and Site Layout

2. All buildings and structures shall comply with the following development controls:
 - a. Height in relation to boundary: no part of any building shall infringe a height in relation to boundary control from any adjacent land zoned residential of 2.5m plus the shortest horizontal distance between that part of the building and any site boundary.
 - b. The height of all buildings (excluding any goal posts associated with sporting activities), shall be limited to the height limits shown on the concept plan attached to this designation.
 - c. Minimum building setbacks: From the Albany Highway boundary as at 1 June 2007 – 5m; Side and Rear boundaries — 1.2m (includes unformed road on southwest boundary).
 - d. Maximum building coverage: 35%
 - e. Minimum permeable area: 30%

Transportation and Traffic

3. That the School Travel Plan being developed by the Requiring Authority (as a component of the Albany Senior High School project) to actively promote the Traffic Demand Management (TDM) targets for travel modes other than by private vehicles and thereby mitigate the impact of school traffic on Albany Highway, be developed in consultation with Council officers. A preliminary travel plan, shall be prepared prior to occupation of the site for academic, and shall be reviewed and updated annually. The Travel Plan shall be developed in conjunction with the School, Auckland Transport and the Council as part of an overall Integrated Transport plan that covers the needs of all educational institutes within the Albany Basin.

4. The Requiring Authority and the School Board of Trustees shall (i) monitor school related traffic and parking in the vicinity of the school, and (ii) resource, develop, review and if necessary amend the Travel Plan for the school in consultation with the Council to mitigate real and potential adverse traffic effects as and when the school becomes operational. The monitoring of parking shall have particular regard to any overspill of carparking from the school to the neighbouring residential area of The Landing.

Ecological and Arboriculture

5. That within Area C as shown on the concept plan attached to this designation, there shall be no removal of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

any tree unless such a tree is dead, suffering from an untreatable disease which has caused or will cause a significant decline in its health, or is causing significant risk to people or property. A tree shall be deemed to be within Area C if more than 50% of the trunk is located within this area. No buildings shall be erected within Area C. For the purposes of this condition, the term 'building' means any permanent structure exceeding 0.5m in height. Minor structures associated with the use of tracks such as steps, boardwalks and directional/educational signage not exceeding 0.5m in height shall be allowed under this condition, provided that such works are undertaken in a manner that does not detrimentally affect the health of any trees.

6. The Requiring Authority shall undertake the establishment of 5ha revegetation plantings to off-set the loss of vegetation. This may include new areas of planting and/or enrichment planting of existing planted areas that would benefit from increased planting density. Such planting will be undertaken within the Lucas Creek catchment and, where proposed on reserve land, will meet the approval of [the appropriate Council officer]. In recognition that suitable planting locations may be owned by a third Party (e.g. reserve land administered by the Auckland Council), a cash contribution offered to the Auckland Council equivalent to the actual cost of undertaking the necessary plantings (on a pro rata basis for any area less than 5ha) shall be deemed to satisfy this condition should the Requiring Authority be unable to reasonably undertake the required planting due to permissions being declined by third parties for suitable locations within the Lucas Creek Catchment. The Requiring Authority shall be required to show it has taken all reasonable steps in trying to secure access to suitable locations for planting before offering any cash contribution in lieu of works to the Auckland Council.

7. The Requiring Authority shall undertake restoration plantings within the cleared tracks within the bush area that were created in order to facilitate the geo-tech investigations (although only where these plantings are outside the footprint of the school buildings sports fields and school operational areas) with the exception of retaining a fire egress track as indicated on the concept plan submitted with the designation which may potentially be required depending on the final design solution adopted.

8. The Requiring Authority shall undertake, dense planting of the edges of the remaining bush with pioneer "edge" type species in order to protect any remaining 'interior' habitats and communities from edge effects.

9. The Requiring Authority shall undertake the planting of tree species that would be attractive to birds along the frontage between the school and Albany Highway (e.g. Puriri and Kowhai), in order to maximise the "invitation area" on the school side of the Oteha Stream wildlife corridor.

10. A comprehensive salvage operation is to be undertaken with regard to lizards (both skinks and geckos) prior to the commencement of any vegetation removal. The methods to be employed in this salvage operation will need to be prepared by a suitably qualified and experienced herpetologist, as will the actual salvage operation itself.

11. The Requiring Authority shall undertake the preparation of a combined Landscape Mitigation, Tree Protection and Ecological Management Plan (LMTPEMP) prepared by suitably qualified and experienced landscape architect, arborist and ecologists, which shall be submitted to the Auckland Council as part of the first Outline Plan of Works. This Plan(s) shall demonstrate achievement of conditions 11 -16 inclusive. It shall have regard to:

- a. The Freshwater Ecological Values Report from SKM dated October 2007;
- b. The evidence of Mr Craig Douglas Bishop report in the matter of the Resource Management Act 1991 and in the matter of a notice of requirements by the Minister of Education regarding the Albany Senior High School dated September 2007; and
- c. The Peer Review of Assessment of Ecological Effects report prepared by Boffa Miskell dated October 2007.

12. The LMTPEMP will include:

- a. Details of how the significant trees on the site which are in close proximity to proposed development are to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

be protected from damage or accidental spillage during the construction panned and supplied with adequate air and water to their root zones. This should include on monitoring of water quality and quantity to ensure changes in available soil moisture levels around the trees are minimized and irrigation undertaken if necessary. These trees are identified in the Arborlab Report (25 September 2006) as trees 6, 7, 8, 10, 11, 12 and 12a (herein referred to as 'Significant Trees') and the group of trees scheduled under the North Shore section of the District Plan as identified in the District Plan as No. 94 and identified in the Arborlab Report as T22 (1 x Kauri), T23 (1 x Rimu) and T24 (1 x Totara).

b. A report from a qualified Arborist attesting to the effects of the proposed works on these trees will be submitted to Auckland Council for assessment prior to works commencing.

c. A requirement that no site works or hard surfacing shall occurring within 10m of the centre of any Scheduled Trees on sites identified in the District Plan as at 1 June 2007 as No. 94 and identified in the Arborlab Report submitted with the notice of requirement as T22 (1 x Kauri), T23 (1 x Rimu) and T24 (1 x Totara), provided that minor low impact works within this area may occur with the express written permission of the Council,

d. A requirement that no site works shall occur that have a detrimental effect on any trees or vegetation on neighbouring properties, without their owners and the Auckland Council's express written permission and mitigation to the approval of Auckland Council.

e. A schedule of the species, number of plants and sizes at time of planting for both revegetation areas and amenity planting.

f. A landscape plan shall include a date for implementation of the planting which shall be prior to the end of the planting season (May to September) following the completion of site works. The planting must be maintained in perpetuity on the site being used for education purposes.

g. An implementation and maintenance programme, including a weed management plan for the site (detailing a minimum of three (3) years following initial planting). The plan shall include details or target weed species (actual and likely), methods of eradication, DAA-004682-94-43-V5 ground preparation for the replanting, replacement species types, replacement plant numbers and replacement plant sizes (at the time of planting).

h. The means by which twice-annual weed and animal pest/predator monitoring will be undertaken, and the means by which the result will trigger appropriate control activities.

i. The means by which students will be encouraged to participate in the care of this bush, with particular regard to formal educational opportunities and the school curriculum.

j. The means by which student access into the bush area will be controlled.

13. All stormwater, wastewater and stream alteration plans shall be prepared in consultation with the Auckland Council Arborist and a suitably qualified Arborist for the Minister of Education and final plans shall not have any significant detrimental effects on the significantly Scheduled Trees.

14. The war memorial plinth located between the trees identified in Condition 19 above shall be retained in its existing position as at 1 June 2007.

15. The stone bollards adjacent to the road frontage that were erected as a World War II memorial to past pupils shall be retained on site, but may be relocated from their existing positions.

16. The Old Albany School Building scheduled as a building of heritage significance in the District Plan as at 1 June 2007 may be relocated within the designation as part of any school development, but may not be demolished or removed from the site (except that it may be temporarily removed from the site during construction of the school for the purposes of protection from construction activity and/restoration). The details of how this building will be reinstated shall be detailed in any Outline Plan of Works involving relocation of this building. This condition shall only apply to the core of the building as it stood in October 1938, and not the more recent additions.

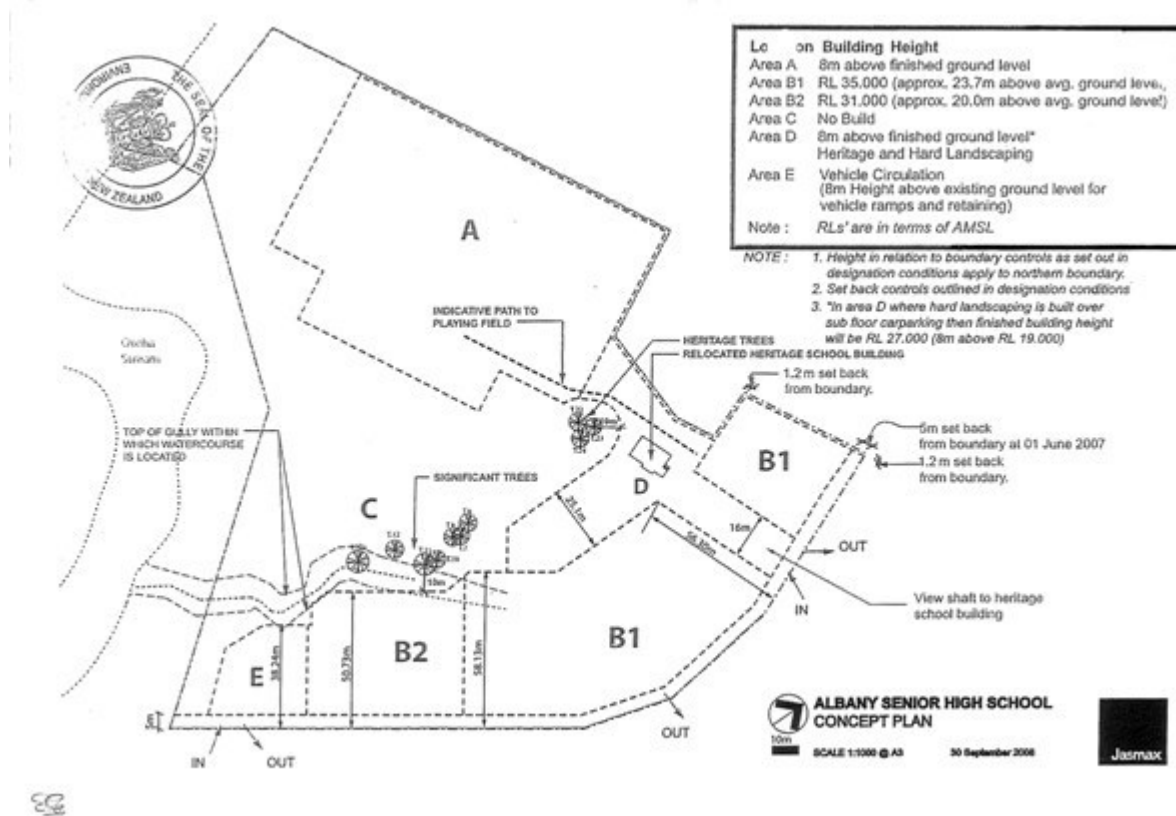

17. A minimum of one parking space for every 10 pupils aged 16 or over, plus one for every employee shall be provided on-site, to a maximum of 300 spaces. For the avoidance of doubt, these parking spaces shall include

The Proposed Auckland Unitary Plan (notified 30 September 2013)

temporary spaces for drop off and pick up of students.

Purpose

Educational purposes - kura kaupapa Māori (years 0 - 13) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The roll of the school shall not exceed 290 inclusive of 40 pupils at the Kohanga Reo.
2. The development of the site and buildings shall comply with the following development controls:
 - a. Landscaping Requirements to include a combination of trees, shrubs and plants along with grassed areas associated with and surrounding the playing fields — Minimum of 30%.
3. Parking provision: All car parking, car loading and bus loading spaces shall be located on site and shall meet the following standards:
 - a. Four car parks, inclusive of two disabled spaces, plus one additional car parking space for every 10 pre-school or school pupils, and one additional drop-off/loading space for every 20 pre-school or school pupils.
 - b. All parking spaces, access ways and manoeuvring areas shall be formed and finished with a dust free surface, drained and marked out.
4. The Requiring Authority shall, either directly or through the School Board of Trustees, shall:
 - a. Monitor school related traffic in the vicinity of the school; and
 - b. Resource, develop, review and action an agreed Travel Management Plan for the school to Councils satisfaction to mitigate real and potential adverse traffic effects as and when the school becomes operational.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. That all activities taking place at the school comply with the following noise levels measured at the boundary of other properties and shall apply all hours of the day, every day of the week:

- a. All Properties zoned Business 1 to 8 65 dBA L10; or
- b. All Properties zoned Business 9 & 10 70 dBA L10.

This provision shall not apply in respect of the noise generated from children's voices outside between 0800 hrs and 1800 hrs on any school day.

6. The proposed Kohanga Reo and Composite School shall, to the extent practicable, incorporate the following building design and landscaping principles:

a. The development of the site and buildings shall: DAA-004682-94-43-V5:

- i. Respond to the visual character and quality of their surrounds in terms of materials, building form and detailing and in particular where buildings open onto or incorporate access points onto, paths and roads;
- ii. Respond to the visual amenity of surrounding areas by limiting the extent to which glare from the use of outdoor lighting, lit architectural features, and reflective surfaces adversely impacts on the comfort of people or degrades the level of visual amenity, including any adverse effects on the night time sky environment;
- iii. Allow for passive surveillance of the street for the maintenance of personal safety in public spaces;
- iv. Seek to break down large building facades in scale to provide visual interest when viewed from the street and any public area;
- v. Seek to define the street edge or building setback;
- vi. Seek to assist the observer to understand its various parts and understand its function, and in particular the clear definition and convenient location of various entry points;
- vii. Screen lift plant and other mechanical plant located on top of buildings with architectural features or locate them in the roof;
- viii. Make use of the site layout, screening, and sound damping material to mitigate any adverse effects of noise nuisance on neighbouring activities.

b. The landscaping shall enhance and/or complement the proposed school campus and street scene, and in particular:

- i. Use tree planting to break up parking areas and reinforce the understanding of the parking layout;
- ii. Make use of landscape features to define the street edge;
- iii. Make use of landscape planting to break-up and or soften the appearance of large or bulky buildings; and
- iv. Provide landscaping around all playing fields.

c. The site development shall ensure pedestrian amenity, safety and convenience by:

- i. Facilitating pedestrian linkages and access to adjacent streets and public open spaces;
- ii. Ensuring that pedestrian routes are direct and easily defined;
- iii. Ensuring sufficient segregation of pedestrian access from vehicle carriageways;
- iv. Providing adequate and appropriate pedestrian shelter; and
- v. Ensuring that pedestrian ways meet the needs for access of people with sight and mobility impairments.

d. The site layout - for vehicle access, circulation, parking and the provision for service vehicles shall avoid adverse effects on any road or adjacent site, and in particular ensure:

- i. That the internal circulation of the parking areas is designed for the safe and efficient movement of vehicles on and off the site, through an easily comprehended layout;
- ii. The provision of adequate sight lines and appropriate surface markings and signs; and
- iii. That parking areas are constructed to a high standard of visual amenity, with low maintenance all weather materials, adequate drainage and landscape planting. The standard conditions for all Minister of Education designations apply to this designation.

4635 Hobsonville Point Primary School

Designation Number	4635
Requiring Authority	Minister of Education
Location	Buckley Avenue, Hobsonville
Rollover Designation	Yes
Legacy Reference	Designation ME61, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The designation shall lapse on the expiry of 15 years from the date on which it is included in the District Plan if it has not been given effect to before the end of that period.

2. The requiring authority shall, either directly or through the School Board of Trustees:

- i. Monitor school related vehicle traffic in the vicinity of the school once a year for a period of 3 years following the opening of the school.
- ii. Resource, develop, review and action a Travel Plan which:
 - a. Sets the goals of the school with respect to sustainable travel modes and to mitigate real and potential adverse traffic effects;
 - b. Seeks to minimise the provision of on-site car parking;
 - c. Facilitates the integration of the school with the surrounding transport network (including issues of pedestrian and cyclist permeability into the site);
 - d. Is maintained and updated annually while the school is operating under this designation.

This Travel Plan shall be developed in consultation with Auckland Council and Auckland Transport or their successors and shall be reviewed at the time of submitting each Outline Plan of Works relating to increased capacity.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. The proposed development shall be subject to the following conditions regarding traffic and parking:
- For the primary school parking shall be provided on a staged basis at a rate of three parking spaces per two classrooms plus two per three staff members, unless the Travel Plan developed under Condition 2(ii) identifies that a lower level of parking provision can meet the demands for off street parking.
 - For the early childhood education centre car parking shall be provided on a staged basis at a rate of one per four child places per session.
 - Disabled and loading parking provisions shall be provided in accordance with the specifications provided in the Waitakere City Council - Code of Practice (or its equivalent document) and in accordance with the minimum requirements stipulated in the Auckland Regional Parking Strategy 2009.
 - The design and layout of group car-parking areas and if required bus/vehicle passenger pick up and drop off areas shall be developed in consultation with [the appropriate Council officer].

4. All activities taking place at the school shall comply with the following noise levels measured at the most exposed location at or within the boundary of properties zoned for residential purposes:

- 7.00am-7.00pm Monday-Saturday = L10 50dBA
- 7.00pm-10.00pm Monday-Saturday 7.00am-10.00pm Sundays & Public Holidays = L10 45dBA
- 10.00pm-7.00pm Other times = L10 40dBA, LMax 70dBA

This provision shall not apply in respect of the noise generated from normal outdoor school activities between 0800hrs and 1800hrs (excluding Sundays and public holidays). Sound will be measured in accordance with the requirements of NZS 6801: 1991 'Acoustics -Measurement of Sound' and assessed in accordance with requirements of NZS 6802:1991 'Assessment of Environmental Sound'.

5. In the event of archaeological evidence being uncovered (e.g. shell, middens, hangi or ovens, pit depressions, defensive ditched, artifactual material or human bones) work is to cease in the vicinity of the discovery, and an Archaeologist, Historic Places Trust and Auckland Council are to be contacted so that appropriate action can be taken before any work can recommence there.

6. All buildings and structures shall be designed in recognition of the matters listed in Condition (12) and shall comply with the following development controls:

Site Coverage

- Maximum building coverage: 35%;
- Maximum impermeable surface coverage: 40%;
- Maximum building height adjoining Hobsonville Point Road: 15.0 metres; and
- Maximum buildings adjoining Eastern Avenue and other local streets: 12.0 metres.

Height excludes goal posts associated with sporting activities; chimneys/flues, flag poles and aerials.

7. The Requiring Authority shall submit with the first Outline Plan of Works a detailed landscape plan in respect of the whole school site. This plan shall include the following details:

- Planting and landscape works along the Eastern Avenue boundary:
 - This shall comprise information regarding the location of planting, boundary treatments, the location of paths and vehicle crossings - and the approved plan must align with existing or proposed landscape treatment within or along Eastern Avenue; and
 - This is to be developed in consultation with [the appropriate Council officer];
- The location of existing and proposed buildings;
- The surrounding street context: show the adjacent streets, footpaths, the location of any pedestrian crossings, and bus stops;
- Contour information;
- Framework tree planting (species, grades and locations), and the location and planting (planting plans) for any garden areas, hedges;
- The articulation and identification of outdoor space, including outdoor play areas (both hard surfaces and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

grassed areas). Note: Outdoor space may be defined by a combination of buildings, trees, landform, fences/hedges or other feature;

g. Vehicle access and parking areas including cycle parks;

h. Entrances for cyclists and pedestrians; and

i. The location, style and height of fencing on exterior boundaries of the school which face roads or other public spaces.

8. A plan detailing how the historic heritage values of the former airforce runway will be recognised on the school site. The plan will be developed in consultation with the Historic Places Trust and Auckland Council or their successors and submitted with an Outline Plan of Work on the site.

9. The Requiring Authority shall submit with each subsequent Outline Plan of Works a landscape plan which demonstrates how the additions continue to contribute to the matters identified in conditions (7) and (8) above.

10. All subsequent Outline Plan of Works submitted by the Requiring Authority in respect of the school site shall be accompanied by a statement that records the extent to which the design reflects or departs from the detailed landscape plan approved in Condition (7) above.

11. Prior to the opening of the school, the Requiring Authority shall construct separate vehicle access points to the primary school and early childhood education centre. These vehicle access points are to be gained from Eastern Avenue, and a separate visitor/staff car park area and service/loading area may be gained off Road 14. The location and design specifications shall be developed in consultation with [the appropriate Council officer] prior to the submission of an Outline Plan of Works.

12. Each Outline Plan of Works for built form shall be accompanied with an urban design statement detailing how the design has been developed in response to the following design principles, where they are applicable:

a. The location of school buildings shall to the extent practicable contribute to the built form of any adjacent street with the placement of buildings with, and located as close as practicable, to adjacent street facing boundaries;

b. All buildings facing the street, open space, and on-site car parking areas shall interact with these spaces with openings such as doors and windows to provide passive surveillance;

c. The height of buildings at the intersection of Hobsonville Point Road and Eastern Avenue shall be maximised where possible, and shall be designed to address both street frontages;

d. Where fencing on road boundaries is required it shall be low height, permeable and recessive in colour and design; and

e. The school shall, to the extent practicable facilitate connectivity from the school site to the surrounding street and pedestrian networks.

13. Development of the site shall be undertaken in a way that recognises the principles of Low Impact Design stormwater management systems (as detailed in the relevant Integrated Catchment Management Plan) and incorporates measures to mitigate the impact of impervious surfaces and earthworks, utilising soils and vegetation to trap pollutants and reduce stormwater runoff. Details of the proposed Low Impact Design measures shall be submitted to the Council with the first and any subsequent Outline Plan of Works for development.

14. A sustainable water supply system shall be implemented. This shall include installing water re-use tanks for non-potable supply and the use of water efficient fixtures to minimise the amount of reticulated water supply required.

4639 Ranui Campus

Designation Number	4639
Requiring Authority	Minister of Education
Location	92 Simpson Road, Ranui
Rollover Designation	Yes
Legacy Reference	Designation ME60, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8), kura kaupapa Māori (years 0 - 8) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The designation shall lapse on the expiry of 10 years from the date on which it is included in the District Plan if it has not been given effect to before the end of that period.
2. The total student roll of the two schools and early childhood education centre shall not exceed 770 students.
3. All buildings and structures shall comply with the following development controls:
 - a. The height of all buildings (excluding any goal posts associated with sporting activities) shall not exceed 8m except for assembly halls, recreational facilities, and cultural or performance facilities, which shall not exceed 10m.
4. The Requiring Authority, either directly or the School Board of Trustees, shall:
 - a. Monitor school related traffic in the vicinity of the schools once a year for a period of 5 years following the opening of each school;
 - b. Resource, develop, review and action a Travel Plan for the schools to set the standards and goals of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

schools with respect to sustainable travel modes and to mitigate real and potential adverse traffic effects; and

c. Limit the provision of on-site public car parking to a minimum. This condition will be achieved by working in partnership with Auckland Council and Auckland Transport to ensure the integration of the school with the surrounding transport network, including issues of pedestrian and cyclist permeability to the site.

5. All development shall be undertaken in accordance with the Geotechnical Report prepared by Babbage Consultants Ltd titled "Ranui School for Ministry of Education Geo- Environmental Assessment Report", ref: 43329, dated November 2007, and the review of this report prepared by GHD Limited titled "Geotechnical Peer Review, Notice of Requirement for the Ministry of Education, New Schools at Ranui, Waitakere City", dated 4 March 2008.

6. The Requiring Authority shall provide written confirmation from a Chartered Professional Engineer (with experience in geotechnics, and familiarity with the report and report review detailed in Condition 11 above) that the recommendations contained within the report and report review detailed in Condition 11 have been fully satisfied.

7. Development of the site shall adhere to a Low Impact Design stormwater management system that minimises impervious surfaces and earthworks, utilise soils and vegetation to trap pollutants and reduce stormwater runoff.

Educational purposes - secondary school (years 7 - 13) and may include early childhood education (preschool)

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The designation shall lapse on the expiry of 15 years from the date on which it is included in the District Plan if it has not been given effect to before the end of that period.

2. All activities taking place at the school shall comply with the following noise levels measured at the most exposed location at or within the boundary of properties zoned for residential purposes:

- 7.00am-7.00pm Monday-Saturday = L10 50dBA;
- 7.00pm-10.00pm Monday-Saturday 7.00am-10.00pm Sundays & Public Holidays = L10 45dBA; and
- 10.00pm-7.00pm Other times = L10 40dBA, LMax 70dBA.

This provision shall not apply in respect of the noise generated from outdoor school activities between 0800hrs and 1800hrs (excluding Sundays and public holidays). Sound measured in accordance with the requirements of NZS 6801:1991 'Acoustics - Measurement of Sound' and assessed in accordance with the requirements of 'NZS 6802:1991 'Assessment of Environmental Sound'.

3. All buildings and structures shall be designed in recognition of the matters listed in Condition (4) (below) and shall comply with the following development controls:

- The principal facades of secondary school classrooms, administrative buildings and recreational facilities (e.g. halls, gymnasiums etc) shall have frontage to Hobsonville Point Road.
- The maximum height of all buildings (excluding goal posts associated with sporting activities,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

chimneys/flues, aerials, flagpoles and any other such plant) fronting Hobsonville Point Road or Squadron Drive shall not exceed 15.0 metres in height.

c. The maximum height of all buildings (excluding goal posts associated with sporting activities, chimneys/flues, aerials, flagpoles and any other such plant) with primary frontage to Western Avenue or Buckley Avenue shall not exceed 12.0 metres in height.

d. No buildings shall be constructed above or within 5.0 metres of the location of any future bulk public stormwater lines which traverse the site and connect to the Council stormwater pond to the north of the site. The 1 in 100 year overland flow path from the upstream catchment should be conveyed through the site within a constructed Overland Flow Path (OLFP) in this “no-build” zone.

e. The early childhood education centres shall have frontage to Western Avenue.

f. All buildings and structures shall comply with the following site coverage controls:

- i. Maximum building coverage: 35%; and
- ii. Maximum impermeable surface coverage: 40%.

4. Each Outline Plan of Works for built form shall be accompanied with an urban design statement detailing how the design has been developed in response to the following design principles, where they are applicable:

a. The location of school buildings, including the early childhood education centres, shall to the extent practicable contribute to the built form of any adjacent street with the placement of buildings aligned with, and located as close as practicable to adjacent street facing boundaries;

b. All buildings facing the street, open space/reserves, and on-site car parking areas shall interact with these spaces with openings such as doors and windows to provide passive surveillance;

c. Multi-storey buildings are the envisaged built form outcome as viewed from the street and sought for the Hobsonville Point Road and Squadron Drive frontages;

d. The height of buildings at the intersections of Hobsonville Point Road and either Squadron Drive or Western Avenue shall be maximised where possible, and the buildings shall be designed to address both street frontages;

e. Ensure that future school building development, including the early childhood education centres, shall provide a positive interface to the proposed adjoining residential land located at the corner of Western Avenue and Buckley Avenue;

f. Where fencing on road boundaries is required it shall be low height, permeable and recessive in colour and design; and

g. The school shall to the extent practicable, facilitate connectivity from the school site to the surrounding street and pedestrian networks. Pedestrian and cyclist access points to the school are encouraged to be provided from all street boundaries.

5. The Requiring Authority shall submit with the first Outline Plan of Works a school Design Concept Plan detailing staging and built form information including the following:

a. Detail on where taller height buildings will be located; and

b. A summary of the manner in which it is anticipated that the school development will change over time as it accommodates intensifying use.

6. The proposed development be subject to the following conditions regarding vehicle access:

a. Prior to the opening of the school, Western Avenue shall be formed, constructed and vested in Auckland Council;

b. Prior to the opening of the school, the Requiring Authority shall construct separate vehicle access points to the secondary school and early childhood education centres. These vehicle access points are to be gained from either Buckley Avenue or Western Avenue. The location and design specifications shall be developed in consultation with [the appropriate Council officer] prior to the submission of the first Outline Plan of Works;

c. Any proposals for a drop off facility or bus parking within the site and fronting Hobsonville Point Road shall be subject to the following:

i. A revised Integrated Transportation Assessment. This assessment shall be undertaken in consultation with Council's Transport Assets, Transport Strategy, Urban Design and Parks Planning Teams and be subsequently

The Proposed Auckland Unitary Plan (notified 30 September 2013)

submitted with the first Outline Plan of Works; and

ii. The design of any bus drop off or parking facility shall be consistent with the design matters identified in Condition (4)(i) and (4)(ii) above.

7. The proposed development be subject to the following conditions regarding traffic and car parking:

a. On-site car parking spaces shall be provided on a staged basis as follows:

i. Staff car parking shall be provided at a rate of two spaces per three staff members;

ii. Student car parking shall be provided up to a rate of one space per ten pupils over 16 years of age; and

iii. For the early childhood education centres car parking spaces shall be provided at a rate of one per four child places in a day;

b. The above rates are to be reduced and on-site car parking minimised where the Approved Travel Plan prepared under Condition (8) below, identifies that there is a lesser demand;

c. Disabled and loading parking provisions shall be provided in accordance with the Waitakere City Council Code of Practice (or its equivalent document) and the Auckland Regional Parking Strategy; and

d. The design and layout of group car parking areas shall be developed in consultation with [the appropriate Council officer].

8. The Requiring Authority shall, directly or through the School Board of Trustees:

a. Monitor school related traffic in the vicinity of the school once a year for a period of 3 years following the opening of the school.

b. Resource, develop, review and action a Travel Plan which:

i. Sets the goals of the school with respect to sustainable travel modes and the mitigating real and potential adverse traffic effects;

ii. Seeks to limit the provision for on-site car parking to a minimum;

iii. Facilitates the integration of the school with the surrounding transport network (including issues of pedestrian and cyclist permeability to the site); and

iv. Is maintained and regularly updated while the school is operating under this designation.

This Plan shall be developed in consultation with Auckland Council and Auckland Transport and shall be reviewed at the time of submitting each Outline Plan of Works relating to increased capacity.

9. In the event of archaeological evidence being uncovered (e.g. shell, middens, hangi or ovens, pit depressions, defensive ditches, artifactual material or human bones) work is to cease in the vicinity of the discovery, and an Archaeologist, Historic Places Trust and the Auckland Council are to be contacted so that the appropriate action can be taken before any work may recommence there.

10. A plan detailing how the historic heritage values of the former airforce runway will be recognised on the school site. The plan will be developed in consultation with the Historic Places Trust and Auckland Council and shall be submitted with the first Outline Plan for work on the site.

11. The Requiring Authority shall submit with the first Outline Plan of Works application a Landscape Concept Plan. This plan shall be developed in consultation with [the appropriate Council officer] and must include the following:

a. The location of existing and proposed buildings within the site;

b. The surrounding street context - the adjacent streets footpaths, the location of any pedestrian crossings, and bus stops. Any landscape works proposed in the landscape plan must complement and be well integrated within the street context;

c. Contour information;

d. Framework tree planting (species, grades and locations), and the location and planting (planting plans) for any garden areas, hedges - the species and layout must complement and be well integrated with the landscape works (existing and proposed)

for the surrounding streetscapes;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

e. The articulation and identification of outdoor space - show outdoor play areas (both hard surfaces and grassed areas);

Note: Outdoor space may be defined by a combination of buildings, trees, landform, fences/hedges or other features;

f. Vehicle access and parking areas including cycle parks;

g. Entrances for cyclists and pedestrians; and

h. The location, style and height of fencing on exterior boundaries of the school which face roads or other public spaces.

12. To ensure that the proposed secondary school and early childhood education centres appropriately interface with the adjoining stormwater wetland, a detailed landscape plan shall be prepared and implemented by the Requiring Authority in relation to this interface. The landscape plan shall be prepared by the Requiring Authority in consultation with [the appropriate Council officer] for final review and comment prior to the submission of the first Outline Plan of Works.

13. The Requiring Authority shall with each Outline Plan of Works for school development:

a. Provide a landscape plan(s) which demonstrates how the development and/or additions continue to contribute to the matters identified in Conditions (10, (11) and (12) above; and

b. Implement the approved landscape plan(s) provided in response to Condition 13(i) as it relates to each Outline Plan of Works within the site.

14. Development of the site shall be undertaken in a way that recognises the principles of Low Impact Design stormwater management systems (as detailed in the relevant Integrated Catchment Management Plan) and incorporates measures to mitigate the impact of impervious surfaces and earthworks, utilising soils and vegetation to trap pollutants and reduce stormwater runoff. Details of the proposed Low Impact Design measures shall be submitted to the Council with the first and any subsequent Outline Plan of Works for development.

15. A sustainable water supply system shall be implemented in any buildings on the site. This shall include installing water re-use tanks for non-potable supply and the use of water efficient fixtures to minimise the amount of reticulated water supply required.

16. The Requiring Authority shall provide details of the location of buildings in relation to the location of public wastewater drainage to enable Council to establish any requirements necessary to ensure the ongoing integrity of the wastewater lines and ensure that any access for maintenance is protected. This information shall be submitted with the first Outline Plan of Works.

4559 Torbay Kindergarten

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	4659
Requiring Authority	Minister of Education
Location	141 Deep Creek Road, Torbay
Rollover Designation	Yes
Legacy Reference	Designation (no number), Auckland Council District Plan (North Shore Section)
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - pre-school facility.

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. That the scope and extent of the designation is generally in accordance with the Notice of Requirement dated 10 August 2012.
2. That the hours of operation of the Kindergarten be restricted to 7.30am to 5.30pm.
3. That any future development that involves an increase in the scale of the Kindergarten (from its current 40 children limit), shall be subject to an alteration to the designation.
4. Before any future works are undertaken an Outline Plan(s) shall be submitted in accordance with Section 176A of the Resource Management Act 1991 to the Auckland Council - Northern Resource Consenting and Compliance (Takapuna Service Centre) unless the works are permitted under the provisions of the Auckland Council District Plan (North Shore Section) 2002, or an appropriate waiver is granted by the Council under Section 176A 2(C).

Advice Note

1. Designation 192 is to be used for educational purposes for a pre-school facility. The activities include teaching, administration, sports, cultural and community facilities. Any additional activities are outside the scope of Designation 192 and will require an alteration to the designation.

4722 Gladstone School

Designation Number	4722
Requiring Authority	Minister of Education
Location	4-8 Seaview Terrace, Mt Albert
Rollover Designation	Yes
Legacy Reference	Designation D04-04, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. No buildings shall be constructed on the school property within 10m of the school's northern boundary unless this is provided for by means of a subsequent designation or an alteration under section 181 of the Act.

2. No new or additional building shall project beyond a building envelope contained by a 35° recession plane from points 2m above the common side boundary of 152 Carrington Road (Lot 1, DP140099) and 150 Carrington Road (Gladstone Primary School) unless:

- This is provided for by means of a subsequent designation or alteration under section 181 of the Act; or
- Written consent is obtained from the owners and occupiers of 2/152 Carrington Road.

3. No additional buildings shall be constructed on school property within 8m of the northern side boundary of 152 Carrington Road (Lot 1, DP140099) unless:

- This is provided for by means of a subsequent designation or alteration under section 181 of the Act; or
- Written consent is obtained from the owners and occupiers of 2/152 Carrington Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. The entry to the carpark at 150 Carrington Road (former Pt Lot 23 Allot 34) shall be chained or otherwise secured against unauthorised access between the hours of 10.00pm and 7.00am Monday to Friday and during weekends and public holidays.

5. No security lights shall be positioned along the southern wall of the classroom block at 150 Carrington Road (former Pt Lot 23 Allot 34) or be located in such a manner that there is direct illumination into 152 Carrington Road.

4723 TKKM o Pūau te Moananui-ā-Kiwa

Designation Number	4723
Requiring Authority	Minister of Education
Location	26A Farringdon Street, Glen Innes
Rollover Designation	Yes
Legacy Reference	Designation D15-03, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - kura kaupapa Māori (years 0 - 13) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. Outline Plan of Works - Transport

Any Outline Plan of Works or consents for new classrooms for the Composite School or new buildings for the operation of the Kohanga Reo shall be accompanied by a report produced by a suitably qualified traffic engineer and/or transportation planner that gives consideration to the following matters:

- The effects on the surrounding road network arising from parking usage at the school, the pick-up and drop off of students, and the ability to cater for this on site, including addressing any real or potential road safety implications; and
- Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for.

2. Travel Plan

A School Travel Plan shall be undertaken by the Requiring Authority, either directly or through the School Board of Trustees, and any future actions / improvements to the roads identified would need to be discussed in consultation with Auckland Transport Community Transport group, prior to submission of any Outline Plan of Works or consents for new classrooms for the school.

- The Travel Plan shall identify current travel patterns, and set standards and goals to mitigate real and potential adverse traffic effects. This is envisaged to be a live document that addresses traffic-related concerns from school activities on an on-going basis and monitored by bi-annual surveys undertaken by the school and results provided to Auckland Transport Community Transport group.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ii. Surveyed results shall be to the Auckland Transport Community Transport School Travel Planning format and be submitted bi-annually to the Community Transport Manager.

3. Parking

a. Carparking shall be provided at the rate of two carparks per classroom, except where the Council accepts, on the basis of a specifically commissioned parking study by an appropriately qualified engineer and/or transportation planner, that a different level is appropriate.

b. Cycle parking spaces shall be provided at a minimum of one space per ten Composite School students and staff. Visitor cycle parking spaces shall be provided at a minimum of 1 space plus 1 per 400 students and staff at the school. This condition shall apply when new composite school classrooms are constructed.

c. In addition to the car parking requirements for the Composite School (outlined in Condition 6(i)), the Kohanga Reo shall be provided with a minimum of one car park on the site for every member of staff in attendance, plus one car park for every 10 children or people the facility is designed to accommodate, except where the Council accepts that a different level is appropriate, on the basis of a specifically commissioned parking study by an appropriately qualified engineer and/or transportation planner.

4748 Stonefields School and ECE

Designation Number	4748
Requiring Authority	Minister of Education
Location	81 Tihi St, Stonefields
Rollover Designation	Yes
Legacy Reference	Designation E14-09, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The proposed development be subject to the following conditions regarding traffic and parking:
 - a. Parking shall be provided on a staged basis at a rate of two parking spaces per classroom for the primary school, and one per staff member and one per ten children for the early childhood centre, to a maximum of 58 in total for all activities on the site. This shall also include any short term parking spaces for pick up and drop off. The maximum of 58 spaces may be reduced to 55 spaces only if public transport (bus) services have been provided to the Stonefields development area, in general accordance with the proposals illustrated in the Integrated Traffic Assessment v3, dated November 2008 prepared by SKM Consultants.
 - b. The Requiring Authority, either directly or through the School Board of Trustees, shall develop a Travel Plan which provides specifically for measures to reduce vehicle dependence, including measures for walking school buses, car pooling, the encouragement of the use of public transport, where possible the development and use of remote pick up/drop off points, and the encouragement of walking, cycling and the use of public transport. This Plan shall be developed in consultation with relevant staff at Auckland Council, and submitted as part of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Outline Plan of Works for any development stage increasing the number of people on the site. The Travel Plan shall be maintained and regularly updated while the school is operating under this designation.

4777 Eden Campus Teen Parent Unit

Designation Number	4777
Requiring Authority	Minister of Education
Location	16 Ngauruhoe Street, Mount Eden
Rollover Designation	Yes
Legacy Reference	Designation E08-22, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - secondary school (years 7 - 13) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The teen parent unit and ancillary childcare facility shall be limited at any one time to being occupied by the following number of people (total of 71 persons/children):
 - a. Students 30;
 - b. Children (0-5yrs) 32;
 - c. Adult childcare supervisors 6; and
 - d. Teachers 3.
2. The childcare facility shall only operate in conjunction with the teen parenting unit.
3. A total of seven on-site car parks shall be provided for the teen parenting unit and ancillary childcare facility. For any other secondary school activity undertaken on the site, carparking shall be provided at a rate of two car parks per classroom additional to the car parks required for the teen parenting unit and ancillary childcare facility. The exception to this is where the Council accepts, on the basis of a specifically commissioned parking study by an appropriately qualified engineer, that a lesser level is appropriate.
4. At no time on site shall the school roll exceed a maximum of 110 pupils (being students and/or children 0-5 years).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	5 years from being operative in the Unitary Plan unless given effect to prior
------------	---

Purpose

Educational purposes - special school (years 0 - 13).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The height of all buildings (excluding any goal posts associated with sporting activities) shall not exceed 10m except for assembly halls, recreational facilities, and cultural or performance facilities.
2. No part of any building shall project above a 45° recession plane measured from any point 2 metres above the ground level along any boundary of the site.
3. The minimum building setbacks to be met are as follows: from the Luke Street boundary - 3m; the western and rear boundaries - 8m; eastern boundary - refer condition 8 below.
4. A fence shall be erected at the cost of the Requiring Authority along the full length of the common boundary between 32-44 Luke St and 50 Luke St. From the Luke St boundary, no new fence shall be erected for the first 1.8m. From a distance of 1.8m from Luke St to 137m from Luke St a solid (minimum 200mm thick) fence shall be constructed along the boundary. The fence shall be a minimum of 3m high (above existing ground or finished ground level). Where existing buildings are on or very near the boundary from 1.8m to- 137m from Luke St the fence may be integrated and aligned into those buildings. Beyond 137m from Luke St to the northern boundary a new Hurricane wire fence with 3 barbed wires atop shall be constructed to a minimum height of 2m (above existing or finished ground level). The fence shall be erected prior to the occupation and use of the site as a school.
5. Noise from all activities on the site shall be subject to the following standards:
 - a. The noise level from any activities within the site, except where otherwise specified below at (iv), measured at or within the boundary of any adjacent site (not held in common ownership) zoned Business 4 shall not exceed:
 - i. 7.00am - 10.00pm 60 dBA L10; and
 - ii. 10.00pm - 7.00am 60 dBA L10
 - b. The noise level from activities within the site, except where otherwise specified below at (iv), shall not exceed the following limits when measured at or within the boundary of any residential zoned site:
 - i. Monday to Saturday 7.00am - 10.00pm 55dBA L10; and
 - ii. Sunday & Public Holidays 9.00am - 6.00pm 55dBAL10All other times 45dBA L10 75dBA Lmax
 - c. Noise levels shall be measured and assessed in accordance with the requirements of NZS 6801:1991 "Measurement of Sound" and NZS 6802:1991 "Assessment of Environmental Sound".
 - d. The above limits shall not apply to noise generated by normal school related outdoor activities on any parts of the site between the hours of 8.00am and 6.00pm.
 - e. Sound from construction activity shall not exceed the limits recommended in and shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise".
6. In the event that any archaeological sites or remains are discovered during the earthworks, then the works at that place of discovery will cease immediately and the appropriate statutory authorisations or consents obtained.
7. In consultation with the adjoining owners, the Requiring Authority shall, establish a 'separation distance' from any existing buildings or plant at 46-62 Luke St that contain refrigeration equipment or piping. Existing buildings

The Proposed Auckland Unitary Plan (notified 30 September 2013)

or plant for the purposes of this condition shall be those which existed at the date of the recommendations on this Requirement on behalf of the Auckland Council. The 'separation distance' shall be determined by a person suitably qualified and experienced in the assessment and management of hazardous facilities and substances based on the following recognised industry codes of practice:

- a. AS/NZS 2022: 2003 Anhydrous Ammonia - Storage and Handling; and
- b. AS/NZS 1677.2:2000 Refrigerating Systems - Safety Requirements for Fixed Application.

The separation distance shall be not less than 25m, and no buildings shall be established within this 'separation distance'.

8. An Emergency Management Plan ('EMP') shall be prepared, at the cost of the Requiring Authority and in consultation with the owner and occupier of 50 Luke Street, by a suitably qualified person taking into account all of the various emergency and hazardous issues that may arise as a result of activities that occur at 50 Luke St. Copies of the EMP shall be provided to Council, the NZ Fire Service and the owner and occupier of 50 Luke Street. The Requiring Authority shall engage in a consultative manner with the owner and occupier of 50 Luke Street to have the EMP reviewed as required and in any event no later than on each third anniversary of the opening of the school to take into account any changes to regulations, procedures and methodologies that may occur over time. Copies of any reviewed EMP shall be provided to the Council, the NZ Fire Service and the owner and occupier of 50 Luke St. The EMP shall be completed prior to the occupation of a school on the site and will remain in place as long as 50 Luke St is used for activities that may give rise to hazardous emergencies. The EMP shall be developed and maintained in accordance with the Ministry of Education's own Emergency Response Management Plan guidelines as well as the guidance prepared by ERMA and the Department of Labour and must address the matter of what triggers and methods are used to identify any potential risk events. The EMP shall include regular (at least 12 monthly) drills. The Requiring Authority shall invite the operator of the factory at 46-62 Luke Street to participate in these drills.

4904 Bairds Education Centre

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	4904
Requiring Authority	Minister of Education
Location	52 Otara Road, Otara
Rollover Designation	Yes
Legacy Reference	Designation 5, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - senior high school (years 11 - 13), special school (years 0 - 13) and may include two(2) early childhood education pre-school(s).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The Bairds Senior High School (Years 11-13) shall be limited to a maximum of 400 students on site at any one time.
2. The Early Childhood Education Centres shall have a combined total of no greater than 100 children on site at any one time aged between zero and five years old.
3. The Special School shall be limited to a maximum of 100 students on site at any one time.
4. The number of car parking spaces required to be provided in to the use of any buildings on site for Educational Purposes – Senior High School shall be provided at a ratio of 1 parking space per 5 students, plus 2 accessible parking spaces.
5. The number of car parking spaces required to be provided in to the use of any buildings on site for Special School purposes shall be calculated at a ratio of 2 parking spaces for every 3 staff members employed on site or operating from the site at any one time, plus 1 space for every 30 pupils aged 15 years and over, and 1 accessible car parking space.
6. That bicycle stands/racks shall be provided adjacent to the main entrance of the Senior High School.
7. The Requiring Authority, either directly or through the School Board of Trustees, shall develop a School Travel Management Plan (STMP) for the secondary school which provides specifically for the safe transportation of pupils and measures to reduce vehicle dependency, including measures for car pooling, the encouragement of the use of public transport and of cycling and walking. This Plan shall be developed in consultation with staff at Council and submitted within 2 months of the alteration to the designation being confirmed. The STMP shall be maintained and regularly reviewed and updated as necessary to remain effective while the Centre is being operated under this designation.

4927 Ormiston Campus

Designation Number	4927
Requiring Authority	Minister of Education
Location	275-291 Ormiston Road, Flat Bush
Rollover Designation	Yes
Legacy Reference	Designation 294, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8), secondary school (years 7 - 13) and may include early childhood education (preschool).

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The standard conditions for all Minister of Education designations apply to this designation.

Airport Noise

1. No "Activities Sensitive to Air Noise" are to be located on parts of the site identified as subject to "Moderate Aircraft Noise Area" controls, as identified and defined in the District Plan.

Concept Plan

2. The designation concept plan shall address the following matters:

- a. Main Building Area: all major buildings shall be located within the Main Building Area shown on the Designation Concept Plan (ASC Architects, September 2008);
- b. Ormiston Road Frontage: site development shall be such that a strong built edge along the Ormiston Road frontage is achieved. Building fronting Ormiston Road shall be designated so that an active edge to Ormiston Road is maximised as far as is practicable;
- c. Assembly Buildings: all buildings that may be open for the assembly of people outside of school hours, such as a theatre, auditorium, gymnasium, etc, shall be located so that their main entry foyer fronts directly onto either Ormiston Road, the through-site road or the Western Boundary Road in the event that the council has given notice to the Minister in accordance with Condition 12(c). The main entry foyer shall maximise clear glazing fronting the street to the maximum extent practicable;
- d. Gateway Buildings: buildings shall be located on both corners of the junction of Ormiston Road and the through-site road to achieve a gateway entrance to the site;
- e. Open Space Area: the Open Space Area (as shown on the Designation Concept Plan, ASC Architects, September 2008) shall provide primarily for active recreation playing fields. The Open Space Area may provide for recreation buildings and may also provide for minor educational buildings (including early childhood facilities) and service buildings;
- f. Secondary Access Points: Secondary Vehicular Access Points, if required shall be located generally where indicated on the Designation Concept Plan (ASC Architects, September 2008), but with regard to traffic volumes, safety, circulation and amenity of adjoining roads; and
- g. Through-Site Road: Site development shall be such that a strong built edge along both frontages of the through-site road is achieved and buildings fronting the through-site road shall be designed so that active edges to the road are maximised as far as is practicable.

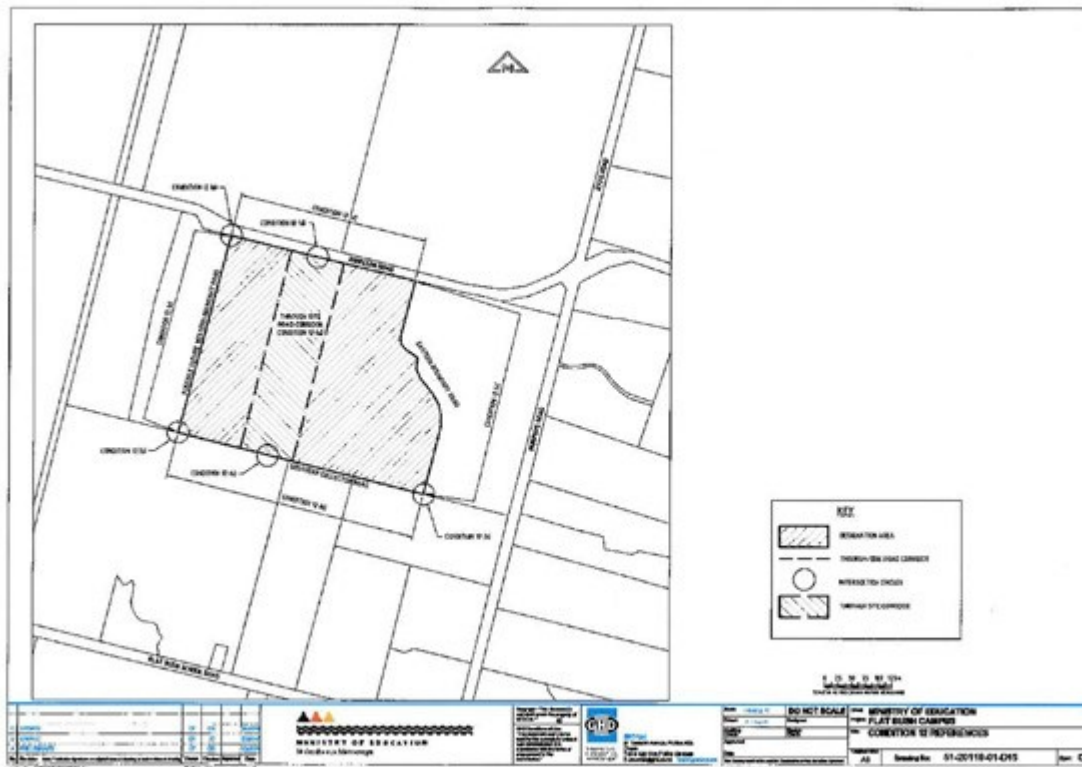

Transportation

3. That the Requiring Authority, either directly or through the School Board of Trustees, prepare and maintain a School Travel Management Plan, to the satisfaction of the Council. The Plan shall be implemented within the first term of the operation of the school activity on the site, monitored over time, and reviewed as necessary to remain effective. The Plan shall have as an objective the safe transportation of pupils between homes and the school by means other than the private motor vehicle. The plan shall ensure the availability of walking school buses and covered storage for cycles, and encourage the use of alternatives to travel of pupils to the site by use of a private motor vehicle.

Attachments

No attachments.

5015 Drury School

Designation Number	5015
Requiring Authority	Minister of Education
Location	23-33 Young Crescent, Drury
Rollover Designation	Yes
Legacy Reference	Designation 37, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

Attachments

No attachments.

5016 Edmund Hillary School

Designation Number	5016
Requiring Authority	Minister of Education
Location	67 Settlement Road, Papakura
Rollover Designation	Yes
Legacy Reference	Designation 25, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool).

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

Attachments

No attachments.

5017 Hingaia Peninsula School

Designation Number	5017
Requiring Authority	Minister of Education
Location	171 Hingaia Road, Hingaia
Rollover Designation	Yes
Legacy Reference	Designation 21, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Educational purposes - primary school (years 0 - 8) and may include early childhood education (preschool)

Conditions

The standard conditions for all Minister of Education designations apply to this designation.

1. The school design and building layout will accommodate the possibility of a north-south side road, perpendicular to Hingaia Road.
2. If the school is built prior to this road being available for use, access and egress will be from Hingaia Road. In this case, the school design will allow for design modifications so that when the side road is operational the school will take access and egress from the side road and access and egress from Hingaia Road will be permanently closed.
3. The school design and building layout must provide for long term vehicle access and egress to the site from a side road, and not directly from Hingaia Road.

5700 Auckland Central Police Station

Designation Number	5700
Requiring Authority	Minister of Police
Location	67-101 Vincent Street, Auckland CBD
Rollover Designation	Yes
Legacy Reference	Designation 290, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Police purposes - Auckland Police Station.

Conditions

1. That development of the site shall comply with the underlying development controls for the site except in the following circumstances:

- a. The maximum Floor Area Ratio can be sought without requiring the inclusion of bonus features within the development;
- b. The underlying development controls shall not apply to the addition or relocation of existing antennas and ancillary equipment attached to the tower located on the roof of the building that exists as at May 2013; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

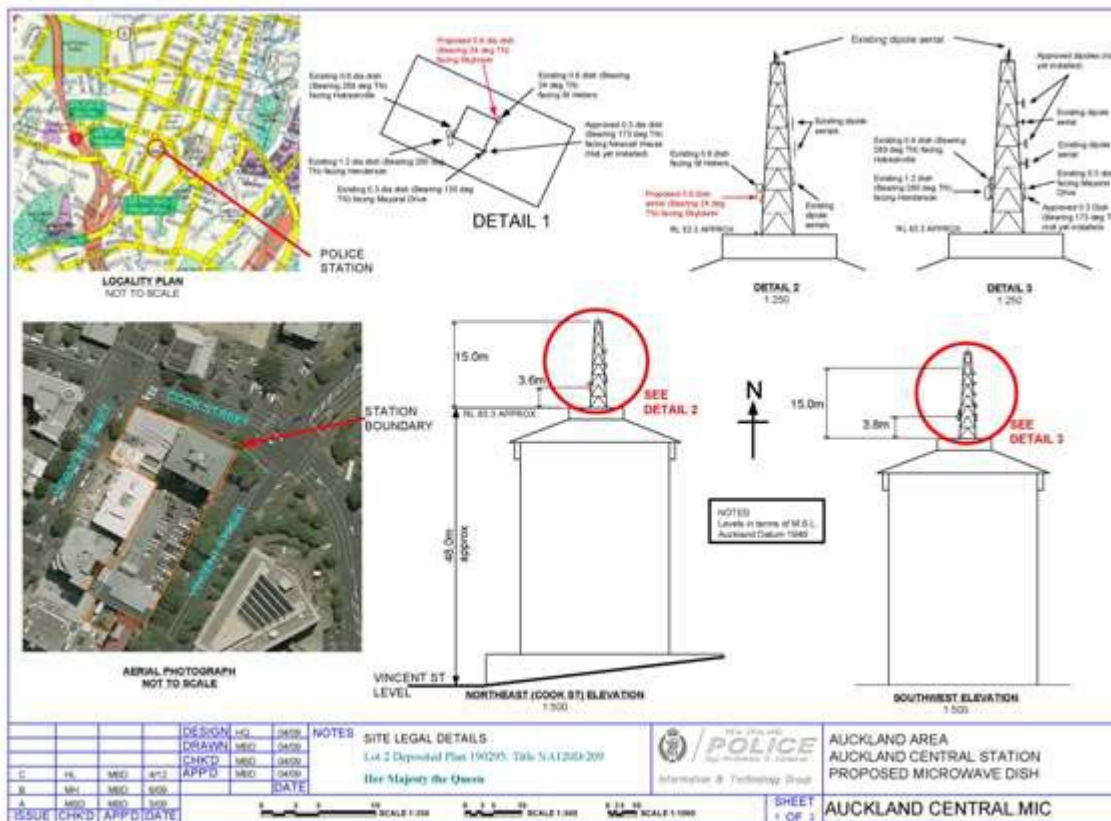

c. Future development of the site may retain the maximum building height (and intrusion into the volcanic view shaft) as the existing CPS building.

Advice Note

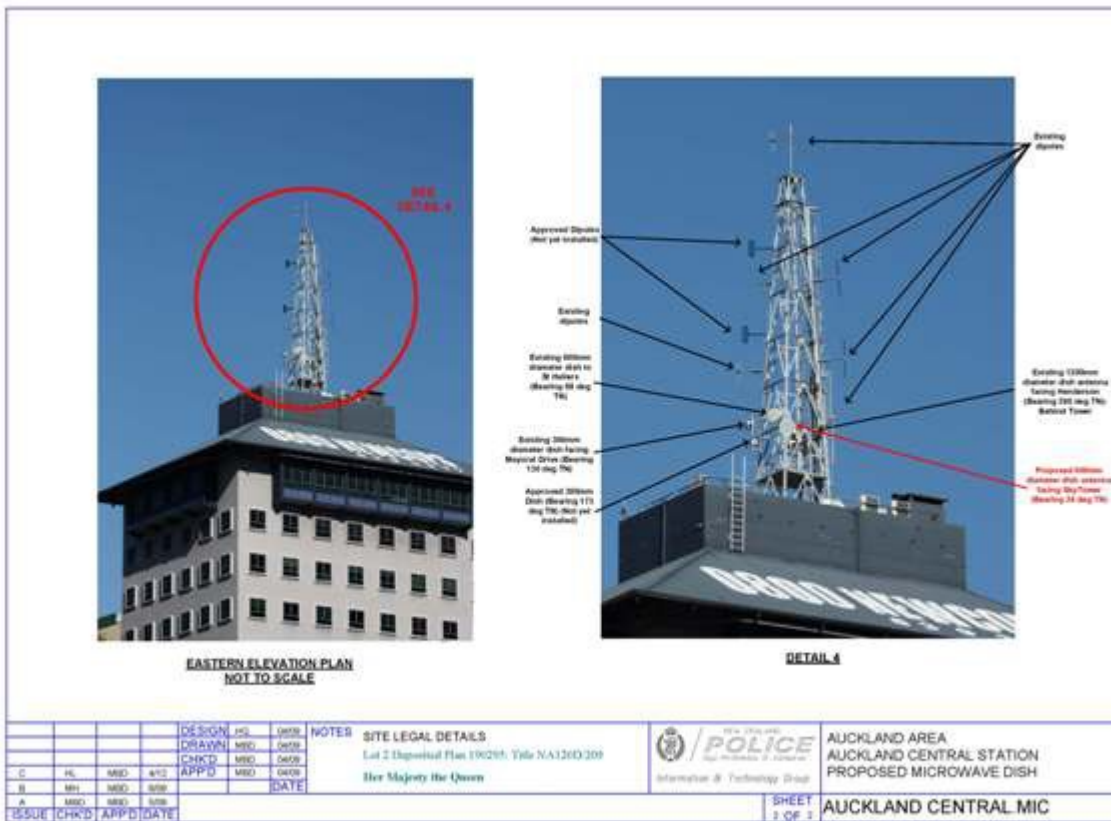

1. Condition 1 does not apply if the proposed development of the site is permitted by obtaining a resource consent for the development.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5701 Avondale Police Station

Designation Number	5701
Requiring Authority	Minister of Police
Location	1832-1834 Great North Road, Avondale
Rollover Designation	Yes
Legacy Reference	Designation E03-07, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The public work authorised by the designation is the construction, undertaking, establishment, management, operation, alteration and maintenance of a policing facility and every use of the land for police and ancillary purposes as detailed in the Policing Act 2008 and subsequent updates.

Conditions

1. Parallel to the eastern boundary and for its full length as far as the transport garage a solid 1.8m high screen wall shall be provided, and the boundary planting adjacent to it shall not exceed the height of this wall. On the southern boundary a 1.8m high timber or timber and masonry screen fence shall be provided.
2. That at least 41 parking spaces be provided on site including two within the garage building in the southeast corner of the site and that all parking and manoeuvring areas, drives and aisles be formed, provided with an all weather surface, drained marked and maintained at all times to the satisfaction of the Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Mitigation of Effects

3. That the first vehicle crossing in Walsall Street be located at least 8.5m from the corner and be marked to indicate that no entry is permitted from Walsall Street.

4. That transport garage shall provide for a minimum of two parking spaces and its use shall be limited to storage of equipment and vehicles.

5. That noise including that generated by any building services shall under normal circumstances comply with the following levels -

The L10 noise level and maximum level arising from any activity measured at or within the boundary of any residential property shall not exceed the following limits:

Times	dBA Level
Monday to Sunday 7am - 10pm	L10: 50dBA
Sunday and Public Holidays 9am - 6pm	L10: 50dBA
At all other times	L10: 40 dBA

6. That under normal circumstances access to and from the site between the hours of 10pm and 6am shall be from Great North Road only.

7. That any lighting shall be designed to prevent excessive light falling on surrounding residential land and to minimise reflected light from such fittings.

5702 Balmoral Police Station

Designation Number	5702
Requiring Authority	Minister of Police
Location	1-3 Halston Road, Balmoral
Rollover Designation	Yes
Legacy Reference	Designation E07-14, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The public work authorised by the designation is the construction, undertaking, establishment, management, operation, alteration and maintenance of a policing facility and every use of the land for police and ancillary purposes as detailed in the Policing Act 2008 and subsequent updates.

Conditions

1. That significant landscaping and planting be maintained in the front yard on Halston Road and the side boundary to 5 Halston Road.

2. That parking area in the front yard be maintained and marked out as visitor parking.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. That the colour of the buildings be maintained sympathetic to adjacent dwellings.

5703 Clendon Community Policing Centre

Designation Number	5703
Requiring Authority	Minister of Police
Location	488 Roscommon Road, Manurewa
Rollover Designation	Yes
Legacy Reference	Designation 122, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The public work authorised by the designation is the construction, undertaking, establishment, management, operation, alteration and maintenance of a policing facility and every use of the land for police and ancillary purposes as detailed in the Policing Act 2008 and subsequent updates.

Conditions

1. Parking, loading and access shall be in accordance with the underlying zoning and provisions of Rule 4.2.1 of the Proposed Unitary Plan.

2. An Outline Plan of Works for any development that triggers additional parking demand, loading or access requirements to the site will be assessed against the relevant assessment criteria under Rule 4.2.1.2.4.1 of the Proposed Unitary Plan.

3. The requiring authority may be required to meet the reasonable costs of all new access and traffic management works (including any additional land required to accommodate these works) associated with the development or redevelopment to the extent that such works are required to meet safety, access, or egress or amenity considerations related to the development or redevelopment or where the works are required to mitigate the likely adverse effects from the development or redevelopment on the safety or operation of the transport network.

5728 Police and Emergency Services Broadcast Tower

Designation Number	5728
Requiring Authority	Minister of Police
Location	501 Otau Mountain Road, Clevedon
Rollover Designation	Yes
Legacy Reference	Designation 266, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Police and emergency services radiocommunication and telecommunication.

Conditions

1. That the mast and equipment building shall be painted or finished in a recessive grey colour so as to minimise its visibility.
2. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities, at any place where the public has reasonable access.
3. The earthworks and equipment building shall be screened by the retention of as much of the existing pine planting as is consistent with protecting the required microwave paths and preserving access to the site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Earthworks are to be conducted on site so as to:

- a. Leave a stable slope; and
- b. Minimise dust generation, soil erosion and sedimentation

5. The Minister recognises the existence of nearby quarrying activities and that vibration and other effects may arise as a result of those activities.

6. That the electric power cable to the site and equipment building be placed underground.

Minister for Social Development

Designation Schedule - Minister for Social Development

Number	Purpose	Location
--------	---------	----------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5900	Care and protection residential centre - Upper North...	398 Weymouth Road, Weymouth
5901	Child welfare institution	26-28 Normandy Place, Henderson
5902	The Youth Justice Centre - Upper North ...	21-24 Kiwi Tamaki Road, Wiri
5903	Child welfare institution	116-118 Wharf Road, Te Atatu Peninsula

5900 Care and Protection Residential Centre

Designation Number	5900
Requiring Authority	Minister for Social Development
Location	398 Weymouth Road, Weymouth
Rollover Designation	Yes
Legacy Reference	Designation 283, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Care and protection residential centre - Upper North being a residence in terms of section 364 of the Children, Young Persons, and Their Families Act 1989 for:

- a. The placement of up to 20 children and young persons for the purpose of providing care (including secure care), protection, control and treatment;
- b. Ancillary educational, recreational, rehabilitative, administrative, visitor accommodation and cultural facilities; and
- c. Activities consistent with and ancillary to the establishment, operation and maintenance of the Care and Protection Residential Centre — Upper North, including buildings, fixed plant and service infrastructure, fencing, landscaping, earthworks, outdoor recreation areas, access and car parking.

Conditions

1. That the Care and Protection Residential Centre - Upper North shall provide residential care for up to 20 children and young persons at any one time.
2. A Community Liaison Committee shall be established to assist in the promotion of a positive relationship between the Care and Protection Residential Centre - Upper North and the local community. The Community Liaison Committee shall be kept informed of current and proposed programmes at the Care and Protection Residential Centre - Upper North and include two representatives of the local community.
3. A Security Management Plan for the Care and Protection Residential Centre - Upper North shall be formulated and implemented in consultation with relevant emergency services and the Community Liaison Committee.
4. Activities (other than construction) on the site shall be so conducted as to ensure that noise from the site shall not exceed the following noise limits at any point within the boundary of any neighbouring residential site:

Monday to Sunday (inclusive)	
7am to 10pm	L10 55 dBA
10pm to 7am	L10 45 dBA
10pm to 7am	Lmax 75 dBA

Noise (other than construction noise) shall be measured and assessed in accordance with the requirements of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

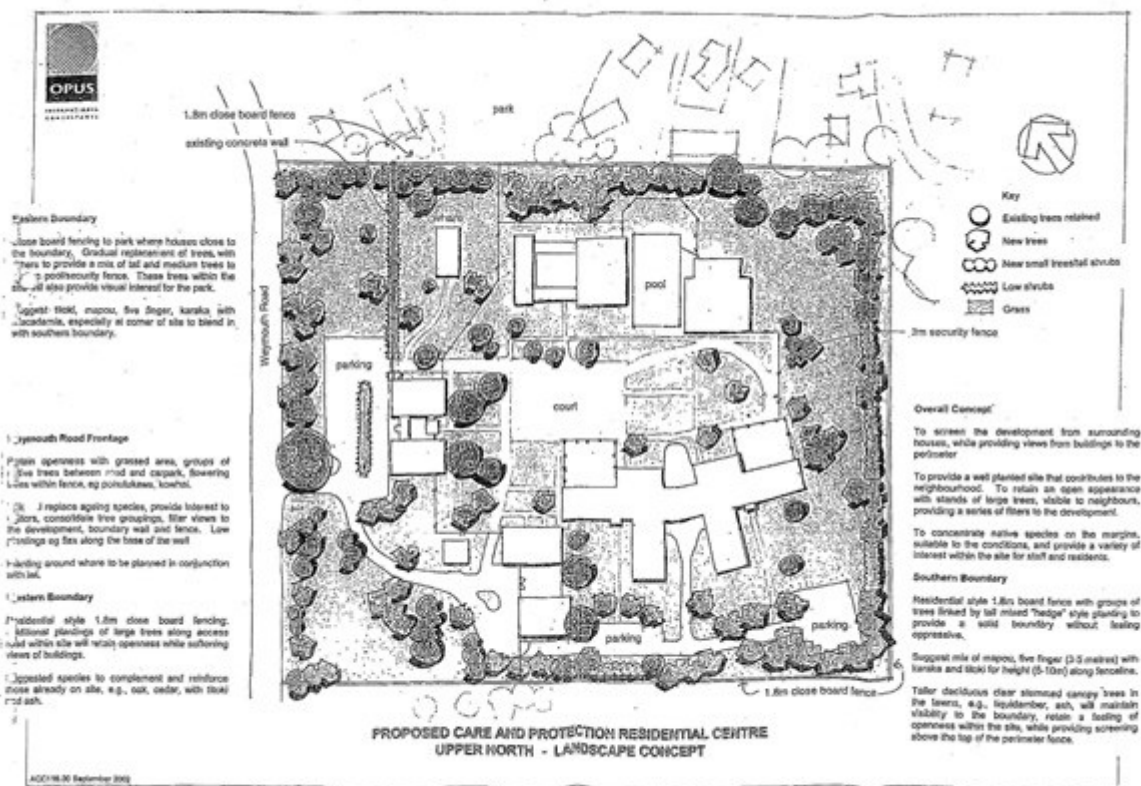

the New Zealand Standards NZS6801:2008 "Acoustics - Measurement of Environmental Sound".

5. The site shall be landscaped generally in accordance with the landscape concept plan prepared by Opus International Consultants marked ACC116.00 (September 2002) contained within Appendix B of the Notice of Requirement. All planting associated with this landscape concept shall be maintained regularly and kept in a tidy condition.

6. The lighting on site shall be sufficient for operational and security purposes and shall be designed to prevent the intrusion of direct light into neighbouring properties.

5902 Youth and Justice Centre – Upper North

Designation Number	5902
Requiring Authority	Minister for Social Development
Location	21-24 Kiwi Tamaki Road
Rollover Designation	Yes
Legacy Reference	Designation 278, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The Youth Justice Centre — Upper North being a residence under section 364 of the Children Young Persons and Their Families Act (1989) for the care and control of children and young persons under the youth justice provisions of that Act and the Criminal Justice Act (1985) (if agreed by the chief executive for the time being responsible for the administration of the Children Young Persons and Their Families Act) at 21-24 Kiwi Tamaki Road, Manurewa.

Conditions

1. That the proposed facility shall provide residential care and control for up to a maximum of 46 children and young persons at any one time. This is to be inclusive of not more than 6 children and young persons held under the provisions of the Criminal Justice Act (1985) at any one time.

2. That the Department of Child, Youth and Family Services, through the Manager of the facility, shall formulate and implement a Security Management Plan for the proposed facility in consultation with key stakeholders including the council, the NZ Police and relevant emergency services, neighbouring property owners, local iwi

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and community groups.

3. That the Manager of the proposed facility shall convene a Community Liaison Committee in accordance with the Children, Young Persons, and Their Families (Residential Care) Regulations 1996.

4. That the parts of the proposed facility comprising the sleeping , living and learning areas shall be designed and constructed to comply with the following internal noise limits:

	Ldn	Lmax
Internal Noise Limits	45dBA	55dBA

Minister for Tertiary Education, Skills and Employment

Designation Schedule - Minister for Tertiary Education, Skills and Employment

Number	Purpose	Location
6100	Construction, undertaking, establishment, management, operation and maintenance of a tertiary educational facility ...	St Pauls Street, Wellesley Street, Governor Fitzroy Place and Mount Street, Auckland Central
6101	Construction, undertaking, establishment, management, operation and maintenance of a tertiary educational facility ...	42 and 72 Akoranga Drive, Northcote

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6100 AUT City Campus

Designation Number	6100
Requiring Authority	Minister for Tertiary Education, Skills and Employment
Location	St Pauls Street, Wellesley Street, Governor Fitzroy Place and Mount Street, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 291, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The public work authorised by the designation is the construction, undertaking, establishment, management, operation and maintenance of a tertiary educational facility and every use of the land for educational and ancillary purposes.

Note:

Ancillary activities includes activities, structures and buildings supporting tertiary education such as (but not limited to) administration, research and development needs, accommodation, meeting and assembly area, commercial, retail and services.

Conditions

No conditions.

Auckland University of Technology City Campus Designation Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6101 AUT North Shore Campus

Designation Number	6101
Requiring Authority	Minister for Tertiary Education, Skills and Employment
Location	42 and 72 Akoranga Drive, Northcote
Rollover Designation	Yes
Legacy Reference	Designation 181, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The public work authorised by the designation is the construction, undertaking, establishment, management, operation and maintenance of a tertiary educational facility and every use of the land for educational and ancillary purposes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Note:

Ancillary activities includes activities, structures and buildings supporting tertiary education such as (but not limited to) administration, research and development needs, accommodation, meeting and assembly area, commercial, retail and services.

Conditions

1. That the proposed intersections and access arrangements on Akoranga Drive be designed and located in accordance with the following principles as far as practicable:
 - a. Be designed and located to optimise safety and efficiency; and
 - b. Provide for public transport, cyclists, pedestrians and visually and mobility impaired people, in terms of the reasonably foreseeable needs of AUT; and
 - c. Consider the views of the following directly affected parties: Northbridge Retirement Home and Awataha Marae.
2. That all new buildings on the site shall not exceed a height of 16m within 20m of the current boundary of Akoranga Drive and 30m elsewhere on the site.
3. Where practicable, at least one pedestrian entrance to the new buildings shall be located facing the street.
4. The Requiring Authority shall prepare a Campus Development Plan (CDP) for the site. The purpose of the CDP is to provide for the general design framework and direction for the ongoing development of the site and activities. The CDP will address matters of urban design, major building areas, parking, access and overall site landscaping. As part of the preparation of the CDP, the Requiring Authority will liaise with council's Urban Design Team. The CDP will be used as a framework for future Outline Plan of Works to be submitted to council under section 176A of the RMA. The CDP will be revised by the Requiring Authority to reflect ongoing developments for the site as they occur.

New Zealand Railways Corporation

Designation Schedule - New Zealand Railways Corporation (KiwiRail)

Number	Purpose	Location
6300	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	North Auckland Railway Line from Portage Road, Otahuhu to Ross Road, Topuni
6301	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	Newmarket Branch Railway Line from Remuera Road, Newmarket to The Strand, Parnell
6302	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	North Island Main Trunk Railway Line from Buckland to Britomart Station, Auckland Central
6303	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	Avondale Southdown Railway Line from Soljak Place, Mount Albert to Bond Place, Onehunga

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6304	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	Onehunga Branch Railway Line from Onehunga Harbour Road, Onehunga to Station Road, Penrose and Neilson Street, Tepapa
6305	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	Southdown Freight Terminal at Neilson Street (adjoins No. 345), Onehunga
6306	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	Mission Bush Branch Railway Line from Mission Bush Road, Glenbrook to Paerata Road, Pukekohe
R6307	Develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises ...	Manukau Rail Link from Lambie Drive (off-ramp), Manukau City Centre to Onslow Drive, Wiri

6300 North Auckland Railway Line

Designation Number	6300
Requiring Authority	New Zealand Railways Corporation (KiwiRail)
Location	North Auckland Railway Line from Portage Road, Otahuhu to Ross Road, Topuni
Rollover Designation	Yes
Legacy Reference	Designations H13-09 & B09-06, Auckland Council District Plan (Isthmus Section) 1999; Designation NZR1, Auckland Council District Plan (Waitakere Section) 2003; and Designation 501, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The purpose of the designation is to develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises as defined in the Railways Act 2005.

Conditions

1. See Diagram B09-06 for strata diagram for land adjacent to Broadway, Newmarket.
2. No additions or alterations shall be made to the building scheduled in the District Plan (Map Reference E10-23 Remuera Railway Station and Signal Box) other than in accordance with an outline plan submitted and processed in terms of Section 176A of the Resource Management Act 1991. This provision shall also apply to the interior of the building and the site surrounds as dimensioned in the Plan.

The following conditions apply between points X: 1,750,777.116m Y: 5,914,020.693m and X: 1,737,958.656m and Y: 5,921,597.470m (NZTM2000):

3. Where an outline plan of works is submitted in accordance with s176A of the Resource Management Act 1991, prior to commencing the project or work, that plan shall be accompanied by:
 - a. A statement outlining the District Plan objectives and policies relevant to the works proposed; and
 - b. An assessment of the effects the works described in the outline plan will have on the environment.

Explanation:

While it is accepted that the project works will be (or should be) in accordance with the designated purpose, the Council will wish to address the relevant objectives and policies of the Plan and be assured that the works will

The Proposed Auckland Unitary Plan (notified 30 September 2013)

not adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist in determining whether to request changes.

4. Appropriate sedimentation and erosion control measures shall be employed for any new earthworks on the designated site.

Explanation:

The District Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 4. Note that major earthworks may require a consent from the Council.

Diagram B09-06 - Strata Diagram for Land Adjacent to Broadway, Newmarket

6301 Newmarket Branch Railway Line

Designation Number

6301

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	New Zealand Railways Corporation (KiwiRail)
Location	Newmarket Branch Railway Line from Remuera Road, Newmarket to The Strand, Parnell
Rollover Designation	Yes
Legacy Reference	Designation B09-06, Auckland Council District Plan (Isthmus Section) 1999; and Designation 282, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The purpose of the designation is to develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises as defined in the Railways Act 2005.

Conditions

The following conditions apply between points X: 1,758,321.043m Y:5,920,188.314m and X 1,758,597.328m Y: 5,920,477.525m (NZTM2000):1. With the exception of the temporary station site, the designation (for existing and future corridors) is limited as to airspace at 6m above the rail tracks and the future corridor to the Britomart Transport Centre is limited to both airspace and substrata as shown in Diagram 282.

2. Development of the temporary station site shall comply with the underlying development controls.

The following conditions apply between points X: 1,758,651.726m Y: 5,918,459.655m and X 1,758,321.043m Y: 5,920,188.314m (NZTM2000):

3. Where the Parnell Tunnel passes under the following properties, the designation applies to the subsoil space only:

- Allotment 57, Section 3 Suburbs of Auckland, Survey Office Plan 47222;
- Section 1, SO 62979;
- Lot 1, DP 150385;
- Part Lot 1, DP 138824; and
- Lot 2, DP 20720.

For these properties, the extent of the designation is limited to the subsoil space owned by the requiring authority and recorded on the certificates of title. The location of these properties and the strata nature of the designation is illustrated in Diagram B09-06(1).

4. Where the Parnell Tunnel passes under Domain Drive and Parnell Road the designation applies to subsoil space only. The location of these roads in relation to the tunnel and the strata nature of the designation is illustrated in Diagram B09-06(1).

5. No buildings and structures shall be located in the designation area on the Domain (see Diagram B09-06(2)) except for any enabling works required for the construction of the Parnell Railway Station and its associated structures (including platforms and pedestrian connections such as over bridges, underpasses, footpaths and gantry structures within the station vicinity).

6. Detailed designs and plans shall be prepared prior to commencement of works to mitigate the adverse visual and amenity effects of the soil nail retaining walls and batter slopes in the proposed alteration to the designation. The details shall include:

- a. Batter slope treatment and planting details; and
- b. Soil nail retaining wall details including visual relief and treatment to minimise their visual impact and to integrate

The Proposed Auckland Unitary Plan (notified 30 September 2013)

into the surrounding landform and vegetated characteristics of the Auckland Domain. The use of MacMatR or similar softening techniques should be investigated to minimise their visual impact.

7. Detailed landscape mitigation planting plans shall be prepared by a Registered Landscape Architect to mitigate the adverse visual and amenity effects of the Auckland Domain vegetation removal. The plans shall have input from an ecologist and interested iwi groups and be submitted for approval to the Parks, Sport and Recreation Manager. The landscape plans should seek to retain the largest and structurally sound trees which are to be indicated on the plans. The plans shall include:

- a. Detailed landscape planting plans with tree and plant species, sizes and spacing;
- b. Landscape specifications; and
- c. Implementation and maintenance programme.

8. Detailed plans and cross sections of the proposed pedestrian underpass, showing the exact location and visual perspectives of the proposed underpass and re-instatement of the existing underpass, shall be approved by the Parks, Sport and Recreation Manager prior to commencement of works, if the outline plan of works is waived. The pedestrian access path should be designed and aligned to minimise any adverse effects on the existing vegetation within the Domain land, including the Puriri tree in close proximity to the proposed underpass. A Crime Prevention Through Environmental Design (CPTED) assessment shall be undertaken of the pedestrian underpass to minimise threats to personal safety.

Advice Note

1. The New Zealand Historic Places Trust Accidental Discovery Protocol be adopted by all contractors working on site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

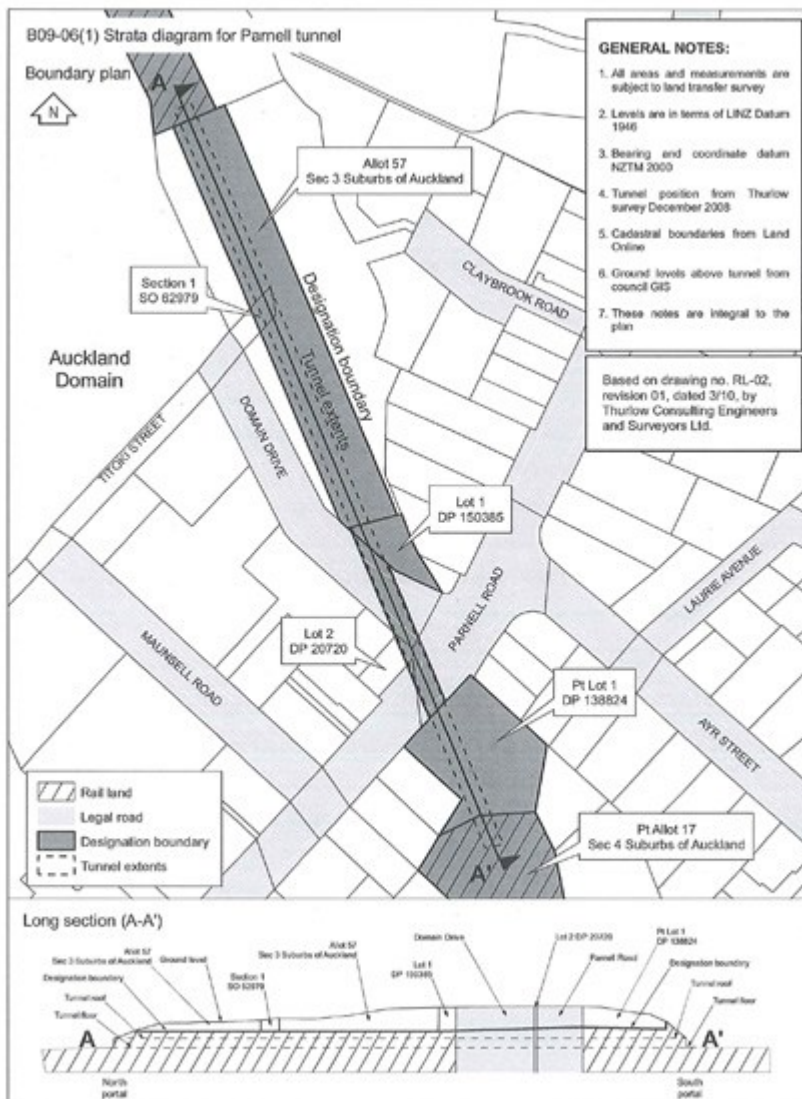

Diagram B09-06(2) - Railway Designation on Auckland Domain Subject to Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6302 North Island Main Trunk Railway Line

Designation Number	6302
Requiring Authority	New Zealand Railways Corporation (KiwiRail)
Location	North Island Main Trunk Railway Line from Buckland to Britomart Station, Auckland Central
Rollover Designation	Yes
Legacy References	Designation 89, Auckland Council District Plan (Franklin Section) 2000; Designation 11, Auckland Council District Plan (Papakura Section) 1999; Designation 230, Auckland Council District Plan (Manukau Section) 2002; Designation B10-05, Auckland Council District Plan (Isthmus Section) 1999; Designation 282, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The purpose of the designation is to develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises as defined in the Railways Act 2005.

Conditions

The following conditions apply between points X: 1,763,282.256m Y: 5,909,226.484m and X: 1,758,983.051m Y: 5,920,480.938m (NZTM2000):

1. Any activity on land within the defined Tamaki Drive Scenic Way (Map Reference B10-08) shall comply with the Auckland City Design Guidelines Tamaki Drive.
2. The geological feature which is scheduled in the District Plan (Map Reference D12-04) shall not be excavated, physically investigated, damaged, or altered, other than in accordance with an outline plan submitted and processed in terms of Section 176A of the Resource Management Act 1991.
3. Where the Purewa Tunnel passes under the following properties, the designation applies to subsoil space only:
 - Lot 416, DP 41185;
 - Lot 1, DP 74916;
 - Lot 2, DP 74916;
 - Part Lot 2, DP 40127;
 - Part Lot 1, DP 40127;
 - Part Lot 22, DP 18321; and
 - Part Lot 19, DP 18321.

For these properties, the extent of the designation is limited to the subsoil space owned by the requiring authority and recorded on the certificates of title. The location of these properties and the strata nature of the designation is illustrated in Diagram B10-05(1).

4. Where the Purewa Tunnel passes under St Johns Road, the extent of the designation is limited to the subsoil space owned by the requiring authority and recorded on Survey Office Plan 22701. The location of this road in relation to the tunnel and the strata nature of the designation is illustrated in Diagram B10-05(1).

The following conditions apply between points XL 1,758,983.051m Y: 5,920,480.938m and X: 1,757,893.28m Y: 5,920,853.469m (NZTM2000):

5. With exception of the temporary station site, the designation (for existing and future corridors) is limited as to airspace at 6m above the rail tracks and the future corridor to the Britomart Transport Centre is limited to both airspace and substrata as shown in the Diagram 282.
6. Development of the temporary station site shall comply with the underlying development controls.

6303 Avondale Southdown Railway Line

Designation Number	6303
Requiring Authority	New Zealand Railways Corporation (KiwiRail)
Location	Avondale to Southdown Railway Line from Soljak Place, Mount Albert to Bond Place, Onehunga
Rollover Designation	Designation G08-05, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

Purpose

The purpose of the designation is to develop, operate and maintain railways, railway lines, railway infrastructure, and railway premises as defined in the Railways Act 2005.

Conditions

1. That prior to implementation of the designation an assessment of environmental effects be undertaken to determine effects the works will have on the environment and the most appropriate means of mitigating these effects.
2. That a landscape plan be submitted for approval to the Council at the time of detailed design including fencing and planting which will be implemented at the boundary of the line with all land zoned residential and open space to minimise noise effects and provide screening.
3. That vehicle access along New North Road, Richardson Road, May Road, Dominion Road, Hayr Road,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Hillsborough Road, Queenstown Road, Pleasant Street, Symonds Street, Forbes Street, Normans Hill Road, Quadrant Road, Hill Street, Selwyn Street, Onehunga Mall, Galway Street, Spring Street, Victoria Street and Alfred Street be maintained when construction is completed. All crossings to be grade separated, with the exception of local roads.

4. The short term construction effects including noise, visual effects and dust be reduced through appropriate construction methods.

5. The term for this designation shall be 12 years from the inclusion of the designation in the District Plan.

New Zealand Refining Company Ltd

Designation Schedule - New Zealand Refining Company

Number	Purpose	Location
6500	Operation, maintenance and repair, upgrade and renewal of the existing petroleum transmission pipeline and ancillary facilities ...	109 Vipond Road, Topuni to 102 Amreins Road, Taupaki
6501	Operation, maintenance and repair, upgrade and renewal of the existing petroleum transmission pipeline and ancillary facilities ...	102 Amreins Road, Taupaki to 149 Roscommon Road, Wiri

6500 Petroleum Pipeline - Rural Section

Designation Number	6500
Requiring Authority	New Zealand Refining Company Ltd (Refining NZ)
Location	102 Amreins Road, Taupaki to 109 Vipond Road, Topuni
Rollover Designation	Yes
Legacy Reference	Designation 620, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation by The New Zealand Refining Company Limited (Refining NZ) is for the operation, maintenance and repair, upgrade and renewal of the existing petroleum transmission pipeline and ancillary facilities as required for the transportation of refined fuel products and described as follows:

- The existing 275mm petroleum transmission pipeline;
- The existing isolation valves;
- Cathodic protection terminals; and
- Surface marker posts and warning signage, located between the northern district boundary extending from Mangawhai Road at Kaiwaka and the southern district boundary extending from the Waitakere City Boundary at Amreins Road, Taupaki.

The following limitations apply:

- Renewal shall be limited to works on the petroleum transmission pipeline and will be limited to the replacement of sections of the pipeline with sections having equivalent diameter, and no more than [50] lineal metres of pipeline will be excavated at any particular time; and
- Upgrade will be limited to adding or replacing above the ground components, provided the relevant district Plan permitted activity standards are complied with.

The contact details for Refining NZ are:

Postal Address: Private Bag 9024, Whangarei, New Zealand

Email: corporate@refiningnz.com

Conditions

Restrictions of the Designation

1.

a. No person shall:

- i. Erect any structure; or
- ii. Erect a fence with supports which extend more than 0.4m into the ground from the surface; or
- iii. Plant any tree or shrub; or
- iv. Disturb the soil below a depth of 0.4 m from the surface; or
- v. Do anything on or to the land which would or could damage or endanger the pipeline within the designated corridor without first obtaining the written consent of Refining NZ.

For the avoidance of doubt, such written consent shall not be required for ordinary cultivation, digging, excavating, tilling and working soil to a depth of less than 0.4m or where Refining NZ has provided specific written approval prior to the designation coming into effect. A minimum of 1m cover shall remain above the top of the pipe after any ordinary cultivation, digging or excavation has taken place.

Landowners and/or developers can apply to Refining NZ for consent to do any work on the land within the designation corridor. Refining NZ will review each application with the landowner and /or developer and work to achieve the most suitable outcome for all parties. Refining NZ may give its written consent subject to reasonable conditions including the power to revoke the consent in specified circumstances.

Refining NZ agrees to not unreasonably withhold its consent.

Works or activities that would or could damage or endanger the pipeline include, for example, the use of heavy compaction or vibration machinery and equipment, pile-driving machinery and equipment, trenching, excavation or drilling (including micro drilling and directional drilling).

b. No person shall undertake road opening, trenching, excavation or drilling (including micro drilling and directional drilling), or lay underground high voltage power lines > 450v either in parallel with or intersecting Refining NZ's petroleum pipeline, without first obtaining Refining NZ's written approval.

c. However, the restrictions in a. and b. above do not apply, and Refining NZ's consent is not required under section 176 of the RMA to undertake:

- i. Any works authorised by an earlier designation;
- ii. Any repair, maintenance or upgrade to any existing network utility infrastructure, provided that:
 - A Road Opening Notice has been obtained from Auckland Transport;
 - Soil is not disturbed below a depth of 0.4m from the surface; and
 - After works, the finished surface level is not reduced below the pre-existing surface datum.

d. Where works other than those authorised by an earlier designation would exceed a depth of 0.4m from the surface and/or after completion of such works the finished surface level is proposed to be reduced below the pre-existing surface datum then application shall be made to Refining NZ for consent to do the works. Refining NZ will review each application with the applicant and work to achieve the most suitable outcome for all parties. Refining NZ may give its written consent subject to reasonable conditions, and agrees not to unreasonably withhold its consent.

General

2. Subject to these conditions, all works shall be undertaken in general accordance with the plans and information submitted by requiring authority in the documents entitled "Proposed Designation Relating to the Refinery to Auckland Pipeline" and additional information received 20 December 2007 entitled NZRC Pipeline

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation DRAFT — Rodney District Council (version 1: December 2007).

Designation Width

3. The maximum width of the designation shall be as follows:

- a. For land not within roads or rail corridor 12m; and
- b. For land comprising roads and rail corridor under which the pipeline crosses, or is contained within, 6m.

Engineering Standards

4. All works in, on or under Council roads shall be carried out in accordance with the requirements of the Council's then current Standards for Engineering Design and Construction.

Road Opening

5. Any maintenance, repair, upgrade or renewal works associated with the pipeline within public roads within the designation shall be carried out in accordance with the document "Working in the Roads Requirements" and a Road Opening Notice obtained from the Road Controlling Authority prior to the works commencing.

Pipeline Maintenance

6. All pipeline maintenance, repair, upgrade and renewal activities outside road reserves that involve excavation shall be in accordance with the Guide to Land Access for the Oil and gas industry and Landowners.

Utility Services

7. Any utilities within the designation shall be protected from the adverse effects of maintenance, repair, upgrade or renewal works.

Overland Flow Paths

8. Existing overland flow paths shall not be impeded by any maintenance, repair, upgrade or renewal works carried out within the designation.

Existing Overhead Lines

9. All works or activities related to the designation shall be undertaken in compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).

Earthworks

10. Where maintenance, repair, upgrade and renewal activities involving excavation are undertaken pursuant to the designation, appropriate sediment and erosion measures shall be employed in accordance with the current Unitary Plan standards. Prior to any earthworks within the designation the appropriate sediment control devices as per Auckland Regional Council Technical Publication No. 90 "Erosion and Sediment Control Guidelines for Land Disturbing activities in the Auckland Region" shall be installed.

Hours of Maintenance

11. Scheduled maintenance, repair, upgrade or renewal work and associated activities shall be limited to between the hours of 7am and 7pm, Monday to Saturday (excluding public holidays) unless the prior approval of the Council has been obtained.

Noise

12. The noise from maintenance works, repair, upgrade and renewal activities shall be measured, assessed and controlled in accordance with the procedures and limits set out in NZS 6803:1999 Acoustics Construction Noise.

Welding, Dust and Smoke

13. Maintenance works, repair, upgrade and renewal activities shall comply with Rule 16.5.2 Welding, and rule 16.7 Dust or Smoke of the Auckland Council District Plan (Rodney Section) 2011 below:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

16.5.2 All welding activities shall be screened from adjacent sites and roads.

16.7

Rule 16.7.1

No activity (apart from traffic travelling on formed roads, or activities authorised by resource consent for a discharge of contaminants into air) shall create a dust or smoke nuisance, which is discernible beyond the boundary of the site or sites on which the activity is being undertaken. For the purposes of this rule a dust or smoke nuisance will occur if the Council considers there is visible evidence of noxious, dangerous, offensive or objectionable deposited particulate matter settling on the ground, a building, or structure, which is traceable from a dust or smoke source; or if the Council considers that the level of dust or smoke, beyond the boundary of the site or sites on which the activity is being undertaken, is noxious, dangerous, offensive or objectionable. In making its determination as to whether there is or is not a dust or smoke nuisance, the Council shall take into account the character of the zone in which the dust or smoke is created. Emergency Service Training and Investigation undertaken by the New Zealand Fire Service Commission is exempt from complying with this rule, however reference should be made to the requirements of the relevant Regional Plan.

Note:

a. In addition to this rule the Proposed Auckland Regional Plan: Air, Land and Water has rules relating to the discharge of smoke and dust.

b. It is the nature of the rural area that rural farming activities are undertaken that will create a level of dust and/or smoke as a part of reasonable farming activities. However, this does not exempt farming activities from meeting Rule 16.7.1.

c. In making the above determination Council shall utilise appropriately trained and/or experienced persons where possible.

Consultation with Transit New Zealand

14. The requiring authority shall consult with New Zealand Transport Agency (NZTA) at least 30 working days prior to carrying out any works or activities on, in or under State Highways, except in emergency situations.

Written Approval from the Requiring Authority

15. The Requiring Authority shall respond within 15 working days of receiving any request for its written approval under section 176 of the RMA.

Advice Notes

1. Access to overhead electricity transmission lines, poles or supporting structures shall be maintained at all times in accordance with the Electricity Act 1992.

2. All land use activities within the designation corridor must comply with the New Zealand Code of Practice for Electrical Safety Distances (NZECP) 34:2001.

3. Any new structures within the designation may be subject to a Building Consent where applicable.

4. Refining NZ has confirmed that it will consult with land owners and occupiers who may be affected by maintenance works, repair, upgrade and renewal activities to reach fair and reasonable arrangements for entry, and to address any matters regarding effects of maintenance, repair, upgrade and renewal activities, including restoring the surface of the land following maintenance, in accordance with its relevant obligations under the pipeline easement.

5. This designation traverses earlier Auckland Council roading, New Zealand Railway Corporation railway and NZTA designations that are protected pursuant to sections 176 and 177 of the RMA, and State Highways which are protected pursuant to sections 51 and 52 of the Government Road Powers Act 1989. Where that occurs, the Requiring Authority may only carry out its activities with the written consent of the earlier requiring authorities.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. The Requiring Authority is obliged to operate the pipelines and ancillary facilities in accordance with the requirements of AS2885: Pipelines — Gas and Petroleum Liquids, the Health and safety in Employment (Pipelines) Regulations 1999 and in accordance with the authorisations issued for those facilities in terms of the Petroleum Act 1937.

7. Emergency works may be performed in line with the Vector advice booklet by excavation to 0.4m depth and thereafter the use of hand tools only. Emergency operations should be notified immediately to Vector or their agent who provide an on-call service outside of normal working hours.

8. An authority may need to be obtained from the New Zealand Historic Places Trust to destroy, damage or modify an archaeological site in accordance with the Historic Places Act 1993.

9. Where any maintenance works, repair, upgrade and renewal activities affect any stream or river or where earth works are undertaken the requiring authority will need to obtain any necessary consents from the Auckland Council prior to the works commencing.

10. For the avoidance of doubt, the Requiring Authority has confirmed that it accepts that nothing in the conditions limits, or is intended to limit, the potential obligation under section 176A of the RMA to provide an Outline Plan of works in appropriate circumstances.

6501 Petroleum Pipeline - Urban Section

Designation Number	6501
Requiring Authority	New Zealand Refining Company Ltd (Refining NZ)
Location	102 Amreins Road, Taupaki to 149 Roscommon Road, Wiri
Rollover Designation	Yes
Legacy Reference	Designation NZRC1, Auckland Council District Plan (Waitakere Section) 2003; Designation G03-06 Auckland Council District Plan (Isthmus Section) 1999; and Designation 296, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation by The New Zealand Refining Company Ltd (Refining NZ) is for the operation, maintenance and repair, upgrade and renewal of the existing petroleum transmission pipeline and ancillary facilities as required for the transportation of refined fuel products and described as follows:

- a. The existing 275mm petroleum transmission pipeline;
- b. The existing isolation valves;
- c. Cathodic protection terminals; and
- d. Surface marker posts and warning signage, located between the northern district boundary extending from the Waitakere City Boundary at Amreins Road, Taupaki and the Wiri Oil Services Terminal at 149 Roscommon Road, Wiri, Manukau City.

The following limitations apply:

- i. Renewal shall be limited to works on the petroleum transmission pipeline and will be limited to the replacement of sections of the pipeline with sections having equivalent diameter, and maximum allowable

The Proposed Auckland Unitary Plan (notified 30 September 2013)

operating pressure of no more than (9.0MPa) and no more than [20] lineal metres of pipeline will be excavated within any 14 day period.

ii. Upgrade will be limited to adding or replacing aboveground components provided the district plan relevant permitted activity standards are complied with and the maximum allowable operating pressure is not increased.

Above ground components are limited to:

- The existing isolation valves;
- The existing cathodic protection terminals;
- Surface marker posts; and
- Warning signage.

iii. All activities within road reserve shall be in accordance with the requirements of "The National Code of Practice for working in Roads"; and

iv. All activities within land other than the road reserve shall be in accordance with the Guide to Land Access for the Oil and Gas Industry and Landowners.

The contact details for Refining NZ are:

Postal Address: Private Bag 9024, Whangarei, New Zealand

Telephone: +64 9 432 8311

Facsimile: +64 9 432 8035

Conditions

Restrictions of the Designation

1.

a. No person shall:

- i. Erect any structure; or
- ii. Plant any tree or shrub; or
- iii. Disturb the soil below a depth of 0.4m; or
- iv. Do anything on or to the land which would or could damage or endanger the pipeline, without first obtaining the written consent of Refining NZ.

For the avoidance of doubt, such written consent shall not be required for ordinary cultivation, digging, excavating, tilling and working soil to a depth of less than 0.4m or where Refining NZ has provided specific written approval prior to the designation coming into effect. A minimum of 1m cover shall remain above the top of the pipe after any ordinary cultivation, digging or excavation has taken place.

Landowners and/or developers can apply to Refining NZ for consent to do any work on the land within the designation corridor. Refining NZ will review each application with the landowner and/or developer and work to achieve the most suitable outcome for all parties. Refining NZ may give its written consent subject to reasonable conditions including the power to revoke the consent in specified circumstances.

NZRC agrees to not unreasonably withhold its consent.

Works or activities that would or could damage or endanger the pipeline include, for example, the use of heavy compaction or vibration machinery and equipment, pile-driving machinery and equipment, trenching, excavation or drilling (including micro drilling and directional drilling).

b. No person shall undertake road opening, trenching, excavation or drilling (including micro drilling and directional drilling), or lay underground high voltage power lines >450v either in parallel with or intersecting Refining NZ's petroleum pipeline, without first obtaining Refining NZ's written approval.

c. However, the restrictions in a. and b. above do not apply, and Refining NZ's consent is not required under

The Proposed Auckland Unitary Plan (notified 30 September 2013)

section 176 of the RMA to the following activities, provided that i. Road Opening Notice has been obtained from the Road Controlling Authority:

- ii. Any road widening or associated works in accordance with any existing road designation;
- iii. Any repair, maintenance or upgrade to existing road surface;
- iv. Any repair, maintenance or upgrade to any existing network utility infrastructure.

Provided in all cases that:

- Soil is not disturbed below a depth of 0.4m from the surface; and
- After works, the finished surface level is not reduced below the pre-existing surface datum.

Where works other than those authorised by an earlier designation would exceed a depth of 0.4m from the surface and/or after completion of such works the finished surface level is proposed to be reduced below the pre-existing surface datum then application shall be made to Refining NZ for consent to do the works. Refining NZ will review each application with the applicant and work to achieve the most suitable outcome for all parties. Refining NZ may give its written consent subject to reasonable conditions, and agrees not to unreasonably withhold its consent.

Emergency works may be performed in line with the Vector Gas advice booklet by excavation to 0.4m depth and thereafter the use of hand tools only. Emergency operations should be notified immediately to Refining NZ or their agent (Vector Gas Ltd) who provide an on-call service outside of normal working hours.

General

2. Subject to these conditions, works shall be undertaken in general accordance with the plans and information submitted by the requiring authority in support of the Notice of Requirement in the documents entitled "Proposed Designation Relating to the Refinery to Auckland Pipeline".

3. The maximum width of the designation shall be as follows:

- a. For land, not including roads and rail corridor 12m; and
- b. For land comprising roads and rail corridor under which the pipeline crosses, or is contained within, 6m.

For the avoidance of doubt, where the designation applies to road or rail corridors the designation shall not extend across any adjacent private property, except to the extent that private property is subject to an easement in favour of Refining NZ.

4. All pipeline maintenance, repair, upgrade and renewal activities within road reserves that involve excavation shall be pursuant to a Road Opening Notice and shall be subject to the Road Opening Notice requirements of the Council and carried out in accordance with "The National Code of Practice for working in Roads".

5. Where maintenance, repair, upgrade and renewal activities involving excavation are undertaken pursuant to the designation, appropriate sediment and erosion measures shall be employed, in accordance with the current Unitary Plan standards.

6. Refining NZ shall at all times ensure that access between parts of any property held in single ownership temporarily severed by maintenance, repair, upgrade and renewal activities is maintained to a level that will enable, as far as practicable, normal activities on the property to continue.

7. Within road reserves scheduled maintenance, repair, upgrade or renewal work and associated activities shall be limited to between the hours of 7am and 7pm, Monday to Saturday (excluding public holidays) except:

- a. where otherwise stated in a Traffic Management Plan, to the satisfaction of the Council; or
- b. with the prior approval of the Council.

8. All works or activities related to the designation shall be undertaken in compliance with the New Zealand

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).

9. The noise from maintenance works, repair, upgrade and renewal activities shall be measured, assessed and controlled in accordance with the procedures and limits set out in NZS 6803:1999 Acoustics – Construction Noise.

10. Refining NZ shall consult with New Zealand Transport Agency (NZTA) at least 30 working days prior to carrying out any works or activities on, in or under State Highways, except in emergency situations.

11. Refining NZ shall consult with Auckland Transport at least 15 working days prior to carrying out any works or activities on, in or under Council-controlled roads, except in emergency situations.

12. The requiring authority shall respond within 15 working days of receiving any request for its written approval under section 176 of the RMA.

Advice Notes

1. Access to overhead electricity transmission lines, poles or supporting structures shall be maintained at all times in accordance with the Electricity Act 1992.

2. Refining NZ has confirmed that it will consult with land owners and occupiers who may be affected by maintenance works, repair, upgrade and renewal activities to reach fair and reasonable arrangements for entry, and to address any matters regarding effects of maintenance, repair, upgrade and renewal activities, including restoring the surface of the land following maintenance, in accordance with its relevant obligations under the pipeline easement.

3. The Requiring Authority is obliged to operate the pipelines and ancillary facilities in accordance with the requirements of AS2885: Pipelines – Gas and Petroleum Liquids, the Health and Safety in Employment (Pipelines) Regulations 1999 and in accordance with the authorisations issued for those facilities in terms of the Petroleum Act 1937.

4. This designation traverses earlier Auckland Council roading, New Zealand Railway Corporation and NZTA Transit designations that are protected pursuant to sections 176 and 177 of the RMA, and State Highways which are protected pursuant to sections 51 and 52 of the Government Roding Powers Act 1989. Where that occurs, the Requiring Authority may only carry out its activities with the written consent of the earlier requiring authorities.

5. An authority may need to be obtained from the New Zealand Historic Places Trust to destroy, damage, or modify an archaeological site in accordance with the Historic Places Act 1993.

New Zealand Transport Agency

Designation Schedule - New Zealand Transport Agency

Number	Purpose	Location
6700	Motorway	State Highway 1 from south of Quarry Road, Drury to Bombay Road, Bombay
6701	Motorway	State Highway 1 from Bombay Road to Mill Road, Bombay

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6702	State Highway - declared limited access road	State Highway 1 from Mill Road to south of Beaver Road East (Waikato District Council boundary), Bombay
6703	Road	State Highway 1 at Great South Road on-ramp, Bombay
6704	State Highway - declared limited access road	State Highway 22 (Karaka Road and Paerata Road) from east of Woodlyn Drive, Karaka to Adams Drive, Pukekohe
6705	Land for road widening - 5m where indicated on Map 100, to a minimum width of 30m of road reserve	State Highway 22 (Karaka Road and Paerata Road) from east of Woodlyn Drive, Karaka to Adams Drive, Pukekohe
6706	Motorway purposes Auckland - Hamilton	State Highway 1 from north of Takanini interchange to south of Quarry Road, Drury
6707	State Highway 22	State Highway 22 (Karaka Road and Great South Road) from east of Woodlyn Road, Karaka to State Highway 1, Drury
6708	South Western Motorway (State Highway 20)	State Highway 20 from (1) east of Great south Road, Manukau City Centre to Cavendish Drive interchange, Wiri and from (2) Massey Road to Walmsley Road, Mangere
6709	South Western Motorway (State Highway 20)	State Highway 20 from (1) Manukau Harbour Crossing to Tararata Creek, Mangere and from (2) Massey Road, Mangere to Cavendish Drive interchange, Wiri
6710	Manukau Harbour Crossing	Waterfront Road Reserve, Coronation Road, Rimu Road and Mahunga Drive, Mangere
6712	Airport Motorway (State Highway 20A)	State Highway 20A from Bader Drive to south of Kirkbride Road, Mangere
6713	George Bolt Memorial Drive	State Highway 20A (George Bolt Memorial Drive) from Kirkbride Road to Auckland International Airport, Mangere
6714	Southern Motorway (State Highway 1)	State Highway 1 from north of Highbrook Drive, Otara to south of Great South Road, Takanini
6715	Southern Motorway widening East Tamaki Road	State Highway 1 at East Tamaki Road interchange, Otara
6716	South Western Motorway - State Highway 20 (connection to State Highway 1)	State Highway 20 from Great South Road, Manukau City Centre to Cavendish Drive interchange, Wiri
6717	State Highway 20B Road purposes: the maintenance, operation and improvement of the State Highway (including road widening)	State Highway 20 (Puhinui Road) from Puhinui Road interchange to Orrs Road, Puhinui
6718	Motorway	State Highway 1 from (1) Auckland Harbour Bridge, Westhaven to Fanshawe Street, Freemans Bay and from (2) Grafton Road, Grafton to Tamaki River, Otahuhu, and State Highway 16 from (3) Newton Road, Eden Terrace to Whau River bridge, Avondale and State Highway 20 from (4) Hillborough Road, Hillsborough to Manukau Harbour Crossing, Onehunga
6719	Motorway - Shelley Beach Road priority lane	State Highway 1 at Shelly Beach Road, Westhaven

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6720	Motorway - Newmarket Viaduct improvement project	State Highway 1 from Gillies Avenue to St Marks Road off-ramp, Newmarket
6721	Motorway - Victoria Park tunnel project	State Highway 1 from Victoria Park, Auckland Central to Shelley Beach Road off-ramp, Westhaven
6722	To alter designation A07-01, SH16, causeway and Rosebank Peninsula ...	State Highway 16 from the causeway to north of Patiki Road on-ramp, Avondale
6723	To alter designation A07-01, SH16, between Great North Road and St Lukes Interchange ...	State Highway 16 from Great North Road, Avondale to St Lukes Road, Western Springs
6724	The designation provides for the construction, and subsequent operation, maintenance and minor improvement of the motorway interchange	State Highway 16 in the vicinity of (1) Patiki Road, Avondale and (2) Rosebank Road, Avondale
6725	Construction of a public road to provide access to properties at the northern end of Patiki Road	State Highway 16 on Patiki Road, Avondale
6726	Construction of a public road to provide access to properties at the northern end of Patiki Road ...	State Highway 20 from Great North Road (in the vicinity of Alverston Street) to the northern portal (vicinity of Great North Road interchange), Waterview
6727	12.2 metre height restriction affecting land within 76.2 meters of the centre line of the Newmarket Viaduct	Vicinity of Newmarket Viaduct (State Highway 1), Newmarket
6728	For a new designation, SH20 tunnels, Great North Road underpass to Alan Wood Reserve ...	State Highway 20 from Alan Wood Reserve, Mt Roskill to Great North Road, Waterview
6729	Proposed motorway; proposed motorway and railway; proposed road, Hayr Road to Richardson Road ...	State Highway 20 from Hillsborough Road, Hillborough to Maioro Street, Mt Roskill
6730	For new designation, SH20, southern tunnel portal to Maioro Street interchange ...	State Highway 20 from Maioro Street to Alan Wood Reserve, Mt Roskill
6731	The designation is for the following work: ...	State Highway 20 from Queenstown Road, Hillborough to Ernie Pinches Street, Mt Roskill Hillsborough Road
6732	The designation is for the following work: ...	State Highway 20 from Queenstown Road, Hillborough to Maioro Street, Mt Roskill
6733	The designation is for the following work: ...	State Highway 20 in the vicinity of Earnie Pinches Street, Mt Roskill
6734	Otahuhu Southern Motorway interchange	State Highway 1 at Otahuhu interchange, Otahuhu
6735	The designation is to include, and allow for, the control of this State Highway, including planning, design, supervision, construction and maintenance ...	State Highway 1 from Wellington Street to Victoria Park, Auckland Central

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6736	The designation is to include, and allow for, the control of this State Highway, including planning, design, supervision, construction and maintenance ...	State Highway 1 and 16 from Grafton Road, Grafton to Wellington Street, Auckland Central and State Highway 16 from Parnell Rise to Newton Road, Auckland Central
6738	Alteration to designation NZTA1, SH16, between Whau River and Henderson Creek ...	State Highway 16 from Whau Creek to Henderson Creek, Te Atatu
6740	N/A	State Highway 16 from north end of Fred Taylor Drive to Brighams Creek, Whenuapai
6741	N/A	State Highways 16 from Westgate interchange, Westgate to Brigham Creek Road intersection, Whenuapai and State Highway 18 from Westgate interchange, Westgate to Greenhithe Bridge, Hobsonville
6742	Refer NOR-2010-1559	State Highway 16 from Henderson Creek, Henderson to Huruhuru Road Bridge, Massey
6743	Refer NOR-2010-1136	State Highway 16 from west of Huruhuru Road bridge, Massey to Westgate interchange, Westgate
6744	N/A	State Highway 16 south of Westgate interchange, Westgate
6747	Motorway administration and maintenance	28 Sulphur Beach Road, Northcote
6748	Auckland Harbour Bridge works depot and anchorage	9 Princes Street, Northcote Point
6749	Auckland Harbour Bridge works depot and anchorage	Queen Street (Pt Allotment 68 TTN of Woodside) , Northcote Point
6750	Auckland-Waiwera Motorway (State Highway 1), including planning, design, supervision, construction and maintenance ...	State Highway 1 from Auckland Harbour Bridge, Northcote to Greville Road interchange, Albany
6751	Proposed Motorway (Auckland/Waiwera Motorway State Highway 1), including planning, design, supervision, construction and maintenance ...	State Highway 1 from Greville Road interchange, Albany to Lonely Track Road, Albany
6753	State Highway 18 - the control, management and improvement of the State Highway ...	State Highway 18 from Constellation Drive interchange (State Highway 1) to west of Paul Matthews Road, Rosedale
6756	State Highway 18 - the control, management and improvement of the State Highway ...	State Highway 18 (Upper Harbour Highway) from west of Paul Matthews Road, Rosedale to Upper Harbour Bridge, Greenhithe
6757	The North Shore Busway ...	North Shore Busway from south of Onewa Road interchange, Onewa to Constellation Drive interchange, Rosedale
6758	Constellation Drive Station ...	Corner Constellation Drive interchange and State Highway 1, Rosedale

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6759	Motorway	State Highway 1, Silverdale interchange, Silverdale
6760	Motorway	State Highway 1 from Lonely Track Road, Redvale to Silverdale interchange, Silverdale
6761	Motorway and limited access highway and associated interchange structures	State Highway 1 from Bankside Road, Silverdale to Titfords Bridge, Puhoi
6762	Quarry	State Highway 1 (Pt Allotment N158 PSH of Mahurangi), Pohuehue
6763	State Highway 1	State Highway 1 from Titfords Bridge, Puhoi to Ross Road (Kaipara District Council boundary), Topuni
6764	Road widening	State Highway 1 intersection with Hudson Road, Warkworth
6765	State Highway 1 / Wayby Valley Road / Wayby Station Road intersection	State Highway 1 intersection with Wayby Station Road and Wayby Valley Road, Wellsford
6766	State Highway 16	State Highway 16 from Brigham Creek, Hobsonville to State Highway 1, Wellsford
6768	Road widening	State Highway 16 (Main Road), Kumeu and Huapai

6700 State Highway 1 - Drury to Bombay

Designation Number	6700
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from south of Quarry Road, Drury to Bombay Road, Bombay
Rollover Designation	Yes
Legacy Reference	Designation 86A, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Motorway.

Conditions

No conditions.

Attachments

No attachments.

6701 State Highway 1 - Bombay

Designation Number	6701
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from Bombay Road to Mill Road, Bombay
Rollover Designation	Yes
Legacy Reference	Designation 86B, Auckland Council District Plan (Franklin Section) 2000

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Motorway.

Conditions

No conditions.

No attachments.

6702 State Highway 1 - Bombay to Waikato District Council boundary

Designation Number	6702
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from Mill Road to south of Beaver Road East (Waikato District Council boundary), Bombay
Rollover Designation	Yes
Legacy Reference	Designation 86C, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

State Highway - declared limited access road.

Conditions

No conditions.

Attachments

No attachments.

6703 State Highway 1 - Bombay On-ramp

Designation Number	6703
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1: Great South Road on-ramp, Bombay
Rollover Designation	Yes
Legacy Reference	Designation 86D, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Description

Road.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

No conditions.

Attachments

No attachments.

6704 State Highway 22 - Karaka to Pukekohe

Designation Number	6704
Requiring Authority	New Zealand Transport Agency
Location	State Highway 22 (Karaka Road and Paerata Road) from east of Woodlyn Drive, Karaka to Adams Drive, Pukekohe
Rollover Designation	Yes
Legacy Reference	Designation 88, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

State Highway - declared limited access road.

Conditions

No conditions.

Attachments

No attachments.

6705 State Highway 22 Road Widening - Karaka to Pukekohe

Designation Number	6705
Requiring Authority	New Zealand Transport Agency
Location	State Highway 22 (Karaka Road and Paerata Road) from east of Woodlyn Drive, Karaka to Adams Drive, Pukekohe
Rollover Designation	Yes
Legacy Reference	Designation 140, Auckland Council District Plan (Franklin Section) District Plan 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Land for road widening - 5m where indicated on Map 100, to a minimum width of 30m of road reserve.

Conditions

No conditions.

Attachments

Map 100 - Designation Land for Road Widening

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6706 State Highway 1 - Takanini to Drury

Designation Number	6706
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from north of Takanini interchange to south of Quarry Road, Drury
Rollover Designation	Yes
Legacy Reference	Designation 201, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Motorway purposes Auckland - Hamilton.

Conditions

No conditions.

Attachments

No attachments.

6707 State Highway 22 - Karaka to Takanini

Designation Number	6707
Requiring Authority	New Zealand Transport Agency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	State Highway 22 (Karaka Road and Great South Road) from east of Woodlyn Road, Karaka to State Highway 1, Drury
Rollover Designation	Yes
Legacy Reference	Designation 224, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

State Highway 22.

Conditions

No conditions.

Attachments

No attachments.

6708 State Highway 20 - Manukau City to Wiri and Mangere

Designation Number	6708
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from (1) east of Great south Road, Manukau City Centre to Cavendish Drive interchange, Wiri and from (2) Massey Road to Walmsley Road, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 181, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

South Western Motorway (State Highway 20).

Conditions

No conditions.

Attachments

No attachments.

6709 State Highway 20 - Manukau Harbour Crossing to Mangere

Designation Number	6709
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from (1) Manukau Harbour Crossing to Tararata Creek, Mangere and from (2) Massey Road, Mangere to Cavendish Drive interchange, Wiri
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 182, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

South Western Motorway (State Highway 20).

Conditions

General

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority, being Transit New Zealand (Transit), the Notice of Requirement (as updated 28 August 2006) and supporting documents, as follows:
 - a. 'SH20 Manukau Harbour Crossing Project — Volume 1 Assessment of Environmental Effects and Attachments', prepared for Transit New Zealand by Opus Consultants Ltd, dated 19 May 2006 and annotated September 2006;
 - b. 'SH20 Manukau Harbour Crossing Project — Volume 2 Technical Appendices', prepared for Transit New Zealand by Opus Consultants Ltd, dated 19 May 2006 and annotated September 2006;
 - c. 'SH20 Manukau Harbour Crossing Project — Volume 3 Scheme Plans and Drawings', prepared for Transit New Zealand by Opus Consultants Ltd, dated 19 May 2006 and annotated September 2006; and other information provided to the Manukau City Council in response to requests for further information under Section 92 of the Resource Management Act 1991 (the Act) and at the hearing.
2. As soon as practicable, following completion of construction of the SH20 Manukau Harbour Crossing Project (the Project), the Requiring Authority shall give notice to the Manukau City Council in accordance with Section 182 of the Act for removal of those parts of the designation which are not required for the long term operation, maintenance and mitigation of effects of the State highway. Note that Condition 2 is specific to land no longer required for construction purposes once the Project is completed.
3. A liaison person shall be appointed by the Requiring Authority for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons arising from the Project.
4. The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Act.

Outline Plans of Works and Management Plans

5. Prior to the commencement of works, the Requiring Authority shall submit to the Manukau City Council the relevant Management Plans required under Conditions 10, 17, 22, 26, 29, 42 and 52 below. The Management Plans shall be submitted to the Manukau City Council as soon as reasonably practicable, allowing sufficient time for review by the Manukau City Council and discussion with the Requiring Authority.
6. Any Management Plans or Outline Plans of Works may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted in stages must clearly show integration with adjacent stages and interrelated activities.
7. If the Manukau City Council and the Requiring Authority agree on the content and terms of such Management Plans, that agreement shall be deemed to be a waiver in relation to that Plan or relevant part of that Plan pursuant to section 176A(2)(c) of the Act of the requirement for an Outline Plan of Works under section 176A. If the Manukau City Council and the Requiring Authority do not agree on the terms of such Plan or Plans, the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

relevant provisions of section 176A of the Act shall apply in respect of any part not agreed.

8. The works shall be undertaken in accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

9. Prior to lodging any outline plan of works or part of such a plan that contains details of measures that may affect public transport, Transit shall consult about the design details with relevant public transport operators, the Auckland Regional Transport Authority, the Manukau City Council and the Auckland City Council. Any such plan shall include a report on this consultation and measures that have been taken to meet any concerns raised.

Construction

10. At least 20 working days prior to the commencement of works on the Project or the relevant stage of the Project, the Requiring Authority shall prepare and submit to the Manukau City Council, a Construction Management Plan (CMP). The purpose of the CMP is to set out the management procedures and construction methods to be undertaken in order to avoid, remedy or mitigate potential adverse effects arising from construction activities.

11. The CMP shall be prepared in consultation with the Manukau City Council and shall include specific details relating to demolition, construction and management of all works associated with the Project, including:

- a. Details of the site or project manager and the construction liaison person identified in condition 3, including their contact details (phone, facsimile, postal address, email address);
- b. The location of large notice boards that clearly identify Transit and the project name, together with the name, telephone number, email address and address for service of the site or project manager and the construction liaison person;
- c. An outline construction programme of the works indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- d. The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at nights, on Sundays and during public holidays;
- e. Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- f. Location of workers offices and conveniences (eg portaloos);
- g. Procedures for controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- h. Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (March 1999);
- i. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works, potentially through the construction liaison person;
- j. Procedures to be followed to ensure that those working in the vicinity of identified heritage features are aware of the heritage values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- k. Means of ensuring the safety of the general public;
- l. Procedures for the construction liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- m. Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding residential streets and Coronation Road is restricted;
- n. The layout of the construction yard at Waterfront Road Reserve, including associated buildings, fencing and site access, which shall, as far as practicable, incorporate the following:
 - i. Retention of the existing public parking area along Coronation Road (which shall not be used for the parking of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

machinery and vehicles, including workers' vehicles, associated with the project);

ii. The main vehicle access across the construction yard to be located as far as practicable from residential dwellings on Waterfront Road and be accessed from Coronation Road;

iii. Construction of temporary boundary / security fences to be undertaken in a manner which minimises impact on existing trees located along Waterfront Road and maintains a grass berm along the road edge;

iv. Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings;

v. Acoustic fences required to achieve compliance with NZS6803:1999 Acoustics — Construction Noise to be located as close as practicable to the noise sources or otherwise in the most effective positions;

vi. Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on residential dwellings on Waterfront Road; and

o. All temporary boundary/security fences shall be maintained in good order, with any graffiti removed as soon as possible.

12. A record of any complaints received in relation to the construction activities and the responses made shall be provided on a three monthly basis by the 10th day of the following month to the Council.

13. The CMP shall be implemented and maintained throughout the entire construction period

14. Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the designation at all times, and shall not be stored or parked along Coronation Road and Waterfront Road.

15. All storage of materials and equipment associated with the construction works shall take place within the boundaries of the designation.

16. Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage at no cost to the Manukau City Council.

Construction Noise and Vibration

17. The CMP shall include a Construction Noise Management Plan (CNMP) and a Construction Vibration Management Plan (CVMP) for the Project or relevant Project stage, prepared by a suitably qualified expert.

18. The CNMP and the CVMP shall be implemented and maintained throughout the entire demolition and construction periods.

19. The CNMP shall include specific details relating to the control of noise associated with all Project works. It shall as far as practicable be formulated to achieve compliance with the requirements of the NZS6803:1999 Acoustics — Construction Noise. The CNMP shall refer to noise management measures set out in Annexure E of NZS6803:1999, and shall, as a minimum, address the following aspects:

a. Demolition and construction sequence;

b. Noise sources, including machinery and equipment to be used;

c. Hours of operation, including times and days when noisy construction work would occur;

d. Predicted construction noise levels;

e. The specification of noise mitigation measures;

f. Development of alternative strategies where compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes, and

g. Methods for monitoring and reporting on construction noise.

20. As far as practicable, permanent acoustic barriers that are required by the Noise Management Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(Condition 30.a. of these conditions) shall be erected prior to road construction, provided each barrier is required at that time to meet the requirements of the CNMP (Condition 19.e. of these conditions).

21. The CVMP shall include specific details relating to the control of vibration associated with all Project works. It shall as far as practicable be formulated to achieve compliance with the vibration standards of the German Standard DIN 4150, and shall address the following aspects:

- a. Vibration monitoring measures;
- b. Existing vibration levels;
- c. Possible mitigation measures;
- d. Complaint response;
- e. Reporting procedures;
- f. Notification and information for the community of the proposed works;
- g. Where appropriate vibration testing of construction processes (e.g. piling) to confirm that the vibration limits will not be exceeded;
- h. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- i. Operational times;
- j. Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works.

Construction Traffic

22. The CMP shall include a Traffic Management Plan (TMP), for the Project or the relevant Project stage, which shall be prepared by a suitably qualified person. In developing the TMP the Requiring Authority shall:

- a. use advanced traffic modelling tools to better understand the effects of construction of the Project on the affected road network. These tools will be developed and calibrated in conjunction with the Manukau City Council and have the ability to simulate lane restrictions and road closures, and
- b. as far as practicable, undertake measures to avoid road closures and also the restriction of vehicle and pedestrian movements.

23. The TMP shall describe the measures that will be undertaken to address, as far as practicable, the following:

- a. Methods of avoiding, remedying or mitigating the local and network wide effects of construction of the Project. In particular, the TMP shall describe:
 - i. Traffic management measures to address and maintain, where practicable traffic capacity, including bus services, at traffic peak hours during weekdays and weekends in Mahunga Drive, Rimu Road and Coronation Road.
 - ii. Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
 - iii. Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/overbridge) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
 - iv. Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks);
 - v. The numbers, frequencies, routes and timing of construction traffic movements;
 - vi. Monitoring to measure the impact of traffic, in terms of traffic speeds and volumes on those roads described in 23(a)(i); and
 - vii. Methods to manage the effects of traffic during construction, including the requirement to detour or divert traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area.
- b. Traffic management measures during construction, to be developed in consultation with the Auckland Regional Transport Authority (ARTA), Bus and Coach Association and the Manukau City Council, to address and maintain, where practicable, traffic capacity at peak hours to provide for passenger transport services on the road network;
- c. Consultation with the Manukau City Council with regard to the most appropriate means for providing access

The Proposed Auckland Unitary Plan (notified 30 September 2013)

on Council roads within and adjacent to the designation;

d. Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works to provide alternative access arrangements to an equivalent standard as that removed, as far as practicable, and in consultation with the Manukau City Council and the affected landowner;

e. Details on the maintenance of pedestrian access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable. Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours;

f. Consistency with Transit New Zealand 'Code of Practice for Temporary Traffic Management' (COPTTM);

g. Recognition of the need for the Manukau City Council to access and maintain its roading network during the construction phase of the Project, and

h. Recognition of the need to coordinate and to consult directly with the proponents of any major construction occurring concurrently with, and in the vicinity of, the Project during construction.

24. The Requiring Authority shall ensure that provision for continued public walking and cycling passage across Manukau Harbour generally between Coronation Road, Mangere Bridge and Onehunga Harbour Road, Onehunga, in the general vicinity of the Old Mangere Bridge, is kept and maintained.

25. Vehicle access to the construction site and site office areas in Waterfront Road Reserve shall be via Coronation Road.

Contamination

26. Prior to commencing earthworks, a Contaminated Land Management Plan (CLMP) shall be prepared by a suitably qualified expert.

27. This CLMP will be based on a Stage 2 Detailed Site Investigation Report carried out in accordance with Contaminated Land Management Guidelines No. 1 — Reporting on Contaminated Sites in New Zealand (Ministry for the Environment October 2003).

28. The CLMP shall indicate whether work on contaminated land can be authorised as part of the designation or whether a separate resource consent (from the Auckland Regional Council) is required. If the work can be authorised as part of the designation, then the CLMP should incorporate conditions under which the work can be undertaken. Such conditions will be drawn up in conjunction with the Manukau City Council. The CLMP shall be provided to the Manukau City Council prior to commencement of earthworks.

Operational Noise

29. A Noise Management Plan (NMP) shall be submitted to the Manukau City Council for the Project or stage of the project. The NMP shall be prepared by a suitably qualified acoustic expert for the purposes of avoiding, mitigating or remedying, where practicable, any adverse noise effects from the operation of the Project.

30. The NMP shall include:

a. General measures (e.g. low noise road surface material and noise attenuation barriers), to achieve compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999);

b. Specific measures for any existing dwellings, where these are necessary in addition to the general measures under (a) above to achieve compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999), and

c. A table showing the predicted traffic noise levels generated by the operation of the Project for the year 2021, for all noise sensitive facilities to be protected by the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999) (residential buildings and teaching areas in educational facilities) taking into consideration the finally agreed height, length and location of all noise barriers and all other noise mitigation measures incorporated in the project design.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. A section specifically dealing with "before" and "after" noise monitoring to check for achievement of the design levels of the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999). This part of the plan shall describe methods and procedures for the measurement of ambient noise levels existing prior to construction, and of traffic noise levels within a period between 2 and 3 years following completion of construction of the Project, measured at representative sites and shall:

- i. Be based on Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999) and NZS6801:1991 "Measurement of Sound";
- ii. Outline methods used for the representative site selection of a minimum of at least four (4) sites and shall include site maps photographs detailing the measurement positions; and
- iii. Include a process for reporting of measurement results to Council within 30 days following the completion of both the "before" and "after" surveys and include comments on measurement conditions.

31. The location and design of noise attenuation barriers shall be in general accordance with the provisions of Alignment plans 1/69/82/5104 Sheets 2, 3 and 4 dated 05/06 but modified as agreed through the process outlined in Condition 46 below.

32. The NMP shall identify any existing dwellings for which specific measures are required in accordance with Condition 30.b. above. Those dwellings shall be referred to as 'affected dwelling(s)'.

33. Not less than three (3) months prior to the completion of construction of the Project, the Requiring Authority shall give written notice to the owner of any affected dwelling:

- a. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels; and
- b. Advising that the owner has six (6) months within which to decide whether or not to accept mitigation treatment to the dwelling.
- c. Once an agreement on mitigation is reached between the Requiring Authority and the owner, the mitigation shall be implemented in an accepted timeframe between the Requiring Authority and the owner.

34. The Requiring Authority shall advise the Manukau City Council of:

- a. All written notices served in accordance with Condition 33;
- b. Any responses received to those written notices; and
- c. Those affected dwellings in respect of which no response has been received.

35. Where specific measures are required under Condition 30.b. above for an affected dwelling, the Requiring Authority shall be deemed to have complied with Condition 30.b. where:

- a. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
- b. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six (6) months after the practical completion of the Project; or
- c. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six (6) months after written notice has been given in accordance with condition 33 above.

36. Subject to condition 35, all noise mitigation measures identified by the NMP shall be implemented prior to the completion of construction of the Project.

Operational Vibration

37. Vibration levels of the existing SH20 operations shall be measured at nominated critical locations, and submitted to the Council, prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

38. In circumstances where vibration generated by the passage of vehicles on the completed highway results in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

adverse effects on persons or property, which, in the reasonable opinion of the Manukau City Council, give rise to a breach of s17 Act, then these are to be measured and assessed in accordance with the provisions of Norwegian Standard NS 8176E.

Archaeological and Heritage

39. Detailed protocols for the management of archaeological and waahi tapu discoveries shall be developed in consultation with tangata whenua and New Zealand Historic Places Trust prior to construction.

40. Subject to condition 41, if any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust and the Manukau City Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the NZ Historic Places Trust is obtained.

41. Condition 40 shall not apply where the Requiring Authority holds all relevant approvals under the Historic Places Act 1993, apart from the requirement in the case of discovery of human remains to contact the New Zealand Police. Urban Design and Landscaping Mitigation

42. An integrated Urban Design and Landscape Mitigation Plan (UDLMP) shall be submitted to the Manukau City Council for the Project or relevant Project stage. This UDLMP shall be prepared by a suitably qualified person or persons, in consultation with the Manukau City Council, Auckland Regional Council and relevant tangata whenua and shall take into account the following:

- a. Transit New Zealand's "Guidelines for Highway Landscaping" (September 2002);
- b. Transit New Zealand's "Urban Design Implementation Principles" (2006).

43. The UDLMP shall have regard to the following principles:

- a. The importance of the southern approaches to the Mangere Bridge as a gateway to Manukau City;
- b. The existing coastal landscape values of the area;
- c. The potential of noise barriers and other structures as design elements;
- d. Support for a strong pedestrian and cycle experience;
- e. Measures to provide for safe passage of pedestrians, cyclists and mobility impaired users;
- f. Crime prevention through environmental design.

44. The UDLMP shall in particular provide for:

- a. The integration of the permanent works into the surrounding landscape;
- b. Mitigation of effects on properties in the vicinity of the alignment;
- c. Pedestrian and cycle linkages proposed in respect of the project, in particular that linking Mahunga Drive and the southern abutment of Old Mangere Bridge via Waterfront Road Reserve. These linkages shall
 - i. be provided in accordance with Austroads Part 14 Bicycles, with a minimum width of 3.0 metres plus clearances
 - ii. include an upgraded pedestrian/cycle facility along the southern embankment of the Old Mangere Bridge (Coronation Road) which physically separates the pedestrian/cycle facility from vehicular traffic, parking areas, turning areas and boat launching facilities. (Along the embankment, the pedestrian / cycle facility shall have a minimum width of 3.5 metres.)
- d. Integration, consistency and continuation of significant elements with recently established planting themes through the Western Ring Route, established desirable coastal vegetation, and the vegetative character of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Onehunga and Mangere Bridge townships;

e. Retention or relocation of existing trees where practicable; and

f. Replacement planting or mitigation for loss of protected or scheduled trees.

45. The UDLMP shall include the following:

a. An Urban Design Framework that depicts the overall urban design concept, the design intent, layout and mitigation proposals for key components and areas (or sectors) of the project, and provide a framework for the design, layout, landscape planting and streetscape measures;

b. Landscape and Urban Design Details — these shall include the following details:

i. Identification of vegetation to be retained;

ii. Proposed planting, including plant species, mixes, spacing/densities, sizes (at time of planting) and layout;

iii. Planting programme — the staging of planting in relation to the construction programme;

iv. Detailed specifications relating to (but not limited to) the following:

- Vegetation protection (for desirable vegetation to be retained);
- Weed control and clearance;
- Ground preparation;
- Mulching;
- Plant supply and planting;
- Maintenance regime (requirements and programme); and
- Performance standards.

v. Detailed design of streetscape elements such as

- Noise attenuation barriers (including their location within the motorway reserve);
- Road safety barriers;
- Retaining walls;
- The new pedestrian footbridge and other new pedestrian facilities.

45. The UDLMP shall include the following:

a. An Urban Design Framework that depicts the overall urban design concept, the design intent, layout and mitigation proposals for key components and areas (or sectors) of the project, and provide a framework for the design, layout, landscape planting and streetscape measures;

b. Landscape and Urban Design Details — these shall include the following details:

i. Identification of vegetation to be retained;

ii. Proposed planting, including plant species, mixes, spacing/densities, sizes (at time of planting) and layout;

iii. Planting programme — the staging of planting in relation to the construction programme;

iv. Detailed specifications relating to (but not limited to) the following:

- Vegetation protection (for desirable vegetation to be retained);
- Weed control and clearance;
- Ground preparation;
- Mulching;
- Plant supply and planting;
- Maintenance regime (requirements and programme); and
- Performance standards.

v. Detailed design of streetscape elements such as

- Noise attenuation barriers (including their location within the motorway reserve);
- Road safety barriers;
- Retaining walls;
- The new pedestrian footbridge and other new pedestrian facilities.

46. That portion of the UDLMP that deals with the design and placement of noise attenuation barriers shall be developed in consultation with persons who own or occupy property that adjoins those barriers (the neighbours).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

47. Prior to submission of the UDLMP to the Manukau City Council, the draft UDLMP shall be presented to the Manukau City Urban Design Panel for its comment, and that comment shall then be considered in finalising the UDLMP.

47A. The works as set out in the UDLMP shall be implemented as soon as practicable and works shall be completed no later than 12 months after the practical completion date of the Project. Waterfront Road Reserve Restoration Plan

48. The Requiring Authority shall prepare, in consultation with the Manukau City Council and the Auckland Regional Council, a Waterfront Road Reserve Restoration Framework (WRRRF) to outline how the reserve land occupied during construction will be reinstated on completion of construction. The WRRRF shall outline measures to mitigate the adverse effects the Project may have on local residents, and shall include, but not be limited to, the following:

- a. The proposed remediation of the coastal edge (particularly above mean high water springs) along the Waterfront Road Reserve, to provide an attractive interface (that may include a sea wall) that addresses erosion problems and removes construction debris and materials;
- b. Proposed landscaping in the Waterfront Road Reserve on completion of construction;
- c. The proposed pedestrian / cycle path from the Coronation Road end of Waterfront Road Reserve, under the southern end of the motorway bridge, to Mahunga Drive (refer also to Condition 44.c. for conditions relating to the pedestrian/cycleway along Coronation Road);
- d. Proposals for reuse of any construction buildings or hardstand, areas;
- e. Proposals for the provision of vehicle access through the park and parking;
- f. Consultation to be undertaken in preparation of the Waterfront Road Reserve Restoration Plan (WRRRP); and
- g. Timeframe to obtain any consents required and complete works as set out in the WRRRF.

49. The proposed WRRRF shall be submitted to the Manukau City Council at least 20 working days prior to the commencement of construction works in Waterfront Road Reserve to enable sufficient time for consideration by Council. Any subsequent significant amendments to the approved WRRRP shall be submitted to Manukau City Council for approval prior to implementation

49A. The Requiring Authority shall prepare, in consultation with the Manukau City Council and the Auckland Regional Council, a Waterfront Road Reserve Restoration Plan (WRRRP), which shall include further details of the mitigation measures set out in the WRRRF pursuant to condition 48 above. The proposed WRRRP shall be submitted to the Manukau City Council for approval at least six (6) months prior to the programmed completion date for Project construction works in Waterfront Road Reserve to enable sufficient time for consideration by Council.

50. Where the restoration works require coastal consents for works within the Coastal Marine Area, it shall be Transit's responsibility to obtain those consents on behalf of Manukau City Council.

51. The works as set out in the Waterfront Road Reserve Restoration Plan shall be implemented as soon as possible and works shall be completed no later than 12 months after the practical completion date of the Project.

Integration with Local Road Network

52. The Requiring Authority shall prepare a Network Integration Plan in consultation with the Manukau City Council to demonstrate how the Project integrates with the existing local road network and with future improvements planned by the Manukau City Council. The Network Integration Plan shall include details of physical works at the interface between the State highway and the local road network, and shall address such matters as lane configuration, traffic signal co-ordination, signage and provision for buses. The Network Integration Plan shall be submitted to the Manukau City Council for the Project or relevant Project stage.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lighting

53. Subject to the requisite safety standards, motorway lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, and to minimise encroachment of lighting standards into view shafts.

Network Utilities

54. Prior to submitting an outline plan of works (s176A of the Act), the Requiring Authority shall consult with Network Utility Operators to identify and record network utility operations and measures to be undertaken to minimise disruption to and maintain proper functioning of those operations. These may include (but are not limited to) measures in relation to the following:

- a. Access;
- b. Protection, relocation and / or reinstatement of network utility infrastructure;
- c. Safety;
- d. Earthworks management;
- e. Dust and vibration management.

The outline plan of works shall describe the proposed measures to minimise disruption to and maintain proper functioning of all affected network utility operations.

Air Quality Monitoring

55. An air quality monitoring station shall be established at a site comparable to the station located in the rear car park of the Te Puea Marae, Miro Road during 2006–2007.

56. The air quality monitoring station will monitor the following parameters for a period of six (6) months within the 24 month period prior to construction of the Project:

- a. Fine particulates (PM10) and oxides of nitrogen (NOx) in accordance with the specifications given in the National Environmental Standards, Air Quality, and
- b. Meteorological measurements of wind speed, wind direction and temperature.

57. The station will monitor the following parameters for a period of twelve (12) months after construction of the Project:

- a. Fine particulates (PM10) and oxides of nitrogen (NOx) in accordance with the specifications given in the National Environmental Standards, Air Quality, and
- b. Meteorological measurements of wind speed, wind direction and temperature.

58. Results of the monitoring in summary form, assessed against the National Environmental Standards, Air Quality and the Auckland Regional Council target values, shall be reported quarterly to the Manukau City Council.

6710 State Highway 20 - Vicinity of Manukau Harbour Crossing

Designation Number	6710
Requiring Authority	New Zealand Transport Agency
Location	Waterfront Road Reserve, Coronation Road, Rimu Road and Mahunga Drive, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 182A, Auckland Council District Plan (Manukau Section) 2002

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Description

Manukau Harbour Crossing.

Conditions

General

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority, being Transit New Zealand (Transit), the Notice of Requirement (as updated 28 August 2006) and supporting documents, as follows:
 - a. 'SH20 Manukau Harbour Crossing Project — Volume 1 Assessment of Environmental Effects and Attachments', prepared for Transit New Zealand by Opus Consultants Ltd, dated 19 May 2006 and annotated September 2006;
 - b. 'SH20 Manukau Harbour Crossing Project — Volume 2 Technical Appendices', prepared for Transit New Zealand by Opus Consultants Ltd, dated 19 May 2006 and annotated September 2006;
 - c. 'SH20 Manukau Harbour Crossing Project — Volume 3 Scheme Plans and Drawings', prepared for Transit New Zealand by Opus Consultants Ltd, dated 19 May 2006 and annotated September 2006; and other information provided to the Manukau City Council in response to requests for further information under Section 92 of the Resource Management Act 1991 (the Act) and at the hearing.
2. As soon as practicable, following completion of construction of the SH20 Manukau Harbour Crossing Project (the Project), the Requiring Authority shall give notice to the Manukau City Council in accordance with Section 182 of the Act for removal of those parts of the designation which are not required for the long term operation, maintenance and mitigation of effects of the State highway. Note that Condition 2 is specific to land no longer required for construction purposes once the Project is completed.
3. A liaison person shall be appointed by the Requiring Authority for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons arising from the Project.
4. The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Act.

Outline Plans of Works and Management Plans

5. Prior to the commencement of works, the Requiring Authority shall submit to the Manukau City Council the relevant Management Plans required under Conditions 10, 17, 22, 26, 29, 42 and 52 below. The Management Plans shall be submitted to the Manukau City Council as soon as reasonably practicable, allowing sufficient time for review by the Manukau City Council and discussion with the Requiring Authority.
6. Any Management Plans or Outline Plans of Works may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted in stages must clearly show integration with adjacent stages and interrelated activities.
7. If the Manukau City Council and the Requiring Authority agree on the content and terms of such Management Plans, that agreement shall be deemed to be a waiver in relation to that Plan or relevant part of that Plan pursuant to section 176A(2)(c) of the Act of the requirement for an Outline Plan of Works under section 176A. If the Manukau City Council and the Requiring Authority do not agree on the terms of such Plan or Plans, the relevant provisions of section 176A of the Act shall apply in respect of any part not agreed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. The works shall be undertaken in accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

9. Prior to lodging any outline plan of works or part of such a plan that contains details of measures that may affect public transport, Transit shall consult about the design details with relevant public transport operators, the Auckland Regional Transport Authority, the Manukau City Council and the Auckland City Council. Any such plan shall include a report on this consultation and measures that have been taken to meet any concerns raised.

Construction

10. At least 20 working days prior to the commencement of works on the Project or the relevant stage of the Project, the Requiring Authority shall prepare and submit to the Manukau City Council, a Construction Management Plan (CMP). The purpose of the CMP is to set out the management procedures and construction methods to be undertaken in order to avoid, remedy or mitigate potential adverse effects arising from construction activities.

11. The CMP shall be prepared in consultation with the Manukau City Council and shall include specific details relating to demolition, construction and management of all works associated with the Project, including:

- a. Details of the site or project manager and the construction liaison person identified in condition 3, including their contact details (phone, facsimile, postal address, email address);
- b. The location of large notice boards that clearly identify Transit and the project name, together with the name, telephone number, email address and address for service of the site or project manager and the construction liaison person;
- c. An outline construction programme of the works indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- d. The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at nights, on Sundays and during public holidays;
- e. Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- f. Location of workers offices and conveniences (eg portaloos);
- g. Procedures for controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- h. Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (March 1999);
- i. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works, potentially through the construction liaison person;
- j. Procedures to be followed to ensure that those working in the vicinity of identified heritage features are aware of the heritage values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- k. Means of ensuring the safety of the general public;
- l. Procedures for the construction liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- m. Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding residential streets and Coronation Road is restricted;
- n. The layout of the construction yard at Waterfront Road Reserve, including associated buildings, fencing and site access, which shall, as far as practicable, incorporate the following:
 - i. Retention of the existing public parking area along Coronation Road (which shall not be used for the parking of machinery and vehicles, including workers' vehicles, associated with the project);
 - ii. The main vehicle access across the construction yard to be located as far as practicable from

The Proposed Auckland Unitary Plan (notified 30 September 2013)

residential dwellings on Waterfront Road and be accessed from Coronation Road;

iii. Construction of temporary boundary / security fences to be undertaken in a manner which minimises impact on existing trees located along Waterfront Road and maintains a grass berm along the road edge;

iv. Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings;

v. Acoustic fences required to achieve compliance with NZS6803:1999 Acoustics — Construction Noise to be located as close as practicable to the noise sources or otherwise in the most effective positions;

vi. Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on residential dwellings on Waterfront Road; and

o. All temporary boundary/security fences shall be maintained in good order, with any graffiti removed as soon as possible.

12. A record of any complaints received in relation to the construction activities and the responses made shall be provided on a three monthly basis by the 10th day of the following month to the Council.

13. The CMP shall be implemented and maintained throughout the entire construction period

14. Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the designation at all times, and shall not be stored or parked along Coronation Road and Waterfront Road.

15. All storage of materials and equipment associated with the construction works shall take place within the boundaries of the designation.

16. Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage at no cost to the Manukau City Council.

Construction Noise and Vibration

17. The CMP shall include a Construction Noise Management Plan (CNMP) and a Construction Vibration Management Plan (CVMP) for the Project or relevant Project stage, prepared by a suitably qualified expert.

18. The CNMP and the CVMP shall be implemented and maintained throughout the entire demolition and construction periods.

19. The CNMP shall include specific details relating to the control of noise associated with all Project works. It shall as far as practicable be formulated to achieve compliance with the requirements of the NZS6803:1999 Acoustics — Construction Noise. The CNMP shall refer to noise management measures set out in Annexure E of NZS6803:1999, and shall, as a minimum, address the following aspects:

a. Demolition and construction sequence;

b. Noise sources, including machinery and equipment to be used;

c. Hours of operation, including times and days when noisy construction work would occur;

d. Predicted construction noise levels;

e. The specification of noise mitigation measures;

f. Development of alternative strategies where compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes, and

g. Methods for monitoring and reporting on construction noise.

20. As far as practicable, permanent acoustic barriers that are required by the Noise Management Plan (Condition 30(a) of these conditions) shall be erected prior to road construction, provided each barrier is required at that time to meet the requirements of the CNMP (Condition 19(e) of these conditions).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

21. The CVMP shall include specific details relating to the control of vibration associated with all Project works. It shall as far as practicable be formulated to achieve compliance with the vibration standards of the German Standard DIN 4150, and shall address the following aspects:

- a. Vibration monitoring measures;
- b. Existing vibration levels;
- c. Possible mitigation measures;
- d. Complaint response;
- e. Reporting procedures;
- f. Notification and information for the community of the proposed works;
- g. Where appropriate vibration testing of construction processes (e.g. piling) to confirm that the vibration limits will not be exceeded;
- h. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- i. Operational times;
- j. Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works.

Construction Traffic

22. The CMP shall include a Traffic Management Plan (TMP), for the Project or the relevant Project stage, which shall be prepared by a suitably qualified person. In developing the TMP the Requiring Authority shall:

- a. use advanced traffic modelling tools to better understand the effects of construction of the Project on the affected road network. These tools will be developed and calibrated in conjunction with the Manukau City Council and have the ability to simulate lane restrictions and road closures, and
- b. as far as practicable, undertake measures to avoid road closures and also the restriction of vehicle and pedestrian movements.

23. The TMP shall describe the measures that will be undertaken to address, as far as practicable, the following:

- a. Methods of avoiding, remedying or mitigating the local and network wide effects of construction of the Project. In particular, the TMP shall describe:

- i. Traffic management measures to address and maintain, where practicable traffic capacity, including bus services, at traffic peak hours during weekdays and weekends in Mahunga Drive, Rimu Road and Coronation Road.
- ii. Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- iii. Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/overbridge) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- iv. Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks);
- v. The numbers, frequencies, routes and timing of construction traffic movements;
- vi. Monitoring to measure the impact of traffic, in terms of traffic speeds and volumes on those roads described in 23(a)(i); and
- vii. Methods to manage the effects of traffic during construction, including the requirement to detour or divert traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area.

b. Traffic management measures during construction, to be developed in consultation with the Auckland Regional Transport Authority (ARTA), Bus and Coach Association and the Manukau City Council, to address and maintain, where practicable, traffic capacity at peak hours to provide for passenger transport services on the road network;

c. Consultation with the Manukau City Council with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation;

d. Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works to provide alternative access

The Proposed Auckland Unitary Plan (notified 30 September 2013)

arrangements to an equivalent standard as that removed, as far as practicable, and in consultation with the Manukau City Council and the affected landowner;

- e. Details on the maintenance of pedestrian access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable. Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours;
- f. Consistency with Transit New Zealand 'Code of Practice for Temporary Traffic Management' (COPTTM);
- g. Recognition of the need for the Manukau City Council to access and maintain its roading network during the construction phase of the Project, and
- h. Recognition of the need to coordinate and to consult directly with the proponents of any major construction occurring concurrently with, and in the vicinity of, the Project during construction.

24. The Requiring Authority shall ensure that provision for continued public walking and cycling passage across Manukau Harbour generally between Coronation Road, Mangere Bridge and Onehunga Harbour Road, Onehunga, in the general vicinity of the Old Mangere Bridge, is kept and maintained.

25. Vehicle access to the construction site and site office areas in Waterfront Road Reserve shall be via Coronation Road.

Contamination

26. Prior to commencing earthworks, a Contaminated Land Management Plan (CLMP) shall be prepared by a suitably qualified expert.

27. This CLMP will be based on a Stage 2 Detailed Site Investigation Report carried out in accordance with Contaminated Land Management Guidelines No. 1 — Reporting on Contaminated Sites in New Zealand (Ministry for the Environment October 2003).

28. The CLMP shall indicate whether work on contaminated land can be authorised as part of the designation or whether a separate resource consent (from the Auckland Regional Council) is required. If the work can be authorised as part of the designation, then the CLMP should incorporate conditions under which the work can be undertaken. Such conditions will be drawn up in conjunction with the Manukau City Council. The CLMP shall be provided to the Manukau City Council prior to commencement of earthworks.

Operational Noise

29. A Noise Management Plan (NMP) shall be submitted to the Manukau City Council for the Project or stage of the project. The NMP shall be prepared by a suitably qualified acoustic expert for the purposes of avoiding, mitigating or remedying, where practicable, any adverse noise effects from the operation of the Project.

30. The NMP shall include:

- a. General measures (e.g. low noise road surface material and noise attenuation barriers), to achieve compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999);
- b. Specific measures for any existing dwellings, where these are necessary in addition to the general measures under (a) above to achieve compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999), and
- c. A table showing the predicted traffic noise levels generated by the operation of the Project for the year 2021, for all noise sensitive facilities to be protected by the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999) (residential buildings and teaching areas in educational facilities) taking into consideration the finally agreed height, length and location of all noise barriers and all other noise mitigation measures incorporated in the project design.
- d. A section specifically dealing with "before" and "after" noise monitoring to check for achievement of the design levels of the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999). This part of the plan shall describe methods and procedures for the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

measurement of ambient noise levels existing prior to construction, and of traffic noise levels within a period between 2 and 3 years following completion of construction of the Project, measured at representative sites and shall:

- i. Be based on Transit New Zealand 'Guidelines for the Management of Road Traffic Noise — State Highway Improvements' (December 1999) and NZS6801:1991 "Measurement of Sound";
- ii. Outline methods used for the representative site selection of a minimum of at least four (4) sites and shall include site maps photographs detailing the measurement positions; and
- iii. Include a process for reporting of measurement results to Council within 30 days following the completion of both the "before" and "after" surveys and include comments on measurement conditions.

31. The location and design of noise attenuation barriers shall be in general accordance with the provisions of Alignment plans 1/69/82/5104 Sheets 2, 3 and 4 dated 05/06 but modified as agreed through the process outlined in Condition 46 below.

32. The NMP shall identify any existing dwellings for which specific measures are required in accordance with Condition 30(b) above. Those dwellings shall be referred to as 'affected dwelling(s)'.

33. Not less than three (3) months prior to the completion of construction of the Project, the Requiring Authority shall give written notice to the owner of any affected dwelling:

- a. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels; and
- b. Advising that the owner has six (6) months within which to decide whether or not to accept mitigation treatment to the dwelling.
- c. Once an agreement on mitigation is reached between the Requiring Authority and the owner, the mitigation shall be implemented in an accepted timeframe between the Requiring Authority and the owner.

34. The Requiring Authority shall advise the Manukau City Council of:

- a. All written notices served in accordance with Condition 33;
- b. Any responses received to those written notices; and
- c. Those affected dwellings in respect of which no response has been received.

35. Where specific measures are required under Condition 30(b) above for an affected dwelling, the Requiring Authority shall be deemed to have complied with Condition 30(b) where:

- a. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
- b. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six (6) months after the practical completion of the Project; or
- c. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six (6) months after written notice has been given in accordance with condition 33 above.

36. Subject to condition 35, all noise mitigation measures identified by the NMP shall be implemented prior to the completion of construction of the Project.

Operational Vibration

37. Vibration levels of the existing SH20 operations shall be measured at nominated critical locations, and submitted to the Council, prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

38. In circumstances where vibration generated by the passage of vehicles on the completed highway results in adverse effects on persons or property, which, in the reasonable opinion of the Manukau City Council, give rise to a breach of s17 Act, then these are to be measured and assessed in accordance with the provisions of Norwegian Standard NS 8176E.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Archaeological and Heritage

39. Detailed protocols for the management of archaeological and waahi tapu discoveries shall be developed in consultation with tangata whenua and New Zealand Historic Places Trust prior to construction.

40. Subject to condition 41, if any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust and the Manukau City Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the NZ Historic Places Trust is obtained.

41. Condition 40 shall not apply where the Requiring Authority holds all relevant approvals under the Historic Places Act 1993, apart from the requirement in the case of discovery of human remains to contact the New Zealand Police. Urban Design and Landscaping Mitigation

42. An integrated Urban Design and Landscape Mitigation Plan (UDLMP) shall be submitted to the Manukau City Council for the Project or relevant Project stage. This UDLMP shall be prepared by a suitably qualified person or persons, in consultation with the Manukau City Council, Auckland Regional Council and relevant tangata whenua and shall take into account the following:

- a. Transit New Zealand's "Guidelines for Highway Landscaping" (September 2002);
- b. Transit New Zealand's "Urban Design Implementation Principles" (2006).

43. The UDLMP shall have regard to the following principles:

- a. The importance of the southern approaches to the Mangere Bridge as a gateway to Manukau City;
- b. The existing coastal landscape values of the area;
- c. The potential of noise barriers and other structures as design elements;
- d. Support for a strong pedestrian and cycle experience;
- e. Measures to provide for safe passage of pedestrians, cyclists and mobility impaired users;
- f. Crime prevention through environmental design.

44. The UDLMP shall in particular provide for:

- a. The integration of the permanent works into the surrounding landscape;
- b. Mitigation of effects on properties in the vicinity of the alignment;
- c. Pedestrian and cycle linkages proposed in respect of the project, in particular that linking Mahunga Drive and the southern abutment of Old Mangere Bridge via Waterfront Road Reserve. These linkages shall
 - i. be provided in accordance with Austroads Part 14 Bicycles, with a minimum width of 3.0 metres plus clearances
 - ii. include an upgraded pedestrian/cycle facility along the southern embankment of the Old Mangere Bridge (Coronation Road) which physically separates the pedestrian/cycle facility from vehicular traffic, parking areas, turning areas and boat launching facilities. (Along the embankment, the pedestrian / cycle facility shall have a minimum width of 3.5 metres.)
- d. Integration, consistency and continuation of significant elements with recently established planting themes through the Western Ring Route, established desirable coastal vegetation, and the vegetative character of Onehunga and Mangere Bridge townships;
- e. Retention or relocation of existing trees where practicable; and
- f. Replacement planting or mitigation for loss of protected or scheduled trees.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

45. The UDLMP shall include the following:

- a. An Urban Design Framework that depicts the overall urban design concept, the design intent, layout and mitigation proposals for key components and areas (or sectors) of the project, and provide a framework for the design, layout, landscape planting and streetscape measures;
- b. Landscape and Urban Design Details — these shall include the following details:
 - i. Identification of vegetation to be retained;
 - ii. Proposed planting, including plant species, mixes, spacing/densities, sizes (at time of planting) and layout;
 - iii. Planting programme — the staging of planting in relation to the construction programme;
 - iv. Detailed specifications relating to (but not limited to) the following:
 - Vegetation protection (for desirable vegetation to be retained);
 - Weed control and clearance;
 - Ground preparation;
 - Mulching;
 - Plant supply and planting;
 - Maintenance regime (requirements and programme); and
 - Performance standards.
 - v. Detailed design of streetscape elements such as
 - Noise attenuation barriers (including their location within the motorway reserve);
 - Road safety barriers;
 - Retaining walls;
 - The new pedestrian footbridge and other new pedestrian facilities.

45. The UDLMP shall include the following:

- a. An Urban Design Framework that depicts the overall urban design concept, the design intent, layout and mitigation proposals for key components and areas (or sectors) of the project, and provide a framework for the design, layout, landscape planting and streetscape measures;
- b. Landscape and Urban Design Details — these shall include the following details:
 - i. Identification of vegetation to be retained;
 - ii. Proposed planting, including plant species, mixes, spacing/densities, sizes (at time of planting) and layout;
 - iii. Planting programme — the staging of planting in relation to the construction programme;
 - iv. Detailed specifications relating to (but not limited to) the following:
 - Vegetation protection (for desirable vegetation to be retained);
 - Weed control and clearance;
 - Ground preparation;
 - Mulching;
 - Plant supply and planting;
 - Maintenance regime (requirements and programme); and
 - Performance standards.
 - v. Detailed design of streetscape elements such as
 - Noise attenuation barriers (including their location within the motorway reserve);
 - Road safety barriers;
 - Retaining walls;
 - The new pedestrian footbridge and other new pedestrian facilities.

46. That portion of the UDLMP that deals with the design and placement of noise attenuation barriers shall be developed in consultation with persons who own or occupy property that adjoins those barriers (the neighbours).

47. Prior to submission of the UDLMP to the Manukau City Council, the draft UDLMP shall be presented to the Manukau City Urban Design Panel for its comment, and that comment shall then be considered in finalising the UDLMP.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

47A. The works as set out in the UDLMP shall be implemented as soon as practicable and works shall be completed no later than 12 months after the practical completion date of the Project. Waterfront Road Reserve Restoration Plan

48. The Requiring Authority shall prepare, in consultation with the Manukau City Council and the Auckland Regional Council, a Waterfront Road Reserve Restoration Framework (WRRRF) to outline how the reserve land occupied during construction will be reinstated on completion of construction. The WRRRF shall outline measures to mitigate the adverse effects the Project may have on local residents, and shall include, but not be limited to, the following:

- a. The proposed remediation of the coastal edge (particularly above mean high water springs) along the Waterfront Road Reserve, to provide an attractive interface (that may include a sea wall) that addresses erosion problems and removes construction debris and materials;
- b. Proposed landscaping in the Waterfront Road Reserve on completion of construction;
- c. The proposed pedestrian / cycle path from the Coronation Road end of Waterfront Road Reserve, under the southern end of the motorway bridge, to Mahunga Drive (refer also to Condition 44(c) for conditions relating to the pedestrian/cycleway along Coronation Road);
- d. Proposals for reuse of any construction buildings or hardstand, areas;
- e. Proposals for the provision of vehicle access through the park and parking;
- f. Consultation to be undertaken in preparation of the Waterfront Road Reserve Restoration Plan (WRRRP); and
- g. Timeframe to obtain any consents required and complete works as set out in the WRRRF.

49. The proposed WRRRF shall be submitted to the Manukau City Council at least 20 working days prior to the commencement of construction works in Waterfront Road Reserve to enable sufficient time for consideration by Council. Any subsequent significant amendments to the approved WRRRP shall be submitted to Manukau City Council for approval prior to implementation

49A. The Requiring Authority shall prepare, in consultation with the Manukau City Council and the Auckland Regional Council, a Waterfront Road Reserve Restoration Plan (WRRRP), which shall include further details of the mitigation measures set out in the WRRRF pursuant to condition 48 above. The proposed WRRRP shall be submitted to the Manukau City Council for approval at least six (6) months prior to the programmed completion date for Project construction works in Waterfront Road Reserve to enable sufficient time for consideration by Council.

50. Where the restoration works require coastal consents for works within the Coastal Marine Area, it shall be Transit's responsibility to obtain those consents on behalf of Manukau City Council.

51. The works as set out in the Waterfront Road Reserve Restoration Plan shall be implemented as soon as possible and works shall be completed no later than 12 months after the practical completion date of the Project.

Integration with Local Road Network

52. The Requiring Authority shall prepare a Network Integration Plan in consultation with the Manukau City Council to demonstrate how the Project integrates with the existing local road network and with future improvements planned by the Manukau City Council. The Network Integration Plan shall include details of physical works at the interface between the State highway and the local road network, and shall address such matters as lane configuration, traffic signal co-ordination, signage and provision for buses. The Network Integration Plan shall be submitted to the Manukau City Council for the Project or relevant Project stage.

Lighting

53. Subject to the requisite safety standards, motorway lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, and to minimise encroachment of lighting standards into view shafts.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Network Utilities

54. Prior to submitting an outline plan of works (s176A of the Act), the Requiring Authority shall consult with Network Utility Operators to identify and record network utility operations and measures to be undertaken to minimise disruption to and maintain proper functioning of those operations. These may include (but are not limited to) measures in relation to the following:

- a. Access;
- b. Protection, relocation and / or reinstatement of network utility infrastructure;
- c. Safety;
- d. Earthworks management;
- e. Dust and vibration management.

The outline plan of works shall describe the proposed measures to minimise disruption to and maintain proper functioning of all affected network utility operations.

Air Quality Monitoring

55. An air quality monitoring station shall be established at a site comparable to the station located in the rear car park of the Te Puea Marae, Miro Road during 2006–2007.

56. The air quality monitoring station will monitor the following parameters for a period of six (6) months within the 24 month period prior to construction of the Project:

- a. Fine particulates (PM10) and oxides of nitrogen (NOx) in accordance with the specifications given in the National Environmental Standards, Air Quality, and
- b. Meteorological measurements of wind speed, wind direction and temperature.

57. The station will monitor the following parameters for a period of twelve (12) months after construction of the Project:

- a. Fine particulates (PM10) and oxides of nitrogen (NOx) in accordance with the specifications given in the National Environmental Standards, Air Quality, and
- b. Meteorological measurements of wind speed, wind direction and temperature.

58. Results of the monitoring in summary form, assessed against the National Environmental Standards, Air Quality and the Auckland Regional Council target values, shall be reported quarterly to the Manukau City Council.

6712 State Highway 20A - Airport Motorway

Designation Number	6712
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20A from Bader Drive to south of Kirkbride Road, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 184, Auckland Council District Plan (Manukau Section 2002)
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Airport Motorway (State Highway 20A).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

General

1. The works shall be subject to the general outline plan of works procedure as provided for in section 176A of the Resource Management Act 1991. If not already incorporated into the designation or otherwise waived by the Council, the outline plan of works shall show construction design details, in particular where the works impact on Council services, roads and intersections. The services plan shall include details of all underground utility services, stormwater reticulation, street lighting, traffic signalisation, and access to all properties directly affected by the designation.
2. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works.
3. At all times, reasonable access shall be maintained from the roading network to private properties not directly affected by the construction and operation works.
4. During and following the construction period, safety barriers and security fencing shall be provided to ensure neighbouring site safety and security fencing to a standard at least as currently provided on the property boundary.
5. A liaison person shall be appointed by the Requiring Authority for the duration of the construction period to be the main and readily accessible point of contact for persons affected by construction work. The Requiring Authority shall advise the Manager, Resource Consents and Compliance of the liaison person's name and contact details. This person shall be reasonably available for on-going consultation on all matters of concern arising during the construction period. The Requiring Authority's liaison person is to maintain adequate site records which shall include, but not be limited to, machinery use, working conditions, weather, any complaints received and measures taken to remedy or minimise the factors causing the complaints. These records are to be made available upon request to the Council's Resource Compliance Officer and/or District Plan Enforcement Officer.

Construction Traffic Management Plan

6. The New Zealand Transport Agency (NZTA) shall submit to the Council with the outline plan of works application a Construction Traffic Management Plan based on its final design and staging for the project. The Construction Traffic Management Plan shall be provided in consultation with the Council and shall:
 - a. Demonstrate how the impact on the local and motorway network will be minimised during the construction period;
 - b. Incorporate NZTA's Code of Practice for Temporary Traffic Management and shall make provision for the efficient movement of trucks and machinery to and from the site works, the staging of works, the standards of any temporary works, and the impact of the works on the local network; and
 - c. Address methods of mitigating the local and network-wide effects of both the construction of individual elements of the project, such as the diamond interchange, and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction.

Landscape Management Plan

7. A Landscape Management Plan prepared by a suitably qualified landscape architect appointed by NZTA shall be provided in consultation with and submitted to the Council with the outline plan of works application. The Landscape Management Plan shall be subsequently implemented no later than the first planting season immediately following completion of construction, and maintained thereafter to the satisfaction of the Manager, Resource

Consents and Compliance.

8. The Landscape Management Plan shall include the strategic planted bed located on the south eastern corner

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of State Highway 20A and Kirkbride Road at 237 Kirkbride Road (House Park) that shall be retained where practicable or relocated to the satisfaction of the Manager, Parks, at no cost to the Council.

Archaeological and Heritage Mitigation Conditions

9. If any traditional sites, taonga, or other archaeological sites are exposed during site works then the following procedures shall apply:
- a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched;
 - c. The site supervisor shall notify representatives of local iwi, the New Zealand Historic Places Trust, the Manukau City Council, and in the case of human remains, the Police. This notification includes such persons being given a reasonable time to record and recover archaeological features discovered, before work may recommence on the site;
 - d. Any newly discovered archaeological site shall be screened by a fence at least 1.0m in height until any necessary authority required by the New Zealand Historic Places Trust is obtained. The fencing shall be supervised by a suitably qualified archaeologist to determine the appropriate location for fencing. No construction material or equipment shall be stored within the fenced area;
 - e. Any geological discoveries shall be recorded and, where practicable, damage to those features minimised. Records of any such geological discoveries shall be provided to the Auckland Regional Council and the Manukau City Council for information and future reference; and
 - f. The requiring authority shall ensure that conditions of the authority received from the New Zealand Historical Places Trust are complied with.

Ecological Impact Management

10. Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.
11. Prior to any disturbance or removal of protected trees in excess of six metres in height, the NZTA shall provide a report to the Council from a registered arborist of the New Zealand Arboricultural Association in respect to the affected trees and the proposed mitigation works. Mitigation works could include avoiding the tree (if practicable), relocation, or removal and/or replacement. Where trees are to be retained and where practicable, the trees shall be fenced no closer than the dripline with a 1.0m high fence. No construction equipment or construction material shall be stored within the fenced off area for the duration of the works. Where roots of such trees need to be cut, they shall be cut and treated according to recognised arboricultural practice after a report has been presented to the Manager, Resource Consents and Compliance as required above.
12. Restoration measures including grassing and other planting for slope stability shall be carried out as soon as practicable by the NZTA, together with landscape planting, using locally sourced native species where available.

Construction Noise Mitigation Condition

13. That any noise from construction work (as defined in Chapter 18 of the Manukau Operative District Plan) emanating from the site shall comply with Rule 5.18.3.6 of the Manukau Operative District Plan 2002 and the New Zealand Standard for Construction Noise (NZS 6803:1999 Acoustics - Construction Noise) or any subsequent revisions.

Operational Noise

14. That in respect of noise associated with the operation of the alteration of designation, a detailed Noise Management Plan shall be prepared by a suitably qualified noise consultant in consultation with the Manager, Resource Consents and Compliance, demonstrating compliance with the NZTA (New Zealand Transport Agency) "Guidelines for the Management of Road Traffic Noise - State Highway Improvements" (December 1999). The Noise Management Plan shall be submitted to the Council with the outline plan of works application and take into consideration adjacent and/or abutting sites including the Mangere Central Primary School

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and Business 5 Zone.

Construction

15. All works on Council roads shall be in accordance with the current Manukau City Council Engineering Quality and MANARC standards.

16. All works shall be carried out in accordance with an approved Health and Safety Control Programme.

17. All necessary and practicable steps shall be taken to avoid damage to other utility services, the roading network, or private property.

18. Adequate provision shall be made for the protection and/or redirection of the existing water supply services located within the following areas, to the satisfaction of the Manager, Resource Consents & Compliance, in conjunction with any future Outline Plan of Works.

a. Area 5 - Existing 300mm Asbestos Cement water supply line (constructed 1978).

b. Area 7 - Existing 200mm PVC water supply line (constructed 2003).

c. Area 8 - Existing 250mm Asbestos Cement water supply line (constructed 1960).

This shall include the submission of engineering design plans, incorporating the protection and/or redirection of these services, in accordance with the Engineering Performance Standards of Manukau City Council's District Plan to Manukau Water for specific approval prior to commencement of works on site.

19. Adequate provision shall be made for the disposal of stormwater from the additional impermeable area on State Highway 20A land. In this regard, engineering design plans in accordance with the Engineering Quality Standards of Manukau City Council's District Plan shall be provided in consultation with and submitted to the Manager, Stormwater Infrastructure prior to commencement of works on site.

Advice Notes:

a. The purpose is to identify any adverse effect and to ensure that the proposed works will include measures to avoid these adverse effects.

b. The engineering design should incorporate water quality measures to the standard required by Auckland Regional Council to adequately treat road runoff.

20. All necessary precautions shall be taken to protect the public from any open trenches and all other hazards associated with the works.

21. All reinstatement within the Council road reserve shall be carried out in accordance with the Council's "Code of Practice for Working in the Road".

22. The land modification works proposed shall be undertaken in a manner which ensures that the land within the above development and the land on adjoining properties remain stable at all times. In this regard:

a. The required retaining walls and/or any temporary stabilising works required shall be constructed in a timely manner under engineering design and supervision.

b. A geotechnical certification is to be submitted to the Council to confirm the suitability of the completed works.

23. Control measures shall be in place to ensure that any trucks do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.

24. All earthworks on the site shall be undertaken in a manner so as to minimise 'dust' or 'soil erosion/siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

25. Any surplus excavated soil shall be taken to an approved fill site and disposed of in accordance with the relevant District Plan requirements.

26. Should any significant vibration need to be generated such as during piling works for example, a Vibration Management Plan shall be submitted to the Manager, Resource Consents and Compliance, Manukau City Council, prior to commencement of the works. This Mitigation Plan shall include details of how as far as practicable the works will comply with the requirements of the German Standard DIN4150 "Structural Vibration in Buildings - Effects on Structures" during construction.

27. During construction, the generation of dust shall be managed in such as way it does not create a nuisance beyond the boundary of the works. A nuisance will be deemed to have occurred if:

- a. There is visible evidence of suspended solids/particulate matter in the air beyond the site boundary; and/or
- b. There is visible evidence of deposited particulate matter traceable from a dust source, settling on the ground, building or structure on an adjoining site.

28. All private services affected by the works, shall be reinstated at no cost to the affected property owner.

Attachments

6713 State Highway 20A - George Bolt Memorial Drive

Designation Number	6713
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20A (George Bolt Memorial Drive) from Kirkbride Road to Auckland International Airport, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 185, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

George Bolt Memorial Drive.

The section of land covered by Designation 185 which is located within Designation 231 is subject to Designation 231 as well as Designation 185.

Conditions

General

1. The works shall be subject to the general outline plan of works procedure as provided for in section 176A of the Resource Management Act 1991. If not already incorporated into the designation or otherwise waived by the Council, the outline plan of works shall show construction design details, in particular where the works impact on Council services, roads and intersections. The services plan shall include details of all underground utility services, stormwater reticulation, street lighting, traffic signalisation, and access to all properties directly affected by the designation.

2. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. At all times, reasonable access shall be maintained from the roading network to private properties not directly affected by the construction and operation works.

4. During and following the construction period, safety barriers and security fencing shall be provided to ensure neighbouring site safety and security fencing to a standard at least as currently provided on the property boundary.

5. A liaison person shall be appointed by the Requiring Authority for the duration of the construction period to be the main and readily accessible point of contact for persons affected by construction work. The Requiring Authority shall advise the Manager, Resource Consents and Compliance of the liaison person's name and contact details. This person shall be reasonably available for on-going consultation on all matters of concern arising during the construction period. The Requiring Authority's liaison person is to maintain adequate site records which shall include, but not be limited to, machinery use, working conditions, weather, any complaints received and measures taken to remedy or minimise the factors causing the complaints. These records are to be made available upon request to the Council's Resource Compliance Officer and/or District Plan Enforcement Officer.

Construction Traffic Management Plan

6. The New Zealand Transport Agency (NZTA) shall submit to the Council with the outline plan of works application a Construction Traffic Management Plan based on its final design and staging for the project. The Construction Traffic Management Plan shall be provided in consultation with the Council and shall:

- a. Demonstrate how the impact on the local and motorway network will be minimised during the construction period;
- b. Incorporate NZTA's Code of Practice for Temporary Traffic Management and shall make provision for the efficient movement of trucks and machinery to and from the site works, the staging of works, the standards of any temporary works, and the impact of the works on the local network; and
- c. Address methods of mitigating the local and network-wide effects of both the construction of individual elements of the project, such as the diamond interchange, and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction.

Landscape Management Plan

7. A Landscape Management Plan prepared by a suitably qualified landscape architect appointed by NZTA shall be provided in consultation with and submitted to the Council with the outline plan of works application. The Landscape Management Plan shall be subsequently implemented no later than the first planting season immediately following completion of construction, and maintained thereafter to the satisfaction of the Manager, Resource

Consents and Compliance.

8. The Landscape Management Plan shall include the strategic planted bed located on the south eastern corner of State Highway 20A and Kirkbride Road at 237 Kirkbride Road (House Park) that shall be retained where practicable or relocated to the satisfaction of the Manager, Parks, at no cost to the Council.

Archaeological and Heritage Mitigation Conditions

9. If any traditional sites, taonga, or other archaeological sites are exposed during site works then the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been exposed shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched;
- c. The site supervisor shall notify representatives of local iwi, the New Zealand Historic Places Trust, the Manukau City Council, and in the case of human remains, the Police. This notification includes such persons being given a reasonable time to record and recover archaeological features discovered, before work may recommence on the site;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- d. Any newly discovered archaeological site shall be screened by a fence at least 1.0m in height until any necessary authority required by the New Zealand Historic Places Trust is obtained. The fencing shall be supervised by a suitably qualified archaeologist to determine the appropriate location for fencing. No construction material or equipment shall be stored within the fenced area;
- e. Any geological discoveries shall be recorded and, where practicable, damage to those features minimised. Records of any such geological discoveries shall be provided to the Auckland Regional Council and the Manukau City Council for information and future reference; and
- f. The requiring authority shall ensure that conditions of the authority received from the New Zealand Historical Places Trust are complied with.

Ecological Impact Management

10. Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

11. Prior to any disturbance or removal of protected trees in excess of six metres in height, the NZTA shall provide a report to the Council from a registered arborist of the New Zealand Arboricultural Association in respect to the affected trees and the proposed mitigation works. Mitigation works could include avoiding the tree (if practicable), relocation, or removal and/or replacement. Where trees are to be retained and where practicable, the trees shall be fenced no closer than the dripline with a 1.0m high fence. No construction equipment or construction material shall be stored within the fenced off area for the duration of the works. Where roots of such trees need to be cut, they shall be cut and treated according to recognised arboricultural practice after a report has been presented to the Manager, Resource Consents and Compliance as required above.

12. Restoration measures including grassing and other planting for slope stability shall be carried out as soon as practicable by the NZTA, together with landscape planting, using locally sourced native species where available.

Construction Noise Mitigation

13. That any noise from construction work (as defined in Chapter 18 of the Manukau Operative District Plan) emanating from the site shall comply with Rule 5.18.3.6 of the Manukau Operative District Plan 2002 and the New Zealand Standard for Construction Noise (NZS 6803:1999 Acoustics - Construction Noise) or any subsequent revisions.

Operational Noise

14. That in respect of noise associated with the operation of the alteration of designation, a detailed Noise Management Plan shall be prepared by a suitably qualified noise consultant in consultation with the Manager, Resource Consents and Compliance, demonstrating compliance with the NZTA (New Zealand Transport Agency) "Guidelines for the Management of Road Traffic Noise - State Highway Improvements" (December 1999). The Noise Management Plan shall be submitted to the Council with the outline plan of works application and take into consideration adjacent and/or abutting sites including the Mangere Central Primary School and Business 5 Zone.

Construction

15. All works on Council roads shall be in accordance with the current Manukau City Council Engineering Quality and MANARC standards.

16. All works shall be carried out in accordance with an approved Health and Safety Control Programme.

17. All necessary and practicable steps shall be taken to avoid damage to other utility services, the roading network, or private property.

18. Adequate provision shall be made for the protection and/or redirection of the existing water supply services located within the following areas, to the satisfaction of the Manager, Resource Consents & Compliance, in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

conjunction with any future Outline Plan of Works.

- a. Area 5 - Existing 300mm Asbestos Cement water supply line (constructed 1978).
- b. Area 7 - Existing 200mm PVC water supply line (constructed 2003).
- c. Area 8 - Existing 250mm Asbestos Cement water supply line (constructed 1960).

This shall include the submission of engineering design plans, incorporating the protection and/or redirection of these services, in accordance with the Engineering Performance Standards of Manukau City Council's District Plan to Manukau Water for specific approval prior to commencement of works on site.

19. Adequate provision shall be made for the disposal of stormwater from the additional impermeable area on State Highway 20A land. In this regard, engineering design plans in accordance with the Engineering Quality Standards of Manukau City Council's District Plan shall be provided in consultation with and submitted to the Manager, Stormwater Infrastructure prior to commencement of works on site.

Advice Notes:

- a. The purpose is to identify any adverse effect and to ensure that the proposed works will include measures to avoid these adverse effects.
- b. The engineering design should incorporate water quality measures to the standard required by Auckland Regional Council to adequately treat road runoff.

20. All necessary precautions shall be taken to protect the public from any open trenches and all other hazards associated with the works.

21. All reinstatement within the Council road reserve shall be carried out in accordance with the Council's "Code of Practice for Working in the Road".

22. The land modification works proposed shall be undertaken in a manner which ensures that the land within the above development and the land on adjoining properties remain stable at all times. In this regard:

- a. The required retaining walls and/or any temporary stabilising works required shall be constructed in a timely manner under engineering design and supervision.
- b. A geotechnical certification is to be submitted to the Council to confirm the suitability of the completed works.

23. Control measures shall be in place to ensure that any trucks do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.

24. All earthworks on the site shall be undertaken in a manner so as to minimise 'dust' or 'soil erosion/siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

25. Any surplus excavated soil shall be taken to an approved fill site and disposed of in accordance with the relevant District Plan requirements.

26. Should any significant vibration need to be generated such as during piling works for example, a Vibration Management Plan shall be submitted to the Manager, Resource Consents and Compliance, Manukau City Council, prior to commencement of the works. This Mitigation Plan shall include details of how as far as practicable the works will comply with the requirements of the German Standard DIN4150 "Structural Vibration in Buildings - Effects on Structures" during construction.

27. During construction, the generation of dust shall be managed in such a way it does not create a nuisance beyond the boundary of the works. A nuisance will be deemed to have occurred if:

- a. There is visible evidence of suspended solids/particulate matter in the air beyond the site boundary; and/or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. There is visible evidence of deposited particulate matter traceable from a dust source, settling on the ground, building or structure on an adjoining site.

28. All private services affected by the works, shall be reinstated at no cost to the affected property owner.

6714 State Highway 1 - Manukau City Centre to Takanini

Designation Number	6714
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from north of Highbrook Drive, Otara to south of Great South Road, Takanini
Rollover Designation	Yes
Legacy Reference	Designation 186, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Southern Motorway (State Highway 1).

Conditions

For area included in Highbrook interchange see Schedule 2 (list of conditions) Environment Court Decision A070/2003 relating to Appeal reference. No. RMA 1229/01.

6716 State Highway 20 - Manukau City Centre to Wiri

Designation Number	6716
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from Great South Road, Manukau City Centre to Cavendish Drive interchange, Wiri
Rollover Designation	Yes
Legacy Reference	Designation 284, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

South Western Motorway - State Highway 20 (connection to State Highway 1).

Conditions

1.0 General

1.1 The scope and extent of works envisaged within the designation shall be generally in accordance with the requirement and the updated plans submitted with the Section 92 response for Notice of Requirement (identified as Council reference 19331), and the Notice of Requirement for the Alteration to Designation (identified as Council reference Proposal 34316) subject to final design and any modification required to comply with the conditions set out below.

1.2 The works shall be subject to the general outline plan of works procedure as provided for in section 176A of the Resource Management Act 1991. If not already incorporated into the designation or otherwise waived by the Council, the outline plan of works shall show construction design details, in particular where the works impact on Council services, roads and intersections.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of construction works.

1.4 At all times, reasonable access shall be maintained from the roading network to private properties, or public open space not directly affected by construction and operation.

1.5 Where a condition requires Council approval this shall mean approval from the Manager Resource Consents and Compliance as the certifying officer, unless otherwise stated. Approval from the Manager shall not be unreasonably withheld or delayed.

1.6 The existing standard of safety barriers and security fencing which are currently located on site boundaries shall be maintained during the construction period, or reinstated after construction if temporarily removed or modified.

1.7 For the purpose of these conditions, in determining whether a proposed activity is "practicable", the NZ Transport Agency shall have regard to:

- The nature of the proposed activity; and
- The sensitivity of the environment which will be affected by the proposed activity; and
- The financial implications of the proposed activity when compared with other options;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and

d. The effects on the environment of the proposed activity when compared with other options; and

e. The current state of technical knowledge and the likelihood that the proposed activity can be successfully carried out.

1.8 Management Plans and Outline Plans

1.8.1 Prior to the commencement of the works, the NZ Transport Agency shall submit to Council the relevant Management Plans required under Conditions 5, 6, 8, 9, 11, 12, 13, 13.3.4, 13.3.5 and 14 below.

1.8.2 The Plans shall be submitted to Council as soon as reasonably practicable, in any event, allowing sufficient time for review by Council and discussion with the NZ Transport Agency.

1.8.3 Any Management or Outline Plans maybe submitted in stages to reflect any proposed staging of the physical works. Plans submitted in stages must clearly show integration with adjacent stages and interrelated activities.

1.8.4 If Council and the NZ Transport Agency agree on the content and terms of such Management Plans, that agreement shall be deemed to be a waiver in relation to that Plan or relevant part of that Plan pursuant to section 176A(2)(c) of the RMA of the requirement for an Outline Plan under section 176A.

1.8.5 If Council and the NZ Transport Agency do not agree on the terms of such Plan or Plans, the relevant provisions of section 176A of the RMA shall apply in respect of any part not agreed.

1.8.6 The works shall be undertaken in accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

2.0 Designation

2.1 That pursuant to Section 171(2)(a) of the Resource Management Act, the requirement for the designation be modified by altering the designation boundary between Lambie Drive and Davies Avenue, to the extent that its northern limit shall be no greater than 15 metres from the northern kerbline of the proposed link road between Lambie Drive and Davies Avenue.

2.2 No works, including land disturbance, construction works, or occupancy by contractors should reduce the development potential of the land located between the proposed motorway and Wiri Station Road Extension (between Lambie Drive and Davies Avenue). For the purposes of this condition the southern section of Hayman Park is defined by notional lines 10 metres from the base of the fill batters on the regraded sections of Wiri Station Road and Lambie Drive, 10 metres from the southern kerbline of the Lambie Drive to Davies Avenue link road, and 10 metres from the top of the cut batter on the northern side of the motorway, such batter being no flatter than 3:1 (3H:1V). The extent of the area so defined shall be indicated on the Outline Plan of Works.

2.3 Wiri Station Road Extension shall make provision for legal road access midway along the proposed extension to serve proposed future intensive land use sites to the north and south of the road.

2.4 As soon as practicable after construction of the works, the NZ Transport Agency shall give notice to Manukau City Council in accordance with section 182 of the RMA for removal of those parts of the designation which cover the Plunket Avenue overbridge and Plunket Avenue roundabout, which are not required for the long term operation, maintenance and mitigation of effects of the State Highway.

3.0 Archaeological and Geological Impact Management

3.1 Should construction work uncover any archaeological remains, the NZ Transport Agency shall immediately

The Proposed Auckland Unitary Plan (notified 30 September 2013)

advise local Iwi, as required by any agreed Iwi protocol for the project, and the New Zealand Historic Places Trust. All works shall cease in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained.

3.2 Any newly discovered archaeological site shall be screened by a fence at least 1.0m in height until any necessary authority required by the New Zealand Historic Places Trust is obtained. The fencing shall be supervised by a suitably qualified archaeologist to determine the appropriate location for fencing. No construction material or equipment shall be stored within the fenced area.

3.3 Any geological discoveries shall be recorded and, where practicable, damage to those features minimised. Records of any such geological discoveries shall be provided to the Auckland Regional Council and the Manukau City Council for information and future reference.

3.4 All initial earthworks in the vicinity of St John's Redoubt, from chainage 0.00 to chainage 400.00 of the Redoubt Road southbound on-ramp, shall be monitored by an archaeologist.

4.0 Ecological Impact Management

4.1 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

4.2 Prior to any disturbance or removal of protected trees in excess of six metres in height, the NZ Transport Agency shall provide a report to Council from a registered arborist of the New Zealand Arboricultural Association in respect to the affected trees and the proposed mitigation works. Mitigation works could include avoiding the tree (if practicable), relocation, or removal and/or replacement.

4.3 Where trees are to be retained and where practicable, the trees shall be fenced no closer than the dripline with a 1.0m high fence. No construction equipment or construction material shall be stored within the fenced off area for the duration of the works. Where roots of such trees need to be cut they shall be cut and treated according to recognised arboricultural practice after a report has been presented to the Manager Resource Consents and Compliance as required above.

4.4 Restoration measures including grassing and other planting for slope stability shall be carried out as soon as practicable by the NZ Transport Agency, together with landscape planting, using locally sourced native species where available.

5.0 Visual Impact Management

5.1A Landscape Management Plan shall be prepared during the detailed design stage by a suitably qualified landscape architect appointed by the NZ Transport Agency. In preparing the Landscape Plan, the following matters shall be taken into account:

- a. The angle and extent of cut and batter slopes;
- b. The preparation and, in due course, implementation of a planting plan that will integrate the alignment into the landscape units through which it passes;
- c. The protection of existing visual and landscape values;
- d. The use of locally sourced native species, where practicable and appropriate;
- e. The removal and control of plant pests;
- f. The use of vegetation on embankments and berms suitable for diffuse of stormwater discharge;
- g. The Landscape Concepts (Sectors 1–3) prepared by Boffa Miskell Limited and presented to the Hearing Commissioners in November 2001;
- h. The integration of context sensitive design elements in hard structures such as retaining walls and overbridges;
- i. Liaison with Manukau City Council to provide appropriate locations for the Council to install City Centre gateway style sculptures at Council's cost (such gateway sculptures are subject to prior NZ Transport Agency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

approval, primarily for safety reasons);

j. The integration of any noise barriers, final details of which shall be determined during detailed design;

k. Provision of continuous pedestrian access along the Puhinui Stream margin within the designation boundary;

l. That specimen trees shall be at least size PB120;

m. No landscaping is to occur on archaeological sites (if any);

n. The use of various arboricultural techniques to protect trees which are to be retained and for any works to trees that are to be retained;

o. Details of plant species proposed to be used;

p. Details of an ongoing maintenance programme for the landscaping;

q. Appropriate landscaping to visually screen the motorway structure from neighbouring sites insofar as that is practicable.

r. The draft Manukau City Centre Redevelopment Strategy (September 1999);

s. The MANUKAU - FACE OF THE FUTURE® trademark and philosophy;

t. Further consultation with affected submitters at the detailed design stage specific to their properties;

u. Further consultation with Manukau City Council and Te Ara o Puhinui regarding revegetation and provision of pedestrian paths in association with Puhinui Stream;

v. Further consultation with Manukau City Council and Wiri Whanau Support Group regarding the detailed design treatment of the pedestrian overbridge connecting with Barrowcliffe Place and associated amenity areas;

w. Further consultation with Manukau City Council regarding planting in the vicinity of the rail alignment;

x. The use of plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

y. The Puhinui Stream Alignment Concept Plans and the Stormwater Pond Concept Plan prepared by Boffa Miskell Limited and presented to the Hearings Commissioners in November 2001; and

z. The retention of existing vegetation and trees along the motorway corridor, where practicable, including the mature grove of Pin Oaks in Hayman Park.

5.2 The Landscape Management Plan shall be submitted for approval to the Council prior to the works commencing. The approved Plan shall be subsequently implemented no later than the first planting season immediately following completion of construction and maintained thereafter to the satisfaction of the Manager-Resource Consents and Compliance.

5.3 The design of the retaining wall to be constructed adjacent to the western boundary of the Church of Jesus Christ of Latter-Day Saints Trust Board site on Redoubt Road shall be undertaken in consultation with the Church.

5.4 An amendment to the Landscape Management Plan shall be prepared by a suitably qualified landscape architect appointed by the NZ Transport Agency in relation to the works necessary to implement the Plunket Avenue overbridge and roundabout, which shall take into account the matters set out in condition 5.1 (as relevant). The amendments to the Landscape Management Plan shall be submitted to the Council for approval prior to the Plunket Avenue works commencing and will be implemented and maintained in accordance with condition 5.2.

6.0 Traffic Management Plan

6.1 The NZ Transport Agency shall submit for Council approval prior to works commencing a Traffic Management Plan based on its final design and staging for the project. The Traffic Management Plan shall:

6.1.1 Demonstrate how the impact on the local and motorway network will be minimised during the construction period.

6.1.2 Incorporate the NZ Transport Agency's Code of Practice for Temporary Traffic Management and shall make provision for the efficient movement of trucks and machinery to and from the site works, the staging of works, the standards of any temporary works, and the impact of the works on the local network.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6.1.3 Address methods of mitigating the local and network-wide effects of both the construction of individual elements of the project (eg bridges, intersections) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction.

6.1.4 Demonstrate how current formed pedestrian routes either along Druces — Lambie roads, Great South Road and between the land to the south of Wiri Station Road and the Manukau Town Centre will be maintained during the construction period.

6.2 During construction of the proposed motorway link, the NZ Transport Agency shall ensure that Keri Ann Place and the adjoining reserve shall not be used for construction access or storage, including the parking of contractors vehicles.

6.3 Unless otherwise agreed in writing between Westfield (New Zealand) Limited ("Westfield") and Village Force Cinemas Limited ("Village") and the NZ Transport Agency, construction traffic shall only enter the construction site via Lakewood Court for the following purposes:

6.3.1 Accommodation works for Denny's Restaurant;

6.3.2 For works associated with integrating the carpark extension with the existing Cinema carpark;

6.3.3 For works associated with construction of a dust/security fence.

6.4 An amendment to the Traffic Management Plan to provide for the works necessary to implement the Plunket Avenue roundabout and overbridge shall be submitted to Council for approval prior to those works commencing. The amendment to the Traffic Management Plan shall comply with conditions 6.1.1, 6.1.2 and 6.1.3 (as relevant).

7.0 Transpower New Zealand

7.1 During detailed design, the NZ Transport Agency shall include provision for the following matters in relation to Transpower New Zealand Limited ("Transpower"):

7.1.1 Adequate protection of the existing transmission lines from any adverse effects of the proposed works; and

7.1.2 Details of works likely to have an adverse effect on Transpower assets, to be determined in consultation with Transpower, prior to the commencement of any works; and

7.1.3 Transpower to be notified of all works likely to adversely affect Transpower assets within a reasonable timeframe; to enable sufficient time for Transpower to plan and carry out any works on its assets required due to the works subject to the designation.

7.2 In particular, the NZ Transport Agency shall address the following matters in relation to Transpower:

7.2.1 Ensure that existing access arrangements to transmission towers are retained where practicable. Where the NZ Transport Agency requires or causes a change in access arrangements, then alternative arrangements shall be made that ensures safe 4-wheel drive 24 hour access to the tower base (including during the construction period) or other options that will enable Transpower to undertake necessary works.

7.2.2 Any proposed temporary or permanent alterations to the access arrangements to any Transpower infrastructure, shall be determined with the agreement of Transpower.

7.2.3 Ensure that all works comply with the following, unless specifically provided in terms of condition 7.2.5

The Proposed Auckland Unitary Plan (notified 30 September 2013)

below:

- a. All mobile plant operated in relation to the proposed works to maintain a 4 metre clearance from Transpower conductors at all times;
- b. No temporary buildings, scaffolding or stationary plant to be located within 8 metres of any conductor;
- c. All earthworks (including stockpiles) underneath the conductors to maintain a minimum of 6.5 metre vertical clearance distances from conductors at all times; and
- d. Transpower's written approval is required prior to undertaking any earthworks within 6 metres of the outer edge of the visible foundation of a transmission tower, or greater than 3 metres in depth between 6 metres and 12 metres from the outer edge of a tower, or any works that could create an unstable batter which may adversely affect a tower.

7.2.4 Where the NZ Transport Agency wishes to undertake works or activities within distances specified in condition 7.2.4 above, the NZ Transport Agency shall outline the procedures and requirements necessary for Transpower to be able to consider and approve or reject such an encroachment as appropriate.

7.2.5 Provide a dust and vibration mitigation strategy for the works which shall include mitigation measures to be undertaken to minimise dust and vibration effects on the existing transmission lines.

7.2.6 Finalise details of landscaping planting to ensure that:

- a. No part of any vegetation will encroach into an area closer than 4 metres to any conductors of the lines. The 4-metre clearance relates to vertical, horizontal and felling distance clearances;
- b. Vegetation planted in close proximity to tower bases does not adversely effect existing tower foundations (i.e. cause corrosion by creating a damp environment); and
- c. Vegetation does not preclude physical access to a tower.

8.0 Noise Management Plan

8.1 The works shall be designed and constructed to ensure compliance with the noise limits specified in the NZ Transport Agency's Guidelines for the Management of Traffic Noise for State Highway Improvements, December 1999 (NZTA's Noise Guidelines) or if practicable such higher standards adopted by the NZ Transport Agency in any review of its Noise Guidelines prior to the commencement of the tendering process for physical works.

8.2 A detailed Noise Management Plan shall be prepared by a suitably qualified noise consultant in consultation with the Manager - Resource Consents and Compliance. The Noise Management Plan shall be submitted for approval to the Manager - Resource Consents and Compliance prior to construction commencing, and the approved plan shall be complied with. The purpose of the Plan is to describe the method by which noise associated with traffic using the roading within the designation will be made to comply with noise limits specified in the NZ Transport Agency's Noise Guidelines. Where the ambient sound level is required to be monitored to determine design limits then this shall be done prior to construction commencing. Such methods may include, but not be limited to:

- a. Acoustic barriers and/or bunding; and
- b. Acoustic insulation (if required);

Where a fence and/or bunding are used and the location allows, the barrier shall be landscaped with plantings where practicable.

8.3 Noise monitoring shall be undertaken in accordance with NZS 6801: 1999 Measurement of Sound to ensure compliance with Condition 8.1 above. The NZ Transport Agency shall ensure that representative noise monitoring of the motorway route is undertaken at its expense by a suitably qualified and experienced acoustical consultant within nine months of the opening of the whole route. Results of all noise monitoring shall be supplied to the Council within six weeks of the monitoring being completed. Where such monitoring demonstrates non-compliance, the NZ Transport Agency shall take such steps as may be necessary to ensure compliance with the above requirements.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9.0 Soil Contamination Management Plan

Prior to construction the NZ Transport Agency shall provide to the Council for approval a Soil Contamination Management Plan. This Plan shall be prepared by a suitably qualified person who shall investigate and identify sites of potential soil contamination within the proposed designation boundary and provide details as to how contaminated soils will be treated or removed for disposal to approved sites.

10.0 Property Access and Carparking

10.1 During detailed design, the NZ Transport Agency shall ensure that the design of the intersection of the proposed roads (SH1 and SH20 on and off ramps) with Redoubt Road does not preclude access to the Church of Jesus Christ Latter Day Saints Trust Board site on Manukau Operative District Plan Redoubt Road as currently provided under the 14 April 1998 resource consent held by the Church.

10.2 During detailed design, the NZ Transport Agency will use its best endeavours to design the proposed roading works so as not to preclude implementation of full access to the Church's property, subject to safety and operational requirements, should the Church wish to obtain future resource consent for such access.

10.3 Prior to commencing works pursuant to the designation in respect of Lot 8, DP 112560, CT 63D/331, the NZ Transport Agency shall ensure that it has obtained all necessary consents and other approvals authorising the construction and use of the new area of carparks, and has constructed those carparks, to be used by the owners and tenants of the Cinema Land (being the land currently owned by Westfield and currently tenanted by Village and includes land transferred or to be transferred to Westfield pursuant to the Public Works Act 1981). For the avoidance of doubt, this condition requires a new resource consent for the new carparking areas and a variation of the existing resource consent to refer to the new area of carparking, and requires the freehold ownership of this replacement land to have been transferred to Westfield. The NZ Transport Agency is to obtain all necessary approvals and consents in consultation with, and on conditions satisfactory to, Westfield and Village.

10.4 The NZ Transport Agency shall provide at its own expense, an amalgamated certificate of title incorporating proposed replacement land for the reduced area of Cinema Land.

11.0 Flooding and Drainage

11.1 NZTA shall submit to Council for approval a revised hydrological specimen design incorporating the most recent detailed hydrological modelling. This revised design shall be used as a basis for detailed design.

11.2 A Drainage Network Plan shall be prepared and submitted to the Manager - Resource Consents and Compliance. The design of the drainage network shall be based upon the outputs of Council's latest hydraulic modelling of the Puhinui Stream, and the Plan shall include details of:

- a. Design assumption and catchment areas;
- b. Design calculations
- c. Final design details, including plans, of cesspits, pipes, drainage channels and swales, and inlets and outlets; and
- d. The hydrological influence and impact upon adjacent land and proposed development at the Everglade Pond and Pacific Arena sites.

11.3 Where the design of the drainage network incorporates changes to the final design, the NZ Transport Agency shall update Council's latest hydraulic model to incorporate those changes and submit the model and the design changes for approval to the Manager - Resource Consents and Compliance.

11.4 Where it is determined, as a result of the assessment in condition 11.3 above, that the design of the drainage network has the potential to impact upon land outside the designation, details of the potential hydrological effects from the 1 in 50 and 1 in 100 storm events, and any mitigation proposed (if necessary),

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall be submitted for approval to the Manager - Resource Consents and Compliance.

12.0 Vibration Management Plan

A Vibration Management Plan shall be submitted for approval to the Manukau City Council prior to commencement of the works. This Management Plan shall include details of how the works will comply with the requirements of German Standard DIN4150 "Structural Vibration in Buildings — Effects on Structures" during construction. The approved Plan shall be complied with by the NZ Transport Agency and its contractors.

13.0 Project Implementation Plan

13.1 Prior to the commencement of works, a Project Implementation Plan (PIP) shall be prepared by the NZ Transport Agency.

13.2 The PIP shall incorporate the management plans required by the designation conditions, namely:

- a. Landscape Management Plan (condition 5);
- b. Traffic Management Plan (condition 6);
- c. Noise Management Plan (condition 8);
- d. Soil Contamination Management Plan (condition 9);
- e. Drainage Network Plan (condition 11);
- f. Vibration Management Plan (condition 12);
- g. Dust Management Plan (condition 13.3.4); and
- h. Construction Noise Management Plan (condition 13.3.5).

13.3 The PIP shall include the following provision:

13.3.1 Liaison with the Public and the Council

13.3.1.1 A Site Liaison Officer will be appointed by the NZ Transport Agency. The Council together with adjoining and adjacent neighbours shall be notified of this appointment, together with a contact address and mobile telephone number.

13.3.1.2 The Site Liaison Officer will provide an initial point of contact between the NZ Transport Agency and the Council, and any other affected party.

13.3.1.3 The Site Liaison Officer shall establish a "line of communication". This line of communication shall include contact telephone numbers (both during and after business hours) of appropriate contacts with reference to the type of work to which the contact relates (for example, site works, building, or drainage).

13.3.1.4 The Site Liaison Officer shall establish a contact with the Manukau City Council and attend any necessary meetings as agreed by these parties.

13.3.1.5 The Site Liaison Officer will advise adjoining and adjacent site occupiers prior to the commencement of site works of the construction timetable.

13.3.1.6 The Site Liaison Officer is to maintain adequate site records which shall include, but not be limited to, machinery use, working conditions, weather, any complaints received and measures taken to remedy or minimise the factors causing the complaints. These records are to be made available upon request to the Council's Resource Compliance Officer and/or District Plan Enforcement Officer.

13.3.2 Site Management

13.3.2.1 A site office shall be located in an obvious position and shall contain a site telephone, any Outline Plan of Works and the PEMP referred to in Condition 14. The site office shall be initial point of inquiry for all visitors to the site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13.3.2.2 A Site Safety Officer will be appointed by the NZ Transport Agency and shall be responsible for all matters related to site safety and the safety of the public and site employees as it pertains to construction activities on and adjacent to the site.

13.3.2.3 Appropriate signs to comply with any Building code or Council Bylaw requirements or the Occupational Health and Safety Act shall be clearly displayed.

13.3.2.4 Rubbish bins shall be located at least 20m from any residential boundaries.

13.3.2.5 Site toilets shall be provided or alternative arrangement made. Site toilets shall be located no closer than 20m to any residential boundary.

13.3.2.6 All works required outside the designation boundaries shall only occur after approval has been obtained from Manukau City Council.

13.3.3 Site Works

13.3.3.1 The location and extent of each stage of the site works will be identified and concerned parties advised of the construction timetable.

13.3.3.2 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by, whatever means necessary and to monitor that such works are and remain effective.

13.3.3.3 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the NZ Transport Agency's expense.

13.3.3.4 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. Any damages to the public drains that may occur during construction, shall be the NZ Transport Agency's responsibility.

13.3.3.5 Unsuitables from earthworks surplus to site requirements shall be disposed of at an approved landfill site.

13.3.3.6 The public roads and footpaths shall be kept clear at all times of spoil from the site.

13.3.4 Dust Management Plan

13.3.4.1 A Dust Management Plan shall be prepared and submitted to the Council for approval prior to the commencement of works. The primary purpose of the Plan is to minimise dust nuisance. The Plan shall:

- a. Specify all methods proposed to be employed to control dust from earthworks;
- b. Specify the methods proposed to address problems if the dust is not satisfactorily mitigated; and
- c. Include the contact details of a contact person for residents and the Council in the event of a dust problem.

13.3.4.2 The NZ Transport Agency shall ensure that the approved Dust Management Plan is complied with.

13.3.5 Construction Noise Management

13.3.5.1 During construction, New Zealand noise standard "NZS 6803:1999 Acoustics- Construction Noise" shall apply and that noise shall comply with the limits set down in Table 2 of NZS:6803 1999 or where that is impracticable alternative strategies to be outlined in the Construction Noise Management Plan, shall be implemented to ensure that construction noise does not exceed agreed levels with affected persons.

13.3.5.2 Prior to commencement of any construction activity on the site the NZ Transport Agency or its contractors, shall submit a Construction Noise Management Plan to Council for approval. The purpose of this

The Proposed Auckland Unitary Plan (notified 30 September 2013)

plan is to describe the methods by which noise associated with the construction works is to be managed to reduce (where required) any impacts on adjoining residential areas. In particular, the Construction Noise Management Plan shall identify:

- a. The matters referred to in paragraph 8.4(a) to (e) of NZS:6803: 1999 Acoustics - Construction Noise;
- b. Methods of managing noise such as a temporary acoustically designed construction noise fence;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency (by reference to NZS:6803 1999);
- d. Contingency measures in the event of any incidence of non-compliance; and
- e. Procedures for handling noise complaints.

13.3.5.3 The NZ Transport Agency shall ensure that the Construction Noise Management Plan is complied with at all times during construction works.

13.3.6 Construction Hours

Except for unforeseen emergency situations and in accordance with Notes 1 and 2, hours of work during the construction phase shall be:

- a. Weekdays: 7.00am to 6.00pm;
- b. Saturdays: 8.00am to 5.00pm;
- c. Sundays and Public Holidays: No work;

Advice Notes:

- i. These restrictions exclude any special operations subject to the notification of, and discussion with, affected parties.
- ii. Except that any construction works within the motorway corridor may involve work outside the above hours and such works are excluded from the above hours of work.

14.0 Project Environmental Management Plan (PEMP)

The Management Plans required by the conditions of this designation shall, as and when approved, be consolidated into a single PEMP which shall be made available to all contractors at the site office. Any amendments to the PEMP shall be agreed to by the relevant consent authority and made available to the contractors.

15.0 Lighting and Signage

Appropriate lighting and signage shall be provided for the motorway and the affected local roading network in accordance with relevant standards adopted by the NZ Transport Agency and Manukau City Council for lighting and signage.

6717 State Highway 20B - State Highway 20 to Auckland International Airport

Designation Number	6717
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20B (Puhinui Road) from Puhinui Road interchange to Orrs Road, Puhinui
Rollover Designation	Yes
Legacy Reference	Designation 303, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

State Highway 20B Road purposes: the maintenance, operation and improvement of the State Highway (including road widening).

Conditions

1. Any works undertaken to give effect to the designation shall be generally in accordance with the plans and information submitted by the New Zealand Transport Agency ("NZTA") in support of this Notice of Requirement in the documents referenced Proposal 36414, Sheet No 1 - No 2 by Council, and those previously submitted in association with Designation 261.

2. NZTA shall submit an Outline Plan of Works in accordance with the provisions of section 176A of the Resource Management Act 1991 prior to commencing any works within the SH20B.

3. The stated purpose of the designation shall be included in Schedule 5A, Chapter 5 of the Manukau District Plan (2002) as follows:

4. NZTA shall consult with the New Zealand Refining Company Ltd at least 30 working days prior to carrying out any activities on, in or under SH20B within the area of the existing New Zealand Refining Company Ltd Refinery to Auckland Pipeline ("the RAP") designation (referenced as Designation 296 in the District Plan) except in emergency situations. In any such emergency, the New Zealand Transport Agency shall notify NZRC or its appointed agent within two days of such works, any digging below 400mm from existing datum shall be performed by hand digging only, and no heavy compaction shall be applied during the emergency works.

5. If any archaeological feature (e.g. shell midden, hangi, oven stones, pit depressions, defensive ditches, artefact material, or koiwi tangata [human skeletal remains]), is uncovered during any work undertaken within the area of the designation, that work shall cease within a 10 metre radius of the discovery and the Environmental Management Group, Manukau City Council, the New Zealand Historic Places Trust and the appropriate iwi authorities shall be contacted within 72 hours so that appropriate action can be taken.

6. NZTA shall consult with Wiri Oil Services Ltd ("WOSL") (or its agent) at least 30 working days prior to carrying out any activities on, in or under SH20B within the area of the existing Wiri to Auckland Pipeline ("the WAP"), except in emergency situations.

7. Any works or activities within 3m of the WAP shall, unless prior written approval from WOSL (or its agent) for the work has been obtained:

- a. Not disturb any soil below a depth of 0.4m from the surface; and
- b. Ensure that upon completion of the works, the finished surface level is not reduced below the existing datum; and
- c. Not involve tree or shrub planting; and
- d. Not involve the erection of any structure (e.g. road sign).

8. NZTA shall consult with Watercare Services L during consideration of options for and the design of any road upgrading works within the area of the designation. The purpose of such consultation is to ensure that the Notice of Requirement for the proposed Hunua 4 Watermain is taken into account.

9. The NZTA shall use its best endeavours to work cooperatively with other statutory bodies, providers of transportation infrastructure (who operate or plan to operate infrastructure either adjoining or dependant on the operation of SH20B), and Auckland International Airport Limited.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. NZTA shall ensure that the stormwater drainage system within the designation, including any associated discharge, is maintained to avoid adverse environmental effects on the abutting properties.

6718 State Highway 1 - Auckland Harbour Bridge to Otahuhu

Designation Number	6718
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from (1) Auckland Harbour Bridge, Westhaven to Fanshawe Street, Freemans Bay and from (2) Grafton Road, Grafton to Tamaki River, Otahuhu, and State Highway 16 from (3) Newton Road, Eden Terrace to Whau River bridge, Avondale and State Highway 20 from (4) Hillborough Road, Hillsborough to Manukau Harbour Crossing, Onehunga
Rollover Designation	Yes
Legacy Reference	Designation A07-01, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Motorway.

Conditions

No conditions.

6719 State Highway 1 - Shelly Beach Priority Lane

Designation Number	6719
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 at Shelly Beach Road, Westhaven
Rollover Designation	Yes
Legacy Reference	Designation A07-01A, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Motorway - Shelley Beach Road priority lane.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

1. The work shall be undertaken in accordance with the Notice of Requirement dated 27 January 2000 and supporting documents.
2. That the area between Westhaven Drive and motorway be landscaped in accordance with Landscape Plans 3,4 and 5 (Reference Job: 1/261107, Code - 7104, Sheet No's 17, 18, 19) 3. Any tree protected under Rule 5C.7.3.3 of the District Plan shall not be removed, altered, relocated or destroyed without resource consent approval.
4. All transplanted trees shall be transplanted in accordance with accepted arboricultural practice.
5. That a 2.0 metre high fence be erected between Westhaven Drive and the motorway. The length of the fence shall be no greater than the existing fenceline.
6. Transit New Zealand is responsible for the maintenance of the fence including the removal of graffiti.
7. Construction of the priority lane shall adhere with construction noise standards NZS6803P:1984 "The measurement and Assessment of noise construction, maintenance and demolition work."
8. That the operation of the additional motorway lane adjacent to Shelly Beach off-ramp be restricted to buses in the morning peak only, but be available for use by general traffic after the morning peak period.

6720 State Highway 1 - Newmarket

Designation Number	6720
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from Gillies Avenue to St Marks Road off-ramp, Newmarket
Rollover Designation	Yes
Legacy Reference	Designation A07-01B, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Motorway - Newmarket Viaduct improvement project.

Conditions

1. General

1.1 Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided at the hearing by the Requiring Authority, being Transit New Zealand, the Notice of Requirement and supporting documents, as follows:

- a. 'Newmarket Viaduct Improvement Project (Viaduct Section) - Overview, Notice of Requirement, Assessment of Environmental Effects and Attachments - Volume 1', prepared for Transit New Zealand Limited by Beca

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Infrastructure Ltd, dated November 2005;

b. 'Newmarket Viaduct Improvement Project (Viaduct Section) - Specialist Technical Reports - Volume 2', prepared for Transit New Zealand Limited by Beca Infrastructure Ltd, dated November 2005;

c. 'Newmarket Viaduct Improvement Project (Viaduct Section) - A3 Plans - Volume 3', prepared for Transit New Zealand Limited by Beca Infrastructure Ltd, dated November 2005; and

d. Further information and updated plans provided with the section 92 response (dated 13 January 2006) and post notification material (dated 7 June 2006) including:

i. Drawings C110 - C113 (Revision B);

ii. Drawings C102 - C106 (Revision B);

iii. Schedule of Affected Properties (Revision B);

iv. Drawing S211 (Revision B); and

v. Revised Urban Design/Visual Assessment (Brewer Davidson, May 2006).

1.2 As soon as practicable, and within 12 months following completion of construction of the Project, the Requiring Authority shall give notice to Auckland City Council in accordance with Section 182 of the RMA for removal of those parts of the designation which are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note that Condition 1.2 is specific to land no longer required for construction purposes once the Project is completed.

1.3 A stakeholder manager shall be appointed by the Requiring Authority for the duration of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The stakeholder manager's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons, including being available at all times during active construction.

1.4 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment on individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is later.

1.5 The period within which this designation shall lapse if not given effect to shall be 5 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

1.6 The works the subject to this designation, including demolition and construction, shall be completed as one continuous project, within 5-years of commencement of the works, with the exception of any enabling works (including enabling works above or nearby the rail corridor required to be undertaken in sequence with any work undertaken by Ontrack).

1.7 The boundary of the designation shall not encroach into the Mt Hobson Road Carriageway.

1.8 The Requiring Authority shall pay the Council a compliance monitoring charge of \$10,000.00 (inclusive of GST) plus any further monitoring charge or charges to recover the actual and reasonable costs that have been incurred to ensure compliance. This charge is to cover the cost of inspecting the site, carrying out tests, reviewing conditions, updating files and all work to ensure compliance with the conditions on the designation. This monitoring charge shall be paid one month prior to commencement of construction.

2. Project Management Plans (PMP) and Outline Plans

2.1 The Requiring Authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 3, 4, 7, 8 and 9 below.

2.2 No works shall be undertaken in any particular location(s) until:

a. The PMP, or such part(s) of the PMP as are relevant to the location(s), are submitted to and approved by the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Auckland City Council; and

b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (RMA) in relation to the works in the location(s), are submitted to Auckland City Council.

2.3 Where an outline plan or plans are required by section 176A of the RMA for works in any particular location(s) and Auckland City Council agrees that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Auckland City Council may waive the requirement for an outline plan in respect of the works in the particular location(s), as provided for in section 176(2)(c) RMA.

2.4 The works shall be undertaken in accordance with the submitted and approved PMP and outline plan of works (where required), unless otherwise altered with the approval of the Auckland City Council (under condition 2.5 below).

2.5 The Requiring Authority shall require its contractor implementing the works to prepare a Contractor's Project Management Plan (CPMP) which shall include mitigation/management plans specified in conditions 3, 4, 7, 8 and 9 (referred to in condition 2.1 above). Where the CPMP is inconsistent with the PMP in relation to these mitigation/ management plans, the Requiring Authority shall seek the approval from the Auckland City Council to the changes.

3. Environmental

3.1 The PMP shall include an Environmental Management Plan (EMP) to be provided to Auckland City Council prior to commencement of works. The purpose of the EMP is to manage and mitigate, where practicable, identified adverse environmental effects.

3.2 The EMP shall also address the implementation of suitable arrangements for stormwater treatment and detention in accordance with Auckland Regional Council (ARC) guidelines and/or consent requirements.

4. Construction

4.1 The PMP shall include a Construction Management Plan (CMP) to be provided to Auckland City Council prior to commencement of works. The CMP shall be prepared in consultation with directly affected parties and parties affected by proximity as defined on the Newmarket Viaduct Consultation Map (June 2006).

4.2 The CMP shall include specific details relating to the demolition, construction and management of all works associated with the Project, including:

General:

- a. Details of the stakeholder manager, including their contact details (phone, facsimile, postal address, email address);
- b. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. An outline construction programme of the works indicating in particular likely time periods for road closures and anticipated traffic diversion effects.
- d. Any means to ensure that no damage occurs to street trees that are otherwise unaffected by the Project throughout the construction period;
- e. Any means of protection of services such as pipes and water mains within the road reserve;
- f. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- g. Location of workers offices and conveniences (e.g. portaloos);
- h. Procedures for controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. A Dust Management Plan shall be submitted to Council. It shall specify methods to be used to control dust from earthworks and demolition. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;
- j. Means of ensuring the safety of the general public;

Noise:

k. The CMP shall include a Construction Noise Management Plan (CNMP) describing the measures adopted to as far as practicable meet the requirements of the NZS6803:1999 Acoustics - Construction Noise. The CNMP shall refer to noise management measures set out in Annex E of NZS6803:1999, and as a minimum shall address the following:

- i. Construction sequence;
- ii. Machinery and equipment to be used, including the use of non percussive machinery where practicable;
- iii. Hours of operation, including times and days when noisy construction work would occur;
- iv. The design of noise mitigation measures such as temporary barriers or enclosures;
- v. Construction noise limits for specific areas;
- vi. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes; and
- vii. Methods for monitoring and reporting on construction noise.

Traffic:

l. Methods of mitigating the local and network wide effects of both construction of individual elements of the Project, and the use of staging to allow sections of the Project to be opened to traffic while other sections are still under construction. In particular, the CMP shall describe:

- i. Traffic management measures to address and maintain, where practicable, traffic capacities at peak hours in Broadway, Gillies Avenue and St Marks Road, and any road closures that will be required;
 - ii. Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks); and
 - iii. The numbers, frequencies and timing of construction traffic movements.
- m. Methods to manage the effects of traffic that is required to detour or be diverted during construction, in particular seeking to minimise effects on residential areas such as Orakei Road and Market Road at night.
- n. Contingencies for traffic diversion in the case of extended road closures, emergency works or structure failure.
- o. Consultation with Auckland City Council, the Auckland Regional Transport Authority and the Bus and Coach Association with regard to the traffic management measures during construction to address and maintain, where practicable, traffic capacity at peak hours to provide for passenger transport services on both the roading and rail networks;
- p. Consultation with Auckland City Council with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation;
- q. Identification of any existing on-site parking and manoeuvring areas which are affected by the works. Then, as far as practicable, and in consultation with Auckland City Council and the affected landowner, how the affected areas will be relocated or reinstated to achieve compliance with the District Plan or to a similar standard to that existing;
- r. Where necessary, provision of alternative access arrangements as far as practicable, and in consultation with the Auckland City Council and the affected landowner, where the existing property access is to be removed or becomes unsafe as a result of the works;
- s. Details on the maintenance of pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable. Pedestrian access across the Dilworth Avenue footbridge shall be maintained at all times, except where it is required to be temporarily closed for construction purposes; and
- t. Consistency with the Transit New Zealand 'Code of Practice for Temporary Traffic Management' (COPTTM).

Vibration:

- u. The CMP shall as far as practicable meet the vibration standards of the German Standard DIN 4150, and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall address the following aspects:

- i. Vibration monitoring measures;
- ii. Criteria;
- iii. Possible mitigation measures;
- iv. Complaint response;
- v. Reporting procedures;
- vi. Notification and information for the community of the proposed works;
- vii. Vibration testing of equipment to confirm that the vibration limits will not be exceeded;
- viii. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- ix. Operational times; and
- x Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works.

4.3 The CMP shall be implemented and maintained throughout the entire demolition and construction periods.

4.4 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of this designation at all times and not on surrounding streets.

4.5 All storage of materials and equipment associated with the construction works shall take place within the boundaries of this designation.

4.6 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage at no cost to Auckland City Council.

4.7 Pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable.

4.8 All local temporary road closures shall be subject to prior approval of the Council.

4.9 The CMP shall, where practicable, provide priority for buses at peak hours along Broadway.

Blasting:

4.10 If any blasting is required during construction, it shall be so controlled as to ensure that any ground vibration as a result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause any reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 'Structural Vibration in Buildings - Effect on Structures', will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular direction. The units are millimetre per second (mm/s).

4.11 The noise created by the use of explosives for blasting shall not exceed a peak overall sound pressure of 128dB (i.e. peak over pressure of 0.05kPa) or alternatively the noise shall not exceed a peak sound level of 122dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not subject to this designation).

5. Archaeological Heritage

5.1 An archaeologist or some other person approved by the New Zealand Historic Places Trust shall be present to monitor initial earthworks for the Project, including works that affect the stonewall under the present viaduct at Gillies Ave (the edge of the lava flow).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.2 Detailed protocols for the management of archaeological and waahi tapu discoveries shall be developed in conjunction with tangata whenua prior to construction.

5.3 If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust, Auckland City Council within 24 hours that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the NZ Historic Places Trust is obtained.

6. Protected Trees

6.1 This condition applies to trees within the designation area that would be subject to Tree Protection rules under the provisions of the underlying zoning of the District Plan ("Protected Trees").

6.2 Removal, trimming/pruning or works within the drip line of Protected Trees, shall be limited to those trees identified in the Landscape Report November 2005 and includes trees located on road reserve greater than 6 metres in height and trees subject to general tree protection greater than 6 metres in height.

6.3 A suitably experienced, Council approved arborist ('nominated arborist') shall be employed by the Requiring Authority, at the Requiring Authority's expense, to monitor, supervise and direct all works within the drip line or in the vicinity of those protected trees to be retained, for the duration of the works.

6.4 Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions of the designation that pertain to the retained vegetation can be explained by the nominated arborist to all contractors or sub-contractors who will be working on site within the drip-line of, or adjacent to, any protected vegetation that is covered by the designation.

6.5 A copy of the conditions of the designation pertaining to the protected trees shall be held on site at all times.

6.6 The following measures shall be taken in respect of the remaining Protected Trees within the designation area:

- a. Temporary protective fencing shall be erected around the Protected Trees to be retained prior to the commencement of construction activity and shall remain in place for the duration of the Project. The purpose of the temporary protective fencing is to provide an area around the retained trees that will facilitate their successful retention during the construction process. The parameters of the enclosure shall be as directed by the Requiring Authority's arborist;
- b. Except as provided for in Conditions 6.7 and 6.8, the area within the temporary protective fencing shall be considered a total exclusion zone. The Requiring Authority and its agents shall not:
 - i. Enter into the delineated area without prior consultation and agreement from the nominated arborist;
 - ii. Alter the dimensions of the delineated area without prior consultation and agreement from the nominated arborist;
 - iii. Store diesel, cement, building materials, site huts, spoil, equipment, or machinery within the delineated area; and
 - iv. Spill substances likely to be injurious to tree health within seepage distance of the delineated area.
- c. The temporary protective fencing shall be constructed from a solid face (i.e. plywood or corrugated iron) attached to a sturdy framework of freestanding scaffolding or posts. It must be constructed to a minimum height of 1.8m and must remain in place for the duration of the Project.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6.7 The nominated arborist shall undertake all necessary trimming and pruning works, including the pruning of tree roots uncovered during excavations. Exposed roots shall be covered and kept moist.

6.8 The nominated arborist shall undertake a tree-monitoring programme throughout the construction phase, including monitoring of:

- a. The condition repair and location of the temporary protective fencing;
- b. Any excavation within the drip line of protected trees;
- c. General tree health; and
- d. Compliance with the conditions of the designation by way of fortnightly inspections during the construction period. A copy of the monitoring results from each visit shall be sent to the Auckland City Environments' arborist, with one copy being retained on site by the Project Manager, while a further copy is to be retained by the nominated arborist.

6.9 During the construction process the nominated arborist may make recommendations on the installation of irrigation systems, mulch, or remedial pruning works, if they are required to improve tree health.

7. Landscape Mitigation

7.1 The PMP shall include a Landscape Mitigation Plan (LMP) to be provided to Auckland City Council prior to or with the outline plan of works for the project or project stage. The LMP shall be prepared by a suitably qualified landscape architect, and shall address the following matters:

- a. Transit New Zealand's "Guidelines for Highway Landscaping" (dated September 2002);
- b. Consistency with Transit New Zealand's "Central Motorway Improvements: Urban Design Framework" (dated 6 September 2001); and
- c. Consistency with Transit New Zealand's "Urban Design Implementation Principles (2006)".

7.2 The Landscape Mitigation Plan (LMP) for the Project area shall provide for:

- a. The integration of the permanent works into the surrounding landscape;
- b. Mitigation of effects on properties in the vicinity of the alignment;
- c. Integration, and continuation of significant elements of consistency with recently established planting themes in the CMJ Core area, established desirable coastal vegetation, and the vegetative character of Newmarket;
- d. Retention or relocation of existing trees where practicable; and
- e. Replacement planting or mitigation for loss of protected or scheduled trees.

7.3 The Landscape Mitigation Plan (LMP) shall include the following:

- a. Concept Plan/Report - this shall depict the overall landscape concept, and provide a framework for the design intent, layout and mitigation proposals;
- b. Landscape Design Details - these shall include the following details:
 - i. Identification of vegetation to be retained;
 - ii. Proposed planting including - plant species, mixes, spacing/densities, sizes (at time of planting) and layout;
 - iii. Planting programme - the staging of planting in relation to the construction programme;
 - iv. Detailed specifications relating to (but not limited to) the following:
 - v. Vegetation protection (for desirable vegetation to be retained);
 - vi. Weed control and clearance;
 - vii. Ground preparation (topsoiling and decompaction to ensure rapid plant establishment and ongoing vigour);
 - viii. Mulching;
 - ix. Plant supply and planting;
 - x. Maintenance regime (requirements and programme);
 - xi. Performance standards
- xii. The restorative landscape treatment for the areas within the designation surrounding all road reserves affected by the Project, including Gillies Ave, St Marks Road, Mauranui Ave, Mahuru Street and Clovernook Street;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

xiii. Landscape treatment for both sides of the Mt Hobson noise wall;

xiv. Consideration of views to volcanic cones; and

xv. Consideration of:

- The landscape character of the area;
- The relationship of the works to the pedestrian environment;
- Integrated planting, as appropriate, to promote a "gateway" concept at St Marks Rd and Gillies Ave and to include treatment of the on-off ramp edges and under-bridge areas; and
- Designs that will strengthen Newmarket's "sense of place".

7.4 In areas where shrub mixes are used, densities shall ensure that low canopy coverage has been attained by the end of the contract maintenance period.

7.5 Prior to planting and throughout the ensuing maintenance period, all weed species declared as plant pests in the Auckland region by the ARC (including Total Control/Containment Pests/Surveillance Pests & Research Organisms) shall be controlled and removed from the site.

7.6 Where native plants are used, the composition shall reflect the natural plant associations of the area, and the mixes (where relevant) shall be of suitable richness and diversity to encourage self-sustainability once established.

7.7 Where practicable, any planting utilising native plants shall use plants genetically sourced from the Ecological District.

7.8 Planting areas shall be mulched using suitable weed-free, granular organic mulch. The only exceptions to this shall be where the slopes are too steep to allow for its retention. In such cases a neutral or black coloured biodegradable or photodegradable geotextile shall be used.

7.9 Landscape mitigation proposals outside the designation boundary shall be agreed with the appropriate landowner and subsequently implemented.

7.10 The LMP shall be prepared in consultation with Auckland City Council and iwi.

7.11 The landscaping shall be implemented in accordance with the LMP within the first planting season following the completion of the construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for the next 3 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping may be implemented after the first planting season of each stage.

7.12 When planning or implementing changes to signage on the Newmarket Viaduct, the Requiring Authority shall, where safe and practicable, avoid locating additional signage where it will encroach on the viewshaft to Mt Hobson, as described in the Auckland City District Plan: Isthmus Section.

8. Urban Design

8.1 The PMP shall include an Urban Design Plan (UDP) to be provided to Auckland City Council prior to or with the outline plan of works for the project or project stage. The UDP shall be prepared by a suitably qualified person (including an artist where appropriate), and shall address the following matters:

- a. Transit New Zealand's "Central Motorway Improvements: Urban Design Framework" (dated 6 September 2001); and
- b. Transit New Zealand's "Urban Design Implementation Principles (2006)".

8.2 The UDP and urban design measures shall include:

- a. Concept Plan/Report - this shall depict the overall urban design concept and provide a framework for the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

design intent, layout and urban design measures, which shall:

- i. Be determined in consultation with Auckland City Council and iwi (by way of a joint working party);
 - ii. Consider further comments from the Auckland City Urban Design Panel;
 - iii. Not preclude access to any future pedestrian linkage identified by Auckland City Council (including Gillies Ave/Clovernook Place).
- b. Urban design details and appropriate design measures in respect of:
- i. Treatment of noise attenuation barriers;
 - ii. Road safety barriers;
 - iii. Retaining walls;
 - iv. Pedestrian areas or facilities;
 - v. Methods to visually screen sections under the Newmarket Viaduct (where considered appropriate), such as beneath the Gillies Ave bridge section;
 - vi. The area beneath the viaduct at Gillies Ave, which shall be designed to promote a positive pedestrian experience;
 - vii. Stakeholder funded art works;
 - viii. Design of the Mt Hobson Road noise wall; and
 - ix. Restoring all road reserves beneath the designation affected by the Project, including Gillies Ave, St Marks Road, Mauranui Ave, Mahuru Street and Clovernook Street.

8.3 The Requiring Authority shall commission a peer review of barrier options for the Newmarket Viaduct. The peer reviewer shall be selected by agreement with Auckland City Council.

a. The purpose of the review of barrier options shall be to ascertain whether there are any alternative barrier options to that proposed by Transit in the NOR documentation, that would better maintain the protected views from the Viaduct to the Waitemata Harbour or Rangitoto as identified in the operative District Plan (as at July 2006). The alternative barrier options shall meet each of the following criteria:

- i. The barrier is approved by the Requiring Authority as meeting its operational and safety requirements (including its debris and noise screen functions); and
- ii. The barrier is of a height or design that could maintain protected views from the Viaduct to the Waitemata Harbour or Rangitoto as identified in the operative District Plan (as at 7 July 2006); and
- iii. The barrier provides the same or better acoustic performance required under condition 9.2(a).

b. The peer review report shall include details of each barrier option (if more than one), including a view protection assessment, the cost, maintenance requirements and the extent to which each option meets Transit's required operational and functional requirements (including its debris and noise screening functions). The report shall be provided to Auckland City Council and the Auckland Regional Council;

c. The view protection assessment shall use photomontages or computer modelling techniques, to demonstrate the impact of each option on protected views. The view protection assessment shall show a representative range of views along the viewshaft's origin from the level of a typical motorcar; and

d. Following the completion of the peer review, where significant additional protection to the views from the Viaduct to the Waitemata Harbour or Rangitoto can be practicably achieved, the Requiring Authority will determine the final barrier design in consultation with Auckland City Council and the Auckland Regional Council.

8.4 The above ground Viaduct pier elements shall not be located in the pier restriction zone shown on Transit plan 9101314-S211, titled "Pier Restriction Zones", Revision B dated 13 January 2006 and submitted with the section 92 response. Piers located within the local road reserve will be minimized and will require the prior written approval of the Auckland City Council. The Council will assess the position and design of the pier in terms of its impact on amenity, public safety and pedestrian and traffic movement, and Council approval shall not be unreasonably withheld.

9. Operational Noise

9.1 The PMP shall include a Noise Management Plan (NMP) to be provided to Auckland City Council prior to commencement of works. The NMP shall be prepared by a suitably qualified acoustic expert for the purposes of avoiding, mitigating or remedying any adverse noise effects from the operation of the project following its

The Proposed Auckland Unitary Plan (notified 30 September 2013)

construction.

9.2 The NMP shall include:

- a. General measures (e.g. noise attenuation barriers), to achieve at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999), these shall include (but are not limited to) the following mitigation measures:
 - i. A noise barrier, no less than 2 metres high from the level of the carriageway, between Mt Hobson Road and the motorway (extending from approximately 28 Dilworth Avenue to 34 Mt Hobson Road) in accordance with the Newmarket Viaduct Improvement Project - Assessment of Noise Effects for Viaduct Section Report (Marshall Day) dated 15 November 2005;
 - ii. The use of Open Graded Porous Asphalt "OGPA" or equivalent material to surface the new viaduct; and
 - iii. The use of solid barriers and a median on the new viaduct.
- b. Specific measures for existing dwellings, where these are necessary in addition to the general measures under 9.2.a. above to achieve at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999).

9.3 The NMP shall identify the existing dwellings for which specific measures are required in accordance with condition 9.2.b above. Those dwellings shall be referred to as 'affected dwelling(s)'.

9.4 Not less than three months prior to the completion of construction of the Project, the Requiring Authority shall give written notice to the owner of each affected dwelling:

- a. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels;
- b. Advising that the owner has six months within which to decide whether or not to accept mitigation treatment to the dwelling; and
- c. Once an agreement on mitigation is reached between the Requiring Authority and the owner, the mitigation shall be implemented in an accepted timeframe between the Requiring Authority and the owner.

9.5 The Requiring Authority shall advise the Auckland City Council of:

- a. All written notices served in accordance with condition 9.4;
- b. Any responses received to those written notices; and
- c. Those affected dwellings in respect of which no response has been received.

9.6 Where specific measures are required for an affected dwelling, the Requiring Authority shall be deemed to have complied with condition 9.1 above where:

- a. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
- b. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six months after the practical completion of the Project; or
- c. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six months after the completion of the State highway construction.

9.7 Subject to condition 9.6, all noise mitigation measures identified by the NMP shall be implemented prior to the completion of construction of the Project.

9.8 As required by the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999) measurements of noise levels existing prior to construction shall be used to establish ambient noise levels. The results of 24 hour ambient noise measurements at no less than a total of six (6) positions within 50 m of the northbound and southbound lanes, together with site maps and photographs detailing measurement positions and key data on measurement conditions shall be forward to the Council prior to the commencement of construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9.9 Compliance Monitoring: Following completion of the work, the requiring authority shall arrange for an appropriately qualified person to undertake monitoring of the level of traffic noise at the above six (6) sites for which ambient noise level data has been previously recorded, within a period between of between 2 and 3 years following completion of construction of the Work and shall report the findings of monitoring to the Council, within one month of the monitoring being undertaken.

10. Operational Vibration

10.1 Vibration levels of the existing State Highway 1 operations shall be measured at critical locations, and submitted to the Council, prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

11. Lighting

11.1 Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas.

12. Parking

12.1 Prior to commencing works pursuant to the designation, the Requiring Authority shall ensure that it has provided approved alternative parking for staff of Westfield, which is currently provided at 10 Mahuru Street, pursuant to Westfield's existing consent LUC no. 5700210401.

13. Lapse Date

Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015, by S78 of the Local Government (Auckland Transitional Provisions) Act 2010.

Advice Notes

1. The Requiring Authority shall obtain all other necessary consents and permits and comply with all relevant Council bylaws.

2. The Requiring Authority shall obtain all other necessary resource consents and permits in relation to sediment and stormwater discharges from the Auckland Regional Council.

3. Under the Historic Places Act an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.

4. Some of the land is subject to existing designations. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.

5. A separate Transit designation, being D09-32, affects land adjoining the Viaduct. That designation imposes a 12.2 metre height restriction on land within 76.2 metres of the centreline of the existing Newmarket Viaduct. The Requiring Authority advises that it will review the ongoing need for and/or extent of designation D09-32 as part of detailed design for the Newmarket Viaduct Project and, once a decision is made, an alteration to designation D09-32 may be sought pursuant to the relevant RMA provisions. In the interim, the height designation D09-32 will remain in its existing position and will not automatically move to align with the new Viaduct alignment.

6721 State Highway 1 - Victoria Park Tunnel

Designation Number	6721
Requiring Authority	New Zealand Transport Agency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	State Highway 1 from Victoria Park, Auckland Central to Shelley Beach Road off-ramp, Westhaven
Rollover Designation	Yes
Legacy Reference	Designation A07-01C, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Motorway - Victoria Park tunnel project.

Conditions

GENERAL

1. General

1.1 Except as modified by the conditions below and subject to final design, the project works shall be undertaken in general accordance with the information provided at the hearing by the Requiring Authority (Transit New Zealand), the Notices of Requirement and the supporting documents, namely:

- a. 'Harbour Bridge To City Project - Overview, Notices of Requirement and Attachments - Volume 1', prepared for Transit New Zealand by Beca Infrastructure Ltd, dated October 2005;
- b. 'Harbour Bridge To City Project - Assessment of Environmental Effects - Volume 2', prepared for Transit New Zealand by Beca Infrastructure Ltd, dated October 2005;
- c. 'Harbour Bridge To City Project - Technical Appendices - Volume 3', prepared for Transit New Zealand by Beca Infrastructure Ltd [et al.] dated October 2005;
- d. 'Harbour Bridge To City Project -A3 Plans - Volume 4', prepared for Transit New Zealand by Beca Infrastructure Ltd, dated October 2005;
- e. Further information provided with the response provided under Section 92 Resource Management Act 1991 (dated 2 February 2006).

Note: The Harbour Bridge to City project has been renamed the " Vic Park Tunnel Project" (the Project).

1.2 As soon as practicable following completion of construction of the Vic Park Tunnel (VPT) Project, the Requiring Authority shall give notice to the Auckland City Council in accordance with Section 182 of the Resource Management Act ("RMA") for removal of those parts of the existing designations (those in existence prior to the lodgement of the new designation subject to condition 1.1 above) between the Auckland Harbour Bridge and Wellington Street overbridge, being:

1. A07-01 'Motorway' and A07-01A 'Motorway': Shelly Beach Priority Lane in the Auckland City District Plan: Isthmus; and
2. 283 'Motorway' in the Auckland City District Plan: Central Area.

1.3 As soon as practicable following completion of construction of the Project, the Requiring Authority shall give notice to Auckland City Council in accordance with Section 182 of the RMA for removal of those parts of the designation which are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note:

This condition is specific to land no longer required for construction purposes once the Project is completed.

1.4 A liaison person shall be appointed by the Requiring Authority for the duration of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.5 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the designation boundary on individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is later.

1.6 The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

2. Project Management Plan ("PMP") and Outline Plans

2.1 The Requiring Authority shall prepare a PMP, which shall include mitigation/management plans as referred to in conditions dealing with specific issues below. A schedule of how the subsidiary plans that are required by these conditions relate back to the PMP follows these conditions as Annexure A.

2.2 No works shall be undertaken in any particular location(s) until:

1. The PMP, or such part(s) of the PMP as are relevant to the location(s) are submitted to and approved by the Auckland City Council (Group Manager: City Planning); and
2. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (RMA) in relation to the works in the location(s), have been submitted to the Auckland City Council.

2.3 Where an outline plan or plans are required by section 176A of the RMA for works in any particular location(s) and the Auckland City Council agrees that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 of the RMA, then the PMP or relevant part(s) of the PMP shall be deemed to be a waiver of the requirement for an outline plan in respect of the works in the particular location(s), as provided for in section 176(2)(c) RMA.

2.4 The works shall be undertaken in accordance with the approved PMP and outline plan of works (where required).

3. Other Plans

3.1 The PMP shall include an Environmental Management Plan (EMP) to be provided to the Auckland City Council prior to the commencement of works. The purpose of the Environmental Management Plan is to avoid, remedy or mitigate all adverse environmental effects associated with the construction and operation of the Project. The EMP is to include a Construction Environmental Management Plan (CEMP) and Environmental Monitoring Guidelines (EMG).

3.2 The PMP shall include a Construction Management Plan (CMP) to be provided to Auckland City Council (Group Manager: City Planning) prior to commencement of works. The purpose of the CMP is to avoid, remedy or mitigate any effects of construction, through methods identified in the CMP, including the preparation of management plans. The CMP shall be prepared in consultation with the directly affected parties and parties affected by proximity (including other neighbouring submitters) as shown in Appendix 1 to the decision (refer to Plan Modification 32).

3.3 The CMP shall include specific details relating to the demolition, construction and management of all works associated with the Project, including the details indicated below:

1. Details of the site or project manager, including their contact details (phone, facsimile (if any), postal address, email address);
2. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
3. An outline construction programme of the works indicating in particular likely time periods for partial or complete road closures and anticipated traffic diversion effects;
4. Any means to ensure that no damage occurs to street trees throughout the construction period;
5. Any means of protection of services such as pipes and watermain within the road reserve;
6. Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
7. Location of workers' offices and conveniences (e.g. portaloos);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places, including wheel wash for construction vehicles. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
9. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;
10. Procedures for ensuring that blasting events, if any, occur at times least likely to disturb all people in the immediate vicinity of the construction areas, and for reasonable notice or warning of any blasting events to be given;
11. Procedures to be followed to ensure that those working in the vicinity of identified heritage features are aware of the heritage values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
12. Procedures to be followed to ensure that iwi representatives are notified of the proposed commencement of works and of the discovery of any koiwi or other artefacts;
13. Procedures to be followed in the event that any historic artefacts are disturbed, being in accordance with any Authority obtained under the Historic Places Act;
14. Means of ensuring the safety of the general public;
15. Methods for receiving and responding to complaints about construction dust and odour from the works;
16. Protocols for offering mitigation such as temporary relocation of households where noise and other impacts cannot be managed to comply with relevant standards.

NOISE AND VIBRATION

4. Operational Noise

4.1 A Noise Management Plan (NMP) shall be prepared by a suitably qualified acoustics expert for the purposes of avoiding, mitigating or remedying any adverse noise effects from the operation of the Project following its construction. The NMP shall be provided to the Auckland City Council (Group Manager: City Planning) prior to the commencement of works.

4.2 The NMP shall include:

1. General measures to achieve, at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999), including (but not limited to) the following mitigation measures:
 - i. the construction of noise walls (to a maximum of 5 metres in height in the St Mary's Bay area);
 - ii. the use of Open Graded Porous Asphalt "OGPA" or equivalent material to surface the carriageway;
2. Specific measures for existing dwellings, where these are necessary in addition to the general measures under (a) above to achieve at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999).

4.3 The NMP shall identify the existing dwellings for which specific measures are required in accordance with condition 4.2.2) above. These dwellings are referred to as the 'affected dwelling(s)'.

4.4 Not less than three months prior to the completion of construction of the Project, the Requiring Authority shall give written notice to the owner of each affected dwelling:

1. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels; and
2. Advising that the owner has six months within which to decide whether or not to accept mitigation treatment to the dwelling.
3. Once an agreement on mitigation is reached between the Requiring Authority and the owner, the mitigation shall be implemented in an accepted timeframe between the Requiring Authority and the owner.

4.5 The Requiring Authority shall advise the Auckland City Council (Group Manager: City Planning) of:

1. All written notices served in accordance with condition 4.4;
2. Any responses received to those written notices;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. Those affected dwellings in respect of which no response has been received.

4.6 Where specific measures are required for an affected dwelling, the Requiring Authority shall be deemed to have complied with condition 4.1 where:

1. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
2. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six months after the practical completion of the Project; or
3. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six months after the completion of construction of the Project.

4.7 Subject to condition 4.6, all noise mitigation measures identified by the NMP shall be implemented prior to the completion of construction of the Project.

4.8 As required by the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999), measurements of noise levels existing prior to construction shall be used to establish ambient noise levels. Measurements shall be undertaken by a suitably qualified person and the results of 24 hour ambient noise measurements at a total of six (6) positions within 100 metres of the designation boundary, together with site maps and photographs detailing the measurement positions and key data on measurement conditions shall be forwarded to the Auckland City Council (Group Manager: City Planning) prior to the commencement of construction.

4.9 Following completion of the Project, the Requiring Authority shall arrange for an appropriately qualified person to undertake monitoring of the level of traffic noise at the above six (6) sites for which ambient noise level data has been previously recorded, within a period between 2 and 3 years following completion of construction of the Project and shall report the findings of monitoring to the Auckland City Council (Group Manager: City Planning), within one month of the monitoring being undertaken.

5. Operational Vibration

5.1 Vibration levels of the existing State Highway 1 operations shall be measured at critical locations nominated by Transit New Zealand, and submitted to the Auckland City Council (Group Manager: City Planning), prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

6. Construction Noise and Vibration

6.1 The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction periods of the Project and shall include the following:

Noise

1. The CMP shall include a Construction Noise and Vibration Management Plan (CNVMP) describing the measures adopted to, as far as practicable, meet the requirements of NZS6803:1999 Acoustics - Construction Noise. The CNVMP shall refer to noise management measures set out in Annexure E of NZS6803:1999, and as a minimum shall address the following;
 - i. Construction sequence;
 - ii. Machinery and equipment to be used, including the use of non-percussive machinery where practicable;
 - iii. Hours of operation, including times and days when noisy construction work would occur;
 - iv. The design of noise mitigation measures such as temporary barriers or enclosures;
 - v. Construction noise limits for specific areas;
 - vi. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes;
 - vii. Methods for monitoring and reporting on construction noise.
 - viii. Methods for receiving and responding to complaints about construction noise.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vibration

2. The CNVMP shall also describe measures adopted to, as far as practicable, meet the vibration criteria of the German Standard DIN 4150, and shall address the following aspects:

- i. Vibration monitoring measures;
- ii. Criteria;
- iii. Possible mitigation measures;
- iv. Complaint response;
- v. Reporting procedures;
- vi. Notification and information for the community of the proposed works;
- vii. Vibration testing of equipment to confirm that the vibration limits will not be exceeded;
- viii. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- ix. Operational times;
- x. Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works.

7. Blasting

7.1 If any blasting is required during construction, it shall be so controlled as to ensure that any ground vibration as a result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause any reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 'Structural Vibration in Buildings - Effect on Structures', will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetre per second (mm/s).

7.2 The noise created by the use of explosives for blasting shall not exceed a peak overall sound pressure of 128dB (i.e. peak over pressure of 0.05kPa) or alternatively the noise shall not exceed a peak sound level of 122dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not subject to this designation).

CONSTRUCTION TRAFFIC

8. Traffic Management Plan

8.1 The Construction Management Plan shall include a Traffic Management Plan (TMP). In developing the TMP:

1. The Requiring Authority shall use advanced traffic modelling tools to better understand the effects of construction of the Project on the affected road network. These tools will be developed and calibrated in conjunction with the Auckland City Council (Group Manager: City Planning) and have the ability to simulate lane restrictions and road closures;
2. The Requiring Authority shall undertake measures to avoid road closures and also the restriction of vehicle and pedestrian movements to the greatest extent practicable. In particular, the measures shall ensure that vehicle and pedestrian accesses in the vicinity of the Victoria Street / Franklin Road intersection are maintained to the greatest extent practicable during the construction period, so as to provide full access for vehicle movements from Franklin Road into Victoria Street and at a minimum left turn access from Victoria Street into Franklin Road.

8.2 The TMP shall describe the measures that will be undertaken to achieve, as far as practicable, the following:

1. Methods of avoiding, remedying or mitigating the local and network wide effects of construction of the Project. In particular, the TMP shall describe:
 - i. Traffic management measures to address and maintain, where practicable traffic capacity, including bus services, at traffic peak hours during week days and weekends in Victoria Street, Beaumont Street, Fanshawe Street, Franklin Road, Cook Street, College Hill and Union Street;
 - ii. Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses (including the restriction of right turn movements into Franklin Road);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- iii. Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (eg intersections/tunnel) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- iv. Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks);
- v. The numbers, frequencies, routes and timing of construction traffic movements; and
- vi. Monitoring to measure the impact of traffic, in terms of traffic speeds and volumes on those roads described in 8.2.1(i);
- vii. Alternative locations to mitigate the temporary loss of off street parking during construction;
- viii. Traffic management measures to ensure, to the greatest extent practicable, that during the peak trading hours of the Victoria Park New World, namely 4.00pm to 7.00pm on weekdays and 11.00am to 4.00pm on weekends:
 - a. access for vehicle movements from Franklin Road into Victoria Street (and at a minimum left turn access from Victoria Street into Franklin Road) is maintained; and
 - b. access is maintained to the carpark of the Victoria Park New World.
2. Methods to manage the effects of traffic during construction, including the requirement to detour or divert traffic. These methods shall:
 - i. Seek to avoid, remedy or mitigate effects on access to and from residential areas in Franklin Road, Beaumont Street and Victoria Street and the effects of traffic noise at night.
 - ii. Seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area particularly on Franklin Road, Victoria Street and Beaumont Street including the New World supermarket and the Victory Christian Church.
3. Traffic management measures during construction to be developed in consultation with the Auckland Regional Transport Authority (ARTA), Bus and Coach Association and the Auckland City Council to address and maintain, where practicable, traffic capacity at peak hours to provide for passenger transport services on the road network.
4. Consultation with the Auckland City Council (Group Manager: City Planning) with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation.
5. Identification of any existing on-site parking and manoeuvring areas which are affected by the works. Then, as far as practicable, and in consultation with the Auckland City Council (Group Manager: City Planning) and the affected landowners, how the affected areas will be relocated or reinstated to achieve compliance with the Auckland City District Plan: Isthmus Section 1999 or Auckland City District Plan: Central Area Section 2004 or to a similar standard to that existing.
6. Measures to maintain existing vehicle access to the greatest extent practicable or where the existing property access is to be removed or becomes unsafe as a result of the works, to provide alternative access arrangements to an equivalent standard as that removed, as far as practicable, and in consultation with the Auckland City Council (Group Manager: City Planning) and the affected landowner.
7. Details on the maintenance of pedestrian access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable. Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. This shall include the areas of high pedestrian traffic of Fanshawe Street, Wellington Street, Franklin Road, Union Street, Cook Street, Victoria Street and Beaumont Street as well as Point Erin, St Mary's Bay and Victoria Park reserve areas.
8. Consistency with Transit New Zealand 'Code of Practice for Temporary Traffic Management' (COPTTM).
9. Recognition of the need for the Auckland City Council to access and maintain its roading network during the construction phase of the Project.
10. Recognition of the need to coordinate and to consult directly with the proponents of any major construction occurring concurrently with, and in the vicinity of, the Project during construction.

8.3 During construction of the proposed tunnel, Transit shall ensure that all storage and vehicle parking takes place within the boundaries of the designation or in compliance with all parking restrictions and Council bylaws.

8.4 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

designation at all times and not on surrounding streets.

8.5 All storage of materials and equipment associated with the construction works shall take place within the boundaries of the designation.

8.6 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage at no cost to the Auckland City Council.

OPERATIONAL TRAFFIC

9. Traffic management measures that are practicable will be developed by Transit in consultation with ARTA and the Northern Busway partners and implemented, if required, to provide northbound bus priority through the Fanshawe Street / Beaumont Street intersection and the St Mary's Bay section of the motorway corridor.

PUBLIC OPEN SPACE AND AMENITY

10. Trees

10.1 The Requiring Authority is to produce a feasibility report, prepared by a qualified arboriculturalist and transplanting specialist, on transplanting the scheduled London Plane Trees in Victoria Park which are affected by the proposed designation and works to a location to be determined in consultation with Auckland City. This feasibility report shall address the likelihood of tree survival, the effects of relocation (temporary or permanent), the timeframes required and their effects on the Project, and the overall benefits/costs. If transplanting one or more of the trees is found to be feasible by the transplanting specialist, and Transit agrees with the estimated cost of transplantation, the transplantation shall be undertaken prior to the commencement of the works in that vicinity. The transplanting shall be accompanied by a maintenance programme approved in advance by the Auckland City Arborist.

10.2 The methodology for relocating any such trees shall be approved by the Auckland City Arborist.

10.3 In the event that it is not feasible to transplant one or more of the scheduled London plane trees, their removal shall be mitigated by the planting of an appropriate number of London plane trees in Victoria Park with the intent that the ring of trees that delineates the Park is maintained. The Auckland City Arborist is to determine how many replacement trees will be required in the case of each London plane tree so removed. The replacement trees shall be planted within the next available planting season. If the planting positions are not available until after the construction period is complete, the trees shall be grown on in a nursery until required. These trees shall be a minimum of 6m high when planted. Each of the trees shall have a two year maintenance programme approved by the Auckland City Arborist. The planting locations for the replacement trees shall be addressed as part of the Requiring Authority's landscape mitigation package and shall be approved by the Auckland City Arborist.

10.4 The Requiring Authority shall develop a tree mitigation package comprising transplanting or replanting of trees, and planting of new trees.

10.5 The removal of any elm trees is to follow MAF (Biosecurity New Zealand) requirements. All plant and machinery used during any such removal must be cleaned before off-site use.

10.6 Monitoring of the groundwater conditions is to be undertaken around trees in the vicinity of the tunnel excavation during construction. If, in the opinion of the Auckland City Arborist, groundwater levels decline to a level that may adversely affect tree health, appropriate remedial measures shall be undertaken by the Requiring Authority to the satisfaction of the City Arborist.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10.7 Conditions 10.8 to 10.15 apply to trees within the designation area that would be subject to Tree Protection rules under the underlying zoning provisions of the District Plan ("Protected Trees").

10.8 Removal, trimming/pruning or works within the drip line of Protected Trees shall be limited to those trees identified in Appendix 2 of the decision (refer to Plan modification 32). A tree may be added to this Appendix with the approval of the Auckland City Arborist.

10.9 A suitably experienced, Council approved arborist ('nominated arborist') shall be employed by the Requiring Authority for the duration of the works, at the Requiring Authority's expense, to monitor, supervise and direct all works within the drip line or in the vicinity of those Protected Trees to be retained.

10.10 Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions of designation that pertain to the retained vegetation are explained by the nominated arborist to all contractors or sub-contractors who will be working on site within the drip-line of, or adjacent to, any protected vegetation that is covered by the designation.

10.11 A copy of the conditions of designation pertaining to the Protected Trees shall be held at the main construction site office, on site, at all times.

10.12 The following measures shall be taken in respect of the remaining Protected Trees within the designation area:

1. Prior to the commencement of construction activity temporary protective fencing shall be erected around the Protected Trees to be retained, and shall remain in place for the duration of the Project. The purpose of the temporary protective fencing is to provide an area around the retained trees that will facilitate their successful retention during the construction process. The parameters of the enclosure shall be as directed by the nominated arborist.
2. Except as provided for in conditions below, the area within the temporary protective fencing shall be considered a total exclusion zone. The Requiring Authority and/or its agents shall not:
 - i. Enter into the delineated area without prior consultation and agreement from the nominated arborist;
 - ii. Alter the dimensions of the delineated area without prior consultation and agreement from the nominated arborist;
 - iii. Store diesel, cement, building materials, site huts, spoil, equipment, or machinery within the delineated area;
 - iv. Spill substances likely to be injurious to tree health within seepage distance of the delineated area
3. The temporary protective fencing shall be constructed with a solid face (e.g. plywood or corrugated iron) and attached to a sturdy framework of freestanding scaffolding or posts. It must be constructed to a minimum height of 1.8m and must remain in place for the duration of the Project.

10.13 The nominated arborist shall undertake all necessary trimming and pruning works, including the pruning of tree roots uncovered during excavations. Exposed roots shall be covered and kept moist.

10.14 The nominated arborist shall undertake a tree monitoring program throughout the construction phase, including monitoring of:

- a. The condition repair and location of the temporary protective fencing;
- b. Any excavation within the drip line of Protected Trees;
- c. General tree health; and
- d. Compliance with the conditions of designation by way of fortnightly inspections during the construction period. A copy of the monitoring results from each visit shall be sent to the Auckland City Arborist, with one copy being retained on site by the Project Manager, while a further copy is to be retained by the nominated arborist.

10.15 During the construction process the Requiring Authority shall implement, where practicable, any recommendations made by the nominated arborist on the installation of irrigation systems, mulch, or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

remedial pruning works if they are required to improve tree health.

11. Auckland City Parks and Reserves

11.1 The design of the Victoria Park tunnel shall not preclude undergrounding of the southbound carriageway in the future.

11.2 The design of the Victoria Park tunnel shall not unreasonably preclude surface parks and recreational land uses from locating above it.

11.3 All land owned by the Auckland City Council shall be restored to its pre-construction state, or as otherwise agreed by the Auckland City Council (Manager Property Group) and the Requiring Authority in accordance with the Urban Design and Landscape Mitigation Plan.

11.4 Any structures and associated infrastructure required to be located within Victoria Park to provide emergency access to and egress from the Victoria Park tunnel shall be:

1. Made as unobtrusive as practicably possible, while achieving their necessary functionality;
2. Located in a manner consistent with existing buildings and site features, or otherwise near the periphery of Victoria Park, to the extent practicable;
3. If possible integrated into other Park features or structures;
4. Suitably designed and landscaped to minimise their adverse effects.

11.5 The design and location of any such structures in Victoria Park shall be approved by the Auckland City Council (Group Manager: Community Planning) prior to its construction.

11.6 A site-specific slope stability assessment shall be carried out by a suitably qualified engineer for the southern abutments of the Shelly Beach Road overbridge and Jacob's Ladder Pedestrian Bridge, as well as at any location where Tunnel Project works are within 10m of the St Mary's Bay cliff face. Where a moderate or greater risk of instability is assessed as a result of works on the Project, a slope movement monitoring system shall be installed with site-specific stability criteria and trigger levels. If the slope movement monitoring system observes deformation in excess of specified trigger levels as a result of the Project works, the Auckland City Council (Group Manager: Community Planning) in consultation with Transit New Zealand's nominated contractor shall coordinate the appropriate remedial actions. Where practicable, stabilisation works shall be undertaken in a manner that is sensitive to the natural character and gateway values of this area.

12. Integrated Urban Design and Landscape Mitigation Plan

12.1 The PMP shall include an integrated Urban Design and Landscape Mitigation Plan ("UDLMP") to be provided to the Auckland City Council (Group Manager: Community Planning) prior to or together with the outline plan of works for the Project or relevant Project stage. The UDLMP shall be prepared by a suitably qualified person or persons and shall take into account the following:

1. Transit New Zealand's "Guidelines for Highway Landscaping" (dated September 2002);
2. Transit New Zealand's "Central Motorway Improvements: Urban Design Framework" (dated 6 September 2001); and
3. Transit New Zealand's "Urban Design Implementation Principles" (2006).

12.2 The UDLMP is to be based on the draft "Vic Park Tunnel Urban Design Framework" dated 20 October 2006, prepared for Transit New Zealand by Boffa Miskell Limited, and shall include the following key principles:

1. The importance of the tree-lined St Mary's Bay cliffs as a gateway to Auckland City;
2. The existing landscape values of the area;
3. Treatment of the motorway corridor subject of the notices of requirement in a unified way;
4. The considered and careful use of major structural elements;
5. The design of noise barriers as possible sculptural elements (i.e., well designed, elegant and functional structures) but without detracting from principles 1 and 2 above;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. Support for a strong pedestrian experience;
7. Recognition of Maori values, associated with the history of settlement and use of the area, including the connection with Watchmans Island (Motu Ngaengae) and the former pa site on Te To headland.

12.3 The UDLMP shall consist of:

1. The Final Urban Design Framework: The Framework shall depict the overall urban design concept, the design intent, layout and mitigation proposals for key components and areas (or sectors) of the Project, and provide a framework for the design, layout, landscape planting and streetscape measures. The Framework will:
 - i. Be determined in consultation with the Auckland City Council (Group Manager: Community Planning) and relevant iwi (by way of a joint working party);
 - ii. Consider further comments that may be obtained from the Auckland City Council Urban Design Panel (which shall be obtained prior to lodgement of the UDLMP with the Auckland City Council (Group Manager: Community Planning)); and
 - iii. Consider further comments from a stakeholder workshop to which affected parties listed in Appendix 1 to the decision (refer to Plan Modification 32) will be invited.
2. Detailed Design Plans: These plans shall depict landscape and streetscape design elements for the Project, as appropriate, and shall consist of:
 - i. An overall "masterplan" of the Project showing the location and extent of landscape and streetscape improvements and mitigation measures;
 - ii. Where required, detailed concept plans for each sector of the route, including cross-sections and elevations of common and site-specific landscape and streetscape elements.

12.4 Contents of detailed design plans.

1. Streetscape elements to be included in the detailed design plans as described in condition 12.3 (2.) shall include:
 - i. Noise attenuation barriers no greater than 5m in height;
 - ii. Road safety barriers;
 - iii. Retaining walls;
 - iv. External appearance and safety consideration (eg stone-throwers) of tunnel portals, the edges of the tunnel portal approaches, and emergency egress;
 - v. The relocated Birdcage (Rob Roy) Hotel and surrounding Franklin Road precinct;
 - vi. Open space in front of the relocated Birdcage Hotel and between the southern tunnel portal and Franklin Road;
 - vii. Replacement of pedestrian and park facilities displaced by the Project;
 - viii. The new pedestrian footbridge and other new pedestrian facilities proposed by the Project, including those within the St Mary's Bay reserve and Victoria Park;
 - ix. Local road reserves affected by the designation, including Franklin Road, Victoria Street, Beaumont Street, and Fanshawe Street;
 - x. The Fanshawe Street/Beaumont Street intersection and the Victoria Street West/Franklin Road/Union Street intersection, including the following elements:
 - Sensitivity to the safety of pedestrians;
 - Improved pedestrian linkages;
 - Consistency with local traffic plans and requirements;
 - Landscaping and design consistent with the Urban Design Framework which also recognises the setting and context of the surrounding area including significant cultural and historic features (if any);
 - xi. Streetlights and sign gantries;
 - xii. Preservation of the Jacob's Ladder pedestrian route in recognition of that route's historic significance and social value.
2. Landscape elements to be included in the detailed design plans as described in 12.3 (2) shall include the following:
 - i. A plan for the St Mary's Bay Reserve from Shelley Beach Road through to Beaumont Street, developed in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

accordance with the following concepts:

- The final Urban Design Framework;
 - The recognition of the tree-lined St Mary's Bay cliffs as a gateway to Auckland City;
 - The existing high natural character of the area;
 - The importance of good pedestrian linkages including footpaths, boardwalks and the access to the pedestrian overbridge and Jacob's Ladder;
 - The need for ground contouring and landscaping which avoids surface water ponding, where practicable, and that is sensitive to user amenity and safety and the ability to appreciate existing views, having regard to the effects of any noise barriers that are installed;
 - Replacement and replanting of trees affected by the works and noise barrier.
- ii. A plan for the western end of Victoria Park, developed in accordance with the following concepts:
- The Victoria Park Management Plan (2005);
 - The final Urban Design Framework;
 - Recognition of the existing character and design of the Park;
 - The maintenance of a ring of Plane Trees and the location of landscaping features having regard to the amenity of the Park;
 - Public access and use including access ways and recreational activities;
 - Effective and imaginative use of the space directly under the viaduct structure;
 - Minimising the effect of the location and design of any structures and associated infrastructure required for emergency access to or egress from the tunnel;
 - Areas identified for active recreation including re-establishment of existing activities or new activities such as playgrounds etc and associated parking.
- iii. Specific vegetation removal and modification plans showing all scheduled and non-scheduled trees and significant vegetation to be removed/relocated/modified and the landowner(s) involved;
- iv. Specific planting plans showing the trees and vegetation to be retained, all new planting, and a detailed plant list and specifications including number, size and species;
- v. Planting programme - the staging of planting in relation to the construction programme;
- vi. Detailed specifications relating to (but not limited to) the following:
- Vegetation protection (for desirable vegetation to be retained);
 - Weed control and clearance;
 - Ground preparation (topsoiling and decompaction to ensure rapid plant establishment and ongoing vigour);
 - Mulching;
 - Plant supply and planting;
 - Maintenance regime (requirements and programme);
 - Performance standards (for site preparation, plant supply, planting and maintenance).

12.5 Where appropriate, landscape mitigation proposals outside of the designation (e.g. Victoria Park, St Mary's Bay reserve, Westhaven Drive and Point Erin) may be agreed by the Requiring Authority with the appropriate landowner and subsequently implemented.

12.6 In developing the UDLMP consideration shall also be given to:

1. Other measures that may assist the Auckland City Council to promote safety and security for local residents and open space users;
2. Other measures to assist the Auckland City Council to promote a positive pedestrian experience within the Project area, including the development of pedestrian links in Freeman's Bay (Napier Street to the Birdcage Hotel), through Victoria Park and the St Mary's Bay reserve;
3. Cooperating with the Auckland City Council to identify and to provide opportunities to accommodate any stakeholder funded art works;
4. The requirement that Transit's financial commitment to the urban design process is limited to the mitigation of Project-related effects resulting from within its designation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12.7 The noise barrier along the St Mary's Bay Reserve shall be designed in accordance with the principles of the Urban Design Framework. This design shall take into account the following considerations:

- The provision of acoustic barriers beside the carriageway to achieve, at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999). Such barriers, where appropriate, shall be transparent.
- Allowing maximum appreciation by southbound motorists of the gateway effect of the tree-lined cliffs;
- Allowing good views of the Westhaven Marina and the Waitemata Harbour from properties on the cliffs and also from the adjacent walkway;
- Making the barrier itself an attractive landscape element;
- The cost, constructability, and the maintenance requirements of the barrier (including cleaning, removal of graffiti and any advertising posters).

12.8 A management and maintenance plan shall be prepared by the requiring authority and implemented for all noise barriers to ensure that, to the extent practicable, the barriers are continually maintained in good condition and free of graffiti and other defacements that may affect the visual amenity of the surrounding areas.

12.9 Prior to planting and throughout the ensuing maintenance period, all weed species declared as plant pests in the Auckland region by the ARC (including Total Control/Containment Pests/Surveillance Pests & Research Organisms) shall be controlled and removed from the designated areas by the requiring authority

12.10 In areas where shrub mixes are used, planting densities shall ensure low canopy coverage has been attained by the end of the maintenance period, which will run for three years following the completion of the construction works.

12.11 Where native plants are used, the composition shall reflect the natural plant associations of the area, and the mixes (where relevant) shall be of suitable richness and diversity to encourage self-sustainability once established. This will require the inclusion of appropriate successional species, including canopy tree species either in the initial planting mix or as enrichment planting.

12.12 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

12.13 Planting areas shall be mulched using suitable weed-free, granular organic mulch. The only exceptions to this shall be where the slopes are too steep to allow for its retention. In such cases a neutral or black coloured biodegradable or photodegradable geotextile is to be used.

12.14 The landscaping shall be implemented in accordance with the UDLMP within the first planting season following the completion of the construction works provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for the next 3 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping may be implemented after the first planting season of each stage.

13.Lighting

13.1 Motorway lighting should be designed and screened to minimise the amount of lighting overspill and illumination of residential areas.

AIR QUALITY

14.Dust

14.1 The Requiring Authority shall ensure that the Construction Environmental Management Plan developed for the Project contains measures to control dust, generated during the construction process, in order to minimise dust deposition and nuisance beyond the designation boundaries.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Contaminated site/odour

14.2 The Requiring Authority shall ensure that the Construction Environmental Management Plan developed for the Project contains appropriate mitigation measures to control offensive odours, generated as a result of the construction process, occurring beyond the designation boundaries.

15. Monitoring and Review

15.1 At least 6 months prior to commencement of construction of the project, an air quality monitoring station is to be established at a site comparable with the station located within the car park of the Victory Christian Church during 2005 / 2006.

1. The station will monitor the following parameters for a period of six months prior to construction of the project commencing:

- i. Fine particulates (PM10) in accordance with the specifications given in the National Environmental Standards, Air Quality;
- ii. Meteorological measurements of wind speed, wind direction and temperature.

2. The station will monitor the following parameters during construction of the project:

- i. Dust, measured as Total Suspended Particulates (TSP) using a continuous particulate monitor equivalent to that used to measure fine particulates prior to construction;
- ii. Meteorological measurements of wind speed, wind direction and temperature.

3. The station will monitor the following parameters for a period of twelve (12) months after completion of construction of the Project:

- i. Fine particulates (PM10), carbon monoxide (CO) and oxides of nitrogen (NOx) in accordance with the specifications given in the National Environmental Standards, Air Quality;
- ii. Meteorological measurements of wind speed, wind direction and temperature.

4. Results of the monitoring in summary form, assessed against the National Environmental Standards, Air Quality and the Auckland Regional Council target values, shall be reported quarterly to the Auckland City Council.

15.2 Prior to commissioning of the air quality monitoring station, Transit will submit a plan to the Auckland City Council (Group Manager: City Planning) detailing how it will comply with condition 15.1 above.

16. Iwi Matters, Archaeological, Heritage

16.1 An Auckland City Council approved and qualified archaeologist and a Kaitiaki monitor approved by Ngati Paoa and Ngati Whatua shall be provided with 7 working days' notice of the commencement of initial earthworks for the Project in relation to each of the tunnel alignment, its approaches, the basement excavation of the Birdcage Hotel and the relocation site for the Hotel in order that they may be present to monitor those activities.

16.2 Detailed protocols for the management of archaeological, koiwi and waahi tapu discoveries shall be developed in conjunction with tangata whenua prior to construction.

16.3 If any koiwi are exposed during site works the following procedures shall apply:

- a. Immediately after it becomes apparent that koiwi have been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched;
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust, the Auckland City Council (Group Manager: City Planning) and, where appropriate, the New Zealand Police as soon as possible so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the koiwi until any approval required has been obtained.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

16.4 The Requiring Authority shall develop a methodology and monitoring programme for the relocation and restoration of the Birdcage Hotel (formerly the Rob Roy) to be agreed in writing by the Auckland City Council (Group Manager: City Planning) prior to the works commencing and shall:

- a. Take into account the Conservation Plan undertaken by Matthews and Matthews Architects, dated January 2003, and in particular, the policies and schedule of significant features; and
- b. Include an inventory of those parts of the Birdcage Hotel (interior and exterior) which are proposed to be: left in place and protected during relocation; removed and reinstated; and those to be removed and not reinstated;
- c. Include a schedule of the planned restoration and reinstatement works for the Birdcage Hotel and surrounds (including the forecourt area) and additions to the building as part of the relocation; and
- d. Include regular liaison and consultation with the Auckland City Council (Group Manager: City Planning) and the New Zealand Historic Places Trust during the relocation phase.

16.5 All work concerned with the relocation and restoration of the Birdcage Hotel as approved under Condition 16.4 shall be carried out under the direction of an appropriately qualified architectural conservation specialist, the appointment of whom is to be agreed in advance in writing by the Auckland City Council (Group Manager: City Planning).

16.6 Prior to the commencement of construction activities in the vicinity of the Campbell Free Kindergarten, a Condition (Dilapidation) Report on the structure of the Kindergarten building shall be agreed in writing by the Auckland City Council (Manager Property Group) and shall:

- a. Be prepared by a suitably qualified building certifier;
- b. Make any necessary recommendations for reinforcing the Kindergarten;
- c. Include a definition of the level of effects to be considered 'significant' pursuant to Condition 16.8; and
- d. Include consultation by the requiring Authority with the New Zealand Historic Places Trust.

16.7 Prior to the commencement of construction activities in the vicinity of the Campbell Free Kindergarten, the structure of the Kindergarten building shall be reinforced as per the recommendations of the Condition (Dilapidation) Report of Condition 16.6. This reinforcement work shall be certified by a building certifier familiar with the Condition (Dilapidation) Report and shall be completed, inspected and agreed in writing by the Auckland City Council (Manager Property Group) prior to the Project works commencing.

16.8 During construction, the effects of vibration on the Birdcage Hotel, Campbell Free Kindergarten, Auckland Municipal Destructor and Depot (also known as the Victoria Park Market) and the former Auckland Gas Company buildings in Beaumont Street shall be monitored by the Requiring Authority and the results of the monitoring provided to the Auckland City Council (Group Manager: City Planning). Appropriate action shall be undertaken if the effects of vibration are significant, including any reasonable restoration or reconstruction of any heritage elements of the buildings noted above, and in the event of damage or failure as a direct result of the Project works, at the cost of the Requiring Authority and to the written approval of the Auckland City Council.

16.9 Prior to the commencement of the Project works, recording of the historical significance of the HMNZS Ngapona, including exterior and interior photographic archival documentation, shall be undertaken and a report prepared. This report is to be completed in consultation with the New Zealand Historic Places Trust and the Auckland City Council.

SERVICES

17. Infrastructure Service Networks

17.1 The Requiring Authority shall liaise with the providers of infrastructure service networks including, but not limited to: water, gas, stormwater, wastewater, power and telecommunications, to develop methodologies and timing for necessary services relocation with the objective of minimising disruption to the operation of these networks during construction of the Project.

Advice Notes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The Requiring Authority shall obtain all other necessary consents and permits and comply with all relevant Auckland City Council bylaws, and obtain any approvals under the Reserves Act (where required.)
2. The Requiring Authority shall obtain all necessary resource consents and permits in relation to sediment and stormwater discharges from the Auckland Regional Council.
3. Under the Historic Places Act 1993, an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.
4. All archaeological sites are protected under the provisions of the Historic Places Act 1993. It is an offence under that Act to modify, damage or destroy any archaeological site, whether the site is recorded or not. Application must be made to the New Zealand Historic Places Trust Pouhere Taonga for an authority to modify or destroy archaeological site(s).
5. Some of the land is subject to existing designations and the provisions of Section 177 of the Resource Management Act 1991 apply accordingly.

No attachments.

6722 State Highway 16 - Waterview Connection causeway to Patiki Road

Designation Number	6722
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from the causeway to north of Patiki Road on-ramp, Avondale
Rollover Designation	Yes
Legacy Reference	Designation A07-01D, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

To alter designation A07-01, SH16, causeway and Rosebank Peninsula – NOR2. Alteration to existing designation at Rosebank Interchange and Patiki bridges, including part of Rosebank Park Domain; modifications to land on existing causeway, ancillary safety and operational services, and maintenance, relocation of services, pedestrian and cycleway, landscaping and planting etc.

Conditions

For a complete set of conditions, refer to the Waterview Connection Proposal Board of Inquiry decision titled “Final Report and Decision of the Board of Inquiry into the New Zealand Transport Agency Waterview Connection Proposal - Volume 2” dated June 2011.

General Designation Conditions

DC.1

Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by the New Zealand Transport Agency (NZTA being the Requiring Authority), the Notice(s) of Requirement and the supporting documents, and supplementary information provided in evidence. This

The Proposed Auckland Unitary Plan (notified 30 September 2013)

information is summarised as follows:

- (a) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Parts A-E;
- (b) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part F: Plans and Drawings, except as updated through the hearing (Refer Schedule A for current plan and drawing references); and
- (c) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part G: Technical Reports:
 - (i) Technical Report G.1 Assessment of Air Quality Effects
 - (ii) Technical Report G.2 Assessment of Archaeological Effects
 - (iii) Technical Report G.3 Assessment of Avian Ecological Effects
 - (iv) Technical Report G.4 Assessment of Coastal Processes
 - (v) Technical Report G.5 Assessment of Construction Noise Effects
 - (vi) Technical Report G.6 Assessment of Freshwater Ecological Effects
 - (vii) Technical Report G.7 Assessment of Groundwater Effects
 - (viii) Technical Report G.8 Assessment of Herpetofauna Ecological Effects
 - (ix) Technical Report G.9 Assessment of Land and Groundwater Contamination
 - (x) Technical Report G.10 Assessment of Lighting Effects
 - (xi) Technical Report G.11 Assessment of Marine Ecological Effects
 - (xii) Technical Report G.12 Assessment of Operational Noise Effects
 - (xiii) Technical Report G.13 Assessment of Ground Settlement Effects
 - (xiv) Technical Report G.14 Assessment of Social Effects
 - (xv) Technical Report G.15 Assessment of Stormwater and Streamworks Effects
 - (xvi) Technical Report G.16 Assessment of Temporary Traffic Effects
 - (xvii) Technical Report G.17 Assessment of Terrestrial Vegetation Effects
 - (xviii) Technical Report G.18 Assessment of Transport Effects
 - (xix) Technical Report G.19 Assessment of Vibration Effects
 - (xx) Technical Report G.20 Assessment of Visual and Landscape Effects
 - (xxi) Technical Report G.21 Construction Environmental Management Plan (CEMP)
 - (xxii) Technical Report G.22 Erosion and Sediment Control Plan (ESCP)
 - (xxiii) Technical Report G.23 Coastal Works
 - (xxiv) Technical Report G.24 Geotechnical Interpretive Report
 - (xxv) Technical Report G.25 Traffic Modelling Report
 - (xxvi) Technical Report G.26 Operational Model Validation Report
 - (xxvii) Technical Report G.27 Stormwater Design Philosophy Statement
 - (xxviii) Technical Report G.28 Geotechnical Factual Report – 500 Series
 - (xxix) Technical Report G.29 Geotechnical Factual Report – 700 Series
 - (xxx) Technical Report G.30 Assessment of Associated Sediment and Contaminant Loads
 - (xxxi) Technical Report G.31: Technical Addendum Report (September 2010)
- (d) PT & Active Mode Transport Routes Existing and Proposed (Refer Schedule A, Row 22).
- (e) Waterview Connection Project, Evidence and Supplementary Information provided to the Board of Inquiry:
 - (i) Evidence in Chief (Numbers 1-37)
 - (ii) Rebuttal Evidence (Numbers 1-33)
 - (iii) Supplementary Information (Numbers 1-8)

DC.1A

Within 3 months of the designations being confirmed for the Project (or at least 1 month prior to any Auckland Council approvals or certifications required by these Conditions, whichever is the earlier), the NZTA shall update and finalise to the satisfaction of the Major Infrastructure Team Manager, Auckland Council all drawings and Plans cited in Schedule A, and provide a full set of the information and documentation referred to in Condition DC.1 to the Major Infrastructure Team Manager Auckland Council. At the same time the NZTA shall prepare to the satisfaction of the Major Infrastructure Team Leader, Auckland Council, a document for each designation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

which sets out the designation and have attached to it in text format a comprehensive set of the conditions imposed by the Board of Inquiry in its Final Decision as summarised in Schedule B, inclusive of any standard conditions and advice notes.

In particular (but not limited to), the following Plans will need to be amended in light of these Final Conditions:

- (a) F.2 Operational Scheme Plans (refer Schedule A, Row 3) require amendment detailing the amended location of the ventilation stacks and southern ventilation buildings;
- (b) F.5 Construction Scheme Plans (refer Schedule A, Row 4) require amendment to detail changes to the construction footprint for the amended location of the ventilation stacks and southern ventilation buildings and reconfiguration of Construction Yard 1);
- (c) F.6 Construction Yard Plans 101 and 107 (refer Schedule A, Row 7), detailing amendments to the Construction Yard 1 in light of the reconfiguration of this Yard and for Construction Yard 7 in light of the relocation of the northern ventilation stack (refer Schedule A, Row 34);
- (d) F.8 Plans of Structures and Architectural Features (refer Schedule A, Row 9), detailing the amended location of the northern ventilation stack and the design and location of the southern ventilation building and stack;
- (e) The CNVMP (including flow diagram and the supplementary evidence produced by Ms Wilkening) (refer Schedule A, Rows 36, 37 and 39);
- (f) The areas of the Open Space Restoration Plans (Schedule A, Row 30) to:
 - (i) Extend these areas in geographic extent to provide for the works identified in the Management Plan notations identified in the OS Conditions (in particular OS.5 and OS.6) (e.g. these areas will (as relevant) include Eric Armishaw Park, Howlett Reserve and Waterview Esplanade Reserve); and
 - (ii) Exclude the operational area of designation required for the northern ventilation stack (as identified through the OPW process (refer Condition DC.8); and
- (e) Schedule A, Row 28 the Plan detailing proposed open space impacts and replacements needs to be updated to recolour the two land parcels on Hendon Avenue (which are excluded from the replacement calculations) to 'brown' to confirm they are part of the operational impact and will not be returned as open space.

DC.2

The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

DC.3

The NZTA shall update and finalise the relevant Construction and Operational Management Plans required under these conditions to ensure compliance with the designation conditions imposed by the Board of Inquiry. The relevant Management Plans shall be submitted to the Major Infrastructure Team Manager, Auckland Council within the timeframes specified in the following conditions. No works shall be undertaken until the relevant management plans have been finalised and certified or approved in accordance with the relevant conditions.

DC.4

Any Management Plans submitted to the Major Infrastructure Team Manager, Auckland Council for approval or certification may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted shall clearly show the integration with adjacent stages and interrelated activities.

DC.5

In the event of any dispute, disagreement or inaction arising as to any Auckland Council Manager certification/ approvals required by the designation conditions, or as to the implementation of or monitoring required by the conditions, matters shall be referred in the first instance to the NZTA Regional State Highway Manager and to the Resource Consents Manager, Auckland Council to determine a process of resolution. If a resolution cannot be agreed, then the matter may be referred to an independent appropriately qualified expert, agreeable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not

The Proposed Auckland Unitary Plan (notified 30 September 2013)

agree. The independent appropriately qualified expert shall be appointed within 10 working days of the NZTA or Auckland Council giving notice of their intention to seek expert determination. The expert shall, as soon as possible, issue his or her decision on the matter. In making the decision, the expert shall be entitled to seek further information and hear from the parties as he or she sees fit.

Advice note: The dispute resolution process provided for in this condition does not prejudice any party's right to take enforcement action in relation to the implementation of the designation conditions. However, the dispute resolution process will be applied before any formal enforcement action is taken by the Council, except in urgent situations.

DC.6

Except for Conditions DC.7, DC.8 and DC.9, the NZTA shall be exempt from providing an Outline Plan of Works for the Project, as provided for in Section 176A (2)(a) and (b) of the RMA.

Advice note: The Construction and Operational Management Plans, together with the provision of detailed drawings required by Condition DC.1(b) are considered sufficient detail in all aspects of the Project, with the exception of proposed works for the northern and southern ventilation buildings and stacks where further details are required.

DC.10

The NZTA shall give notice to the Manager Regional and Local Planning, Auckland Council in accordance with Section 182 and 181 respectively of the RMA for:

(a) Within six months of the State highway opening (being operational), removal of those parts of the designation that are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note: this condition is specific to land no longer required for construction purposes once the Project is completed and includes the land of 6 Barrymore Road, refer Condition OS.17.

(b) The designation to be altered to remove those conditions no longer required for long term operation and maintenance of the Project.

DC.12

Unless otherwise provided for by Condition RC.2, if any monitoring required to be undertaken by any party by the designation conditions indicates non-compliance with any designation condition, the NZTA must provide written notice to the Major Infrastructure Team Manager Auckland Council as soon as it becomes aware of same, stating the following:

(a) A description of the non-compliance; and

(b) The measures NZTA proposes for addressing the non-compliance, including any additional mitigation measures.

Subject to the Council's approval, the NZTA must implement the additional mitigation measures to address the non-compliance.

DC.13

Pursuant to Section 36(1)(d) of the RMA, the requiring authority is required to pay to Auckland Council any administrative charge for the carrying out by the local authority of its functions in relation to the administration, monitoring, and supervision of designation conditions.

DC.14

The servants of agents of Auckland Council shall be permitted to have access to relevant parts of the Project at all reasonable times for the purpose of carrying out inspections, investigations, tests, measurements and/or to take samples.

Construction Environment Management Plan Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CEMP.1

Except where provided for in Condition CEMP.1A below, the NZTA shall update and finalise the draft Construction Environmental Management Plan (CEMP) including all the Management Plans which form part of the CEMP and are included as appendices, submitted with this application to ensure compliance with the consent and designation conditions imposed by the Board of Inquiry. The CEMP shall be provided to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to the commencement of works to certify compliance and consistency with the conditions. Construction shall not commence until certification is obtained.

Advice note: For clarity the CEMP will be updated and finalised in accordance with the conditions. Any amendments will be limited to reflecting the requirements of the conditions, specifying personnel, and completing the Environmental Risk Register.

Advice note: Particular care must be taken with development and operation of Construction Yard 7. When the CEMP is being updated and finalised, consideration must be given to the contents of the draft SSCOMP prepared for Construction Yard 7 (Row 41, Schedule A) recognising changes required by inclusion of the ventilation stack in this yard.

CEMP.2

The certification process of the CEMP (and its appendices) shall confirm that the CEMP gives effect to the relevant conditions, as well as those matters in CEMP.6, and that it includes details of:

- (a) Staff and contractors' responsibilities;
- (b) Training requirements for employees, sub-contractors and visitors;
- (c) Environmental incident and emergency management;
- (d) Communication and interface procedures (in accordance with the Communication Plan required under Condition PI.2);
- (e) Environmental complaints management (including the procedures required under Condition PI.4);
- (f) Compliance monitoring;
- (g) Reporting (including detail on the frequency of reporting to the Auckland Council);
- (h) Environmental auditing; and
- (i) Corrective action.

CEMP.3

The management of key environmental effects associated with the construction phase of the Project is detailed within environmental management plans that are included in the CEMP as appendices. This suite of management plans as shown on Figure CEMP.A comprises:

- (a) Construction Noise and Vibration Management Plan (CNVMP);
- (b) Construction Air Quality Management Plan (CAQMP);
- (c) Erosion and Sediment Control Plan (ESCP);
- (d) Temporary Stormwater Management Plan (TSMP);
- (e) Ecological Management Plan (ECOMP);
- (f) Groundwater Management Plan (GWMP);
- (g) Settlement Effects Management Plan (SEMP);
- (h) Contaminated Soils Management Plan (CSMP);
- (i) Hazardous Substances Management Plan (HSMP);
- (j) Archaeological Site Management Plan (ASMP);
- (k) Construction Traffic Management Plan (CTMP);
- (l) Concrete Batching and Crushing Plant Management Plan (CBCPMP);
- (m) Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP) (to be prepared in accordance with Condition CEMP.15);
- (n) Waste Management Plan (to be prepared in accordance with Condition CEMP.10); and
- (o) Temporary Construction Lighting Management Plan (to be prepared in accordance with Condition L.2).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CEMP.4

The CEMP shall be implemented and maintained throughout the entire construction period.

CEMP.5

A copy of the CEMP shall be held on each construction site at all times and be available for inspection on request by the Auckland Council.

CEMP.6

The finalised CEMP shall include specific details on demolition, construction and management of all works associated with the Project. The certification process of the CEMP shall confirm that the CEMP includes details of the following:

- (a) Details of the site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) The location of large notice boards that clearly identify the NZTA and the Project name, together with the name, telephone, email address and address for service of the site or Project manager and the community liaison person;
- (c) An outline construction programme of the work indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- (d) The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at night, on Sundays and during public holidays;
- (e) Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/ storage of rubbish, storage and unloading of building materials and similar construction activities;
- (f) Location of worker's offices and conveniences (e.g. portaloos);
- (g) Procedures of controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- (h) Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (Nov 2007);
- (i) Procedures for ensuring that residents within 100m of construction areas or other people whose use of an area may be disrupted by construction works (for example the Te Atatu Boating Club for works on the Whau River) are given notice of the commencement of construction activities and are informed about the expected duration of the works, including potentially through the community liaison person;
- (j) Procedures to be followed to ensure that those working in the vicinity of identified heritage and ecological features are aware of the heritage or ecological values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- (k) Means of ensuring the safety of the general public;
- (l) Procedures for the community liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- (m) Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding streets is restricted;
- (n) All temporary boundary/ security fences shall be maintained in good order, with any graffiti removed as soon as possible;
- (o) Confirmation of a Project Arborist and completion of a STEM assessment of the preliminary list of Amenity Trees in Schedule E.7 of the AEE to confirm the final Amenity Trees; and
- (p) The process to minimise removal of Amenity Trees, maximise the protection of those retained, undertake relocation of Amenity Trees and replacement planting of specimen trees (in accordance with Conditions LV.10 and ARCH.9)).
- (q) Advice note: For the purposes of CEMP.6(o) and (p), Amenity Tree is defined as a tree or trees that contribute significantly to amenity, taking into account its form, size, health, ecological or historical significance (a preliminary list of these trees is provided in Appendix E.7 of the AEE).

CEMP.7

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The layout of the 12 Construction Yards, including associated buildings, fencing and site access shall be developed in accordance with Waterview Connection Project Construction Yards Plans (Refer Schedule A, Row 7). The layout drawings shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the occupation of the yard, for review and certification that the final layout of the construction yards is in accordance with the conditions. The layout drawings shall incorporate the following:

- (a) The main access to the construction yards to be located as far as practicable from residential dwellings, taking into account site and public safety and environmental constraints, in the locations shown on Waterview Connection Project Construction Yards Drawings (Refer Schedule A, Row 7);
 - (b) Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings; Construction of temporary boundary/ security fences to be undertaken in a manner which minimises impacts on existing trees;
 - (c) Temporary acoustic fences and visual barriers;
 - (d) Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on adjacent residential dwellings; and
- Location of workers' and Project vehicle parking.

CEMP.8

All storage of material and equipment associated with the construction works shall take place within the boundaries of the designation.

CEMP.9

Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standards as existed prior to such damage at no cost to the Auckland Council.

CEMP.10

The NZTA shall finalise and implement the Hazardous Substances Management Plan (HSMP), through the CEMP (as per Condition CEMP.1), submitted with this application, prior to works commencing on site. The certification process of the CEMP shall confirm that the HSMP clearly identifies the requirements for proper storage, handling, transport and disposal of hazardous substances during the construction phase of the Project and confirm that there shall be no storage of explosives on the Project site.

CEMP.11

The NZTA shall develop and implement a Waste Management Plan in accordance with the waste management principles, controls and methods set out in the CEMP. The Plan shall be provided to the Major Infrastructure Team Manager, Auckland Council and be implemented throughout the entire construction period.

CEMP.12

The CEMP shall be reviewed by the NZTA at least annually or as a result of a material change to the Project.

The review shall take into consideration:

- (a) Compliance with designation and consent conditions;
- (b) Any changes to construction methods;
- (c) Key changes to roles and responsibilities within the Project;
- (d) Changes in industry best practice standards;
- (e) Changes in legal or other requirements;
- (f) Results of inspections, monitoring, incidents, corrective actions, internal or external assessments; and
- (g) Public complaints.

A summary of the review process undertaken shall be kept by the NZTA, provided annually to the Major Infrastructure Team Manager, Auckland Council and made available (with any related data) to the Auckland Council upon request.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CEMP.13

Following the review process (as described in Condition CEMP.12), the CEMP may require updating. Any material change proposed to the CEMP (including appended Management Plans) shall be submitted for approval to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the proposed changes taking effect.

Advice Note:

Material change will include amendment to any base information informing the CEMP or any process, procedure or method of the CEMP (such as the environmental constraints map, compliance monitoring process, complaints procedure or mitigation / remedial methods identified) which has the potential to increase adverse effects on a particular value. For clarity changes to personnel and contact schedules do not constitute a material change.

CEMP.14

The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP). The EISDCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council, and include:

(a) Methods and measures:

(i) To ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities.

(ii) To appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines

(iii) To ensure that no activity is undertaken during construction that would result in ground vibrations and/or ground instability likely to cause material damage to the transmission lines, including support structures.

(iv) To ensure that changes to the drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations for any high voltage transmission line support structure.

(b) Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including, but not limited to, the provisions of Schedule (Growth Limit Zones) to those Regulations.

(c) Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001), including, but not limited to, the provisions of:

(i) Clause 2.2 with respect to excavations near overhead support structures;

(ii) Clause 2.4 with respect to buildings near overhead support structures;

(iii) Section 3 with respect to minimum separation between buildings and conductors;

(iv) Section 5 with respect to minimum safe distances for the operation of mobile plant; and,

(v) Table 4 with respect to minimum safe separation distances between the ground and the overhead conductors.

(d) Confirmation that Transpower has been provided a copy of the EISDCMP for their review at least 20 working days prior to construction.

Advice note: With respect to clause (c), specific consideration must be given to the height and location of temporary structures (such as Project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers).

CEMP.15

The NZTA will be responsible for all service relocations required for construction of the Project. The NZTA shall liaise with the providers of infrastructure service networks (including, but not limited to water, gas, stormwater, wastewater, power and telecommunications), and private property owners with on-site services to develop methodologies and timing for necessary services relocation required for the Project, with the objective of minimising disruption to the operation of these service networks and onsite services.

Advice note:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(a) It is noted that if separate consents are required for relocations for any services of network utility operators or landowners, such consents will be obtained before construction commences in the relevant area, and any effects of those relocations would be considered at that time. The same applies to any alteration of consents if required.

(b) Network infrastructure owned and operated by Watercare Services is located within the designations. An operating agreement will be developed by the NZTA and Watercare Services which will include appropriate notification and access protocols where works are to be undertaken by either network operator on or adjacent to Watercare Services infrastructure within the designations.

Public Information Conditions

PI.1.

A community liaison person shall be appointed by the NZTA for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the Project. The liaison person's name and contact details shall be made available in the CEMP and on site signage by the NZTA. This person must be reasonably available for on-going consultation on all matters of concern to affected parties arising from the Project.

PI.2.

The NZTA shall prepare and implement a Communications Plan that sets out procedures detailing how the public, Ministry of Social Development, Housing New Zealand Corporation and other organisations representing the particular demographic characteristics of the community (including but not limited to Primary Health Organisations, general practitioners, youth, education organisations, aged care groups and groups representing ethnic and migrant communities) will be communicated with throughout the construction and monitoring periods (as prescribed in the designation and consent conditions).

In preparing the Communications Plan, the NZTA will liaise with Auckland Council to access its community liaison databases. The Communications Plan will include details of:

- (a) The site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) In accordance with these Conditions, the database of the key construction activities and monitoring requirements that are the subject of the Communications Plan;
- (c) The database of stakeholders and residents who will be communicated with;
- (d) Communication methods, an assessment of how these methods reach the different audience/ stakeholder groups (including those methods set out in Condition CEMP.6), and detail on when each of these methods will be used (e.g. regular communication or event specific methods);
- (e) The appointed specialist in Environmental and Occupational Medicine, including contact details (as per Condition SO.13);
- (f) Any stakeholder specific communication plans required; and
- (g) Monitoring and review procedures for the Communications Plan.

The Communications Plan shall be written in accordance with the external communication procedures set out in the CEMP and provided at least 20 working days prior to construction commencing, to the Major Infrastructure Team Manager, Auckland Council, Working Liaison Group and the Community Liaison Group(s) established by Condition PI.5. The structure of the communication groups set out in these conditions is attached as Figure PI.A.

PI.3.

At least 15 working days prior to the commencement of construction, and at 15 working day intervals thereafter, or as required depending on the scale of works and effects on the community, advertisements will be placed in the relevant local newspapers and community notice boards (as identified in Condition CEMP.6(b)) detailing the nature of the forthcoming works, the location of the forthcoming works and hours of operation. All advertisements will include reference to a 24 hour toll free complaints telephone number. Where relevant, advertisements will also include but not be limited to details of:

- (a) Any traffic disruptions or controls or changes to property access, pedestrian/ cycle routes and bus stops;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and

(b) Any other construction activities, including night time works, blasting, and structure-borne noise, as identified in the conditions.

PI.4.

The NZTA shall manage, investigate and resolve (as appropriate) all complaints for the duration of the construction works in accordance with the environmental complaints section of the CEMP. The implementation strategy for complaints includes:

- (a) A 24 hour toll free telephone number and email address, which shall be provided to all potentially affected residents and businesses. The number shall be available and answered at all times during the entire duration of the works for the receipt and management of any complaints. A sign containing the contact details shall be located at each site specific work activity;
- (b) The NZTA shall maintain a record of all complaints made to this number, email or any site office, including the full details of the complainant and the nature of the complaint;
- (c) Upon receiving a complaint, within 10 days of complaint receipt, a formal written response will be provided to the complainant and Auckland Council;
- (d) The NZTA shall undertake corrective action where necessary to resolve any problem identified. All action taken and relevant information shall be documented. For the avoidance of doubt, 'where necessary' refers to where the works are not being carried out in accordance with conditions of this designation;
- (e) Where issues and complaints about effects cannot be resolved through the CEMP complaints management process, a meeting shall be held between the NZTA, the complainant and the Auckland Council representative(s) to discuss the complaint and ways in which the issue may be resolved. If parties cannot agree on a resolution, an independent qualified mediator will be appointed, agreeable to all parties and at the shared cost of all parties, to undertake mediation of the dispute or concerns; and
- (f) All information collected in Conditions PI.4 (b), (c) and (d) shall be detailed in a Construction Compliance Report (including the means by which the complaint was addressed, whether resolution was reached and how the response was carried out) prepared by the NZTA. This Report shall be submitted to the Major Infrastructure Team Manager, Auckland Council on a quarterly basis commencing at the beginning of the works and for the entire duration of construction.

PI.5.

The NZTA shall establish Community Liaison Group(s) at least two months prior to construction commencing in each of the following key construction areas:

- (a) Te Atatu (including the SH16 Causeway)
- (b) Waterview (including works to St Lukes on SH16 and on the Waterview Estuary and Causeway Bridges)
- (c) Owairaka

and hold regular meetings (at least three monthly) throughout the construction period and up to 24 months following construction completion relevant to these areas (or less if the members of the Group agree), so that on-going monitoring information can continue to be disseminated.

The Community Liaison Group(s) shall be open to all interested parties within the Project area including, but not limited to the following groups:

- (a) Auckland Council and Auckland Transport;
- (b) Educational facilities within the Project area (including schools, kindergartens, childcare facilities and Unitec Institute of Technology);
- (c) Relevant community/ environmental groups (including but not limited to Friends of Oakley Creek, Star Mills Preservation Group, Cycle Action Auckland and representatives from those organisations identified in the Communications Plan (as required by Condition PI.2) and local residents;
- (d) Department of Conservation;
- (e) Local Boards;
- (f) Iwi groups with Mana Whenua;
- (g) Public transport providers; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(h) Housing New Zealand Corporation.

Advice note: The purpose of the Community Liaison Group(s) is to provide a regular forum through which information about the Project can be provided to the community, and an opportunity for concerns or issues to be raised.

PI.6.

The Community Liaison Group(s) shall be provided opportunities to review and comment on the following (amongst other things):

- (a) The Outline Plan of Works detailing designs for the northern and southern ventilation buildings and stacks (the outcomes of this consultation will be reported in accordance with the processes required in DC.8(n) and DC.9(k);
- (b) The Open Space Restoration Plans (as required by Condition OS.3);
- (c) Finalisation and amendment to Urban Design and Landscape Plans (UDL Plans) (as required by Condition LV.1);
- (d) The Oakley Inlet Heritage Plan (as required by Conditions OS.5(b)(i) and ARCH.6);
- (e) The detail of the Oakley Creek restoration (as required by Condition STW.20);
- (f) Publicly available results of environmental monitoring as required by the designation and/or these Consents (e.g. air quality monitoring); and
- (g) The finalisation of the STEM assessment required by CEMP.6(o) and a schedule of trees that are required to be removed for consideration of timber use in heritage projects as required by Condition SO.7.

Advice Note: Attention is drawn to the Vegetation conditions concerning identification and protection of Significant Vegetation and Valued Vegetation.

(h) Detailed design features of the Te Atatu underpass (e.g. lighting and architectural treatment).

Temporary Traffic Conditions

TT.1

The NZTA shall update and finalise the Construction Traffic Management Plan (CTMP) submitted with this application, in accordance with these conditions, and implement it through the CEMP.

In finalising the CTMP, the NZTA shall:

- (a) Provide simulation modelling demonstrations to better understand the effects of construction of the Project on the affected road network;
- (b) Include measures to avoid road closures and restrictions of vehicle, bus, cycle and pedestrian movements;
- (c) Where road closures or restrictions cannot reasonably be avoided the particular vulnerabilities and sensitivities of pedestrian diversions and restricted conditions shall be taken into account in the planning of any closures or restrictions.

TT.2

The CTMP shall require the development of Site Specific Traffic Management Plans (SSTMPs) and their approval by the Traffic Management Project Governance Group (as defined by the CTMP), for each construction activity that may affect traffic or transportation infrastructure and services. The SSTMPs shall be provided to the Traffic Management Coordinator(s) for the relevant Road Controlling Authority at least 10 working days prior to each construction activity.

TT.3

Each SSTMP shall describe the measures that will be undertaken to avoid, remedy or mitigate the local and network wide effects of construction of the Project. In particular, the SSTMP shall include the following matters:

- (a) Traffic management measures to address and maintain, traffic capacity, including bus services, at peak traffic periods during weekdays (6:00 to 9:00 and 16:00 to 19:00) and peak traffic periods at weekends (including Te Atatu Road, Great North Road and Richardson Road);
- (b) Methods to manage the effects of traffic during construction including the requirement to detour or divert

The Proposed Auckland Unitary Plan (notified 30 September 2013)

traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area;

(c) Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;

(d) Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/ overbridges) and the use of staging to allow sections of the Project to be opened to the traffic while other sections are still under construction;

(e) Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks) during construction;

(f) Any routes where construction traffic movements will be restricted (either for particular times for construction periods);

(g) Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works, measures to provide alternative access arrangements in consultation with the Auckland Council and the affected landowner; and

(h) Measures to maintain pedestrian and cycle access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable (e.g. unless provision of such access is severed by the works or such access will become unsafe as a result of the construction works). Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. (This Condition does not act as a qualification to the commitment to maintain access to open space and education facilities, as required in Condition OS.13).

TT.4

The SSTMPs shall include traffic management measures developed in consultation with the Auckland Transport, Bus and Coach Association and the Auckland Council, to address and maintain, where practicable, existing levels of service for buses particularly at peak periods (6:00 to 9:00 and 16:00 to 19:00) on weekdays.

TT.5

The NZTA shall consult with the Traffic Operations Manager, Auckland Transport with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation. The NZTA shall also coordinate and consult directly with the proponents of any major construction or major traffic generating event occurring concurrently with, and in the vicinity of the Project.

TT.6

The SSTMPs shall include measures developed in consultation with Auckland Transport to, as far as practicable, enable continued public walking and cycling passage along the existing Northwestern Cycleway (between Te Atatu Interchange and St Lukes Interchange) and along Great North Road and the public walkway along Oakley Creek, with any interruptions being as short as feasible.

TT.7

The NZTA shall undertake construction works so as to avoid significant long duration impacts or the full closure of Te Atatu Road for all road users heading to or from the Te Atatu Peninsula and to ensure that access for emergency service vehicles is maintained.

TT.8

The NZTA shall restrict construction truck movements during peak hours (6:00 to 9:00 and 16:00 to 19:00) on weekdays and during the peak periods at the weekends to avoid the following:

(a) Te Atatu Road Interchange, during both morning and afternoon peak hours

(b) Great North Road Interchange, city bound during the morning peak hours

(c) Great North Road Interchange, west bound onto SH16 and southbound onto Great North road during the afternoon peak.

Construction truck movements during these hours shall only be allowed under exceptional circumstances agreed in advance with the Traffic Management Project Governance Group.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

TT.9

The NZTA shall maintain at least the existing active traffic lane configuration capacity on SH16, at the Te Atatu Interchange area, Te Atatu Road, Richardson Road and on Great North Road during peak periods being 6:00 to 9:00 and 16:00 to 19:00 on weekdays and during the peak periods on weekends, for the duration of the temporary construction programme.

TT.10

The NZTA shall monitor the impact of construction traffic in terms of traffic speeds and volumes on SH16, Great North Road, Te Atatu Road and Richardson Road throughout the construction period to confirm the expected traffic effects as set out in the Temporary Traffic Assessment (Technical Report G.16) submitted with this application.

(a) This monitoring will be undertaken on a daily, weekly and monthly basis; and

(b) Monitoring results will be made available to the Traffic Operations Manager, Auckland Transport on request.

TT.11

If monitoring undertaken pursuant to Condition TT.10 indicates that traffic volumes or traffic conditions are significantly different from those expected, the SSTMPs will be reviewed and as appropriate amended to the satisfaction of the Traffic Management Project Governance Group.

Operational Traffic Conditions

Integration with Local Road Network

OT.1

The NZTA shall prepare in collaboration with Auckland Transport a Network Integration Plan (NIP) for the Project, or relevant Project phases, to demonstrate how the Project integrates with the existing local road network and with future improvements (identified in the Western Ring Route (Northwest) Network Plan) planned by the Auckland Council. The NIP shall include details of proposed physical works at the interface between the State highway and the local road network, and shall address such matters as pedestrian/ cycle ways, lane configuration, traffic signal co-ordination, signage and provision for buses

In addition, the NIP will address:

(a) The commitment of the NZTA to progress bus priority measures northbound on Great North Road as part of the reinstatement of Great North Road, as proposed by Auckland Transport and indicated on the Plans Great North Road Option 1 Proposed Road Marking (Schedule A, Row 33), subject to the agreement with Auckland Transport;

(b) How the works committed to by the NZTA for pedestrian and cycle ways, as detailed in the PT and Active Mode Transport Routes Plan Set (Condition DC.1(d) (refer Schedule A, Row 22)), integrate with pedestrian and cycle ways on the wider transport network;

(c) The Richardson Road Bridge, which shall be designed in general accordance with the structural plans (Schedule A, Row 9) and the commitment of the NZTA to provide a 2m footpath on Richardson Road Bridge, subject to confirming appropriate bus stop locations with Auckland Transport;

(d) Integration of the works proposed on Te Atatu Road to appropriately transition between the Waterview Connection Project and any projects being progressed by Auckland Transport;

(e) Opportunities to review traffic signal timings at the Te Atatu Interchange with a view to minimising delays to all users, including cyclists on the SH16 cycle way; and

(f) The commitment of the NZTA to provide for cycle “aspects” (cycle signal lights) at the Great North Road Interchange.

(g) As part of detailed design at the Te Atatu Interchange, the installation of underpasses and/or overbridges, provided however that should some not prove feasible in civil or traffic engineering design terms, the installation of coordinated traffic signal operation for cyclists on the north-western cycleway by means of synchronised cycle lights which seek to reduce delays for cyclists.

Works identified in the NIP which are the responsibility of the NZTA, will be undertaken as at the time of construction works for the Project.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise and Vibration Conditions – Construction

CNV.1

The NZTA shall finalise and implement through the CEMP, a Construction Noise and Vibration Management Plan (CNVMP) throughout the entire construction period of the Project.

The CNVMP shall describe the measures adopted to meet:

- (a) the noise criteria set out in Conditions CNV.2 and 3 below;
- (b) the vibration criteria set out in Condition CNV.4 below; or
- (c) where (a) or (b) cannot be met, the process that will be followed to appropriately mitigate noise and vibration effects including methods that may be applied outside the designation.

The CNVMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CNVMP, as a minimum, addresses the following:

- (i) Construction noise and vibration criteria (Conditions CNV.2, CNV.3, and CNV.4);
- (ii) Hours of operation, including times and days when noisy and/or vibration inducing construction activities would occur;
- (iii) Machinery and equipment to be used;
- (iv) Vibration testing of equipment to confirm safe distances to buildings prior to construction;
- (v) Preparation of building condition surveys of critical dwellings prior to, during and after completion of construction works;
- (vi) Roles and responsibilities of personnel on site;
- (vii) Construction operator training procedures;
- (viii) Methods for monitoring and reporting on construction noise and vibration;
- (ix) A hierarchy of mitigation options that will be assessed for the Project noise mitigation, including alternative strategies where full compliance with the relevant noise and/or vibration criteria cannot be achieved;
- (x) Management schedules containing site specific information;
- (xi) Measures for liaising with and notifying potentially affected receivers of proposed construction activities and the potential for noise and vibration effects, specifically:
 - PPFs located within a horizontal distance of 35 metres of underground excavation works, along the tunnel alignment shall receive prior notification not greater than 7 days (and not less than 24 hours) prior to the commencement of works.
 - Methods for ensuring residents affected by night works (within 100m of the construction site night works, as defined on the maps (refer Schedule A, Row 35) are notified of such works (i.e. any works during the hours of 20:00 to 06:30) at least 5 days prior to the commencement of any such work.
 - The maps showing PPFs to be notified of night works (refer Schedule A, Row 35, shall be reviewed and included within the CNVMP.
- (xii) Methods for receiving and handling complaints about construction noise and vibration;
- (xiii) Measures for preventing the occurrence of rogue fly rock, including management of charge weights and face loading procedures, stemming of charge holes and profiling of the face to maintain minimum burden (face cover);
- (xiv) Investigations on the practicability of implementing permanent noise mitigation works for construction mitigation (as per Condition CNV.7);
- (xv) Investigations of the practicability of implementing Building Modification mitigation, as required in accordance with Conditions ON.6 and ON.11, prior to commencement of construction within 100m of the relevant PPFs (including those on the Unitec site); and
- (xvi) The process for developing Site Specific Noise Management Plans (SSNMP), in accordance with the SSNMP Flow Chart (refer Schedule A, Row 36), including templates and a certification process for the Major Infrastructure Team Manager, Auckland Council (in accordance with Condition CNV.13) to confirm the process of SSNMP review of noise mitigation options where, the modelled/predicted levels or subsequent actual levels exceed the criteria in Conditions CNV.2 and/or CNV.4.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CNV.2

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction noise (excluding noise from blasting Monday to Saturday inclusive) shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise" and shall comply with the following criteria:

Note: In Condition CNV.2 (T) means a duration between 15 minutes and 60 minutes, in accordance with NZS6803:1999.

(a) Project Construction Noise Criteria: Residential Receivers

Time of Week	Time period	Project Construction Noise Criteria (Long Term Construction) dB		
		Sectors 1-7	Sectors 8-9	All Sectors
		LAeq(T)	LAeq(T)	LAeq(T)
Monday- Saturday	0630-0730	60	45	75
	0730-1800	70	70	85
	1800-2000	65	65	80
	2000-0630	60	45	75
Sundays and Public Holidays	0630-0730	45	45	75
	0730-1800	60	45	85
	1800-2000	45	45	75
	2000-0630	45	45	75

(b) Project Construction Noise Criteria: Commercial and Industrial Receivers

Time Period	Project Construction Noise Criteria (Long Term Construction) dB
	LAeq(T)
0730-1800	70
1800-0730	75

(c) Project Construction Noise Criteria: Internal Structure-borne Noise from tunnelling for Residential Receivers

Time Period	Project Construction Noise Criteria Inside	
0600-2200	35 dB LAeq(T)	All habitable rooms
2200-0600	30 dB LAeq(T)	Bedrooms

(d) Project Construction Noise Criteria: Internal noise for Licensed Educational Facilities

Time Period (School Days)	Project Construction Noise Criteria Inside	
Teaching Hours	45 dB LAeq(T)	Classrooms, library, offices, teaching, laboratories, manual arts, workshops
Teaching Hours	40 dB LAeq(T)	School hall, lecture theatres

Note: In Condition CNV2(d) "Teaching hours" means: Primary schools and Kindergartens: 9am to 3pm Unitec: 8am to 9pm

CNV.4

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction vibration received by any building shall be measured and assessed in accordance with the German Standard DIN 4150-3:1999 "Structural vibration – Part 3: Effects of vibration on structures", and shall comply with the criteria set out as follows:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Type of Structure	Short-term vibration			Long-term vibration	
	PPV at the foundation at a frequency of				
	1-10 Hz (mm/s)	1-50 Hz (mm/s)	50-100 Hz (mm/s)	PPV at horizontal plane of highest floor (mm/s)	PPV at horizontal plane of highest floor (mm/s)
Commercial/Industrial	20	20-40	40-50	40	10
Residential/School	5	5-15	15-20	15	5
Historic or Sensitive structures	3	3-8	8-10	8	2.5

CNV.5

Notwithstanding Condition CNV.3 above,

(a) Blasting activities shall be conducted so that 95% of the blasts undertaken (measured over any twenty blasts on the foundation of any building outside the designation boundary) shall produce peak particle velocities not exceeding 5mm/s and 100% of the blasts undertaken shall produce peak particle velocities not exceeding 10mm/s irrespective of the frequency of the blast measured.

(b) Construction activities, which occur within Sectors 1, 6, 8 and 9 which are identified in Technical Report no. G.19 Assessment of Vibration Effects, as being at a 'High Risk' of exceeding the DIN 4150-3:1999 criteria (being excavation, piling, compaction and drilling) shall be conducted so that 95% of the activities undertaken (measured over at least 20 representative samples of the relevant activity on any residential building) shall produce peak particle velocities not exceeding the relevant criterion in DIN 4150-3:1999 and 100% of the activities undertaken shall not exceed 10mm/s irrespective of the frequency of the activity measured.

CNV.7

Where practicable, permanent (traffic) noise barriers, required in any Sector as Detailed Mitigation Options for operational noise following completion of the Project (in accordance with Conditions ON.3 to ON.5) shall be erected prior to noise generating construction works commencing. Where this is not practicable, temporary noise mitigation measures shall be implemented in accordance with the CNVMF, prior to noise generating construction works commencing.

CNV.8

Pile driving or pile removal shall not be undertaken at night (i.e. during the hours of 20:00 – 06:30).

CNV.13

SSNMPs (required by Condition CNV.1(xvi)) above, shall be submitted to Major Infrastructure Team Manager, Auckland Council for review and certification at least 7 working days prior to the proposed works commencing. A decision will be provided by the Council within 5 working days of receipt of the SSNMP.

Works will not commence until certification is received from the Major Infrastructure Team Manager, Auckland Council. The Council may, at its discretion, waive the requirement for SSNMPs to be submitted to the Council where an SSNMP is required.

If monitoring shows that levels specified in a SSNMP are being exceeded, work generating the exceedance will stop and not recommence until further mitigation is implemented in accordance with an amended SSNMP certified by Council.

Advice note: It is accepted that the criteria of CNV.2 and CNV.4 may not be met at all times, but that the NZTA will take all practical steps to achieve compliance, taking into account the hierarchy of mitigation options outlined in Condition CNV.1 (ix).

Noise Conditions – Operation

ON.1

For the purposes of Conditions ON.2-ON.14 the following terms will have the following meanings:

- Appendix E – means Appendix E to the Technical Report G.12 'Assessment of Operational Noise Effects'

The Proposed Auckland Unitary Plan (notified 30 September 2013)

submitted with this application.

- BPO – means Best Practicable Option.
- Building Modification Mitigation – has the same meaning as in NZS 6806:2010.
- Design Year – means a point in time that is 10 years after the opening of the Project to the public
- Emergency Mechanical Services – means mechanical services used for emergency situations only.
- Habitable room – has the same meaning as in NZS 6806:2010.
- Noise Criteria Categories – means groups of preference for time-averaged sound levels established in accordance with NZS 6806:2010 when determining the BPO mitigation option; i.e. Category A - primary noise criterion, Category B - secondary noise criterion and Category C - internal noise criterion.
- NZS 6806:2010 – means NZS 6806:2010 Acoustics – Road-Traffic Noise – New and Altered Roads.
- PPFs – means only the premises and facilities identified in green, yellow or red in Appendix E.
- Structural mitigation – has the same meaning as in NZS 6806:2010.

ON.2

The NZTA shall implement the traffic noise mitigation measures identified as the “Preferred Mitigation Options” in Appendix E as part of the Project, in order to achieve the Noise Criteria Categories indicated in Appendix E (“Identified Categories”), where practicable and subject to Conditions ON.3-ON.11 below.

ON.3

The detailed design of the structural mitigation measures of the “Preferred Mitigation Options” (the Detailed Mitigation Options) shall be undertaken by a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council prior to construction of the Project, and, subject to Condition ON.4, shall include, as a minimum, the following:

- (a) Noise barriers with the location, length and height in general accordance with Appendix E and designed in accordance with the ULDF (Section B) (refer Schedule A, Row 38); and
- (b) A requirement that Open Graded Porous Asphalt (“OGPA”) or equivalent low-noise generating road surface be used on all surface roads throughout the Project, except at the Great North Road Interchange; and
- (c) For the Great North Road Interchange, a requirement that Twin Layer Open Graded Porous Asphalt (“Twin Layer OGPA”) or equivalent low-noise generating road surface be used as shown in Appendix E.

ON.4

Where the design of the Detailed Mitigation Options identifies that it is not practicable to implement a particular structural mitigation measure in the location or of the length or height included in the “Preferred Mitigation Options”, either:

- (a) If the design of the structural mitigation measures could be changed and would still achieve the same Identified Category at all relevant PPFs, and a suitably qualified expert approved by the Major Infrastructure Team Manager, Auckland Council, certifies to the Auckland Council that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed mitigation measures; or
- (b) If the changed design of the structural mitigation measure would change the Noise Criteria Category at any relevant PPF from Category A or B to Category C but Major Infrastructure Team Manager, Auckland Council confirms that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed structural mitigation measures.

ON.5

The Detailed Mitigation Options shall be implemented prior to completion of construction of the Project.

ON.6

- (a) Sectors 1 to 8 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. A noise level increase of 3 decibels or more will occur due to road-traffic noise from the Project; and
- ii. Habitable spaces are likely to receive in excess of 45 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year.

For those PPFs, following the process set out in Conditions ON.7 to ON.11, it shall be determined which Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces.

(b) Sector 9 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options, habitable spaces are likely to receive in excess of 40 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year. For those PPFs, following the process set out in ON.7 and ON.8, it shall be determined if Building Modification Mitigation may be required to achieve 40 dB LAeq inside habitable spaces. For those PPFs where Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces, this shall be implemented following the process set out in ON.9 to ON.11.

ON.7

(a) Prior to commencement of construction of any sector of the Project in the vicinity of a PPF identified under Condition ON.6, the NZTA shall write to the owner of each such building seeking access for the purpose of measuring internal noise levels and assessing the existing building envelope in relation to noise reduction performance.

(b) If the owner(s) of the building approve the NZTA's access to the property within 12 months of the date of the NZTA's letter (sent pursuant to Condition ON.7(a)), then no more than six months prior to commencement of construction in any sector of the Project, the NZTA shall instruct a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council, to visit the building to measure internal noise levels and assess the existing building envelope in relation to noise reduction performance.

ON.8

Where a PPF identified under Condition ON.6 is identified, the NZTA shall be deemed to have complied with Condition ON.7 above where:

- (a) The NZTA (through its acoustics specialist) has visited the building; or
- (b) The owner(s) of the building approved the NZTA's access, but the NZTA could not gain entry for some reason after repeated attempts; or
- (c) The owner(s) of the building did not approve the NZTA's access to the property within the time period set out in Condition ON.7(b) (including where the owner(s) did not respond to the NZTA's letter (sent pursuant to Condition ON.7(a) within that period); or
- (d) The owner(s) of the building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

If any of (b) to (d) above apply to a particular Building, the NZTA shall not be required to implement any Building Modification Mitigation at that Building

ON.9

Subject to Condition ON.8, within 6 months of the assessment required under Condition ON.7(b), the NZTA shall give written notice to the owner of each PPF identified under Condition ON.6:

- (a) Advising of the options available for Building Modification Mitigation to the building; and
- (b) Advising that the owner has three months within which to decide whether to accept Building Modification Mitigation for the building, and if the NZTA has advised the owner that more than one options for building modification mitigation is available, to advise which of those options the owner prefers.

ON.10

Once an agreement on Building Modification Mitigation is reached between the NZTA and the owner of an affected building, the mitigation shall be implemented (including the NZTA undertaking any required third party

The Proposed Auckland Unitary Plan (notified 30 September 2013)

authorisation) in a reasonable and practical timeframe agreed between the NZTA and the owner. Building Modification Mitigation shall be to the standard specified in section 8.3.2 of NZS 6806:2010.

Advice Note: The NZTA will be responsible for obtaining any necessary building consents or other approvals to undertake the above Building Modification Mitigation.

ON.11

Subject to Condition ON.8, where Building Modification Mitigation is required, the NZTA shall be deemed to have complied with Condition ON.10 above where:

- (a) The NZTA has completed Building Modification Mitigation to the Building; or
- (b) The owner(s) of the Building did not accept the NZTA's offer to implement Building Modification Mitigation prior to the expiry of the timeframe stated in Condition ON.9(b) above (including where the owner(s) did not respond to the Requiring Authority within that period); or
- (c) The owner of the Building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

ON.12

The NZTA shall manage and maintain the Detailed Mitigation Options to ensure that, those mitigation works are maintained to retain their noise attenuation performance indefinitely

ON.14

(a) Prior to construction, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake a minimum of 8 (eight) representative measurements of ambient noise levels. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(b) Following completion of the work, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake traffic noise monitoring at the same sites surveyed in Condition ON.14 (a) above, within 2 to 3 years following completion of construction of the Project. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(c) The results of the noise level monitoring in accordance with ON.14(b) above shall be used to verify the computer noise model of the Detailed Mitigation Option. A report describing the findings of the verification shall be provided to the Major Infrastructure Team Manager, Auckland Council within one month of it being completed.

Vibration Conditions - Operation

OV.1

Existing ambient vibration levels shall be measured at critical locations nominated by the NZTA, and submitted to the Major Infrastructure Team Manager, Auckland Council for approval prior to the commencement of works. These baseline measurements will establish pre-Project vibration levels for comparison with future vibration levels.

Air Quality Conditions – Construction

GENERAL CONDITIONS

AQ.1.

The NZTA shall finalise and implement, through the CEMP, the Construction Air Quality Management Plan (CAQMP) and Concrete Batching and Crushing Management Plan (CBCMP) submitted with the application. The CAQMP and CBCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CAQMP and CBCMP includes the following details:

- (a) Daily visual monitoring of dust emissions;
- (b) Procedures for responding to process malfunctions and accidental dust discharges;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (c) Criteria, including consideration of weather conditions and procedures for use of water sprays on stockpiles and operational areas of the site;
- (d) Continuous monitoring of Total Suspended Particulate (TSP) concentrations and meteorology;
- (e) Monitoring of the times of detectable odour emissions from the ground;
- (f) Procedures for responding to discharges of odour (including in the event of excavation of contaminated sites);
- (g) Monitoring of construction vehicle maintenance;
- (h) Process equipment inspection, maintenance, monitoring and recording, including baghouses, pressure relief valves and high level alarms;
- (i) Complaints investigation, monitoring and reporting; and
- (j) The identification of staff and contractors' responsibilities.

AQ.2.

The NZTA shall review the CAQMP and CBCMP at least annually and as a result of any material change to the Project. Any consequential changes will be undertaken in accordance with Condition CEMP.13.

AQ.3.

All construction activities shall be operated, maintained, supervised, monitored and controlled at all times so that all emissions authorised by this consent are maintained at the minimum practicable level.

AQ.4.

The NZTA shall undertake construction activities in accordance with the CEMP, CAQMP and CBCMP, such that:

- (a) Hard surfaced areas of the construction yards and active construction areas are vacuum swept or scraped down at least twice each week and additionally as reasonably required;
- (b) All unsealed areas of the site used for vehicle movement are maintained visibly damp by the use of water sprays or a water cart during weather conditions where the potential for dust emissions exist;
- (c) Wheel wash systems are installed at all truck exits from unpaved areas of the site onto public roads are used for all trucks that depart from the site;
- (d) All stockpiles are constructed and positioned to minimise the potential for dust emissions. The surfaces of all stockpiles are maintained adequately damp at all times to minimise the release of particulate matter;
- (e) Belt conveyors for moving dry materials are fitted with water sprays or enclosed to minimise wind entrainment of dust. Where installed, water suppression is used whenever the conveyors are used for moving dry materials.

AQ.5.

Unless expressly provided for by conditions of this consent, there shall be no odour, dust or fumes beyond the site boundary caused by discharges from the site which, in the opinion of an enforcement officer, is noxious, offensive or objectionable.

AQ.6.

All offensive or objectionable dust beyond the boundary of the site caused as a result of processes on the site shall be mitigated forthwith in accordance with the requirements of the Construction Air Quality Management Plan.

AQ.7.

Beyond the site boundary there shall be no hazardous air pollutant caused by discharges from the site that causes, or is likely to cause, adverse effects on human health, environment or property.

AQ.8

No discharges from any activity on site shall give rise to visible emissions, other than water vapour, to an extent which, in the opinion of an enforcement officer, is noxious, dangerous, offensive or objectionable.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

MONITORING

AQ.14

The NZTA shall undertake visual inspections of dust emissions as follows:

- (a) Visual inspections of all active construction areas at least three times daily during October to April inclusive, whenever there are construction activities. The results of visual monitoring shall be logged.
- (b) Visual inspections of dust emissions from the concrete batching plants and rock crushing plant shall be undertaken daily while the plant is operating

AQ.15

The operation of water sprays shall be checked at least once each day.

REPORTING

AQ.19.

All records, logs, monitoring and test results that are required by the conditions of this consent shall be made available on request, during operating hours, to an Auckland Council enforcement officer and shall be kept for the duration of the consent.

AQ.22.

Log books shall be maintained that record all relevant information that is required to demonstrate compliance with the conditions of this consent. This information shall include, but is not limited to:

- (a) Visual assessments of any dust emissions from the site and the source;
- (b) Any dust control equipment malfunction and any remedial action taken;
- (c) When a water cart was used and, if so, the frequency of use and the volume of water used (including identification of location);
- (d) All relevant details of the TSP and meteorological monitoring required by Conditions AQ.16 and AQ.17;
- (e) Any additional dust control measures undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

AQ.23.

The NZTA shall maintain a log of any complaints received relating to air quality. Details of each complaint received shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 24 hours of receipt of the complaint. The log shall include any complaints lodged with the Auckland Council where the Council has informed the NZTA of the complaint. The log shall include, but not be limited to the following:

- (a) The date, time, location and nature of the complaint;
- (b) Weather conditions at the time of the complaint (including approximate wind speed, wind direction, cloud cover);
- (c) Any possible other contributing factors (such as a fire, smoky vehicle, a local chimney emission, etc.);
- (d) The name, phone number and address of the complainant (unless the complainant elects not to supply these details);
- (e) Any remedial actions undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

Landscape and Visual Conditions

LV.1.

The Urban Design and Landscape Plans (UDL Plans) (Plan Set F.16, refer Schedule A, Row 17) shall be reviewed and revised in accordance with the conditions and submitted to the Major Infrastructure Team Manager, Auckland Council for certification that they comply with the conditions of the consents/ designation prior to construction of the relevant Project stage, at least 20 working days prior to the commencement of construction.

The UDL Plans shall be updated to:

- (a) Reflect relevant details from the PT and Active Mode Transport Routes Plan Set (Schedule A, Row 23);
- (b) Remove the playing field at Waterview Reserve;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (c) Confirm the reconfigured bund design at Alwyn Avenue (Schedule A, Row 42);
- (d) Reflect landscaping required in relation to the northern vent stack in Waterview Glades pursuant to Conditions DC.8.

LV.2.

In certifying the UDL Plans, prepared in accordance with Condition LV.1, the Major Infrastructure Team Manager, Auckland Council shall be satisfied the UDL plans includes:

- (a) The visual mitigation of infrastructure as detailed in Section B of the UDLF (refer Schedule A, Row 38).
- (b) Incorporation of art or art through design of structures, particularly as it relates to noise barriers and the Great North Road Interchange piers and ramps (Refer to clauses (g) and (i) below).
- (c) Planting to screen houses and noise walls (including cross section details);
- (d) Planting along the corridor on Traherne Island, in accordance with these conditions and the Ecological Management Plan;
- (e) Specimen planting on the Great North Road Interchange and the Te Atatu Road Interchange;
- (f) Specimen planting at the tunnel portals (except where this is within the OPW area);
- (g) Finalisation of the noise barriers (as required by Condition ON.3(a)) in accordance with the design principles for noise walls (refer Schedule A, Row 32);
- (h) Delineation of the final areas of the Open Space Restoration Plans in accordance with the Open Space Restoration Plans (Schedule A, Row 30), and reference that all works within the Open Space Restoration Plan Areas are subject to Conditions OS.1 to OS.8;
- (i) Oakley Inlet Heritage Plan, prepared in accordance with Conditions OS.5, and in particular, consideration shall be given to the design treatment of the Great North Road Interchange piers and ramps to take into consideration the impact of the structures on the visual quality of the open space beneath;
- (j) Ecological Management Plan, prepared in accordance with Conditions V.1, A.1, H.1, F.1 and M.1;
- (k) Western Ring Route: Maioro Street Interchange and Waterview Connection - Oakley Creek Rehabilitation and Restoration Guidelines (Boffa Miskell, 2010); and
- (l) Details of artworks or art through design of structures within the Project (e.g. design detailing of median barriers, bridge railings, safety barriers, piers, retaining walls and tunnel portals), in accordance with Section B of the Urban Landscape and Design Framework (UDLF June 2010) (refer Schedule A, Row 38) and F.8:Plans of Structures and Architectural Features, but excluding the north and south ventilation buildings, plans sections and elevations.

LV.3.

The NZTA shall have implemented the UDL Plans within 6 months of practical completion of construction of the Project.

LV.4.

The landscaping shall be implemented in accordance with the UDL Plans within the first planting season following the completion of the construction works, provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for a period of 10 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping shall be implemented in accordance with this Condition for each stage unless subsequent construction staging requires use of the proposed landscaping area.

Advice note: On-going control and management of the landscaping within the designation is the responsibility of the NZTA.

LV.5.

The NZTA shall implement the UDL Plans taking into account the pest plant management guidelines detailed in the Ecological Management Plan (as required by Condition CEMP.3).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

LV.7.

The NZTA shall ensure that the Temporary Embankments constructed for the Causeway are located on the seaward side of SH16 between the motorway end of Rosebank Road and the bridge over the Waterview Inlet.

LV.8.

The NZTA shall ensure that any areas within the designation affected by construction activities have sub-soil rehabilitated and top-soil replaced so that the hydrological response including the volume of stormwater runoff generated is as close as practicable to the predevelopment situation. The methodologies to achieve this shall be documented and provided to the Major Infrastructure Team Manager, Auckland Council with the revised UDL Plans submitted pursuant to Condition LV.1.

LV.9.

The UDL Plans shall make provision for the rehabilitation of Construction Yard 2 at the completion of SH16 construction works through the close planting of native coastal species within that part of the yard area seaward of the proposed stormwater filter strip. All planting shall be consistent with the native coastal planting referenced in the ECOMP and Condition V.10.

LV.10.

The UDL Plans shall identify all Amenity Trees required to be removed over the construction of the Project (in accordance with Condition CEMP.6(o) and (p)). Replacement trees shall be sized at 160Lt and will either draw from the Coastal Forest or Basalt Rock Forest ecotypes listed in the Landscape Planting Schedules (provided in F.16, refer Schedule A, 17) or an agreed alternative species (confirmed by Major Infrastructure Team Manager, Auckland Council), except in the case of those trees subject to Condition ARCH.9.

Advice note: This does not necessarily apply to any replacement planting in the Open Space Restoration Plan areas, which will be confirmed in approval from Auckland Council and will be in accordance with relevant Auckland Council Park guidelines (see Condition OS.4).

Open Space Conditions

OS.1

For the purposes of Conditions OS.2 – OS.15 the following terms will have the following meanings:

- Full size – means a football (soccer) field with the dimensions 100m x 60m.
- Half size – means a football (soccer) field with the dimensions less than 100m x 60m but no smaller than 50m x 30m.
- Toddler – means a playground specifically designed for children between the ages of 1 and 3
- Junior – means a playground specifically designed for children between the ages of 4 and 8
- Youth – means a playground specifically designed for children between the ages of 9 – 14 years
- Open Space Restoration Plans – means those plans listed in Schedule A, row 30.
- Open for Play - means the sports field has a level surface and a dense weed-free sward of mature grass, goal posts and lighting if indicated in the Open Space Restoration Plans approved by the Auckland Council.
- Sand - carpeted - means the field has been levelled and irrigated, and conventional sub-soil drains, slit drains and a 50mm deep sand carpet have been installed. The field has been stolonised with a warm season grass such as kikuyu or couch.
- Auckland Council Park Guidelines – means the document by Auckland City Council titled “Furnishing our parks: design guidelines for park furniture”, dated September 2009
- Park furniture – means those items described in the Auckland Council Park Guidelines
- AS2560 – means the Australia New Zealand Standard for lighting of sports fields.
- AS4282 – means the Australia New Zealand Standard for the control of the obtrusive effects of outdoor lighting.
- Way finding exercise – means a process for determining the number, size, location and content of signage to provide clear direction for all park users.
- Skate-park for the purpose of conditions OS.5(b)(iii) means a skate park with a size of approximately 1,400

The Proposed Auckland Unitary Plan (notified 30 September 2013)

sq. m. (generally 25 wide x 55m long), incorporating a range of design variations. Suitable for beginners (providing training facilities to develop their skills) but primarily catering for intermediate to advanced level skaters.

- BMX bike track for the purpose of condition OS.5(b)(iii) means a low maintenance, non-competition BMX bike track, incorporating a range of design variations. Primarily catering for beginner and intermediate riders.

OS.2

The NZTA shall prepare Open Space Restoration Plans to outline how the open space replacement land, as defined in the Open Space Restoration Plan Areas (Schedule A, Row 30) (including land occupied during construction) will be reinstated or replaced on completion of construction, for handover to Auckland Council and those areas identified in Condition DC.1A(f) and RC.3(f). Following the consultation detailed in Condition OS.3 below, the Open Space Restoration Plans listed in Condition OS.3(a) to (f) shall be submitted within 12 months of construction commencing in the specific areas affecting the reserves or within 12 months of occupation of open space, whichever is the sooner, to the Major Infrastructure Team Manager, Auckland Council.

Advice note: Conditions OS.9 and OS.10 require certain works to be provided prior to occupation of Construction Yards 6 and 7 (Waterview Reserve) and Construction Yards 9- 12 (Alan Wood Reserve) and this may impact on the timing of Open Space Restoration Plans for these areas.

OS.3

The Open Space Restoration Plans shall be prepared in consultation with the Auckland Council, Iwi, the Community Liaison Groups (Condition PI.5), NZHPT, and other recreation users and other user representatives identified by Auckland Council. The Open Space Restoration Plans shall comprise the following specific plans:

- (a) Waterview Reserve Restoration Plan;
- (b) Alan Wood Restoration Plan (including Hendon Park and 25 Valonia Street);
- (c) Oakley Creek Esplanade (Waterview Glades) Restoration Plan;
- (d) Jack Colvin Park Restoration Plan;
- (e) Rosebank Domain Restoration Plan;
- (f) Harbourview-Orangihina Reserve Restoration Plan.
- (g) The areas of the Open Space Restoration Plans are shown in the Open Space Restoration Plan Areas (Refer Schedule A, Row 30).

OS.4

All Open Space Restoration Plans shall be prepared in general accordance with the UDL Plans (Schedule A, Row 30), and shall include, but not be limited to, the following:

- (a) Details of, including the location, of any artworks and educational signage, and directional signage. In the case of Alan Wood Reserve, Waterview Reserve and Oakley Creek Esplanade (Waterview Glade) this shall include a "way-finding exercise" in accordance with Auckland Council practice, to determine all signage to be provided; and
- (b) Evidence of integration with the Oakley Creek restoration works required under Conditions STW.5, STW.20, V.16 and LV.2(i); and a summary of the consultation undertaken (as required by Condition OS.3) and the response received; and
- (c) Details of any vehicle access through the reserves and parking areas; and
- (d) Park furniture (including quantity and quality) to be provided in accordance with relevant Auckland Council Park guidelines, except for:
 - (i) The riparian area within Alan Wood Reserve where the only furniture required is a maximum of 10 seats; and
 - (ii) Oakley Creek Esplanade (Waterview Glades) where the only furniture required is replacement of 3 existing seats; and
- (e) The inclusion and integration of the design for all pedestrian and cycleway linkages and facilities detailed on the PT and Active Mode Transport Routes (Schedule A, Row 22). The design integration shall be in accordance with CPTED principles;
- (f) Implementation programme, including sequencing of works and completion dates. This shall include works

The Proposed Auckland Unitary Plan (notified 30 September 2013)

that could be implemented prior to practical completion of construction works or are outside the Project area (e.g. upgrading of the Waterview Esplanade Reserve set out in Condition OS.5(b)(vii);

(g) Implementation programmes for planting and field reinstatement. This shall include:

(i) A 12 month maintenance period for built structures and soft landscaping; and

(ii) For any landscaping accessible to horses an assessment to demonstrate that the planting schedule is not toxic to horses and that consultation on this has been undertaken with the Te Atatu Pony Club;

(h) The specific requirements for each Restoration Plan area as set out in Conditions OS.5 – OS.8;

(i) Documentation of consultation undertaken required by Condition OS.3 and the views and concerns expressed by this consultation and the written approval of the Manager Community and Cultural Policy.

Advice note: For the avoidance of doubt provision of (a) to (h) above will require elevations, cross sections, engineering drawings and written documentation to supplement the UDL Plans. It is also noted that the UDL Plans identify landscaping, planting and other works beyond the Open Space Restoration Plans (refer Conditions LV.1 – LV.6, LV.9 and LV.10). Educational signs and artworks are particularly encouraged.

OS.13

During construction, the NZTA shall maintain pedestrian accessways to all open space available for public use during construction and education facilities where access is affected by the works, including any public access that crosses private land. Such access shall be safe, clearly identifiable, provide appropriate surfacing and seek to minimise significant detours. The access shall be of a same or similar standard as that disrupted and will be provided and maintained by the NZTA.

Advice note: This specifically includes the existing pedestrian access that provides a connection to the crossing over Oakley Creek between 1510 Great North Road and Unitec Mt Albert Campus.

Social Conditions

SO.1

In addition to the Community Liaison Groups established pursuant to Condition PI.5, the NZTA shall establish an Education Liaison Group (including representatives from local schools, kindergartens, childcare facilities, Unitec Institute of Technology, the Ministry of Education and Housing New Zealand Corporation), to provide a forum through which:

(a) Relevant monitoring data can be provided (e.g. air quality monitoring);

(b) Notice can be provided of when particularly noisy activities will occur in close proximity to schools and education facilities, to enable the opportunity to identify any potential conflict with particular sensitive periods, and the requirement for specific mitigation strategies (e.g. rescheduling of construction activities where practicable);

(c) Particular concerns can be raised by educational facilities or parents, discussed and potentially addressed;

(d) Notice can be provided of potential construction impacts on school transport routes (including pedestrian/cycle access) to enable the opportunity to identify specific mitigation preferences of the education facilities (e.g. any detour routes) and to enable these facilities to appropriately inform students and/or parents; and

(e) Learning and teaching opportunities for educational facilities to participate in Project works (e.g. planting or artworks).

The Education Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period. The Education Liaison Group shall continue to meet for at least 12 months following the completion of the Project (or less if the members of the Education Liaison Group agree), so that ongoing monitoring information can continue to be disseminated.

SO.2

In addition to Condition SO.1(b) above, where noisy construction activities (that are projected to exceed the Noise Criteria in the CNVMP) are proposed in close proximity or adjacent to schools/ childcare centres, the NZTA shall, when preparing their SSNMP (in accordance with Condition CNV.1) give specific consideration to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

options to carry out these works outside school hours or during school holidays as a mitigation option.

SO.6

In addition to the Community Liaison Group established pursuant to Condition PI.5, the NZTA shall establish a Working Liaison Group (WLG) inviting the following:

- (a) Auckland Council;
- (b) Housing New Zealand Corporation;
- (c) Te Kawerau Iwi Tribal Authority;
- (d) Ngati Whatua o Orakei;
- (e) KiwiRail;
- (f) Department of Conservation;
- (g) Ministry of Education; and
- (h) Local Boards.

The purpose of this WLG will be to provide a forum through which:

- (a) Opportunities for public work development (including social housing, passenger transport or recreation / open space) are identified in areas where the NZTA confirms that the designation is no longer required (e.g. following construction activities);
- (b) Comment can be provided on updated Urban Design and Landscape Plans, including the finalised designs of structural elements for the Project (prior to their submission to the Auckland Council);
- (c) Opportunities for integration of other environmental projects (e.g. restoration plantings) are identified;
- (d) Consideration is given to appropriate protocols for commencement and completion of construction activities (including blessings for commencement of construction phases); and
- (e) Comment can be provided by Te Kawerau a Maki on the detailed lighting design of SH16, to consider how lighting effects on cultural sites and practices might be mitigated without compromising traffic safety or those performance standards identified in Condition L.1.

The Working Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period.

SO.7

A schedule of trees that require removal for construction of the Project will be identified and reported to the Community Liaison Group for their consideration of potential provision of timber for heritage projects (including in particular the provision of Robinia wood for heritage boat building). If the demand for this timber is identified to the Construction Team, appropriate measures for felling and removal from the site will be confirmed.

Vegetation Conditions

V.1

The NZTA shall finalise the ECOMP submitted with this application, prior to works commencing on site. The ECOMP shall be implemented through the CEMP. The ECOMP shall clearly identify the location and identity of:

- (a) All Significant Vegetation within the designation that is to be fully protected or relocated; and
- (b) All Valued Vegetation within the designation that is affected by the works (protected or removed).

Note: Significant and Valued Vegetation shall be as defined in the ECOMP.

V.2

The NZTA shall employ a suitably experienced botanist ('nominated botanist') for the duration of the works to monitor, supervise and direct all works affecting or otherwise in close proximity to the Significant Vegetation and Valued Vegetation identified in the ECOMP.

V.3

Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions that pertain to the Significant Vegetation and Valued Vegetation and all vegetation in general (both native and exotic) are explained by the nominated botanist to all contractors or sub-contractors who will be working on site

The Proposed Auckland Unitary Plan (notified 30 September 2013)

within the close vicinity of that vegetation.

V.4

The NZTA shall minimise the amount of vegetation (both native and exotic) which is to be cleared, with the exception of weeds (both woody and otherwise, unless agreed with the Major Infrastructure Team Manager, Auckland Council and the Community Liaison Group that the retention of these 'weeds' has other environmental or ecological benefits that warrant their retention). All vegetation clearance shall be undertaken in accordance with the measures set out in the ECOMP.

V.5

The NZTA shall install protective fencing around, or otherwise clearly demarcate, all of the Significant Vegetation identified in the ECOMP as requiring full protection, under the supervision of the nominated botanist.

V.6

The NZTA shall replace any terrestrial Valued Vegetation that is required to be removed as a result of construction activities, in accordance with the ECOMP and the Urban Design and Landscape Plans.

V.7

The nominated botanist shall supervise all trimming, pruning and relocation work associated with the Significant Vegetation and Valued Vegetation required as part of the works.

V.8

Immediately prior to planting, and for a period of 2 years following completion of construction, the NZTA shall undertake weed control and management of all invasive plant pests within the vegetated areas of the surface designation for the Project. Following this 2 year period, on-going control and management of all invasive plant pests within these areas will be the responsibility of the NZTA.

V.9

The nominated botanist shall undertake a monitoring programme throughout the construction period, including monitoring of:

- (a) The condition, repair and location of the temporary protective fencing or other forms of demarcation used to identify the Significant Vegetation;
- (b) Any works within the vicinity of the Significant Vegetation and Valued Vegetation;
- (c) The general health of the Significant Vegetation and Valued Vegetation (including any Significant or Valued Vegetation that has been relocated away from the works area); and
- (d) Compliance with the vegetation conditions of designation by way of fortnightly inspections during the construction period.

V.10

Any planting utilising native plants shall use plants genetically sourced from the Tamaki Ecological District where possible or otherwise shall use plants that have been genetically sourced from within the Auckland Ecological Region.

V.11

Prior to commencement of works adjacent to Traherne Island, the NZTA shall employ a suitably qualified and experienced plant translocation expert to uplift and protect all areas of *Mimulus repens* on Traherne Island that will be affected by the work. The *Mimulus repens* shall be relocated to suitable and safe habitat away from the works area, or otherwise held and protected for the duration of the works in the vicinity of their original location and be replanted back at that location (or in close proximity to it) upon completion of the works. The location of the recipient sites will be determined in consultation with the Department of Conservation and in general accordance with the Traherne Island Natural Heritage Restoration Plan (2009 – 2014). Trials shall be undertaken to identify appropriate recipient sites, with these trial sites being monitored for a period of no less than 5 years,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

or until their failure. Where possible, recipient sites shall be located in currently weed-free areas. Where recipient sites may potentially be affected by weeds, they shall be subject to an on-going weed management plan. Should translocation attempts fail at all trial sites then the NZTA, in consultation with DOC, shall determine an alternative appropriate form of mitigation.

V.15

Planting along and within the rock revetment of the widened SH16 causeway shall be undertaken by the NZTA at locations in general accordance with the Urban Design and Landscape Plans and planting schedules (Refer Schedule A, Row 17), as identified in those plans under the label "Rock Armour with Saltwater Revetment Planting". The planting treatments will be in accordance with the concepts of the ECOMP, Appendix I 'Conceptual Rock Revetment Planting Designs'.

V.17

Prior to commencement of works adjacent to or on Traherne Island, the NZTA shall employ a suitably qualified and experienced ecologist for the preparation of a Traherne Island Weed and Pest Management Plan. The Plan shall be prepared in consultation with the Department of Conservation and be submitted to the Auckland Council for approval at least 20 working days prior to construction commencing.

V.18

The NZTA shall implement the approved Traherne Island Weed and Pest Management Plan. Every 5 years, a suitably qualified and experienced ecologist engaged by NZTA shall review the plan in consultation with the Department of Conservation. The plan shall then be submitted to the Auckland Council for approval.

Avian Conditions

A.1

The NZTA shall finalise, and implement through the CEMP, ECOMP submitted with this application to include the matters set out in Conditions A.2 to A.6.

A.2

The NZTA shall provide temporary high tide roosting structure(s) adjacent to the Causeway during construction, in accordance with the ECOMP, to the satisfaction of the Major Infrastructure Team Manager, Auckland Council. The temporary bird roosts shall be sized in accordance with the ECOMP, and located within the Waterview Estuary adjacent to the southern side of the causeway and in the vicinity of the existing Causeway bridge.

A.3

The NZTA shall employ a suitably qualified ecologist to undertake monitoring of the roosting areas located at:

- (a) The existing high tide roost in Harbourview-Orangihina Park; and
- (b) The temporary construction roosting structure(s) pursuant to Condition A.2.

Monitoring shall be undertaken on a monthly basis, with a monitoring report prepared on a quarterly basis. The monitoring report shall be made available to the Major Infrastructure Team Manager, Auckland Council and Department of Conservation upon request.

A.4

Should the monitoring results indicate that the roosting sites have been abandoned, consultation shall be undertaken with the Department of Conservation and the Major Infrastructure Team Manager, Auckland Council to determine the need for and type of further management strategies (if any) required.

A.5

Vegetation clearance at Traherne Island shall occur outside the bird breeding season of September to December. Elsewhere, vegetation clearance shall occur outside the bird breeding season of September to December where practicable.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

A.6

Animal pest control shall be undertaken by the NZTA on Traherne Island (northern and southern sides) and on the Coastal Marine Area (CMA) frontage of SH16 from Traherne Island North to Whau Creek, and on the southern side of SH16 from Traherne Island South to Whau River (in accordance with Condition V.17).

Herpetofauna Conditions

H.1

The NZTA shall finalise and implement through the CEMP, the ECOMP submitted with this application to include details of lizard management to be undertaken, including the following:

- (a) Lizard capture methodology, including timing;
- (b) Lizard release locations(s);
- (c) Lizard habitat enhancement at population release sites, including a detailed pest control programme for a minimum of one month prior to release and for a minimum of three consecutive years' duration after release;
- (d) Location(s), monitoring and maintenance of lizard protective fencing;
- (e) Post-release monitoring methodology; and
- (f) Lizard captive management methodology.

Lighting Conditions

Operation

L.1

Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, in general accordance with the Waterview Connection Lighting Plan (Drawing Set F.11 (Refer Schedule A, Row 12):

- a) All motorway lighting shall be designed in accordance with "Roadlighting Standard AS/NZS1158";
 - b) All other lighting shall be designed in accordance with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
 - c) Fully cut off luminaires shall be used on SH20 from the Southern Tunnel Portal to the Maioro Street Interchange to minimised lighting overspill, as shown on Drawing Set F.11(Refer Schedule A, Row 12).
- Construction Zones and Construction Yards

L.2

A Temporary Construction Lighting Management Plan shall be prepared for all construction zones and construction yards prior to commencement of any night time works within the construction zones and construction yards. The Temporary Construction Lighting Management Plan shall be independently verified by a lighting specialist and provided to the Major Infrastructure Team Manager, Auckland Council for certification of compliance 10 working days prior to any night time work commencing.

The certification process shall ensure that the Plan includes (but is not be limited to):

- a) The layout and arrangement of all temporary lighting required for night time works, and shall show how this avoids the "Light Spill Restriction Zone" identified on the Construction Yard Plans (Refer Schedule A, Row 7) submitted with the application, and that the temporary lighting complies with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- b) Provision for a 10m buffer between the night time work and any residential boundary at all times to minimise potential for light spill; and
- c) General operating procedures outlined in the CEMP.

L.3

Asymmetrical floodlights with horizontal glass visors that are not raised more than 3 degrees above the horizontal plane shall be used for any temporary construction night time lighting requirements. Alternative temporary lighting arrangements may be used, subject to the prior approval of the Major Infrastructure Team Manager, Auckland Council, where it can be demonstrated that the proposed lighting is similar or better to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

asymmetrical floodlights with glass visors. Glare shall be kept below the recommendation given in AS 4282 – 1997 “Control of the Obtrusive Effects of Outdoor Lighting” Tables 2.1 and 2.2.

Archaeology Conditions

ARCH.1

The NZTA shall complete, and implement through the CEMP, the Archaeological Site Management Plan (ASMP) submitted with the notice of requirement, to include, but not be limited to:

- a) Identification of the Project archaeologist, their role and responsibility on the Project;
- b) Who reports to the Project archaeologist;
- c) Specific sites requiring supervision, and measures to be undertaken to protect and manage these sites;
- d) Whether NZHPT and/or Auckland Council heritage and/or iwi supervision is required for the specific site (the latter to be determined through consultation with the relevant iwi groups); and
- e) Accidental discovery protocols in the event that unknown archaeological sites are uncovered.

ARCH.2

The NZTA shall employ at its expense a qualified archaeologist (the Project archaeologist) who shall be on site to monitor all initial earthworks, including surface stripping of the site, for all specific areas identified in the ASMP to establish whether any sub-surface archaeological features are present. This includes, but is not limited to, the following areas:

- (a) All unmodified areas in the vicinity of Rosebank Road;
- (b) All works in the vicinity of the “Oakley Inlet Heritage Area”, located adjacent to the Great North Road Interchange;
- (c) Works in the vicinity of two midden sites (recorded R11/2214 and R11/2215) within Great North Road Interchange, and all previously unmodified areas near the banks of the Oakley Inlet;
- (d) Any ground disturbance works in Construction Yard 7 within Oakley Creek Reserve.

ARCH.3

If any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- (a) Immediately it becomes apparent that a possible archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- (b) The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched and notify the Project archaeologist;
- (c) The Project archaeologist shall inspect the site to assess the relevance of the find, and then the Auckland Council shall be advised of the significance;
- (d) If the site is confirmed to be an archaeological site by the Project archaeologist, the site supervisor shall then notify tangata whenua, the New Zealand Historic Places Trust, and the Auckland Council that an archaeological site has been exposed so that appropriate action can be taken;
- (e) In the case of human remains, the NZ Police shall be notified.

ARCH.4

In accordance with the ASMP, the following archaeological sites shall be fenced off and protected to the satisfaction of the Project archaeologist, prior to construction activities being undertaken:

- (a) Recorded sites R11/2504, R11/2505, R11/2506 and R11/2507, located on the northern boundary of the designation adjacent to the Rosebank Road peninsula.
- (b) Recorded site R11/2383 in the Oakley Creek Esplanade Reserve construction yard.

ARCH.8

All contractors and subcontractors working on the Project shall be trained on the archaeological requirements set out in the ASMP.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice note:

Any archaeological sites within the area affected by the Project shall not be modified or disturbed in any way unless written authorisation has been obtained from the NZ Historic Places Trust.

Contaminated Land and Contaminated Discharges Conditions

CL.1

The NZTA shall finalise and implement through the CEMP, the Contaminated Soil Management Plan (CSMP) submitted with this application prior to commencement of any site works. The CSMP shall include, but not be limited to:

- (a) Measures to be undertaken in the handling, storage and disposal of all material excavated during the construction works;
- (b) Soil validation testing and groundwater testing;
- (c) Soil verification testing to be undertaken to determine the nature of the excavated spoil and potential reuse or disposal options;
- (d) Measures to be undertaken in the event of unexpected contamination being identified during construction activities; and
- (e) Measures to be undertaken for the handling of asbestos containing material.

CL.4

All excavated soil shall be tested by the NZTA in general accordance with the CSMP, prior to either reuse on site or disposal off site. The testing regime shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council.

CL.5

The NZTA shall notify the Major Infrastructure Team Manager, Auckland Council within 5 working days of identification of any contamination at the site which was not identified in the reports submitted in support of this application, including contaminated soil, surface water or groundwater. The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.6

The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.7

The NZTA shall engage a suitably qualified contaminated land specialist to supervise the works, excavation and removal of any contaminated soils from the site and undertake sampling (if required) of imported material.

CL.8

All testing / sampling techniques shall be carried out in accordance with the Ministry for the Environment Contaminated Land Management Guidelines or other equivalent standards approved in writing by the Major Infrastructure Team Manager, Auckland Council.

CL.11

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council, a Site Closure Report no later than three (3) months after the completion of the earthworks. The Report shall be prepared in accordance with Schedule 13 (Schedules for Reporting on Contaminated Land) of the Proposed Auckland Regional Plan: Air Land and Water and include:

- (a) Results of any soil reuse and imported material testing carried out to ensure compliance with the CSMP;
- (b) Volumes of soil removed from site;
- (c) Copies of the waste disposal receipts; and

(d) Reports of any non-compliance with the CSMP procedures or complaints received while undertaking the site works.

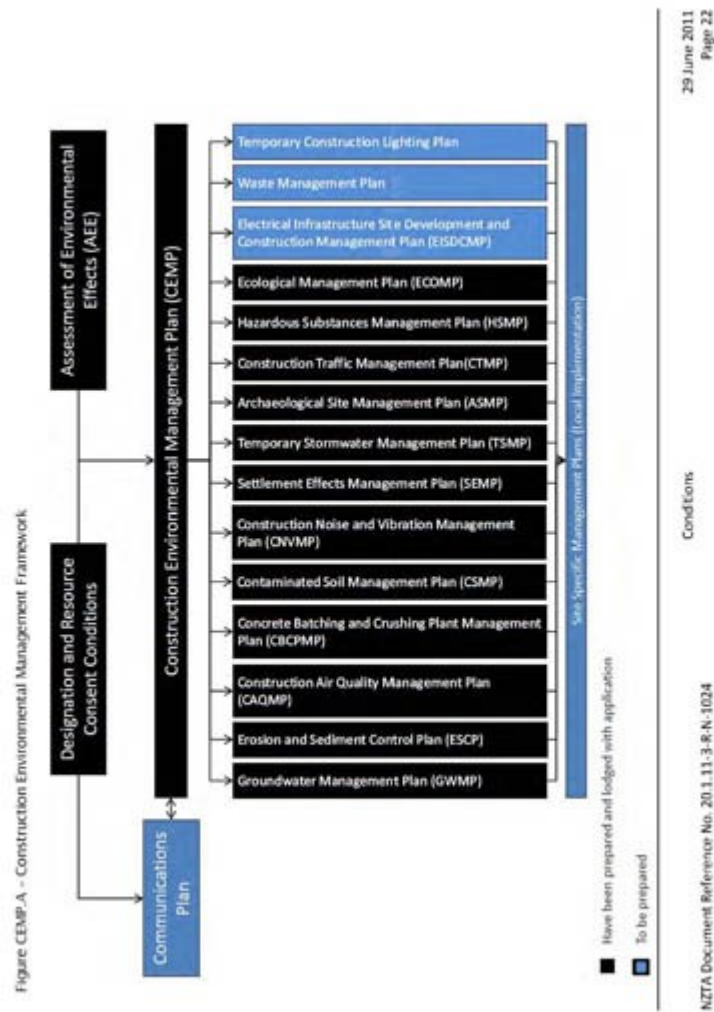

Figure PI.A - Structure of Communication Groups

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6723 State Highway 16 - Waterview Connection Waterview to Western Springs

Designation Number	6723
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from Great North Road, Avondale to St Lukes Road, Western Springs
Rollover Designation	Yes
Legacy Reference	Designation A07-01E, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

To alter designation A07-01, SH16, between Great North Road and St Lukes Interchange – NOR3. Addition of properties to existing designation, and construction of two new lanes, stormwater treatment, wetland pond, ancillary works and services, vegetation removal and restoration works, relocation of services, works on existing cycleway, landscaping and planting.

Conditions

For a complete set of conditions, refer to the Waterview Connection Proposal Board of Inquiry decision titled “Final Report and Decision of the Board of Inquiry into the New Zealand Transport Agency Waterview Connection Proposal - Volume 2” dated June 2011.

General Designation Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

DC.1

Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by the New Zealand Transport Agency (NZTA being the Requiring Authority), the Notice(s) of Requirement and the supporting documents, and supplementary information provided in evidence. This information is summarised as follows:

(a) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Parts A-E;

(b) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part F: Plans and Drawings, except as updated through the hearing (Refer Schedule A for current plan and drawing references); and

(c) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part G: Technical Reports:

- (i) Technical Report G.1 Assessment of Air Quality Effects
 - (ii) Technical Report G.2 Assessment of Archaeological Effects
 - (iii) Technical Report G.3 Assessment of Avian Ecological Effects
 - (iv) Technical Report G.4 Assessment of Coastal Processes
 - (v) Technical Report G.5 Assessment of Construction Noise Effects
 - (vi) Technical Report G.6 Assessment of Freshwater Ecological Effects
 - (vii) Technical Report G.7 Assessment of Groundwater Effects
 - (viii) Technical Report G.8 Assessment of Herpetofauna Ecological Effects
 - (ix) Technical Report G.9 Assessment of Land and Groundwater Contamination
 - (x) Technical Report G.10 Assessment of Lighting Effects
 - (xi) Technical Report G.11 Assessment of Marine Ecological Effects
 - (xii) Technical Report G.12 Assessment of Operational Noise Effects
 - (xiii) Technical Report G.13 Assessment of Ground Settlement Effects
 - (xiv) Technical Report G.14 Assessment of Social Effects
 - (xv) Technical Report G.15 Assessment of Stormwater and Streamworks Effects
 - (xvi) Technical Report G.16 Assessment of Temporary Traffic Effects
 - (xvii) Technical Report G.17 Assessment of Terrestrial Vegetation Effects
 - (xviii) Technical Report G.18 Assessment of Transport Effects
 - (xix) Technical Report G.19 Assessment of Vibration Effects
 - (xx) Technical Report G.20 Assessment of Visual and Landscape Effects
 - (xxi) Technical Report G.21 Construction Environmental Management Plan (CEMP)
 - (xxii) Technical Report G.22 Erosion and Sediment Control Plan (ESCP)
 - (xxiii) Technical Report G.23 Coastal Works
 - (xxiv) Technical Report G.24 Geotechnical Interpretive Report
 - (xxv) Technical Report G.25 Traffic Modelling Report
 - (xxvi) Technical Report G.26 Operational Model Validation Report
 - (xxvii) Technical Report G.27 Stormwater Design Philosophy Statement
 - (xxviii) Technical Report G.28 Geotechnical Factual Report – 500 Series
 - (xxix) Technical Report G.29 Geotechnical Factual Report – 700 Series
 - (xxx) Technical Report G.30 Assessment of Associated Sediment and Contaminant Loads
 - (xxxi) Technical Report G.31: Technical Addendum Report (September 2010)
- (d) PT & Active Mode Transport Routes Existing and Proposed (Refer Schedule A, Row 22).
- (e) Waterview Connection Project, Evidence and Supplementary Information provided to the Board of Inquiry:
- (i) Evidence in Chief (Numbers 1-37)
 - (ii) Rebuttal Evidence (Numbers 1-33)
 - (iii) Supplementary Information (Numbers 1-8)

DC.1A

Within 3 months of the designations being confirmed for the Project (or at least 1 month prior to any Auckland Council approvals or certifications required by these Conditions, whichever is the earlier), the NZTA shall update

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and finalise to the satisfaction of the Major Infrastructure Team Manager, Auckland Council all drawings and Plans cited in Schedule A, and provide a full set of the information and documentation referred to in Condition DC.1 to the Major Infrastructure Team Manager Auckland Council. At the same time the NZTA shall prepare to the satisfaction of the Major Infrastructure Team Leader, Auckland Council, a document for each designation which sets out the designation and have attached to it in text format a comprehensive set of the conditions imposed by the Board of Inquiry in its Final Decision as summarised in Schedule B, inclusive of any standard conditions and advice notes.

In particular (but not limited to), the following Plans will need to be amended in light of these Final Conditions:

- (a) F.2 Operational Scheme Plans (refer Schedule A, Row 3) require amendment detailing the amended location of the ventilation stacks and southern ventilation buildings;
- (b) F.5 Construction Scheme Plans (refer Schedule A, Row 4) require amendment to detail changes to the construction footprint for the amended location of the ventilation stacks and southern ventilation buildings and reconfiguration of Construction Yard 1);
- (c) F.6 Construction Yard Plans 101 and 107 (refer Schedule A, Row 7), detailing amendments to the Construction Yard 1 in light of the reconfiguration of this Yard and for Construction Yard 7 in light of the relocation of the northern ventilation stack (refer Schedule A, Row 34);
- (d) F.8 Plans of Structures and Architectural Features (refer Schedule A, Row 9), detailing the amended location of the northern ventilation stack and the design and location of the southern ventilation building and stack;
- (e) The CNVMP (including flow diagram and the supplementary evidence produced by Ms Wilkening) (refer Schedule A, Rows 36, 37 and 39);
- (f) The areas of the Open Space Restoration Plans (Schedule A, Row 30) to:
 - (i) Extend these areas in geographic extent to provide for the works identified in the Management Plan notations identified in the OS Conditions (in particular OS.5 and OS.6) (e.g. these areas will (as relevant) include Eric Armishaw Park, Howlett Reserve and Waterview Esplanade Reserve); and
 - (ii) Exclude the operational area of designation required for the northern ventilation stack (as identified through the OPW process (refer Condition DC.8); and
- (e) Schedule A, Row 28 the Plan detailing proposed open space impacts and replacements needs to be updated to recolour the two land parcels on Hendon Avenue (which are excluded from the replacement calculations) to 'brown' to confirm they are part of the operational impact and will not be returned as open space.

DC.2

The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

DC.3

The NZTA shall update and finalise the relevant Construction and Operational Management Plans required under these conditions to ensure compliance with the designation conditions imposed by the Board of Inquiry. The relevant Management Plans shall be submitted to the Major Infrastructure Team Manager, Auckland Council within the timeframes specified in the following conditions. No works shall be undertaken until the relevant management plans have been finalised and certified or approved in accordance with the relevant conditions.

DC.4

Any Management Plans submitted to the Major Infrastructure Team Manager, Auckland Council for approval or certification may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted shall clearly show the integration with adjacent stages and interrelated activities.

DC.5

In the event of any dispute, disagreement or inaction arising as to any Auckland Council Manager certification/ approvals required by the designation conditions, or as to the implementation of or monitoring required by the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

conditions, matters shall be referred in the first instance to the NZTA Regional State Highway Manager and to the Resource Consents Manager, Auckland Council to determine a process of resolution. If a resolution cannot be agreed, then the matter may be referred to an independent appropriately qualified expert, agreeable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not agree. The independent appropriately qualified expert shall be appointed within 10 working days of the NZTA or Auckland Council giving notice of their intention to seek expert determination. The expert shall, as soon as possible, issue his or her decision on the matter. In making the decision, the expert shall be entitled to seek further information and hear from the parties as he or she sees fit.

Advice note: The dispute resolution process provided for in this condition does not prejudice any party's right to take enforcement action in relation to the implementation of the designation conditions. However, the dispute resolution process will be applied before any formal enforcement action is taken by the Council, except in urgent situations.

DC.6

Except for Conditions DC.7, DC.8 and DC.9, the NZTA shall be exempt from providing an Outline Plan of Works for the Project, as provided for in Section 176A (2)(a) and (b) of the RMA.

Advice note: The Construction and Operational Management Plans, together with the provision of detailed drawings required by Condition DC.1(b) are considered sufficient detail in all aspects of the Project, with the exception of proposed works for the northern and southern ventilation buildings and stacks where further details are required.

DC.10

The NZTA shall give notice to the Manager Regional and Local Planning, Auckland Council in accordance with Section 182 and 181 respectively of the RMA for:

(a) Within six months of the State highway opening (being operational), removal of those parts of the designation that are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note: this condition is specific to land no longer required for construction purposes once the Project is completed and includes the land of 6 Barrymore Road, refer Condition OS.17.

(b) The designation to be altered to remove those conditions no longer required for long term operation and maintenance of the Project.

DC.12

Unless otherwise provided for by Condition RC.2, if any monitoring required to be undertaken by any party by the designation conditions indicates non-compliance with any designation condition, the NZTA must provide written notice to the Major Infrastructure Team Manager Auckland Council as soon as it becomes aware of same, stating the following:

(a) A description of the non-compliance; and

(b) The measures NZTA proposes for addressing the non-compliance, including any additional mitigation measures.

Subject to the Council's approval, the NZTA must implement the additional mitigation measures to address the non-compliance.

DC.13

Pursuant to Section 36(1)(d) of the RMA, the requiring authority is required to pay to Auckland Council any administrative charge for the carrying out by the local authority of its functions in relation to the administration, monitoring, and supervision of designation conditions.

DC.14

The servants of agents of Auckland Council shall be permitted to have access to relevant parts of the Project at

The Proposed Auckland Unitary Plan (notified 30 September 2013)

all reasonable times for the purpose of carrying out inspections, investigations, tests, measurements and/or to take samples.

Construction Environment Management Plan Conditions

CEMP.1

Except where provided for in Condition CEMP.1A below, the NZTA shall update and finalise the draft Construction Environmental Management Plan (CEMP) including all the Management Plans which form part of the CEMP and are included as appendices, submitted with this application to ensure compliance with the consent and designation conditions imposed by the Board of Inquiry. The CEMP shall be provided to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to the commencement of works to certify compliance and consistency with the conditions. Construction shall not commence until certification is obtained.

Advice note: For clarity the CEMP will be updated and finalised in accordance with the conditions. Any amendments will be limited to reflecting the requirements of the conditions, specifying personnel, and completing the Environmental Risk Register.

Advice note: Particular care must be taken with development and operation of Construction Yard 7. When the CEMP is being updated and finalised, consideration must be given to the contents of the draft SSCOMP prepared for Construction Yard 7 (Row 41, Schedule A) recognising changes required by inclusion of the ventilation stack in this yard.

CEMP.2

The certification process of the CEMP (and its appendices) shall confirm that the CEMP gives effect to the relevant conditions, as well as those matters in

CEMP.6, and that it includes details of:

- (a) Staff and contractors' responsibilities;
- (b) Training requirements for employees, sub-contractors and visitors;
- (c) Environmental incident and emergency management;
- (d) Communication and interface procedures (in accordance with the Communication Plan required under Condition PI.2);
- (e) Environmental complaints management (including the procedures required under Condition PI.4);
- (f) Compliance monitoring;
- (g) Reporting (including detail on the frequency of reporting to the Auckland Council);
- (h) Environmental auditing; and
- (i) Corrective action.

CEMP.3

The management of key environmental effects associated with the construction phase of the Project is detailed within environmental management plans that are included in the CEMP as appendices. This suite of management plans as shown on Figure CEMP.A comprises:

- (a) Construction Noise and Vibration Management Plan (CNVMP);
- (b) Construction Air Quality Management Plan (CAQMP);
- (c) Erosion and Sediment Control Plan (ESCP);
- (d) Temporary Stormwater Management Plan (TSMP);
- (e) Ecological Management Plan (ECOMP);
- (f) Groundwater Management Plan (GWMP);
- (g) Settlement Effects Management Plan (SEMP);
- (h) Contaminated Soils Management Plan (CSMP);
- (i) Hazardous Substances Management Plan (HSMP);
- (j) Archaeological Site Management Plan (ASMP);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (k) Construction Traffic Management Plan (CTMP);
- (l) Concrete Batching and Crushing Plant Management Plan (CBCPMP);
- (m) Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP) (to be prepared in accordance with Condition CEMP.15);
- (n) Waste Management Plan (to be prepared in accordance with Condition CEMP.10); and
- (o) Temporary Construction Lighting Management Plan (to be prepared in accordance with Condition L.2).

CEMP.4

The CEMP shall be implemented and maintained throughout the entire construction period.

CEMP.5

A copy of the CEMP shall be held on each construction site at all times and be available for inspection on request by the Auckland Council.

CEMP.6

The finalised CEMP shall include specific details on demolition, construction and management of all works associated with the Project. The certification process of the CEMP shall confirm that the CEMP includes details of the following:

- (a) Details of the site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) The location of large notice boards that clearly identify the NZTA and the Project name, together with the name, telephone, email address and address for service of the site or Project manager and the community liaison person;
- (c) An outline construction programme of the work indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- (d) The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at night, on Sundays and during public holidays;
- (e) Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/ storage of rubbish, storage and unloading of building materials and similar construction activities;
- (f) Location of worker's offices and conveniences (e.g. portaloos);
- (g) Procedures of controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- (h) Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (Nov 2007);
- (i) Procedures for ensuring that residents within 100m of construction areas or other people whose use of an area may be disrupted by construction works (for example the Te Atatu Boating Club for works on the Whau River) are given notice of the commencement of construction activities and are informed about the expected duration of the works, including potentially through the community liaison person;
- (j) Procedures to be followed to ensure that those working in the vicinity of identified heritage and ecological features are aware of the heritage or ecological values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- (k) Means of ensuring the safety of the general public;
- (l) Procedures for the community liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- (m) Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding streets is restricted;
- (n) All temporary boundary/ security fences shall be maintained in good order, with any graffiti removed as soon as possible;
- (o) Confirmation of a Project Arborist and completion of a STEM assessment of the preliminary list of Amenity Trees in Schedule E.7 of the AEE to confirm the final Amenity Trees; and
- (p) The process to minimise removal of Amenity Trees, maximise the protection of those retained, undertake

The Proposed Auckland Unitary Plan (notified 30 September 2013)

relocation of Amenity Trees and replacement planting of specimen trees (in accordance with Conditions LV.10 and ARCH.9)).

(q) Advice note: For the purposes of CEMP.6(o) and (p), Amenity Tree is defined as a tree or trees that contribute significantly to amenity, taking into account its form, size, health, ecological or historical significance (a preliminary list of these trees is provided in Appendix E.7 of the AEE).

CEMP.7

The layout of the 12 Construction Yards, including associated buildings, fencing and site access shall be developed in accordance with Waterview Connection Project Construction Yards Plans (Refer Schedule A, Row 7). The layout drawings shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the occupation of the yard, for review and certification that the final layout of the construction yards is in accordance with the conditions. The layout drawings shall incorporate the following:

- (a) The main access to the construction yards to be located as far as practicable from residential dwellings, taking into account site and public safety and environmental constraints, in the locations shown on Waterview Connection Project Construction Yards Drawings (Refer Schedule A, Row 7);
 - (b) Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings; Construction of temporary boundary/ security fences to be undertaken in a manner which minimises impacts on existing trees;
 - (c) Temporary acoustic fences and visual barriers;
 - (d) Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on adjacent residential dwellings; and
- Location of workers' and Project vehicle parking.

CEMP.8

All storage of material and equipment associated with the construction works shall take place within the boundaries of the designation.

CEMP.9

Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standards as existed prior to such damage at no cost to the Auckland Council.

CEMP.10

The NZTA shall finalise and implement the Hazardous Substances Management Plan (HSMP), through the CEMP (as per Condition CEMP.1), submitted with this application, prior to works commencing on site. The certification process of the CEMP shall confirm that the HSMP clearly identifies the requirements for proper storage, handling, transport and disposal of hazardous substances during the construction phase of the Project and confirm that there shall be no storage of explosives on the Project site.

CEMP.11

The NZTA shall develop and implement a Waste Management Plan in accordance with the waste management principles, controls and methods set out in the CEMP. The Plan shall be provided to the Major Infrastructure Team Manager, Auckland Council and be implemented throughout the entire construction period.

CEMP.12

The CEMP shall be reviewed by the NZTA at least annually or as a result of a material change to the Project. The review shall take into consideration:

- (a) Compliance with designation and consent conditions;
- (b) Any changes to construction methods;
- (c) Key changes to roles and responsibilities within the Project;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (d) Changes in industry best practice standards;
- (e) Changes in legal or other requirements;
- (f) Results of inspections, monitoring, incidents, corrective actions, internal or external assessments; and
- (g) Public complaints.

A summary of the review process undertaken shall be kept by the NZTA, provided annually to the Major Infrastructure Team Manager, Auckland Council and made available (with any related data) to the Auckland Council upon request.

CEMP.13

Following the review process (as described in Condition CEMP.12), the CEMP may require updating. Any material change proposed to the CEMP (including appended Management Plans) shall be submitted for approval to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the proposed changes taking effect.

Advice Note:

Material change will include amendment to any base information informing the CEMP or any process, procedure or method of the CEMP (such as the environmental constraints map, compliance monitoring process, complaints procedure or mitigation / remedial methods identified) which has the potential to increase adverse effects on a particular value. For clarity changes to personnel and contact schedules do not constitute a material change.

CEMP.14

The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP). The EISDCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council, and include:

(a) Methods and measures:

- (i) To ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities.
- (ii) To appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines
- (iii) To ensure that no activity is undertaken during construction that would result in ground vibrations and/or ground instability likely to cause material damage to the transmission lines, including support structures.
- (iv) To ensure that changes to the drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations for any high voltage transmission line support structure.
- (b) Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including, but not limited to, the provisions of Schedule (Growth Limit Zones) to those Regulations.
- (c) Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001), including, but not limited to, the provisions of:
 - (i) Clause 2.2 with respect to excavations near overhead support structures;
 - (ii) Clause 2.4 with respect to buildings near overhead support structures;
 - (iii) Section 3 with respect to minimum separation between buildings and conductors;
 - (iv) Section 5 with respect to minimum safe distances for the operation of mobile plant; and,
 - (v) Table 4 with respect to minimum safe separation distances between the ground and the overhead conductors.
- (d) Confirmation that Transpower has been provided a copy of the EISDCMP for their review at least 20 working days prior to construction.

Advice note: With respect to clause (c), specific consideration must be given to the height and location of temporary structures (such as Project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CEMP.15

The NZTA will be responsible for all service relocations required for construction of the Project. The NZTA shall liaise with the providers of infrastructure service networks (including, but not limited to water, gas, stormwater, wastewater, power and telecommunications), and private property owners with on-site services to develop methodologies and timing for necessary services relocation required for the Project, with the objective of minimising disruption to the operation of these service networks and onsite services.

Advice note:

(a) It is noted that if separate consents are required for relocations for any services of network utility operators or landowners, such consents will be obtained before construction commences in the relevant area, and any effects of those relocations would be considered at that time. The same applies to any alteration of consents if required.

(b) Network infrastructure owned and operated by Watercare Services is located within the designations. An operating agreement will be developed by the NZTA and Watercare Services which will include appropriate notification and access protocols where works are to be undertaken by either network operator on or adjacent to Watercare Services infrastructure within the designations.

Public Information Conditions

PI.1.

A community liaison person shall be appointed by the NZTA for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the Project. The liaison person's name and contact details shall be made available in the CEMP and on site signage by the NZTA. This person must be reasonably available for on-going consultation on all matters of concern to affected parties arising from the Project.

PI.2.

The NZTA shall prepare and implement a Communications Plan that sets out procedures detailing how the public, Ministry of Social Development, Housing New Zealand Corporation and other organisations representing the particular demographic characteristics of the community (including but not limited to Primary Health Organisations, general practitioners, youth, education organisations, aged care groups and groups representing ethnic and migrant communities) will be communicated with throughout the construction and monitoring periods (as prescribed in the designation and consent conditions).

In preparing the Communications Plan, the NZTA will liaise with Auckland Council to access its community liaison databases. The Communications Plan will include details of:

- (a) The site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) In accordance with these Conditions, the database of the key construction activities and monitoring requirements that are the subject of the Communications Plan;
- (c) The database of stakeholders and residents who will be communicated with;
- (d) Communication methods, an assessment of how these methods reach the different audience/ stakeholder groups (including those methods set out in Condition CEMP.6), and detail on when each of these methods will be used (e.g. regular communication or event specific methods);
- (e) The appointed specialist in Environmental and Occupational Medicine, including contact details (as per Condition SO.13);
- (f) Any stakeholder specific communication plans required; and
- (g) Monitoring and review procedures for the Communications Plan.

The Communications Plan shall be written in accordance with the external communication procedures set out in the CEMP and provided at least 20 working days prior to construction commencing, to the Major Infrastructure Team Manager, Auckland Council, Working Liaison Group and the Community Liaison Group(s) established by Condition PI.5. The structure of the communication groups set out in these conditions is attached as Figure PI.A.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

PI.3.

At least 15 working days prior to the commencement of construction, and at 15 working day intervals thereafter, or as required depending on the scale of works and effects on the community, advertisements will be placed in the relevant local newspapers and community notice boards (as identified in Condition CEMP.6(b)) detailing the nature of the forthcoming works, the location of the forthcoming works and hours of operation. All advertisements will include reference to a 24 hour toll free complaints telephone number. Where relevant, advertisements will also include but not be limited to details of:

- (a) Any traffic disruptions or controls or changes to property access, pedestrian/ cycle routes and bus stops; and
- (b) Any other construction activities, including night time works, blasting, and structure-borne noise, as identified in the conditions.

PI.4.

The NZTA shall manage, investigate and resolve (as appropriate) all complaints for the duration of the construction works in accordance with the environmental complaints section of the CEMP. The implementation strategy for complaints includes:

- (a) A 24 hour toll free telephone number and email address, which shall be provided to all potentially affected residents and businesses. The number shall be available and answered at all times during the entire duration of the works for the receipt and management of any complaints. A sign containing the contact details shall be located at each site specific work activity;
- (b) The NZTA shall maintain a record of all complaints made to this number, email or any site office, including the full details of the complainant and the nature of the complaint;
- (c) Upon receiving a complaint, within 10 days of complaint receipt, a formal written response will be provided to the complainant and Auckland Council;
- (d) The NZTA shall undertake corrective action where necessary to resolve any problem identified. All action taken and relevant information shall be documented. For the avoidance of doubt, 'where necessary' refers to where the works are not being carried out in accordance with conditions of this designation;
- (e) Where issues and complaints about effects cannot be resolved through the CEMP complaints management process, a meeting shall be held between the NZTA, the complainant and the Auckland Council representative(s) to discuss the complaint and ways in which the issue may be resolved. If parties cannot agree on a resolution, an independent qualified mediator will be appointed, agreeable to all parties and at the shared cost of all parties, to undertake mediation of the dispute or concerns; and
- (f) All information collected in Conditions PI.4 (b), (c) and (d) shall be detailed in a Construction Compliance Report (including the means by which the complaint was addressed, whether resolution was reached and how the response was carried out) prepared by the NZTA. This Report shall be submitted to the Major Infrastructure Team Manager, Auckland Council on a quarterly basis commencing at the beginning of the works and for the entire duration of construction.

PI.5.

The NZTA shall establish Community Liaison Group(s) at least two months prior to construction commencing in each of the following key construction areas:

- (a) Te Atatu (including the SH16 Causeway)
- (b) Waterview (including works to St Lukes on SH16 and on the Waterview Estuary and Causeway Bridges)
- (c) Owairaka

and hold regular meetings (at least three monthly) throughout the construction period and up to 24 months following construction completion relevant to these areas (or less if the members of the Group agree), so that on-going monitoring information can continue to be disseminated.

The Community Liaison Group(s) shall be open to all interested parties within the Project area including, but not limited to the following groups:

- (a) Auckland Council and Auckland Transport;
- (b) Educational facilities within the Project area (including schools, kindergartens, childcare facilities and Unitec

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Institute of Technology);

(c) Relevant community/ environmental groups (including but not limited to Friends of Oakley Creek, Star Mills Preservation Group, Cycle Action Auckland and representatives from those organisations identified in the Communications Plan (as required by Condition PI.2) and local residents;

(d) Department of Conservation;

(e) Local Boards;

(f) Iwi groups with Mana Whenua;

(g) Public transport providers; and

(h) Housing New Zealand Corporation.

Advice note: The purpose of the Community Liaison Group(s) is to provide a regular forum through which information about the Project can be provided to the community, and an opportunity for concerns or issues to be raised.

PI.6.

The Community Liaison Group(s) shall be provided opportunities to review and comment on the following (amongst other things):

(a) The Outline Plan of Works detailing designs for the northern and southern ventilation buildings and stacks (the outcomes of this consultation will be reported in accordance with the processes required in DC.8(n) and DC.9(k);

(b) The Open Space Restoration Plans (as required by Condition OS.3);

(c) Finalisation and amendment to Urban Design and Landscape Plans (UDL Plans) (as required by Condition LV.1);

(d) The Oakley Inlet Heritage Plan (as required by Conditions OS.5(b)(i) and ARCH.6);

(e) The detail of the Oakley Creek restoration (as required by Condition STW.20);

(f) Publicly available results of environmental monitoring as required by the designation and/or these Consents (e.g. air quality monitoring); and

(g) The finalisation of the STEM assessment required by CEMP.6(o) and a schedule of trees that are required to be removed for consideration of timber use in heritage projects as required by Condition SO.7.

Advice Note: Attention is drawn to the Vegetation conditions concerning identification and protection of Significant Vegetation and Valued Vegetation.

(h) Detailed design features of the Te Atatu underpass (e.g. lighting and architectural treatment).

Temporary Traffic Conditions

TT.1

The NZTA shall update and finalise the Construction Traffic Management Plan (CTMP) submitted with this application, in accordance with these conditions, and implement it through the CEMP.

In finalising the CTMP, the NZTA shall:

(a) Provide simulation modelling demonstrations to better understand the effects of construction of the Project on the affected road network;

(b) Include measures to avoid road closures and restrictions of vehicle, bus, cycle and pedestrian movements;

(c) Where road closures or restrictions cannot reasonably be avoided the particular vulnerabilities and sensitivities of pedestrian diversions and restricted conditions shall be taken into account in the planning of any closures or restrictions.

TT.2

The CTMP shall require the development of Site Specific Traffic Management Plans (SSTMPs) and their approval by the Traffic Management Project Governance Group (as defined by the CTMP), for each construction activity that may affect traffic or transportation infrastructure and services. The SSTMPs shall be provided to the Traffic Management Coordinator(s) for the relevant Road Controlling Authority at least 10 working days prior to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

each construction activity.

TT.3

Each SSTMP shall describe the measures that will be undertaken to avoid, remedy or mitigate the local and network wide effects of construction of the Project. In particular, the SSTMP shall include the following matters:

- (a) Traffic management measures to address and maintain, traffic capacity, including bus services, at peak traffic periods during weekdays (6:00 to 9:00 and 16:00 to 19:00) and peak traffic periods at weekends (including Te Atatu Road, Great North Road and Richardson Road);
- (b) Methods to manage the effects of traffic during construction including the requirement to detour or divert traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area;
- (c) Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- (d) Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/ overbridges) and the use of staging to allow sections of the Project to be opened to the traffic while other sections are still under construction;
- (e) Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks) during construction;
- (f) Any routes where construction traffic movements will be restricted (either for particular times for construction periods);
- (g) Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works, measures to provide alternative access arrangements in consultation with the Auckland Council and the affected landowner; and
- (h) Measures to maintain pedestrian and cycle access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable (e.g. unless provision of such access is severed by the works or such access will become unsafe as a result of the construction works). Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. (This Condition does not act as a qualification to the commitment to maintain access to open space and education facilities, as required in Condition OS.13).

TT.4

The SSTMPs shall include traffic management measures developed in consultation with the Auckland Transport, Bus and Coach Association and the Auckland Council, to address and maintain, where practicable, existing levels of service for buses particularly at peak periods (6:00 to 9:00 and 16:00 to 19:00) on weekdays.

TT.5

The NZTA shall consult with the Traffic Operations Manager, Auckland Transport with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation. The NZTA shall also coordinate and consult directly with the proponents of any major construction or major traffic generating event occurring concurrently with, and in the vicinity of the Project.

TT.6

The SSTMPs shall include measures developed in consultation with Auckland Transport to, as far as practicable, enable continued public walking and cycling passage along the existing Northwestern Cycleway (between Te Atatu Interchange and St Lukes Interchange) and along Great North Road and the public walkway along Oakley Creek, with any interruptions being as short as feasible.

TT.7

The NZTA shall undertake construction works so as to avoid significant long duration impacts or the full closure of Te Atatu Road for all road users heading to or from the Te Atatu Peninsula and to ensure that access for emergency service vehicles is maintained.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

TT.8

The NZTA shall restrict construction truck movements during peak hours (6:00 to 9:00 and 16:00 to 19:00) on weekdays and during the peak periods at the weekends to avoid the following:

- (a) Te Atatu Road Interchange, during both morning and afternoon peak hours
- (b) Great North Road Interchange, city bound during the morning peak hours
- (c) Great North Road Interchange, west bound onto SH16 and southbound onto Great North road during the afternoon peak.

Construction truck movements during these hours shall only be allowed under exceptional circumstances agreed in advance with the Traffic Management Project Governance Group.

TT.9

The NZTA shall maintain at least the existing active traffic lane configuration capacity on SH16, at the Te Atatu Interchange area, Te Atatu Road, Richardson Road and on Great North Road during peak periods being 6:00 to 9:00 and 16:00 to 19:00 on weekdays and during the peak periods on weekends, for the duration of the temporary construction programme.

TT.10

The NZTA shall monitor the impact of construction traffic in terms of traffic speeds and volumes on SH16, Great North Road, Te Atatu Road and Richardson Road throughout the construction period to confirm the expected traffic effects as set out in the Temporary Traffic Assessment (Technical Report G.16) submitted with this application.

- (a) This monitoring will be undertaken on a daily, weekly and monthly basis; and
- (b) Monitoring results will be made available to the Traffic Operations Manager, Auckland Transport on request.

TT.11

If monitoring undertaken pursuant to Condition TT.10 indicates that traffic volumes or traffic conditions are significantly different from those expected, the SSTMPs will be reviewed and as appropriate amended to the satisfaction of the Traffic Management Project Governance Group.

Operational Traffic Conditions

Integration with Local Road Network

OT.1

The NZTA shall prepare in collaboration with Auckland Transport a Network Integration Plan (NIP) for the Project, or relevant Project phases, to demonstrate how the Project integrates with the existing local road network and with future improvements (identified in the Western Ring Route (Northwest) Network Plan) planned by the Auckland Council. The NIP shall include details of proposed physical works at the interface between the State highway and the local road network, and shall address such matters as pedestrian/ cycle ways, lane configuration, traffic signal co-ordination, signage and provision for buses

In addition, the NIP will address:

- (a) The commitment of the NZTA to progress bus priority measures northbound on Great North Road as part of the reinstatement of Great North Road, as proposed by Auckland Transport and indicated on the Plans Great North Road Option 1 Proposed Road Marking (Schedule A, Row 33), subject to the agreement with Auckland Transport;
- (b) How the works committed to by the NZTA for pedestrian and cycle ways, as detailed in the PT and Active Mode Transport Routes Plan Set (Condition DC.1(d) (refer Schedule A, Row 22)), integrate with pedestrian and cycle ways on the wider transport network;
- (c) The Richardson Road Bridge, which shall be designed in general accordance with the structural plans (Schedule A, Row 9) and the commitment of the NZTA to provide a 2m footpath on Richardson Road Bridge, subject to confirming appropriate bus stop locations with Auckland Transport;
- (d) Integration of the works proposed on Te Atatu Road to appropriately transition between the Waterview Connection Project and any projects being progressed by Auckland Transport;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(e) Opportunities to review traffic signal timings at the Te Atatu Interchange with a view to minimising delays to all users, including cyclists on the SH16 cycle way; and

(f) The commitment of the NZTA to provide for cycle “aspects” (cycle signal lights) at the Great North Road Interchange.

(g) As part of detailed design at the Te Atatu Interchange, the installation of underpasses and/or overbridges, provided however that should some not prove feasible in civil or traffic engineering design terms, the installation of coordinated traffic signal operation for cyclists on the north-western cycleway by means of synchronised cycle lights which seek to reduce delays for cyclists.

Works identified in the NIP which are the responsibility of the NZTA, will be undertaken as at the time of construction works for the Project.

Noise and Vibration Conditions – Construction

CNV.1

The NZTA shall finalise and implement through the CEMP, a Construction Noise and Vibration Management Plan (CNVMP) throughout the entire construction period of the Project.

The CNVMP shall describe the measures adopted to meet:

- (a) the noise criteria set out in Conditions CNV.2 and 3 below;
- (b) the vibration criteria set out in Condition CNV.4 below; or
- (c) where (a) or (b) cannot be met, the process that will be followed to appropriately mitigate noise and vibration effects including methods that may be applied outside the designation.

The CNVMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CNVMP, as a minimum, addresses the following:

- (i) Construction noise and vibration criteria (Conditions CNV.2, CNV.3, and CNV.4);
- (ii) Hours of operation, including times and days when noisy and/or vibration inducing construction activities would occur;
- (iii) Machinery and equipment to be used;
- (iv) Vibration testing of equipment to confirm safe distances to buildings prior to construction;
- (v) Preparation of building condition surveys of critical dwellings prior to, during and after completion of construction works;
- (vi) Roles and responsibilities of personnel on site;
- (vii) Construction operator training procedures;
- (viii) Methods for monitoring and reporting on construction noise and vibration;
- (ix) A hierarchy of mitigation options that will be assessed for the Project noise mitigation, including alternative strategies where full compliance with the relevant noise and/or vibration criteria cannot be achieved;
- (x) Management schedules containing site specific information;
- (xi) Measures for liaising with and notifying potentially affected receivers of proposed construction activities and the potential for noise and vibration effects, specifically:
 - PPFs located within a horizontal distance of 35 metres of underground excavation works, along the tunnel alignment shall receive prior notification not greater than 7 days (and not less than 24 hours) prior to the commencement of works.
 - Methods for ensuring residents affected by night works (within 100m of the construction site night works, as defined on the maps (refer Schedule A, Row 35) are notified of such works (i.e. any works during the hours of 20:00 to 06:30) at least 5 days prior to the commencement of any such work.
 - The maps showing PPFs to be notified of night works (refer Schedule A, Row 35, shall be reviewed and included within the CNVMP.
- (xii) Methods for receiving and handling complaints about construction noise and vibration;
- (xiii) Measures for preventing the occurrence of rogue fly rock, including management of charge weights and face loading procedures, stemming of charge holes and profiling of the face to maintain minimum burden (face cover);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (xiv) Investigations on the practicability of implementing permanent noise mitigation works for construction mitigation (as per Condition CNV.7);
- (xv) Investigations of the practicability of implementing Building Modification mitigation, as required in accordance with Conditions ON.6 and ON.11, prior to commencement of construction within 100m of the relevant PPFs (including those on the Unitec site); and
- (xvi) The process for developing Site Specific Noise Management Plans (SSNMP), in accordance with the SSNMP Flow Chart (refer Schedule A, Row 36), including templates and a certification process for the Major Infrastructure Team Manager, Auckland Council (in accordance with Condition CNV.13) to confirm the process of SSNMP review of noise mitigation options where, the modelled/predicted levels or subsequent actual levels exceed the criteria in Conditions CNV.2 and/or CNV.4.

CNV.2

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction noise (excluding noise from blasting Monday to Saturday inclusive) shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise" and shall comply with the following criteria:
Note: In Condition CNV.2 (T) means a duration between 15 minutes and 60 minutes, in accordance with NZS6803:1999.

(a) Project Construction Noise Criteria: Residential Receivers

Time of Week	Time period	Project Construction Noise Criteria (Long Term Construction) dB		
		Sectors 1-7	Sectors 8-9	All Sectors
		LAeq(T)	LAeq(T)	LAeq(T)
Monday- Saturday	0630-0730	60	45	75
	0730-1800	70	70	85
	1800-2000	65	65	80
	2000-0630	60	45	75
Sundays and Public Holidays	0630-0730	45	45	75
	0730-1800	60	45	85
	1800-2000	45	45	75
	2000-0630	45	45	75

(b) Project Construction Noise Criteria: Commercial and Industrial Receivers

Time Period	Project Construction Noise Criteria (Long Term Construction) dB
	LAeq(T)
0730-1800	70
1800-0730	75

(c) Project Construction Noise Criteria: Internal Structure-borne Noise from tunnelling for Residential Receivers

Time Period	Project Construction Noise Criteria Inside	
0600-2200	35 dB LAeq(T)	All habitable rooms
2200-0600	30 dB LAeq(T)	Bedrooms

(d) Project Construction Noise Criteria: Internal noise for Licensed Educational Facilities

Time Period (School Days)	Project Construction Noise Criteria Inside	
Teaching Hours	45 dB LAeq(T)	Classrooms, library, offices, teaching, laboratories, manual arts, workshops
Teaching Hours	40 dB LAeq(T)	School hall, lecture theatres

Note: In Condition CNV2(d) "Teaching hours" means: Primary schools and Kindergartens: 9am to 3pm Unitec: 8am to 9pm

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CNV.3

Project Construction Noise Criteria: Airblast (excluding Sundays)

Category	Type of Blasting Operations	Peak Sound Pressure Level (LZpeak dB)
Human Comfort Limits		
Sensitive Site	Operations lasting longer than 12 months or more than 20 Blasts	115 dB for 95% blasts per year. 120 dB maximum unless agreement is reached with occupier that a higher limit may apply
Sensitive Site	Operations lasting less than 12 months or less than 20 Blasts	120 dB for 95% blasts per year. 125 dB maximum unless agreement is reached with occupier that a higher limit may apply
Occupied non-sensitive sites such as factories and commercial premises	All blasting	125 dB maximum unless agreement is reached with the occupier that a higher limit may apply. For sites containing equipment sensitive to vibration, the vibration should be kept below manufacturer's specifications of levels that can be shown to adversely affect the equipment operation
Damage Control Limits		
Structures that include masonry, plaster and plasterboard in their construction and also unoccupied structures of reinforced concrete or steel construction	All blasting	133 dB unless agreement is reached with owner that a higher limit may apply.
Service structures such as pipelines, powerlines and cables located above ground	All blasting	Limit to be determined by structural design methodology

CNV.4

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction vibration received by any building shall be measured and assessed in accordance with the German Standard DIN 4150-3:1999 "Structural vibration – Part 3: Effects of vibration on structures", and shall comply with the criteria set out as follows:

Type of Structure	Short-term vibration			Long-term vibration	
	PPV at the foundation at a frequency of				
	1-10 Hz (mm/s)	1-50 Hz (mm/s)	50-100 Hz (mm/s)	PPV at horizontal plane of highest floor (mm/s)	PPV at horizontal plane of highest floor (mm/s)
Commercial/Industrial	20	20-40	40-50	40	10
Residential/School	5	5-15	15-20	15	5
Historic or Sensitive structures	3	3-8	8-10	8	2.5

CNV.5

Notwithstanding Condition CNV.3 above,

(a) Blasting activities shall be conducted so that 95% of the blasts undertaken (measured over any twenty

The Proposed Auckland Unitary Plan (notified 30 September 2013)

blasts on the foundation of any building outside the designation boundary) shall produce peak particle velocities not exceeding 5mm/s and 100% of the blasts undertaken shall produce peak particle velocities not exceeding 10mm/s irrespective of the frequency of the blast measured.

(b) Construction activities, which occur within Sectors 1, 6, 8 and 9 which are identified in Technical Report no. G.19 Assessment of Vibration Effects, as being at a 'High Risk' of exceeding the DIN 4150-3:1999 criteria (being excavation, piling, compaction and drilling) shall be conducted so that 95% of the activities undertaken (measured over at least 20 representative samples of the relevant activity on any residential building) shall produce peak particle velocities not exceeding the relevant criterion in DIN 4150-3:1999 and 100% of the activities undertaken shall not exceed 10mm/s irrespective of the frequency of the activity measured.

CNV.6

Blasting shall be undertaken between 09:00h and 17:00h, Monday to Saturday, except that blasting may be undertaken between 09:00h and 17:00h on Sundays where:

- (a) The blasting is at least 50m inside the Sector 8 tunnel;
- (b) The blasting produces peak particle velocities at any residential building not exceeding 0.5mm/s; and
- (c) The Project construction noise criteria set out in Condition CNV.2 for Sundays are complied with.

CNV.7

Where practicable, permanent (traffic) noise barriers, required in any Sector as Detailed Mitigation Options for operational noise following completion of the Project (in accordance with Conditions ON.3 to ON.5) shall be erected prior to noise generating construction works commencing. Where this is not practicable, temporary noise mitigation measures shall be implemented in accordance with the CNVMP, prior to noise generating construction works commencing.

CNV.8

Pile driving or pile removal shall not be undertaken at night (i.e. during the hours of 20:00 – 06:30).

CNV.9

The concrete batch plants, rock crushing plants and the loading bays and conveyors for such plants shall be fully enclosed.

CNV.11

For all other properties, if noise and vibration monitoring of the tunnelling works for the Project (in accordance with Condition CNV.1), indicates that the noise or vibration criteria of Conditions CNV.2 or CNV.4 will potentially be exceeded, then the process set out in the CNVMP will be undertaken including Site Specific Noise Management Plans. Where relocation for residents is proposed, notification of such relocation with residents and property owners will be undertaken in accordance with the processes contained in the CNVMP.

CNV.13

SSNMPs (required by Condition CNV.1(xvi)) above, shall be submitted to Major Infrastructure Team Manager, Auckland Council for review and certification at least 7 working days prior to the proposed works commencing. A decision will be provided by the Council within 5 working days of receipt of the SSNMP.

Works will not commence until certification is received from the Major Infrastructure Team Manager, Auckland Council. The Council may, at its discretion, waive the requirement for SSNMPs to be submitted to the Council where an SSNMP is required.

If monitoring shows that levels specified in a SSNMP are being exceeded, work generating the exceedence will stop and not recommence until further mitigation is implemented in accordance with an amended SSNMP certified by Council.

Advice note: It is accepted that the criteria of CNV.2 and CNV.4 may not be met at all times, but that the NZTA will take all practical steps to achieve compliance, taking into account the hierarchy of mitigation options outlined in Condition CNV.1 (ix).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise Conditions – Operation

ON.1

For the purposes of Conditions ON.2-ON.14 the following terms will have the following meanings:

- Appendix E – means Appendix E to the Technical Report G.12 ‘Assessment of Operational Noise Effects’ submitted with this application.
- BPO – means Best Practicable Option.
- Building Modification Mitigation – has the same meaning as in NZS 6806:2010.
- Design Year – means a point in time that is 10 years after the opening of the Project to the public
- Emergency Mechanical Services – means mechanical services used for emergency situations only.
- Habitable room – has the same meaning as in NZS 6806:2010.
- Noise Criteria Categories – means groups of preference for time-averaged sound levels established in accordance with NZS 6806:2010 when determining the BPO mitigation option; i.e. Category A - primary noise criterion, Category B - secondary noise criterion and Category C - internal noise criterion.
- NZS 6806:2010 – means NZS 6806:2010 Acoustics – Road-Traffic Noise – New and Altered Roads.
- PPFs – means only the premises and facilities identified in green, yellow or red in Appendix E.
- Structural mitigation – has the same meaning as in NZS 6806:2010.

ON.2

The NZTA shall implement the traffic noise mitigation measures identified as the “Preferred Mitigation Options” in Appendix E as part of the Project, in order to achieve the Noise Criteria Categories indicated in Appendix E (“Identified Categories”), where practicable and subject to Conditions ON.3-ON.11 below.

ON.3

The detailed design of the structural mitigation measures of the “Preferred Mitigation Options” (the Detailed Mitigation Options) shall be undertaken by a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council prior to construction of the Project, and, subject to Condition ON.4, shall include, as a minimum, the following:

- (a) Noise barriers with the location, length and height in general accordance with Appendix E and designed in accordance with the ULDF (Section B) (refer Schedule A, Row 38); and
- (b) A requirement that Open Graded Porous Asphalt (“OGPA”) or equivalent low-noise generating road surface be used on all surface roads throughout the Project, except at the Great North Road Interchange; and
- (c) For the Great North Road Interchange, a requirement that Twin Layer Open Graded Porous Asphalt (“Twin Layer OGPA”) or equivalent low-noise generating road surface be used as shown in Appendix E.

ON.4

Where the design of the Detailed Mitigation Options identifies that it is not practicable to implement a particular structural mitigation measure in the location or of the length or height included in the “Preferred Mitigation Options”, either:

- (a) If the design of the structural mitigation measures could be changed and would still achieve the same Identified Category at all relevant PPFs, and a suitably qualified expert approved by the Major Infrastructure Team Manager, Auckland Council, certifies to the Auckland Council that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed mitigation measures; or
- (b) If the changed design of the structural mitigation measure would change the Noise Criteria Category at any relevant PPF from Category A or B to Category C but Major Infrastructure Team Manager, Auckland Council confirms that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed structural mitigation measures.

ON.5

The Detailed Mitigation Options shall be implemented prior to completion of construction of the Project.

ON.6

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(a) Sectors 1 to 8 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options:

- i. A noise level increase of 3 decibels or more will occur due to road-traffic noise from the Project; and
- ii. Habitable spaces are likely to receive in excess of 45 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year.

For those PPFs, following the process set out in Conditions ON.7 to ON.11, it shall be determined which Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces.

(b) Sector 9 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options, habitable spaces are likely to receive in excess of 40 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year. For those PPFs, following the process set out in ON.7 and ON.8, it shall be determined if Building Modification Mitigation may be required to achieve 40 dB LAeq inside habitable spaces. For those PPFs where Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces, this shall be implemented following the process set out in ON.9 to ON.11.

ON.7

(a) Prior to commencement of construction of any sector of the Project in the vicinity of a PPF identified under Condition ON.6, the NZTA shall write to the owner of each such building seeking access for the purpose of measuring internal noise levels and assessing the existing building envelope in relation to noise reduction performance.

(b) If the owner(s) of the building approve the NZTA's access to the property within 12 months of the date of the NZTA's letter (sent pursuant to Condition ON.7(a)), then no more than six months prior to commencement of construction in any sector of the Project, the NZTA shall instruct a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council, to visit the building to measure internal noise levels and assess the existing building envelope in relation to noise reduction performance.

ON.8

Where a PPF identified under Condition ON.6 is identified, the NZTA shall be deemed to have complied with Condition ON.7 above where:

- (a) The NZTA (through its acoustics specialist) has visited the building; or
- (b) The owner(s) of the building approved the NZTA's access, but the NZTA could not gain entry for some reason after repeated attempts; or
- (c) The owner(s) of the building did not approve the NZTA's access to the property within the time period set out in Condition ON.7(b) (including where the owner(s) did not respond to the NZTA's letter (sent pursuant to Condition ON.7(a) within that period); or
- (d) The owner(s) of the building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

If any of (b) to (d) above apply to a particular Building, the NZTA shall not be required to implement any Building Modification Mitigation at that Building

ON.9

Subject to Condition ON.8, within 6 months of the assessment required under Condition ON.7(b), the NZTA shall give written notice to the owner of each PPF identified under Condition ON.6:

- (a) Advising of the options available for Building Modification Mitigation to the building; and
- (b) Advising that the owner has three months within which to decide whether to accept Building Modification Mitigation for the building, and if the NZTA has advised the owner that more than one options for building modification mitigation is available, to advise which of those options the owner prefers.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ON.10

Once an agreement on Building Modification Mitigation is reached between the NZTA and the owner of an affected building, the mitigation shall be implemented (including the NZTA undertaking any required third party authorisation) in a reasonable and practical timeframe agreed between the NZTA and the owner. Building Modification Mitigation shall be to the standard specified in section 8.3.2 of NZS 6806:2010.

Advice Note: The NZTA will be responsible for obtaining any necessary building consents or other approvals to undertake the above Building Modification Mitigation.

ON.11

Subject to Condition ON.8, where Building Modification Mitigation is required, the NZTA shall be deemed to have complied with Condition ON.10 above where:

- (a) The NZTA has completed Building Modification Mitigation to the Building; or
- (b) The owner(s) of the Building did not accept the NZTA's offer to implement Building Modification Mitigation prior to the expiry of the timeframe stated in Condition ON.9(b) above (including where the owner(s) did not respond to the Requiring Authority within that period); or
- (c) The owner of the Building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

ON.12

The NZTA shall manage and maintain the Detailed Mitigation Options to ensure that, those mitigation works are maintained to retain their noise attenuation performance indefinitely

ON.14

(a) Prior to construction, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake a minimum of 8 (eight) representative measurements of ambient noise levels. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(b) Following completion of the work, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake traffic noise monitoring at the same sites surveyed in Condition ON.14 (a) above, within 2 to 3 years following completion of construction of the Project. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(c) The results of the noise level monitoring in accordance with ON.14(b) above shall be used to verify the computer noise model of the Detailed Mitigation Option. A report describing the findings of the verification shall be provided to the Major Infrastructure Team Manager, Auckland Council within one month of it being completed.

Vibration Conditions - Operation

OV.1

Existing ambient vibration levels shall be measured at critical locations nominated by the NZTA, and submitted to the Major Infrastructure Team Manager, Auckland Council for approval prior to the commencement of works. These baseline measurements will establish pre-Project vibration levels for comparison with future vibration levels.

Air Quality Conditions – Construction

GENERAL CONDITIONS

AQ.1.

The NZTA shall finalise and implement, through the CEMP, the Construction Air Quality Management Plan (CAQMP) and Concrete Batching and Crushing Management Plan (CBCMP) submitted with the application. The CAQMP and CBCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CAQMP and CBCMP includes the following details:

- (a) Daily visual monitoring of dust emissions;
- (b) Procedures for responding to process malfunctions and accidental dust discharges;
- (c) Criteria, including consideration of weather conditions and procedures for use of water sprays on stockpiles and operational areas of the site;
- (d) Continuous monitoring of Total Suspended Particulate (TSP) concentrations and meteorology;
- (e) Monitoring of the times of detectable odour emissions from the ground;
- (f) Procedures for responding to discharges of odour (including in the event of excavation of contaminated sites);
- (g) Monitoring of construction vehicle maintenance;
- (h) Process equipment inspection, maintenance, monitoring and recording, including baghouses, pressure relief valves and high level alarms;
- (i) Complaints investigation, monitoring and reporting; and
- (j) The identification of staff and contractors' responsibilities.

AQ.2.

The NZTA shall review the CAQMP and CBCMP at least annually and as a result of any material change to the Project. Any consequential changes will be undertaken in accordance with Condition CEMP.13.

AQ.3.

All construction activities shall be operated, maintained, supervised, monitored and controlled at all times so that all emissions authorised by this consent are maintained at the minimum practicable level.

AQ.4.

The NZTA shall undertake construction activities in accordance with the CEMP, CAQMP and CBCMP, such that:

- (a) Hard surfaced areas of the construction yards and active construction areas are vacuum swept or scraped down at least twice each week and additionally as reasonably required;
- (b) All unsealed areas of the site used for vehicle movement are maintained visibly damp by the use of water sprays or a water cart during weather conditions where the potential for dust emissions exist;
- (c) Wheel wash systems are installed at all truck exits from unpaved areas of the site onto public roads are used for all trucks that depart from the site;
- (d) All stockpiles are constructed and positioned to minimise the potential for dust emissions. The surfaces of all stockpiles are maintained adequately damp at all times to minimise the release of particulate matter;
- (e) Belt conveyors for moving dry materials are fitted with water sprays or enclosed to minimise wind entrainment of dust. Where installed, water suppression is used whenever the conveyors are used for moving dry materials.

AQ.5.

Unless expressly provided for by conditions of this consent, there shall be no odour, dust or fumes beyond the site boundary caused by discharges from the site which, in the opinion of an enforcement officer, is noxious, offensive or objectionable.

AQ.6.

All offensive or objectionable dust beyond the boundary of the site caused as a result of processes on the site shall be mitigated forthwith in accordance with the requirements of the Construction Air Quality Management Plan.

AQ.7.

Beyond the site boundary there shall be no hazardous air pollutant caused by discharges from the site that causes, or is likely to cause, adverse effects on human health, environment or property.

AQ.8

The Proposed Auckland Unitary Plan (notified 30 September 2013)

No discharges from any activity on site shall give rise to visible emissions, other than water vapour, to an extent which, in the opinion of an enforcement officer, is noxious, dangerous, offensive or objectionable.

MONITORING

AQ.14

The NZTA shall undertake visual inspections of dust emissions as follows:

- (a) Visual inspections of all active construction areas at least three times daily during October to April inclusive, whenever there are construction activities. The results of visual monitoring shall be logged.
- (b) Visual inspections of dust emissions from the concrete batching plants and rock crushing plant shall be undertaken daily while the plant is operating

AQ.15

The operation of water sprays shall be checked at least once each day.

REPORTING

AQ.19.

All records, logs, monitoring and test results that are required by the conditions of this consent shall be made available on request, during operating hours, to an Auckland Council enforcement officer and shall be kept for the duration of the consent.

AQ.22.

Log books shall be maintained that record all relevant information that is required to demonstrate compliance with the conditions of this consent. This information shall include, but is not limited to:

- (a) Visual assessments of any dust emissions from the site and the source;
- (b) Any dust control equipment malfunction and any remedial action taken;
- (c) When a water cart was used and, if so, the frequency of use and the volume of water used (including identification of location);
- (d) All relevant details of the TSP and meteorological monitoring required by Conditions AQ.16 and AQ.17;
- (e) Any additional dust control measures undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

AQ.23.

The NZTA shall maintain a log of any complaints received relating to air quality. Details of each complaint received shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 24 hours of receipt of the complaint. The log shall include any complaints lodged with the Auckland Council where the Council has informed the NZTA of the complaint. The log shall include, but not be limited to the following:

- (a) The date, time, location and nature of the complaint;
- (b) Weather conditions at the time of the complaint (including approximate wind speed, wind direction, cloud cover);
- (c) Any possible other contributing factors (such as a fire, smoky vehicle, a local chimney emission, etc.);
- (d) The name, phone number and address of the complainant (unless the complainant elects not to supply these details);
- (e) Any remedial actions undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

Landscape and Visual Conditions

LV.1.

The Urban Design and Landscape Plans (UDL Plans) (Plan Set F.16, refer Schedule A, Row 17) shall be reviewed and revised in accordance with the conditions and submitted to the Major Infrastructure Team Manager, Auckland Council for certification that they comply with the conditions of the consents/ designation prior to construction of the relevant Project stage, at least 20 working days prior to the commencement of construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The UDL Plans shall be updated to:

- (a) Reflect relevant details from the PT and Active Mode Transport Routes Plan Set (Schedule A, Row 23);
- (b) Remove the playing field at Waterview Reserve;
- (c) Confirm the reconfigured bund design at Alwyn Avenue (Schedule A, Row 42);
- (d) Reflect landscaping required in relation to the northern vent stack in Waterview Glades pursuant to Conditions DC.8.

LV.2.

In certifying the UDL Plans, prepared in accordance with Condition LV.1, the Major Infrastructure Team Manager, Auckland Council shall be satisfied the UDL plans includes:

- (a) The visual mitigation of infrastructure as detailed in Section B of the UDLF (refer Schedule A, Row 38).
- (b) Incorporation of art or art through design of structures, particularly as it relates to noise barriers and the Great North Road Interchange piers and ramps (Refer to clauses (g) and (i) below).
- (c) Planting to screen houses and noise walls (including cross section details);
- (d) Planting along the corridor on Traherne Island, in accordance with these conditions and the Ecological Management Plan;
- (e) Specimen planting on the Great North Road Interchange and the Te Atatu Road Interchange;
- (f) Specimen planting at the tunnel portals (except where this is within the OPW area);
- (g) Finalisation of the noise barriers (as required by Condition ON.3(a)) in accordance with the design principles for noise walls (refer Schedule A, Row 32);
- (h) Delineation of the final areas of the Open Space Restoration Plans in accordance with the Open Space Restoration Plans (Schedule A, Row 30), and reference that all works within the Open Space Restoration Plan Areas are subject to Conditions OS.1 to OS.8;
- (i) Oakley Inlet Heritage Plan, prepared in accordance with Conditions OS.5, and in particular, consideration shall be given to the design treatment of the Great North Road Interchange piers and ramps to take into consideration the impact of the structures on the visual quality of the open space beneath;
- (j) Ecological Management Plan, prepared in accordance with Conditions V.1, A.1, H.1, F.1 and M.1;
- (k) Western Ring Route: Maioro Street Interchange and Waterview Connection - Oakley Creek Rehabilitation and Restoration Guidelines (Boffa Miskell, 2010); and
- (l) Details of artworks or art through design of structures within the Project (e.g. design detailing of median barriers, bridge railings, safety barriers, piers, retaining walls and tunnel portals), in accordance with Section B of the Urban Landscape and Design Framework (UDLF June 2010) (refer Schedule A, Row 38) and F.8:Plans of Structures and Architectural Features, but excluding the north and south ventilation buildings, plans sections and elevations.

LV.3.

The NZTA shall have implemented the UDL Plans within 6 months of practical completion of construction of the Project.

LV.4.

The landscaping shall be implemented in accordance with the UDL Plans within the first planting season following the completion of the construction works, provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for a period of 10 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping shall be implemented in accordance with this Condition for each stage unless subsequent construction staging requires use of the proposed landscaping area.

Advice note: On-going control and management of the landscaping within the designation is the responsibility of the NZTA.

LV.5.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The NZTA shall implement the UDL Plans taking into account the pest plant management guidelines detailed in the Ecological Management Plan (as required by Condition CEMP.3).

LV.8.

The NZTA shall ensure that any areas within the designation affected by construction activities have sub-soil rehabilitated and top-soil replaced so that the hydrological response including the volume of stormwater runoff generated is as close as practicable to the predevelopment situation. The methodologies to achieve this shall be documented and provided to the Major Infrastructure Team Manager, Auckland Council with the revised UDL Plans submitted pursuant to Condition LV.1.

LV.10.

The UDL Plans shall identify all Amenity Trees required to be removed over the construction of the Project (in accordance with Condition CEMP.6(o) and (p)). Replacement trees shall be sized at 160Lt and will either draw from the Coastal Forest or Basalt Rock Forest ecotypes listed in the Landscape Planting Schedules (provided in F.16, refer Schedule A, 17) or an agreed alternative species (confirmed by Major Infrastructure Team Manager, Auckland Council), except in the case of those trees subject to Condition ARCH.9.

Advice note: This does not necessarily apply to any replacement planting in the Open Space Restoration Plan areas, which will be confirmed in approval from Auckland Council and will be in accordance with relevant Auckland Council Park guidelines (see Condition OS.4).

Open Space Conditions

OS.13

During construction, the NZTA shall maintain pedestrian accessways to all open space available for public use during construction and education facilities where access is affected by the works, including any public access that crosses private land. Such access shall be safe, clearly identifiable, provide appropriate surfacing and seek to minimise significant detours. The access shall be of a same or similar standard as that disrupted and will be provided and maintained by the NZTA.

Advice note: This specifically includes the existing pedestrian access that provides a connection to the crossing over Oakley Creek between 1510 Great North Road and Unitec Mt Albert Campus.

OS.15

The works shall not result in any permanent loss of carparking from Western Springs Garden carpark.

Social Conditions

SO.1

In addition to the Community Liaison Groups established pursuant to Condition PI.5, the NZTA shall establish an Education Liaison Group (including representatives from local schools, kindergartens, childcare facilities, Unitec Institute of Technology, the Ministry of Education and Housing New Zealand Corporation), to provide a forum through which:

- (a) Relevant monitoring data can be provided (e.g. air quality monitoring);
- (b) Notice can be provided of when particularly noisy activities will occur in close proximity to schools and education facilities, to enable the opportunity to identify any potential conflict with particular sensitive periods, and the requirement for specific mitigation strategies (e.g. rescheduling of construction activities where practicable);
- (c) Particular concerns can be raised by educational facilities or parents, discussed and potentially addressed;
- (d) Notice can be provided of potential construction impacts on school transport routes (including pedestrian/cycle access) to enable the opportunity to identify specific mitigation preferences of the education facilities (e.g. any detour routes) and to enable these facilities to appropriately inform students and/or parents; and
- (e) Learning and teaching opportunities for educational facilities to participate in Project works (e.g. planting or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

artworks).

The Education Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period. The Education Liaison Group shall continue to meet for at least 12 months following the completion of the Project (or less if the members of the Education Liaison Group agree), so that ongoing monitoring information can continue to be disseminated.

SO.2

In addition to Condition SO.1(b) above, where noisy construction activities (that are projected to exceed the Noise Criteria in the CNVMP) are proposed in close proximity or adjacent to schools/ childcare centres, the NZTA shall, when preparing their SSNMP (in accordance with Condition CNV.1) give specific consideration to options to carry out these works outside school hours or during school holidays as a mitigation option.

SO.6

In addition to the Community Liaison Group established pursuant to Condition PI.5, the NZTA shall establish a Working Liaison Group (WLG) inviting the following:

- (a) Auckland Council;
- (b) Housing New Zealand Corporation;
- (c) Te Kawerau Iwi Tribal Authority;
- (d) Ngati Whatua o Orakei;
- (e) KiwiRail;
- (f) Department of Conservation;
- (g) Ministry of Education; and
- (h) Local Boards.

The purpose of this WLG will be to provide a forum through which:

- (a) Opportunities for public work development (including social housing, passenger transport or recreation / open space) are identified in areas where the NZTA confirms that the designation is no longer required (e.g. following construction activities);
- (b) Comment can be provided on updated Urban Design and Landscape Plans, including the finalised designs of structural elements for the Project (prior to their submission to the Auckland Council);
- (c) Opportunities for integration of other environmental projects (e.g. restoration plantings) are identified;
- (d) Consideration is given to appropriate protocols for commencement and completion of construction activities (including blessings for commencement of construction phases); and
- (e) Comment can be provided by Te Kawerau a Maki on the detailed lighting design of SH16, to consider how lighting effects on cultural sites and practices might be mitigated without compromising traffic safety or those performance standards identified in Condition L.1.

The Working Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period.

SO.7

A schedule of trees that require removal for construction of the Project will be identified and reported to the Community Liaison Group for their consideration of potential provision of timber for heritage projects (including in particular the provision of Robinia wood for heritage boat building). If the demand for this timber is identified to the Construction Team, appropriate measures for felling and removal from the site will be confirmed.

Vegetation Conditions

V.1

The NZTA shall finalise the ECOMP submitted with this application, prior to works commencing on site. The ECOMP shall be implemented through the CEMP. The ECOMP shall clearly identify the location and identity of:

- (a) All Significant Vegetation within the designation that is to be fully protected or relocated; and
- (b) All Valued Vegetation within the designation that is affected by the works (protected or removed).

Note: Significant and Valued Vegetation shall be as defined in the ECOMP.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

V.2

The NZTA shall employ a suitably experienced botanist ('nominated botanist') for the duration of the works to monitor, supervise and direct all works affecting or otherwise in close proximity to the Significant Vegetation and Valued Vegetation identified in the ECOMP.

V.3

Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions that pertain to the Significant Vegetation and Valued Vegetation and all vegetation in general (both native and exotic) are explained by the nominated botanist to all contractors or sub-contractors who will be working on site within the close vicinity of that vegetation.

V.4

The NZTA shall minimise the amount of vegetation (both native and exotic) which is to be cleared, with the exception of weeds (both woody and otherwise, unless agreed with the Major Infrastructure Team Manager, Auckland Council and the Community Liaison Group that the retention of these 'weeds' has other environmental or ecological benefits that warrant their retention). All vegetation clearance shall be undertaken in accordance with the measures set out in the ECOMP.

V.5

The NZTA shall install protective fencing around, or otherwise clearly demarcate, all of the Significant Vegetation identified in the ECOMP as requiring full protection, under the supervision of the nominated botanist.

V.6

The NZTA shall replace any terrestrial Valued Vegetation that is required to be removed as a result of construction activities, in accordance with the ECOMP and the Urban Design and Landscape Plans.

V.7

The nominated botanist shall supervise all trimming, pruning and relocation work associated with the Significant Vegetation and Valued Vegetation required as part of the works.

V.8

Immediately prior to planting, and for a period of 2 years following completion of construction, the NZTA shall undertake weed control and management of all invasive plant pests within the vegetated areas of the surface designation for the Project. Following this 2 year period, on-going control and management of all invasive plant pests within these areas will be the responsibility of the NZTA.

V.9

The nominated botanist shall undertake a monitoring programme throughout the construction period, including monitoring of:

- (a) The condition, repair and location of the temporary protective fencing or other forms of demarcation used to identify the Significant Vegetation;
- (b) Any works within the vicinity of the Significant Vegetation and Valued Vegetation;
- (c) The general health of the Significant Vegetation and Valued Vegetation (including any Significant or Valued Vegetation that has been relocated away from the works area); and
- (d) Compliance with the vegetation conditions of designation by way of fortnightly inspections during the construction period.

V.10

Any planting utilising native plants shall use plants genetically sourced from the Tamaki Ecological District where possible or otherwise shall use plants that have been genetically sourced from within the Auckland Ecological Region.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Avian Conditions

A.1

The NZTA shall finalise, and implement through the CEMP, ECOMP submitted with this application to include the matters set out in Conditions A.2 to A.6.

Herpetofauna Conditions

H.1

The NZTA shall finalise and implement through the CEMP, the ECOMP submitted with this application to include details of lizard management to be undertaken, including the following:

- (a) Lizard capture methodology, including timing;
- (b) Lizard release locations(s);
- (c) Lizard habitat enhancement at population release sites, including a detailed pest control programme for a minimum of one month prior to release and for a minimum of three consecutive years' duration after release;
- (d) Location(s), monitoring and maintenance of lizard protective fencing;
- (e) Post-release monitoring methodology; and
- (f) Lizard captive management methodology.

Lighting Conditions

Operation

L.1

Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, in general accordance with the Waterview Connection Lighting Plan (Drawing Set F.11 (Refer Schedule A, Row 12):

- a) All motorway lighting shall be designed in accordance with "Roadlighting Standard AS/NZS1158";
 - b) All other lighting shall be designed in accordance with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
 - c) Fully cut off luminaires shall be used on SH20 from the Southern Tunnel Portal to the Maioro Street Interchange to minimised lighting overspill, as shown on Drawing Set F.11(Refer Schedule A, Row 12).
- Construction Zones and Construction Yards

L.2

A Temporary Construction Lighting Management Plan shall be prepared for all construction zones and construction yards prior to commencement of any night time works within the construction zones and construction yards. The Temporary Construction Lighting Management Plan shall be independently verified by a lighting specialist and provided to the Major Infrastructure Team Manager, Auckland Council for certification of compliance 10 working days prior to any night time work commencing.

The certification process shall ensure that the Plan includes (but is not be limited to):

- a) The layout and arrangement of all temporary lighting required for night time works, and shall show how this avoids the "Light Spill Restriction Zone" identified on the Construction Yard Plans (Refer Schedule A, Row 7) submitted with the application, and that the temporary lighting complies with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- b) Provision for a 10m buffer between the night time work and any residential boundary at all times to minimise potential for light spill; and
- c) General operating procedures outlined in the CEMP.

L.3

Asymmetrical floodlights with horizontal glass visors that are not raised more than 3 degrees above the horizontal plane shall be used for any temporary construction night time lighting requirements. Alternative temporary lighting arrangements may be used, subject to the prior approval of the Major Infrastructure Team Manager, Auckland Council, where it can be demonstrated that the proposed lighting is similar or better to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

asymmetrical floodlights with glass visors. Glare shall be kept below the recommendation given in AS 4282 – 1997 “Control of the Obtrusive Effects of Outdoor Lighting” Tables 2.1 and 2.2.

Archaeology Conditions

ARCH.1

The NZTA shall complete, and implement through the CEMP, the Archaeological Site Management Plan (ASMP) submitted with the notice of requirement, to include, but not be limited to:

- a) Identification of the Project archaeologist, their role and responsibility on the Project;
- b) Who reports to the Project archaeologist;
- c) Specific sites requiring supervision, and measures to be undertaken to protect and manage these sites;
- d) Whether NZHPT and/or Auckland Council heritage and/or iwi supervision is required for the specific site (the latter to be determined through consultation with the relevant iwi groups); and
- e) Accidental discovery protocols in the event that unknown archaeological sites are uncovered.

ARCH.2

The NZTA shall employ at its expense a qualified archaeologist (the Project archaeologist) who shall be on site to monitor all initial earthworks, including surface stripping of the site, for all specific areas identified in the ASMP to establish whether any sub-surface archaeological features are present. This includes, but is not limited to, the following areas:

- (a) All unmodified areas in the vicinity of Rosebank Road;
- (b) All works in the vicinity of the “Oakley Inlet Heritage Area”, located adjacent to the Great North Road Interchange;
- (c) Works in the vicinity of two midden sites (recorded R11/2214 and R11/2215) within Great North Road Interchange, and all previously unmodified areas near the banks of the Oakley Inlet;
- (d) Any ground disturbance works in Construction Yard 7 within Oakley Creek Reserve.

ARCH.3

If any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- (a) Immediately it becomes apparent that a possible archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- (b) The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched and notify the Project archaeologist;
- (c) The Project archaeologist shall inspect the site to assess the relevance of the find, and then the Auckland Council shall be advised of the significance;
- (d) If the site is confirmed to be an archaeological site by the Project archaeologist, the site supervisor shall then notify tangata whenua, the New Zealand Historic Places Trust, and the Auckland Council that an archaeological site has been exposed so that appropriate action can be taken;
- (e) In the case of human remains, the NZ Police shall be notified.

ARCH.8

All contractors and subcontractors working on the Project shall be trained on the archaeological requirements set out in the ASMP.

Advice note:

Any archaeological sites within the area affected by the Project shall not be modified or disturbed in any way unless written authorisation has been obtained from the NZ Historic Places Trust.

Contaminated Land and Contaminated Discharges Conditions

CL.1

The NZTA shall finalise and implement through the CEMP, the Contaminated Soil Management Plan (CSMP)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

submitted with this application prior to commencement of any site works. The CSMP shall include, but not be limited to:

- (a) Measures to be undertaken in the handling, storage and disposal of all material excavated during the construction works;
- (b) Soil validation testing and groundwater testing;
- (c) Soil verification testing to be undertaken to determine the nature of the excavated spoil and potential reuse or disposal options;
- (d) Measures to be undertaken in the event of unexpected contamination being identified during construction activities; and
- (e) Measures to be undertaken for the handling of asbestos containing material.

CL.2

Prior to the main construction works commencing, the baseline quality of soils and groundwater within Sector 5 (the southern bank of Oakley Creek coincident with the location of the former tannery) and Sector 7 (particularly in relation to works in the vicinity of Great North Road) shall be investigated and established. The investigations shall be carried out in accordance with appropriate Ministry for the Environment and Auckland Council guidelines.

The findings of the soil and groundwater investigations shall be used to determine the specific constructions methods during work in this area to manage any likely environmental effects in relation to the Project.

CL.3

Prior to the main construction works commencing, soils and fill materials within Alan Wood Reserve (Sector 9) shall be further classified so as to determine the distribution and extent of cleanfill, managed fill and contaminated/hazardous fill materials.

CL.4

All excavated soil shall be tested by the NZTA in general accordance with the CSMP, prior to either reuse on site or disposal off site. The testing regime shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council.

CL.5

The NZTA shall notify the Major Infrastructure Team Manager, Auckland Council within 5 working days of identification of any contamination at the site which was not identified in the reports submitted in support of this application, including contaminated soil, surface water or groundwater. The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.6

The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.7

The NZTA shall engage a suitably qualified contaminated land specialist to supervise the works, excavation and removal of any contaminated soils from the site and undertake sampling (if required) of imported material.

CL.8

All testing / sampling techniques shall be carried out in accordance with the Ministry for the Environment Contaminated Land Management Guidelines or other equivalent standards approved in writing by the Major Infrastructure Team Manager, Auckland Council.

CL.9

The Proposed Auckland Unitary Plan (notified 30 September 2013)

During and following the tunnel construction works beneath Sector 8, groundwater quality monitoring shall be carried out at locations within and down hydraulic gradient of Phyllis Street Landfill. Monitoring shall be undertaken on at least a monthly basis, and for a period up to 12 months following completion of the tunnel construction works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.10

Prior to, during and following tunnel construction works beneath Phyllis Street Landfill, monitoring for landfill gas shall be carried out from existing monitoring boreholes within the landfill. Monitoring shall be undertaken on at least a monthly basis, for a period of no less than 6 months prior to, and up to 12 months following completion of the tunnelling works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.11

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council, a Site Closure Report no later than three (3) months after the completion of the earthworks. The Report shall be prepared in accordance with Schedule 13 (Schedules for Reporting on Contaminated Land) of the Proposed Auckland Regional Plan: Air Land and Water and include:

- (a) Results of any soil reuse and imported material testing carried out to ensure compliance with the CSMP;
- (b) Volumes of soil removed from site;
- (c) Copies of the waste disposal receipts; and
- (d) Reports of any non-compliance with the CSMP procedures or complaints received while undertaking the site works.

Freshwater Conditions

F.1

The NZTA shall finalise, and implement through the CEMP, the ECOMP submitted with this application. The ECOMP shall be updated to ensure compliance with the conditions of this consent and include changes to the details of construction processes prior to construction commencing. The ECOMP shall include, but not be limited to details of:

- (a) Monitoring of freshwater ecology;
- (b) Monitoring of freshwater and stream sediment quality;
- (c) Trigger event criteria for undertaking additional monitoring;
- (d) Procedures for responding to accidental discharges of contaminants to the freshwater environment; and
- (e) Contingency plans and/or remedial measures in the event monitoring results identify adverse effects.

F.2

The NZTA shall engage a suitably qualified ecologist and water quality scientist to undertake freshwater monitoring programme prior to, during and following construction to monitor the effect of the Project on the freshwater ecology. The freshwater monitoring shall be undertaken in Oakley Creek, Pixie Stream and Meola Creek. The freshwater monitoring programme shall be undertaken in accordance with the details set out in the ECOMP and include:

- (a) Cross sectional profiles;
- (b) Macro invertebrate sampling; and
- (c) Freshwater fish monitoring.

F.3

The freshwater monitoring programme shall, as a minimum, be undertaken in accordance with the following frequency:

- (a) Prior to construction – two baseline ecological surveys.
- (b) During construction – twice per year for fish and macro invertebrates and cross sectional profiles, within one month prior to the beginning of the earthworks season and within one month either side of the end of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

earthworks season.

(c) Post construction – on an annual basis for a maximum period of three years, or less if the Major Infrastructure Team Manager, Auckland Council is satisfied that no adverse effects have occurred or are likely to occur from the Project.

(d) Monthly water quality samples at the five existing Oakley Creek sample locations to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb) and nutrients.

(e) Four “event based” samples per annum from each of the current two Oakley Creek sites. The samples are to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb), hydrocarbons (TPH) and nutrients.

(f) Two sediment quality samples per annum (January and July) at the five existing water quality Oakley Creek sites (if there is sufficient sediment to sample). The samples are to be analysed for metals (Zn, Cu and Pb), polycyclic aromatic hydrocarbons (PAH), hydrocarbons (TPH) and semi-volatile organic compounds.

Advice note: The sample collection and analysis required under sub-clauses (d) to (f) shall be undertaken following an IANZ accredited methodology by a suitably accredited laboratory (International Accreditation New Zealand).

F.4

The NZTA shall undertake additional freshwater monitoring in the event of a ‘trigger event’ for freshwater habitats. For the purposes of this consent, a ‘trigger event’ for freshwater habitats is defined in the ECOMP.

F.5

The NZTAs ecologist/hydrologist (required by condition F.2) shall review, every six months, the freshwater monitoring results, provided from Conditions F.2 to F.4, and results in monitoring detailed in earthworks Conditions E.9 and E.19 and Groundwater Condition G.10. In the event that potential adverse effects are identified, including through review of the Condition G.10 monitoring results by the hydrologist and freshwater ecologist required by Condition G.12, the NZTA shall develop and submit for the approval of the Major Infrastructure Team Manager, Auckland Council appropriate contingency plans and/or remedial measures in accordance with the measures set out in the ECOMP.

F.6

Freshwater monitoring reports shall be compiled from the monitoring undertaken pursuant to Conditions F.2 to F.4 and the review of Condition F.5, and a report provided to the Major Infrastructure Team Manager, Auckland Council every 6 months.

Figure CEMP.A - Construction Environmental Management Framework

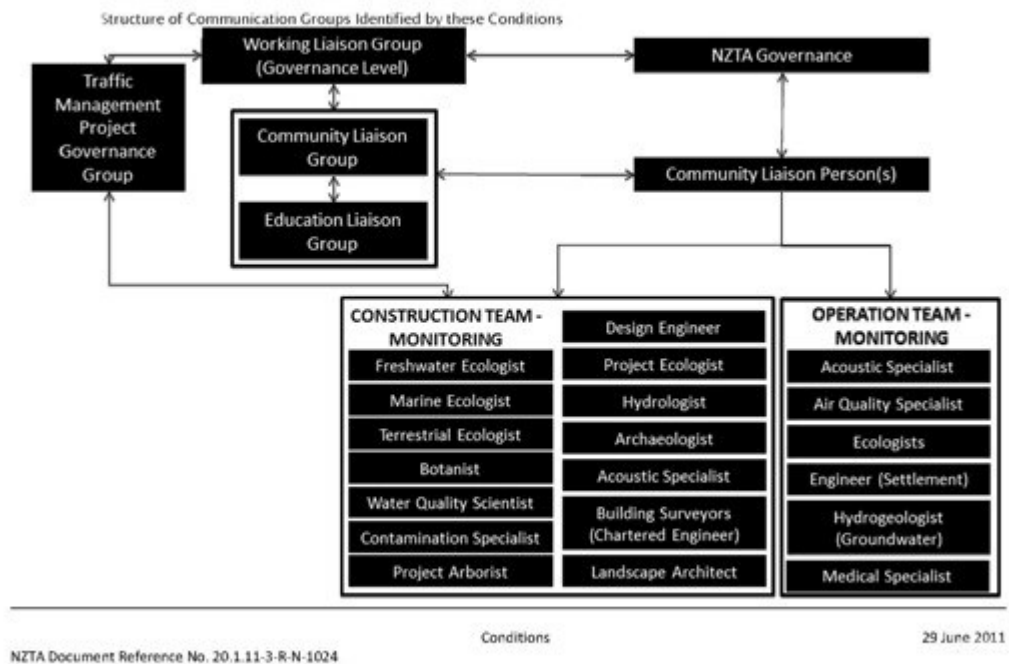

Figure PI.A - Structure of Communication Groups

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6724 State Highway 16 - Avondale

Designation Number	6724
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 in the vicinity of (1) Patiki Road, Avondale and (2) Rosebank Road, Avondale
Rollover Designation	Yes
Legacy Reference	Designation C01-06, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation provides for the construction, and subsequent operation, maintenance and minor improvement of the motorway interchange.

Conditions

Design of Works and Landscape Protection

1. That the development of the works be generally in accordance with Works Consultancy Services Plans No 1/60/48/5104/22 R2 (amended February 1994), No 1/60/48/5104/19 R2 (as amended June 1993) and No 1/60/48/5104/20; and Figure 4-3 "Rosebank/Patiki 2 - Ramps C & D" as lodged with the original notice of requirement, subject to any modification required to comply with these conditions.

2. That the on ramp "C" and the access road to Rosebank Domain be designed to ensure the protection of the copper beech tree scheduled in the Auckland District Plan (former Auckland District) as Item 3B-01 and that the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

following further measures be taken for its protection:

- a. A 1.8 metre solid protective fence be constructed outside the dripline of the tree to the satisfaction of Council's Arborist prior to works commencing in its vicinity; and
- b. Regular monitoring by a qualified arborist throughout the works.

3. That visual and landscape values be taken into account in the detailed design of the access road including the retention if practicable of existing trees and vegetation.

4. That the design and construction of the interchange shall not preclude the option of a cycleway along the motorway between Rosebank and Patiki Roads or the option of a cycleway via the off ramp to Rosebank Road.

Consents Prior to Works

5. That prior to any works being commenced the following shall be obtained:

- a. Any necessary soil conservation or earthworks consents; and
- b. Any necessary discharge permits; and
- c. Any necessary authority to modify those archaeological sites likely to be affected, from the New Zealand Historic Places Trust.

Mitigation of Effects

6. Transit New Zealand and its contractors shall take all necessary steps to prevent or mitigate:

- a. Any nuisance to properties adjacent to the works; and
- b. Any significant disturbance to breeding patterns or damage to habitats of the rare or threatened birds, arthropods or fungi found on Pollen Island, from dust, noise or vibration reasonably attributable to the construction of the works.

7. That any land taken or held for the works be maintained to a high standard until such works commence.

8. That the site of any works be reinstated and appropriately landscaped with suitable plant species. Eco-sourced plants that are genetically appropriate to the local environment should be used in the vicinity of the coast and Pollen Island in order to aid the preservation of the unique properties of this area.

9. That the effects of construction activity on wildlife on Pollen Island and related habitats be regularly monitored by suitably qualified persons at appropriate intervals throughout the project.

10. That the driving of motorway support piles is to be avoided wherever practicable and any activities likely to be particularly disturbing shall be timed to avoid breeding seasons of rare or protected birds found in the vicinity of Pollen Island.

11. That consent by Transit New Zealand for access to Pollen Island from the Motorway is not to be unreasonably withheld but should take into account any guidelines recommended by the Department of Conservation and the Royal Forest and Bird Protection Society of New Zealand.

12. That reasonable access be maintained to private properties at all times.

13. That the extent of land required to be taken for the works be defined by survey and that this information be made available as soon as possible to the affected property owners and occupiers.

14. That the access road between Patiki Road and Rosebank Domain be developed in consultation with Auckland City Council, ensuring as a minimum that:

- a. Both foot and vehicle access to the Domain and cycleway be maintained at all times during construction;
- b. Both the Domain and the cycleway be reinstated to an equivalent or superior standard to that now existing, on completion of the works; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. Provision be made for the replacement to a reasonable standard of any utility services and connections to any new industrial sites.

15. That Transit New Zealand undertake to

a. Pay the full costs of any traffic signal installation at the intersection of Patiki and Rosebank Roads which is made necessary by the proposed works or the equivalent sum towards alternative intersection improvements at that location;

b. Pay for the works at Patiki and Rosebank Roads as indicated on Works Consultancy Plans No 1/ 60/48/5104/19 R2 (amended June 1993) and No 1/60/48/5104/22 R2 (amended February 1994).

Provision of Detailed Plans

16. That detailed plans of the proposed works be made available to the Manager, Planning and Regulatory Services Department at least two months prior to the commencement of construction and that any reasonable changes requested by the said Manager to achieve the purpose of the requirement and with regard to the agreed to conditions within one month be complied with.

Advice Note:

Approval of plans under this Clause does not constitute building consent under the Building Act which must be separately obtained.

Terms of Designation

17. That the designation consent shall become effective only upon the prior consent of the Minister of Conservation to the proposed reclamations and that in any case the designation will not have effect on those areas to be reclaimed until such time as they are raised above mean high water spring.

18. That the term of this designation shall be five years from the inclusion of the designation in the District Plan.

19. Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015, by section 78 of the Local Government (Auckland Transitional Provisions) Act 2010.

20. Any administrative charges incurred by the Council associated with the carrying out of its functions in relation to this designation shall be recoverable from the requiring authority.

Motorway Interchange Ramps connecting Rosebank Peninsula with the Northwestern Motorway

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6725 State Highway 16 - Avondale

Designation Number	6725
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 on Patiki Road, Avondale
Rollover Designation	Yes
Legacy Reference	Designation C01-07, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Construction of a public road to provide access to properties at the northern end of Patiki Road.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Design of Works and Landscape Protection

1. That the development of the works be generally in accordance with Works Consultancy Services Plans No 1/60/48/5104/22 R2 (amended February 1994), No 1/60/48/5104/19 R2 (as amended June 1993) and No 1/60/48/5104/20; and Figure 4-3 "Rosebank/Patiki 2 - Ramps C & D" as lodged with the original notice of requirement, subject to any modification required to comply with these conditions.

2. That the on ramp "C" and the access road to Rosebank Domain be designed to ensure the protection of the copper beech tree scheduled in the Auckland District Plan (former Auckland District) as Item 3B-01 and that the following further measures be taken for its protection:

- a. A 1.8 metre solid protective fence be constructed outside the dripline of the tree to the satisfaction of Council's Arborist prior to works commencing in its vicinity; and
- b. Regular monitoring by a qualified arborist throughout the works.

3. That visual and landscape values be taken into account in the detailed design of the access road including the retention if practicable of existing trees and vegetation.

4. That the design and construction of the interchange shall not preclude the option of a cycleway along the motorway between Rosebank and Patiki Roads or the option of a cycleway via the off ramp to Rosebank Road.

Consents Prior to Works

5. That prior to any works being commenced the following shall be obtained:

- a. Any necessary soil conservation or earthworks consents; and
- b. Any necessary discharge permits; and
- c. Any necessary authority to modify those archaeological sites likely to be affected, from the New Zealand Historic Places Trust.

Mitigation of Effects

6. Transit New Zealand and its contractors shall take all necessary steps to prevent or mitigate:

- a. Any nuisance to properties adjacent to the works; and
- b. Any significant disturbance to breeding patterns or damage to habitats of the rare or threatened birds, arthropods or fungi found on Pollen Island, from dust, noise or vibration reasonably attributable to the construction of the works.

7. That any land taken or held for the works be maintained to a high standard until such works commence.

8. That the site of any works be reinstated and appropriately landscaped with suitable plant species. Eco-sourced plants that are genetically appropriate to the local environment should be used in the vicinity of the coast and Pollen Island in order to aid the preservation of the unique properties of this area.

9. That the effects of construction activity on wildlife on Pollen Island and related habitats be regularly monitored by suitably qualified persons at appropriate intervals throughout the project.

10. That the driving of motorway support piles is to be avoided wherever practicable and any activities likely to be particularly disturbing shall be timed to avoid breeding seasons of rare or protected birds found in the vicinity of Pollen Island.

11. That consent by Transit New Zealand for access to Pollen Island from the Motorway is not to be unreasonably withheld but should take into account any guidelines recommended by the Department of Conservation and the Royal Forest and Bird Protection Society of New Zealand.

12. That reasonable access be maintained to private properties at all times.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13. That the extent of land required to be taken for the works be defined by survey and that this information be made available as soon as possible to the affected property owners and occupiers.

14. That the access road between Patiki Road and Rosebank Domain be developed in consultation with Auckland City Council, ensuring as a minimum that:

- a. Both foot and vehicle access to the Domain and cycleway be maintained at all times during construction;
- b. Both the Domain and the cycleway be reinstated to an equivalent or superior standard to that now existing, on completion of the works; and
- c. Provision be made for the replacement to a reasonable standard of any utility services and connections to any new industrial sites.

15. That Transit New Zealand undertake to

- a. Pay the full costs of any traffic signal installation at the intersection of Patiki and Rosebank Roads which is made necessary by the proposed works or the equivalent sum towards alternative intersection improvements at that location;
- b. Pay for the works at Patiki and Rosebank Roads as indicated on Works Consultancy Plans No 1/60/48/5104/19 R2 (amended June 1993) and No 1/60/48/5104/22 R2 (amended February 1994).

Provision of Detailed Plans

16. That detailed plans of the proposed works be made available to the Manager, Planning and Regulatory Services Department at least two months prior to the commencement of construction and that any reasonable changes requested by the said Manager to achieve the purpose of the requirement and with regard to the agreed to conditions within one month be complied with.

Advice Note:

Approval of plans under this Clause does not constitute building consent under the Building Act which must be separately obtained.

Terms of Designation

17. That the designation consent shall become effective only upon the prior consent of the Minister of Conservation to the proposed reclamations and that in any case the designation will not have effect on those areas to be reclaimed until such time as they are raised above mean high water spring.

18. That the term of this designation shall be five years from the inclusion of the designation in the District Plan.

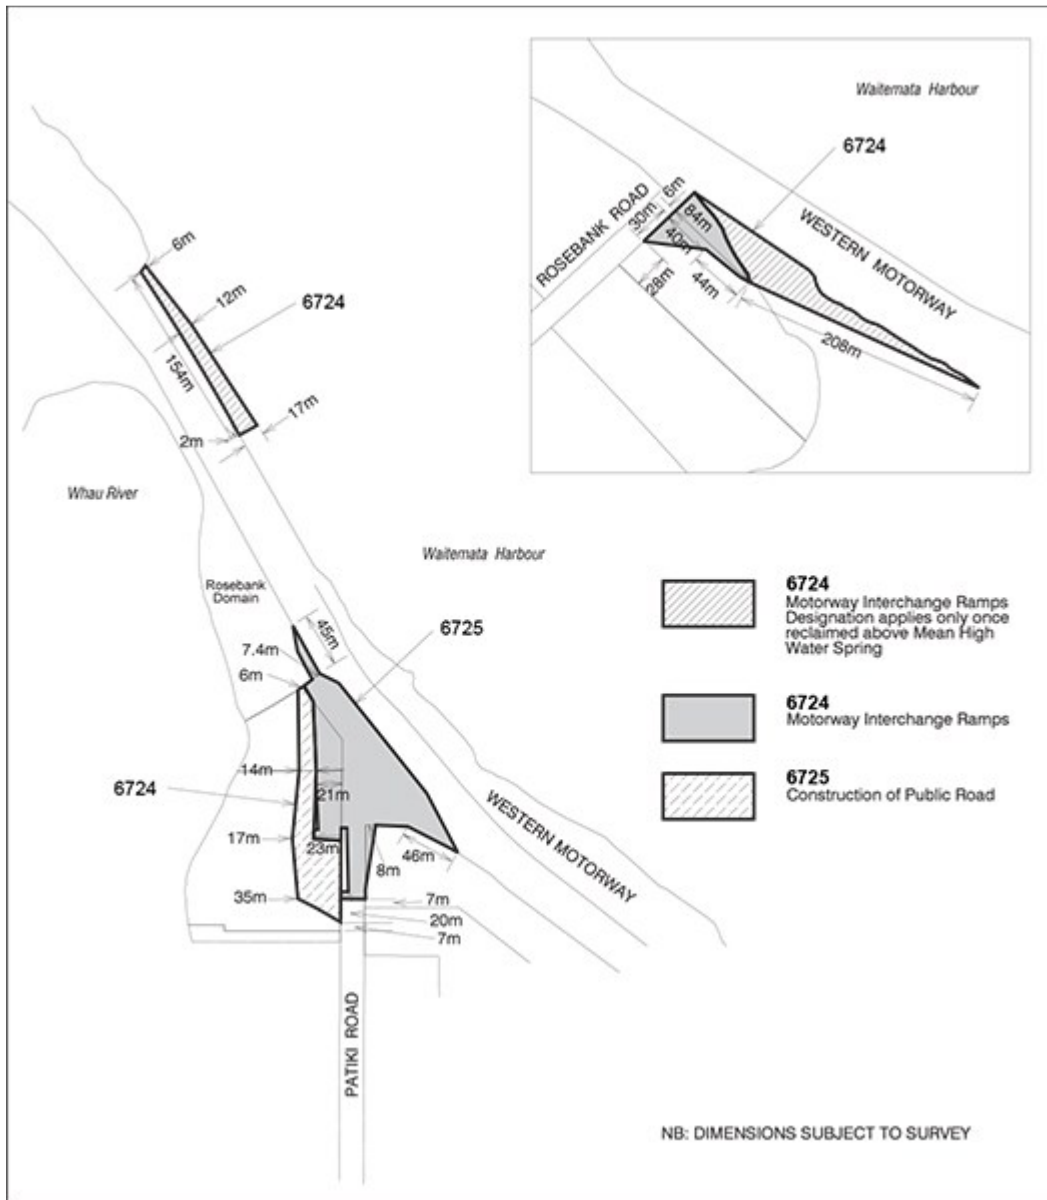

19. Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015, by section 78 of the Local Government (Auckland Transitional Provisions) Act 2010.

20. Any administrative charges incurred by the Council associated with the carrying out of its functions in relation to this designation shall be recoverable from the requiring authority.

Attachments

Attachment 1: Motorway Interchange Ramps connecting Rosebank Peninsula with the Northwestern Motorway

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6726 State Highway 20 - Waterview Connection Great North Road

Designation Number	6726
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from Great North Road (in the vicinity of Alverston Street) to the northern portal (vicinity of Great North Road interchange), Waterview
Rollover Designation	Yes
Legacy Reference	Designation D04-22, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five year from being operative in the Unitary Plan unless given effect to prior

Purpose

For a new designation, SH16, SH20 and Great North underpass – NOR4. A new surface designation for

The Proposed Auckland Unitary Plan (notified 30 September 2013)

construction, operation and maintenance of new interchange and structures associated with tunnel operation, including ventilation building and stack, mitigation and local road access, taking in new pieces of land, and allowing for construction and operation of ramps, stormwater, wetland ponds, ancillary safety and operational services and maintenance, temporary works, vegetation removal and restoration, relocation of services, works on north-western cycleway, landscaping and planting, open space restoration and restoration of the Oakley Inlet heritage area.

Conditions

For a complete set of conditions, refer to the Waterview Connection Proposal Board of Inquiry decision titled "Final Report and Decision of the Board of Inquiry into the New Zealand Transport Agency Waterview Connection Proposal - Volume 2" dated June 2011.

General Designation Conditions

DC.1

Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by the New Zealand Transport Agency (NZTA being the Requiring Authority), the Notice(s) of Requirement and the supporting documents, and supplementary information provided in evidence. This information is summarised as follows:

(a) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Parts A-E;

(b) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part F: Plans and Drawings, except as updated through the hearing (Refer Schedule A for current plan and drawing references); and

(c) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part G: Technical Reports:

- (i) Technical Report G.1 Assessment of Air Quality Effects
- (ii) Technical Report G.2 Assessment of Archaeological Effects
- (iii) Technical Report G.3 Assessment of Avian Ecological Effects
- (iv) Technical Report G.4 Assessment of Coastal Processes
- (v) Technical Report G.5 Assessment of Construction Noise Effects
- (vi) Technical Report G.6 Assessment of Freshwater Ecological Effects
- (vii) Technical Report G.7 Assessment of Groundwater Effects
- (viii) Technical Report G.8 Assessment of Herpetofauna Ecological Effects
- (ix) Technical Report G.9 Assessment of Land and Groundwater Contamination
- (x) Technical Report G.10 Assessment of Lighting Effects
- (xi) Technical Report G.11 Assessment of Marine Ecological Effects
- (xii) Technical Report G.12 Assessment of Operational Noise Effects
- (xiii) Technical Report G.13 Assessment of Ground Settlement Effects
- (xiv) Technical Report G.14 Assessment of Social Effects
- (xv) Technical Report G.15 Assessment of Stormwater and Streamworks Effects
- (xvi) Technical Report G.16 Assessment of Temporary Traffic Effects
- (xvii) Technical Report G.17 Assessment of Terrestrial Vegetation Effects
- (xviii) Technical Report G.18 Assessment of Transport Effects
- (xix) Technical Report G.19 Assessment of Vibration Effects
- (xx) Technical Report G.20 Assessment of Visual and Landscape Effects
- (xxi) Technical Report G.21 Construction Environmental Management Plan (CEMP)
- (xxii) Technical Report G.22 Erosion and Sediment Control Plan (ESCP)
- (xxiii) Technical Report G.23 Coastal Works
- (xxiv) Technical Report G.24 Geotechnical Interpretive Report
- (xxv) Technical Report G.25 Traffic Modelling Report
- (xxvi) Technical Report G.26 Operational Model Validation Report
- (xxvii) Technical Report G.27 Stormwater Design Philosophy Statement

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (xxviii) Technical Report G.28 Geotechnical Factual Report – 500 Series
- (xxix) Technical Report G.29 Geotechnical Factual Report – 700 Series
- (xxx) Technical Report G.30 Assessment of Associated Sediment and Contaminant Loads
- (xxxi) Technical Report G.31: Technical Addendum Report (September 2010)
- (d) PT & Active Mode Transport Routes Existing and Proposed (Refer Schedule A, Row 22).
- (e) Waterview Connection Project, Evidence and Supplementary Information provided to the Board of Inquiry:
 - (i) Evidence in Chief (Numbers 1-37)
 - (ii) Rebuttal Evidence (Numbers 1-33)
 - (iii) Supplementary Information (Numbers 1-8)

DC.1A

Within 3 months of the designations being confirmed for the Project (or at least 1 month prior to any Auckland Council approvals or certifications required by these Conditions, whichever is the earlier), the NZTA shall update and finalise to the satisfaction of the Major Infrastructure Team Manager, Auckland Council all drawings and Plans cited in Schedule A, and provide a full set of the information and documentation referred to in Condition DC.1 to the Major Infrastructure Team Manager Auckland Council. At the same time the NZTA shall prepare to the satisfaction of the Major Infrastructure Team Leader, Auckland Council, a document for each designation which sets out the designation and have attached to it in text format a comprehensive set of the conditions imposed by the Board of Inquiry in its Final Decision as summarised in Schedule B, inclusive of any standard conditions and advice notes.

In particular (but not limited to), the following Plans will need to be amended in light of these Final Conditions:

- (a) F.2 Operational Scheme Plans (refer Schedule A, Row 3) require amendment detailing the amended location of the ventilation stacks and southern ventilation buildings;
- (b) F.5 Construction Scheme Plans (refer Schedule A, Row 4) require amendment to detail changes to the construction footprint for the amended location of the ventilation stacks and southern ventilation buildings and reconfiguration of Construction Yard 1);
- (c) F.6 Construction Yard Plans 101 and 107 (refer Schedule A, Row 7), detailing amendments to the Construction Yard 1 in light of the reconfiguration of this Yard and for Construction Yard 7 in light of the relocation of the northern ventilation stack (refer Schedule A, Row 34);
- (d) F.8 Plans of Structures and Architectural Features (refer Schedule A, Row 9), detailing the amended location of the northern ventilation stack and the design and location of the southern ventilation building and stack;
- (e) The CNVMP (including flow diagram and the supplementary evidence produced by Ms Wilkening) (refer Schedule A, Rows 36, 37 and 39);
- (f) The areas of the Open Space Restoration Plans (Schedule A, Row 30) to:
 - (i) Extend these areas in geographic extent to provide for the works identified in the Management Plan notations identified in the OS Conditions (in particular OS.5 and OS.6) (e.g. these areas will (as relevant) include Eric Armishaw Park, Howlett Reserve and Waterview Esplanade Reserve); and
 - (ii) Exclude the operational area of designation required for the northern ventilation stack (as identified through the OPW process (refer Condition DC.8); and
- (e) Schedule A, Row 28 the Plan detailing proposed open space impacts and replacements needs to be updated to recolour the two land parcels on Hendon Avenue (which are excluded from the replacement calculations) to 'brown' to confirm they are part of the operational impact and will not be returned as open space.

DC.2

The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

DC.3

The NZTA shall update and finalise the relevant Construction and Operational Management Plans required under

The Proposed Auckland Unitary Plan (notified 30 September 2013)

these conditions to ensure compliance with the designation conditions imposed by the Board of Inquiry. The relevant Management Plans shall be submitted to the Major Infrastructure Team Manager, Auckland Council within the timeframes specified in the following conditions. No works shall be undertaken until the relevant management plans have been finalised and certified or approved in accordance with the relevant conditions.

DC.4

Any Management Plans submitted to the Major Infrastructure Team Manager, Auckland Council for approval or certification may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted shall clearly show the integration with adjacent stages and interrelated activities.

DC.5

In the event of any dispute, disagreement or inaction arising as to any Auckland Council Manager certification/ approvals required by the designation conditions, or as to the implementation of or monitoring required by the conditions, matters shall be referred in the first instance to the NZTA Regional State Highway Manager and to the Resource Consents Manager, Auckland Council to determine a process of resolution. If a resolution cannot be agreed, then the matter may be referred to an independent appropriately qualified expert, agreeable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not agree. The independent appropriately qualified expert shall be appointed within 10 working days of the NZTA or Auckland Council giving notice of their intention to seek expert determination. The expert shall, as soon as possible, issue his or her decision on the matter. In making the decision, the expert shall be entitled to seek further information and hear from the parties as he or she sees fit.

Advice note: The dispute resolution process provided for in this condition does not prejudice any party's right to take enforcement action in relation to the implementation of the designation conditions. However, the dispute resolution process will be applied before any formal enforcement action is taken by the Council, except in urgent situations.

DC.6

Except for Conditions DC.7, DC.8 and DC.9, the NZTA shall be exempt from providing an Outline Plan of Works for the Project, as provided for in Section 176A (2)(a) and (b) of the RMA.

Advice note: The Construction and Operational Management Plans, together with the provision of detailed drawings required by Condition DC.1(b) are considered sufficient detail in all aspects of the Project, with the exception of proposed works for the northern and southern ventilation buildings and stacks where further details are required.

DC.7

An Outline Plan of Works shall be prepared for the Northern and Southern Ventilation Buildings and Stacks (OPW1 and OPW2) (in the general location as shown in the Operational Scheme Plans F.2 (Schedule A, Row 3) as shown on Figures DC.A and DC.B) in accordance with Section 176A of the RMA and Conditions DC.8 and DC.9 below and submitted to the Major Infrastructure Team Manager, Auckland Council.

For the purposes of Conditions DC.8 and DC.9, the following definitions shall apply:

(a) Control Building – A building or buildings associated with the staffed control of the tunnel operating systems (including CCTV systems or surveillance). This precludes the inclusion or attachment of any equipment unrelated to the structure or operation of the control building.

(b) Ventilation Building – A building or buildings associated with the operation and maintenance of the tunnels and associated ventilation system (including power and emergency water supply). This precludes the inclusion or attachment of any equipment unrelated to the structure or operation of the ventilation building.

(c) Ventilation Stack (stack) - A structure which channels air emissions to a height in the atmosphere which is suitable to disperse the emissions and result in an acceptable ambient air quality. This precludes the inclusion or attachment of any equipment unrelated to the structure or operation of the ventilation stack.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

DC.8

Outline Plan of Works for the Northern Ventilation Buildings and Stack (OPW1) (refer Figure DC.A)

OPW1 shall be prepared in accordance with Section 176A of the RMA. The final form of the Northern Ventilation Buildings and Stack shall be in accordance with the design principles of Section B of the Urban Landscape and Design Framework (ULDF June 2010) (refer Schedule A, Row 38) and the following requirements:

- (a) Retention of the same building / structural components underground as per the revised Drawing Set F.8, specifically Drawing 9 'North Portal - Basement Floor Plan' and above ground, specifically Drawing 8 'North Portal Location Plan' (refer Schedule A, Row 9) (subject to the amendments to location required by subclause (c) below);
- (b) Creation of a fragmented form for the ventilation buildings, such that the aboveground building is broken down into small, discrete elements – broadly similar in scale to that of nearby residential and school buildings;
- (c) Location of the ventilation stack on the eastern side of Great North Road, within the OPW area identified on Plan DC.A. The precise location within the OPW area shall be a matter of consultation with the Community Liaison Group(s) as established by Condition PI.5;
- (d) Ensure that any required roof linkages do not dominate the form of the building nor make it register visually as a single entity;
- (e) Development of an architectural profile, detailing and material palette that references the local landscape/ geology/ coastline/ residential area in the design of the aboveground ventilation buildings and for the ventilation stack to avoid an industrial character;
- (f) Maximisation of areas of planted open space between buildings, structures and vehicle movement/ parking areas;
- (g) Maximisation of the quantum of limbed-up (to promote visibility and surveillance (in accordance with CPTED principles)), large scale, specimen tree planting between buildings, structures and vehicle movement / parking areas surrounding the ventilation buildings;
- (h) Treatment of the ventilation building and ventilation stack as objects of urban sculpture;

DC.10

The NZTA shall give notice to the Manager Regional and Local Planning, Auckland Council in accordance with Section 182 and 181 respectively of the RMA for:

- (a) Within six months of the State highway opening (being operational), removal of those parts of the designation that are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note: this condition is specific to land no longer required for construction purposes once the Project is completed and includes the land of 6 Barrymore Road, refer Condition OS.17.

- (b) The designation to be altered to remove those conditions no longer required for long term operation and maintenance of the Project.

DC.12

Unless otherwise provided for by Condition RC.2, if any monitoring required to be undertaken by any party by the designation conditions indicates non-compliance with any designation condition, the NZTA must provide written notice to the Major Infrastructure Team Manager Auckland Council as soon as it becomes aware of same, stating the following:

- (a) A description of the non-compliance; and
- (b) The measures NZTA proposes for addressing the non-compliance, including any additional mitigation measures.

Subject to the Council's approval, the NZTA must implement the additional mitigation measures to address the non-compliance.

DC.13

Pursuant to Section 36(1)(d) of the RMA, the requiring authority is required to pay to Auckland Council any administrative charge for the carrying out by the local authority of its functions in relation to the administration,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

monitoring, and supervision of designation conditions.

DC.14

The servants of agents of Auckland Council shall be permitted to have access to relevant parts of the Project at all reasonable times for the purpose of carrying out inspections, investigations, tests, measurements and/or to take samples.

Construction Environment Management Plan Conditions

CEMP.1

Except where provided for in Condition CEMP.1A below, the NZTA shall update and finalise the draft Construction Environmental Management Plan (CEMP) including all the Management Plans which form part of the CEMP and are included as appendices, submitted with this application to ensure compliance with the consent and designation conditions imposed by the Board of Inquiry. The CEMP shall be provided to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to the commencement of works to certify compliance and consistency with the conditions. Construction shall not commence until certification is obtained.

Advice note: For clarity the CEMP will be updated and finalised in accordance with the conditions. Any amendments will be limited to reflecting the requirements of the conditions, specifying personnel, and completing the Environmental Risk Register.

Advice note: Particular care must be taken with development and operation of Construction Yard 7. When the CEMP is being updated and finalised, consideration must be given to the contents of the draft SSCEMP prepared for Construction Yard 7 (Row 41, Schedule A) recognising changes required by inclusion of the ventilation stack in this yard.

CEMP.2

The certification process of the CEMP (and its appendices) shall confirm that the CEMP gives effect to the relevant conditions, as well as those matters in CEMP.6, and that it includes details of:

- (a) Staff and contractors' responsibilities;
- (b) Training requirements for employees, sub-contractors and visitors;
- (c) Environmental incident and emergency management;
- (d) Communication and interface procedures (in accordance with the Communication Plan required under Condition PI.2);
- (e) Environmental complaints management (including the procedures required under Condition PI.4);
- (f) Compliance monitoring;
- (g) Reporting (including detail on the frequency of reporting to the Auckland Council);
- (h) Environmental auditing; and
- (i) Corrective action.

CEMP.3

The management of key environmental effects associated with the construction phase of the Project is detailed within environmental management plans that are included in the CEMP as appendices. This suite of management plans as shown on Figure CEMP.A comprises:

- (a) Construction Noise and Vibration Management Plan (CNVMP);
- (b) Construction Air Quality Management Plan (CAQMP);
- (c) Erosion and Sediment Control Plan (ESCP);
- (d) Temporary Stormwater Management Plan (TSMP);
- (e) Ecological Management Plan (ECOMP);
- (f) Groundwater Management Plan (GWMP);
- (g) Settlement Effects Management Plan (SEMP);
- (h) Contaminated Soils Management Plan (CSMP);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (i) Hazardous Substances Management Plan (HSMP);
- (j) Archaeological Site Management Plan (ASMP);
- (k) Construction Traffic Management Plan (CTMP);
- (l) Concrete Batching and Crushing Plant Management Plan (CBCPMP);
- (m) Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP) (to be prepared in accordance with Condition CEMP.15);
- (n) Waste Management Plan (to be prepared in accordance with Condition CEMP.10); and
- (o) Temporary Construction Lighting Management Plan (to be prepared in accordance with Condition L.2).

CEMP.4

The CEMP shall be implemented and maintained throughout the entire construction period.

CEMP.5

A copy of the CEMP shall be held on each construction site at all times and be available for inspection on request by the Auckland Council.

CEMP.6

The finalised CEMP shall include specific details on demolition, construction and management of all works associated with the Project. The certification process of the CEMP shall confirm that the CEMP includes details of the following:

- (a) Details of the site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) The location of large notice boards that clearly identify the NZTA and the Project name, together with the name, telephone, email address and address for service of the site or Project manager and the community liaison person;
- (c) An outline construction programme of the work indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- (d) The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at night, on Sundays and during public holidays;
- (e) Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/ storage of rubbish, storage and unloading of building materials and similar construction activities;
- (f) Location of worker's offices and conveniences (e.g. portaloos);
- (g) Procedures of controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- (h) Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (Nov 2007);
- (i) Procedures for ensuring that residents within 100m of construction areas or other people whose use of an area may be disrupted by construction works (for example the Te Atatu Boating Club for works on the Whau River) are given notice of the commencement of construction activities and are informed about the expected duration of the works, including potentially through the community liaison person;
- (j) Procedures to be followed to ensure that those working in the vicinity of identified heritage and ecological features are aware of the heritage or ecological values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- (k) Means of ensuring the safety of the general public;
- (l) Procedures for the community liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- (m) Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding streets is restricted;
- (n) All temporary boundary/ security fences shall be maintained in good order, with any graffiti removed as soon as possible;
- (o) Confirmation of a Project Arborist and completion of a STEM assessment of the preliminary list of Amenity

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Trees in Schedule E.7 of the AEE to confirm the final Amenity Trees; and

(p) The process to minimise removal of Amenity Trees, maximise the protection of those retained, undertake relocation of Amenity Trees and replacement planting of specimen trees (in accordance with Conditions LV.10 and ARCH.9)).

(q) Advice note: For the purposes of CEMP.6(o) and (p), Amenity Tree is defined as a tree or trees that contribute significantly to amenity, taking into account its form, size, health, ecological or historical significance (a preliminary list of these trees is provided in Appendix E.7 of the AEE).

CEMP.7

The layout of the 12 Construction Yards, including associated buildings, fencing and site access shall be developed in accordance with Waterview Connection Project Construction Yards Plans (Refer Schedule A, Row 7). The layout drawings shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the occupation of the yard, for review and certification that the final layout of the construction yards is in accordance with the conditions. The layout drawings shall incorporate the following:

- (a) The main access to the construction yards to be located as far as practicable from residential dwellings, taking into account site and public safety and environmental constraints, in the locations shown on Waterview Connection Project Construction Yards Drawings (Refer Schedule A, Row 7);
 - (b) Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings; Construction of temporary boundary/ security fences to be undertaken in a manner which minimises impacts on existing trees;
 - (c) Temporary acoustic fences and visual barriers;
 - (d) Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on adjacent residential dwellings; and
- Location of workers' and Project vehicle parking.

CEMP.8

All storage of material and equipment associated with the construction works shall take place within the boundaries of the designation.

CEMP.9

Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standards as existed prior to such damage at no cost to the Auckland Council.

CEMP.10

The NZTA shall finalise and implement the Hazardous Substances Management Plan (HSMP), through the CEMP (as per Condition CEMP.1), submitted with this application, prior to works commencing on site. The certification process of the CEMP shall confirm that the HSMP clearly identifies the requirements for proper storage, handling, transport and disposal of hazardous substances during the construction phase of the Project and confirm that there shall be no storage of explosives on the Project site.

CEMP.11

The NZTA shall develop and implement a Waste Management Plan in accordance with the waste management principles, controls and methods set out in the CEMP. The Plan shall be provided to the Major Infrastructure Team Manager, Auckland Council and be implemented throughout the entire construction period.

CEMP.12

The CEMP shall be reviewed by the NZTA at least annually or as a result of a material change to the Project. The review shall take into consideration:

- (a) Compliance with designation and consent conditions;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (b) Any changes to construction methods;
- (c) Key changes to roles and responsibilities within the Project;
- (d) Changes in industry best practice standards;
- (e) Changes in legal or other requirements;
- (f) Results of inspections, monitoring, incidents, corrective actions, internal or external assessments; and
- (g) Public complaints.

A summary of the review process undertaken shall be kept by the NZTA, provided annually to the Major Infrastructure Team Manager, Auckland Council and made available (with any related data) to the Auckland Council upon request.

CEMP.13

Following the review process (as described in Condition CEMP.12), the CEMP may require updating. Any material change proposed to the CEMP (including appended Management Plans) shall be submitted for approval to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the proposed changes taking effect.

Advice Note:

Material change will include amendment to any base information informing the CEMP or any process, procedure or method of the CEMP (such as the environmental constraints map, compliance monitoring process, complaints procedure or mitigation / remedial methods identified) which has the potential to increase adverse effects on a particular value. For clarity changes to personnel and contact schedules do not constitute a material change.

CEMP.14

The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP). The EISDCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council, and include:

- (a) Methods and measures:
 - (i) To ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities.
 - (ii) To appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines
 - (iii) To ensure that no activity is undertaken during construction that would result in ground vibrations and/or ground instability likely to cause material damage to the transmission lines, including support structures.
 - (iv) To ensure that changes to the drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations for any high voltage transmission line support structure.
- (b) Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including, but not limited to, the provisions of Schedule (Growth Limit Zones) to those Regulations.
- (c) Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001), including, but not limited to, the provisions of:
 - (i) Clause 2.2 with respect to excavations near overhead support structures;
 - (ii) Clause 2.4 with respect to buildings near overhead support structures;
 - (iii) Section 3 with respect to minimum separation between buildings and conductors;
 - (iv) Section 5 with respect to minimum safe distances for the operation of mobile plant; and,
 - (v) Table 4 with respect to minimum safe separation distances between the ground and the overhead conductors.
- (d) Confirmation that Transpower has been provided a copy of the EISDCMP for their review at least 20 working days prior to construction.

Advice note: With respect to clause (c), specific consideration must be given to the height and location of temporary structures (such as Project offices and other construction site facilities) and permanent structures

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(such as lighting poles, signage, gantries and acoustic barriers).

CEMP.15

The NZTA will be responsible for all service relocations required for construction of the Project. The NZTA shall liaise with the providers of infrastructure service networks (including, but not limited to water, gas, stormwater, wastewater, power and telecommunications), and private property owners with on-site services to develop methodologies and timing for necessary services relocation required for the Project, with the objective of minimising disruption to the operation of these service networks and onsite services.

Advice note:

(a) It is noted that if separate consents are required for relocations for any services of network utility operators or landowners, such consents will be obtained before construction commences in the relevant area, and any effects of those relocations would be considered at that time. The same applies to any alteration of consents if required.

(b) Network infrastructure owned and operated by Watercare Services is located within the designations. An operating agreement will be developed by the NZTA and Watercare Services which will include appropriate notification and access protocols where works are to be undertaken by either network operator on or adjacent to Watercare Services infrastructure within the designations.

Public Information Conditions

PI.1.

A community liaison person shall be appointed by the NZTA for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the Project. The liaison person's name and contact details shall be made available in the CEMP and on site signage by the NZTA. This person must be reasonably available for on-going consultation on all matters of concern to affected parties arising from the Project.

PI.2.

The NZTA shall prepare and implement a Communications Plan that sets out procedures detailing how the public, Ministry of Social Development, Housing New Zealand Corporation and other organisations representing the particular demographic characteristics of the community (including but not limited to Primary Health Organisations, general practitioners, youth, education organisations, aged care groups and groups representing ethnic and migrant communities) will be communicated with throughout the construction and monitoring periods (as prescribed in the designation and consent conditions).

In preparing the Communications Plan, the NZTA will liaise with Auckland Council to access its community liaison databases. The Communications Plan will include details of:

- (a) The site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) In accordance with these Conditions, the database of the key construction activities and monitoring requirements that are the subject of the Communications Plan;
- (c) The database of stakeholders and residents who will be communicated with;
- (d) Communication methods, an assessment of how these methods reach the different audience/ stakeholder groups (including those methods set out in Condition CEMP.6), and detail on when each of these methods will be used (e.g. regular communication or event specific methods);
- (e) The appointed specialist in Environmental and Occupational Medicine, including contact details (as per Condition SO.13);
- (f) Any stakeholder specific communication plans required; and
- (g) Monitoring and review procedures for the Communications Plan.

The Communications Plan shall be written in accordance with the external communication procedures set out in the CEMP and provided at least 20 working days prior to construction commencing, to the Major Infrastructure Team Manager, Auckland Council, Working Liaison Group and the Community Liaison Group(s) established by Condition PI.5. The structure of the communication groups set out in these conditions is attached as Figure

The Proposed Auckland Unitary Plan (notified 30 September 2013)

PI.A.

PI.3.

At least 15 working days prior to the commencement of construction, and at 15 working day intervals thereafter, or as required depending on the scale of works and effects on the community, advertisements will be placed in the relevant local newspapers and community notice boards (as identified in Condition CEMP.6(b)) detailing the nature of the forthcoming works, the location of the forthcoming works and hours of operation. All advertisements will include reference to a 24 hour toll free complaints telephone number. Where relevant, advertisements will also include but not be limited to details of:

(a) Any traffic disruptions or controls or changes to property access, pedestrian/ cycle routes and bus stops; and

(b) Any other construction activities, including night time works, blasting, and structure-borne noise, as identified in the conditions.

PI.4.

The NZTA shall manage, investigate and resolve (as appropriate) all complaints for the duration of the construction works in accordance with the environmental complaints section of the CEMP. The implementation strategy for complaints includes:

(a) A 24 hour toll free telephone number and email address, which shall be provided to all potentially affected residents and businesses. The number shall be available and answered at all times during the entire duration of the works for the receipt and management of any complaints. A sign containing the contact details shall be located at each site specific work activity;

(b) The NZTA shall maintain a record of all complaints made to this number, email or any site office, including the full details of the complainant and the nature of the complaint;

(c) Upon receiving a complaint, within 10 days of complaint receipt, a formal written response will be provided to the complainant and Auckland Council;

(d) The NZTA shall undertake corrective action where necessary to resolve any problem identified. All action taken and relevant information shall be documented. For the avoidance of doubt, 'where necessary' refers to where the works are not being carried out in accordance with conditions of this designation;

(e) Where issues and complaints about effects cannot be resolved through the CEMP complaints management process, a meeting shall be held between the NZTA, the complainant and the Auckland Council representative(s) to discuss the complaint and ways in which the issue may be resolved. If parties cannot agree on a resolution, an independent qualified mediator will be appointed, agreeable to all parties and at the shared cost of all parties, to undertake mediation of the dispute or concerns; and

(f) All information collected in Conditions PI.4 (b), (c) and (d) shall be detailed in a Construction Compliance Report (including the means by which the complaint was addressed, whether resolution was reached and how the response was carried out) prepared by the NZTA. This Report shall be submitted to the Major Infrastructure Team Manager, Auckland Council on a quarterly basis commencing at the beginning of the works and for the entire duration of construction.

PI.5.

The NZTA shall establish Community Liaison Group(s) at least two months prior to construction commencing in each of the following key construction areas:

(a) Te Atatu (including the SH16 Causeway)

(b) Waterview (including works to St Lukes on SH16 and on the Waterview Estuary and Causeway Bridges)

(c) Owairaka

and hold regular meetings (at least three monthly) throughout the construction period and up to 24 months following construction completion relevant to these areas (or less if the members of the Group agree), so that on-going monitoring information can continue to be disseminated.

The Community Liaison Group(s) shall be open to all interested parties within the Project area including, but not limited to the following groups:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (a) Auckland Council and Auckland Transport;
- (b) Educational facilities within the Project area (including schools, kindergartens, childcare facilities and Unitec Institute of Technology);
- (c) Relevant community/ environmental groups (including but not limited to Friends of Oakley Creek, Star Mills Preservation Group, Cycle Action Auckland and representatives from those organisations identified in the Communications Plan (as required by Condition PI.2) and local residents;
- (d) Department of Conservation;
- (e) Local Boards;
- (f) Iwi groups with Mana Whenua;
- (g) Public transport providers; and
- (h) Housing New Zealand Corporation.

Advice note: The purpose of the Community Liaison Group(s) is to provide a regular forum through which information about the Project can be provided to the community, and an opportunity for concerns or issues to be raised.

PI.6.

The Community Liaison Group(s) shall be provided opportunities to review and comment on the following (amongst other things):

- (a) The Outline Plan of Works detailing designs for the northern and southern ventilation buildings and stacks (the outcomes of this consultation will be reported in accordance with the processes required in DC.8(n) and DC.9(k);
- (b) The Open Space Restoration Plans (as required by Condition OS.3);
- (c) Finalisation and amendment to Urban Design and Landscape Plans (UDL Plans) (as required by Condition LV.1);
- (d) The Oakley Inlet Heritage Plan (as required by Conditions OS.5(b)(i) and ARCH.6);
- (e) The detail of the Oakley Creek restoration (as required by Condition STW.20);
- (f) Publicly available results of environmental monitoring as required by the designation and/or these Consents (e.g. air quality monitoring); and
- (g) The finalisation of the STEM assessment required by CEMP.6(o) and a schedule of trees that are required to be removed for consideration of timber use in heritage projects as required by Condition SO.7.

Advice Note: Attention is drawn to the Vegetation conditions concerning identification and protection of Significant Vegetation and Valued Vegetation.

- (h) Detailed design features of the Te Atatu underpass (e.g. lighting and architectural treatment).

Temporary Traffic Conditions

TT.1

The NZTA shall update and finalise the Construction Traffic Management Plan (CTMP) submitted with this application, in accordance with these conditions, and implement it through the CEMP.

In finalising the CTMP, the NZTA shall:

- (a) Provide simulation modelling demonstrations to better understand the effects of construction of the Project on the affected road network;
- (b) Include measures to avoid road closures and restrictions of vehicle, bus, cycle and pedestrian movements;
- (c) Where road closures or restrictions cannot reasonably be avoided the particular vulnerabilities and sensitivities of pedestrian diversions and restricted conditions shall be taken into account in the planning of any closures or restrictions.

TT.2

The CTMP shall require the development of Site Specific Traffic Management Plans (SSTMPs) and their approval by the Traffic Management Project Governance Group (as defined by the CTMP), for each construction

The Proposed Auckland Unitary Plan (notified 30 September 2013)

activity that may affect traffic or transportation infrastructure and services. The SSTMPs shall be provided to the Traffic Management Coordinator(s) for the relevant Road Controlling Authority at least 10 working days prior to each construction activity.

TT.3

Each SSTMP shall describe the measures that will be undertaken to avoid, remedy or mitigate the local and network wide effects of construction of the Project. In particular, the SSTMP shall include the following matters:

- (a) Traffic management measures to address and maintain, traffic capacity, including bus services, at peak traffic periods during weekdays (6:00 to 9:00 and 16:00 to 19:00) and peak traffic periods at weekends (including Te Atatu Road, Great North Road and Richardson Road);
- (b) Methods to manage the effects of traffic during construction including the requirement to detour or divert traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area;
- (c) Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- (d) Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/ overbridges) and the use of staging to allow sections of the Project to be opened to the traffic while other sections are still under construction;
- (e) Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks) during construction;
- (f) Any routes where construction traffic movements will be restricted (either for particular times for construction periods);
- (g) Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works, measures to provide alternative access arrangements in consultation with the Auckland Council and the affected landowner; and
- (h) Measures to maintain pedestrian and cycle access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable (e.g. unless provision of such access is severed by the works or such access will become unsafe as a result of the construction works). Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. (This Condition does not act as a qualification to the commitment to maintain access to open space and education facilities, as required in Condition OS.13).

TT.4

The SSTMPs shall include traffic management measures developed in consultation with the Auckland Transport, Bus and Coach Association and the Auckland Council, to address and maintain, where practicable, existing levels of service for buses particularly at peak periods (6:00 to 9:00 and 16:00 to 19:00) on weekdays.

TT.5

The NZTA shall consult with the Traffic Operations Manager, Auckland Transport with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation. The NZTA shall also coordinate and consult directly with the proponents of any major construction or major traffic generating event occurring concurrently with, and in the vicinity of the Project.

TT.6

The SSTMPs shall include measures developed in consultation with Auckland Transport to, as far as practicable, enable continued public walking and cycling passage along the existing Northwestern Cycleway (between Te Atatu Interchange and St Lukes Interchange) and along Great North Road and the public walkway along Oakley Creek, with any interruptions being as short as feasible.

TT.7

The NZTA shall undertake construction works so as to avoid significant long duration impacts or the full closure of Te Atatu Road for all road users heading to or from the Te Atatu Peninsula and to ensure that access for

The Proposed Auckland Unitary Plan (notified 30 September 2013)

emergency service vehicles is maintained.

TT.8

The NZTA shall restrict construction truck movements during peak hours (6:00 to 9:00 and 16:00 to 19:00) on weekdays and during the peak periods at the weekends to avoid the following:

- (a) Te Atatu Road Interchange, during both morning and afternoon peak hours
- (b) Great North Road Interchange, city bound during the morning peak hours
- (c) Great North Road Interchange, west bound onto SH16 and southbound onto Great North road during the afternoon peak.

Construction truck movements during these hours shall only be allowed under exceptional circumstances agreed in advance with the Traffic Management Project Governance Group.

TT.9

The NZTA shall maintain at least the existing active traffic lane configuration capacity on SH16, at the Te Atatu Interchange area, Te Atatu Road, Richardson Road and on Great North Road during peak periods being 6:00 to 9:00 and 16:00 to 19:00 on weekdays and during the peak periods on weekends, for the duration of the temporary construction programme.

TT.10

The NZTA shall monitor the impact of construction traffic in terms of traffic speeds and volumes on SH16, Great North Road, Te Atatu Road and Richardson Road throughout the construction period to confirm the expected traffic effects as set out in the Temporary Traffic Assessment (Technical Report G.16) submitted with this application.

- (a) This monitoring will be undertaken on a daily, weekly and monthly basis; and
- (b) Monitoring results will be made available to the Traffic Operations Manager, Auckland Transport on request.

TT.11

If monitoring undertaken pursuant to Condition TT.10 indicates that traffic volumes or traffic conditions are significantly different from those expected, the SSTMPs will be reviewed and as appropriate amended to the satisfaction of the Traffic Management Project Governance Group.

Operational Traffic Conditions

Integration with Local Road Network

OT.1

The NZTA shall prepare in collaboration with Auckland Transport a Network Integration Plan (NIP) for the Project, or relevant Project phases, to demonstrate how the Project integrates with the existing local road network and with future improvements (identified in the Western Ring Route (Northwest) Network Plan) planned by the Auckland Council. The NIP shall include details of proposed physical works at the interface between the State highway and the local road network, and shall address such matters as pedestrian/ cycle ways, lane configuration, traffic signal co-ordination, signage and provision for buses

In addition, the NIP will address:

- (a) The commitment of the NZTA to progress bus priority measures northbound on Great North Road as part of the reinstatement of Great North Road, as proposed by Auckland Transport and indicated on the Plans Great North Road Option 1 Proposed Road Marking (Schedule A, Row 33), subject to the agreement with Auckland Transport;
- (b) How the works committed to by the NZTA for pedestrian and cycle ways, as detailed in the PT and Active Mode Transport Routes Plan Set (Condition DC.1(d) (refer Schedule A, Row 22)), integrate with pedestrian and cycle ways on the wider transport network;
- (c) The Richardson Road Bridge, which shall be designed in general accordance with the structural plans (Schedule A, Row 9) and the commitment of the NZTA to provide a 2m footpath on Richardson Road Bridge, subject to confirming appropriate bus stop locations with Auckland Transport;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (d) Integration of the works proposed on Te Atatu Road to appropriately transition between the Waterview Connection Project and any projects being progressed by Auckland Transport;
- (e) Opportunities to review traffic signal timings at the Te Atatu Interchange with a view to minimising delays to all users, including cyclists on the SH16 cycle way; and
- (f) The commitment of the NZTA to provide for cycle “aspects” (cycle signal lights) at the Great North Road Interchange.
- (g) As part of detailed design at the Te Atatu Interchange, the installation of underpasses and/or overbridges, provided however that should some not prove feasible in civil or traffic engineering design terms, the installation of coordinated traffic signal operation for cyclists on the north-western cycleway by means of synchronised cycle lights which seek to reduce delays for cyclists.

Works identified in the NIP which are the responsibility of the NZTA, will be undertaken as at the time of construction works for the Project.

The NZTA shall prepare a Tunnel Traffic Operation Plan in consultation with the Auckland Transport and Auckland Council. The Plan shall include, but not be limited to:

- (a) Procedures for tunnel operational safety, including fire-life safety;
- (b) Procedures for maintenance requirements.
- (c) Procedures for managing traffic to avoid or minimise potential congestion within the tunnel, particularly during peak periods.
- (d) Procedures for the management of traffic during incidents.
- (e) Procedures for the operation of tunnel fans and the management of portal emissions.
- (f) Confirmation that all equipment has been tested and operates in accordance with requirements and specifications.

The Tunnel Traffic Operation Plan shall be completed and provided to Auckland Transport and to the Major Infrastructure Team Manager, Auckland Council (in respect of Condition OT.2(e)), prior to operational use of the tunnelled section of SH20.

Advice note: The operation and maintenance of the air quality monitoring equipment inside the tunnel shall follow manufacturer’s recommendations.

Noise and Vibration Conditions – Construction

CNV.1

The NZTA shall finalise and implement through the CEMP, a Construction Noise and Vibration Management Plan (CNVMP) throughout the entire construction period of the Project.

The CNVMP shall describe the measures adopted to meet:

- (a) the noise criteria set out in Conditions CNV.2 and 3 below;
- (b) the vibration criteria set out in Condition CNV.4 below; or
- (c) where (a) or (b) cannot be met, the process that will be followed to appropriately mitigate noise and vibration effects including methods that may be applied outside the designation.

The CNVMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CNVMP, as a minimum, addresses the following:

- (i) Construction noise and vibration criteria (Conditions CNV.2, CNV.3, and CNV.4);
- (ii) Hours of operation, including times and days when noisy and/or vibration inducing construction activities would occur;
- (iii) Machinery and equipment to be used;
- (iv) Vibration testing of equipment to confirm safe distances to buildings prior to construction;
- (v) Preparation of building condition surveys of critical dwellings prior to, during and after completion of construction works;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (vi) Roles and responsibilities of personnel on site;
- (vii) Construction operator training procedures;
- (viii) Methods for monitoring and reporting on construction noise and vibration;
- (ix) A hierarchy of mitigation options that will be assessed for the Project noise mitigation, including alternative strategies where full compliance with the relevant noise and/or vibration criteria cannot be achieved;
- (x) Management schedules containing site specific information;
- (xi) Measures for liaising with and notifying potentially affected receivers of proposed construction activities and the potential for noise and vibration effects, specifically:
 - PPFs located within a horizontal distance of 35 metres of underground excavation works, along the tunnel alignment shall receive prior notification not greater than 7 days (and not less than 24 hours) prior to the commencement of works.
 - Methods for ensuring residents affected by night works (within 100m of the construction site night works, as defined on the maps (refer Schedule A, Row 35) are notified of such works (i.e. any works during the hours of 20:00 to 06:30) at least 5 days prior to the commencement of any such work.
 - The maps showing PPFs to be notified of night works (refer Schedule A, Row 35, shall be reviewed and included within the CNVMP.
- (xii) Methods for receiving and handling complaints about construction noise and vibration;
- (xiii) Measures for preventing the occurrence of rogue fly rock, including management of charge weights and face loading procedures, stemming of charge holes and profiling of the face to maintain minimum burden (face cover);
- (xiv) Investigations on the practicability of implementing permanent noise mitigation works for construction mitigation (as per Condition CNV.7);
- (xv) Investigations of the practicability of implementing Building Modification mitigation, as required in accordance with Conditions ON.6 and ON.11, prior to commencement of construction within 100m of the relevant PPFs (including those on the Unitec site); and
- (xvi) The process for developing Site Specific Noise Management Plans (SSNMP), in accordance with the SSNMP Flow Chart (refer Schedule A, Row 36), including templates and a certification process for the Major Infrastructure Team Manager, Auckland Council (in accordance with Condition CNV.13) to confirm the process of SSNMP review of noise mitigation options where, the modelled/predicted levels or subsequent actual levels exceed the criteria in Conditions CNV.2 and/or CNV.4.

CNV.2

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction noise (excluding noise from blasting Monday to Saturday inclusive) shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise" and shall comply with the following criteria:

Note: In Condition CNV.2 (T) means a duration between 15 minutes and 60 minutes, in accordance with NZS6803:1999.

(a)Project Construction Noise Criteria: Residential Receivers

Time of Week	Time period	Project Construction Noise Criteria (Long Term Construction)		
		dB		
		Sectors 1-7	Sectors 8-9	All Sectors
		LAeq(T)	LAeq(T)	LAeq(T)
Monday- Saturday	0630-0730	60	45	75
	0730-1800	70	70	85
	1800-2000	65	65	80
	2000-0630	60	45	75
Sundays and Public Holidays	0630-0730	45	45	75
	0730-1800	60	45	85
	1800-2000	45	45	75
	2000-0630	45	45	75

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(b) Project Construction Noise Criteria: Commercial and Industrial Receivers

Time Period	Project Construction Noise Criteria (Long Term Construction) dB
	LAeq(T)
0730-1800	70
1800-0730	75

(c) Project Construction Noise Criteria: Internal Structure-borne Noise from tunnelling for Residential Receivers

Time Period	Project Construction Noise Criteria Inside	
0600-2200	35 dB LAeq(T)	All habitable rooms
2200-0600	30 dB LAeq(T)	Bedrooms

(d) Project Construction Noise Criteria: Internal noise for Licensed Educational Facilities

Time Period (School Days)	Project Construction Noise Criteria Inside	
Teaching Hours	45 dB LAeq(T)	Classrooms, library, offices, teaching, laboratories, manual arts, workshops
Teaching Hours	40 dB LAeq(T)	School hall, lecture theatres

Note: In Condition CNV2(d) "Teaching hours" means: Primary schools and Kindergartens: 9am to 3pm Unitec: 8am to 9pm

CNV.3

Project Construction Noise Criteria: Airblast (excluding Sundays)

Category	Type of Blasting Operations	Peak Sound Pressure Level (LZpeak dB)
Human Comfort Limits		
Sensitive Site	Operations lasting longer than 12 months or more than 20 Blasts	115 dB for 95% blasts per year. 120 dB maximum unless agreement is reached with occupier that a higher limit may apply
Sensitive Site	Operations lasting less than 12 months or less than 20 Blasts	120 dB for 95% blasts per year. 125 dB maximum unless agreement is reached with occupier that a higher limit may apply
Occupied non-sensitive sites such as factories and commercial premises	All blasting	125 dB maximum unless agreement is reached with the occupier that a higher limit may apply. For sites containing equipment sensitive to vibration, the vibration should be kept below manufacturer's specifications of levels that can be shown to adversely affect the equipment operation
Damage Control Limits		
Structures that include masonry, plaster and plasterboard in their construction and also unoccupied structures of reinforced concrete or steel construction	All blasting	133 dB unless agreement is reached with owner that a higher limit may apply.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Service structures such as pipelines, powerlines and cables located above ground	All blasting	Limit to be determined by structural design methodology
--	--------------	---

CNV.4

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction vibration received by any building shall be measured and assessed in accordance with the German Standard DIN 4150-3:1999 "Structural vibration – Part 3: Effects of vibration on structures", and shall comply with the criteria set out as follows:

Type of Structure	Short-term vibration			Long-term vibration	
	PPV at the foundation at a frequency of				
	1-10 Hz (mm/s)	1-50 Hz (mm/s)	50-100 Hz (mm/s)	PPV at horizontal plane of highest floor (mm/s)	PPV at horizontal plane of highest floor (mm/s)
Commercial/Industrial	20	20-40	40-50	40	10
Residential/School	5	5-15	15-20	15	5
Historic or Sensitive structures	3	3-8	8-10	8	2.5

CNV.5

Notwithstanding Condition CNV.3 above,

(a) Blasting activities shall be conducted so that 95% of the blasts undertaken (measured over any twenty blasts on the foundation of any building outside the designation boundary) shall produce peak particle velocities not exceeding 5mm/s and 100% of the blasts undertaken shall produce peak particle velocities not exceeding 10mm/s irrespective of the frequency of the blast measured.

(b) Construction activities, which occur within Sectors 1, 6, 8 and 9 which are identified in Technical Report no. G.19 Assessment of Vibration Effects, as being at a 'High Risk' of exceeding the DIN 4150-3:1999 criteria (being excavation, piling, compaction and drilling) shall be conducted so that 95% of the activities undertaken (measured over at least 20 representative samples of the relevant activity on any residential building) shall produce peak particle velocities not exceeding the relevant criterion in DIN 4150-3:1999 and 100% of the activities undertaken shall not exceed 10mm/s irrespective of the frequency of the activity measured.

CNV.6

Blasting shall be undertaken between 09:00h and 17:00h, Monday to Saturday, except that blasting may be undertaken between 09:00h and 17:00h on Sundays where:

- (a) The blasting is at least 50m inside the Sector 8 tunnel;
- (b) The blasting produces peak particle velocities at any residential building not exceeding 0.5mm/s; and
- (c) The Project construction noise criteria set out in Condition CNV.2 for Sundays are complied with.

CNV.7

Where practicable, permanent (traffic) noise barriers, required in any Sector as Detailed Mitigation Options for operational noise following completion of the Project (in accordance with Conditions ON.3 to ON.5) shall be erected prior to noise generating construction works commencing. Where this is not practicable, temporary noise mitigation measures shall be implemented in accordance with the CNVMP, prior to noise generating construction works commencing.

CNV.8

Pile driving or pile removal shall not be undertaken at night (i.e. during the hours of 20:00 – 06:30).

CNV.9

The concrete batch plants, rock crushing plants and the loading bays and conveyors for such plants shall be fully enclosed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CNV.10

If noise and vibration monitoring of the tunnelling works for the Project (in accordance with Condition CNV.1), indicates that the noise or vibration criteria of Conditions CNV.2(c) or CNV.4 will potentially be exceeded and that temporary relocation will be offered for residents at 1510 Great North Road, then relocation (and temporary transportation) shall be arranged with the leaseholder at 1510 Great North Road for tenants (with at least 1 months' notice to the leaseholder prior to relocation). Any accepted offer of relocation is to be in place prior to tunnelling works within 50m of the building at 1510 Great North Road.

CNV.11

For all other properties, if noise and vibration monitoring of the tunnelling works for the Project (in accordance with Condition CNV.1), indicates that the noise or vibration criteria of Conditions CNV.2 or CNV.4 will potentially be exceeded, then the process set out in the CNVMP will be undertaken including Site Specific Noise Management Plans. Where relocation for residents is proposed, notification of such relocation with residents and property owners will be undertaken in accordance with the processes contained in the CNVMP.

CNV.12

Any relocation required by CNV.10 will not be undertaken in the period between 10 working days prior to any Unitec examinations and the completion of those examinations.

CNV.13

SSNMPs (required by Condition CNV.1(xvi)) above, shall be submitted to Major Infrastructure Team Manager, Auckland Council for review and certification at least 7 working days prior to the proposed works commencing. A decision will be provided by the Council within 5 working days of receipt of the SSNMP.

Works will not commence until certification is received from the Major Infrastructure Team Manager, Auckland Council. The Council may, at its discretion, waive the requirement for SSNMPs to be submitted to the Council where an SSNMP is required.

If monitoring shows that levels specified in a SSNMP are being exceeded, work generating the exceedence will stop and not recommence until further mitigation is implemented in accordance with an amended SSNMP certified by Council.

Advice note: It is accepted that the criteria of CNV.2 and CNV.4 may not be met at all times, but that the NZTA will take all practical steps to achieve compliance, taking into account the hierarchy of mitigation options outlined in Condition CNV.1 (ix).

Noise Conditions – Operation

ON.1

For the purposes of Conditions ON.2-ON.14 the following terms will have the following meanings:

- Appendix E – means Appendix E to the Technical Report G.12 'Assessment of Operational Noise Effects' submitted with this application.
- BPO – means Best Practicable Option.
- Building Modification Mitigation – has the same meaning as in NZS 6806:2010.
- Design Year – means a point in time that is 10 years after the opening of the Project to the public
- Emergency Mechanical Services – means mechanical services used for emergency situations only.
- Habitable room – has the same meaning as in NZS 6806:2010.
- Noise Criteria Categories – means groups of preference for time-averaged sound levels established in accordance with NZS 6806:2010 when determining the BPO mitigation option; i.e. Category A - primary noise criterion, Category B - secondary noise criterion and Category C - internal noise criterion.
- NZS 6806:2010 – means NZS 6806:2010 Acoustics – Road-Traffic Noise – New and Altered Roads.
- PPFs – means only the premises and facilities identified in green, yellow or red in Appendix E.
- Structural mitigation – has the same meaning as in NZS 6806:2010.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ON.2

The NZTA shall implement the traffic noise mitigation measures identified as the “Preferred Mitigation Options” in Appendix E as part of the Project, in order to achieve the Noise Criteria Categories indicated in Appendix E (“Identified Categories”), where practicable and subject to Conditions ON.3-ON.11 below.

ON.3

The detailed design of the structural mitigation measures of the “Preferred Mitigation Options” (the Detailed Mitigation Options) shall be undertaken by a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council prior to construction of the Project, and, subject to Condition ON.4, shall include, as a minimum, the following:

- (a) Noise barriers with the location, length and height in general accordance with Appendix E and designed in accordance with the ULDF (Section B) (refer Schedule A, Row 38); and
- (b) A requirement that Open Graded Porous Asphalt (“OGPA”) or equivalent low-noise generating road surface be used on all surface roads throughout the Project, except at the Great North Road Interchange; and
- (c) For the Great North Road Interchange, a requirement that Twin Layer Open Graded Porous Asphalt (“Twin Layer OGPA”) or equivalent low-noise generating road surface be used as shown in Appendix E.

ON.4

Where the design of the Detailed Mitigation Options identifies that it is not practicable to implement a particular structural mitigation measure in the location or of the length or height included in the “Preferred Mitigation Options”, either:

- (a) If the design of the structural mitigation measures could be changed and would still achieve the same Identified Category at all relevant PPFs, and a suitably qualified expert approved by the Major Infrastructure Team Manager, Auckland Council, certifies to the Auckland Council that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed mitigation measures; or
- (b) If the changed design of the structural mitigation measure would change the Noise Criteria Category at any relevant PPF from Category A or B to Category C but Major Infrastructure Team Manager, Auckland Council confirms that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed structural mitigation measures.

ON.5

The Detailed Mitigation Options shall be implemented prior to completion of construction of the Project.

ON.6

(a) Sectors 1 to 8 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options:

- i. A noise level increase of 3 decibels or more will occur due to road-traffic noise from the Project; and
- ii. Habitable spaces are likely to receive in excess of 45 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year.

For those PPFs, following the process set out in Conditions ON.7 to ON.11, it shall be determined which Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces.

(b) Sector 9 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options, habitable spaces are likely to receive in excess of 40 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year. For those PPFs, following the process set out in ON.7 and ON.8, it shall be determined if Building Modification Mitigation may be required to achieve 40 dB LAeq inside habitable spaces. For those PPFs where Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces, this shall be implemented

The Proposed Auckland Unitary Plan (notified 30 September 2013)

following the process set out in ON.9 to ON.11.

ON.7

(a) Prior to commencement of construction of any sector of the Project in the vicinity of a PPF identified under Condition ON.6, the NZTA shall write to the owner of each such building seeking access for the purpose of measuring internal noise levels and assessing the existing building envelope in relation to noise reduction performance.

(b) If the owner(s) of the building approve the NZTA's access to the property within 12 months of the date of the NZTA's letter (sent pursuant to Condition ON.7(a)), then no more than six months prior to commencement of construction in any sector of the Project, the NZTA shall instruct a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council, to visit the building to measure internal noise levels and assess the existing building envelope in relation to noise reduction performance.

ON.8

Where a PPF identified under Condition ON.6 is identified, the NZTA shall be deemed to have complied with Condition ON.7 above where:

(a) The NZTA (through its acoustics specialist) has visited the building; or

(b) The owner(s) of the building approved the NZTA's access, but the NZTA could not gain entry for some reason after repeated attempts; or

(c) The owner(s) of the building did not approve the NZTA's access to the property within the time period set out in Condition ON.7(b) (including where the owner(s) did not respond to the NZTA's letter (sent pursuant to Condition ON.7(a) within that period); or

(d) The owner(s) of the building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

If any of (b) to (d) above apply to a particular Building, the NZTA shall not be required to implement any Building Modification Mitigation at that Building

ON.9

Subject to Condition ON.8, within 6 months of the assessment required under Condition ON.7(b), the NZTA shall give written notice to the owner of each PPF identified under Condition ON.6:

(a) Advising of the options available for Building Modification Mitigation to the building; and

(b) Advising that the owner has three months within which to decide whether to accept Building Modification Mitigation for the building, and if the NZTA has advised the owner that more than one options for building modification mitigation is available, to advise which of those options the owner prefers.

ON.10

Once an agreement on Building Modification Mitigation is reached between the NZTA and the owner of an affected building, the mitigation shall be implemented (including the NZTA undertaking any required third party authorisation) in a reasonable and practical timeframe agreed between the NZTA and the owner. Building Modification Mitigation shall be to the standard specified in section 8.3.2 of NZS 6806:2010.

Advice Note: The NZTA will be responsible for obtaining any necessary building consents or other approvals to undertake the above Building Modification Mitigation.

ON.11

Subject to Condition ON.8, where Building Modification Mitigation is required, the NZTA shall be deemed to have complied with Condition ON.10 above where:

(a) The NZTA has completed Building Modification Mitigation to the Building; or

(b) The owner(s) of the Building did not accept the NZTA's offer to implement Building Modification Mitigation prior to the expiry of the timeframe stated in Condition ON.9(b) above (including where the owner(s) did not respond to the Requiring Authority within that period); or

(c) The owner of the Building cannot, after reasonable enquiry, be found prior to completion of construction of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the Project.

ON.12

The NZTA shall manage and maintain the Detailed Mitigation Options to ensure that, those mitigation works are maintained to retain their noise attenuation performance indefinitely

ON.13

All mechanical services associated with the general operation of the tunnels shall be designed such that noise emissions do not exceed the following noise limits, when measured at or within the boundary of any residential-zoned site:

Monday to Saturday 7 am to 10 pm	50 dB LAeq(15 min)
Sunday & Public Holidays 9 am to 6 pm	50 dB LAeq(15 min)
At all other times	40 dB LAeq(15 min)
	75 dB LAmax

ON.14

(a) Prior to construction, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake a minimum of 8 (eight) representative measurements of ambient noise levels. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(b) Following completion of the work, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake traffic noise monitoring at the same sites surveyed in Condition ON.14 (a) above, within 2 to 3 years following completion of construction of the Project. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(c) The results of the noise level monitoring in accordance with ON.14(b) above shall be used to verify the computer noise model of the Detailed Mitigation Option. A report describing the findings of the verification shall be provided to the Major Infrastructure Team Manager, Auckland Council within one month of it being completed.

Vibration Conditions - Operation

OV.1

Existing ambient vibration levels shall be measured at critical locations nominated by the NZTA, and submitted to the Major Infrastructure Team Manager, Auckland Council for approval prior to the commencement of works. These baseline measurements will establish pre-Project vibration levels for comparison with future vibration levels.

Air Quality Conditions – Construction

GENERAL CONDITIONS

AQ.1.

The NZTA shall finalise and implement, through the CEMP, the Construction Air Quality Management Plan (CAQMP) and Concrete Batching and Crushing Management Plan (CBCMP) submitted with the application. The CAQMP and CBCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CAQMP and CBCMP includes the following details:

- (a) Daily visual monitoring of dust emissions;
- (b) Procedures for responding to process malfunctions and accidental dust discharges;
- (c) Criteria, including consideration of weather conditions and procedures for use of water sprays on stockpiles and operational areas of the site;
- (d) Continuous monitoring of Total Suspended Particulate (TSP) concentrations and meteorology;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (e) Monitoring of the times of detectable odour emissions from the ground;
- (f) Procedures for responding to discharges of odour (including in the event of excavation of contaminated sites);
- (g) Monitoring of construction vehicle maintenance;
- (h) Process equipment inspection, maintenance, monitoring and recording, including baghouses, pressure relief valves and high level alarms;
- (i) Complaints investigation, monitoring and reporting; and
- (j) The identification of staff and contractors' responsibilities.

AQ.2.

The NZTA shall review the CAQMP and CBCMP at least annually and as a result of any material change to the Project. Any consequential changes will be undertaken in accordance with Condition CEMP.13.

AQ.3.

All construction activities shall be operated, maintained, supervised, monitored and controlled at all times so that all emissions authorised by this consent are maintained at the minimum practicable level.

AQ.4.

The NZTA shall undertake construction activities in accordance with the CEMP, CAQMP and CBCMP, such that:

- (a) Hard surfaced areas of the construction yards and active construction areas are vacuum swept or scraped down at least twice each week and additionally as reasonably required;
- (b) All unsealed areas of the site used for vehicle movement are maintained visibly damp by the use of water sprays or a water cart during weather conditions where the potential for dust emissions exist;
- (c) Wheel wash systems are installed at all truck exits from unpaved areas of the site onto public roads are used for all trucks that depart from the site;
- (d) All stockpiles are constructed and positioned to minimise the potential for dust emissions. The surfaces of all stockpiles are maintained adequately damp at all times to minimise the release of particulate matter;
- (e) Belt conveyors for moving dry materials are fitted with water sprays or enclosed to minimise wind entrainment of dust. Where installed, water suppression is used whenever the conveyors are used for moving dry materials.

AQ.5.

Unless expressly provided for by conditions of this consent, there shall be no odour, dust or fumes beyond the site boundary caused by discharges from the site which, in the opinion of an enforcement officer, is noxious, offensive or objectionable.

AQ.6.

All offensive or objectionable dust beyond the boundary of the site caused as a result of processes on the site shall be mitigated forthwith in accordance with the requirements of the Construction Air Quality Management Plan.

AQ.7.

Beyond the site boundary there shall be no hazardous air pollutant caused by discharges from the site that causes, or is likely to cause, adverse effects on human health, environment or property.

AQ.8

No discharges from any activity on site shall give rise to visible emissions, other than water vapour, to an extent which, in the opinion of an enforcement officer, is noxious, dangerous, offensive or objectionable.

PROCESS CONDITIONS – CONCRETE BATCHING:

AQ.9

Air displaced from concrete batching plant during silo filling or concrete batching shall be vented to atmosphere

The Proposed Auckland Unitary Plan (notified 30 September 2013)

via filter units as follows:

- (a) Cement silos – a pulse jet baghouse mounted on top of the silo designed to meet a particulate discharge concentration limit of 30 mg/m³, a collection efficiency of 99.9% and a maximum air to cloth ratio of 3.0 m³/m²/min.
- (b) Cement weigh hopper - a static baghouse mounted on top of the weigh hopper designed to meet a particulate discharge concentration limit of 30 mg/m³, a collection efficiency of 90% and a maximum air to cloth ratio of 1.0 m³/m²/min.
- (c) Mixer drum – either via the cement silo or via a separate baghouse designed to meet a particulate discharge concentration limit of 30 mg/m³, a collection efficiency of 99.9% and a maximum air to cloth ratio of 3.0 m³/m²/min. If a separate baghouse is used, the pressure drop across this baghouse shall be continuously monitored.

AQ.10

Each cement silo on site shall be fitted with a high fill alarm that shall be adequately maintained and be operating whenever bulk cement is being transferred into that silo. In the event of the alarm operating, filling into that silo shall cease immediately and shall not be resumed until the cause has been located and remedied.

AQ.11

No part of the concrete batching process shall be operated without the associated emission control equipment being fully operational and functioning correctly.

MONITORING

AQ.14

The NZTA shall undertake visual inspections of dust emissions as follows:

- (a) Visual inspections of all active construction areas at least three times daily during October to April inclusive, whenever there are construction activities. The results of visual monitoring shall be logged.
- (b) Visual inspections of dust emissions from the concrete batching plants and rock crushing plant shall be undertaken daily while the plant is operating

AQ.15

The operation of water sprays shall be checked at least once each day.

Air Quality Conditions – Construction

AQ.16

Continuous monitoring of TSP concentrations shall be undertaken in at least one location in Sector 1, in at least two locations in Sectors 5 and/or 7, and in at least two locations in Sector 9 while construction activities are being undertaken in those Sectors. The locations of continuous TSP monitors shall, as far as practicable, comply with the requirements of AS/NZ 3580.1.1:2007 Method for Sampling and Analysis of Ambient Air – Guide to Siting Air Monitoring Equipment.

AQ.17

Continuous monitoring of wind speed and direction shall be undertaken in at least one location in each of Sector 1, Sectors 5 or 7 and Sector 9 while construction activities are being undertaken in those Sectors. The locations of wind speed and direction monitors shall, as far as practicable, comply with the requirements of AS 2923:1987 Ambient Air – Guide for the Measurement of Horizontal Wind for Air Quality Applications and be at the same locations as the TSP monitors required by Condition AQ.16.

AQ.18

The locations and types of continuous TSP and meteorological monitoring sites required by Conditions AQ.16 and AQ.17 shall be selected by the NZTA in consultation with the Auckland Council. In the event of a failure of the monitoring equipment, this shall be repaired or replaced within 2 working days.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

REPORTING

AQ.19.

All records, logs, monitoring and test results that are required by the conditions of this consent shall be made available on request, during operating hours, to an Auckland Council enforcement officer and shall be kept for the duration of the consent.

AQ.20

If the monitoring required by Condition AQ.16 shows that concentrations of TSP in ambient air at or beyond the boundary of the site exceeds 80 micrograms/m³ as a 24-hour average, the NZTA shall undertake an investigation into the cause of the exceedance in accordance with the CAQMP.

AQ.21.

A report into the outcome of any investigation required by Condition AQ.20 shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 10 working days of the exceedance. If the cause of the exceedance is identified as being an activity undertaken on the site, the report shall also identify additional measures to be taken to reduce discharges of particulate matter into air from that activity.

AQ.22.

Log books shall be maintained that record all relevant information that is required to demonstrate compliance with the conditions of this consent. This information shall include, but is not limited to:

- (a) Visual assessments of any dust emissions from the site and the source;
- (b) Any dust control equipment malfunction and any remedial action taken;
- (c) When a water cart was used and, if so, the frequency of use and the volume of water used (including identification of location);
- (d) All relevant details of the TSP and meteorological monitoring required by Conditions AQ.16 and AQ.17;
- (e) Any additional dust control measures undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

AQ.23.

The NZTA shall maintain a log of any complaints received relating to air quality. Details of each complaint received shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 24 hours of receipt of the complaint. The log shall include any complaints lodged with the Auckland Council where the Council has informed the NZTA of the complaint. The log shall include, but not be limited to the following:

- (a) The date, time, location and nature of the complaint;
- (b) Weather conditions at the time of the complaint (including approximate wind speed, wind direction, cloud cover);
- (c) Any possible other contributing factors (such as a fire, smoky vehicle, a local chimney emission, etc.);
- (d) The name, phone number and address of the complainant (unless the complainant elects not to supply these details);
- (e) Any remedial actions undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

Landscape and Visual Conditions

LV.1.

The Urban Design and Landscape Plans (UDL Plans) (Plan Set F.16, refer Schedule A, Row 17) shall be reviewed and revised in accordance with the conditions and submitted to the Major Infrastructure Team Manager, Auckland Council for certification that they comply with the conditions of the consents/ designation prior to construction of the relevant Project stage, at least 20 working days prior to the commencement of construction.

The UDL Plans shall be updated to:

- (a) Reflect relevant details from the PT and Active Mode Transport Routes Plan Set (Schedule A, Row 23);
- (b) Remove the playing field at Waterview Reserve;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (c) Confirm the reconfigured bund design at Alwyn Avenue (Schedule A, Row 42);
- (d) Reflect landscaping required in relation to the northern vent stack in Waterview Glades pursuant to Conditions DC.8.

LV.2.

In certifying the UDL Plans, prepared in accordance with Condition LV.1, the Major Infrastructure Team Manager, Auckland Council shall be satisfied the UDL plans includes:

- (a) The visual mitigation of infrastructure as detailed in Section B of the UDLF (refer Schedule A, Row 38).
- (b) Incorporation of art or art through design of structures, particularly as it relates to noise barriers and the Great North Road Interchange piers and ramps (Refer to clauses (g) and (i) below).
- (c) Planting to screen houses and noise walls (including cross section details);
- (d) Planting along the corridor on Traherne Island, in accordance with these conditions and the Ecological Management Plan;
- (e) Specimen planting on the Great North Road Interchange and the Te Atatu Road Interchange;
- (f) Specimen planting at the tunnel portals (except where this is within the OPW area);
- (g) Finalisation of the noise barriers (as required by Condition ON.3(a)) in accordance with the design principles for noise walls (refer Schedule A, Row 32);
- (h) Delineation of the final areas of the Open Space Restoration Plans in accordance with the Open Space Restoration Plans (Schedule A, Row 30), and reference that all works within the Open Space Restoration Plan Areas are subject to Conditions OS.1 to OS.8;
- (i) Oakley Inlet Heritage Plan, prepared in accordance with Conditions OS.5, and in particular, consideration shall be given to the design treatment of the Great North Road Interchange piers and ramps to take into consideration the impact of the structures on the visual quality of the open space beneath;
- (j) Ecological Management Plan, prepared in accordance with Conditions V.1, A.1, H.1, F.1 and M.1;
- (k) Western Ring Route: Maioro Street Interchange and Waterview Connection - Oakley Creek Rehabilitation and Restoration Guidelines (Boffa Miskell, 2010); and
- (l) Details of artworks or art through design of structures within the Project (e.g. design detailing of median barriers, bridge railings, safety barriers, piers, retaining walls and tunnel portals), in accordance with Section B of the Urban Landscape and Design Framework (UDLF June 2010) (refer Schedule A, Row 38) and F.8:Plans of Structures and Architectural Features, but excluding the north and south ventilation buildings, plans sections and elevations.

LV.3.

The NZTA shall have implemented the UDL Plans within 6 months of practical completion of construction of the Project.

LV.4.

The landscaping shall be implemented in accordance with the UDL Plans within the first planting season following the completion of the construction works, provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for a period of 10 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping shall be implemented in accordance with this Condition for each stage unless subsequent construction staging requires use of the proposed landscaping area.

Advice note: On-going control and management of the landscaping within the designation is the responsibility of the NZTA.

LV.5.

The NZTA shall implement the UDL Plans taking into account the pest plant management guidelines detailed in the Ecological Management Plan (as required by Condition CEMP.3).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

LV.8.

The NZTA shall ensure that any areas within the designation affected by construction activities have sub-soil rehabilitated and top-soil replaced so that the hydrological response including the volume of stormwater runoff generated is as close as practicable to the predevelopment situation. The methodologies to achieve this shall be documented and provided to the Major Infrastructure Team Manager, Auckland Council with the revised UDL Plans submitted pursuant to Condition LV.1.

LV.10.

The UDL Plans shall identify all Amenity Trees required to be removed over the construction of the Project (in accordance with Condition CEMP.6(o) and (p)). Replacement trees shall be sized at 160Lt and will either draw from the Coastal Forest or Basalt Rock Forest ecotypes listed in the Landscape Planting Schedules (provided in F.16, refer Schedule A, 17) or an agreed alternative species (confirmed by Major Infrastructure Team Manager, Auckland Council), except in the case of those trees subject to Condition ARCH.9.

Advice note: This does not necessarily apply to any replacement planting in the Open Space Restoration Plan areas, which will be confirmed in approval from Auckland Council and will be in accordance with relevant Auckland Council Park guidelines (see Condition OS.4).

Open Space Conditions

OS.1

For the purposes of Conditions OS.2 – OS.15 the following terms will have the following meanings:

- Full size – means a football (soccer) field with the dimensions 100m x 60m.
- Half size – means a football (soccer) field with the dimensions less than 100m x 60m but no smaller than 50m x 30m.
- Toddler – means a playground specifically designed for children between the ages of 1 and 3.
- Junior – means a playground specifically designed for children between the ages of 4 and 8.
- Youth – means a playground specifically designed for children between the ages of 9 – 14 years.
- Open Space Restoration Plans – means those plans listed in Schedule A, row 30.
- Open for Play - means the sports field has a level surface and a dense weed-free sward of mature grass, goal posts and lighting if indicated in the Open Space Restoration Plans approved by the Auckland Council.
- Sand - carpeted - means the field has been levelled and irrigated, and conventional sub-soil drains, slit drains and a 50mm deep sand carpet have been installed. The field has been stolonised with a warm season grass such as kikuyu or couch.
- Auckland Council Park Guidelines – means the document by Auckland City Council titled “Furnishing our parks: design guidelines for park furniture”, dated September 2009
- Park furniture – means those items described in the Auckland Council Park Guidelines
- AS2560 – means the Australia New Zealand Standard for lighting of sports fields.
- AS4282 – means the Australia New Zealand Standard for the control of the obtrusive effects of outdoor lighting.
- Way finding exercise – means a process for determining the number, size, location and content of signage to provide clear direction for all park users.
- Skate-park for the purpose of conditions OS.5(b)(iii) means a skate park with a size of approximately 1,400 sq. m. (generally 25 wide x 55m long), incorporating a range of design variations. Suitable for beginners (providing training facilities to develop their skills) but primarily catering for intermediate to advanced level skaters.
- BMX bike track for the purpose of condition OS.5(b)(iii) means a low maintenance, non-competition BMX bike track, incorporating a range of design variations. Primarily catering for beginner and intermediate riders.

OS.2

The NZTA shall prepare Open Space Restoration Plans to outline how the open space replacement land, as defined in the Open Space Restoration Plan Areas (Schedule A, Row 30) (including land occupied during construction) will be reinstated or replaced on completion of construction, for handover to Auckland Council and those areas identified in Condition DC.1A(f) and RC.3(f). Following the consultation detailed in Condition OS.3

The Proposed Auckland Unitary Plan (notified 30 September 2013)

below, the Open Space Restoration Plans listed in Condition OS.3(a) to (f) shall be submitted within 12 months of construction commencing in the specific areas affecting the reserves or within 12 months of occupation of open space, whichever is the sooner, to the Major Infrastructure Team Manager, Auckland Council.

Advice note: Conditions OS.9 and OS.10 require certain works to be provided prior to occupation of Construction Yards 6 and 7 (Waterview Reserve) and Construction Yards 9- 12 (Alan Wood Reserve) and this may impact on the timing of Open Space Restoration Plans for these areas.

OS.3

The Open Space Restoration Plans shall be prepared in consultation with the Auckland Council, Iwi, the Community Liaison Groups (Condition PI.5), NZHPT, and other recreation users and other user representatives identified by Auckland Council. The Open Space Restoration Plans shall comprise the following specific plans:

- (a) Waterview Reserve Restoration Plan;
- (b) Alan Wood Restoration Plan (including Hendon Park and 25 Valonia Street);
- (c) Oakley Creek Esplanade (Waterview Glades) Restoration Plan;
- (d) Jack Colvin Park Restoration Plan;
- (e) Rosebank Domain Restoration Plan;
- (f) Harbourview-Orangihina Reserve Restoration Plan.
- (g) The areas of the Open Space Restoration Plans are shown in the Open Space Restoration Plan Areas (Refer Schedule A, Row 30).

OS.4

All Open Space Restoration Plans shall be prepared in general accordance with the UDL Plans (Schedule A, Row 30), and shall include, but not be limited to, the following:

- (a) Details of, including the location, of any artworks and educational signage, and directional signage. In the case of Alan Wood Reserve, Waterview Reserve and Oakley Creek Esplanade (Waterview Glade) this shall include a "way-finding exercise" in accordance with Auckland Council practice, to determine all signage to be provided; and
- (b) Evidence of integration with the Oakley Creek restoration works required under Conditions STW.5, STW.20, V.16 and LV.2(i); and a summary of the consultation undertaken (as required by Condition OS.3) and the response received; and
- (c) Details of any vehicle access through the reserves and parking areas; and
- (d) Park furniture (including quantity and quality) to be provided in accordance with relevant Auckland Council Park guidelines, except for:
 - (i) The riparian area within Alan Wood Reserve where the only furniture required is a maximum of 10 seats; and
 - (ii) Oakley Creek Esplanade (Waterview Glades) where the only furniture required is replacement of 3 existing seats; and
- (e) The inclusion and integration of the design for all pedestrian and cycleway linkages and facilities detailed on the PT and Active Mode Transport Routes (Schedule A, Row 22). The design integration shall be in accordance with CPTED principles;
- (f) Implementation programme, including sequencing of works and completion dates. This shall include works that could be implemented prior to practical completion of construction works or are outside the Project area (e.g. upgrading of the Waterview Esplanade Reserve set out in Condition OS.5(b)(vii);
- (g) Implementation programmes for planting and field reinstatement. This shall include:
 - (i) A 12 month maintenance period for built structures and soft landscaping; and
 - (ii) For any landscaping accessible to horses an assessment to demonstrate that the planting schedule is not toxic to horses and that consultation on this has been undertaken with the Te Atatu Pony Club;
- (h) The specific requirements for each Restoration Plan area as set out in Conditions OS.5 – OS.8;
- (i) Documentation of consultation undertaken required by Condition OS.3 and the views and concerns expressed by this consultation and the written approval of the Manager Community and Cultural Policy.

Advice note: For the avoidance of doubt provision of (a) to (h) above will require elevations, cross sections,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

engineering drawings and written documentation to supplement the UDL Plans. It is also noted that the UDL Plans identify landscaping, planting and other works beyond the Open Space Restoration Plans (refer Conditions LV.1 – LV.6, LV.9 and LV.10). Educational signs and artworks are particularly encouraged.

Waterview Reserve (Specific)

OS.5

The Waterview Reserve Open Space Restoration Plan shall be prepared in general accordance with the UDL Plans (Refer Schedule A, Row 17). The following shall be provided:

(a) Equivalent reinstatement of the following recreational facilities:

(i) A children's playground with the design and equipment targeted at "junior" and "youth" ages; and

(ii) One ablution block; and

(iii) One basketball court (28m by 15m); and

(iv) One volleyball court.

(b) Other restoration and enhancement:

(i) Measures to enhance the Oakley Inlet Heritage Area, including interpretative signage and pedestrian access;

(ii) Creation of esplanade reserve along Oakley Inlet;

(iii) Subject to obtaining necessary resource consents and Auckland Council landowner approval, provision of a skate-park, BMX bike track (non-motorised bikes);

(iv) Provision of pedestrian paths within the reserve area (as indicated on the UDL Plan 212);

(v) Eco-sourced and mass planting to screen the interchange ramps from Herdman Street and the Waterview Primary School (as indicated on the UDL Plan 212 (Refer Schedule A, Row 17));

(vi) A sloping and landscaped bund as indicated on the UDL Plan 212 (Refer Schedule A, Row 17) to screen the interchange ramps from the open space areas;

(vii) Subject to obtaining necessary resource consents and Auckland Council landowner approvals, upgrading of the Waterview Esplanade Reserve walkway and associated landscaping, identified on the UDL Plan 210 (Refer Schedule A, Row 17);

(c) The works required in accordance with Condition OS.16(a) in respect of the allweather cycle/pedestrian path into Eric Armishaw Park.

(d) A financial payment shall be made to the Auckland Council (in lieu and as equivalent of a playing field at Waterview Reserve), in full at least 20 working days prior to occupation of Construction Yards 6 and 7, valued on the basis of provision of one "open for play" full size sand-carpeted football (soccer) field with a clear 10m space for spectators on all sides and associated changing facilities and parking requirements as at Waterview Reserve or as proposed by UDL Plans (Schedule A, Row 17).

Advice note: the purpose of the financial payment in lieu is for the provision of a playing field at Phyllis Reserve, rather than its reinstatement at Waterview Reserve.

Advice note: The replacement land area for Open Space will provide approximately 2.35 – 2.4ha of new replacement open space land in general accordance with the Proposed Open Space Impacts and Replacement Plans (See Schedule A, Row 28), including 0.30ha of additional open space at Saxon Reserve if it is all able to be acquired and consented.

OS.7

The Oakley Creek Esplanade Reserve (Waterview Glades) Open Space Restoration Plan shall be prepared in general accordance with the UDL Plans (Refer Schedule A, Row 17), and shall include, but not be limited to, the following:

(a) Creation of esplanade reserve at 36 Cradock Street;

(b) Riparian planting along Oakley Creek to a width of 15m and as identified on the notated UDL Plan 229 (Refer Schedule A, Row 17) as notation M1;

(c) Re-contouring of the reserve in a manner that is consistent with those shown on UDL Plan 229 (Refer Schedule A, Row 17) and as described in the annotation Plan Note 7 of that Plan; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(d) Stability work required for the ventilation stack (refer Condition DC.8(n)), and the integration of any necessary structures within Oakley Creek Esplanade Reserve.

Construction Works

OS.10

At least 20 working days prior to the occupation of the construction areas within Waterview Reserve, the NZTA shall, in consultation and agreement with the Auckland Council, provide:

- (a) The financial payment in lieu of the playing field facilities at Waterview Reserve, as per Condition OS.5(c);
- (b) A half basketball court and volleyball court within the relocated Waterview Reserve;
- (c) Development of Saxon Reserve with an additional site area of 2,000m² and as a minimum, the expanded reserve shall include an upgraded children's playground (toddler, junior and youth), landscaping, pedestrian paths, park furniture and an ablution block; and
- (d) Improvements to the existing pathway connections at Howlett Reserve, providing wider and safer access out to either Howlett Street or Oakley Avenue. In the event land purchase requirements deems this unable to be completed prior to occupation of the construction areas within Waterview Reserve, an equivalent financial payment in lieu of the land purchase and improvement works will be made. The financial payment will be based on the Capital Value of the Oakley Avenue site that is nominated by the NZTA in the Proposed Open Space Impacts and Replacement Plan (refer Schedule A, Row 28) and approved by the Auckland Council, with provision for site clearance (meaning works to provide vacant possession clear of any existing improvements), path formation and landscaping). This contribution shall be paid in full to the Auckland Council for improvement to or expansion of existing reserves in the Waterview area.

OS.11

At least 20 working days prior to the occupation of the construction areas within Oakley Creek Esplanade Reserve (Waterview Glades), the NZTA shall, in consultation and subject to agreement with the Auckland Council, provide:

- (a) Formalisation of the existing informal pathway at the northern end of Oakley Creek Esplanade Reserve (Waterview Glades), to connect to the existing Oakley Creek walkway (as indicatively identified on the notated UDL Plan 229 (Refer Schedule A, Row 17), as Plan Note 3), as modified for the finalised location of the ventilation stack (DC.8), and in a way that maintains public health and safety throughout the construction period;
- (b) Planting of the riparian margins of Oakley Creek.

OS.13

During construction, the NZTA shall maintain pedestrian accessways to all open space available for public use during construction and education facilities where access is affected by the works, including any public access that crosses private land. Such access shall be safe, clearly identifiable, provide appropriate surfacing and seek to minimise significant detours. The access shall be of a same or similar standard as that disrupted and will be provided and maintained by the NZTA.

Advice note: This specifically includes the existing pedestrian access that provides a connection to the crossing over Oakley Creek between 1510 Great North Road and Unitec Mt Albert Campus.

Open Space Conditions

OS.14

Where access to Oakley Creek will be disrupted for more than 3 consecutive days, or over a weekend, or there is no provision for a walkway detour, the Community Liaison Person shall notify the Friends of Oakley Creek at least 20 working days in advance of any planned disruption (except where the disruption is of shorter duration, or an emergency situation).

OS.16

The NZTA shall provide:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (a) Subject to obtaining necessary resource consents and Auckland Council landowner approval, a 3m all-weather shared cycle/pedestrian path with boardwalks as required, from the Great North Road Interchange through into Eric Armishaw Park. The works shall be sufficient to connect this path to the existing walkways and paths within that park (eg to the playground); and
- (b) The pedestrian connections to Berridge Avenue, Alberta Street and Montrose Street as shown on the PT and Active Mode Transport Routes (Sheet 109) (Refer Schedule A, Row 22), once these areas are no longer required for construction.

Social Conditions

SO.1

In addition to the Community Liaison Groups established pursuant to Condition PI.5, the NZTA shall establish an Education Liaison Group (including representatives from local schools, kindergartens, childcare facilities, Unitec Institute of Technology, the Ministry of Education and Housing New Zealand Corporation), to provide a forum through which:

- (a) Relevant monitoring data can be provided (e.g. air quality monitoring);
- (b) Notice can be provided of when particularly noisy activities will occur in close proximity to schools and education facilities, to enable the opportunity to identify any potential conflict with particular sensitive periods, and the requirement for specific mitigation strategies (e.g. rescheduling of construction activities where practicable);
- (c) Particular concerns can be raised by educational facilities or parents, discussed and potentially addressed;
- (d) Notice can be provided of potential construction impacts on school transport routes (including pedestrian/cycle access) to enable the opportunity to identify specific mitigation preferences of the education facilities (e.g. any detour routes) and to enable these facilities to appropriately inform students and/or parents; and
- (e) Learning and teaching opportunities for educational facilities to participate in Project works (e.g. planting or artworks).

The Education Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period. The Education Liaison Group shall continue to meet for at least 12 months following the completion of the Project (or less if the members of the Education Liaison Group agree), so that ongoing monitoring information can continue to be disseminated.

SO.2

In addition to Condition SO.1(b) above, where noisy construction activities (that are projected to exceed the Noise Criteria in the CNVMP) are proposed in close proximity or adjacent to schools/ childcare centres, the NZTA shall, when preparing their SSNMP (in accordance with Condition CNV.1) give specific consideration to options to carry out these works outside school hours or during school holidays as a mitigation option.

SO.3

The NZTA shall comply with the obligations imposed on it by clauses 4 and 5 of the Project Agreement (dated May 2011 (yet to be signed)) between it, the Ministry of Education and the Auckland Kindergarten Association, including in particular the requirement to relocate the Waterview Kindergarten to an alternative site prior to construction works commencing on sites adjoining the Kindergarten site. The NZTA's obligations under this condition are

subject to the Ministry and the Auckland Kindergarten Association providing written approvals, agreements or other inputs as specified in that Project Agreement.

SO.4

The NZTA shall, in agreement with the Ministry of Education, monitor the Waterview Primary School and the Waterview Kindergarten rolls:

- (a) At commencement of construction in the Waterview area (including demolition of houses within the confirmed designation footprint); and
- (b) For a period up to 3 years after construction is completed in the Waterview area and confirmed the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

operational designation footprint in these areas, or until monitoring shows the roll has stabilised to the 2006 roll level (155 and 30 students respectively) over two consecutive years (whichever is shorter).

SO.5

Should monitoring as required by Condition SO.4 indicate that the rolls of Waterview Kindergarten and Waterview Primary School have dropped below 30 and 155 respectively (the 2006 roll levels), the NZTA shall in consultation with the Ministry of Education provide financial resources to ensure that resources are maintained to these 2006 roll levels during the required length of monitoring.

SO.5A

The NZTA shall comply with the obligations imposed on it by clauses 4 and 5 (dated April 2011) Project Agreement between it, the Ministry of Education and the Waterview Primary School Board of Trustees. The NZTA's obligations under this condition are subject to the Ministry and Board of Trustees providing such approvals, agreements or other input as specified in that Project Agreement.

SO.6

In addition to the Community Liaison Group established pursuant to Condition PI.5, the NZTA shall establish a Working Liaison Group (WLG) inviting the following:

- (a) Auckland Council;
- (b) Housing New Zealand Corporation;
- (c) Te Kawerau Iwi Tribal Authority;
- (d) Ngati Whatua o Orakei;
- (e) KiwiRail;
- (f) Department of Conservation;
- (g) Ministry of Education; and
- (h) Local Boards.

The purpose of this WLG will be to provide a forum through which:

- (a) Opportunities for public work development (including social housing, passenger transport or recreation / open space) are identified in areas where the NZTA confirms that the designation is no longer required (e.g. following construction activities);
- (b) Comment can be provided on updated Urban Design and Landscape Plans, including the finalised designs of structural elements for the Project (prior to their submission to the Auckland Council);
- (c) Opportunities for integration of other environmental projects (e.g. restoration plantings) are identified;
- (d) Consideration is given to appropriate protocols for commencement and completion of construction activities (including blessings for commencement of construction phases); and
- (e) Comment can be provided by Te Kawerau a Maki on the detailed lighting design of SH16, to consider how lighting effects on cultural sites and practices might be mitigated without compromising traffic safety or those performance standards identified in Condition L.1.

The Working Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period.

SO.7

A schedule of trees that require removal for construction of the Project will be identified and reported to the Community Liaison Group for their consideration of potential provision of timber for heritage projects (including in particular the provision of Robinia wood for heritage boat building). If the demand for this timber is identified to the Construction Team, appropriate measures for felling and removal from the site will be confirmed.

SO.13

The NZTA shall appoint a medical specialist qualified and experienced in Environmental and Occupational Medicine for the duration of the operational air quality monitoring of the Project (as defined by Condition OA.4)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

to be a point of contact for persons concerned about the discharge from the ventilation stacks. This person must be reasonably available by appointment for advice on matters of concern for residents within the Waterview / Point Chevalier and Owairaka / New Windsor communities, and parents of pupils and prospective pupils at schools, kindergartens, playschools, and child care centres within those areas.

SO.14

For the purpose of mitigating significant adverse effects on passive open space and reserves in Sectors 5, 7 and 9, both during the construction years and longer term, particularly in the Waterview, Owairaka and New Windsor communities (other mitigation having been held by the Board of Inquiry not to be adequate) the following applies:

(a) The NZTA shall, subject to conditions (b), (c) and (d) below, construct the following:

(i) A pedestrian and cycleway to AUSTROADS standards between Waterview and Owairaka/New Windsor (as generally indicated on drawing labelled as "Indicative SH20 Cycleway Route" (refer to Schedule A, Row 40)), subject to any modifications necessary to address design, property or engineering constraints.

(ii) The "Alford St Bridge".

(iii) The "Soljak PI Bridge".

(b) The NZTA's obligations under condition (a)(i) arise when the NZTA receives certification from the Auckland Council and Auckland Transport that the Auckland Council and Auckland Transport have:

(i) acquired all necessary land, or obtained all necessary interests and/or landowner approvals on a permanent basis in respect of the facilities described in condition (a)(i); and

(ii) acquired sufficient land to form a cycle and pedestrian way to AUSTROADS standards between Alan Wood Reserve and Unitec; and

(iii) obtained all necessary resource consents required for construction and operation of the facilities.

(c) The NZTA's obligations under condition (a)(ii) arise when the NZTA receives certification from the Auckland Council and Auckland Transport that the Auckland Council and Auckland Transport have:

(i) acquired all necessary land, or obtained all necessary interests and/or landowner approvals on a permanent basis for the Alford St Bridge; and

(ii) obtained all necessary resource consents required for construction and operation of the Alford St Bridge.

(d) The NZTA's obligations under conditions (a)(iii) arise when the NZTA receives certification from the Auckland Council and Auckland Transport that the Auckland Council and Auckland Transport have:

(i) acquired all necessary land, or obtained all necessary interests and/or landowner approvals for the Soljak PI Bridge either on a permanent basis or on the basis that the Soljak PI Bridge may be constructed and operated unless and until its continued existence and / or operation conflicts with or

compromises future works pursuant to the designation for rail purposes; and (ii) obtained all necessary resource consents required for construction and operation of the Soljak PI Bridge.

(e) The certification from Auckland Council required under conditions (b), (c) and (d) above must be received by the NZTA within 8 years of the designations for the Project being confirmed.

(f) Each of the facilities for which certification has been given must be constructed within 1 year of the opening of the motorway, or two years from when certification is given for the relevant facility, whichever is the earlier, subject however to some elements of the facilities towards the northern end needing to await the decommissioning of Construction Yard 7.

(g) The value of the construction works to be undertaken by the NZTA pursuant to condition (a) to (d) above shall not exceed a sum equal to \$8 million in June 2011 New Zealand dollars (with any construction costs above that figure being met by the Council.)"

(h) The pedestrian and cycleway facilities described in condition (a)(i) above are in addition to the cycling and pedestrian facilities required by the other conditions.

Advice notes:

The intention of this condition is to construct a continuous pedestrian and cycleway with bridges at Soljak PI and Alford St. To achieve this, the Council and Auckland Transport will use their best endeavours to obtain the necessary consents and landowner approvals, for all three components of the network.

The approvals required for the Soljak PI Bridge reflect the designation for rail purposes of land under the bridge

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and the possibility that any bridge structure will be approved for a limited length of time only.

In the event that, despite their best endeavours, the Council and Auckland Transport cannot obtain all of the necessary landowner approvals, the condition allows each part of the network to be constructed in isolation from the others. That will provide some mitigation of the significant adverse effects on passive open space and reserves in Sectors 5, 7 and 9 that the condition is intended to address. It will also enable the Council and Auckland Transport to complete the network in the future at their expense when and if they are able to obtain the outstanding approvals.

Condition (f) above requires the earlier of the 2 named events to be the trigger for NZTA to undertake the works, in order that the required mitigation or at least some of it occur during the construction years. It also recognises that towards the northern end of the pedestrian and cycleway, some of the works may need to await the de-commissioning of Construction Yard 7.

Subject to landowner approvals, the Council and/or Auckland Transport will be the owner of the pedestrian and cycleway and the bridges described in (a) above and shall have full responsibility for the operation and maintenance of those facilities once they have been constructed by NZTA. Accordingly, NZTA will be under no further obligation in respect of any of the facilities once they have been constructed and, in particular, will have no obligation in terms of the removal, alteration or replacement of the Soljak PI Bridge in the event that it conflicts with or compromises proposed works pursuant to the designation for rail purposes.

Vegetation Conditions

V.1

The NZTA shall finalise the ECOMP submitted with this application, prior to works commencing on site. The ECOMP shall be implemented through the CEMP. The ECOMP shall clearly identify the location and identity of:

- (a) All Significant Vegetation within the designation that is to be fully protected or relocated; and
- (b) All Valued Vegetation within the designation that is affected by the works (protected or removed).

Note: Significant and Valued Vegetation shall be as defined in the ECOMP.

V.2

The NZTA shall employ a suitably experienced botanist ('nominated botanist') for the duration of the works to monitor, supervise and direct all works affecting or otherwise in close proximity to the Significant Vegetation and Valued Vegetation identified in the ECOMP.

V.3

Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions that pertain to the Significant Vegetation and Valued Vegetation and all vegetation in general (both native and exotic) are explained by the nominated botanist to all contractors or sub-contractors who will be working on site within the close vicinity of that vegetation.

V.4

The NZTA shall minimise the amount of vegetation (both native and exotic) which is to be cleared, with the exception of weeds (both woody and otherwise, unless agreed with the Major Infrastructure Team Manager, Auckland Council and the Community Liaison Group that the retention of these 'weeds' has other environmental or ecological benefits that warrant their retention). All vegetation clearance shall be undertaken in accordance with the measures set out in the ECOMP.

V.5

The NZTA shall install protective fencing around, or otherwise clearly demarcate, all of the Significant Vegetation identified in the ECOMP as requiring full protection, under the supervision of the nominated botanist.

V.6

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The NZTA shall replace any terrestrial Valued Vegetation that is required to be removed as a result of construction activities, in accordance with the ECOMP and the Urban Design and Landscape Plans.

V.7

The nominated botanist shall supervise all trimming, pruning and relocation work associated with the Significant Vegetation and Valued Vegetation required as part of the works.

V.8

Immediately prior to planting, and for a period of 2 years following completion of construction, the NZTA shall undertake weed control and management of all invasive plant pests within the vegetated areas of the surface designation for the Project. Following this 2 year period, on-going control and management of all invasive plant pests within these areas will be the responsibility of the NZTA.

V.9

The nominated botanist shall undertake a monitoring programme throughout the construction period, including monitoring of:

- (a) The condition, repair and location of the temporary protective fencing or other forms of demarcation used to identify the Significant Vegetation;
- (b) Any works within the vicinity of the Significant Vegetation and Valued Vegetation;
- (c) The general health of the Significant Vegetation and Valued Vegetation (including any Significant or Valued Vegetation that has been relocated away from the works area); and
- (d) Compliance with the vegetation conditions of designation by way of fortnightly inspections during the construction period.

V.10

Any planting utilising native plants shall use plants genetically sourced from the Tamaki Ecological District where possible or otherwise shall use plants that have been genetically sourced from within the Auckland Ecological Region.

V.14

A rock forest restoration programme shall be undertaken by the NZTA on the northern banks of the Oakley Creek Inlet in accordance with the concepts of the ECOMP, Appendix H 'Rock Forest Provisional Concept Plan'. A detailed planting plan shall be submitted to Auckland Council for approval, prior to implementation of the planting, with the plan to include planting specifications and management techniques. The detailed planting plan shall be integrated with cultural heritage values including, but not limited to, those shown on the plan entitled 'Oakley Inlet Heritage Area' (UDL Plan 224 refer Schedule A, Row 17).

V.16

All realignments and riparian enhancements of Oakley Creek shall be carried out in accordance with the Oakley Creek Realignment and Rehabilitation Guidelines and in general accordance with the Urban Design and Landscape plans (Refer Schedule A, Row 17).

Avian Conditions

A.1

The NZTA shall finalise, and implement through the CEMP, ECOMP submitted with this application to include the matters set out in Conditions A.2 to A.6.

Herpetofauna Conditions

H.1

The NZTA shall finalise and implement through the CEMP, the ECOMP submitted with this application to include details of lizard management to be undertaken, including the following:

- (a) Lizard capture methodology, including timing;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (b) Lizard release locations(s);
- (c) Lizard habitat enhancement at population release sites, including a detailed pest control programme for a minimum of one month prior to release and for a minimum of three consecutive years' duration after release;
- (d) Location(s), monitoring and maintenance of lizard protective fencing;
- (e) Post-release monitoring methodology; and
- (f) Lizard captive management methodology.

Lighting Conditions

Operation

L.1

Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, in general accordance with the Waterview Connection Lighting Plan (Drawing Set F.11 (Refer Schedule A, Row 12):

- a) All motorway lighting shall be designed in accordance with "Roadlighting Standard AS/NZS1158";
- b) All other lighting shall be designed in accordance with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- c) Fully cut off luminaries shall be used on SH20 from the Southern Tunnel Portal to the Maioro Street Interchange to minimised lighting overspill, as shown on Drawing Set F.11(Refer Schedule A, Row 12).

Construction Zones and Construction Yards

L.2

A Temporary Construction Lighting Management Plan shall be prepared for all construction zones and construction yards prior to commencement of any night time works within the construction zones and construction yards. The Temporary Construction Lighting Management Plan shall be independently verified by a lighting specialist and provided to the Major Infrastructure Team Manager, Auckland Council for certification of compliance 10 working days prior to any night time work commencing.

The certification process shall ensure that the Plan includes (but is not be limited to):

- a) The layout and arrangement of all temporary lighting required for night time works, and shall show how this avoids the "Light Spill Restriction Zone" identified on the Construction Yard Plans (Refer Schedule A, Row 7) submitted with the application, and that the temporary lighting complies with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- b) Provision for a 10m buffer between the night time work and any residential boundary at all times to minimise potential for light spill; and
- c) General operating procedures outlined in the CEMP.

L.3

Asymmetrical floodlights with horizontal glass visors that are not raised more than 3 degrees above the horizontal plane shall be used for any temporary construction night time lighting requirements. Alternative temporary lighting arrangements may be used, subject to the prior approval of the Major Infrastructure Team Manager, Auckland Council, where it can be demonstrated that the proposed lighting is similar or better to asymmetrical floodlights with glass visors. Glare shall be kept below the recommendation given in AS 4282 – 1997 "Control of the Obtrusive Effects of Outdoor Lighting" Tables 2.1 and 2.2.

Archaeology Conditions

ARCH.1

The NZTA shall complete, and implement through the CEMP, the Archaeological Site Management Plan (ASMP) submitted with the notice of requirement, to include, but not be limited to:

- a) Identification of the Project archaeologist, their role and responsibility on the Project;
- b) Who reports to the Project archaeologist;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c) Specific sites requiring supervision, and measures to be undertaken to protect and manage these sites;
- d) Whether NZHPT and/or Auckland Council heritage and/or iwi supervision is required for the specific site (the latter to be determined through consultation with the relevant iwi groups); and
- e) Accidental discovery protocols in the event that unknown archaeological sites are uncovered.

ARCH.2

The NZTA shall employ at its expense a qualified archaeologist (the Project archaeologist) who shall be on site to monitor all initial earthworks, including surface stripping of the site, for all specific areas identified in the ASMP to establish whether any sub-surface archaeological features are present. This includes, but is not limited to, the following areas:

- (a) All unmodified areas in the vicinity of Rosebank Road;
- (b) All works in the vicinity of the "Oakley Inlet Heritage Area", located adjacent to the Great North Road Interchange;
- (c) Works in the vicinity of two midden sites (recorded R11/2214 and R11/2215) within Great North Road Interchange, and all previously unmodified areas near the banks of the Oakley Inlet;
- (d) Any ground disturbance works in Construction Yard 7 within Oakley Creek Reserve.

ARCH.3

If any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- (a) Immediately it becomes apparent that a possible archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- (b) The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched and notify the Project archaeologist;
- (c) The Project archaeologist shall inspect the site to assess the relevance of the find, and then the Auckland Council shall be advised of the significance;
- (d) If the site is confirmed to be an archaeological site by the Project archaeologist, the site supervisor shall then notify tangata whenua, the New Zealand Historic Places Trust, and the Auckland Council that an archaeological site has been exposed so that appropriate action can be taken;
- (e) In the case of human remains, the NZ Police shall be notified.

ARCH.4

In accordance with the ASMP, the following archaeological sites shall be fenced off and protected to the satisfaction of the Project archaeologist, prior to construction activities being undertaken:

- (a) Recorded sites R11/2504, R11/2505, R11/2506 and R11/2507, located on the northern boundary of the designation adjacent to the Rosebank Road peninsula.
- (b) Recorded site R11/2383 in the Oakley Creek Esplanade Reserve construction yard.

ARCH.5

In accordance with the ASMP, the following specific measures shall be implemented in the area identified as the "Oakley Inlet Heritage Area" (including recorded sites R11/2191, R11/2202, R11/2203 and R11/2459), located adjacent to the Great North Road Interchange:

- (a) In determining the details of construction methodology and site access, the NZTA shall ensure that there is no impact on sites R11/2202, R11/2203 and the main features of site R11/2191 (the basalt walls, boiler, building foundations and platforms). When the details have been determined, a plan will be prepared in consultation with the Project archaeologist that outlines the areas of archaeological value to be fenced off and protected from any adverse effects during the construction process. The Heritage Manager, Environmental Services, Auckland Council shall be consulted in the drafting of the plan and shall certify that the extent and method of fencing will protect the areas of archaeological value prior to commencement of construction works within the area. This plan will be added to the Archaeological Constraints layer in the GIS layers included as an Appendix of the ASMP in the CEMP.
- (b) All works in the Oakley Inlet Heritage Area shall be monitored by the Project archaeologist;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (c) Machine access to construction works in this area shall be planned so as to minimise adverse effects on archaeological features;
- (d) During and following removal of houses north of Cowley Street and west of Great North Road in the area where the mill workers' cottages and mill race were once located, investigations shall be undertaken to establish and record any archaeological remains that may have survived;
- (e) Remedial or limited restoration works shall be carried out to the basalt walls, wheel pit, boiler and bridge abutment of the mill/tannery/ quarry site (R11/2191), to a specification prepared by a heritage professional, to ensure their long term preservation. The specification shall be prepared in consultation with the Heritage Manager, Environmental Services, Auckland Council;
- (f) A vegetation management plan shall be prepared and implemented to remove vegetation that is damaging archaeological features in this area and to protect and enhance features with appropriate vegetation cover. This plan shall form part of the Waterview Reserve Restoration Plan (refer to Conditions ARCH.6 and OS.5) and shall be prepared in consultation with the Heritage Manager, Environmental Services, Auckland Council;
- (g) The design and location of any walkways and paths and structures within the Oakley Inlet Heritage Area shall include consideration of historic paths and accessways (excluding the piers associated with the SH16 Interchange).

ARCH.6

The Project archaeologist shall be made part of the Waterview Reserve Restoration Plan (refer Condition OS.3) development team to provide advice on long term management of the "Oakley Inlet Heritage Area". The Waterview Reserve Restoration Plan shall include provision for, as a minimum:

- (a) A pedestrian bridge linking the northern and southern banks of the Oakley inlet shall be provided in the original location of the historical bridge to restore the historical connection between the two parts of the Oakley Inlet Heritage Area and make both parts easily accessible. The bridge is to be of a design appropriate to the historic form of this bridge but at a height above water to accommodate the passage of kayaks at high tide;
- (b) Interpretative signage of the Oakley Inlet Heritage Area for public information and educational purposes;
- (c) The management of planting to avoid encroachment of deep rooted trees on identified archaeological sites (including planting undertaken in accordance with Condition V.14).

ARCH.7

In accordance with the ASMP, any works to the dry stone wall (recorded site R11/2213) located on the north western boundary of the Great North Road Interchange, shall be minimised and managed in accordance with the following:

- (a) If it is necessary to demolish part of the wall, the stone shall be used to repair the remainder of the wall. Appropriate reuse of any surplus stone will be determined following consultation with the NZHPT and Auckland Council.
- (b) The remainder of the stone wall shall be protected from construction machinery by the use of waratahs and an adequate buffer area prior to earthworks commencing.
- (c) The remainder of the stone wall shall be carefully cleared of vegetation growth and repaired where necessary to a specification prepared by a heritage professional employed at the expense of the NZTA.

ARCH.8

All contractors and subcontractors working on the Project shall be trained on the archaeological requirements set out in the ASMP.

Advice note:

Any archaeological sites within the area affected by the Project shall not be modified or disturbed in any way unless written authorisation has been obtained from the NZ Historic Places Trust.

ARCH.9

All Monterey Pines or oak trees (*Quercus* spp) over 10m in height within Sector 5 shall be identified and managed through the CEMP Amenity Tree process (Conditions CEMP.6(o) and (p)). Irrespective of their health

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(unless the Project Arborist and Auckland Council confirm that these trees pose an immediate hazard), these trees will be confirmed as Amenity Trees. These trees shall be retained where practicable. If removal of any of these trees is required for construction, they shall be replaced by trees of the same species (or as otherwise agreed through the Waterfront Reserve Restoration Plan) sized at 160Lt. The location of replacement specimens will be defined through planning of the Oakley Inlet Heritage Area (as part of the Waterview Reserve Restoration Plan, refer Condition OS.5), with the replanting of Monterey Pines to reflect their historic use as a boundary planting species. Two trees shall be provided for every oak tree (*Quercus* spp) removed.

Advice note

Any archaeological sites within the area affected by the Project shall not be modified or disturbed in any way unless written authorisation has been obtained from the NZ Historic Places Trust.

Ground Settlement Conditions

S.1

The NZTA shall finalise, and implement through the CEMP, the Settlement Effects Management Plan (SEMP) lodged with the application prior to construction activities being undertaken. Prior to construction (following detailed investigation and design), the total estimated settlements and building damage categories shall be confirmed using the methodology in Technical Report G.13 Assessment of Ground Settlement Effects and the SEMP shall be updated accordingly.

In the event that settlement predictions are greater (than those allowed for in Figure E.14 (refer Schedule A, Row 26)) or building damage categories increase in ranking or buildings affected from those identified in Figures G1-G4 (refer Schedule A, Row 27), mitigation measures shall be introduced as part of the detailed design and construction process to avoid any adverse effects greater than predicted by the application lodged in August 2010.

Settlement Monitoring

S.2

The NZTA shall establish a series of ground settlement monitoring markers to monitor potential settlement in relation to the construction of the tunnels. The survey markers will be located generally as follows:

- (a) Along the tunnel alignment and extending out to a maximum of 400m either side of the tunnels to correlate with cross sections that have been used for the settlement estimates and to infill between them.
- (b) To cover the more extensive eastern zone area of settlement at Chainage 3400 (Figure E.14 refer Schedule A, Row 26).
- (c) On or around buildings or features considered to be particularly sensitive as defined in the SEMP (including those buildings identified in Condition S.7) and as may be updated to reflect detailed analysis and interpretation of monitoring results as the Project proceeds.

Two types of markers shall be established: Framework Markers which shall form the main basis of monitoring, and Intermediate Markers which shall provide additional monitoring information for interpretation of Alerts and Alarms. The locations of each type of settlement monitoring marker shall be confirmed in the SEMP. Each Framework Marker shall have an alert and alarm level set in relation to Figure E.14, where alert = 75% of the theoretical value and alarm = 100% of the theoretical value with due consideration of the seasonal range of ground movement identified by pre-construction monitoring.

S.3

The NZTA shall survey the settlement monitoring markers at the following frequency:

- (a) Pre-construction
 - i) All Framework Markers – Vertical and selected horizontal at 3 monthly intervals, starting at least 12 months prior to construction commencing; and
 - ii) All Intermediate Markers - Vertical and selected horizontal once.
- (b) During Construction

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i) All Framework Markers - Vertical on a monthly basis; and
 - ii) Selected Framework Markers only - Horizontal on a monthly basis.
- (c) During Active Construction
- i) All Framework and Intermediate Markers – Vertical on a weekly basis; and
 - ii) Selected Framework Markers only - Horizontal on a monthly basis. Active construction” shall be defined as:
 - (a) Starting when the advancing tunnel face comes within 150m and ending when the final tunnel lining has been installed 150m beyond the section; and
 - (b) When excavation in front of a retaining wall comes within 100m of a section and ending when the permanent wall supports are in place beyond a distance of 100m.

S.4

Within three days of each monitoring round, the NZTA shall use the settlement monitoring results (together with the results of groundwater monitoring where they may provide an earlier indication of future settlements) to reassess the ground settlements and building damage categories and compare them to those estimated in Figures E.14 and G1-G4 (refer Schedule A, Row 26 and 27). If alert and alarm levels are exceeded, the trigger marker shall be resurveyed within 24 hours. If the reassessment indicates that a building has increased its damage category from that in Figures G1 – G4 (refer Schedule A, Row 27) then this shall be considered to be an Alert Level and additional specific assessment of the building shall be carried out by the NZTA to confirm this reassessment within 72 hours. If the additional assessment confirms the increase in damage category, this shall be considered to be an Alarm Level and the property owner and occupier will be notified within 48 hours. Following consultation with the property owner and occupier(s); subsequent actions may include increased frequency and/or extent of monitoring, modification to the construction approach or mitigation works to the affected building.

S.5 Settlement monitoring shall be undertaken for a period of 2 years following completion of the tunnels. The NZTA may reduce the frequency of settlement monitoring, required by Condition S.3, to 6-monthly:

- (a) Once the active construction stage has passed; and
- (b) Monthly monitoring has been undertaken for a minimum of 6 months; and
- (c) The monitoring indicates that any potential settlement effects are within a satisfactory range as specified in the SEMP; and
- (d) The criteria in (a) to (c) above has been certified by the Auckland Council.

S.6

The NZTA shall collate the results of the settlement monitoring (undertaken pursuant to Conditions S.2 – S.5) and prepare a report that shall be made available to the Auckland Council]. A settlement monitoring report shall be prepared prior to the commencement of construction, and then at monthly intervals throughout the construction period. Following the completion of construction, a settlement monitoring report shall be prepared following each round of settlement monitoring undertaken (i.e. monthly and then 6-monthly when monitoring is reduced pursuant to Condition S.5). The settlement reports shall highlight any alert or alarm level exceedances and provide a full interpretation and/or explanation as to why these levels are exceeded, the likely effects and detail any remedial or mitigation measures initiated as a result of these trigger exceedances.

Building Condition Surveys

S.7 The NZTA shall review and update the schedule of buildings and structures considered to be at risk in accordance with the criteria of the SEMP and maintain this for review by the Auckland Council. This shall include, but not be limited to, the following properties identified in the Technical Report G.13 Assessment of Ground Settlement Effects provided in support of this application:

- (a) Buildings on properties within the substrata designation;
- (b) Buildings where total estimated settlement is greater than 50mm (defined in Figure E.14 – Refer Schedule A, Row 26);
- (c) Buildings in areas estimated to have a risk of damage more than negligible (defined in Figures G1-G4 as categories 1-5 (Refer Schedule A, Row 27));

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (d) Unitec Buildings 76, and 310-313 (as per Unitec Site Plan in Schedule A, Row 31);
- (e) 1510 Great North Road, Unitec Residential Flats (two buildings);
- (f) Pak'n Save Supermarket;
- (g) Metro Football Clubhouse, Phyllis Street;
- (h) Building at 1550 Great North Road;
- (i) BP Service station at 1380 Great North Road;
- (j) Modern Chairs Building (Richardson Road);
- (k) Waterview Primary School;
- (l) Operational septic tanks where total estimated settlement is greater than 50mm; and
- (m) Buildings on the western side of the alignment between Chainage 3000 and 3400 where total estimated settlement is greater than 20mm.

S.8

The NZTA shall consult with owners of buildings and structures identified in Condition S.7 and, subject to the owner's approval of terms acceptable to the NZTA, shall undertake a preconstruction condition assessment of these structures in accordance with the SEMP.

S.9

The NZTA shall employ a suitably qualified person (e.g. a Chartered Professional Engineer) to undertake the building assessments required pursuant to Conditions S.8 and S.12 and identify this person in the SEMP.

S.10

The NZTA shall undertake monthly visual inspections of the following buildings during the "active construction" phase of the Project as defined in Condition S.3:

- (a) All Type 1 Dwellings within a zone where "more than negligible" effects have been predicted;
- (b) All Type 2 Dwellings within a zone where "slight" effects or greater have been predicted
- (c) Unitec Building 76;
- (d) 1510 Great North Road, Unitec Residential Flats (two buildings);
- (e) Pak'n Save supermarket; and
- (f) Waterview Primary School (pool and hall).

Note: Type 1 and 2 Dwellings are those as defined in Technical Report G.13 Assessment of Ground Settlement Effects.

S.11

The NZTA shall undertake level and/or wall inclination surveys on a monthly basis during the "active construction" phase of the Project on the following buildings:

- (a) All Type 1 Dwellings within a zone where "slight" effects or greater have been predicted;
- (b) Unitec Building 76;
- (c) 1510 Great North Road, Unitec Residential Flats (two buildings);
- (d) Waterview Primary School (pool); and
- (e) Pak 'n' Save Supermarket

S.12

The NZTA shall, subject to the owner(s) approval, ensure that within 6 months of completion of construction activities, a post-construction condition assessment covering the matters identified in the SEMP is undertaken and shall be provided to the owner(s). The assessment report shall include a determination of the cause of damage identified (if any) since the preconstruction condition assessments. The NZTA shall agree with the owner(s) appropriate remedial works (if any) in conjunction with arrangements for implementation and/or compensation. The requirements of this condition need not be fulfilled for any particular building with the written approval of the current owner of a building or where the NZTA can provide reasonable evidence to the Auckland Council that the current owner of that building has agreed they do not require such a survey.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

S.13

The NZTA shall ensure that a copy of the pre, post-construction and any additional building condition assessment reports for each building be forwarded to the respective property owner(s) within 15 working days of completing the reports. The NZTA shall notify the Auckland Council that the assessments have been completed. The community liaison person appointed pursuant to Condition PI.1 shall be the contact person for owner(s) subject to assessment and reporting under Conditions S.1 to S.11 and S.16 and remedial works or compensation payments under Condition S.12 and S.16.

Retaining Wall Monitoring

S.14

The NZTA shall establish inclinometer and surface monitoring of the retaining walls for the tunnel portals and cut and cover tunnel to determine any potential effect from the tunnels. The nature and timing of the monitoring shall be determined during detailed design of the retaining walls and specified in the SEMP.

Services Monitoring

S.15

Prior to construction commencing, the NZTA shall undertake CCTV surveys of services identified in the SEMP as being susceptible to damage or particularly critical. This shall include, but not be limited to:

(a) Waterview Orakei No. 9 trunk sewer. The NZTA shall monitor these services by undertaking additional CCTV surveys throughout the construction period. If any damage is determined in relation to the Project, the NZTA shall undertake any remedial action as required in consultation with the service provider.

Slope Stability Assessments

S.16

Prior to construction commencing, the NZTA shall undertake geotechnical investigations of slopes or sites that have been identified as potentially being susceptible to movement. This shall include, but not be limited to:

(a) 14H and 14J Cradock Street

(b) 34 Cradock Street

(c) 40 Cradock Street

(d) 56 Powell Street;

(e) 1590A Great North Road; and

(f) Other sites on the western slopes of Oakley Creek identified under Condition S.7(b) and S.7(m) which are assessed in the course of a pre-construction condition assessment undertaken in accordance with Condition S.8 as potentially being susceptible to slope movement.

The NZTA shall undertake monitoring throughout the active construction period in accordance with Condition S.10 above and shall assess and agree remedial action as required, in consultation with the owner, in accordance with Condition S.12 above.

Differential Settlement

S.17

Pairs of settlement markers shall be established on each side of the cross sections identified on Figure E.14 to monitor differential movements. The markers in each pair shall be no more than 20m apart, and each pair shall be within 100m of the centreline of the closest tunnel. Monitoring installed in accordance with Condition S.11 can be utilised for this purpose. Each pair of markers shall have Alert and Alarm values set based on the calculated differential settlements at that location and consistent with the relevant calculated Building Damage Category (Figures G1-G4, (Refer Schedule A Row 27)), Alert and Alarm levels shall be as defined in Condition S.2. Monitoring frequency shall be as defined for Framework Markers in Condition S.3.

Contaminated Land and Contaminated Discharges Conditions

CL.1

The NZTA shall finalise and implement through the CEMP, the Contaminated Soil Management Plan (CSMP)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

submitted with this application prior to commencement of any site works. The CSMP shall include, but not be limited to:

- (a) Measures to be undertaken in the handling, storage and disposal of all material excavated during the construction works;
- (b) Soil validation testing and groundwater testing;
- (c) Soil verification testing to be undertaken to determine the nature of the excavated spoil and potential reuse or disposal options;
- (d) Measures to be undertaken in the event of unexpected contamination being identified during construction activities; and
- (e) Measures to be undertaken for the handling of asbestos containing material.

CL.2

Prior to the main construction works commencing, the baseline quality of soils and groundwater within Sector 5 (the southern bank of Oakley Creek coincident with the location of the former tannery) and Sector 7 (particularly in relation to works in the vicinity of Great North Road) shall be investigated and established. The investigations shall be carried out in accordance with appropriate Ministry for the Environment and Auckland Council guidelines.

The findings of the soil and groundwater investigations shall be used to determine the specific constructions methods during work in this area to manage any likely environmental effects in relation to the Project.

CL.3

Prior to the main construction works commencing, soils and fill materials within Alan Wood Reserve (Sector 9) shall be further classified so as to determine the distribution and extent of cleanfill, managed fill and contaminated/hazardous fill materials.

CL.4

All excavated soil shall be tested by the NZTA in general accordance with the CSMP, prior to either reuse on site or disposal off site. The testing regime shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council.

CL.5

The NZTA shall notify the Major Infrastructure Team Manager, Auckland Council within 5 working days of identification of any contamination at the site which was not identified in the reports submitted in support of this application, including contaminated soil, surface water or groundwater. The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.6

The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.7

The NZTA shall engage a suitably qualified contaminated land specialist to supervise the works, excavation and removal of any contaminated soils from the site and undertake sampling (if required) of imported material.

CL.8

All testing / sampling techniques shall be carried out in accordance with the Ministry for the Environment Contaminated Land Management Guidelines or other equivalent standards approved in writing by the Major Infrastructure Team Manager, Auckland Council.

CL.9

The Proposed Auckland Unitary Plan (notified 30 September 2013)

During and following the tunnel construction works beneath Sector 8, groundwater quality monitoring shall be carried out at locations within and down hydraulic gradient of Phyllis Street Landfill. Monitoring shall be undertaken on at least a monthly basis, and for a period up to 12 months following completion of the tunnel construction works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.10

Prior to, during and following tunnel construction works beneath Phyllis Street Landfill, monitoring for landfill gas shall be carried out from existing monitoring boreholes within the landfill. Monitoring shall be undertaken on at least a monthly basis, for a period of no less than 6 months prior to, and up to 12 months following completion of the tunnelling works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.11

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council, a Site Closure Report no later than three (3) months after the completion of the earthworks. The Report shall be prepared in accordance with Schedule 13 (Schedules for Reporting on Contaminated Land) of the Proposed Auckland Regional Plan: Air Land and Water and include:

- (a) Results of any soil reuse and imported material testing carried out to ensure compliance with the CSMP;
- (b) Volumes of soil removed from site;
- (c) Copies of the waste disposal receipts; and
- (d) Reports of any non-compliance with the CSMP procedures or complaints received while undertaking the site works.

Freshwater Conditions

F.1

The NZTA shall finalise, and implement through the CEMP, the ECOMP submitted with this application. The ECOMP shall be updated to ensure compliance with the conditions of this consent and include changes to the details of construction processes prior to construction commencing. The ECOMP shall include, but not be limited to details of:

- (a) Monitoring of freshwater ecology;
- (b) Monitoring of freshwater and stream sediment quality;
- (c) Trigger event criteria for undertaking additional monitoring;
- (d) Procedures for responding to accidental discharges of contaminants to the freshwater environment; and
- (e) Contingency plans and/or remedial measures in the event monitoring results identify adverse effects.

F.2

The NZTA shall engage a suitably qualified ecologist and water quality scientist to undertake freshwater monitoring programme prior to, during and following construction to monitor the effect of the Project on the freshwater ecology. The freshwater monitoring shall be undertaken in Oakley Creek, Pixie Stream and Meola Creek. The freshwater monitoring programme shall be undertaken in accordance with the details set out in the ECOMP and include:

- (a) Cross sectional profiles;
- (b) Macro invertebrate sampling; and
- (c) Freshwater fish monitoring.

F.3

The freshwater monitoring programme shall, as a minimum, be undertaken in accordance with the following frequency:

- (a) Prior to construction – two baseline ecological surveys.
- (b) During construction – twice per year for fish and macro invertebrates and cross sectional profiles, within one month prior to the beginning of the earthworks season and within one month either side of the end of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

earthworks season.

(c) Post construction – on an annual basis for a maximum period of three years, or less if the Major Infrastructure Team Manager, Auckland Council is satisfied that no adverse effects have occurred or are likely to occur from the Project.

(d) Monthly water quality samples at the five existing Oakley Creek sample locations to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb) and nutrients.

(e) Four “event based” samples per annum from each of the current two Oakley Creek sites. The samples are to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb), hydrocarbons (TPH) and nutrients.

(f) Two sediment quality samples per annum (January and July) at the five existing water quality Oakley Creek sites (if there is sufficient sediment to sample). The samples are to be analysed for metals (Zn, Cu and Pb), polycyclic aromatic hydrocarbons (PAH), hydrocarbons (TPH) and semi-volatile organic compounds.

Advice note: The sample collection and analysis required under sub-clauses (d) to (f) shall be undertaken following an IANZ accredited methodology by a suitably accredited laboratory (International Accreditation New Zealand).

F.4

The NZTA shall undertake additional freshwater monitoring in the event of a ‘trigger event’ for freshwater habitats. For the purposes of this consent, a ‘trigger event’ for freshwater habitats is defined in the ECOMP.

F.5

The NZTAs ecologist/hydrologist (required by condition F.2) shall review, every six months, the freshwater monitoring results, provided from Conditions F.2 to F.4, and results in monitoring detailed in earthworks Conditions E.9 and E.19 and Groundwater Condition G.10. In the event that potential adverse effects are identified, including through review of the Condition G.10 monitoring results by the hydrologist and freshwater ecologist required by Condition G.12, the NZTA shall develop and submit for the approval of the Major Infrastructure Team Manager, Auckland Council appropriate contingency plans and/or remedial measures in accordance with the measures set out in the ECOMP.

F.6

Freshwater monitoring reports shall be compiled from the monitoring undertaken pursuant to Conditions F.2 to F.4 and the review of Condition F.5, and a report provided to the Major Infrastructure Team Manager, Auckland Council every 6 months.

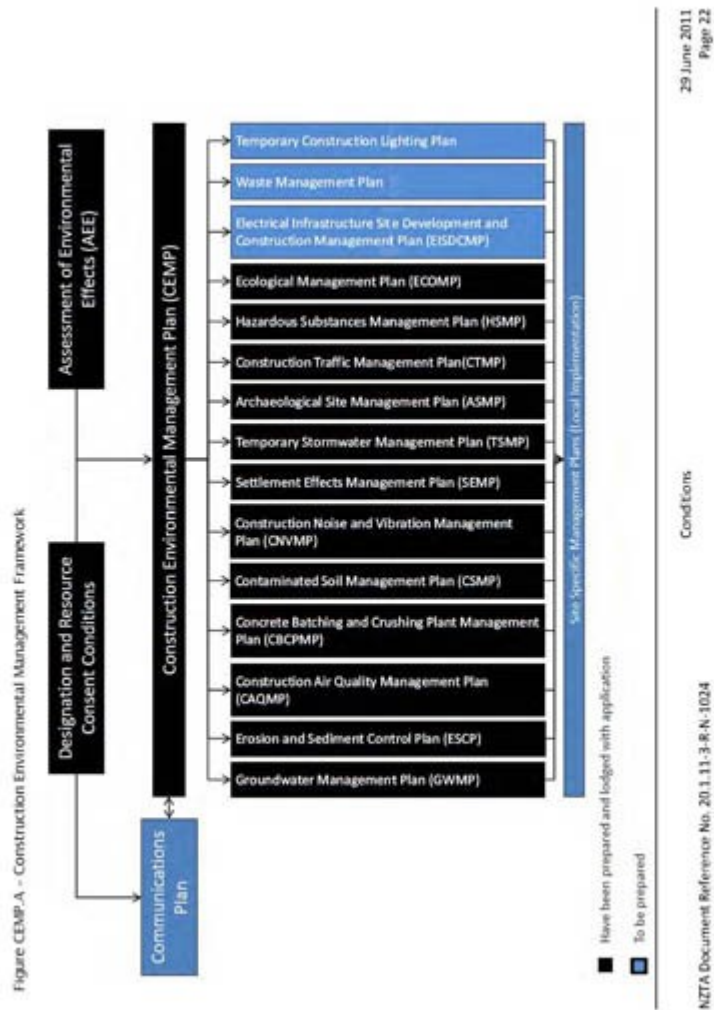

Figure PI.A - Structure of Communication Groups

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6727 State Highway 1 - Newmarket Viaduct Height Restriction

Designation Number	6727
Requiring Authority	New Zealand Transport Agency
Location	Vicinity of Newmarket Viaduct (State Highway 1), Newmarket
Rollover Designation	Yes
Legacy Reference	Designation D09-32, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

12.2m height restriction affecting land within 76.2m of the centre line of the Newmarket Viaduct.

Conditions

No conditions.

Attachments

No attachments.

6728 State Highway 20 - Waterview Connection Mt Roskill to Waterview

Designation Number	6728
Requiring Authority	New Zealand Transport Agency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	State Highway 20 from Alan Wood Reserve, Mt Roskill to Great North Road, Waterview
Rollover Designation	Yes
Legacy Reference	Designation E04-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five year from being operative in the Unitary Plan unless given effect to prior

Purpose

For a new designation, SH20 tunnels, Great North Road underpass to Alan Wood Reserve – NOR5. New strata (subsoil) designation for construction, operation and maintenance of cut and cover and deep excavation tunnels, restricting subsurface activities beneath certain properties, through proposed Sectors 7 and 8; construction, operation and maintenance and protection of SH20 subsurface works (tunnels).

Conditions

For a complete set of conditions, refer to the Waterview Connection Proposal Board of Inquiry decision titled “Final Report and Decision of the Board of Inquiry into the New Zealand Transport Agency Waterview Connection Proposal - Volume 2” dated June 2011.

General Designation Conditions

DC.1

Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by the New Zealand Transport Agency (NZTA being the Requiring Authority), the Notice(s) of Requirement and the supporting documents, and supplementary information provided in evidence. This information is summarised as follows:

- (a) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Parts A-E;
- (b) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part F: Plans and Drawings, except as updated through the hearing (Refer Schedule A for current plan and drawing references); and
- (c) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part G: Technical Reports:
 - (i) Technical Report G.1 Assessment of Air Quality Effects
 - (ii) Technical Report G.2 Assessment of Archaeological Effects
 - (iii) Technical Report G.3 Assessment of Avian Ecological Effects
 - (iv) Technical Report G.4 Assessment of Coastal Processes
 - (v) Technical Report G.5 Assessment of Construction Noise Effects
 - (vi) Technical Report G.6 Assessment of Freshwater Ecological Effects
 - (vii) Technical Report G.7 Assessment of Groundwater Effects
 - (viii) Technical Report G.8 Assessment of Herpetofauna Ecological Effects
 - (ix) Technical Report G.9 Assessment of Land and Groundwater Contamination
 - (x) Technical Report G.10 Assessment of Lighting Effects
 - (xi) Technical Report G.11 Assessment of Marine Ecological Effects
 - (xii) Technical Report G.12 Assessment of Operational Noise Effects
 - (xiii) Technical Report G.13 Assessment of Ground Settlement Effects
 - (xiv) Technical Report G.14 Assessment of Social Effects
 - (xv) Technical Report G.15 Assessment of Stormwater and Streamworks Effects
 - (xvi) Technical Report G.16 Assessment of Temporary Traffic Effects
 - (xvii) Technical Report G.17 Assessment of Terrestrial Vegetation Effects

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (xviii) Technical Report G.18 Assessment of Transport Effects
- (xix) Technical Report G.19 Assessment of Vibration Effects
- (xx) Technical Report G.20 Assessment of Visual and Landscape Effects
- (xxi) Technical Report G.21 Construction Environmental Management Plan (CEMP)
- (xxii) Technical Report G.22 Erosion and Sediment Control Plan (ESCP)
- (xxiii) Technical Report G.23 Coastal Works
- (xxiv) Technical Report G.24 Geotechnical Interpretive Report
- (xxv) Technical Report G.25 Traffic Modelling Report
- (xxvi) Technical Report G.26 Operational Model Validation Report
- (xxvii) Technical Report G.27 Stormwater Design Philosophy Statement
- (xxviii) Technical Report G.28 Geotechnical Factual Report – 500 Series
- (xxix) Technical Report G.29 Geotechnical Factual Report – 700 Series
- (xxx) Technical Report G.30 Assessment of Associated Sediment and Contaminant Loads
- (xxxi) Technical Report G.31: Technical Addendum Report (September 2010)
- (d) PT & Active Mode Transport Routes Existing and Proposed (Refer Schedule A, Row 22).
- (e) Waterview Connection Project, Evidence and Supplementary Information provided to the Board of Inquiry:
 - (i) Evidence in Chief (Numbers 1-37)
 - (ii) Rebuttal Evidence (Numbers 1-33)
 - (iii) Supplementary Information (Numbers 1-8)

DC.1A

Within 3 months of the designations being confirmed for the Project (or at least 1 month prior to any Auckland Council approvals or certifications required by these Conditions, whichever is the earlier), the NZTA shall update and finalise to the satisfaction of the Major Infrastructure Team Manager, Auckland Council all drawings and Plans cited in Schedule A, and provide a full set of the information and documentation referred to in Condition DC.1 to the Major Infrastructure Team Manager Auckland Council. At the same time the NZTA shall prepare to the satisfaction of the Major Infrastructure Team Leader, Auckland Council, a document for each designation which sets out the designation and have attached to it in text format a comprehensive set of the conditions imposed by the Board of Inquiry in its Final Decision as summarised in Schedule B, inclusive of any standard conditions and advice notes.

In particular (but not limited to), the following Plans will need to be amended in light of these Final Conditions:

- (a) F.2 Operational Scheme Plans (refer Schedule A, Row 3) require amendment detailing the amended location of the ventilation stacks and southern ventilation buildings;
- (b) F.5 Construction Scheme Plans (refer Schedule A, Row 4) require amendment to detail changes to the construction footprint for the amended location of the ventilation stacks and southern ventilation buildings and reconfiguration of Construction Yard 1);
- (c) F.6 Construction Yard Plans 101 and 107 (refer Schedule A, Row 7), detailing amendments to the Construction Yard 1 in light of the reconfiguration of this Yard and for Construction Yard 7 in light of the relocation of the northern ventilation stack (refer Schedule A, Row 34);
- (d) F.8 Plans of Structures and Architectural Features (refer Schedule A, Row 9), detailing the amended location of the northern ventilation stack and the design and location of the southern ventilation building and stack;
- (e) The CNVMP (including flow diagram and the supplementary evidence produced by Ms Wilkening) (refer Schedule A, Rows 36, 37 and 39);
- (f) The areas of the Open Space Restoration Plans (Schedule A, Row 30) to:
 - (i) Extend these areas in geographic extent to provide for the works identified in the Management Plan notations identified in the OS Conditions (in particular OS.5 and OS.6) (e.g. these areas will (as relevant) include Eric Armishaw Park, Howlett Reserve and Waterview Esplanade Reserve); and
 - (ii) Exclude the operational area of designation required for the northern ventilation stack (as identified through the OPW process (refer Condition DC.8); and
- (e) Schedule A, Row 28 the Plan detailing proposed open space impacts and replacements needs to be

The Proposed Auckland Unitary Plan (notified 30 September 2013)

updated to recolour the two land parcels on Hendon Avenue (which are excluded from the replacement calculations) to 'brown' to confirm they are part of the operational impact and will not be returned as open space.

DC.2

The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

DC.3

The NZTA shall update and finalise the relevant Construction and Operational Management Plans required under these conditions to ensure compliance with the designation conditions imposed by the Board of Inquiry. The relevant Management Plans shall be submitted to the Major Infrastructure Team Manager, Auckland Council within the timeframes specified in the following conditions. No works shall be undertaken until the relevant management plans have been finalised and certified or approved in accordance with the relevant conditions.

DC.4

Any Management Plans submitted to the Major Infrastructure Team Manager, Auckland Council for approval or certification may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted shall clearly show the integration with adjacent stages and interrelated activities.

DC.5

In the event of any dispute, disagreement or inaction arising as to any Auckland Council Manager certification/ approvals required by the designation conditions, or as to the implementation of or monitoring required by the conditions, matters shall be referred in the first instance to the NZTA Regional State Highway Manager and to the Resource Consents Manager, Auckland Council to determine a process of resolution. If a resolution cannot be agreed, then the matter may be referred to an independent appropriately qualified expert, agreeable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not agree. The independent appropriately qualified expert shall be appointed within 10 working days of the NZTA or Auckland Council giving notice of their intention to seek expert determination. The expert shall, as soon as possible, issue his or her decision on the matter. In making the decision, the expert shall be entitled to seek further information and hear from the parties as he or she sees fit.

Advice note: The dispute resolution process provided for in this condition does not prejudice any party's right to take enforcement action in relation to the implementation of the designation conditions. However, the dispute resolution process will be applied before any formal enforcement action is taken by the Council, except in urgent situations.

DC.6

Except for Conditions DC.7, DC.8 and DC.9, the NZTA shall be exempt from providing an Outline Plan of Works for the Project, as provided for in Section 176A (2)(a) and (b) of the RMA.

Advice note: The Construction and Operational Management Plans, together with the provision of detailed drawings required by Condition DC.1(b) are considered sufficient detail in all aspects of the Project, with the exception of proposed works for the northern and southern ventilation buildings and stacks where further details are required.

DC.10

The NZTA shall give notice to the Manager Regional and Local Planning, Auckland Council in accordance with Section 182 and 181 respectively of the RMA for:

(a) Within six months of the State highway opening (being operational), removal of those parts of the designation that are not required for the long term operation, maintenance and mitigation of effects of the State highway.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Note: this condition is specific to land no longer required for construction purposes once the Project is completed and includes the land of 6 Barrymore Road, refer Condition OS.17.

(b) The designation to be altered to remove those conditions no longer required for long term operation and maintenance of the Project.

DC.12

Unless otherwise provided for by Condition RC.2, if any monitoring required to be undertaken by any party by the designation conditions indicates non-compliance with any designation condition, the NZTA must provide written notice to the Major Infrastructure Team Manager Auckland Council as soon as it becomes aware of same, stating the following:

- (a) A description of the non-compliance; and
- (b) The measures NZTA proposes for addressing the non-compliance, including any additional mitigation measures.

Subject to the Council's approval, the NZTA must implement the additional mitigation measures to address the non-compliance.

DC.13

Pursuant to Section 36(1)(d) of the RMA, the requiring authority is required to pay to Auckland Council any administrative charge for the carrying out by the local authority of its functions in relation to the administration, monitoring, and supervision of designation conditions.

DC.14

The servants of agents of Auckland Council shall be permitted to have access to relevant parts of the Project at all reasonable times for the purpose of carrying out inspections, investigations, tests, measurements and/or to take samples.

Construction Environment Management Plan Conditions

CEMP.1

Except where provided for in Condition CEMP.1A below, the NZTA shall update and finalise the draft Construction Environmental Management Plan (CEMP) including all the Management Plans which form part of the CEMP and are included as appendices, submitted with this application to ensure compliance with the consent and designation conditions imposed by the Board of Inquiry. The CEMP shall be provided to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to the commencement of works to certify compliance and consistency with the conditions. Construction shall not commence until certification is obtained.

Advice note: For clarity the CEMP will be updated and finalised in accordance with the conditions. Any amendments will be limited to reflecting the requirements of the conditions, specifying personnel, and completing the Environmental Risk Register.

Advice note: Particular care must be taken with development and operation of Construction Yard 7. When the CEMP is being updated and finalised, consideration must be given to the contents of the draft SSCEMP prepared for Construction Yard 7 (Row 41, Schedule A) recognising changes required by inclusion of the ventilation stack in this yard.

CEMP.2

The certification process of the CEMP (and its appendices) shall confirm that the CEMP gives effect to the relevant conditions, as well as those matters in CEMP.6, and that it includes details of:

- (a) Staff and contractors' responsibilities;
- (b) Training requirements for employees, sub-contractors and visitors;
- (c) Environmental incident and emergency management;
- (d) Communication and interface procedures (in accordance with the Communication Plan required under

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Condition PI.2);

(e) Environmental complaints management (including the procedures required under Condition PI.4);

(f) Compliance monitoring;

(g) Reporting (including detail on the frequency of reporting to the Auckland Council);

(h) Environmental auditing; and

(i) Corrective action.

CEMP.3

The management of key environmental effects associated with the construction phase of the Project is detailed within environmental management plans that are included in the CEMP as appendices. This suite of management plans as shown on Figure CEMP.A comprises:

(a) Construction Noise and Vibration Management Plan (CNVMP);

(b) Construction Air Quality Management Plan (CAQMP);

(c) Erosion and Sediment Control Plan (ESCP);

(d) Temporary Stormwater Management Plan (TSMP);

(e) Ecological Management Plan (ECOMP);

(f) Groundwater Management Plan (GWMP);

(g) Settlement Effects Management Plan (SEMP);

(h) Contaminated Soils Management Plan (CSMP);

(i) Hazardous Substances Management Plan (HSMP);

(j) Archaeological Site Management Plan (ASMP);

(k) Construction Traffic Management Plan (CTMP);

(l) Concrete Batching and Crushing Plant Management Plan (CBCPMP);

(m) Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP) (to be prepared in accordance with Condition CEMP.15);

(n) Waste Management Plan (to be prepared in accordance with Condition CEMP.10); and

(o) Temporary Construction Lighting Management Plan (to be prepared in accordance with Condition L.2).

CEMP.4

The CEMP shall be implemented and maintained throughout the entire construction period.

CEMP.5

A copy of the CEMP shall be held on each construction site at all times and be available for inspection on request by the Auckland Council.

CEMP.6

The finalised CEMP shall include specific details on demolition, construction and management of all works associated with the Project. The certification process of the CEMP shall confirm that the CEMP includes details of the following:

(a) Details of the site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);

(b) The location of large notice boards that clearly identify the NZTA and the Project name, together with the name, telephone, email address and address for service of the site or Project manager and the community liaison person;

(c) An outline construction programme of the work indicating in particular likely time periods for road closures and anticipated traffic diversion effects;

(d) The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at night, on Sundays and during public holidays;

(e) Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;

(f) Location of worker's offices and conveniences (e.g. portaloos);

(g) Procedures of controlling sediment run-off, dust and the removal of soil, debris and demolition and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;

(h) Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (Nov 2007);

(i) Procedures for ensuring that residents within 100m of construction areas or other people whose use of an area may be disrupted by construction works (for example the Te Atatu Boating Club for works on the Whau River) are given notice of the commencement of construction activities and are informed about the expected duration of the works, including potentially through the community liaison person;

(j) Procedures to be followed to ensure that those working in the vicinity of identified heritage and ecological features are aware of the heritage or ecological values of these features and the steps which need to be taken to meet the conditions applying to work on the site;

(k) Means of ensuring the safety of the general public;

(l) Procedures for the community liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;

(m) Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding streets is restricted;

(n) All temporary boundary/ security fences shall be maintained in good order, with any graffiti removed as soon as possible;

(o) Confirmation of a Project Arborist and completion of a STEM assessment of the preliminary list of Amenity Trees in Schedule E.7 of the AEE to confirm the final Amenity Trees; and

(p) The process to minimise removal of Amenity Trees, maximise the protection of those retained, undertake relocation of Amenity Trees and replacement planting of specimen trees (in accordance with Conditions LV.10 and ARCH.9)).

(q) Advice note: For the purposes of CEMP.6(o) and (p), Amenity Tree is defined as a tree or trees that contribute significantly to amenity, taking into account its form, size, health, ecological or historical significance (a preliminary list of these trees is provided in Appendix E.7 of the AEE).

CEMP.7

The layout of the 12 Construction Yards, including associated buildings, fencing and site access shall be developed in accordance with Waterview Connection Project Construction Yards Plans (Refer Schedule A, Row 7). The layout drawings shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the occupation of the yard, for review and certification that the final layout of the construction yards is in accordance with the conditions. The layout drawings shall incorporate the following:

(a) The main access to the construction yards to be located as far as practicable from residential dwellings, taking into account site and public safety and environmental constraints, in the locations shown on Waterview Connection Project Construction Yards Drawings (Refer Schedule A, Row 7);

(b) Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings; Construction of temporary boundary/ security fences to be undertaken in a manner which minimises impacts on existing trees;

(c) Temporary acoustic fences and visual barriers;

(d) Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on adjacent residential dwellings; and

Location of workers' and Project vehicle parking.

CEMP.8

All storage of material and equipment associated with the construction works shall take place within the boundaries of the designation.

CEMP.9

Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with

The Proposed Auckland Unitary Plan (notified 30 September 2013)

construction activities shall be repaired to the same or similar standards as existed prior to such damage at no cost to the Auckland Council.

CEMP.10

The NZTA shall finalise and implement the Hazardous Substances Management Plan (HSMP), through the CEMP (as per Condition CEMP.1), submitted with this application, prior to works commencing on site. The certification process of the CEMP shall confirm that the HSMP clearly identifies the requirements for proper storage, handling, transport and disposal of hazardous substances during the construction phase of the Project and confirm that there shall be no storage of explosives on the Project site.

CEMP.11

The NZTA shall develop and implement a Waste Management Plan in accordance with the waste management principles, controls and methods set out in the CEMP. The Plan shall be provided to the Major Infrastructure Team Manager, Auckland Council and be implemented throughout the entire construction period.

CEMP.12

The CEMP shall be reviewed by the NZTA at least annually or as a result of a material change to the Project. The review shall take into consideration:

- (a) Compliance with designation and consent conditions;
- (b) Any changes to construction methods;
- (c) Key changes to roles and responsibilities within the Project;
- (d) Changes in industry best practice standards;
- (e) Changes in legal or other requirements;
- (f) Results of inspections, monitoring, incidents, corrective actions, internal or external assessments; and
- (g) Public complaints.

A summary of the review process undertaken shall be kept by the NZTA, provided annually to the Major Infrastructure Team Manager, Auckland Council and made available (with any related data) to the Auckland Council upon request.

CEMP.13

Following the review process (as described in Condition CEMP.12), the CEMP may require updating. Any material change proposed to the CEMP (including appended Management Plans) shall be submitted for approval to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the proposed changes taking effect.

Advice Note:

Material change will include amendment to any base information informing the CEMP or any process, procedure or method of the CEMP (such as the environmental constraints map, compliance monitoring process, complaints procedure or mitigation / remedial methods identified) which has the potential to increase adverse effects on a particular value. For clarity changes to personnel and contact schedules do not constitute a material change.

CEMP.14

The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP). The EISDCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council, and include:

- (a) Methods and measures:
 - (i) To ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities.
 - (ii) To appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines
 - (iii) To ensure that no activity is undertaken during construction that would result in ground vibrations and/or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ground instability likely to cause material damage to the transmission lines, including support structures.

(iv) To ensure that changes to the drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations for any high voltage transmission line support structure.

(b) Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including, but not limited to, the provisions of Schedule (Growth Limit Zones) to those Regulations.

(c) Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001), including, but not limited to, the provisions of:

(i) Clause 2.2 with respect to excavations near overhead support structures;

(ii) Clause 2.4 with respect to buildings near overhead support structures;

(iii) Section 3 with respect to minimum separation between buildings and conductors;

(iv) Section 5 with respect to minimum safe distances for the operation of mobile plant; and,

(v) Table 4 with respect to minimum safe separation distances between the ground and the overhead conductors.

(d) Confirmation that Transpower has been provided a copy of the EISCDMP for their review at least 20 working days prior to construction.

Advice note: With respect to clause (c), specific consideration must be given to the height and location of temporary structures (such as Project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers).

CEMP.15

The NZTA will be responsible for all service relocations required for construction of the Project. The NZTA shall liaise with the providers of infrastructure service networks (including, but not limited to water, gas, stormwater, wastewater, power and telecommunications), and private property owners with on-site services to develop methodologies and timing for necessary services relocation required for the Project, with the objective of minimising disruption to the operation of these service networks and onsite services.

Advice note:

(a) It is noted that if separate consents are required for relocations for any services of network utility operators or landowners, such consents will be obtained before construction commences in the relevant area, and any effects of those relocations would be considered at that time. The same applies to any alteration of consents if required.

(b) Network infrastructure owned and operated by Watercare Services is located within the designations. An operating agreement will be developed by the NZTA and Watercare Services which will include appropriate notification and access protocols where works are to be undertaken by either network operator on or adjacent to Watercare Services infrastructure within the designations.

Public Information Conditions

PI.1.

A community liaison person shall be appointed by the NZTA for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the Project. The liaison person's name and contact details shall be made available in the CEMP and on site signage by the NZTA. This person must be reasonably available for on-going consultation on all matters of concern to affected parties arising from the Project.

PI.2.

The NZTA shall prepare and implement a Communications Plan that sets out procedures detailing how the public, Ministry of Social Development, Housing New Zealand Corporation and other organisations representing the particular demographic characteristics of the community (including but not limited to Primary Health Organisations, general practitioners, youth, education organisations, aged care groups and groups representing ethnic and migrant communities) will be communicated with throughout the construction and monitoring periods

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(as prescribed in the designation and consent conditions).

In preparing the Communications Plan, the NZTA will liaise with Auckland Council to access its community liaison databases. The Communications Plan will include details of:

- (a) The site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) In accordance with these Conditions, the database of the key construction activities and monitoring requirements that are the subject of the Communications Plan;
- (c) The database of stakeholders and residents who will be communicated with;
- (d) Communication methods, an assessment of how these methods reach the different audience/ stakeholder groups (including those methods set out in Condition CEMP.6), and detail on when each of these methods will be used (e.g. regular communication or event specific methods);
- (e) The appointed specialist in Environmental and Occupational Medicine, including contact details (as per Condition SO.13);
- (f) Any stakeholder specific communication plans required; and
- (g) Monitoring and review procedures for the Communications Plan.

The Communications Plan shall be written in accordance with the external communication procedures set out in the CEMP and provided at least 20 working days prior to construction commencing, to the Major Infrastructure Team Manager, Auckland Council, Working Liaison Group and the Community Liaison Group(s) established by Condition PI.5. The structure of the communication groups set out in these conditions is attached as Figure PI.A.

PI.3.

At least 15 working days prior to the commencement of construction, and at 15 working day intervals thereafter, or as required depending on the scale of works and effects on the community, advertisements will be placed in the relevant local newspapers and community notice boards (as identified in Condition CEMP.6(b)) detailing the nature of the forthcoming works, the location of the forthcoming works and hours of operation. All advertisements will include reference to a 24 hour toll free complaints telephone number. Where relevant, advertisements will also include but not be limited to details of:

- (a) Any traffic disruptions or controls or changes to property access, pedestrian/ cycle routes and bus stops; and
- (b) Any other construction activities, including night time works, blasting, and structure-borne noise, as identified in the conditions.

PI.4.

The NZTA shall manage, investigate and resolve (as appropriate) all complaints for the duration of the construction works in accordance with the environmental complaints section of the CEMP. The implementation strategy for complaints includes:

- (a) A 24 hour toll free telephone number and email address, which shall be provided to all potentially affected residents and businesses. The number shall be available and answered at all times during the entire duration of the works for the receipt and management of any complaints. A sign containing the contact details shall be located at each site specific work activity;
- (b) The NZTA shall maintain a record of all complaints made to this number, email or any site office, including the full details of the complainant and the nature of the complaint;
- (c) Upon receiving a complaint, within 10 days of complaint receipt, a formal written response will be provided to the complainant and Auckland Council;
- (d) The NZTA shall undertake corrective action where necessary to resolve any problem identified. All action taken and relevant information shall be documented. For the avoidance of doubt, 'where necessary' refers to where the works are not being carried out in accordance with conditions of this designation;
- (e) Where issues and complaints about effects cannot be resolved through the CEMP complaints management process, a meeting shall be held between the NZTA, the complainant and the Auckland Council representative(s) to discuss the complaint and ways in which the issue may be resolved. If parties cannot agree on a resolution, an independent qualified mediator will be appointed, agreeable to all parties and at the shared

The Proposed Auckland Unitary Plan (notified 30 September 2013)

cost of all parties, to undertake mediation of the dispute or concerns; and

(f) All information collected in Conditions PI.4 (b), (c) and (d) shall be detailed in a Construction Compliance Report (including the means by which the complaint was addressed, whether resolution was reached and how the response was carried out) prepared by the NZTA. This Report shall be submitted to the Major Infrastructure Team Manager, Auckland Council on a quarterly basis commencing at the beginning of the works and for the entire duration of construction.

PI.5.

The NZTA shall establish Community Liaison Group(s) at least two months prior to construction commencing in each of the following key construction areas:

- (a) Te Atatu (including the SH16 Causeway)
- (b) Waterview (including works to St Lukes on SH16 and on the Waterview Estuary and Causeway Bridges)
- (c) Owairaka

and hold regular meetings (at least three monthly) throughout the construction period and up to 24 months following construction completion relevant to these areas (or less if the members of the Group agree), so that on-going monitoring information can continue to be disseminated.

The Community Liaison Group(s) shall be open to all interested parties within the Project area including, but not limited to the following groups:

- (a) Auckland Council and Auckland Transport;
- (b) Educational facilities within the Project area (including schools, kindergartens, childcare facilities and Unitec Institute of Technology);
- (c) Relevant community/ environmental groups (including but not limited to Friends of Oakley Creek, Star Mills Preservation Group, Cycle Action Auckland and representatives from those organisations identified in the Communications Plan (as required by Condition PI.2) and local residents;
- (d) Department of Conservation;
- (e) Local Boards;
- (f) Iwi groups with Mana Whenua;
- (g) Public transport providers; and
- (h) Housing New Zealand Corporation.

Advice note: The purpose of the Community Liaison Group(s) is to provide a regular forum through which information about the Project can be provided to the community, and an opportunity for concerns or issues to be raised.

PI.6.

The Community Liaison Group(s) shall be provided opportunities to review and comment on the following (amongst other things):

- (a) The Outline Plan of Works detailing designs for the northern and southern ventilation buildings and stacks (the outcomes of this consultation will be reported in accordance with the processes required in DC.8(n) and DC.9(k);
- (b) The Open Space Restoration Plans (as required by Condition OS.3);
- (c) Finalisation and amendment to Urban Design and Landscape Plans (UDL Plans) (as required by Condition LV.1);
- (d) The Oakley Inlet Heritage Plan (as required by Conditions OS.5(b)(i) and ARCH.6);
- (e) The detail of the Oakley Creek restoration (as required by Condition STW.20);
- (f) Publicly available results of environmental monitoring as required by the designation and/or these Consents (e.g. air quality monitoring); and
- (g) The finalisation of the STEM assessment required by CEMP.6(o) and a schedule of trees that are required to be removed for consideration of timber use in heritage projects as required by Condition SO.7.

Advice Note: Attention is drawn to the Vegetation conditions concerning identification and protection of Significant Vegetation and Valued Vegetation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(h) Detailed design features of the Te Atatu underpass (e.g. lighting and architectural treatment).

Operational Traffic Conditions

Tunnel Traffic Operation Plan

OT.2

The NZTA shall prepare a Tunnel Traffic Operation Plan in consultation with the Auckland Transport and Auckland Council. The Plan shall include, but not be limited to:

- (a) Procedures for tunnel operational safety, including fire-life safety;
- (b) Procedures for maintenance requirements.
- (c) Procedures for managing traffic to avoid or minimise potential congestion within the tunnel, particularly during peak periods.
- (d) Procedures for the management of traffic during incidents.
- (e) Procedures for the operation of tunnel fans and the management of portal emissions.
- (f) Confirmation that all equipment has been tested and operates in accordance with requirements and specifications.

The Tunnel Traffic Operation Plan shall be completed and provided to Auckland Transport and to the Major Infrastructure Team Manager, Auckland Council (in respect of Condition OT.2(e)), prior to operational use of the tunnelled section of SH20.

Advice note: The operation and maintenance of the air quality monitoring equipment inside the tunnel shall follow manufacturer's recommendations.

Noise and Vibration Conditions – Construction

CNV.1

The NZTA shall finalise and implement through the CEMP, a Construction Noise and Vibration Management Plan (CNVMP) throughout the entire construction period of the Project.

The CNVMP shall describe the measures adopted to meet:

- (a) the noise criteria set out in Conditions CNV.2 and 3 below;
- (b) the vibration criteria set out in Condition CNV.4 below; or
- (c) where (a) or (b) cannot be met, the process that will be followed to appropriately mitigate noise and vibration effects including methods that may be applied outside the designation.

The CNVMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CNVMP, as a minimum, addresses the following:

- (i) Construction noise and vibration criteria (Conditions CNV.2, CNV.3, and CNV.4);
- (ii) Hours of operation, including times and days when noisy and/or vibration inducing construction activities would occur;
- (iii) Machinery and equipment to be used;
- (iv) Vibration testing of equipment to confirm safe distances to buildings prior to construction;
- (v) Preparation of building condition surveys of critical dwellings prior to, during and after completion of construction works;
- (vi) Roles and responsibilities of personnel on site;
- (vii) Construction operator training procedures;
- (viii) Methods for monitoring and reporting on construction noise and vibration;
- (ix) A hierarchy of mitigation options that will be assessed for the Project noise mitigation, including alternative strategies where full compliance with the relevant noise and/or vibration criteria cannot be achieved;
- (x) Management schedules containing site specific information;
- (xi) Measures for liaising with and notifying potentially affected receivers of proposed construction activities and the potential for noise and vibration effects, specifically:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

•PPFs located within a horizontal distance of 35 metres of underground excavation works, along the tunnel alignment shall receive prior notification not greater than 7 days (and not less than 24 hours) prior to the commencement of works.

•Methods for ensuring residents affected by night works (within 100m of the construction site night works, as defined on the maps (refer Schedule A, Row 35) are notified of such works (i.e. any works during the hours of 20:00 to 06:30) at least 5 days prior to the commencement of any such work.

•The maps showing PPFs to be notified of night works (refer Schedule A, Row 35, shall be reviewed and included within the CNVMP.

(xii) Methods for receiving and handling complaints about construction noise and vibration;

(xiii) Measures for preventing the occurrence of rogue fly rock, including management of charge weights and face loading procedures, stemming of charge holes and profiling of the face to maintain minimum burden (face cover);

(xiv) Investigations on the practicability of implementing permanent noise mitigation works for construction mitigation (as per Condition CNV.7);

(xv) Investigations of the practicability of implementing Building Modification mitigation, as required in accordance with Conditions ON.6 and ON.11, prior to commencement of construction within 100m of the relevant PPFs (including those on the Unitec site); and

(xvi) The process for developing Site Specific Noise Management Plans (SSNMP), in accordance with the SSNMP Flow Chart (refer Schedule A, Row 36), including templates and a certification process for the Major Infrastructure Team Manager, Auckland Council (in accordance with Condition CNV.13) to confirm the process of SSNMP review of noise mitigation options where, the modelled/predicted levels or subsequent actual levels exceed the criteria in Conditions CNV.2 and/or CNV.4.

CNV.2

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction noise (excluding noise from blasting Monday to Saturday inclusive) shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise" and shall comply with the following criteria:

Note: In Condition CNV.2 (T) means a duration between 15 minutes and 60 minutes, in accordance with NZS6803:1999.

(a) Project Construction Noise Criteria: Residential Receivers

Time of Week	Time period	Project Construction Noise Criteria (Long Term Construction) dB		
		Sectors 1-7	Sectors 8-9	All Sectors
		LAeq(T)	LAeq(T)	LAeq(T)
Monday- Saturday	0630-0730	60	45	75
	0730-1800	70	70	85
	1800-2000	65	65	80
	2000-0630	60	45	75
Sundays and Public Holidays	0630-0730	45	45	75
	0730-1800	60	45	85
	1800-2000	45	45	75
	2000-0630	45	45	75

(b) Project Construction Noise Criteria: Commercial and Industrial Receivers

Time Period	Project Construction Noise Criteria (Long Term Construction) dB
	LAeq(T)
0730-1800	70
1800-0730	75

(c) Project Construction Noise Criteria: Internal Structure-borne Noise from tunnelling for Residential Receivers

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Time Period	Project Construction Noise Criteria Inside	
0600-2200	35 dB LAeq(T)	All habitable rooms
2200-0600	30 dB LAeq(T)	Bedrooms

(d) Project Construction Noise Criteria: Internal noise for Licensed Educational Facilities

Time Period (School Days)	Project Construction Noise Criteria Inside	
Teaching Hours	45 dB LAeq(T)	Classrooms, library, offices, teaching, laboratories, manual arts, workshops
Teaching Hours	40 dB LAeq(T)	School hall, lecture theatres

Note: In Condition CNV2(d) "Teaching hours" means: Primary schools and Kindergartens: 9am to 3pm Unitec: 8am to 9pm

CNV.3

Project Construction Noise Criteria: Airblast (excluding Sundays)

Category	Type of Blasting Operations	Peak Sound Pressure Level (LZpeak dB)
Human Comfort Limits		
Sensitive Site	Operations lasting longer than 12 months or more than 20 Blasts	115 dB for 95% blasts per year. 120 dB maximum unless agreement is reached with occupier that a higher limit may apply
Sensitive Site	Operations lasting less than 12 months or less than 20 Blasts	120 dB for 95% blasts per year. 125 dB maximum unless agreement is reached with occupier that a higher limit may apply
Occupied non-sensitive sites such as factories and commercial premises	All blasting	125 dB maximum unless agreement is reached with the occupier that a higher limit may apply. For sites containing equipment sensitive to vibration, the vibration should be kept below manufacturer's specifications of levels that can be shown to adversely affect the equipment operation
Damage Control Limits		
Structures that include masonry, plaster and plasterboard in their construction and also unoccupied structures of reinforced concrete or steel construction	All blasting	133 dB unless agreement is reached with owner that a higher limit may apply.
Service structures such as pipelines, powerlines and cables located above ground	All blasting	Limit to be determined by structural design methodology

CNV.4

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction vibration received by any building shall be measured and assessed in accordance with the German Standard DIN 4150-3:1999 "Structural vibration – Part 3: Effects of vibration on structures", and shall comply with the criteria set out as follows:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Type of Structure	Short-term vibration			Long-term vibration	
	PPV at the foundation at a frequency of				
	1-10 Hz (mm/s)	1-50 Hz (mm/s)	50-100 Hz (mm/s)	PPV at horizontal plane of highest floor (mm/s)	PPV at horizontal plane of highest floor (mm/s)
Commercial/Industrial	20	20-40	40-50	40	10
Residential/School	5	5-15	15-20	15	5
Historic or Sensitive structures	3	3-8	8-10	8	2.5

CNV.5

Notwithstanding Condition CNV.3 above,

(a) Blasting activities shall be conducted so that 95% of the blasts undertaken (measured over any twenty blasts on the foundation of any building outside the designation boundary) shall produce peak particle velocities not exceeding 5mm/s and 100% of the blasts undertaken shall produce peak particle velocities not exceeding 10mm/s irrespective of the frequency of the blast measured.

(b) Construction activities, which occur within Sectors 1, 6, 8 and 9 which are identified in Technical Report no. G.19 Assessment of Vibration Effects, as being at a 'High Risk' of exceeding the DIN 4150-3:1999 criteria (being excavation, piling, compaction and drilling) shall be conducted so that 95% of the activities undertaken (measured over at least 20 representative samples of the relevant activity on any residential building) shall produce peak particle velocities not exceeding the relevant criterion in DIN 4150-3:1999 and 100% of the activities undertaken shall not exceed 10mm/s irrespective of the frequency of the activity measured.

CNV.6

Blasting shall be undertaken between 09:00h and 17:00h, Monday to Saturday, except that blasting may be undertaken between 09:00h and 17:00h on Sundays where:

- (a) The blasting is at least 50m inside the Sector 8 tunnel;
- (b) The blasting produces peak particle velocities at any residential building not exceeding 0.5mm/s; and
- (c) The Project construction noise criteria set out in Condition CNV.2 for Sundays are complied with.

CNV.7

Where practicable, permanent (traffic) noise barriers, required in any Sector as Detailed Mitigation Options for operational noise following completion of the Project (in accordance with Conditions ON.3 to ON.5) shall be erected prior to noise generating construction works commencing. Where this is not practicable, temporary noise mitigation measures shall be implemented in accordance with the CNVMP, prior to noise generating construction works commencing.

CNV.8

Pile driving or pile removal shall not be undertaken at night (i.e. during the hours of 20:00 – 06:30).

CNV.9

The concrete batch plants, rock crushing plants and the loading bays and conveyors for such plants shall be fully enclosed.

CNV.10

If noise and vibration monitoring of the tunnelling works for the Project (in accordance with Condition CNV.1), indicates that the noise or vibration criteria of Conditions CNV.2(c) or CNV.4 will potentially be exceeded and that temporary relocation will be offered for residents at 1510 Great North Road, then relocation (and temporary transportation) shall be arranged with the leaseholder at 1510 Great North Road for tenants (with at least 1 months' notice to the leaseholder prior to relocation). Any accepted offer of relocation is to be in place prior to tunnelling works within 50m of the building at 1510 Great North Road.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CNV.11

For all other properties, if noise and vibration monitoring of the tunnelling works for the Project (in accordance with Condition CNV.1), indicates that the noise or vibration criteria of Conditions CNV.2 or CNV.4 will potentially be exceeded, then the process set out in the CNVMP will be undertaken including Site Specific Noise Management Plans. Where relocation for residents is proposed, notification of such relocation with residents and property owners will be undertaken in accordance with the processes contained in the CNVMP.

CNV.12

Any relocation required by CNV.10 will not be undertaken in the period between 10 working days prior to any Unitec examinations and the completion of those examinations.

CNV.13

SSNMPs (required by Condition CNV.1(xvi)) above, shall be submitted to Major Infrastructure Team Manager, Auckland Council for review and certification at least 7 working days prior to the proposed works commencing. A decision will be provided by the Council within 5 working days of receipt of the SSNMP.

Works will not commence until certification is received from the Major Infrastructure Team Manager, Auckland Council. The Council may, at its discretion, waive the requirement for SSNMPs to be submitted to the Council where an SSNMP is required.

If monitoring shows that levels specified in a SSNMP are being exceeded, work generating the exceedence will stop and not recommence until further mitigation is implemented in accordance with an amended SSNMP certified by Council.

Advice note: It is accepted that the criteria of CNV.2 and CNV.4 may not be met at all times, but that the NZTA will take all practical steps to achieve compliance, taking into account the hierarchy of mitigation options outlined in Condition CNV.1 (ix).

Vibration Conditions - Operation

OV.1

Existing ambient vibration levels shall be measured at critical locations nominated by the NZTA, and submitted to the Major Infrastructure Team Manager, Auckland Council for approval prior to the commencement of works. These baseline measurements will establish pre-Project vibration levels for comparison with future vibration levels.

Operational Air Quality Conditions

OA.2

Prior to the tunnels becoming operational, the NZTA shall establish two ambient air quality monitoring stations and one portal air quality monitoring station. The location and types of these monitoring stations shall be selected by the NZTA in consultation with the Auckland Council and Peer Review Panel (Condition OA.7), providing that one ambient monitoring station will be located within the Waterview Primary School (subject to agreement by the School).

Ambient air quality shall be monitored continuously in real time, to monitor potential effects associated with the operation of the ventilation system from the tunnels. Ambient monitoring shall include fine particulates (PM10 and PM2.5) and nitrogen dioxide. Portal monitoring shall include nitrogen dioxide. Results shall be compared with the relevant National Environmental Standards for air quality and Auckland Regional air quality targets (as identified in Chapter 4 of the Auckland Regional Plan: Air, Land and Water, 2010). Monitoring shall be undertaken at each site until the Peer Review Panel recommends that monitoring is no longer necessary. The locations, operation and maintenance schedules of the continuous monitors shall, as far as practicable, comply with the requirements of AS/NZ 3580.1.1: 2007 Method for Sampling and Analysis of Ambient Air – Guide to Siting Air Monitoring Equipment, and with methods specified in the National Environment Standards.

Ground Settlement Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

S.1

The NZTA shall finalise, and implement through the CEMP, the Settlement Effects Management Plan (SEMP) lodged with the application prior to construction activities being undertaken. Prior to construction (following detailed investigation and design), the total estimated settlements and building damage categories shall be confirmed using the methodology in Technical Report G.13 Assessment of Ground Settlement Effects and the SEMP shall be updated accordingly.

In the event that settlement predictions are greater (than those allowed for in Figure E.14 (refer Schedule A, Row 26)) or building damage categories increase in ranking or buildings affected from those identified in Figures G1-G4 (refer Schedule A, Row 27), mitigation measures shall be introduced as part of the detailed design and construction process to avoid any adverse effects greater than predicted by the application lodged in August 2010.

Settlement Monitoring

S.6

The NZTA shall collate the results of the settlement monitoring (undertaken pursuant to Conditions S.2 – S.5) and prepare a report that shall be made available to the Auckland Council]. A settlement monitoring report shall be prepared prior to the commencement of construction, and then at monthly intervals throughout the construction period. Following the completion of construction, a settlement monitoring report shall be prepared following each round of settlement monitoring undertaken (i.e. monthly and then 6-monthly when monitoring is reduced pursuant to Condition S.5). The settlement reports shall highlight any alert or alarm level exceedances and provide a full interpretation and/or explanation as to why these levels are exceeded, the likely effects and detail any remedial or mitigation measures initiated as a result of these trigger exceedances.

Differential Settlement

S.17

Pairs of settlement markers shall be established on each side of the cross sections identified on Figure E.14 to monitor differential movements. The markers in each pair shall be no more than 20m apart, and each pair shall be within 100m of the centreline of the closest tunnel. Monitoring installed in accordance with Condition S.11 can be utilised for this purpose. Each pair of markers shall have Alert and Alarm values set based on the calculated differential settlements at that location and consistent with the relevant calculated Building Damage Category (Figures G1-G4, (Refer Schedule A Row 27)), Alert and Alarm levels shall be as defined in Condition S.2. Monitoring frequency shall be as defined for Framework Markers in Condition S.3.

Contaminated Land and Contaminated Discharges Conditions

CL.1

The NZTA shall finalise and implement through the CEMP, the Contaminated Soil Management Plan (CSMP) submitted with this application prior to commencement of any site works. The CSMP shall include, but not be limited to:

- (a) Measures to be undertaken in the handling, storage and disposal of all material excavated during the construction works;
- (b) Soil validation testing and groundwater testing;
- (c) Soil verification testing to be undertaken to determine the nature of the excavated spoil and potential reuse or disposal options;
- (d) Measures to be undertaken in the event of unexpected contamination being identified during construction activities; and
- (e) Measures to be undertaken for the handling of asbestos containing material.

CL.2

Prior to the main construction works commencing, the baseline quality of soils and groundwater within Sector 5 (the southern bank of Oakley Creek coincident with the location of the former tannery) and Sector 7 (particularly in relation to works in the vicinity of Great North Road) shall be investigated and established. The investigations

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall be carried out in accordance with appropriate Ministry for the Environment and Auckland Council guidelines.

The findings of the soil and groundwater investigations shall be used to determine the specific constructions methods during work in this area to manage any likely environmental effects in relation to the Project.

CL.3

Prior to the main construction works commencing, soils and fill materials within Alan Wood Reserve (Sector 9) shall be further classified so as to determine the distribution and extent of cleanfill, managed fill and contaminated/hazardous fill materials.

CL.4

All excavated soil shall be tested by the NZTA in general accordance with the CSMP, prior to either reuse on site or disposal off site. The testing regime shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council.

CL.5

The NZTA shall notify the Major Infrastructure Team Manager, Auckland Council within 5 working days of identification of any contamination at the site which was not identified in the reports submitted in support of this application, including contaminated soil, surface water or groundwater. The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.6

The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.7

The NZTA shall engage a suitably qualified contaminated land specialist to supervise the works, excavation and removal of any contaminated soils from the site and undertake sampling (if required) of imported material.

CL.8

All testing / sampling techniques shall be carried out in accordance with the Ministry for the Environment Contaminated Land Management Guidelines or other equivalent standards approved in writing by the Major Infrastructure Team Manager, Auckland Council.

CL.9

During and following the tunnel construction works beneath Sector 8, groundwater quality monitoring shall be carried out at locations within and down hydraulic gradient of Phyllis Street Landfill. Monitoring shall be undertaken on at least a monthly basis, and for a period up to 12 months following completion of the tunnel construction works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.10

Prior to, during and following tunnel construction works beneath Phyllis Street Landfill, monitoring for landfill gas shall be carried out from existing monitoring boreholes within the landfill. Monitoring shall be undertaken on at least a monthly basis, for a period of no less than 6 months prior to, and up to 12 months following completion of the tunnelling works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.11

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council, a Site Closure Report no

The Proposed Auckland Unitary Plan (notified 30 September 2013)

later than three (3) months after the completion of the earthworks. The Report shall be prepared in accordance with Schedule 13 (Schedules for Reporting on Contaminated Land) of the Proposed Auckland Regional Plan: Air Land and Water and include:

- (a) Results of any soil reuse and imported material testing carried out to ensure compliance with the CSMP;
- (b) Volumes of soil removed from site;
- (c) Copies of the waste disposal receipts; and
- (d) Reports of any non-compliance with the CSMP procedures or complaints received while undertaking the site works.

Figure CEMP.A - Construction Environmental Management Framework

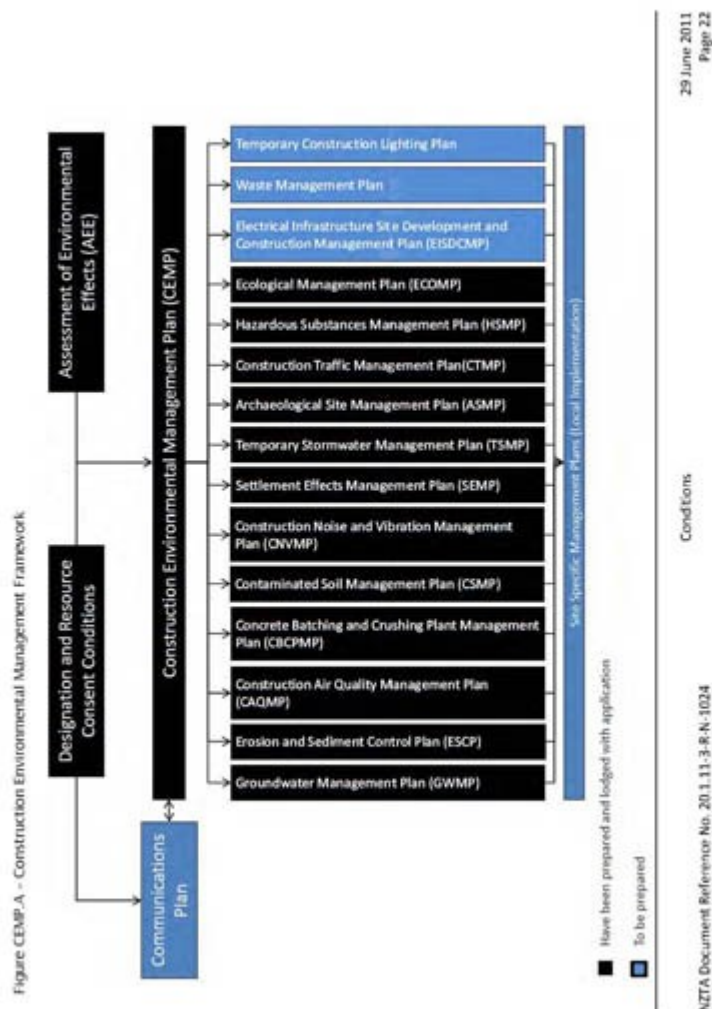

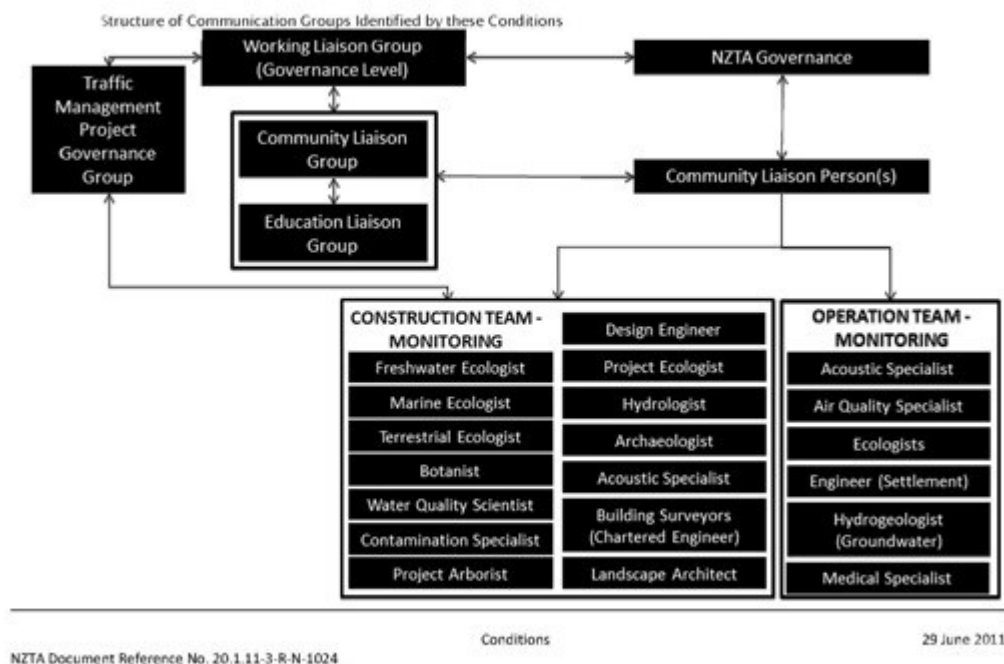

Figure PI.A - Structure of Communication Groups

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6729 State Highway 20 and Railway - Mt Roskill

Designation Number	6729
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from Hillsborough Road, Hillborough to Maioro Street, Mt Roskill
Rollover Designation	Yes
Legacy Reference	Designation F05-05, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Proposed motorway; proposed motorway and railway; proposed road, Hayr Road to Richardson Road.

Conditions

1. That at the time of detailed design an environmental impact assessment be undertaken to determine effects the works will have on the environment and the most appropriate means of mitigating these effects.
2. That a landscape plan be submitted to the Council at the time of detailed design including fencing and planting which will be implemented at the boundary of the motorway with all land zoned residential and open space to minimise noise effects and provide screening.
3. That vehicle access across May Road, Dominion Road and Hayr Road be maintained when construction is

The Proposed Auckland Unitary Plan (notified 30 September 2013)

completed.

4. That roading seals which minimise noise levels be incorporated into the final design.

5. That short term construction effects including noise, visual effects and dust be mitigated through construction methods which reduce these effects.

6. The term for implementation of this designation shall be 8 years from the inclusion of the designation in the District Plan.

No attachments.

6730 State Highway 20 - Waterview Connection Mt Roskill

Designation Number	6730
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from Maioro Street to Alan Wood Reserve, Mt Roskill
Rollover Designation	Yes
Legacy Reference	Designation F05-11, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

For new designation, SH20, southern tunnel portal to Maioro Street interchange – NOR7. New surface designation for construction, operation and maintenance of the SH20 surface component from Maioro Street Interchange to the proposed tunnels; includes land for structures associated with tunnel operation and works for mitigation and local road access and ramps; land taken from reserves and from land owned by the Crown for rail and residential purposes, generally in Sector 9. Works for construction, operation and maintenance of SH20 described above and including stormwater treatment, wetland ponds, ancillary safety and operational services, ventilation building and stack, temporary works, vegetation removal and restoration works, cycleway extension, landscaping and planting, installation and maintenance of grout curtain for groundwater management.

Conditions

For a complete set of conditions, refer to the Waterview Connection Proposal Board of Inquiry decision titled “Final Report and Decision of the Board of Inquiry into the New Zealand Transport Agency Waterview Connection Proposal - Volume 2” dated June 2011.

General Designation Conditions

DC.1

Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by the New Zealand Transport Agency (NZTA being the Requiring Authority), the Notice(s) of Requirement and the supporting documents, and supplementary information provided in evidence. This information is summarised as follows: (a) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Parts A-E; (b) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part F: Plans and Drawings, except as updated through the hearing (Refer Schedule A for current plan and drawing references); and (c) Waterview Connection Project. Assessment of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Environmental Effects Report (dated August 2010). Part G: Technical Reports:

- (i) Technical Report G.1 Assessment of Air Quality Effects
- (ii) Technical Report G.2 Assessment of Archaeological Effects
- (iii) Technical Report G.3 Assessment of Avian Ecological Effects
- (iv) Technical Report G.4 Assessment of Coastal Processes
- (v) Technical Report G.5 Assessment of Construction Noise Effects
- (vi) Technical Report G.6 Assessment of Freshwater Ecological Effects
- (vii) Technical Report G.7 Assessment of Groundwater Effects
- (viii) Technical Report G.8 Assessment of Herpetofauna Ecological Effects
- (ix) Technical Report G.9 Assessment of Land and Groundwater Contamination
- (x) Technical Report G.10 Assessment of Lighting Effects
- (xi) Technical Report G.11 Assessment of Marine Ecological Effects
- (xii) Technical Report G.12 Assessment of Operational Noise Effects
- (xiii) Technical Report G.13 Assessment of Ground Settlement Effects
- (xiv) Technical Report G.14 Assessment of Social Effects
- (xv) Technical Report G.15 Assessment of Stormwater and Streamworks Effects
- (xvi) Technical Report G.16 Assessment of Temporary Traffic Effects
- (xvii) Technical Report G.17 Assessment of Terrestrial Vegetation Effects
- (xviii) Technical Report G.18 Assessment of Transport Effects (xix) Technical Report G.19 Assessment of Vibration Effects
- (xx) Technical Report G.20 Assessment of Visual and Landscape Effects (xxi) Technical Report G.21 Construction Environmental Management Plan (CEMP)
- (xxii) Technical Report G.22 Erosion and Sediment Control Plan (ESCP)
- (xxiii) Technical Report G.23 Coastal Works
- (xxiv) Technical Report G.24 Geotechnical Interpretive Report (xxv) Technical Report G.25 Traffic Modelling Report (xxvi) Technical Report G.26 Operational Model Validation Report
- (xxvii) Technical Report G.27 Stormwater Design Philosophy Statement
- (xxviii) Technical Report G.28 Geotechnical Factual Report – 500 Series
- (xxix) Technical Report G.29 Geotechnical Factual Report – 700 Series
- (xxx) Technical Report G.30 Assessment of Associated Sediment and Contaminant Loads
- (xxxi) Technical Report G.31: Technical Addendum Report (September 2010)
- (d) PT & Active Mode Transport Routes Existing and Proposed (Refer Schedule A, Row 22).
- (e) Waterview Connection Project, Evidence and Supplementary Information provided to the Board of Inquiry:
 - (i) Evidence in Chief (Numbers 1-37)
 - (ii) Rebuttal Evidence (Numbers 1-33)
 - (iii) Supplementary Information (Numbers 1-8)

DC.1A

Within 3 months of the designations being confirmed for the Project (or at least 1 month prior to any Auckland Council approvals or certifications required by these Conditions, whichever is the earlier), the NZTA shall update and finalise to the satisfaction of the Major Infrastructure Team Manager, Auckland Council all drawings and Plans cited in Schedule A, and provide a full set of the information and documentation referred to in Condition DC.1 to the Major Infrastructure Team Manager Auckland Council. At the same time the NZTA shall prepare to the satisfaction of the Major Infrastructure Team Leader, Auckland Council, a document for each designation which sets out the designation and have attached to it in text format a comprehensive set of the conditions imposed by the Board of Inquiry in its Final Decision as summarised in Schedule B, inclusive of any standard conditions and advice notes. In particular (but not limited to), the following Plans will need to be amended in light of these Final Conditions:

- (a) F.2 Operational Scheme Plans (refer Schedule A, Row 3) require amendment detailing the amended location of the ventilation stacks and southern ventilation buildings;
- (b) F.5 Construction Scheme Plans (refer Schedule A, Row 4) require amendment to detail changes to the construction footprint for the amended location of the ventilation stacks and southern ventilation buildings and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

reconfiguration of Construction Yard 1);

(c) F.6 Construction Yard Plans 101 and 107 (refer Schedule A, Row 7), detailing amendments to the Construction Yard 1 in light of the reconfiguration of this Yard and for Construction Yard 7 in light of the relocation of the northern ventilation stack (refer Schedule A, Row 34);

(d) F.8 Plans of Structures and Architectural Features (refer Schedule A, Row 9), detailing the amended location of the northern ventilation stack and the design and location of the southern ventilation building and stack;

(e) The CNVMP (including flow diagram and the supplementary evidence produced by Ms Wilkening) (refer Schedule A, Rows 36, 37 and 39);

(f) The areas of the Open Space Restoration Plans (Schedule A, Row 30) to:

(i) Extend these areas in geographic extent to provide for the works identified in the Management Plan notations identified in the OS Conditions (in particular OS.5 and OS.6) (e.g. these areas will (as relevant) include Eric Armishaw Park, Howlett Reserve and Waterview Esplanade Reserve); and

(ii) Exclude the operational area of designation required for the northern ventilation stack (as identified through the OPW process (refer Condition DC.8); and (e) Schedule A, Row 28 the Plan detailing proposed open space impacts and replacements needs to be updated to recolour the two land parcels on Hendon Avenue (which are excluded from the replacement calculations) to 'brown' to confirm they are part of the operational impact and will not be returned as open space.

DC.2

The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

DC.3

The NZTA shall update and finalise the relevant Construction and Operational Management Plans required under these conditions to ensure compliance with the designation conditions imposed by the Board of Inquiry. The relevant Management Plans shall be submitted to the Major Infrastructure Team Manager, Auckland Council within the timeframes specified in the following conditions. No works shall be undertaken until the relevant management plans have been finalised and certified or approved in accordance with the relevant conditions.

DC.4

Any Management Plans submitted to the Major Infrastructure Team Manager, Auckland Council for approval or certification may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted shall clearly show the integration with adjacent stages and interrelated activities.

DC.5

In the event of any dispute, disagreement or inaction arising as to any Auckland Council Manager certification/ approvals required by the designation conditions, or as to the implementation of or monitoring required by the conditions, matters shall be referred in the first instance to the NZTA Regional State Highway Manager and to the Resource Consents Manager, Auckland Council to determine a process of resolution. If a resolution cannot be agreed, then the matter may be referred to an independent appropriately qualified expert, agreeable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not agree. The independent appropriately qualified expert shall be appointed within 10 working days of the NZTA or Auckland Council giving notice of their intention to seek expert determination. The expert shall, as soon as possible, issue his or her decision on the matter. In making the decision, the expert shall be entitled to seek further information and hear from the parties as he or she sees fit.

Advice note: The dispute resolution process provided for in this condition does not prejudice any party's right to take enforcement action in relation to the implementation of the designation conditions. However, the dispute resolution process will be applied before any formal enforcement action is taken by the Council, except in urgent situations.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

DC.6

Except for Conditions DC.7, DC.8 and DC.9, the NZTA shall be exempt from providing an Outline Plan of Works for the Project, as provided for in Section 176A (2)(a) and (b) of the RMA.

Advice note: The Construction and Operational Management Plans, together with the provision of detailed drawings required by Condition DC.1(b) are considered sufficient detail in all aspects of the Project, with the exception of proposed works for the northern and southern ventilation buildings and stacks where further details are required .

Outline Plan of works

DC.7

An Outline Plan of Works shall be prepared for the Northern and Southern Ventilation Buildings and Stacks (OPW1 and OPW2) (in the general location as shown in the Operational Scheme Plans F.2 (Schedule A, Row 3) as shown on Figures DC.A and DC.B) in accordance with Section 176A of the RMA and Conditions DC.8 and DC.9 below and submitted to the Major Infrastructure Team Manager, Auckland Council.

For the purposes of Conditions DC.8 and DC.9, the following definitions shall apply:

- (a) Control Building – A building or buildings associated with the staffed control of the tunnel operating systems (including CCTV systems or surveillance). This precludes the inclusion or attachment of any equipment unrelated to the structure or operation of the control building.
- (b) Ventilation Building – A building or buildings associated with the operation and maintenance of the tunnels and associated ventilation system (including power and emergency water supply). This precludes the inclusion or attachment of any equipment unrelated to the structure or operation of the ventilation building.
- (c) Ventilation Stack (stack) - A structure which channels air emissions to a height in the atmosphere which is suitable to disperse the emissions and result in an acceptable ambient air quality. This precludes the inclusion or attachment of any equipment unrelated to the structure or operation of the ventilation stack.

DC.9

Outline Plan of Works for the Southern Ventilation Building, Control Building and Stack (OPW2) (Refer Figure DC.B). OPW2 shall be prepared in accordance with Section 176A of the RMA. The final form of the Southern Ventilation Building, Control Building and Ventilation Stack shall be in accordance with the design principles of Section B of the Urban Landscape and Design Framework (ULDF June 2010) (refer Schedule A, Row 38) and the following requirements:

- (a) Retention of the same building / structural components underground as per the revised Drawing Set F.8, specifically Drawings of Vent South Option 003 / 003A (refer Schedule A, Row 9);
- (b) Creation of an above ground building arrangement that maximises the separation of the buildings from the houses on Hendon Avenue to the east and the pedestrian / cycle way to the west;
- (c) The location of facilities, accessways, parking and manoeuvring areas to be in general accordance with the revised Plans of Drawing Set F.8, specifically Drawings of Vent South Option 003 / 003A (refer Schedule A, Row 9), providing for a shift of between 70 – 80m to the south east from the position shown in the application documents, the final decision within that 10m range to be taken by the NZTA, to the approval of Major Infrastructure Team Manager, Auckland Council, after consultation with the Community Liaison Group for Owairaka established under Condition PI.5;
- (d) Minimisation of the height of the ventilation building, control building and ventilation stack to limit their visual intrusion/ incursion relative to neighbouring residential properties – other than to enhance the visual aesthetic and cohesion of these key elements;
- (e) Development of an architectural profile, detailing and material palette that is sufficiently varied to avoid the building and vent imparting a monolithic character;
- (f) Employment of an architectural profile, detailing and material palette that references the local landscape/ geology/ tectonic character of the locality, and which is visually/ aesthetically 'grounded' in the remaining open space of Alan Wood Reserve and avoids an industrial character;
- (g) Treatment of the ventilation buildings and ventilation stack as objects of urban sculpture that are integrated

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with one another;

(h) Use of the building materials on the ventilation buildings and stack which are sufficiently robust, varied/ modulated, and treated that they remain adverse to graffiti and vandalism;

(i) Maximisation of the quantum of limbed-up large scale specimen trees (to promote visibility and surveillance (in accordance with CPTED principles)) in the vicinity of the ventilation buildings, related structures and vehicle movement/ parking areas, so as to reduce the apparent scale of the buildings when viewed from residential properties near Hendon Avenue and Methuen Road;

(j) Documentation of consultation with the Owairaka Community Liaison Group (as established by Condition PI.5) and the Manager, Urban Design Auckland Council and the views and concerns expressed by this consultation;

(k) Confirmation that the building height (maximum of 7.5m) and above ground area is no greater than the Concept Plan drawings in the updated plan set F.8, specifically Drawings of Vent South Option 003 / 003A (refer Schedule A, Row 9);

(l) The site configuration should maximise the use of CPTED principles for territorial reinforcements to achieve site security, minimising the necessity for additional fencing;

(m) If parking areas are secured, they should where possible directly abut the buildings. Any fencing should be kept to a minimum;

(n) Provision of lighting integrated with the façade design to illuminate the ventilation building, and as appropriate any shared pedestrian / cycle path within Alan Wood Reserve; and

(o) The ventilation stack will be at a height of 15m calculated from the post-construction ground level of the Alan Wood Reserve averaged at a distance of 10m from the exterior walls of the ventilation stack location.

DC.10

The NZTA shall give notice to the Manager Regional and Local Planning, Auckland Council in accordance with Section 182 and 181 respectively of the RMA for:

(a) Within six months of the State highway opening (being operational), removal of those parts of the designation that are not required for the long term operation, maintenance and mitigation of effects of the State highway Note: this condition is specific to land no longer required for construction purposes once the Project is completed and includes the land of 6 Barrymore Road, refer Condition OS.17.

(b) The designation to be altered to remove those conditions no longer required for long term operation and maintenance of the Project.

DC.11

A number of conditions of the designation require works on land that is to be acquired by the NZTA to provide land for a rail corridor to replace existing rail land required for the Project ("replacement rail land"). Any conditions applying to the replacement rail land must be met by the NZTA up until (and if) construction of rail commences on that land. Once construction of rail commences on the replacement rail land, under a new or altered rail designation imposed through a publicly notified process, any conditions relating to the replacement rail land shall cease to have effect. *Advice note: The expectation is that the planning process authorising the construction of such rail will have imposed appropriate conditions to apply in respect of the rail corridor and any mitigation and interface with the Waterview Project.*

DC.12

Unless otherwise provided for by Condition RC.2, if any monitoring required to be undertaken by any party by the designation conditions indicates non-compliance with any designation condition, the NZTA must provide written notice to the Major Infrastructure Team Manager Auckland Council as soon as it becomes aware of same, stating the following:

(a) A description of the non-compliance; and

(b) The measures NZTA proposes for addressing the non-compliance, including any additional mitigation measures.

Subject to the Council's approval, the NZTA must implement the additional mitigation measures to address the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

non-compliance.

DC.13

Pursuant to Section 36(1)(d) of the RMA, the requiring authority is required to pay to Auckland Council any administrative charge for the carrying out by the local authority of its functions in relation to the administration, monitoring, and supervision of designation conditions.

DC.14

The servants of agents of Auckland Council shall be permitted to have access to relevant parts of the Project at all reasonable times for the purpose of carrying out inspections, investigations, tests, measurements and/or to take samples.

Construction Environment Management Plan Conditions

CEMP.1

Except where provided for in Condition CEMP.1A below, the NZTA shall update and finalise the draft Construction Environmental Management Plan (CEMP) including all the Management Plans which form part of the CEMP and are included as appendices, submitted with this application to ensure compliance with the consent and designation conditions imposed by the Board of Inquiry. The CEMP shall be provided to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to the commencement of works to certify compliance and consistency with the conditions. Construction shall not commence until certification is obtained.

Advice note: For clarity the CEMP will be updated and finalised in accordance with the conditions. Any amendments will be limited to reflecting the requirements of the conditions, specifying personnel, and completing the Environmental Risk Register. Advice note: Particular care must be taken with development and operation of Construction Yard 7. When the CEMP is being updated and finalised, consideration must be given to the contents of the draft SSCEMP prepared for Construction Yard 7 (Row 41, Schedule A) recognising changes required by inclusion of the ventilation stack in this yard.

CEMP.2

The certification process of the CEMP (and its appendices) shall confirm that the CEMP gives effect to the relevant conditions, as well as those matters in CEMP.6, and that it includes details of:

- (a) Staff and contractors' responsibilities;
- (b) Training requirements for employees, sub-contractors and visitors;
- (c) Environmental incident and emergency management;
- (d) Communication and interface procedures (in accordance with the Communication Plan required under Condition PI.2);
- (e) Environmental complaints management (including the procedures required under Condition PI.4);
- (f) Compliance monitoring; (g) Reporting (including detail on the frequency of reporting to the Auckland Council);
- (h) Environmental auditing; and (i) Corrective action.

CEMP.3

The management of key environmental effects associated with the construction phase of the Project is detailed within environmental management plans that are included in the CEMP as appendices. This suite of management plans as shown on Figure CEMP.A comprises:

- (a) Construction Noise and Vibration Management Plan (CNVMP);
- (b) Construction Air Quality Management Plan (CAQMP);
- (c) Erosion and Sediment Control Plan (ESCP);
- (d) Temporary Stormwater Management Plan (TSMP);
- (e) Ecological Management Plan (ECOMP);
- (f) Groundwater Management Plan (GWMP);
- (g) Settlement Effects Management Plan (SEMP);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (h) Contaminated Soils Management Plan (CSMP);
- (i) Hazardous Substances Management Plan (HSMP);
- (j) Archaeological Site Management Plan (ASMP);
- (k) Construction Traffic Management Plan (CTMP);
- (l) Concrete Batching and Crushing Plant Management Plan (CBCPMP);
- (m) Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP) (to be prepared in accordance with Condition CEMP.15);
- (n) Waste Management Plan (to be prepared in accordance with Condition CEMP.10); and Temporary Construction Lighting Management Plan (to be prepared in accordance with Condition L.2).

CEMP.4

The CEMP shall be implemented and maintained throughout the entire construction period.

CEMP.5

A copy of the CEMP shall be held on each construction site at all times and be available for inspection on request by the Auckland Council.

CEMP.6

The finalised CEMP shall include specific details on demolition, construction and management of all works associated with the Project. The certification process of the CEMP shall confirm that the CEMP includes details of the following:

- (a) Details of the site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) The location of large notice boards that clearly identify the NZTA and the Project name, together with the name, telephone, email address and address for service of the site or Project manager and the community liaison person;
- (c) An outline construction programme of the work indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- (d) The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at night, on Sundays and during public holidays;
- (e) Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/ storage of rubbish, storage and unloading of building materials and similar construction activities;
- (f) Location of worker's offices and conveniences (e.g. portaloos);
- (g) Procedures of controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- (h) Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (Nov 2007);
- (i) Procedures for ensuring that residents within 100m of construction areas or other people whose use of an area may be disrupted by construction works (for example the Te Atatu Boating Club for works on the Whau River) are given notice of the commencement of construction activities and are informed about the expected duration of the works, including potentially through the community liaison person;
- (j) Procedures to be followed to ensure that those working in the vicinity of identified heritage and ecological features are aware of the heritage or ecological values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- (k) Means of ensuring the safety of the general public;
- (l) Procedures for the community liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- (m) Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding streets is restricted;
- (n) All temporary boundary/ security fences shall be maintained in good order, with any graffiti removed as soon as possible;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (o) Confirmation of a Project Arborist and completion of a STEM assessment of the preliminary list of Amenity Trees in Schedule E.7 of the AEE to confirm the final Amenity Trees; and
- (p) The process to minimise removal of Amenity Trees, maximise the protection of those retained, undertake relocation of Amenity Trees and replacement planting of specimen trees (in accordance with Conditions LV.10 and ARCH.9)).
- (q) Advice note: For the purposes of CEMP.6(o) and (p), Amenity Tree is defined as a tree or trees that contribute significantly to amenity, taking into account its form, size, health, ecological or historical significance (a preliminary list of these trees is provided in Appendix E.7 of the AEE).

CEMP.7

The layout of the 12 Construction Yards, including associated buildings, fencing and site access shall be developed in accordance with Waterview Connection Project Construction Yards Plans (Refer Schedule A, Row 7). The layout drawings shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the occupation of the yard, for review and certification that the final layout of the construction yards is in accordance with the conditions. The layout drawings shall incorporate the following:

- (a) The main access to the construction yards to be located as far as practicable from residential dwellings, taking into account site and public safety and environmental constraints, in the locations shown on Waterview Connection Project Construction Yards Drawings (Refer Schedule A, Row 7);
- (b) Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings; Construction of temporary boundary/ security fences to be undertaken in a manner which minimises impacts on existing trees;
- (c) Temporary acoustic fences and visual barriers;
- (d) Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on adjacent residential dwellings; and Location of workers' and Project vehicle parking.

CEMP.8

All storage of material and equipment associated with the construction works shall take place within the boundaries of the designation.

CEMP.9

Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standards as existed prior to such damage at no cost to the Auckland Council.

CEMP.10

The NZTA shall finalise and implement the Hazardous Substances Management Plan (HSMP), through the CEMP (as per Condition CEMP.1), submitted with this application, prior to works commencing on site. The certification process of the CEMP shall confirm that the HSMP clearly identifies the requirements for proper storage, handling, transport and disposal of hazardous substances during the construction phase of the Project and confirm that there shall be no storage of explosives on the Project site.

CEMP.11

The NZTA shall develop and implement a Waste Management Plan in accordance with the waste management principles, controls and methods set out in the CEMP. The Plan shall be provided to the Major Infrastructure Team Manager, Auckland Council and be implemented throughout the entire construction period.

CEMP.12

The CEMP shall be reviewed by the NZTA at least annually or as a result of a material change to the Project. The review shall take into consideration:

- (a) Compliance with designation and consent conditions;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (b) Any changes to construction methods;
- (c) Key changes to roles and responsibilities within the Project;
- (d) Changes in industry best practice standards;
- (e) Changes in legal or other requirements;
- (f) Results of inspections, monitoring, incidents, corrective actions, internal or external assessments; and
- (g) Public complaints. A summary of the review process undertaken shall be kept by the NZTA, provided annually to the Major Infrastructure Team Manager, Auckland Council and made available (with any related data) to the Auckland Council upon request.

CEMP.13

Following the review process (as described in Condition CEMP.12), the CEMP may require updating. Any material change proposed to the CEMP (including appended Management Plans) shall be submitted for approval to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the proposed changes taking effect.

Advice Note: Material change will include amendment to any base information informing the CEMP or any process, procedure or method of the CEMP (such as the environmental constraints map, compliance monitoring process, complaints procedure or mitigation / remedial methods identified) which has the potential to increase adverse effects on a particular value. For clarity changes to personnel and contact schedules do not constitute a material change.

CEMP.14

The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP). The EISDCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council, and include:

(a) Methods and measures:

- (i) To ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities.
 - (ii) To appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines
 - (iii) To ensure that no activity is undertaken during construction that would result in ground vibrations and/or ground instability likely to cause material damage to the transmission lines, including support structures.
 - (iv) To ensure that changes to the drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations for any high voltage transmission line support structure.
- (b) Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including, but not limited to, the provisions of Schedule (Growth Limit Zones) to those Regulations.
- (c) Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001), including, but not limited to, the provisions of:
- (i) Clause 2.2 with respect to excavations near overhead support structures;
 - (ii) Clause 2.4 with respect to buildings near overhead support structures;
 - (iii) Section 3 with respect to minimum separation between buildings and conductors;
 - (iv) Section 5 with respect to minimum safe distances for the operation of mobile plant; and,
 - (v) Table 4 with respect to minimum safe separation distances between the ground and the overhead conductors.
- (d) Confirmation that Transpower has been provided a copy of the EISDCMP for their review at least 20 working days prior to construction.

Advice note: With respect to clause (c), specific consideration must be given to the height and location of temporary structures (such as Project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CEMP.15

The NZTA will be responsible for all service relocations required for construction of the Project. The NZTA shall liaise with the providers of infrastructure service networks (including, but not limited to water, gas, stormwater, wastewater, power and telecommunications), and private property owners with on-site services to develop methodologies and timing for necessary services relocation required for the Project, with the objective of minimising disruption to the operation of these service networks and onsite services.

Advice note:

(a) It is noted that if separate consents are required for relocations for any services of network utility operators or landowners, such consents will be obtained before construction commences in the relevant area, and any effects of those relocations would be considered at that time. The same applies to any alteration of consents if required.

(b) Network infrastructure owned and operated by Watercare Services is located within the designations. An operating agreement will be developed by the NZTA and Watercare Services which will include appropriate notification and access protocols where works are to be undertaken by either network operator on or adjacent to Watercare Services infrastructure within the designations.

Public Information Conditions

PI.1.

A community liaison person shall be appointed by the NZTA for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the Project. The liaison person's name and contact details shall be made available in the CEMP and on site signage by the NZTA. This person must be reasonably available for on-going consultation on all matters of concern to affected parties arising from the Project.

PI.2.

The NZTA shall prepare and implement a Communications Plan that sets out procedures detailing how the public, Ministry of Social Development, Housing New Zealand Corporation and other organisations representing the particular demographic characteristics of the community (including but not limited to Primary Health Organisations, general practitioners, youth, education organisations, aged care groups and groups representing ethnic and migrant communities) will be communicated with throughout the construction and monitoring periods (as prescribed in the designation and consent conditions). In preparing the Communications Plan, the NZTA will liaise with Auckland Council to access its community liaison databases. The Communications Plan will include details of:

- (a) The site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) In accordance with these Conditions, the database of the key construction activities and monitoring requirements that are the subject of the Communications Plan;
- (c) The database of stakeholders and residents who will be communicated with;
- (d) Communication methods, an assessment of how these methods reach the different audience/ stakeholder groups (including those methods set out in Condition CEMP.6), and detail on when each of these methods will be used (e.g. regular communication or event specific methods);
- (e) The appointed specialist in Environmental and Occupational Medicine, including contact details (as per Condition SO.13);
- (f) Any stakeholder specific communication plans required; and
- (g) Monitoring and review procedures for the Communications Plan. The Communications Plan shall be written in accordance with the external communication procedures set out in the CEMP and provided at least 20 working days prior to construction commencing, to the Major Infrastructure Team Manager, Auckland Council, Working Liaison Group and the Community Liaison Group(s) established by Condition PI.5. The structure of the communication groups set out in these conditions is attached as Figure PI.A.

PI.3.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

At least 15 working days prior to the commencement of construction, and at 15 working day intervals thereafter, or as required depending on the scale of works and effects on the community, advertisements will be placed in the relevant local newspapers and community notice boards (as identified in Condition CEMP.6(b)) detailing the nature of the forthcoming works, the location of the forthcoming works and hours of operation. All advertisements will include reference to a 24 hour toll free complaints telephone number. Where relevant, advertisements will also include but not be limited to details of:

- (a) Any traffic disruptions or controls or changes to property access, pedestrian/ cycle routes and bus stops; and
- (b) Any other construction activities, including night time works, blasting, and structure-borne noise, as identified in the conditions.

PI.4.

The NZTA shall manage, investigate and resolve (as appropriate) all complaints for the duration of the construction works in accordance with the environmental complaints section of the CEMP. The implementation strategy for complaints includes:

- (a) A 24 hour toll free telephone number and email address, which shall be provided to all potentially affected residents and businesses. The number shall be available and answered at all times during the entire duration of the works for the receipt and management of any complaints. A sign containing the contact details shall be located at each site specific work activity;
- (b) The NZTA shall maintain a record of all complaints made to this number, email or any site office, including the full details of the complainant and the nature of the complaint;
- (c) Upon receiving a complaint, within 10 days of complaint receipt, a formal written response will be provided to the complainant and Auckland Council;
- (d) The NZTA shall undertake corrective action where necessary to resolve any problem identified. All action taken and relevant information shall be documented. For the avoidance of doubt, 'where necessary' refers to where the works are not being carried out in accordance with conditions of this designation;
- (e) Where issues and complaints about effects cannot be resolved through the CEMP complaints management process, a meeting shall be held between the NZTA, the complainant and the Auckland Council representative(s) to discuss the complaint and ways in which the issue may be resolved. If parties cannot agree on a resolution, an independent qualified mediator will be appointed, agreeable to all parties and at the shared cost of all parties, to undertake mediation of the dispute or concerns; and (f) All information collected in Conditions PI.4 (b), (c) and (d) shall be detailed in a Construction Compliance Report (including the means by which the complaint was addressed, whether resolution was reached and how the response was carried out) prepared by the NZTA. This Report shall be submitted to the Major Infrastructure Team Manager, Auckland Council on a quarterly basis commencing at the beginning of the works and for the entire duration of construction.

PI.5.

The NZTA shall establish Community Liaison Group(s) at least two months prior to construction commencing in each of the following key construction areas:

- (a) Te Atatu (including the SH16 Causeway)
- (b) Waterview (including works to St Lukes on SH16 and on the Waterview Estuary and Causeway Bridges)
- (c) Owairaka and hold regular meetings (at least three monthly) throughout the construction period and up to 24 months following construction completion relevant to these areas (or less if the members of the Group agree), so that on-going monitoring information can continue to be disseminated.

The Community Liaison Group(s) shall be open to all interested parties within the Project area including, but not limited to the following groups:

- (a) Auckland Council and Auckland Transport;
- (b) Educational facilities within the Project area (including schools, kindergartens, childcare facilities and Unitec Institute of Technology);
- (c) Relevant community/ environmental groups (including but not limited to Friends of Oakley Creek, Star Mills

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Preservation Group, Cycle Action Auckland and representatives from those organisations identified in the Communications Plan (as required by Condition PI.2) and local residents;

- (d) Department of Conservation;
- (e) Local Boards;
- (f) Iwi groups with Mana Whenua;
- (g) Public transport providers; and
- (h) Housing New Zealand Corporation.

Advice note: The purpose of the Community Liaison Group(s) is to provide a regular forum through which information about the Project can be provided to the community, and an opportunity for concerns or issues to be raised.

PI.6.

The Community Liaison Group(s) shall be provided opportunities to review and comment on the following (amongst other things): \

- (a) The Outline Plan of Works detailing designs for the northern and southern ventilation buildings and stacks (the outcomes of this consultation will be reported in accordance with the processes required in DC.8(n) and DC.9(k);
- (b) The Open Space Restoration Plans (as required by Condition OS.3);
- (c) Finalisation and amendment to Urban Design and Landscape Plans (UDL Plans) (as required by Condition LV.1);
- (d) The Oakley Inlet Heritage Plan (as required by Conditions OS.5(b)(i) and ARCH.6);
- (e) The detail of the Oakley Creek restoration (as required by Condition STW.20);
- (f) Publicly available results of environmental monitoring as required by the designation and/or these Consents (e.g. air quality monitoring); and
- (g) The finalisation of the STEM assessment required by CEMP.6(o) and a schedule of trees that are required to be removed for consideration of timber use in heritage projects as required by Condition SO.7.

Advice Note: Attention is drawn to the Vegetation conditions concerning identification and protection of Significant Vegetation and Valued Vegetation.

- (h) Detailed design features of the Te Atatu underpass (e.g. lighting and architectural treatment).

Temporary Traffic Conditions

TT.1

The NZTA shall update and finalise the Construction Traffic Management Plan (CTMP) submitted with this application, in accordance with these conditions, and implement it through the CEMP. In finalising the CTMP, the NZTA shall:

- (a) Provide simulation modelling demonstrations to better understand the effects of construction of the Project on the affected road network;
- (b) Include measures to avoid road closures and restrictions of vehicle, bus, cycle and pedestrian movements;
- (c) Where road closures or restrictions cannot reasonably be avoided the particular vulnerabilities and sensitivities of pedestrian diversions and restricted conditions shall be taken into account in the planning of any closures or restrictions.

TT.2

The CTMP shall require the development of Site Specific Traffic Management Plans (SSTMPs) and their approval by the Traffic Management Project Governance Group (as defined by the CTMP), for each construction activity that may affect traffic or transportation infrastructure and services. The SSTMPs shall be provided to the Traffic Management Coordinator(s) for the relevant Road Controlling Authority at least 10 working days prior to each construction activity.

TT.3

Each SSTMP shall describe the measures that will be undertaken to avoid, remedy or mitigate the local and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

network wide effects of construction of the Project. In particular, the SSTMP shall include the following matters:

- (a) Traffic management measures to address and maintain, traffic capacity, including bus services, at peak traffic periods during weekdays (6:00 to 9:00 and 16:00 to 19:00) and peak traffic periods at weekends (including Te Atatu Road, Great North Road and Richardson Road);
- (b) Methods to manage the effects of traffic during construction including the requirement to detour or divert traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area;
- (c) Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- (d) Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/ overbridges) and the use of staging to allow sections of the Project to be opened to the traffic while other sections are still under construction;
- (e) Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks) during construction;
- (f) Any routes where construction traffic movements will be restricted (either for particular times for construction periods);
- (g) Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works, measures to provide alternative access arrangements in consultation with the Auckland Council and the affected landowner; and (h) Measures to maintain pedestrian and cycle access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable (e.g. unless provision of such access is severed by the works or such access will become unsafe as a result of the construction works). Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. (This Condition does not act as a qualification to the commitment to maintain access to open space and education facilities, as required in Condition OS.13).

TT.4

The SSTMPs shall include traffic management measures developed in consultation with the Auckland Transport, Bus and Coach Association and the Auckland Council, to address and maintain, where practicable, existing levels of service for buses particularly at peak periods (6:00 to 9:00 and 16:00 to 19:00) on weekdays.

TT.5

The NZTA shall consult with the Traffic Operations Manager, Auckland Transport with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation. The NZTA shall also coordinate and consult directly with the proponents of any major construction or major traffic generating event occurring concurrently with, and in the vicinity of the Project.

TT.6

The SSTMPs shall include measures developed in consultation with Auckland Transport to, as far as practicable, enable continued public walking and cycling passage along the existing Northwestern Cycleway (between Te Atatu Interchange and St Lukes Interchange) and along Great North Road and the public walkway along Oakley Creek, with any interruptions being as short as feasible.

TT.7

The NZTA shall undertake construction works so as to avoid significant long duration impacts or the full closure of Te Atatu Road for all road users heading to or from the Te Atatu Peninsula and to ensure that access for emergency service vehicles is maintained.

TT.8

The NZTA shall restrict construction truck movements during peak hours (6:00 to 9:00 and 16:00 to 19:00) on weekdays and during the peak periods at the weekends to avoid the following:

- (a) Te Atatu Road Interchange, during both morning and afternoon peak hours

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (b) Great North Road Interchange, city bound during the morning peak hours
- (c) Great North Road Interchange, west bound onto SH16 and southbound onto Great North road during the afternoon peak. Construction truck movements during these hours shall only be allowed under exceptional circumstances agreed in advance with the Traffic Management Project Governance Group.

TT.9

The NZTA shall maintain at least the existing active traffic lane configuration capacity on SH16, at the Te Atatu Interchange area, Te Atatu Road, Richardson Road and on Great North Road during peak periods being 6:00 to 9:00 and 16:00 to 19:00 on weekdays and during the peak periods on weekends, for the duration of the temporary construction programme.

TT.10

The NZTA shall monitor the impact of construction traffic in terms of traffic speeds and volumes on SH16, Great North Road, Te Atatu Road and Richardson Road throughout the construction period to confirm the expected traffic effects as set out in the *Temporary Traffic Assessment* (Technical Report G.16) submitted with this application.

- (a) This monitoring will be undertaken on a daily, weekly and monthly basis; and
- (b) Monitoring results will be made available to the Traffic Operations Manager, Auckland Transport on request.

TT.11

If monitoring undertaken pursuant to Condition TT.10 indicates that traffic volumes or traffic conditions are significantly different from those expected, the SSTMPs will be reviewed and as appropriate amended to the satisfaction of the Traffic Management Project Governance Group.

Operational Traffic Conditions Integration with Local Road Network

OT.1

The NZTA shall prepare in collaboration with Auckland Transport a Network Integration Plan (NIP) for the Project, or relevant Project phases, to demonstrate how the Project integrates with the existing local road network and with future improvements (identified in the Western Ring Route (Northwest) Network Plan) planned by the Auckland Council. The NIP shall include details of proposed physical works at the interface between the State highway and the local road network, and shall address such matters as pedestrian/ cycle ways, lane configuration, traffic signal co-ordination, signage and provision for buses. In addition, the NIP will address:

- (a) The commitment of the NZTA to progress bus priority measures northbound on Great North Road as part of the reinstatement of Great North Road, as proposed by Auckland Transport and indicated on the Plans *Great North Road Option 1 Proposed Road Marking* (Schedule A, Row 33), subject to the agreement with Auckland Transport;
- (b) How the works committed to by the NZTA for pedestrian and cycle ways, as detailed in the PT and Active Mode Transport Routes Plan Set (Condition DC.1(d) (refer Schedule A, Row 22)), integrate with pedestrian and cycle ways on the wider transport network;
- (c) The Richardson Road Bridge, which shall be designed in general accordance with the structural plans (Schedule A, Row 9) and the commitment of the NZTA to provide a 2m footpath on Richardson Road Bridge, subject to confirming appropriate bus stop locations with Auckland Transport;
- (d) Integration of the works proposed on Te Atatu Road to appropriately transition between the Waterview Connection Project and any projects being progressed by Auckland Transport;
- (e) Opportunities to review traffic signal timings at the Te Atatu Interchange with a view to minimising delays to all users, including cyclists on the SH16 cycle way; and (f) The commitment of the NZTA to provide for cycle “aspects” (cycle signal lights) at the Great North Road Interchange.
- (g) As part of detailed design at the Te Atatu Interchange, the installation of underpasses and/or overbridges, provided however that should some not prove feasible in civil or traffic engineering design terms, the installation of coordinated traffic signal operation for cyclists on the north-western cycleway by means of synchronised cycle lights which seek to reduce delays for cyclists. Works identified in the NIP which are the responsibility of the NZTA, will be undertaken as at the time of construction works for the Project.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Tunnel Traffic Operation Plan

OT.2

The NZTA shall prepare a Tunnel Traffic Operation Plan in consultation with the Auckland Transport and Auckland Council. The Plan shall include, but not be limited to:

- (a) Procedures for tunnel operational safety, including fire-life safety;
- (b) Procedures for maintenance requirements.
- (c) Procedures for managing traffic to avoid or minimise potential congestion within the tunnel, particularly during peak periods.
- (d) Procedures for the management of traffic during incidents.
- (e) Procedures for the operation of tunnel fans and the management of portal emissions.
- (f) Confirmation that all equipment has been tested and operates in accordance with requirements and specifications. The Tunnel Traffic Operation Plan shall be completed and provided to Auckland Transport and to the Major Infrastructure Team Manager, Auckland Council (in respect of Condition OT.2(e)), prior to operational use of the tunnelled section of SH20.

Advice note: The operation and maintenance of the air quality monitoring equipment inside the tunnel shall follow manufacturer's recommendations.

Noise and Vibration Conditions – Construction

CNV.1

The NZTA shall finalise and implement through the CEMP, a Construction Noise and Vibration Management Plan (CNVMP) throughout the entire construction period of the Project. The CNVMP shall describe the measures adopted to meet:

- (a) the noise criteria set out in Conditions CNV.2 and 3 below;
- (b) the vibration criteria set out in Condition CNV.4 below; or
- (c) where (a) or (b) cannot be met, the process that will be followed to appropriately mitigate noise and vibration effects including methods that may be applied outside the designation.

The CNVMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CNVMP, as a minimum, addresses the following:

- (i) Construction noise and vibration criteria (Conditions CNV.2, CNV.3, and CNV.4);
- (ii) Hours of operation, including times and days when noisy and/or vibration inducing construction activities would occur;
- (iii) Machinery and equipment to be used;
- (iv) Vibration testing of equipment to confirm safe distances to buildings prior to construction;
- (v) Preparation of building condition surveys of critical dwellings prior to, during and after completion of construction works;
- (vi) Roles and responsibilities of personnel on site;
- (vii) Construction operator training procedures;
- (viii) Methods for monitoring and reporting on construction noise and vibration;
- (ix) A hierarchy of mitigation options that will be assessed for the Project noise mitigation, including alternative strategies where full compliance with the relevant noise and/or vibration criteria cannot be achieved;
- (x) Management schedules containing site specific information;
- (xi) Measures for liaising with and notifying potentially affected receivers of proposed construction activities and the potential for noise and vibration effects, specifically:
 - PPFs located within a horizontal distance of 35 metres of underground excavation works, along the tunnel alignment shall receive prior notification not greater than 7 days (and not less than 24 hours) prior to the commencement of works.
 - Methods for ensuring residents affected by night works (within 100m of the construction site night works, as defined on the maps (refer Schedule A, Row 35) are notified of such works (i.e. any works during the hours of 20:00 to 06:30) at least 5 days prior to the commencement of any such work.
 - The maps showing PPFs to be notified of night works (refer Schedule A, Row 35, shall be reviewed and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

included within the CNVMP. (xii) Methods for receiving and handling complaints about construction noise and vibration;

(xiii) Measures for preventing the occurrence of rogue fly rock, including management of charge weights and face loading procedures, stemming of charge holes and profiling of the face to maintain minimum burden (face cover); (xiv) Investigations on the practicability of implementing permanent noise mitigation works for construction mitigation (as per Condition CNV.7);

(xv) Investigations of the practicability of implementing Building Modification mitigation, as required in accordance with Conditions ON.6 and ON.11, prior to commencement of construction within 100m of the relevant PPFs (including those on the Unitec site); and

(xvi) The process for developing Site Specific Noise Management Plans (SSNMP), in accordance with the SSNMP Flow Chart (refer Schedule A, Row 36), including templates and a certification process for the Major Infrastructure Team Manager, Auckland Council (in accordance with Condition CNV.13) to confirm the process of SSNMP review of noise mitigation options where, the modelled/predicted levels or subsequent actual levels exceed the criteria in Conditions CNV.2 and/or CNV.4.

CNV.2

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction noise (excluding noise from blasting Monday to Saturday inclusive) shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise" and shall comply with the following criteria:

Note: In Condition CNV.2 (T) means a duration between 15 minutes and 60 minutes, in accordance with NZS6803:1999. (a) Project Construction Noise Criteria: Residential Receivers

Time of Week	Time period	Project Construction Noise Criteria (Long Term Construction) dB		
		Sectors 1-7	Sectors 8-9	All Sectors
		LAeq(T)	LAeq(T)	LAeq(T)
Monday- Saturday	0630-0730	60	45	75
	0730-1800	70	70	85
	1800-2000	65	65	80
	2000-0630	60	45	75
Sundays and Public Holidays	0630-0730	45	45	75
	0730-1800	60	45	85
	1800-2000	45	45	75
	2000-0630	45	45	75

(b) Project Construction Noise Criteria: Commercial and Industrial Receivers

Time Period	Project Construction Noise Criteria (Long Term Construction) dB
	LAeq(T)
0730-1800	70
1800-0730	75

(c) Project Construction Noise Criteria: Internal Structure-borne Noise from tunnelling for Residential Receivers

Time Period	Project Construction Noise Criteria Inside	
0600-2200	35 dB LAeq(T)	All habitable rooms
2200-0600	30 dB LAeq(T)	Bedrooms

(d) Project Construction Noise Criteria: Internal noise for Licensed Educational Facilities

Time Period (School Days)	Project Construction Noise Criteria Inside	
Teaching Hours	45 dB LAeq(T)	Classrooms, library, offices, teaching, laboratories, manual arts, workshops
Teaching Hours	40 dB LAeq(T)	School hall, lecture theatres

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Note: In Condition CNV2(d) "Teaching hours" means: Primary schools and Kindergartens: 9am to 3pm Unitec: 8am to 9pm

CNV.3

Project Construction Noise Criteria: Airblast (excluding Sundays)

Category	Type of Blasting Operations	Peak Sound Pressure Level (LZpeak dB)
Human Comfort Limits		
Sensitive Site	Operations lasting longer than 12 months or more than 20 Blasts	115 dB for 95% blasts per year. 120 dB maximum unless agreement is reached with occupier that a higher limit may apply
Sensitive Site	Operations lasting less than 12 months or less than 20 Blasts	120 dB for 95% blasts per year. 125 dB maximum unless agreement is reached with occupier that a higher limit may apply
Occupied non-sensitive sites such as factories and commercial premises	All blasting	125 dB maximum unless agreement is reached with the occupier that a higher limit may apply. For sites containing equipment sensitive to vibration, the vibration should be kept below manufacturer's specifications of levels that can be shown to adversely affect the equipment operation
Damage Control Limits		
Structures that include masonry, plaster and plasterboard in their construction and also unoccupied structures of reinforced concrete or steel construction	All blasting	133 dB unless agreement is reached with owner that a higher limit may apply.
Service structures such as pipelines, powerlines and cables located above ground	All blasting	Limit to be determined by structural design methodology

CNV.4

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction vibration received by any building shall be measured and assessed in accordance with the German Standard DIN 4150-3:1999 "Structural vibration – Part 3: Effects of vibration on structures", and shall comply with the criteria set out as follows:

Type of Structure	Short-term vibration			Long-term vibration	
	PPV at the foundation at a frequency of				
	1-10 Hz (mm/s)	1-50 Hz (mm/s)	50-100 Hz (mm/s)	PPV at horizontal plane of highest floor (mm/s)	PPV at horizontal plane of highest floor (mm/s)
Commercial/Industrial	20	20-40	40-50	40	10
Residential/School	5	5-15	15-20	15	5
Historic or Sensitive structures	3	3-8	8-10	8	2.5

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CNV.5

Notwithstanding Condition CNV.3 above,

(a) Blasting activities shall be conducted so that 95% of the blasts undertaken (measured over any twenty blasts on the foundation of any building outside the designation boundary) shall produce peak particle velocities not exceeding 5mm/s and 100% of the blasts undertaken shall produce peak particle velocities not exceeding 10mm/s irrespective of the frequency of the blast measured.

(b) Construction activities, which occur within Sectors 1, 6, 8 and 9 which are identified in Technical Report no. G.19 Assessment of Vibration Effects, as being at a 'High Risk' of exceeding the DIN 4150-3:1999 criteria (being excavation, piling, compaction and drilling) shall be conducted so that 95% of the activities undertaken (measured over at least 20 representative samples of the relevant activity on any residential building) shall produce peak particle velocities not exceeding the relevant criterion in DIN 4150-3:1999 and 100% of the activities undertaken shall not exceed 10mm/s irrespective of the frequency of the activity measured.

CNV.6

Blasting shall be undertaken between 09:00h and 17:00h, Monday to Saturday, except that blasting may be undertaken between 09:00h and 17:00h on Sundays where: (a) The blasting is at least 50m inside the Sector 8 tunnel;

(b) The blasting produces peak particle velocities at any residential building not exceeding 0.5mm/s; and

(c) The Project construction noise criteria set out in Condition CNV.2 for Sundays are complied with.

CNV.7

Where practicable, permanent (traffic) noise barriers, required in any Sector as Detailed Mitigation Options for operational noise following completion of the Project (in accordance with Conditions ON.3 to ON.5) shall be erected prior to noise generating construction works commencing. Where this is not practicable, temporary noise mitigation measures shall be implemented in accordance with the CNVMP, prior to noise generating construction works commencing.

CNV.8

Pile driving or pile removal shall not be undertaken at night (i.e. during the hours of 20:00 – 06:30).

CNV.9

The concrete batch plants, rock crushing plants and the loading bays and conveyors for such plants shall be fully enclosed.

CNV.11

For all other properties, if noise and vibration monitoring of the tunnelling works for the Project (in accordance with Condition CNV.1), indicates that the noise or vibration criteria of Conditions CNV.2 or CNV.4 will potentially be exceeded, then the process set out in the CNVMP will be undertaken including Site Specific Noise Management Plans. Where relocation for residents is proposed, notification of such relocation with residents and property owners will be undertaken in accordance with the processes contained in the CNVMP.

CNV.13

SSNMPs (required by Condition CNV.1(xvi)) above, shall be submitted to Major Infrastructure Team Manager, Auckland Council for review and certification at least 7 working days prior to the proposed works commencing. A decision will be provided by the Council within 5 working days of receipt of the SSNMP. Works will not commence until certification is received from the Major Infrastructure Team Manager, Auckland Council. The Council may, at its discretion, waive the requirement for SSNMPs to be submitted to the Council where an SSNMP is required. If monitoring shows that levels specified in a SSNMP are being exceeded, work generating the exceedence will stop and not recommence until further mitigation is implemented in accordance with an amended SSNMP certified by Council. *Advice note: It is accepted that the criteria of CNV.2 and CNV.4 may not be met at all times, but that the NZTA will take all practical steps to achieve compliance, taking into account the hierarchy of mitigation options outlined in Condition CNV.1 (ix).*

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise Conditions – Operation

ON.1

For the purposes of Conditions ON.2-ON.14 the following terms will have the following meanings:

- Appendix E – means Appendix E to the Technical Report G.12 ‘Assessment of Operational Noise Effects’ submitted with this application.
- BPO – means Best Practicable Option.
- Building Modification Mitigation – has the same meaning as in NZS 6806:2010.
- Design Year – means a point in time that is 10 years after the opening of the Project to the public
- Emergency Mechanical Services – means mechanical services used for emergency situations only.
- Habitable room – has the same meaning as in NZS 6806:2010.
- Noise Criteria Categories – means groups of preference for time-averaged sound levels established in accordance with NZS 6806:2010 when determining the BPO mitigation option; i.e. Category A - primary noise criterion, Category B - secondary noise criterion and Category C - internal noise criterion.
- NZS 6806:2010 – means NZS 6806:2010 Acoustics – Road-Traffic Noise – New and Altered Roads.
- PPFs – means only the premises and facilities identified in green, yellow or red in Appendix E.
- Structural mitigation – has the same meaning as in NZS 6806:2010.

ON.2

The NZTA shall implement the traffic noise mitigation measures identified as the “Preferred Mitigation Options” in Appendix E as part of the Project, in order to achieve the Noise Criteria Categories indicated in Appendix E (“Identified Categories”), where practicable and subject to Conditions ON.3-ON.11 below.

ON.3

The detailed design of the structural mitigation measures of the “Preferred Mitigation Options” (the Detailed Mitigation Options) shall be undertaken by a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council prior to construction of the Project, and, subject to Condition ON.4, shall include, as a minimum, the following:

- (a) Noise barriers with the location, length and height in general accordance with Appendix E and designed in accordance with the ULDF (Section B) (refer Schedule A, Row 38); and
- (b) A requirement that Open Graded Porous Asphalt (“OGPA”) or equivalent low-noise generating road surface be used on all surface roads throughout the Project, except at the Great North Road Interchange; and
- (c) For the Great North Road Interchange, a requirement that Twin Layer Open Graded Porous Asphalt (“Twin Layer OGPA”) or equivalent low-noise generating road surface be used as shown in Appendix E.

ON.4

Where the design of the Detailed Mitigation Options identifies that it is not practicable to implement a particular structural mitigation measure in the location or of the length or height included in the “Preferred Mitigation Options”, either:

- (a) If the design of the structural mitigation measures could be changed and would still achieve the same Identified Category at all relevant PPFs, and a suitably qualified expert approved by the Major Infrastructure Team Manager, Auckland Council, certifies to the Auckland Council that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed mitigation measures; or
- (b) If the changed design of the structural mitigation measure would change the Noise Criteria Category at any relevant PPF from Category A or B to Category C but Major Infrastructure Team Manager, Auckland Council confirms that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed structural mitigation measures.

ON.5

The Detailed Mitigation Options shall be implemented prior to completion of construction of the Project.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ON.6

(a) **Sectors 1 to 8** - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options:

- i. A noise level increase of 3 decibels or more will occur due to road-traffic noise from the Project; and
- ii. Habitable spaces are likely to receive in excess of 45 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year. For those PPFs, following the process set out in Conditions ON.7 to ON.11, it shall be determined which Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces.

(b) **Sector 9** - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options, habitable spaces are likely to receive in excess of 40 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year. For those PPFs, following the process set out in ON.7 and ON.8, it shall be determined if Building Modification Mitigation may be required to achieve 40 dB LAeq inside habitable spaces. For those PPFs where Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces, this shall be implemented following the process set out in ON.9 to ON.11.

ON.7

(a) Prior to commencement of construction of any sector of the Project in the vicinity of a PPF identified under Condition ON.6, the NZTA shall write to the owner of each such building seeking access for the purpose of measuring internal noise levels and assessing the existing building envelope in relation to noise reduction performance.

(b) If the owner(s) of the building approve the NZTA's access to the property within 12 months of the date of the NZTA's letter (sent pursuant to Condition ON.7(a)), then no more than six months prior to commencement of construction in any sector of the Project, the NZTA shall instruct a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council, to visit the building to measure internal noise levels and assess the existing building envelope in relation to noise reduction performance.

ON.8

Where a PPF identified under Condition ON.6 is identified, the NZTA shall be deemed to have complied with Condition ON.7 above where:

- (a) The NZTA (through its acoustics specialist) has visited the building; or
- (b) The owner(s) of the building approved the NZTA's access, but the NZTA could not gain entry for some reason after repeated attempts; or
- (c) The owner(s) of the building did not approve the NZTA's access to the property within the time period set out in Condition ON.7(b) (including where the owner(s) did not respond to the NZTA's letter (sent pursuant to Condition ON.7(a) within that period); or
- (d) The owner(s) of the building cannot, after reasonable enquiry, be found prior to completion of construction of the Project. If any of (b) to (d) above apply to a particular Building, the NZTA shall not be required to implement any Building Modification Mitigation at that Building

ON.9

Subject to Condition ON.8, within 6 months of the assessment required under Condition ON.7(b), the NZTA shall give written notice to the owner of each PPF identified under Condition ON.6:

- (a) Advising of the options available for Building Modification Mitigation to the building; and
- (b) Advising that the owner has three months within which to decide whether to accept Building Modification Mitigation for the building, and if the NZTA has advised the owner that more than one options for building modification mitigation is available, to advise which of those options the owner prefers.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ON.10

Once an agreement on Building Modification Mitigation is reached between the NZTA and the owner of an affected building, the mitigation shall be implemented (including the NZTA undertaking any required third party authorisation) in a reasonable and practical timeframe agreed between the NZTA and the owner. Building Modification Mitigation shall be to the standard specified in section 8.3.2 of NZS 6806:2010. *Advice Note: The NZTA will be responsible for obtaining any necessary building consents or other approvals to undertake the above Building Modification Mitigation.*

ON.11

Subject to Condition ON.8, where Building Modification Mitigation is required, the NZTA shall be deemed to have complied with Condition ON.10 above where:

- (a) The NZTA has completed Building Modification Mitigation to the Building; or
- (b) The owner(s) of the Building did not accept the NZTA's offer to implement Building Modification Mitigation prior to the expiry of the timeframe stated in Condition ON.9(b) above (including where the owner(s) did not respond to the Requiring Authority within that period); or
- (c) The owner of the Building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

ON.12

The NZTA shall manage and maintain the Detailed Mitigation Options to ensure that, those mitigation works are maintained to retain their noise attenuation performance indefinitely

ON.13

All mechanical services associated with the general operation of the tunnels shall be designed such that noise emissions do not exceed the following noise limits, when measured at or within the boundary of any residential-zoned site:

Monday to Saturday	7am to 10pm	50 dB LAeq(15 min)
Sundays & Public Holidays	9am to 6pm	50 dB LAeq(15 min)
At all other times		40 dB L Aeq(15 min) 75 dB LAmax

ON.14

(a) Prior to construction, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake a minimum of 8 (eight) representative measurements of ambient noise levels. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(b) Following completion of the work, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake traffic noise monitoring at the same sites surveyed in Condition ON.14 (a) above, within 2 to 3 years following completion of construction of the Project. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(c) The results of the noise level monitoring in accordance with ON.14(b) above shall be used to verify the computer noise model of the Detailed Mitigation Option. A report describing the findings of the verification shall be provided to the Major Infrastructure Team Manager, Auckland Council within one month of it being completed.

Vibration Conditions - Operation

OV.1

Existing ambient vibration levels shall be measured at critical locations nominated by the NZTA, and submitted to the Major Infrastructure Team Manager, Auckland Council for approval prior to the commencement of works. These baseline measurements will establish pre-Project vibration levels for comparison with future vibration levels.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Air Quality Conditions – Construction GENERAL CONDITIONS

AQ.1.

The NZTA shall finalise and implement, through the CEMP, the Construction Air Quality Management Plan (CAQMP) and Concrete Batching and Crushing Management Plan (CBCMP) submitted with the application. The CAQMP and CBCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CAQMP and CBCMP includes the following details:

- (a) Daily visual monitoring of dust emissions;
- (b) Procedures for responding to process malfunctions and accidental dust discharges;
- (c) Criteria, including consideration of weather conditions and procedures for use of water sprays on stockpiles and operational areas of the site;
- (d) Continuous monitoring of Total Suspended Particulate (TSP) concentrations and meteorology;
- (e) Monitoring of the times of detectable odour emissions from the ground;
- (f) Procedures for responding to discharges of odour (including in the event of excavation of contaminated sites);
- (g) Monitoring of construction vehicle maintenance;
- (h) Process equipment inspection, maintenance, monitoring and recording, including baghouses, pressure relief valves and high level alarms;
- (i) Complaints investigation, monitoring and reporting; and
- (j) The identification of staff and contractors' responsibilities.

AQ.2.

The NZTA shall review the CAQMP and CBCMP at least annually and as a result of any material change to the Project. Any consequential changes will be undertaken in accordance with Condition CEMP.13.

AQ.3.

All construction activities shall be operated, maintained, supervised, monitored and controlled at all times so that all emissions authorised by this consent are maintained at the minimum practicable level.

AQ.4.

The NZTA shall undertake construction activities in accordance with the CEMP, CAQMP and CBCMP, such that:

- (a) Hard surfaced areas of the construction yards and active construction areas are vacuum swept or scraped down at least twice each week and additionally as reasonably required;
- (b) All unsealed areas of the site used for vehicle movement are maintained visibly damp by the use of water sprays or a water cart during weather conditions where the potential for dust emissions exist;
- (c) Wheel wash systems are installed at all truck exits from unpaved areas of the site onto public roads are used for all trucks that depart from the site;
- (d) All stockpiles are constructed and positioned to minimise the potential for dust emissions. The surfaces of all stockpiles are maintained adequately damp at all times to minimise the release of particulate matter;
- (e) Belt conveyors for moving dry materials are fitted with water sprays or enclosed to minimise wind entrainment of dust. Where installed, water suppression is used whenever the conveyors are used for moving dry materials.

AQ.5.

Unless expressly provided for by conditions of this consent, there shall be no odour, dust or fumes beyond the site boundary caused by discharges from the site which, in the opinion of an enforcement officer, is noxious, offensive or objectionable.

AQ.6.

All offensive or objectionable dust beyond the boundary of the site caused as a result of processes on the site shall be mitigated forthwith in accordance with the requirements of the Construction Air Quality Management

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Plan.

AQ.7.

Beyond the site boundary there shall be no hazardous air pollutant caused by discharges from the site that causes, or is likely to cause, adverse effects on human health, environment or property.

AQ.8

No discharges from any activity on site shall give rise to visible emissions, other than water vapour, to an extent which, in the opinion of an enforcement officer, is noxious, dangerous, offensive or objectionable.

MONITORING

AQ.14

The NZTA shall undertake visual inspections of dust emissions as follows:

(a) Visual inspections of all active construction areas at least three times daily during October to April inclusive, whenever there are construction activities. The results of visual monitoring shall be logged.

(b) Visual inspections of dust emissions from the concrete batching plants and rock crushing plant shall be undertaken daily while the plant is operating

AQ.15

The operation of water sprays shall be checked at least once each day.

AQ.16

Continuous monitoring of TSP concentrations shall be undertaken in at least one location in Sector 1, in at least two locations in Sectors 5 and/or 7, and in at least two locations in Sector 9 while construction activities are being undertaken in those Sectors. The locations of continuous TSP monitors shall, as far as practicable, comply with the requirements of AS/NZ 3580.1.1:2007 Method for Sampling and Analysis of Ambient Air – Guide to Siting Air Monitoring Equipment.

AQ.17

Continuous monitoring of wind speed and direction shall be undertaken in at least one location in each of Sector 1, Sectors 5 or 7 and Sector 9 while construction activities are being undertaken in those Sectors. The locations of wind speed and direction monitors shall, as far as practicable, comply with the requirements of AS 2923:1987 Ambient Air – Guide for the Measurement of Horizontal Wind for Air Quality Applications and be at the same locations as the TSP monitors required by Condition AQ.16.

AQ.18

The locations and types of continuous TSP and meteorological monitoring sites required by Conditions AQ.16 and AQ.17 shall be selected by the NZTA in consultation with the Auckland Council. In the event of a failure of the monitoring equipment, this shall be repaired or replaced within 2 working days.

REPORTING

AQ.19

All records, logs, monitoring and test results that are required by the conditions of this consent shall be made available on request, during operating hours, to an Auckland Council enforcement officer and shall be kept for the duration of the consent.

AQ.20

If the monitoring required by Condition AQ.16 shows that concentrations of TSP in ambient air at or beyond the boundary of the site exceeds 80 micrograms/m³ as a 24-hour average, the NZTA shall undertake an investigation into the cause of the exceedence in accordance with the CAQMP.

AQ.21

The Proposed Auckland Unitary Plan (notified 30 September 2013)

A report into the outcome of any investigation required by Condition AQ.20 shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 10 working days of the exceedence. If the cause of the exceedence is identified as being an activity undertaken on the site, the report shall also identify additional measures to be taken to reduce discharges of particulate matter into air from that activity.

AQ.22

Log books shall be maintained that record all relevant information that is required to demonstrate compliance with the conditions of this consent. This information shall include, but is not limited to:

- (a) Visual assessments of any dust emissions from the site and the source;
- (b) Any dust control equipment malfunction and any remedial action taken;
- (c) When a water cart was used and, if so, the frequency of use and the volume of water used (including identification of location);
- (d) All relevant details of the TSP and meteorological monitoring required by Conditions AQ.16 and AQ.17;
- (e) Any additional dust control measures undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

AQ.23

The NZTA shall maintain a log of any complaints received relating to air quality. Details of each complaint received shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 24 hours of receipt of the complaint. The log shall include any complaints lodged with the Auckland Council where the Council has informed the NZTA of the complaint. The log shall include, but not be limited to the following:

- (a) The date, time, location and nature of the complaint;
- (b) Weather conditions at the time of the complaint (including approximate wind speed, wind direction, cloud cover);
- (c) Any possible other contributing factors (such as a fire, smoky vehicle, a local chimney emission, etc.);
- (d) The name, phone number and address of the complainant (unless the complainant elects not to supply these details);
- (e) Any remedial actions undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

Operational Air Quality Conditions

OA.1

The vents used to discharge emissions in the tunnels shall discharge vertically into air at a height of 15m, as follows:

- (a) The northern ventilation stack will be at a height of 15m. This height shall be calculated from the lowest existing ground level along the Great North Road boundary, adjacent to the ventilation stack; and
- (b) The southern ventilation stack will be at a height of 15m calculated from the post-construction ground level of the Alan Wood Reserve averaged at a distance of 10m from the exterior walls the ventilation stack location. and shall not be impeded by any obstruction that may in the opinion of the Peer Review Panel (Condition OA. 7) decrease the vertical efflux velocity (in other words, the average velocity of material emitted into the atmosphere).

OA.2

Prior to the tunnels becoming operational, the NZTA shall establish two ambient air quality monitoring stations and one portal air quality monitoring station. The location and types of these monitoring stations shall be selected by the NZTA in consultation with the Auckland Council and Peer Review Panel (Condition OA.7), providing that one ambient monitoring station will be located within the Waterview Primary School (subject to agreement by the School). Ambient air quality shall be monitored continuously in real time, to monitor potential effects associated with the operation of the ventilation system from the tunnels. Ambient monitoring shall include fine particulates (PM10 and PM2.5) and nitrogen dioxide. Portal monitoring shall include nitrogen dioxide. Results shall be compared with the relevant National Environmental Standards for air quality and Auckland Regional air quality targets (as identified in Chapter 4 of the Auckland Regional Plan: Air, Land and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Water, 2010). Monitoring shall be undertaken at each site until the Peer Review Panel recommends that monitoring is no longer necessary. The locations, operation and maintenance schedules of the continuous monitors shall, as far as practicable, comply with the requirements of AS/NZ 3580.1.1: 2007 Method for Sampling and Analysis of Ambient Air – Guide to Siting Air Monitoring Equipment, and with methods specified in the National Environment Standards.

OA.3

Continuous monitoring of wind speed and direction shall be undertaken at each ambient air quality monitoring location as required by Condition OA.2. The locations of wind speed and direction monitors shall, as far as practicable, comply with the requirements of AS 2923:1987 Ambient Air – Guide for the Measurement of Horizontal Wind for Air Quality Applications.

OA.4

For the first 12 months of tunnel operation, the results of the ambient air quality monitoring shall be reported via validated reports and issued for information via the Project website (monthly). Following this period, and for a period of at least 12 months, reporting shall take place quarterly as follows: Quarter 1 (December to February) by 31 March, Quarter 2 (March to May) by 30 June, Quarter 3 (June to August) by 30 September and Quarter 4 (September to November) by 31 December.

OA.5

If the monitoring required by Condition OA.2 shows that concentrations of contaminants in ambient air at the monitoring locations exceeds the relevant National Environmental Standards for air quality, or Regional Air Quality Targets (as identified in Chapter 4 of the Auckland Regional Plan: Air, Land and Water), the NZTA shall undertake an investigation into the cause of the exceedence and report this to the Peer Review Panel (Condition OA.7) and the Major Infrastructure Team Manager, Auckland Council.

OA.6

The air quality monitoring shall be undertaken in general accordance with the Operational Air Quality Management Procedure (Appendix O of *Technical Report G.1 Assessment of Air Quality Effects*) submitted with this application.

OA.7

A Peer Review Panel shall be appointed by NZTA with the agreement of Major Infrastructure Team Manager, Auckland Council for the purpose of reviewing the ambient air quality monitoring programme and results. The Peer Review Panel shall consist of two independent experts in air quality with experience in ambient air quality monitoring and emissions from motor vehicles. The Peer Review Panel shall review all ambient monitoring, relevant traffic data and tunnel emissions and provide a summary report including any interpretation and recommendations to NZTA, Auckland Council and the Community Liaison Group(s) within 6 months of the tunnels becoming operational and annually thereafter.

Portal Emissions

OA.8

The tunnel ventilation system shall be designed and operated to ensure that any air emitted from the tunnel portals does not cause the concentration of nitrogen dioxide (NO₂) in ambient air to exceed 200 micrograms per cubic metre, expressed as a rolling 1 hour average, at any point beyond the designation boundary that borders an air pollution sensitive land use.

Advice Note: The above standard reflects the National Environmental Standard for Nitrogen Dioxide (NO₂) concentration in ambient air.

Landscape and Visual Conditions

LV.1.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Urban Design and Landscape Plans (UDL Plans) (Plan Set F.16, refer Schedule A, Row 17) shall be reviewed and revised in accordance with the conditions and submitted to the Major Infrastructure Team Manager, Auckland Council for certification that they comply with the conditions of the consents/ designation prior to construction of the relevant Project stage, at least 20 working days prior to the commencement of construction. The UDL Plans shall be updated to: (a) Reflect relevant details from the PT and Active Mode Transport Routes Plan Set (Schedule A, Row 23); (b) Remove the playing field at Waterview Reserve; (c) Confirm the reconfigured bund design at Alwyn Avenue (Schedule A, Row 42); (d) Reflect landscaping required in relation to the northern vent stack in Waterview Glades pursuant to Conditions DC.8.

LV.2.

In certifying the UDL Plans, prepared in accordance with Condition LV.1, the Major Infrastructure Team Manager, Auckland Council shall be satisfied the UDL plans includes: (a) The visual mitigation of infrastructure as detailed in Section B of the UDLF (refer Schedule A, Row 38). (b) Incorporation of art or art through design of structures, particularly as it relates to noise barriers and the Great North Road Interchange piers and ramps (Refer to clauses (g) and (i) below). (c) Planting to screen houses and noise walls (including cross section details); (d) Planting along the corridor on Traherne Island, in accordance with these conditions and the Ecological Management Plan; (e) Specimen planting on the Great North Road Interchange and the Te Atatu Road Interchange; (f) Specimen planting at the tunnel portals (except where this is within the OPW area); (g) Finalisation of the noise barriers (as required by Condition ON.3(a)) in accordance with the design principles for noise walls (refer Schedule A, Row 32); (h) Delineation of the final areas of the Open Space Restoration Plans in accordance with the Open Space Restoration Plans (Schedule A, Row 30), and reference that all works within the Open Space Restoration Plan Areas are subject to Conditions OS.1 to OS.8; (i) Oakley Inlet Heritage Plan, prepared in accordance with Conditions OS.5, and in particular, consideration shall be given to the design treatment of the Great North Road Interchange piers and ramps to take into consideration the impact of the structures on the visual quality of the open space beneath; (j) Ecological Management Plan, prepared in accordance with Conditions V.1, A.1, H.1, F.1 and M.1; (k) Western Ring Route: Maioro Street Interchange and Waterview Connection - Oakley Creek Rehabilitation and Restoration Guidelines (Boffa Miskell, 2010); and (l) Details of artworks or art through design of structures within the Project (e.g. design detailing of median barriers, bridge railings, safety barriers, piers, retaining walls and tunnel portals), in accordance with Section B of the Urban Landscape and Design Framework (UDLF June 2010) (refer Schedule A, Row 38) and F.8: Plans of Structures and Architectural Features, but excluding the north and south ventilation buildings, plans sections and elevations.

LV.3.

The NZTA shall have implemented the UDL Plans within 6 months of practical completion of construction of the Project.

LV.4.

The landscaping shall be implemented in accordance with the UDL Plans within the first planting season following the completion of the construction works, provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for a period of 10 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping shall be implemented in accordance with this Condition for each stage unless subsequent construction staging requires use of the proposed landscaping area. *Advice note: On-going control and management of the landscaping within the designation is the responsibility of the NZTA.*

LV.5.

The NZTA shall implement the UDL Plans taking into account the pest plant management guidelines detailed in the Ecological Management Plan (as required by Condition CEMP.3).

LV.8.

The NZTA shall ensure that any areas within the designation affected by construction activities have sub-soil

The Proposed Auckland Unitary Plan (notified 30 September 2013)

rehabilitated and top-soil replaced so that the hydrological response including the volume of stormwater runoff generated is as close as practicable to the predevelopment situation. The methodologies to achieve this shall be documented and provided to the Major Infrastructure Team Manager, Auckland Council with the revised UDL Plans submitted pursuant to Condition LV.1.

LV.10.

The UDL Plans shall identify all Amenity Trees required to be removed over the construction of the Project (in accordance with Condition CEMP.6(o) and (p)). Replacement trees shall be sized at 160Lt and will either draw from the Coastal Forest or Basalt Rock Forest ecotypes listed in the Landscape Planting Schedules (provided in F.16, refer Schedule A, 17) or an agreed alternative species (confirmed by Major Infrastructure Team Manager, Auckland Council), except in the case of those trees subject to Condition ARCH.9. *Advice note: This does not necessarily apply to any replacement planting in the Open Space Restoration Plan areas, which will be confirmed in approval from Auckland Council and will be in accordance with relevant Auckland Council Park guidelines (see Condition OS.4).*

Open Space Conditions

OS.1

For the purposes of Conditions OS.2 – OS.15 the following terms will have the following meanings:

- Full size – means a football (soccer) field with the dimensions 100m x 60m.
- Half size – means a football (soccer) field with the dimensions less than 100m x 60m but no smaller than 50m x 30m.
- Toddler – means a playground specifically designed for children between the ages of 1 and 3
- Junior – means a playground specifically designed for children between the ages of 4 and 8
- Youth – means a playground specifically designed for children between the ages of 9 – 14 years
- Open Space Restoration Plans – means those plans listed in Schedule A, row 30.
- Open for Play - means the sports field has a level surface and a dense weed-free sward of mature grass, goal posts and lighting if indicated in the Open Space Restoration Plans approved by the Auckland Council.
- Sand - carpeted - means the field has been levelled and irrigated, and conventional sub-soil drains, slit drains and a 50mm deep sand carpet have been installed. The field has been stolonised with a warm season grass such as kikuyu or couch.
- Auckland Council Park Guidelines – means the document by Auckland City Council titled “Furnishing our parks: design guidelines for park furniture”, dated September 2009
- Park furniture – means those items described in the Auckland Council Park Guidelines
- AS2560 – means the Australia New Zealand Standard for lighting of sports fields.
- AS4282 – means the Australia New Zealand Standard for the control of the obtrusive effects of outdoor lighting.
- Way finding exercise – means a process for determining the number, size, location and content of signage to provide clear direction for all park users.
- Skate-park for the purpose of conditions OS.5(b)(iii) means a skate park with a size of approximately 1,400 sq. m. (generally 25 wide x 55m long), incorporating a range of design variations. Suitable for beginners (providing training facilities to develop their skills) but primarily catering for intermediate to advanced level skaters.
- BMX bike track for the purpose of condition OS.5(b)(iii) means a low maintenance, non-competition BMX bike track, incorporating a range of design variations. Primarily catering for beginner and intermediate riders.

OS.2

The NZTA shall prepare Open Space Restoration Plans to outline how the open space replacement land, as defined in the Open Space Restoration Plan Areas (Schedule A, Row 30) (including land occupied during construction) will be reinstated or replaced on completion of construction, for handover to Auckland Council and those areas identified in Condition DC.1A(f) and RC.3(f). Following the consultation detailed in Condition OS.3 below, the Open Space Restoration Plans listed in Condition OS.3(a) to (f) shall be submitted within 12 months

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of construction commencing in the specific areas affecting the reserves or within 12 months of occupation of open space, which ever is the sooner, to the Major Infrastructure Team Manager, Auckland Council.

Advice note: Conditions OS.9 and OS.10 require certain works to be provided prior to occupation of Construction Yards 6 and 7 (Waterview Reserve) and Construction Yards 9- 12 (Alan Wood Reserve) and this may impact on the timing of Open Space Restoration Plans for these areas.

OS.3

The Open Space Restoration Plans shall be prepared in consultation with the Auckland Council, Iwi, the Community Liaison Groups (Condition PI.5), NZHPT, and other recreation users and other user representatives identified by Auckland Council. The Open Space Restoration Plans shall comprise the following specific plans:

- (a) Waterview Reserve Restoration Plan;
- (b) Alan Wood Restoration Plan (including Hendon Park and 25 Valonia Street);
- (c) Oakley Creek Esplanade (Waterview Glades) Restoration Plan;
- (d) Jack Colvin Park Restoration Plan;
- (e) Rosebank Domain Restoration Plan;
- (f) Harbourview-Orangihina Reserve Restoration Plan.
- (g) The areas of the Open Space Restoration Plans are shown in the Open Space Restoration Plan Areas (Refer Schedule A, Row 30).

OS.4

All Open Space Restoration Plans shall be prepared in general accordance with the UDL Plans (Schedule A, Row 30), and shall include, but not be limited to, the following:

- (a) Details of, including the location, of any artworks and educational signage, and directional signage. In the case of Alan Wood Reserve, Waterview Reserve and Oakley Creek Esplanade (Waterview Glade) this shall include a "way-finding exercise" in accordance with Auckland Council practice, to determine all signage to be provided; and
- (b) Evidence of integration with the Oakley Creek restoration works required under Conditions STW.5, STW.20, V.16 and LV.2(i); and a summary of the consultation undertaken (as required by Condition OS.3) and the response received; and
- (c) Details of any vehicle access through the reserves and parking areas; and
- (d) Park furniture (including quantity and quality) to be provided in accordance with relevant Auckland Council Park guidelines, except for: (i) The riparian area within Alan Wood Reserve where the only furniture required is a maximum of 10 seats; and (ii) Oakley Creek Esplanade (Waterview Glades) where the only furniture required is replacement of 3 existing seats; and
- (e) The inclusion and integration of the design for all pedestrian and cycleway linkages and facilities detailed on the PT and Active Mode Transport Routes (Schedule A, Row 22). The design integration shall be in accordance with CPTED principles;
- (f) Implementation programme, including sequencing of works and completion dates. This shall include works that could be implemented prior to practical completion of construction works or are outside the Project area (e.g. upgrading of the Waterview Esplanade Reserve set out in Condition OS.5(b)(vii);
- (g) Implementation programmes for planting and field reinstatement. This shall include:
 - (i) A 12 month maintenance period for built structures and soft landscaping; and
 - (ii) For any landscaping accessible to horses an assessment to demonstrate that the planting schedule is not toxic to horses and that consultation on this has been undertaken with the Te Atatu Pony Club;
- (h) The specific requirements for each Restoration Plan area as set out in Conditions OS.5 – OS.8;
- (i) Documentation of consultation undertaken required by Condition OS.3 and the views and concerns expressed by this consultation and the written approval of the Manager Community and Cultural Policy.

Advice note: For the avoidance of doubt provision of (a) to (h) above will require elevations, cross sections, engineering drawings and written documentation to supplement the UDL Plans. It is also noted that the UDL Plans identify landscaping, planting and other works beyond the Open Space Restoration Plans (refer

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions LV.1 – LV.6, LV.9 and LV.10). Educational signs and artworks are particularly encouraged.

Alan Wood Reserve (Specific)

OS.6

The Alan Wood Reserve Open Space Restoration Plan, shall be prepared in general accordance with the detail shown for the Open Space Restoration Areas on the UDL Plans (Refer Schedule A, Row 17), the following shall be provided:

(a) Equivalent reinstatement of the following recreational facilities:

(i) Two “open for play” full sized sand-carpeted football (soccer) fields at Valonia Street with artificial lighting (for training purposes to AS2560 and AS4282), associated changing facilities/ ablution block, and associated parking requirements;

(ii) If a financial payment in lieu has not been made under Condition OS.9(b) then one half size football field for training purposes at Alan Wood Reserve;

(iii) One half basketball court; and

(iv) One volleyball court; Except that:

(v) There shall be a general 10m clear space for spectators around the fields and field layout shall be maximised to provide a continuous playing surface (e.g. for summer sports such as softball and cricket) (e.g. by altering drainage and the detailed design for the stream realignment of Oakley Creek).

(b) Other Restoration and Enhancement:

(i) An extension to the pedestrian / cycle access from the Pedestrian/Cycleway to Methuen Road through the existing park access at 174 Methuen Road, following a full CPTED review and response;

(ii) Details of proposed pedestrian/ cycle access within and to/from the reserve areas (including Hendon Park Bridge) (Refer Schedule A, Row 9) including a full CPTED review and response;

(iii) Separation of pedestrian access within the reserve (e.g. linking the carpark to the fields) from the SH20 Cycleway (Refer Schedule A, Row 17);

(iv) Subject to obtaining necessary resource consents and Auckland Council landowner approval, provision of a skate-park;

(v) Design and provision of the Management Plan elements identified on UDL Plan 218 (Refer Schedule A, Row 17) (with the exception of M3 and M7) and notation M2 on Plan 219, subject to approval from Auckland Council;

(vi) Design and provision of the Management Plan elements identified on UDL Plan 220 (noted M1 through to M5), on UDL Plan 221 (Refer Schedule A, Row 17) (noted as M1 – M3, M7 - M10, M12 and M13) and on UDL Plan 222 (noted M1 and M2 and M4 and M6), subject to any necessary resource consents and landowner approval from Auckland Council; and (vii) Landscape planting as provided on UDL Plan 223 (Refer Schedule A, Row 17) (noted as M1 and M3), subject to landowner approval from Auckland Council. *Advice Note: Condition OS.6(a) needs to be read in conjunction with Condition OS.9(a) as decisions made prior to construction may be relevant to the post construction Open Space Restoration Plan.*

Construction Works

OS.9

At least 20 working days prior to the occupation of the construction areas within Alan Wood Reserve, the NZTA shall, in consultation and agreement with the Auckland Council, provide:

(a) Three soccer playing fields, maintaining as a minimum the existing dimensions of the playing fields in Alan Wood Reserve that are open for play, including associated access, ablution block and carparking. If the two fields at Valonia Reserve can be provided as an early work these will be done to the standard set in OS.6(a); or

(b) An equivalent financial payment in lieu (or part thereof) to the Auckland Council, which has been paid in full at least 20 working days prior to occupation of Construction Yards 9 - 12; and (c) A half basketball court and volleyball court.

OS.9a

Prior to occupation of Construction Yards 8, 9 and 10, access to the following areas will be maintained or provided (as shown as Area A on the Accessible Open Space in Sector 9 during Construction Plan (Refer Schedule A, Row 29)):

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (a) Approximately 4.6ha of existing passive open space from Methuen Road to New North Road.
- (b) Approximately 2.2ha of newly established active recreation open space and existing passive open space, in the vicinity of the Valonia Street Reserve.

OS.9b

Following the stream realignment, a passive recreation linkage (including a gravel walkway) between the above open spaces will be provided, establishing a continuous open space linkage from Valonia Street to New North Road (identified as Area B on the Accessible Open Space in Sector 9 During Construction Plan (see Schedule A, Row 29).

OS.12

The "Hendon Park Bridge" to the Valonia Reserve area shall be provided within three months of completion of construction works on the SH20 carriageway (up to chainage 1300) and the final stormwater pond proposed at Valonia Street.

OS.13

During construction, the NZTA shall maintain pedestrian accessways to all open space available for public use during construction and education facilities where access is affected by the works, including any public access that crosses private land. Such access shall be safe, clearly identifiable, provide appropriate surfacing and seek to minimise significant detours. The access shall be of a same or similar standard as that disrupted and will be provided and maintained by the NZTA.

Advice note: This specifically includes the existing pedestrian access that provides a connection to the crossing over Oakley Creek between 1510 Great North Road and Unitec Mt Albert Campus.

OS.14

Where access to Oakley Creek will be disrupted for more than 3 consecutive days, or over a weekend, or there is no provision for a walkway detour, the Community Liaison Person shall notify the Friends of Oakley Creek at least 20 working days in advance of any planned disruption (except where the disruption is of shorter duration, or an emergency situation).

OS.17

(a) The NZTA will facilitate the Crown making the property at 6 Barrymore Road (with the exception of land required for the ongoing operation and maintenance of the State Highway or the future rail corridor land) available to Auckland Council for reserve. Any transfer to Auckland Council would be subject to the agreement of both Land Information New Zealand and Council, and only occur after the designation footprint is withdrawn to the operational requirements of the Project (as per Condition DC.10).

(b) If the transfer to Auckland Council does not occur within 12 months of commencement of operations of the motorway in Sector 9, the NZTA shall make a financial payment in lieu of that transfer to Auckland Council in the amount of \$1.13 million, for the same purposes as the payment described in condition SO.14, but not further conditional in the manner provided by SO.14(d).

(c) The purpose of the transfer under (a) or the financial payment under (b) is to mitigate significant adverse effects on passive open space and reserves in Sector 9 (other mitigation having been held by the Board of Inquiry not to be adequate).

Advice Note: The disposal of surplus Crown land is subject to statutory processes (including the Public Works Act) which are managed by Land Information New Zealand and not the NZTA directly.

Social Conditions

SO.1

In addition to the Community Liaison Groups established pursuant to Condition PI.5, the NZTA shall establish an Education Liaison Group (including representatives from local schools, kindergartens, childcare facilities,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Unitec Institute of Technology, the Ministry of Education and Housing New Zealand Corporation), to provide a forum through which:

- (a) Relevant monitoring data can be provided (e.g. air quality monitoring);
- (b) Notice can be provided of when particularly noisy activities will occur in close proximity to schools and education facilities, to enable the opportunity to identify any potential conflict with particular sensitive periods, and the requirement for specific mitigation strategies (e.g. rescheduling of construction activities where practicable); (c) Particular concerns can be raised by educational facilities or parents, discussed and potentially addressed;
- (d) Notice can be provided of potential construction impacts on school transport routes (including pedestrian/cycle access) to enable the opportunity to identify specific mitigation preferences of the education facilities (e.g. any detour routes) and to enable these facilities to appropriately inform students and/or parents; and
- (e) Learning and teaching opportunities for educational facilities to participate in Project works (e.g. planting or artworks). The Education Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period. The Education Liaison Group shall continue to meet for at least 12 months following the completion of the Project (or less if the members of the Education Liaison Group agree), so that ongoing monitoring information can continue to be disseminated.

SO.2

In addition to Condition SO.1(b) above, where noisy construction activities (that are projected to exceed the Noise Criteria in the CNVMP) are proposed in close proximity or adjacent to schools/ childcare centres, the NZTA shall, when preparing their SSNMP (in accordance with Condition CNV.1) give specific consideration to options to carry out these works outside school hours or during school holidays as a mitigation option.

SO.6

In addition to the Community Liaison Group established pursuant to Condition PI.5, the NZTA shall establish a Working Liaison Group (WLG) inviting the following:

- (a) Auckland Council;
- (b) Housing New Zealand Corporation;
- (c) Te Kawerau Iwi Tribal Authority;
- (d) Ngati Whatua o Orakei;
- (e) KiwiRail;
- (f) Department of Conservation;
- (g) Ministry of Education; and
- (h) Local Boards.

The purpose of this WLG will be to provide a forum through which: (a) Opportunities for public work development (including social housing, passenger transport or recreation / open space) are identified in areas where the NZTA confirms that the designation is no longer required (e.g. following construction activities); (b) Comment can be provided on updated Urban Design and Landscape Plans, including the finalised designs of structural elements for the Project (prior to their submission to the Auckland Council); (c) Opportunities for integration of other environmental projects (e.g. restoration plantings) are identified; (d) Consideration is given to appropriate protocols for commencement and completion of construction activities (including blessings for commencement of construction phases); and (e) Comment can be provided by Te Kawerau a Maki on the detailed lighting design of SH16, to consider how lighting effects on cultural sites and practices might be mitigated without compromising traffic safety or those performance standards identified in Condition L.1. The Working Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period.

SO.7

A schedule of trees that require removal for construction of the Project will be identified and reported to the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Community Liaison Group for their consideration of potential provision of timber for heritage projects (including in particular the provision of *Robinia* wood for heritage boat building). If the demand for this timber is identified to the Construction Team, appropriate measures for felling and removal from the site will be confirmed.

SO.13

The NZTA shall appoint a medical specialist qualified and experienced in Environmental and Occupational Medicine for the duration of the operational air quality monitoring of the Project (as defined by Condition OA.4) to be a point of contact for persons concerned about the discharge from the ventilation stacks. This person must be reasonably available by appointment for advice on matters of concern for residents within the Waterview / Point Chevalier and Owairaka / New Windsor communities, and parents of pupils and prospective pupils at schools, kindergartens, playschools, and child care centres within those areas.

SO.14

For the purpose of mitigating significant adverse effects on passive open space and reserves in Sectors 5, 7 and 9, both during the construction years and longer term, particularly in the Waterview, Owairaka and New Windsor communities (other mitigation having been held by the Board of Inquiry not to be adequate) the following applies:

(a) The NZTA shall, subject to conditions (b), (c) and (d) below, construct the following:

(i) A pedestrian and cycleway to AUSTROADS standards between Waterview and Owairaka/New Windsor (as generally indicated on drawing labelled as "Indicative SH20 Cycleway Route" (refer to Schedule A, Row 40)), subject to any modifications necessary to address design, property or engineering constraints.

(ii) The "Alford St Bridge".

(iii) The "Soljak PI Bridge".

(b) The NZTA's obligations under condition (a)(i) arise when the NZTA receives certification from the Auckland Council and Auckland Transport that the Auckland Council and Auckland Transport have:

(i) acquired all necessary land, or obtained all necessary interests and/or landowner approvals on a permanent basis in respect of the facilities described in condition (a)(i); and

(ii) acquired sufficient land to form a cycle and pedestrian way to AUSTROADS standards between Alan Wood Reserve and Unitec; and (iii) obtained all necessary resource consents required for construction and operation of the facilities.

(c) The NZTA's obligations under condition (a)(ii) arise when the NZTA receives certification from the Auckland Council and Auckland Transport that the Auckland Council and Auckland Transport have:

(i) acquired all necessary land, or obtained all necessary interests and/or landowner approvals on a permanent basis for the Alford St Bridge; and

(ii) obtained all necessary resource consents required for construction and operation of the Alford St Bridge.

(d) The NZTA's obligations under conditions (a)(iii) arise when the NZTA receives certification from the Auckland Council and Auckland Transport that the Auckland Council and Auckland Transport have:

(i) acquired all necessary land, or obtained all necessary interests and/or landowner approvals for the Soljak PI Bridge either on a permanent basis or on the basis that the Soljak PI Bridge may be constructed and operated unless and until its continued existence and / or operation conflicts with or compromises future works pursuant to the designation for rail purposes; and

(ii) obtained all necessary resource consents required for construction and operation of the Soljak PI Bridge.

(e) The certification from Auckland Council required under conditions (b), (c) and (d) above must be received by the NZTA within 8 years of the designations for the Project being confirmed.

(f) Each of the facilities for which certification has been given must be constructed within 1 year of the opening of the motorway, or two years from when certification is given for the relevant facility, whichever is the earlier, subject however to some elements of the facilities towards the northern end needing to await the decommissioning of Construction Yard 7.

(g) The value of the construction works to be undertaken by the NZTA pursuant to condition (a) to (d) above shall not exceed a sum equal to \$8 million in June 2011 New Zealand dollars (with any construction costs above that figure being met by the Council.)

(h) The pedestrian and cycleway facilities described in condition (a)(i) above are in addition to the cycling and pedestrian facilities required by the other conditions.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice notes:

The intention of this condition is to construct a continuous pedestrian and cycleway with bridges at Soljak PI and Alford St. To achieve this, the Council and Auckland Transport will use their best endeavours to obtain the necessary consents and landowner approvals, for all three components of the network.

The approvals required for the Soljak PI Bridge reflect the designation for rail purposes of land under the bridge and the possibility that any bridge structure will be approved for a limited length of time only.

In the event that, despite their best endeavours, the Council and Auckland Transport cannot obtain all of the necessary landowner approvals, the condition allows each part of the network to be constructed in isolation from the others. That will provide some mitigation of the significant adverse effects on passive open space and reserves in Sectors 5, 7 and 9 that the condition is intended to address. It will also enable the Council and Auckland Transport to complete the network in the future at their expense when and if they are able to obtain the outstanding approvals.

Condition (f) above requires the earlier of the 2 named events to be the trigger for NZTA to undertake the works, in order that the required mitigation or at least some of it occur during the construction years. It also recognises that towards the northern end of the pedestrian and cycleway, some of the works may need to await the de-commissioning of Construction Yard 7.

Subject to landowner approvals, the Council and/or Auckland Transport will be the owner of the pedestrian and cycleway and the bridges described in (a) above and shall have full responsibility for the operation and maintenance of those facilities once they have been constructed by NZTA. Accordingly, NZTA will be under no further obligation in respect of any of the facilities once they have been constructed and, in particular, will have no obligation in terms of the removal, alteration or replacement of the Soljak PI Bridge in the event that it conflicts with or compromises proposed works pursuant to the designation for rail purposes.

Vegetation Conditions

V.1

The NZTA shall finalise the ECOMP submitted with this application, prior to works commencing on site. The ECOMP shall be implemented through the CEMP. The ECOMP shall clearly identify the location and identity of: (a) All Significant Vegetation within the designation that is to be fully protected or relocated; and (b) All Valued Vegetation within the designation that is affected by the works (protected or removed). Note: Significant and Valued Vegetation shall be as defined in the ECOMP.

V.2

The NZTA shall employ a suitably experienced botanist ('nominated botanist') for the duration of the works to monitor, supervise and direct all works affecting or otherwise in close proximity to the Significant Vegetation and Valued Vegetation identified in the ECOMP.

V.3

Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions that pertain to the Significant Vegetation and Valued Vegetation and all vegetation in general (both native and exotic) are explained by the nominated botanist to all contractors or sub-contractors who will be working on site within the close vicinity of that vegetation.

V.4

The NZTA shall minimise the amount of vegetation (both native and exotic) which is to be cleared, with the exception of weeds (both woody and otherwise, unless agreed with the Major Infrastructure Team Manager, Auckland Council and the Community Liaison Group that the retention of these 'weeds' has other environmental or ecological benefits that warrant their retention). All vegetation clearance shall be undertaken in accordance with the measures set out in the ECOMP.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

V.5

The NZTA shall install protective fencing around, or otherwise clearly demarcate, all of the Significant Vegetation identified in the ECOMP as requiring full protection, under the supervision of the nominated botanist.

V.6

The NZTA shall replace any terrestrial Valued Vegetation that is required to be removed as a result of construction activities, in accordance with the ECOMP and the Urban Design and Landscape Plans.

V.7

The nominated botanist shall supervise all trimming, pruning and relocation work associated with the Significant Vegetation and Valued Vegetation required as part of the works.

V.8

Immediately prior to planting, and for a period of 2 years following completion of construction, the NZTA shall undertake weed control and management of all invasive plant pests within the vegetated areas of the surface designation for the Project. Following this 2 year period, on-going control and management of all invasive plant pests within these areas will be the responsibility of the NZTA.

V.9

The nominated botanist shall undertake a monitoring programme throughout the construction period, including monitoring of: (a) The condition, repair and location of the temporary protective fencing or other forms of demarcation used to identify the Significant Vegetation; (b) Any works within the vicinity of the Significant Vegetation and Valued Vegetation; (c) The general health of the Significant Vegetation and Valued Vegetation (including any Significant or Valued Vegetation that has been relocated away from the works area); and (d) Compliance with the vegetation conditions of designation by way of fortnightly inspections during the construction period.

V.10

Any planting utilising native plants shall use plants genetically sourced from the Tamaki Ecological District where possible or otherwise shall use plants that have been genetically sourced from within the Auckland Ecological Region.

V.12

Should the taxonomic and rarity status of the Geranium species growing alongside Oakley Creek in Hendon Park and Alan Wood Reserve not be confirmed before the commencement of works in this area, then this species shall be treated as Significant Vegetation and shall either be:

- (a) Protected in full or in part, and/or
- (b) Where protection is not practicable, relocated to a suitable and safe habitat elsewhere; or
- (c) Where protection or translocation are not practicable, this population shall be cleared in locations where required to allow works to proceed, but replaced with an equal extent of replacement plantings of the same species (from propagated material sourced from the existing population) planted at a safe and suitable habitat nearby in Hendon Park/Alan Wood Reserve.

V.13

Any clearance of the Geranium in accordance with Condition V.12 shall be restricted to the minimum necessary to facilitate the works.

V.16

All realignments and riparian enhancements of Oakley Creek shall be carried out in accordance with the Oakley Creek Realignment and Rehabilitation Guidelines and in general accordance with the Urban Design and Landscape plans (Refer Schedule A, Row 17).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Avian Conditions

A.1

The NZTA shall finalise, and implement through the CEMP, ECOMP submitted with this application to include the matters set out in Conditions A.2 to A.6.

Herpetofauna Conditions

H.1

The NZTA shall finalise and implement through the CEMP, the ECOMP submitted with this application to include details of lizard management to be undertaken, including the following:

- (a) Lizard capture methodology, including timing;
- (b) Lizard release locations(s);
- (c) Lizard habitat enhancement at population release sites, including a detailed pest control programme for a minimum of one month prior to release and for a minimum of three consecutive years' duration after release;
- (d) Location(s), monitoring and maintenance of lizard protective fencing;
- (e) Post-release monitoring methodology; and
- (f) Lizard captive management methodology.

Lighting Conditions Operation

L.1

Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, in general accordance with the Waterview Connection Lighting Plan (Drawing Set F.11 (Refer Schedule A, Row 12):

- a) All motorway lighting shall be designed in accordance with "Roadlighting Standard AS/NZS1158";
- b) All other lighting shall be designed in accordance with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- c) Fully cut off luminaires shall be used on SH20 from the Southern Tunnel Portal to the Maioro Street Interchange to minimised lighting overspill, as shown on Drawing Set F.11(Refer Schedule A, Row 12).

Construction Zones and Construction Yards

L.2

A Temporary Construction Lighting Management Plan shall be prepared for all construction zones and construction yards prior to commencement of any night time works within the construction zones and construction yards. The Temporary Construction Lighting Management Plan shall be independently verified by a lighting specialist and provided to the Major Infrastructure Team Manager, Auckland Council for certification of compliance 10 working days prior to any night time work commencing. The certification process shall ensure that the Plan includes (but is not be limited to):

- a) The layout and arrangement of all temporary lighting required for night time works, and shall show how this avoids the "Light Spill Restriction Zone" identified on the Construction Yard Plans (Refer Schedule A, Row 7) submitted with the application, and that the temporary lighting complies with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- b) Provision for a 10m buffer between the night time work and any residential boundary at all times to minimise potential for light spill; and
- c) General operating procedures outlined in the CEMP.

Lighting Conditions

L.3

Asymmetrical floodlights with horizontal glass visors that are not raised more than 3 degrees above the horizontal plane shall be used for any temporary construction night time lighting requirements. Alternative temporary lighting arrangements may be used, subject to the prior approval of the Major Infrastructure Team Manager, Auckland Council, where it can be demonstrated that the proposed lighting is similar or better to asymmetrical floodlights with glass visors. Glare shall be kept below the recommendation given in AS 4282 – 1997 "Control of the Obtrusive Effects of Outdoor Lighting" Tables 2.1 and 2.2.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Archaeology Conditions

ARCH.1

The NZTA shall complete, and implement through the CEMP, the Archaeological Site Management Plan (ASMP) submitted with the notice of requirement, to include, but not be limited to:

- a) Identification of the Project archaeologist, their role and responsibility on the Project;
- b) Who reports to the Project archaeologist;
- c) Specific sites requiring supervision, and measures to be undertaken to protect and manage these sites;
- d) Whether NZHPT and/or Auckland Council heritage and/or iwi supervision is required for the specific consultation with the relevant iwi groups); and e) Accidental discovery protocols in the event that unknown archaeological sites are uncovered.

ARCH.2.

The NZTA shall employ at its expense a qualified archaeologist (the Project archaeologist) who shall be on site to monitor all initial earthworks, including surface stripping of the site, for all specific areas identified in the ASMP to establish whether any sub-surface archaeological features are present. This includes, but is not limited to, the following areas:

- (a) All unmodified areas in the vicinity of Rosebank Road;
- (b) All works in the vicinity of the "Oakley Inlet Heritage Area", located adjacent to the Great North Road Interchange;
- (c) Works in the vicinity of two midden sites (recorded R11/2214 and R11/2215) within Great North Road Interchange, and all previously unmodified areas near the banks of the Oakley Inlet;
- (d) Any ground disturbance works in Construction Yard 7 within Oakley Creek Reserve.

ARCH.3

If any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- (a) Immediately it becomes apparent that a possible archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- (b) The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched and notify the Project archaeologist;
- (c) The Project archaeologist shall inspect the site to assess the relevance of the find, and then the Auckland Council shall be advised of the significance;
- (d) If the site is confirmed to be an archaeological site by the Project archaeologist, the site supervisor shall then notify tangata whenua, the New Zealand Historic Places Trust, and the Auckland Council that an archaeological site has been exposed so that appropriate action can be taken
- (e) In the case of human remains, the NZ Police shall be notified.

ARCH.8

All contractors and subcontractors working on the Project shall be trained on the archaeological requirements set out in the ASMP.

Advice note:

Any archaeological sites within the area affected by the Project shall not be modified or disturbed in any way unless written authorisation has been obtained from the NZ Historic Places Trust.

Ground Settlement Conditions

S.1

The NZTA shall finalise, and implement through the CEMP, the Settlement Effects Management Plan (SEMP) lodged with the application prior to construction activities being undertaken. Prior to construction (following detailed investigation and design), the total estimated settlements and building damage categories shall be confirmed using the methodology in Technical Report G.13 *Assessment of Ground Settlement Effects* and the SEMP shall be updated accordingly. In the event that settlement predictions are greater (than those allowed for

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in Figure E.14 (refer Schedule A, Row 26)) or building damage categories increase in ranking or buildings affected from those identified in Figures G1-G4 (refer Schedule A, Row 27), mitigation measures shall be introduced as part of the detailed design and construction process to avoid any adverse effects greater than predicted by the application lodged in August 2010.

Settlement Monitoring

S.2

The NZTA shall establish a series of ground settlement monitoring markers to monitor potential settlement in relation to the construction of the tunnels. The survey markers will be located generally as follows:

- (a) Along the tunnel alignment and extending out to a maximum of 400m either side of the tunnels to correlate with cross sections that have been used for the settlement estimates and to infill between them.
- (b) To cover the more extensive eastern zone area of settlement at Chainage 3400 (Figure E.14 refer Schedule A, Row 26).
- (c) On or around buildings or features considered to be particularly sensitive as defined in the SEMP (including those buildings identified in Condition S.7) and as may be updated to reflect detailed analysis and interpretation of monitoring results as the Project proceeds. Two types of markers shall be established: Framework Markers which shall form the main basis of monitoring, and Intermediate Markers which shall provide additional monitoring information for interpretation of Alerts and Alarms. The locations of each type of settlement monitoring marker shall be confirmed in the SEMP. Each Framework Marker shall have an alert and alarm level set in relation to Figure E.14, where alert = 75% of the theoretical value and alarm = 100% of the theoretical value with due consideration of the seasonal range of ground movement identified by pre-construction monitoring.

S.3

The NZTA shall survey the settlement monitoring markers at the following frequency:

- (a) Pre-construction
 - (i) All Framework Markers – Vertical and selected horizontal at 3 monthly intervals, starting at least 12 months prior to construction commencing; and
 - (ii) All Intermediate Markers - Vertical and selected horizontal once.
- b) During Construction
 - (i) All Framework Markers - Vertical on a monthly basis; and
 - (ii) Selected Framework Markers only - Horizontal on a monthly basis.
- (c) During Active Construction
 - (i) All Framework and Intermediate Markers – Vertical on a weekly basis; and
 - (ii) Selected Framework Markers only - Horizontal on a monthly basis.

“Active construction” shall be defined as:

- (a) Starting when the advancing tunnel face comes within 150m and ending when the final tunnel lining has been installed 150m beyond the section; and
- (b) When excavation in front of a retaining wall comes within 100m of a section and ending when the permanent wall supports are in place beyond a distance of 100m.

S.4

Within three days of each monitoring round, the NZTA shall use the settlement monitoring results (together with the results of groundwater monitoring where they may provide an earlier indication of future settlements) to reassess the ground settlements and building damage categories and compare them to those estimated in Figures E.14 and G1-G4 (refer Schedule A, Row 26 and 27).

If alert and alarm levels are exceeded, the trigger marker shall be resurveyed within 24 hours.

If the reassessment indicates that a building has increased its damage category from that in Figures G1 – G4 (refer Schedule A, Row 27) then this shall be considered to be an Alert Level and additional specific

The Proposed Auckland Unitary Plan (notified 30 September 2013)

assessment of the building shall be carried out by the NZTA to confirm this reassessment within 72 hours.

If the additional assessment confirms the increase in damage category, this shall be considered to be an Alarm Level and the property owner and occupier will be notified within 48 hours. Following consultation with the property owner and occupier(s); subsequent actions may include increased frequency and/or extent of monitoring, modification to the construction approach or mitigation works to the affected building.

S.5

Settlement monitoring shall be undertaken for a period of 2 years following completion of the tunnels. The NZTA may reduce the frequency of settlement monitoring, required by Condition S.3, to 6-monthly:

- (a) Once the active construction stage has passed; and
- (b) Monthly monitoring has been undertaken for a minimum of 6 months; and
- (c) The monitoring indicates that any potential settlement effects are within a satisfactory range as specified in the SEMP; and
- (d) The criteria in (a) to (c) above has been certified by the Auckland Council.

S.6

The NZTA shall collate the results of the settlement monitoring (undertaken pursuant to Conditions S.2 – S.5) and prepare a report that shall be made available to the Auckland Council. A settlement monitoring report shall be prepared prior to the commencement of construction, and then at monthly intervals throughout the construction period. Following the completion of construction, a settlement monitoring report shall be prepared following each round of settlement monitoring undertaken (i.e. monthly and then 6-monthly when monitoring is reduced pursuant to Condition S.5).

The settlement reports shall highlight any alert or alarm level exceedences and provide a full interpretation and/or explanation as to why these levels are exceeded, the likely effects and detail any remedial or mitigation measures initiated as a result of these trigger exceedences.

Building Condition Surveys

S.7

The NZTA shall review and update the schedule of buildings and structures considered to be at risk in accordance with the criteria of the SEMP and maintain this for review by the Auckland Council. This shall include, but not be limited to, the following properties identified in the Technical Report G.13 *Assessment of Ground Settlement Effects* provided in support of this application:

- (a) Buildings on properties within the substrata designation;
- (b) Buildings where total estimated settlement is greater than 50mm (defined in Figure E.14 – Refer Schedule A, Row 26);
- (c) Buildings in areas estimated to have a risk of damage more than negligible (defined in Figures G1-G4 as categories 1-5 (Refer Schedule A, Row 27));
- (d) Unitec Buildings 76, and 310-313 (as per Unitec Site Plan in Schedule A, Row 31);
- (e) 1510 Great North Road, Unitec Residential Flats (two buildings);
- (f) Pak'n Save Supermarket;
- (g) Metro Football Clubhouse, Phyllis Street;
- (h) Building at 1550 Great North Road;
- (i) BP Service station at 1380 Great North Road; (j) Modern Chairs Building (Richardson Road);
- (k) Waterview Primary School;
- (l) Operational septic tanks where total estimated settlement is greater than 50mm; and
- (m) Buildings on the western side of the alignment between Chainage 3000 and 3400 where total estimated settlement is greater than 20mm.

S.8

The NZTA shall consult with owners of buildings and structures identified in Condition S.7 and, subject to the owner's approval of terms acceptable to the NZTA, shall undertake a preconstruction condition assessment of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

these structures in accordance with the SEMP.

S.9 The NZTA shall employ a suitably qualified person (e.g. a Chartered Professional Engineer) to undertake the building assessments required pursuant to Conditions S.8 and S.12 and identify this person in the SEMP.

S.10 The NZTA shall undertake monthly visual inspections of the following buildings during the “active construction” phase of the Project as defined in Condition S.3:

- (a) All Type 1 Dwellings within a zone where “more than negligible” effects have been predicted;
- (b) All Type 2 Dwellings within a zone where “slight” effects or greater have been predicted
- (c) Unitec Building 76;
- (d) 1510 Great North Road, Unitec Residential Flats (two buildings);
- (e) Pak’n Save supermarket; and
- (f) Waterview Primary School (pool and hall).

Note: Type 1 and 2 Dwellings are those as defined in Technical Report G.13 *Assessment of Ground Settlement Effects*.

S.11 The NZTA shall undertake level and/or wall inclination surveys on a monthly basis during the “active construction” phase of the Project on the following buildings:

- (a) All Type 1 Dwellings within a zone where “slight” effects or greater have been predicted;
- (b) Unitec Building 76;
- (c) 1510 Great North Road, Unitec Residential Flats (two buildings);
- (d) Waterview Primary School (pool); and
- (e) Pak ‘n’ Save Supermarket

S.12

The NZTA shall, subject to the owner(s) approval, ensure that within 6 months of completion of construction activities, a post-construction condition assessment covering the matters identified in the SEMP is undertaken and shall be provided to the owner(s). The assessment report shall include a determination of the cause of damage identified (if any) since the preconstruction condition assessments. The NZTA shall agree with the owner(s) appropriate remedial works (if any) in conjunction with arrangements for implementation and/or compensation. The requirements of this condition need not be fulfilled for any particular building with the written approval of the current owner of a building or where the NZTA can provide reasonable evidence to the Auckland Council that the current owner of that building has agreed they do not require such a survey.

S.13

The NZTA shall ensure that a copy of the pre, post-construction and any additional building condition assessment reports for each building be forwarded to the respective property owner(s) within 15 working days of completing the reports. The NZTA shall notify the Auckland Council that the assessments have been completed. The community liaison person appointed pursuant to Condition PI.1 shall be the contact person for owner(s) subject to assessment and reporting under Conditions S.1 to S.11 and S.16 and remedial works or compensation payments under Condition S.12 and S.16.

Retaining Wall Monitoring

S.14

The NZTA shall establish inclinometer and surface monitoring of the retaining walls for the tunnel portals and cut and cover tunnel to determine any potential effect from the tunnels. The nature and timing of the monitoring shall be determined during detailed design of the retaining walls and specified in the SEMP.

Services Monitoring

S.15

Prior to construction commencing, the NZTA shall undertake CCTV surveys of services identified in the SEMP as being susceptible to damage or particularly critical. This shall include, but not be limited to:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(a) Waterview Orakei No. 9 trunk sewer.

The NZTA shall monitor these services by undertaking additional CCTV surveys throughout the construction period. If any damage is determined in relation to the Project, the NZTA shall undertake any remedial action as required in consultation with the service provider.

Slope Stability Assessments

S.16

Prior to construction commencing, the NZTA shall undertake geotechnical investigations of slopes or sites that have been identified as potentially being susceptible to movement. This shall include, but not be limited to:

(a) 14H and 14J Cradock Street

(b) 34 Cradock Street

(c) 40 Cradock Street

(d) 56 Powell Street;

(e) 1590A Great North Road; and

(f) Other sites on the western slopes of Oakley Creek identified under Condition S.7(b) and S.7(m) which are assessed in the course of a pre-construction condition assessment undertaken in accordance with Condition S.8 as potentially being susceptible to slope movement.

The NZTA shall undertake monitoring throughout the active construction period in accordance with Condition S.10 above and shall assess and agree remedial action as required, in consultation with the owner, in accordance with Condition S.12 above.

Differential Settlement

S.17

Pairs of settlement markers shall be established on each side of the cross sections identified on Figure E.14 to monitor differential movements. The markers in each pair shall be no more than 20m apart, and each pair shall be within 100m of the centreline of the closest tunnel. Monitoring installed in accordance with Condition S.11 can be utilised for this purpose. Each pair of markers shall have Alert and Alarm values set based on the calculated differential settlements at that location and consistent with the relevant calculated Building Damage Category (Figures G1-G4, (Refer Schedule A Row 27)), Alert and Alarm levels shall be as defined in Condition S.2. Monitoring frequency shall be as defined for Framework Markers in Condition S.3.

Streamworks Conditions

General conditions

STW.1 The streamworks and associated works (such as stormwater outfalls) shall be undertaken in accordance with the plans and information contained within Technical Report G.15 *Assessment of Stormwater and Streamworks Effects* and Technical Report G.22 *Erosion and Sediment Control Plan*, submitted with this application. The design of streamworks and associated works shall follow the approach expressed in the Oakley Creek Re-alignment and Rehabilitation Guidelines, appended to *Technical Report G.6 Assessment of Freshwater Ecological Effects*.

STW.2

Any future amendments that may affect the performance of the streamworks shall be approved by the Major Infrastructure Team Manager, Auckland Council in writing, prior to construction. Any amendments to the design shall be in accordance with the Western Ring Route: Oakley Creek Re-alignment and Rehabilitation Guidelines (Boffa Miskell, 2010), appended to *Technical Report G.6 Assessment of Freshwater Ecological Effects*.

STW.3

The NZTA shall inform the Major Infrastructure Team Manager, Auckland Council in writing at least 10 working days prior to any streamworks commencing, and again 10 working days before any environmental protection measures are removed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

STW.4

Prior to streamworks commencing on site, the NZTA shall arrange and conduct a preconstruction site meeting between Auckland Council, NZTA and the primary contractor.

STW.5

At least 20 working days prior to commencement of streamworks associated with the realignments of Oakley Creek and the Stoddard Road tributary, the construction design details associated with these works shall be submitted to the Major Infrastructure Team Manager, Auckland Council for approval. The details shall include but not be limited to:

- (a) Detailed design of the proposed streamworks including long sections, cross sections and details of the design including freshwater habitat improvement and riparian planting;
- (b) Construction erosion and sediment control plans (ESCP).

STW.6

The NZTA shall forward a detailed construction programme and methodology to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the commencement of works, and shall provide monthly updates during the streamworks. These shall include details of:

- (a) The commencement date and expected duration of the streamworks;
- (b) The location of any works and structures in relation to the streamworks; and
- (c) Dates for the implementation of erosion and sediment controls.

STW.7

No streamworks shall be undertaken between 1 May and 30 September unless written approval has been obtained from the Major Infrastructure Team Manager, Auckland Council. Any such approval shall be sought at least 10 working days prior to the proposed commencement of the works.

STW.8

All erosion and sediment controls associated with the streamworks shall be constructed and installed in accordance with Technical Report G.22 *Erosion and Sediment Control Plan* submitted with this application.

STW.9

The site shall be stabilised against erosion as soon as practicable and in a progressive manner as streamworks are finished.

STW.10

All uncompacted material shall be kept clear of the channel during and after streamworks.

STW.11

The NZTA shall ensure that any temporary dam structure built within the stream shall be constructed from non-erodible material (such as sandbags or sheet piles).

STW.12

The NZTA shall ensure that when dewatering the in-stream works area, no sediment-laden water shall be discharged directly into a watercourse. Any sediment-laden water must be treated in an appropriate sediment treatment device in accordance with TP90.

STW.13

All machinery shall be maintained and operated in a way which ensures that spillages of fuel, oil and similar contaminants are prevented, particularly during refuelling and machinery servicing.

STW.14

The NZTA shall ensure that:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (a) Any excavated sediment that requires temporary stockpiling shall not be placed within the 100 year ARI flood plain, and
- (b) Erosion and sediment control measures around the stockpile perimeter shall be constructed in accordance with TP90.

STW.15

The design engineer and Project ecologist shall monitor the construction of the streamworks. The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council a certificate signed by an appropriately qualified and experienced engineer and ecologist to certify that the streamworks have been undertaken in accordance with the drawings supplied with this application, or as otherwise amended under Condition STW.2, within three months of completion of the streamworks.

STW.16

The NZTA shall obtain approval of the constructed stream realignment works from the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to diversion of Oakley Creek into the new channel.

Bridge Structure

STW.17

The NZTA shall submit a certificate signed by an appropriately qualified and experienced engineer to certify that the Oakley Creek SH20 motorway bridge has been constructed in accordance with the drawings supplied with this application, within 3 months of completion of the structure.

STW.18

Any erosion occurring as a result of construction of the Oakley Creek bridge (SH20) shall be remedied as soon as possible and to the satisfaction of the Major Infrastructure Team Manager, Auckland Council.

STW.19

The area of Oakley Creek beneath the Oakley Creek bridge (SH20) shall be maintained free of debris to ensure stream flows are not restricted.

Streamworks Environmental Management Plan (SWEMP)

STW.20

The NZTA shall submit for approval to the Major Infrastructure Team Manager, Auckland Council a Streamworks Environmental Management Plan (SWEMP) which shall include details of the final freshwater mitigation and environmental enhancement works associated with the Project to give effect to the design set out in Technical Report G.15 and principles of the "Western Ring Route – Maioro Street Interchange and Waterview Connection - Oakley Creek Realignment and Rehabilitation Guidelines" described in Condition STW.22. This SWEMP shall cover the mitigation for the loss of an area of Pixie Stream, Oakley Creek and the Stoddard Road tributary. It shall be submitted to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the proposed enhancement works being commenced under this consent and shall include, but not be limited to, the following:

- (a) The nature of works to be undertaken;
- (b) The location of works;
- (c) Detailed design and plans of all enhancements to the stream bed and/or stream channel, including any structures or other engineering works. This includes replication of the existing waterfall located on the Stoddard Road tributary near the confluence with Oakley Creek in a similar position within the new realignment;
- (d) Riparian planting programmes, including detailed planting plans and specifications relating to species mix, location, density, size and maintenance to achieve an overall average of 70% shading of stream at maturity within those reaches where realignments or the SEV off-setting mitigation associated with the Project are proposed;
- (e) Timing of implementation;
- (f) The outcomes of consultation with Iwi (Ngati Whatua o Orakei and Te Kawerau Tribal Authority), the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Community Liaison Group (see Condition PI.6), and Friends of Oakley Creek; and

(g) How the basalt blocks from sections of the existing Oakley Creek channel that are to be realigned will be reused, with preference given to use within the channel realignment works and within other works identified in the Alan Wood Open Space Restoration Plan. Options for reuse shall take into account, but not be limited to:

(i) The heritage (cultural) values of the basalt blocks in the channel walls, in-situ basalt e.g. at the Stoddard Confluence and the basalt columnar blocks; and

(ii) The ecological values of the basalt block substrates with terrestrial and aquatic vegetation e.g. endangered moss *Fissidens berteroii*.

Advice Note: The intent is to include the SEV off-setting mitigation associated with the Maioro Interchange Project within Hendon Park and Alan Wood Reserve, and to the same shading standard as specified in Condition STW 20(d).

STW.21

The realignments necessary for highway construction will be rehabilitated separately to the Project's SEV off-set mitigation requirement of 343 metres. The Project's SEV off-set mitigation requirements will be undertaken within the areas demarcated as areas A to D on the "Oakley Creek Realignment Layout Plan, drawing 20.1.11-3-D-D-330-21" (Refer Schedule A, Row 23).

Advice Note: The SEV off-set mitigation associated with the Maioro Interchange Project is intended to be undertaken upstream and downstream of those areas shown for Realignment and Rehabilitation (Refer Schedule A, Row 23), for the purposes of creating a coherent ecological corridor in this area.

STW.22

The SWEMP shall be prepared in general accordance with the "Western Ring Route – Maioro Street Interchange and Waterview Connection - Oakley Creek Realignment and Rehabilitation Guidelines" (Boffa Miskell, 2010) appended to *Technical Report G.6 Assessment of Freshwater Ecological Effects*.

STW.23

The NZTA shall implement the mitigation and environmental enhancement works contained in the approved SWEMP within 12 months of practical completion of the Project.

STW.24

The NZTA shall supply to the Major Infrastructure Team Manager, Auckland Council within three months of the completion of the riparian planting works written confirmation from an appropriately qualified landscape architect or ecologist that the riparian plantings have been implemented in accordance with the SWEMP approved under Condition STW.20.

STW.25

Any material amendments to the SWEMP shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to any amendment being implemented.

Fish Passage

STW.26

All proposed stream bed and/or stream channel structures shall not impede the passage of fish both upstream and downstream. **Flooding**

STW.27

Works in the floodplain (including motorway embankments, ancillary earthworks and streamworks) shall be in accordance with the final design of the streamworks approved by the Major Infrastructure Team Manager, Auckland Council (as per Conditions STW.5 and STW.29) and be undertaken in accordance with the plans and information submitted with this application including, but not limited:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (a) Waterview Connection Project. Assessment of Environmental Effects Report (Dated August 2010).
- (i) Plan F.2 Operation Scheme Plans (Refer Schedule A, Row 3); and
- (ii) Plan F.14 Streamworks and Stormwater Discharges (Refer Schedule A, Row 15).
- (b) Technical Report G.15 *Assessment of Stormwater and Streamworks Effects*.

STW.28

Within three months of completion of the works, the NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council “as built” plans certified by a qualified and experienced engineer to confirm that the works have been carried out in accordance with Condition STW.27.

STW.29

Any amendments to works by the NZTA in the floodplain that may increase the flooding effects shall be submitted to the Major Infrastructure Team Manager, Auckland Council for approval in writing at least 20 working days prior to construction. These proposed amendments shall include updated drawings and hydraulic modelling using the Oakley Creek Catchment Model to assess the effects of the change.

STW.30

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council a certificate signed by an appropriately qualified and experienced engineer to certify that the flood protection works for the tunnels have been constructed in accordance with the drawings, approach and standards supplied with this application, prior to the opening of the Project.

STW.31

Design of flood defences for the southern portal shall be in accordance with the catchment management option preferred by Auckland Council with allowances for climate change, sea-level rise and Maximum Probable Development.

Contaminated Land and Contaminated Discharges Conditions

CL.1 The NZTA shall finalise and implement through the CEMP, the Contaminated Soil Management Plan (CSMP) submitted with this application prior to commencement of any site works. The CSMP shall include, but not be limited to:

- (a) Measures to be undertaken in the handling, storage and disposal of all material excavated during the construction works;
- (b) Soil validation testing and groundwater testing;
- (c) Soil verification testing to be undertaken to determine the nature of the excavated spoil and potential reuse or disposal options;
- (d) Measures to be undertaken in the event of unexpected contamination being identified during construction activities; and
- (e) Measures to be undertaken for the handling of asbestos containing material.

CL.2

Prior to the main construction works commencing, the baseline quality of soils and groundwater within Sector 5 (the southern bank of Oakley Creek coincident with the location of the former tannery) and Sector 7 (particularly in relation to works in the vicinity of Great North Road) shall be investigated and established. The investigations shall be carried out in accordance with appropriate Ministry for the Environment and Auckland Council guidelines. The findings of the soil and groundwater investigations shall be used to determine the specific constructions methods during work in this area to manage any likely environmental effects in relation to the Project.

CL.3

Prior to the main construction works commencing, soils and fill materials within Alan Wood Reserve (Sector 9) shall be further classified so as to determine the distribution and extent of cleanfill, managed fill and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

contaminated/hazardous fill materials. CL.4 All excavated soil shall be tested by the NZTA in general accordance with the CSMP, prior to either reuse on site or disposal off site. The testing regime shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council.

CL.5

The NZTA shall notify the Major Infrastructure Team Manager, Auckland Council within 5 working days of identification of any contamination at the site which was not identified in the reports submitted in support of this application, including contaminated soil, surface water or groundwater. CL.6 The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP. CL.7 The NZTA shall engage a suitably qualified contaminated land specialist to supervise the works, excavation and removal of any contaminated soils from the site and undertake sampling (if required) of imported material. CL.8 All testing / sampling techniques shall be carried out in accordance with the Ministry for the Environment Contaminated Land Management Guidelines or other equivalent standards approved in writing by the Major Infrastructure Team Manager, Auckland Council.

CL.9

During and following the tunnel construction works beneath Sector 8, groundwater quality monitoring shall be carried out at locations within and down hydraulic gradient of Phyllis Street Landfill. Monitoring shall be undertaken on at least a monthly basis, and for a period up to 12 months following completion of the tunnel construction works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.10

Prior to, during and following tunnel construction works beneath Phyllis Street Landfill, monitoring for landfill gas shall be carried out from existing monitoring boreholes within the landfill. Monitoring shall be undertaken on at least a monthly basis, for a period of no less than 6 months prior to, and up to 12 months following completion of the tunnelling works. The monitoring programme shall be submitted for approval by the Auckland Council as landowner.

CL.11

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council, a Site Closure Report no later than three (3) months after the completion of the earthworks. The Report shall be prepared in accordance with Schedule 13 (Schedules for Reporting on Contaminated Land) of the Proposed Auckland Regional Plan: Air Land and Water and include:

- (a) Results of any soil reuse and imported material testing carried out to ensure compliance with the CSMP;
- (b) Volumes of soil removed from site;
- (c) Copies of the waste disposal receipts; and
- (d) Reports of any non-compliance with the CSMP procedures or complaints received while undertaking the site works

Freshwater Conditions

F.1 The NZTA shall finalise, and implement through the CEMP, the ECOMP submitted with this application. The ECOMP shall be updated to ensure compliance with the conditions of this consent and include changes to the details of construction processes prior to construction commencing. The ECOMP shall include, but not be limited to details of:

- (a) Monitoring of freshwater ecology;
- (b) Monitoring of freshwater and stream sediment quality;
- (c) Trigger event criteria for undertaking additional monitoring;
- (d) Procedures for responding to accidental discharges of contaminants to the freshwater environment; and
- (e) Contingency plans and/or remedial measures in the event monitoring results identify adverse effects.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

F.2

The NZTA shall engage a suitably qualified ecologist and water quality scientist to undertake freshwater monitoring programme prior to, during and following construction to monitor the effect of the Project on the freshwater ecology. The freshwater monitoring shall be undertaken in Oakley Creek, Pixie Stream and Meola Creek. The freshwater monitoring programme shall be undertaken in accordance with the details set out in the ECOMP and include:

- (a) Cross sectional profiles;
- (b) Macro invertebrate sampling; and
- (c) Freshwater fish monitoring.

F.3

The freshwater monitoring programme shall, as a minimum, be undertaken in accordance with the following frequency:

- (a) Prior to construction – two baseline ecological surveys.
- (b) During construction – twice per year for fish and macro invertebrates and cross sectional profiles, within one month prior to the beginning of the earthworks season and within one month either side of the end of the earthworks season.
- (c) Post construction – on an annual basis for a maximum period of three years, or less if the Major Infrastructure Team Manager, Auckland Council is satisfied that no adverse effects have occurred or are likely to occur from the Project.
- (d) Monthly water quality samples at the five existing Oakley Creek sample locations to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb) and nutrients.
- (e) Four “event based” samples per annum from each of the current two Oakley Creek sites. The samples are to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb), hydrocarbons (TPH) and nutrients.
- (f) Two sediment quality samples per annum (January and July) at the five existing water quality Oakley Creek sites (if there is sufficient sediment to sample). The samples are to be analysed for metals (Zn, Cu and Pb), polycyclic aromatic hydrocarbons (PAH), hydrocarbons (TPH) and semi-volatile organic compounds.

Advice note: The sample collection and analysis required under sub-clauses (d) to (f) shall be undertaken following an IANZ accredited methodology by a suitably accredited laboratory (International Accreditation New Zealand).

F.4 The NZTA shall undertake additional freshwater monitoring in the event of a ‘trigger event’ for freshwater habitats. For the purposes of this consent, a ‘trigger event’ for freshwater habitats is defined in the ECOMP. F.5 The NZTA’s ecologist/hydrologist (required by condition F.2) shall review, every six months, the freshwater monitoring results, provided from Conditions F.2 to F.4, and results in monitoring detailed in earthworks Conditions E.9 and E.19 and Groundwater Condition G.10. In the event that potential adverse effects are identified, including through review of the Condition G.10 monitoring results by the hydrologist and freshwater ecologist required by Condition G.12, the NZTA shall develop and submit for the approval of the Major Infrastructure Team Manager, Auckland Council appropriate contingency plans and/or remedial measures in accordance with the measures set out in the ECOMP.

F.5

The NZTAs ecologist/hydrologist (required by condition F.2) shall review, every six months, the freshwater monitoring results, provided from Conditions F.2 to F.4, and results in monitoring detailed in earthworks Conditions E.9 and E.19 and Groundwater Condition G.10. In the event that potential adverse effects are identified, including through review of the Condition G.10 monitoring results by the hydrologist and freshwater ecologist required by Condition G.12, the NZTA shall develop and submit for the approval of the Major Infrastructure Team Manager, Auckland Council appropriate contingency plans and/or remedial measures in accordance with the measures set out in the ECOMP.

F.6

Freshwater monitoring reports shall be compiled from the monitoring undertaken pursuant to Conditions F.2 to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

F.4 and the review of Condition F.5, and a report provided to the Major Infrastructure Team Manager, Auckland Council every 6 months.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6731 State Highway 20 - Hillsborough to Mt Roskill

Designation Number	6731
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from Queenstown Road, Hillsborough to Ernie Pinches Street, Mt Roskill Hillsborough Road
Rollover Designation	Yes
Legacy Reference	Designation H08-05, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation is for the following work:

- A designation of land between Queenstown Road and the eastern end of Ernie Pinches Street as a road for state highway / motorway purposes (Map Ref H08-05);
- A designation of land between Queenstown Road and New Windsor Road as road, accessway or service lane for access (Map Ref H08-06);
- A designation of land westward from a point opposite Sandringham Road as road for access to and / or for state highway / motorway purposes; this component of the designation being necessary to allow for the connection of the proposed motorway to the local roading network and future grade separation between road and rail when an adjoining railway purposes designation is given effect to (Map Ref H08-07); including the construction, operation and maintenance of those roads, accessways and service lanes and all ancillary structures, works and activities directly associated with the proposed extension of State Highway 20 from Hillsborough Road to Maoro Road.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

1. General

1.1 To move the requirement boundary to the southeast (towards Ernie Pinches Street) to minimise encroachment over the southeastern boundary of Christ the King Church and School at 288-292 Richardson Road as shown on Plan 1/86/32/3914/8 Revision C.

1.1A That the designation be modified by reducing its size so that the part of the designation extending from Carr Road does not extend onto Lot 2, DP 77953 owned by Swift New Zealand Limited and held in Certificate of Title 34A/1386. This modification shall be as shown on Drawing Number 1/86/32/1914/2. The part of the designation on the Hayr Road boundary shall remain.

1.1B No work shall occur within the area of Winstone Park which is currently protected by the Reserves Act 1977 until determination of the High Court appeal AP123/02 (or any subsequent and related Court of Appeal proceeding), dismissing the appeal and / or authorising work within the Winstone Park Reserve.

1.1C That the designation be altered by adjusting its boundaries at 133 Stoddard Road, 67 Ernie Pinches Street and 90 May Road (the Roseman Avenue pond). This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-087, P-03-088, P-03-89 (dated 26 Sept 02); and
- b. P-02-057, P-02-058, P-02-061 (dated 13 Aug 02).

1.1D That the designation be altered by adjusting its boundaries at 43 to 53 Hendry Avenue and 1 to 11A Maioro Street. This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-086, P-03-090 (dated 26 Sept 02); and
- b. P-02-055, P-02-060 (dated 4 Feb 03).

1.1E That the designation be altered by adjusting its boundaries at Mt Roskill Grammar School. This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-092 dated 26 Sept 2002;
- b. P-02-064 dated 4 February 2003;
- c. S-35-126 revision OD dated 28 May 2003;
- d. S-35-101 revision B dated 14 November 2002; and
- e. P-03-086-091 dated 4 Oct 2002.

1.1F That the designation be altered by adjusting its boundaries at the Dominion Road frontage to Winstone Park. This alteration shall be as shown on the following drawings drawn by URS Ltd:

- a. P-100-200 'Figure A' dated 21 May 2004; and
- b. P-100-202 'Figure B' dated May 2004.

1.1G That the designation be altered by adjusting its boundaries at the corner of Hendry Avenue and Queenstown Road (Lot 2 DP 55660). This alteration shall be as shown on the following drawings drawn by Transit NZ and URS NZ Ltd:

- a. P-100-011 dated March 2004; and
- b. C-121A, dated April 2004.

1.1H That the designation be altered by adjusting its boundaries at 110, 138A and 155 Hillsborough Road. This alteration shall be as shown on the 'SH20 - Mt Roskill Extension Proposed Alteration to Designation' drawings drawn by Transit NZ and URS NZ Ltd and referred to as:

- a. Figure 2 Rev A, Site 138 Hillsborough Road (dated October 2004);
- b. Figure 3 Rev A, Site 155 Hillsborough Road (dated October 2004); and
- c. Figure 4, Rev A, Site 110 Hillsborough Road (dated October 2004).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.2 Except as modified by the conditions below, the work shall be undertaken in general accordance with the information provided by Transit New Zealand at the hearing; the Notice of Requirement and supporting documents, namely:

- a. 'SH20 Hillsborough to Richardson Road, Assessment of Effects on the Environment', Traffic Design Group and URS NZ Ltd, dated 2 November 2000;
- b. 'SH20 Hillsborough to Richardson Road, Scheme Assessment Report', Volume 1 – Report, Volume 2 – Drawings, Traffic Design Group and URS NZ Ltd, dated 2 November 2000;
- c. Revised attachments to the Notice of Requirement. In particular, the following drawings drawn by Traffic Design Group and URS NZ Ltd;
- d. 'Proposed designation as amended in response to matters raised during hearing 26 March-6 April 2001', Drawing numbers 1/86/32/1914/1-4 Revision E; and
- f. 'Property identification and designation boundaries (as revised post-notification)', 1/86/32/3914/1-9 Revision C.

1.3

- a. Except as modified by conditions below, works on and disturbance of the northern slopes of the Mt Roskill volcanic cone between Dominion Road and Roseman Avenue shall be generally in accordance with the works shown on Figure A (Project Drawing Number P-100-200) drawn by URS NZ Ltd dated 21 May 2004 (hereafter referred to as "Figure A"); and
- b. If as a result of detailed design, the Requiring Authority proposes any departure from the works shown on Figure A that affects Mt Roskill volcanic cone between Dominion Road and Roseman Avenue but which remains in general accordance with the drawing, the Requiring Authority shall consult with the Department of Conservation before adopting any such a departure; and
- c. No excavation beyond that associated with the extent of work shown on Figure A is permitted, except where:-
 - i. the work does not result in any further excavation of unmodified parts of the cone within Winstone Park; and
 - ii. the work is consistent with Condition 2.1B.

1.4 Where the State highway connects with Richardson Road, the route shall be redesigned and shifted towards the southeast so as to minimise the need for works to encroach across the southeastern boundary of Christ the King Church and School at 288-292 Richardson Road.

1.5 The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1)(c) of the Resource Management Act 1991.

1.6 Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015, by S78 of the Local Government (Auckland Transitional Provisions) Act 2010.

1.7 As soon as practicable following confirmation of the designation and completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of the existing designation F05-05 'proposed motorway; proposed motorway and railway; proposed road, Hayr Road to Richardson Road.

1.8 As soon as practicable following confirmation of the designation and completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of the existing designation A07-01 'motorway' in the vicinity of Hendry Road where designation A07-01 is replaced by the new designation.

1.9 As soon as practicable, following completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of those parts of the designation which are not required for the long term operation and maintenance of the State highway.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.9A

- a. Within three months following completion of construction of the state highway between Dominion Road and Roseman Avenue, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for the adjustment of the southern boundary of the designation between Dominion Road and Roseman Avenue to a new position approximately 18 metres northwards; and
- b. Activities within the zone 2 metres to the north of the adjusted designation boundary shall thereafter be limited to inspection and maintenance purposes.

1.9B Works within Winstone Park along the Dominion Road frontage shall be undertaken in accordance with the following:

- a. The design of the proposed footpath between the Winstone Park access road and the Dominion Road interchange shall be generally in accordance with the works shown on Figure A (Project Drawing Number P-100-200) drawn by URS NZ Ltd dated 21 May 2004.
- b. The detailed design of the new footpath between the Winstone Park access road and the Dominion Road interchange shall be determined in consultation with the council. The following matters shall be taken into account in the final design:
 - i. The appropriate width;
 - ii. Lighting;
 - iii. The connection between the new footpath and the existing footpath along Dominion Road;
 - iv. The need to ensure changes to the Winstone Park vehicle access clearly define the pedestrian crossing point.
- c. The construction of the proposed footpath between the Winstone Park access road and the Dominion Road interchange shall be undertaken in a manner which minimises excavation of the natural ground surface.
- d. Prior to any construction work commencing protective fencing shall be erected to protect the trees near the area of works. Where practicable the fencing shall be to the standard described within 4.1 Protective Fencing in Annexure 5 (Guidelines for works within the vicinity of trees) of the District Plan.
- e. All pruning works and construction activity at the base of the existing mature puriri and totara trees adjacent to the proposed footpath shall be undertaken in consultation with the council's parks arborist. The work shall also be undertaken in accordance with the arborist's report dated 27 February 2004, included with the notice of requirement.
- f. With regard to the mature puriri to the immediate south of the Winstone Park access road, the portion of the batter within the dripline of the puriri shall be excavated under arborist's supervision, incorporating hand digging as required. All roots encountered shall be cut cleanly back to the soil face with sharp pruning tools. The exposed face shall be immediately covered with up to 50mm of high quality topsoil and the topsoil lightly compacted.
- g. Any pruning of trees required to achieve clearance for the footpath shall be undertaken by a recognised arboricultural contractor who is approved by the council's parks arborist.
- h. Transit's contractor shall contact the council's parks arborist a minimum of five working days prior to any arboricultural work commencing to arrange for a pre-works commencement meeting. All contractors and sub-contractors involved in the arboricultural work shall be present. The location of protective fencing shall be agreed in consultation with the council's parks arborist at that time.

1.10 The Requiring Authority shall pay the Council a compliance monitoring charge of \$5,000 (inclusive of GST), plus any further monitoring charge or charges to recover the actual and reasonable costs that have been incurred to ensure compliance. (This charge is to cover the cost of inspecting the site, carrying out tests, reviewing conditions, updating files and all work required to ensure compliance with the conditions on the designation). This monitoring charge shall be paid at the time an Outline Plan is submitted.

1.11 Any land taken or held for works shall be maintained to a reasonable standard until physical works commence to the satisfaction of the Council.

1.12 That a permanent liaison person shall be appointed by the Requiring Authority for the duration of the State

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Highway 20 extension project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be available for on-going consultation on all matters of concern to affected persons.

1.13 Access shall be maintained to the land currently leased by the Pat Noton (1984) Trust under New Zealand Railways Corporation Leases L43520 and N2080, and to the land currently leased by South International Finance under New Zealand Railways Corporation Lease L44406/C25209 while those parties remain in valid occupation of the land.

2. Construction

2.1 Prior to commencement of any works on any part of the land included within the designation, the Requiring Authority shall submit a Construction Management Plan to the Council in respect of that land. The Construction Management Plan shall include specific details relating to the demolition, construction and management of all works associated with this development, including:

- a. Details of the site or project manager, including their contact details (phone, facsimile, postal address);
- b. The location of large noticeboards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. Any means, such as a restriction on the size of construction vehicles and machinery, required to ensure that no damage occurs to street trees throughout the construction period;
- d. Any means of protection of services such as pipes and watermain within the road reserve;
- e. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- f. Measures to be adopted to ensure that pedestrian access past the works is provided where practicable and that such access is safe;
- g. Location of workers conveniences (e.g. portaloos);
- h. Ingress and egress to and from the works for vehicles during the construction period;
- i. Proposed maximum numbers and timing of truck movements throughout each day and the proposed routes;
- j. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- k. Location of vehicle and construction machinery access during the construction period;
- l. Procedures to be followed for ensuring that residents within 100 metres of blast sites receive at least 24 hours written notice of any imminent blasting;
- m. Hours of operation and days of the week for construction activities;
- n. Means of providing safe pedestrian access between Keith Hay Park and the Mt Roskill Schools, and between Ernie Pinches Street and Stoddard Road during construction;
- o. Means of ensuring the safety of the general public;
- p. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;
- q. Procedures to be followed to ensure that those working in the vicinity of Mt Roskill volcanic cone are aware of the heritage values of the cone and the steps which need to be taken to meet the conditions applying to work in this area.

The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction period.

2.1A With respect to the 20 metre wide strip situated to the north of the southern boundary of the designation within Winstone Park, during construction:

- a. Storage of materials, and vehicle or machinery parking shall only be carried out within the same area 10 metres extending from and parallel to the southern boundary of the designation;
- b. Prior to the commencement of any construction activity, a temporary 2 metre high fence shall be erected along the southern boundary of the designation to separate the Winstone Park reserve from all construction

The Proposed Auckland Unitary Plan (notified 30 September 2013)

activities, and the fence shall not be removed until either all related construction activity is completed or the area is no longer required for that purpose.

2.1B Once construction of the motorway within the designated area between Dominion Road and Roseman Avenue is completed, any land on Mount Roskill, within the 18 metre strip previously designated (as referred to in Condition 1.8A), must be reinstated in conformity with the natural landscape and form in that vicinity, as soon as practicable.

2.2 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of this designation at all times and not on surrounding streets.

2.3 All storage of materials and loading and unloading of equipment associated with the construction works shall take place within the boundaries of this designation.

2.4 Pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable.

2.5 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the road during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage.

2.6 During construction, the New Zealand Standard NZS 6803:1999 Acoustics – Construction Noise, shall be complied with. The limits of Table 2 shall also be applied to school buildings.

2.7 Appropriate measures shall be taken during construction to minimise potential dust nuisance.

2.8 Pedestrian access between Keith Hay Park and the Mt Roskill Schools, and between Ernie Pinches Street and Stoddard Road shall be maintained during construction.

2.9 Prior to the commencement of construction in the vicinity of Winstone Park (at the Mt Roskill cone), Transit shall use its best endeavours to relocate the existing childrens' playground in the Park to a location approved by the Council.

3. Landscape and Visual Effects

3.1 A detailed landscape plan, including an implementation and maintenance programme, shall be prepared by a suitably qualified landscape architect in consultation with the Council, at the time of submitting an Outline Plan.

a. The plan shall include details of the plant sizes at the time of planting and intended species.

b. In preparing the landscape plan, the following matters shall be taken into account:

i. The integration of the highway alignment into the surrounding landscape;

ii. Mitigation of effects on properties in the vicinity of the alignment;

iii. Any proposed planting of mature trees (including replanting);

iv. Planting in respect of waterways, including stormwater ponds;

v. Planting of earth bunds;

vi. The suitability of particular species of plants to the conditions of any particular area, and the beneficial effects of any particular species in terms of air quality;

vii. The staging of landscaping with the staging of construction;

viii. Landscaping in respect of Maioro Street.

c. Such a plan is to include appropriate measures for:

i. screening views of the motorway from adjacent properties and public places;

ii. screening noise attenuation fences;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- iii. retention or relocation of existing trees where practicable;
- iv. revegetation of the realigned stream located between Ernie Pinches Street and Stoddard Road.
- d. The landscaping shall be implemented in accordance with the landscaping plan within the first planting season following the completion of the construction works, and shall be maintained for the next five years.

3.2

- a. The Requiring Authority shall consult with the Department of Conservation ('DOC'), Auckland Conservation Board ('ACB') and the Auckland Volcanic Cones Society Inc ('AVCS') on the final design of the works shown on Figure A and associated safety fence at the base of the Mt Roskill Cone;
- b. The design of the safety fence shall incorporate materials, textures and colours appropriate to the visual and historical context of the cone;
- c. Batter slopes shall be planted with trees or shrubs suited to the conditions of the site and to the natural context of the cone;
- d. The associated safety fence shall be a minimum 1.4 metres in height and shall include appropriate safety features. The fence shall be designed to be as visually transparent as possible, while still meeting the required safety standards;
- e. The results of consultation with DOC, ACB and AVCS shall be taken into account in finalising the design of the batter slopes, reinstatement works and safety fence;
- f. Plans for the design of the batter slopes, reinstatement works and safety fence, together with a report on the consultation with DOC, ACB and AVCS, shall be provided to the Auckland City Council at the time an Outline Plan is submitted.
- g. A photographic record shall be taken as the cut proceeds to provide a visual record of the geology of the cone

3.3 Vehicle access past the oak tree at the rear of St Martin's Church (1358 Dominion Road) shall be provided in a manner which minimises excavation and damage to the tree roots.

3.4 To the extent that stormwater management allows, a landscape bund shall be constructed along the boundary of Keith Hay Park and the motorway to achieve visual and landscaping mitigation. No part of the bund shall extend beyond the boundary of the designation without specific approval from Auckland City Council as land owner.

3A. Somerset Road Tress

Trees requiring trimming or removal for the construction of the Keith Hay Park pedestrian and cycle bridge

3A.1 All tree work identified on drawing S-35-126 revision OD dated 28 May 2003 (produced by Transit and URS NZ Ltd) shall be undertaken by a recognised arboricultural contractor who is approved by the Council's parks arborist.

3A.2 Transit's Contractor shall contact the Council's parks arborist a minimum of 5 working days prior to any arboricultural work commencing to arrange for a pre works commencement meeting. All contractors and sub-contractors involved in the arboricultural works shall be present.

3A.3 All tree removals and pruning works shall be undertaken in consultation with Council's parks arborist.

3A.4 All tree pruning works shall employ recognised arboricultural target pruning practices. All such works shall be supervised by the Council's parks arborist who shall be available in accordance with the 5 days notice required in condition 3A.2.

3A.5 All tree removal work shall employ recognised arboricultural felling and dismantling practices, and shall be undertaken in a manner that avoids or minimises damage or disturbance to adjacent trees to be retained.

Protection of seven trees on southern side of Somerset Road

3A.6 Prior to any construction activities commencing a temporary barrier shall be erected as close as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

practicable to the edge of the dripline of trees numbered 1211-1217 (as identified on drawing S-35-126 revision OD dated 28 May 2003 produced by Transit and URS NZ Ltd). The location of the temporary barrier shall be determined in consultation with the Council parks arborist. The temporary barrier shall be a minimum of 2 metres in height and shall be of sturdy construction. It shall remain in place for the entire duration of all works within the vicinity of the Somerset Road trees. The temporary barrier shall be clearly identified as a 'restricted area / tree protection area' by the placement of the appropriate signage.

3A.7 Any pruning on the southern side of the poplar trees numbered 1211-1217 that may be required to provide clearance from the construction site shall be undertaken in consultation with Council's parks arborist.

3A.8 All pruning works shall be performed by a qualified competent arborist using recognised arboricultural target pruning practice. All such works shall be supervised by the Council's parks arborist who shall be available in accordance with the 5 days notice required in condition 3A.2.

3A.9 Prior to any construction activities commencing, a layer of mulch shall be laid over the entire area within the fenced area referred to in 3A.6 above. The mulch shall be a minimum thickness of 200mm, and shall be maintained at this level for the entire duration of the construction works within the vicinity of the Somerset Road trees.

3A.10 At no time shall the fenced area referred to in 3A.6 above be used for storage even temporarily of construction materials, fill, or any other materials associated with the State Highway 20 project.

3A.11 At no time shall any vehicles or equipment be even temporarily parked, stored, or manoeuvred within the fenced area referred to in 3A.6 above.

3A.12 All excavations in close proximity to the dripline of trees 1211-1217 shall require direct supervision by a competent arborist. Any root pruning which is required shall be undertaken by the arborist using recognised root pruning procedures.

4. Sediment Control and Stormwater

4.1 The Requiring Authority shall implement suitable sediment control measures during all earthworks and after construction to ensure that all stormwater run off from the site is managed and controlled to ensure that in so far as is practicable no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with the Auckland City Operative District Plan 1999 (Isthmus) Annexure 14 Guidelines for sediment control. In the event that material is deposited on the street, the Requiring Authority shall take immediate action at their own expense, to clean the street.

4.2 The Requiring Authority shall implement suitable arrangements for stormwater treatment and detention in accordance with relevant ARC guidelines.

5. Noise (Following Construction)

5.1 A noise management plan, detailing noise reduction measures to be implemented, and prepared by a suitably qualified acoustic expert, shall be submitted to the Council at the time an Outline Plan is lodged. The noise management plan shall include:

a. Measures to ensure compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise – State Highway Improvements' (December 1999), provided that the noise management plan shall not apply to the Christ the King Parish Precinct zoned land occupied by Christ the King Church and School at 288-292 Richardson Road.

5.2 The noise management plan shall identify existing dwellings for which acoustic treatment is required in order to ensure compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise – State Highway Improvements' (December 1999). Those dwellings shall be referred to as 'affected dwelling(s)'.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.3 Not less than three months prior to the completion of construction of the State highway, the Requiring Authority shall give written notice to the owner of each affected dwelling as follows:

- a. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels;
- b. Advising that the owner has nine months within which to decide whether or not to accept mitigation treatment to the dwelling.

5.4 The Requiring Authority shall advise the Council of:

- a. All written notices served in accordance with condition 5.3;
- b. Any responses received to those written notices;
- c. Those affected dwellings in respect of which no response has been received.

5.5 Where acoustic treatment is required to a dwelling, the Requiring Authority shall be deemed to have complied with condition 5.1 above where:

- a. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
- b. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six months after the completion of the State highway;
- or
- c. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six months after the completion of the State highway construction.

5.6 Subject to condition 5.5, all noise mitigation work identified by the noise management plan shall be implemented before the use of the State highway commences.

5.7 Low noise generating surfaces, such as friction course surfacing, shall be investigated for use on the motorway and in Maioro Street as a method of meeting Transit's Guidelines.

6. Noise and Vibration from Blasting

6.1 Blasting activities shall be so controlled as to ensure that any ground vibration as the result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 'Structural Vibration in Buildings – Effect on Structures', will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetre per second (mm/s).

6.2 The noise created by the use of explosives for blasting shall either not exceed a peak overall sound pressure level of 128 dB (i.e. peak over pressure of 0.05 kPa) or alternatively the noise shall not exceed a peak sound level of 122 dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not subject to this designation).

[Refer also condition 2.1(l) relating to notifying residents of imminent blasting.]

7. Parking, Roding and Property Access

7.1 During the detailed design stage, the Requiring Authority will consult with the Council with regard to the most appropriate means (e.g. flush medians, right turn bays) for providing access on Council roads within the designation.

7.2 Any existing on-site parking and manoeuvring areas which are affected by the works shall, as far as practicable, and in consultation with the Council and the affected landowner, be relocated or reinstated to achieve compliance with District Plan standards. Details of any such relocations or reinstatements shall be provided to the Council at the time an Outline Plan is submitted.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.3 Alternative access arrangements shall be provided as far as practicable, and in consultation with the Council and the affected landowner, where existing property access is removed or becomes unsafe as a result of the works. Details of any alternative access arrangements shall be provided to the Council at the time an Outline Plan is submitted.

7.4 The right of way serving the properties at 55B and 55C Stamford Park Road (Lots 1 and 2, DP46097) shall not be used by the Requiring Authority for construction access.

7.5 Any bus stops which need to be moved or shifted as direct a result of the proposed works shall be relocated in consultation with the Council. Christ the King School shall also be consulted about the relocation of the bus stop serving the school.

7.6 The Requiring Authority shall consult with the Council to preserve the Council's ability to construct a rapid transit connection at the Dominion Road interchange as set out in the Council's Notice of Requirement for designation for 'proposed enhancement of the Dominion Road passenger transport services'.

7.7 Hendry Avenue shall be severed into two cul-de-sacs for the purposes of construction of certain aspects of the project. The Requiring Authority shall reconsider whether the final form of Hendry Avenue should constitute cul-de-sacs or a through road after undertaking both further consultation with residents of Hendry Avenue, Stephen Lysnar Place and Kelsey Crescent and a further assessment of effects of both options. Transit will consult with Council officers regarding the results of the further consultation and further assessment of effects before determining the final form of Hendry Avenue.

7.8 The State highway shall be constructed with 3m wide shoulders for traffic safety purposes and to provide for potential future bus lanes.

8. Pedestrian Access

8.1 Appropriate crossing facilities for pedestrians, to mitigate the effects of the proposed works, design and consultation with the Council, shall be provided at the following intersections and roads:

- a. the Hillsborough interchange;
- b. Sandringham Road / Stoddard Road intersection;
- c. Richardson Road / Maioro Street intersection;
- d. Maioro Street / New Windsor Road intersection;
- e. the Dominion Road interchange;
- f. Maioro Street;
- g. any other intersections included within the designation.

Details of crossing facilities shall be provided to the Council at the time an Outline Plan is submitted.

8.2 Fully signalised pedestrian crossings, with a separate phase for pedestrians shall be provided at Richardson Road / Maioro Street, and Maioro Street / New Windsor Road, for the safety of school children using these intersections.

8.3 Pedestrian access shall be provided from Hillsborough Road to Melrose Road.

8.4 Provision shall be made to ensure that the works do not preclude the Council's ability to construct the proposed southwestern cycleway. In particular, and in partnership with the Council, provision shall be made for a southwestern cycleway at the following locations:

- a. Adjacent to the motorway where it passes under May Road;
- b. To be accessed from the pedestrian / cycleway bridge at Ernie Pinches Street (with adequate provision for bicycle turning movements);
- c. In the vicinity of Hendry Avenue (particularly if a decision is made that the final form of Hendry Avenue shall

The Proposed Auckland Unitary Plan (notified 30 September 2013)

constitute cul-de-sac heads).

8.5 Pedestrian / cycle bridges conforming to the design standards of the Austroads Guide to Traffic Engineering Part 6: Pedestrians shall be provided between Somerset Road / Frost Road and Keith Hay Park, and between Ernie Pinches Street and Stoddard Road. The Requiring Authority shall also consult with Mt Roskill Schools regarding the design and location of the pedestrian / cycle bridge between Somerset Road / Frost Road and Keith Hay Park. Details of the pedestrian / cycle bridges shall be provided to the Council at the time an Outline Plan is submitted.

8.6 Boundary fencing for pedestrian safety shall be constructed along the shared boundaries of the motorway and Keith Hay Park, Akarana Golf Club, and Winstone Park.”

9. Archaeological and Geological Areas

9.1 The Requiring Authority shall employ at its expense a qualified archaeologist who shall:

- a. Be on site to monitor all initial earthworks in the immediate vicinity of the Mt Roskill cone, including surface stripping of the site, to establish whether any sub-surface archaeological features are present;
- b. Advise the Council in writing within 24 hours if any archaeological features have been discovered.

9.2 Detailed protocols for the management of archaeological and waahi tapu discoveries shall be specifically discussed with tangata whenua prior to construction.

9.3 If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched;
- c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation, City Planning of the Auckland City Council that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any authority required from the NZ Historic Places Trust is obtained.

9.4 The Requiring Authority shall employ at their expense a qualified geologist who shall:

- a. Be on site to monitor all initial earthworks in the immediate vicinity of the Mt Roskill cone;
- b. Periodically review construction activities in the vicinity of the Mt Roskill cone;
- c. Be available on call to inspect any geological features encountered during excavation at the base of the Mt Roskill cone and to enable identification of any significant geological features;
- d. Advise the Council in writing within 24 hours if any significant geological features have been discovered.

9.5 Any geological discoveries such as lava caves shall be recorded and, where practicable, damage to these features minimised. Records of any such geological discoveries shall be provided to the Auckland City Council, Auckland Regional Council and the Department of Conservation for information and future reference.

10. Lighting

10.1 Where encroachment into areas subject to view protection controls in the District Plan cannot be avoided by structures such as lighting poles and fixtures, such structures shall be designed to have minimum impact, taking into account the assessment criteria in Clause 5C.7.6.5 Rules: Volcanic Cones of the District Plan. Details of any such encroachments together with an assessment of effects shall be provided to the Council at the time an Outline Plan is submitted.

10.2 Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Air Emissions

11.1 Onsite monitoring of air emissions from vehicles shall be carried out over a six week period at the Maioro Street / Richardson Road intersection, adjacent to Christ the King Church and School prior to any physical works associated with the motorway being undertaken in the vicinity. The results shall be provided to the Council at the time an Outline Plan is lodged. The monitoring results shall measure the levels of carbon monoxide, nitrogen dioxide, particulate matter (PM10), and hydrocarbons in relation to air quality guidelines.

11.2 A plan for post construction monitoring of air emissions from vehicles at the Maioro Street / Richardson Road intersection adjacent to Christ the King Church and School shall be provided to the Council at the time an Outline Plan is lodged. The monitoring programme shall include the following:

- a. Engagement of an air emissions expert with specialist equipment to monitor air emissions at the above location;
- b. Measurement of carbon monoxide, nitrogen dioxide, particulate matter (PM10), and hydrocarbons in relation to air quality guidelines;
- c. Details of the number and location of monitoring positions;
- d. A requirement for copies of all air emissions monitoring reports to be provided to the Council;

The monitoring shall be carried out over a six week period within one year of the opening of the SH 20 extension. Monitoring shall be undertaken during the time of year which is expected to give rise to worse case meteorological conditions in terms of air quality.

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all relevant Council bylaws.
2. Under the Historic Places Act an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.
3. Some of the land is subject to existing designations. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.
4. The Council holds a comprehensive discharge consent and has a comprehensive stormwater management plan for the Oakley catchment.
5. The Requiring Authority and the Council will continue to work together to progress the design of the southwestern cycleway generally following the alignment of the State Highway 20 extension.

6732 State Highway 20 - Hillsborough to Mt Roskill

Designation Number	6732
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 from Queenstown Road, Hillborough to Maioro Street, Mt Roskill
Rollover Designation	Yes
Legacy Reference	Designation H08-06, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

The designation is for the following work:

- a. A designation of land between Queenstown Road and the eastern end of Ernie Pinches Street as a road for state highway / motorway purposes (Map Ref H08-05);
 - b. A designation of land between Queenstown Road and New Windsor Road as road, accessway or service lane for access (Map Ref H08-06);
 - c. A designation of land westward from a point opposite Sandringham Road as road for access to and / or for state highway / motorway purposes; this component of the designation being necessary to allow for the connection of the proposed motorway to the local roading network and future grade separation between road and rail when an adjoining railway purposes designation is given effect to (Map Ref H08-07);
- including the construction, operation and maintenance of those roads, accessways and service lanes and all ancillary structures, works and activities directly associated with the proposed extension of State Highway 20 from Hillsborough Road to Maoro Road.

Conditions

1. General

1.1 To move the requirement boundary to the southeast (towards Ernie Pinches Street) to minimise encroachment over the southeastern boundary of Christ the King Church and School at 288-292 Richardson Road as shown on Plan 1/86/32/3914/8 Revision C.

1.1A That the designation be modified by reducing its size so that the part of the designation extending from Carr Road does not extend onto Lot 2, DP 77953 owned by Swift New Zealand Limited and held in Certificate of Title 34A/1386. This modification shall be as shown on Drawing Number 1/86/32/1914/2. The part of the designation on the Hayr Road boundary shall remain.

1.1B No work shall occur within the area of Winstone Park which is currently protected by the Reserves Act 1977 until determination of the High Court appeal AP123/02 (or any subsequent and related Court of Appeal proceeding), dismissing the appeal and / or authorising work within the Winstone Park Reserve.

1.1C That the designation be altered by adjusting its boundaries at 133 Stoddard Road, 67 Ernie Pinches Street and 90 May Road (the Roseman Avenue pond). This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-087, P-03-088, P-03-89 (dated 26 Sept 02); and
- b. P-02-057, P-02-058, P-02-061 (dated 13 Aug 02).

1.1D That the designation be altered by adjusting its boundaries at 43 to 53 Hendry Avenue and 1 to 11A Maoro Street. This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-086, P-03-090 (dated 26 Sept 02); and
- b. P-02-055, P-02-060 (dated 4 Feb 03).

1.1E That the designation be altered by adjusting its boundaries at Mt Roskill Grammar School. This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-092 dated 26 Sept 2002;
- b. P-02-064 dated 4 February 2003;
- c. S-35-126 revision OD dated 28 May 2003;
- d. S-35-101 revision B dated 14 November 2002; and
- e. P-03-086-091 dated 4 Oct 2002.

1.1F That the designation be altered by adjusting its boundaries at the Dominion Road frontage to Winstone

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Park. This alteration shall be as shown on the following drawings drawn by URS Ltd:

- a. P-100-200 'Figure A' dated 21 May 2004; and
- b. P-100-202 'Figure B' dated May 2004.

1.1G That the designation be altered by adjusting its boundaries at the corner of Hendry Avenue and Queenstown Road (Lot 2 DP 55660). This alteration shall be as shown on the following drawings drawn by Transit NZ and URS NZ Ltd:

- a. P-100-011 dated March 2004; and
- b. C-121A, dated April 2004.

1.1H That the designation be altered by adjusting its boundaries at 110, 138A and 155 Hillsborough Road. This alteration shall be as shown on the 'SH20 - Mt Roskill Extension Proposed Alteration to Designation' drawings drawn by Transit NZ and URS NZ Ltd and referred to as:

- a. Figure 2 Rev A, Site 138 Hillsborough Road (dated October 2004);
- b. Figure 3 Rev A, Site 155 Hillsborough Road (dated October 2004); and
- c. Figure 4, Rev A, Site 110 Hillsborough Road (dated October 2004).

1.2 Except as modified by the conditions below, the work shall be undertaken in general accordance with the information provided by Transit New Zealand at the hearing; the Notice of Requirement and supporting documents, namely:

- a. 'SH20 Hillsborough to Richardson Road, Assessment of Effects on the Environment', Traffic Design Group and URS NZ Ltd, dated 2 November 2000;
- b. 'SH20 Hillsborough to Richardson Road, Scheme Assessment Report', Volume 1 – Report, Volume 2 – Drawings, Traffic Design Group and URS NZ Ltd, dated 2 November 2000;
- c. Revised attachments to the Notice of Requirement. In particular, the following drawings drawn by Traffic Design Group and URS NZ Ltd;
- d. 'Proposed designation as amended in response to matters raised during hearing 26 March-6 April 2001', Drawing numbers 1/86/32/1914/1-4 Revision E; and
- f. 'Property identification and designation boundaries (as revised post-notification)', 1/86/32/3914/1-9 Revision C.

1.3

- a. Except as modified by conditions below, works on and disturbance of the northern slopes of the Mt Roskill volcanic cone between Dominion Road and Roseman Avenue shall be generally in accordance with the works shown on Figure A (Project Drawing Number P-100-200) drawn by URS NZ Ltd dated 21 May 2004 (hereafter referred to as "Figure A"); and
- b. If as a result of detailed design, the Requiring Authority proposes any departure from the works shown on Figure A that affects Mt Roskill volcanic cone between Dominion Road and Roseman Avenue but which remains in general accordance with the drawing, the Requiring Authority shall consult with the Department of Conservation before adopting any such a departure; and
- c. No excavation beyond that associated with the extent of work shown on Figure A is permitted, except where:-
 - i. the work does not result in any further excavation of unmodified parts of the cone within Winstone Park; and
 - ii. the work is consistent with Condition 2.1B.

1.4 Where the State highway connects with Richardson Road, the route shall be redesigned and shifted towards the southeast so as to minimise the need for works to encroach across the southeastern boundary of Christ the King Church and School at 288-292 Richardson Road.

1.5 The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1)(c) of the Resource Management Act 1991.

1.6 Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

by S78 of the Local Government (Auckland Transitional Provisions) Act 2010.

1.7 As soon as practicable following confirmation of the designation and completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of the existing designation F05-05 'proposed motorway; proposed motorway and railway; proposed road, Hayr Road to Richardson Road.

1.8 As soon as practicable following confirmation of the designation and completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of the existing designation A07-01 'motorway' in the vicinity of Hendry Road where designation A07-01 is replaced by the new designation.

1.9 As soon as practicable, following completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of those parts of the designation which are not required for the long term operation and maintenance of the State highway.

1.9A

a. Within three months following completion of construction of the state highway between Dominion Road and Roseman Avenue, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for the adjustment of the southern boundary of the designation between Dominion Road and Roseman Avenue to a new position approximately 18 metres northwards; and

b. Activities within the zone 2 metres to the north of the adjusted designation boundary shall thereafter be limited to inspection and maintenance purposes.

1.9B Works within Winstone Park along the Dominion Road frontage shall be undertaken in accordance with the following:

a. The design of the proposed footpath between the Winstone Park access road and the Dominion Road interchange shall be generally in accordance with the works shown on Figure A (Project Drawing Number P-100-200) drawn by URS NZ Ltd dated 21 May 2004.

b. The detailed design of the new footpath between the Winstone Park access road and the Dominion Road interchange shall be determined in consultation with the council. The following matters shall be taken into account in the final design:

i. The appropriate width;

ii. Lighting;

iii. The connection between the new footpath and the existing footpath along Dominion Road;

iv. The need to ensure changes to the Winstone Park vehicle access clearly define the pedestrian crossing point.

c. The construction of the proposed footpath between the Winstone Park access road and the Dominion Road interchange shall be undertaken in a manner which minimises excavation of the natural ground surface.

d. Prior to any construction work commencing protective fencing shall be erected to protect the trees near the area of works. Where practicable the fencing shall be to the standard described within 4.1 Protective Fencing in Annexure 5 (Guidelines for works within the vicinity of trees) of the District Plan.

e. All pruning works and construction activity at the base of the existing mature puriri and totara trees adjacent to the proposed footpath shall be undertaken in consultation with the council's parks arborist. The work shall also be undertaken in accordance with the arborist's report dated 27 February 2004, included with the notice of requirement.

f. With regard to the mature puriri to the immediate south of the Winstone Park access road, the portion of the batter within the dripline of the puriri shall be excavated under arborist's supervision, incorporating hand digging as required. All roots encountered shall be cut cleanly back to the soil face with sharp pruning tools. The exposed face shall be immediately covered with up to 50mm of high quality topsoil and the topsoil lightly compacted.

g. Any pruning of trees required to achieve clearance for the footpath shall be undertaken by a recognised

The Proposed Auckland Unitary Plan (notified 30 September 2013)

arboricultural contractor who is approved by the council's parks arborist.

h. Transit's contractor shall contact the council's parks arborist a minimum of five working days prior to any arboricultural work commencing to arrange for a pre-works commencement meeting. All contractors and sub-contractors involved in the arboricultural work shall be present. The location of protective fencing shall be agreed in consultation with the council's parks arborist at that time.

1.10 The Requiring Authority shall pay the Council a compliance monitoring charge of \$5,000 (inclusive of GST), plus any further monitoring charge or charges to recover the actual and reasonable costs that have been incurred to ensure compliance. (This charge is to cover the cost of inspecting the site, carrying out tests, reviewing conditions, updating files and all work required to ensure compliance with the conditions on the designation). This monitoring charge shall be paid at the time an Outline Plan is submitted.

1.11 Any land taken or held for works shall be maintained to a reasonable standard until physical works commence to the satisfaction of the Council.

1.12 That a permanent liaison person shall be appointed by the Requiring Authority for the duration of the State Highway 20 extension project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be available for on-going consultation on all matters of concern to affected persons.

1.13 Access shall be maintained to the land currently leased by the Pat Noton (1984) Trust under New Zealand Railways Corporation Leases L43520 and N2080, and to the land currently leased by South International Finance under New Zealand Railways Corporation Lease L44406/C25209 while those parties remain in valid occupation of the land.

2. Construction

2.1 Prior to commencement of any works on any part of the land included within the designation, the Requiring Authority shall submit a Construction Management Plan to the Council in respect of that land. The Construction Management Plan shall include specific details relating to the demolition, construction and management of all works associated with this development, including:

- a. Details of the site or project manager, including their contact details (phone, facsimile, postal address);
- b. The location of large noticeboards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. Any means, such as a restriction on the size of construction vehicles and machinery, required to ensure that no damage occurs to street trees throughout the construction period;
- d. Any means of protection of services such as pipes and watermain within the road reserve;
- e. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- f. Measures to be adopted to ensure that pedestrian access past the works is provided where practicable and that such access is safe;
- g. Location of workers conveniences (e.g. portaloos);
- h. Ingress and egress to and from the works for vehicles during the construction period;
- i. Proposed maximum numbers and timing of truck movements throughout each day and the proposed routes;
- j. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- k. Location of vehicle and construction machinery access during the construction period;
- l. Procedures to be followed for ensuring that residents within 100 metres of blast sites receive at least 24 hours written notice of any imminent blasting;
- m. Hours of operation and days of the week for construction activities;
- n. Means of providing safe pedestrian access between Keith Hay Park and the Mt Roskill Schools, and between

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Ernie Pinches Street and Stoddard Road during construction;

o. Means of ensuring the safety of the general public;

p. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;

q. Procedures to be followed to ensure that those working in the vicinity of Mt Roskill volcanic cone are aware of the heritage values of the cone and the steps which need to be taken to meet the conditions applying to work in this area.

The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction period.

2.1A With respect to the 20 metre wide strip situated to the north of the southern boundary of the designation within Winstone Park, during construction:

a. Storage of materials, and vehicle or machinery parking shall only be carried out within the same area 10 metres extending from and parallel to the southern boundary of the designation;

b. Prior to the commencement of any construction activity, a temporary 2 metre high fence shall be erected along the southern boundary of the designation to separate the Winstone Park reserve from all construction activities, and the fence shall not be removed until either all related construction activity is completed or the area is no longer required for that purpose.

2.1B Once construction of the motorway within the designated area between Dominion Road and Roseman Avenue is completed, any land on Mount Roskill, within the 18 metre strip previously designated (as referred to in Condition 1.8A), must be reinstated in conformity with the natural landscape and form in that vicinity, as soon as practicable.

2.2 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of this designation at all times and not on surrounding streets.

2.3 All storage of materials and loading and unloading of equipment associated with the construction works shall take place within the boundaries of this designation.

2.4 Pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable.

2.5 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the road during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage.

2.6 During construction, the New Zealand Standard NZS 6803:1999 Acoustics – Construction Noise, shall be complied with. The limits of Table 2 shall also be applied to school buildings.

2.7 Appropriate measures shall be taken during construction to minimise potential dust nuisance.

2.8 Pedestrian access between Keith Hay Park and the Mt Roskill Schools, and between Ernie Pinches Street and Stoddard Road shall be maintained during construction.

2.9 Prior to the commencement of construction in the vicinity of Winstone Park (at the Mt Roskill cone), Transit shall use its best endeavours to relocate the existing childrens' playground in the Park to a location approved by the Council.

3. Landscape and Visual Effects

3.1 A detailed landscape plan, including an implementation and maintenance programme, shall be prepared by

The Proposed Auckland Unitary Plan (notified 30 September 2013)

a suitably qualified landscape architect in consultation with the Council, at the time of submitting an Outline Plan.

- a. The plan shall include details of the plant sizes at the time of planting and intended species.
- b. In preparing the landscape plan, the following matters shall be taken into account:
 - i. The integration of the highway alignment into the surrounding landscape;
 - ii. Mitigation of effects on properties in the vicinity of the alignment;
 - iii. Any proposed planting of mature trees (including replanting);
 - iv. Planting in respect of waterways, including stormwater ponds;
 - v. Planting of earth bunds;
 - vi. The suitability of particular species of plants to the conditions of any particular area, and the beneficial effects of any particular species in terms of air quality;
 - vii. The staging of landscaping with the staging of construction;
 - viii. Landscaping in respect of Maioro Street.
- c. Such a plan is to include appropriate measures for:
 - i. screening views of the motorway from adjacent properties and public places;
 - ii. screening noise attenuation fences;
 - iii. retention or relocation of existing trees where practicable;
 - iv. revegetation of the realigned stream located between Ernie Pinches Street and Stoddard Road.
- d. The landscaping shall be implemented in accordance with the landscaping plan within the first planting season following the completion of the construction works, and shall be maintained for the next five years.

3.2

- a. The Requiring Authority shall consult with the Department of Conservation ('DOC'), Auckland Conservation Board ('ACB') and the Auckland Volcanic Cones Society Inc ('AVCS') on the final design of the works shown on Figure A and associated safety fence at the base of the Mt Roskill Cone;
- b. The design of the safety fence shall incorporate materials, textures and colours appropriate to the visual and historical context of the cone;
- c. Batter slopes shall be planted with trees or shrubs suited to the conditions of the site and to the natural context of the cone;
- d. The associated safety fence shall be a minimum 1.4 metres in height and shall include appropriate safety features. The fence shall be designed to be as visually transparent as possible, while still meeting the required safety standards;
- e. The results of consultation with DOC, ACB and AVCS shall be taken into account in finalising the design of the batter slopes, reinstatement works and safety fence;
- f. Plans for the design of the batter slopes, reinstatement works and safety fence, together with a report on the consultation with DOC, ACB and AVCS, shall be provided to the Auckland City Council at the time an Outline Plan is submitted.
- g. A photographic record shall be taken as the cut proceeds to provide a visual record of the geology of the cone

3.3 Vehicle access past the oak tree at the rear of St Martin's Church (1358 Dominion Road) shall be provided in a manner which minimises excavation and damage to the tree roots.

3.4 To the extent that stormwater management allows, a landscape bund shall be constructed along the boundary of Keith Hay Park and the motorway to achieve visual and landscaping mitigation. No part of the bund shall extend beyond the boundary of the designation without specific approval from Auckland City Council as land owner.

3A. Somerset Road Tress

Trees requiring trimming or removal for the construction of the Keith Hay Park pedestrian and cycle bridge

3A.1 All tree work identified on drawing S-35-126 revision OD dated 28 May 2003 (produced by Transit and URS NZ Ltd) shall be undertaken by a recognised arboricultural contractor who is approved by the Council's parks arborist.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3A.2 Transit's Contractor shall contact the Council's parks arborist a minimum of 5 working days prior to any arboricultural work commencing to arrange for a pre works commencement meeting. All contractors and sub-contractors involved in the arboricultural works shall be present.

3A.3 All tree removals and pruning works shall be undertaken in consultation with Council's parks arborist.

3A.4 All tree pruning works shall employ recognised arboricultural target pruning practices. All such works shall be supervised by the Council's parks arborist who shall be available in accordance with the 5 days notice required in condition 3A.2.

3A.5 All tree removal work shall employ recognised arboricultural felling and dismantling practices, and shall be undertaken in a manner that avoids or minimises damage or disturbance to adjacent trees to be retained.

Protection of seven trees on southern side of Somerset Road

3A.6 Prior to any construction activities commencing a temporary barrier shall be erected as close as practicable to the edge of the dripline of trees numbered 1211-1217 (as identified on drawing S-35-126 revision OD dated 28 May 2003 produced by Transit and URS NZ Ltd). The location of the temporary barrier shall be determined in consultation with the Council parks arborist. The temporary barrier shall be a minimum of 2 metres in height and shall be of sturdy construction. It shall remain in place for the entire duration of all works within the vicinity of the Somerset Road trees. The temporary barrier shall be clearly identified as a 'restricted area / tree protection area' by the placement of the appropriate signage.

3A.7 Any pruning on the southern side of the poplar trees numbered 1211-1217 that may be required to provide clearance from the construction site shall be undertaken in consultation with Council's parks arborist.

3A.8 All pruning works shall be performed by a qualified competent arborist using recognised arboricultural target pruning practice. All such works shall be supervised by the Council's parks arborist who shall be available in accordance with the 5 days notice required in condition 3A.2.

3A.9 Prior to any construction activities commencing, a layer of mulch shall be laid over the entire area within the fenced area referred to in 3A.6 above. The mulch shall be a minimum thickness of 200mm, and shall be maintained at this level for the entire duration of the construction works within the vicinity of the Somerset Road trees.

3A.10 At no time shall the fenced area referred to in 3A.6 above be used for storage even temporarily of construction materials, fill, or any other materials associated with the State Highway 20 project.

3A.11 At no time shall any vehicles or equipment be even temporarily parked, stored, or manoeuvred within the fenced area referred to in 3A.6 above.

3A.12 All excavations in close proximity to the dripline of trees 1211-1217 shall require direct supervision by a competent arborist. Any root pruning which is required shall be undertaken by the arborist using recognised root pruning procedures.

4. Sediment Control and Stormwater

4.1 The Requiring Authority shall implement suitable sediment control measures during all earthworks and after construction to ensure that all stormwater run off from the site is managed and controlled to ensure that in so far as is practicable no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with the Auckland City Operative District Plan 1999 (Isthmus) Annexure 14 Guidelines for sediment control. In the event that material is deposited on the street, the Requiring Authority shall take immediate action at their own expense, to clean the street.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4.2 The Requiring Authority shall implement suitable arrangements for stormwater treatment and detention in accordance with relevant ARC guidelines.

5. Noise (Following Construction)

5.1 A noise management plan, detailing noise reduction measures to be implemented, and prepared by a suitably qualified acoustic expert, shall be submitted to the Council at the time an Outline Plan is lodged. The noise management plan shall include:

a. Measures to ensure compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise – State Highway Improvements' (December 1999), provided that the noise management plan shall not apply to the Christ the King Parish Precinct zoned land occupied by Christ the King Church and School at 288-292 Richardson Road.

5.2 The noise management plan shall identify existing dwellings for which acoustic treatment is required in order to ensure compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise – State Highway Improvements' (December 1999). Those dwellings shall be referred to as 'affected dwelling(s)'.

5.3 Not less than three months prior to the completion of construction of the State highway, the Requiring Authority shall give written notice to the owner of each affected dwelling as follows:

a. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels;
b. Advising that the owner has nine months within which to decide whether or not to accept mitigation treatment to the dwelling.

5.4 The Requiring Authority shall advise the Council of:

a. All written notices served in accordance with condition 5.3;
b. Any responses received to those written notices;
c. Those affected dwellings in respect of which no response has been received.

5.5 Where acoustic treatment is required to a dwelling, the Requiring Authority shall be deemed to have complied with condition 5.1 above where:

a. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
b. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six months after the completion of the State highway;
or
c. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six months after the completion of the State highway construction.

5.6 Subject to condition 5.5, all noise mitigation work identified by the noise management plan shall be implemented before the use of the State highway commences.

5.7 Low noise generating surfaces, such as friction course surfacing, shall be investigated for use on the motorway and in Maioro Street as a method of meeting Transit's Guidelines.

6. Noise and Vibration from Blasting

6.1 Blasting activities shall be so controlled as to ensure that any ground vibration as the result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 'Structural Vibration in Buildings – Effect on Structures', will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetre per second (mm/s).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6.2 The noise created by the use of explosives for blasting shall either not exceed a peak overall sound pressure level of 128 dB (i.e. peak over pressure of 0.05 kPa) or alternatively the noise shall not exceed a peak sound level of 122 dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not subject to this designation).

[Refer also condition 2.1(l) relating to notifying residents of imminent blasting.]

7. Parking, Roothing and Property Access

7.1 During the detailed design stage, the Requiring Authority will consult with the Council with regard to the most appropriate means (e.g. flush medians, right turn bays) for providing access on Council roads within the designation.

7.2 Any existing on-site parking and manoeuvring areas which are affected by the works shall, as far as practicable, and in consultation with the Council and the affected landowner, be relocated or reinstated to achieve compliance with District Plan standards. Details of any such relocations or reinstatements shall be provided to the Council at the time an Outline Plan is submitted.

7.3 Alternative access arrangements shall be provided as far as practicable, and in consultation with the Council and the affected landowner, where existing property access is removed or becomes unsafe as a result of the works. Details of any alternative access arrangements shall be provided to the Council at the time an Outline Plan is submitted.

7.4 The right of way serving the properties at 55B and 55C Stamford Park Road (Lots 1 and 2, DP46097) shall not be used by the Requiring Authority for construction access.

7.5 Any bus stops which need to be moved or shifted as direct a result of the proposed works shall be relocated in consultation with the Council. Christ the King School shall also be consulted about the relocation of the bus stop serving the school.

7.6 The Requiring Authority shall consult with the Council to preserve the Council's ability to construct a rapid transit connection at the Dominion Road interchange as set out in the Council's Notice of Requirement for designation for 'proposed enhancement of the Dominion Road passenger transport services'.

7.7 Hendry Avenue shall be severed into two cul-de-sacs for the purposes of construction of certain aspects of the project. The Requiring Authority shall reconsider whether the final form of Hendry Avenue should constitute cul-de-sacs or a through road after undertaking both further consultation with residents of Hendry Avenue, Stephen Lysnar Place and Kelsey Crescent and a further assessment of effects of both options. Transit will consult with Council officers regarding the results of the further consultation and further assessment of effects before determining the final form of Hendry Avenue.

7.8 The State highway shall be constructed with 3m wide shoulders for traffic safety purposes and to provide for potential future bus lanes.

8. Pedestrian Access

8.1 Appropriate crossing facilities for pedestrians, to mitigate the effects of the proposed works, design and consultation with the Council, shall be provided at the following intersections and roads:

- a. the Hillsborough interchange;
- b. Sandringham Road / Stoddard Road intersection;
- c. Richardson Road / Maioro Street intersection;
- d. Maioro Street / New Windsor Road intersection;
- e. the Dominion Road interchange;
- f. Maioro Street;
- g. any other intersections included within the designation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Details of crossing facilities shall be provided to the Council at the time an Outline Plan is submitted.

8.2 Fully signalised pedestrian crossings, with a separate phase for pedestrians shall be provided at Richardson Road / Maioro Street, and Maioro Street / New Windsor Road, for the safety of school children using these intersections.

8.3 Pedestrian access shall be provided from Hillsborough Road to Melrose Road.

8.4 Provision shall be made to ensure that the works do not preclude the Council's ability to construct the proposed southwestern cycleway. In particular, and in partnership with the Council, provision shall be made for a southwestern cycleway at the following locations:

- a. Adjacent to the motorway where it passes under May Road;
- b. To be accessed from the pedestrian / cycleway bridge at Ernie Pinches Street (with adequate provision for bicycle turning movements);
- c. In the vicinity of Hendry Avenue (particularly if a decision is made that the final form of Hendry Avenue shall constitute cul-de-sac heads).

8.5 Pedestrian / cycle bridges conforming to the design standards of the Austroads Guide to Traffic Engineering Part 6: Pedestrians shall be provided between Somerset Road / Frost Road and Keith Hay Park, and between Ernie Pinches Street and Stoddard Road. The Requiring Authority shall also consult with Mt Roskill Schools regarding the design and location of the pedestrian / cycle bridge between Somerset Road / Frost Road and Keith Hay Park. Details of the pedestrian / cycle bridges shall be provided to the Council at the time an Outline Plan is submitted.

8.6 Boundary fencing for pedestrian safety shall be constructed along the shared boundaries of the motorway and Keith Hay Park, Akarana Golf Club, and Winstone Park."

9. Archaeological and Geological Areas

9.1 The Requiring Authority shall employ at its expense a qualified archaeologist who shall:

- a. Be on site to monitor all initial earthworks in the immediate vicinity of the Mt Roskill cone, including surface stripping of the site, to establish whether any sub-surface archaeological features are present;
- b. Advise the Council in writing within 24 hours if any archaeological features have been discovered.

9.2 Detailed protocols for the management of archaeological and waahi tapu discoveries shall be specifically discussed with tangata whenua prior to construction.

9.3 If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched;
- c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation, City Planning of the Auckland City Council that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any authority required from the NZ Historic Places Trust is obtained.

9.4 The Requiring Authority shall employ at their expense a qualified geologist who shall:

- a. Be on site to monitor all initial earthworks in the immediate vicinity of the Mt Roskill cone;
- b. Periodically review construction activities in the vicinity of the Mt Roskill cone;
- c. Be available on call to inspect any geological features encountered during excavation at the base of the Mt Roskill cone and to enable identification of any significant geological features;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. Advise the Council in writing within 24 hours if any significant geological features have been discovered.

9.5 Any geological discoveries such as lava caves shall be recorded and, where practicable, damage to these features minimised. Records of any such geological discoveries shall be provided to the Auckland City Council, Auckland Regional Council and the Department of Conservation for information and future reference.

10. Lighting

10.1 Where encroachment into areas subject to view protection controls in the District Plan cannot be avoided by structures such as lighting poles and fixtures, such structures shall be designed to have minimum impact, taking into account the assessment criteria in Clause 5C.7.6.5 Rules: Volcanic Cones of the District Plan. Details of any such encroachments together with an assessment of effects shall be provided to the Council at the time an Outline Plan is submitted.

10.2 Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas.

11. Air Emissions

11.1 Onsite monitoring of air emissions from vehicles shall be carried out over a six week period at the Maioro Street / Richardson Road intersection, adjacent to Christ the King Church and School prior to any physical works associated with the motorway being undertaken in the vicinity. The results shall be provided to the Council at the time an Outline Plan is lodged. The monitoring results shall measure the levels of carbon monoxide, nitrogen dioxide, particulate matter (PM10), and hydrocarbons in relation to air quality guidelines.

11.2 A plan for post construction monitoring of air emissions from vehicles at the Maioro Street / Richardson Road intersection adjacent to Christ the King Church and School shall be provided to the Council at the time an Outline Plan is lodged. The monitoring programme shall include the following:

- a. Engagement of an air emissions expert with specialist equipment to monitor air emissions at the above location;
 - b. Measurement of carbon monoxide, nitrogen dioxide, particulate matter (PM10), and hydrocarbons in relation to air quality guidelines;
 - c. Details of the number and location of monitoring positions;
 - d. A requirement for copies of all air emissions monitoring reports to be provided to the Council;
- The monitoring shall be carried out over a six week period within one year of the opening of the SH 20 extension. Monitoring shall be undertaken during the time of year which is expected to give rise to worse case meteorological conditions in terms of air quality.

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all relevant Council bylaws.
2. Under the Historic Places Act an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.
3. Some of the land is subject to existing designations. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.
4. The Council holds a comprehensive discharge consent and has a comprehensive stormwater management plan for the Oakley catchment.
5. The Requiring Authority and the Council will continue to work together to progress the design of the southwestern cycleway generally following the alignment of the State Highway 20 extension.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6733 State Highway 20 - Road Access Mt Roskill

Designation Number	6733
Requiring Authority	New Zealand Transport Agency
Location	State Highway 20 in the vicinity of Earnie Pinches Street, My Roskill
Rollover Designation	Yes
Legacy Reference	Designation H08-07, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation is for the following work:

- a. A designation of land between Queenstown Road and the eastern end of Ernie Pinches Street as a road for state highway / motorway purposes (Map Ref H08-05);
 - b. A designation of land between Queenstown Road and New Windsor Road as road, accessway or service lane for access (Map Ref H08-06);
 - c. A designation of land westward from a point opposite Sandringham Road as road for access to and / or for state highway / motorway purposes; this component of the designation being necessary to allow for the connection of the proposed motorway to the local roading network and future grade separation between road and rail when an adjoining railway purposes designation is given effect to (Map Ref H08-07);
- including the construction, operation and maintenance of those roads, accessways and service lanes and all ancillary structures, works and activities directly associated with the proposed extension of State Highway 20 from Hillsborough Road to Maoro Road.

Conditions

1. General

1.1 To move the requirement boundary to the southeast (towards Ernie Pinches Street) to minimise encroachment over the southeastern boundary of Christ the King Church and School at 288-292 Richardson Road as shown on Plan 1/86/32/3914/8 Revision C.

1.1A That the designation be modified by reducing its size so that the part of the designation extending from Carr Road does not extend onto Lot 2, DP 77953 owned by Swift New Zealand Limited and held in Certificate of Title 34A/1386. This modification shall be as shown on Drawing Number 1/86/32/1914/2. The part of the designation on the Hayr Road boundary shall remain.

1.1B No work shall occur within the area of Winstone Park which is currently protected by the Reserves Act 1977 until determination of the High Court appeal AP123/02 (or any subsequent and related Court of Appeal proceeding), dismissing the appeal and / or authorising work within the Winstone Park Reserve.

1.1C That the designation be altered by adjusting its boundaries at 133 Stoddard Road, 67 Ernie Pinches Street and 90 May Road (the Roseman Avenue pond). This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-087, P-03-088, P-03-89 (dated 26 Sept 02); and
- b. P-02-057, P-02-058, P-02-061 (dated 13 Aug 02).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.1D That the designation be altered by adjusting its boundaries at 43 to 53 Hendry Avenue and 1 to 11A Maoro Street. This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-086, P-03-090 (dated 26 Sept 02); and
- b. P-02-055, P-02-060 (dated 4 Feb 03).

1.1E That the designation be altered by adjusting its boundaries at Mt Roskill Grammar School. This alteration shall be as shown on the following drawings produced by Transit NZ and URS NZ Ltd:

- a. P-03-092 dated 26 Sept 2002;
- b. P-02-064 dated 4 February 2003;
- c. S-35-126 revision OD dated 28 May 2003;
- d. S-35-101 revision B dated 14 November 2002; and
- e. P-03-086-091 dated 4 Oct 2002.

1.1F That the designation be altered by adjusting its boundaries at the Dominion Road frontage to Winstone Park. This alteration shall be as shown on the following drawings drawn by URS Ltd:

- a. P-100-200 'Figure A' dated 21 May 2004; and
- b. P-100-202 'Figure B' dated May 2004.

1.1G That the designation be altered by adjusting its boundaries at the corner of Hendry Avenue and Queenstown Road (Lot 2 DP 55660). This alteration shall be as shown on the following drawings drawn by Transit NZ and URS NZ Ltd:

- a. P-100-011 dated March 2004; and
- b. C-121A, dated April 2004.

1.1H That the designation be altered by adjusting its boundaries at 110, 138A and 155 Hillsborough Road. This alteration shall be as shown on the 'SH20 - Mt Roskill Extension Proposed Alteration to Designation' drawings drawn by Transit NZ and URS NZ Ltd and referred to as:

- a. Figure 2 Rev A, Site 138 Hillsborough Road (dated October 2004);
- b. Figure 3 Rev A, Site 155 Hillsborough Road (dated October 2004); and
- c. Figure 4, Rev A, Site 110 Hillsborough Road (dated October 2004).

1.2 Except as modified by the conditions below, the work shall be undertaken in general accordance with the information provided by Transit New Zealand at the hearing; the Notice of Requirement and supporting documents, namely:

- a. 'SH20 Hillsborough to Richardson Road, Assessment of Effects on the Environment', Traffic Design Group and URS NZ Ltd, dated 2 November 2000;
- b. 'SH20 Hillsborough to Richardson Road, Scheme Assessment Report', Volume 1 – Report, Volume 2 – Drawings, Traffic Design Group and URS NZ Ltd, dated 2 November 2000;
- c. Revised attachments to the Notice of Requirement. In particular, the following drawings drawn by Traffic Design Group and URS NZ Ltd;
- d. 'Proposed designation as amended in response to matters raised during hearing 26 March-6 April 2001', Drawing numbers 1/86/32/1914/1-4 Revision E; and
- f. 'Property identification and designation boundaries (as revised post-notification)', 1/86/32/3914/1-9 Revision C.

1.3

- a. Except as modified by conditions below, works on and disturbance of the northern slopes of the Mt Roskill volcanic cone between Dominion Road and Roseman Avenue shall be generally in accordance with the works shown on Figure A (Project Drawing Number P-100-200) drawn by URS NZ Ltd dated 21 May 2004 (hereafter referred to as "Figure A"); and
- b. If as a result of detailed design, the Requiring Authority proposes any departure from the works shown on Figure A that affects Mt Roskill volcanic cone between Dominion Road and Roseman Avenue but which remains

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in general accordance with the drawing, the Requiring Authority shall consult with the Department of Conservation before adopting any such a departure; and

c. No excavation beyond that associated with the extent of work shown on Figure A is permitted, except where:-

- i. the work does not result in any further excavation of unmodified parts of the cone within Winstone Park; and
- ii. the work is consistent with Condition 2.1B.

1.4 Where the State highway connects with Richardson Road, the route shall be redesigned and shifted towards the southeast so as to minimise the need for works to encroach across the southeastern boundary of Christ the King Church and School at 288-292 Richardson Road.

1.5 The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1)(c) of the Resource Management Act 1991.

1.6 Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015, by S78 of the Local Government (Auckland Transitional Provisions) Act 2010.

1.7 As soon as practicable following confirmation of the designation and completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of the existing designation F05-05 'proposed motorway; proposed motorway and railway; proposed road, Hayr Road to Richardson Road.

1.8 As soon as practicable following confirmation of the designation and completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of the existing designation A07-01 'motorway' in the vicinity of Hendry Road where designation A07-01 is replaced by the new designation.

1.9 As soon as practicable, following completion of construction, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for removal of those parts of the designation which are not required for the long term operation and maintenance of the State highway.

1.9A

a. Within three months following completion of construction of the state highway between Dominion Road and Roseman Avenue, the Requiring Authority shall give notice to the Council in accordance with Section 182 of the RMA for the adjustment of the southern boundary of the designation between Dominion Road and Roseman Avenue to a new position approximately 18 metres northwards; and

b. Activities within the zone 2 metres to the north of the adjusted designation boundary shall thereafter be limited to inspection and maintenance purposes.

1.9B Works within Winstone Park along the Dominion Road frontage shall be undertaken in accordance with the following:

a. The design of the proposed footpath between the Winstone Park access road and the Dominion Road interchange shall be generally in accordance with the works shown on Figure A (Project Drawing Number P-100-200) drawn by URS NZ Ltd dated 21 May 2004.

b. The detailed design of the new footpath between the Winstone Park access road and the Dominion Road interchange shall be determined in consultation with the council. The following matters shall be taken into account in the final design:

- i. The appropriate width;
- ii. Lighting;
- iii. The connection between the new footpath and the existing footpath along Dominion Road;
- iv. The need to ensure changes to the Winstone Park vehicle access clearly define the pedestrian crossing point.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. The construction of the proposed footpath between the Winstone Park access road and the Dominion Road interchange shall be undertaken in a manner which minimises excavation of the natural ground surface.
- d. Prior to any construction work commencing protective fencing shall be erected to protect the trees near the area of works. Where practicable the fencing shall be to the standard described within 4.1 Protective Fencing in Annexure 5 (Guidelines for works within the vicinity of trees) of the District Plan.
- e. All pruning works and construction activity at the base of the existing mature puriri and totara trees adjacent to the proposed footpath shall be undertaken in consultation with the council's parks arborist. The work shall also be undertaken in accordance with the arborist's report dated 27 February 2004, included with the notice of requirement.
- f. With regard to the mature puriri to the immediate south of the Winstone Park access road, the portion of the batter within the dripline of the puriri shall be excavated under arborist's supervision, incorporating hand digging as required. All roots encountered shall be cut cleanly back to the soil face with sharp pruning tools. The exposed face shall be immediately covered with up to 50mm of high quality topsoil and the topsoil lightly compacted.
- g. Any pruning of trees required to achieve clearance for the footpath shall be undertaken by a recognised arboricultural contractor who is approved by the council's parks arborist.
- h. Transit's contractor shall contact the council's parks arborist a minimum of five working days prior to any arboricultural work commencing to arrange for a pre-works commencement meeting. All contractors and sub-contractors involved in the arboricultural work shall be present. The location of protective fencing shall be agreed in consultation with the council's parks arborist at that time.

1.10 The Requiring Authority shall pay the Council a compliance monitoring charge of \$5,000 (inclusive of GST), plus any further monitoring charge or charges to recover the actual and reasonable costs that have been incurred to ensure compliance. (This charge is to cover the cost of inspecting the site, carrying out tests, reviewing conditions, updating files and all work required to ensure compliance with the conditions on the designation). This monitoring charge shall be paid at the time an Outline Plan is submitted.

1.11 Any land taken or held for works shall be maintained to a reasonable standard until physical works commence to the satisfaction of the Council.

1.12 That a permanent liaison person shall be appointed by the Requiring Authority for the duration of the State Highway 20 extension project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be available for on-going consultation on all matters of concern to affected persons.

1.13 Access shall be maintained to the land currently leased by the Pat Noton (1984) Trust under New Zealand Railways Corporation Leases L43520 and N2080, and to the land currently leased by South International Finance under New Zealand Railways Corporation Lease L44406/C25209 while those parties remain in valid occupation of the land.

2. Construction

2.1 Prior to commencement of any works on any part of the land included within the designation, the Requiring Authority shall submit a Construction Management Plan to the Council in respect of that land. The Construction Management Plan shall include specific details relating to the demolition, construction and management of all works associated with this development, including:

- a. Details of the site or project manager, including their contact details (phone, facsimile, postal address);
- b. The location of large noticeboards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. Any means, such as a restriction on the size of construction vehicles and machinery, required to ensure that no damage occurs to street trees throughout the construction period;
- d. Any means of protection of services such as pipes and watermain within the road reserve;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- e. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- f. Measures to be adopted to ensure that pedestrian access past the works is provided where practicable and that such access is safe;
- g. Location of workers conveniences (e.g. portaloos);
- h. Ingress and egress to and from the works for vehicles during the construction period;
- i. Proposed maximum numbers and timing of truck movements throughout each day and the proposed routes;
- j. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- k. Location of vehicle and construction machinery access during the construction period;
- l. Procedures to be followed for ensuring that residents within 100 metres of blast sites receive at least 24 hours written notice of any imminent blasting;
- m. Hours of operation and days of the week for construction activities;
- n. Means of providing safe pedestrian access between Keith Hay Park and the Mt Roskill Schools, and between Ernie Pinches Street and Stoddard Road during construction;
- o. Means of ensuring the safety of the general public;
- p. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;
- q. Procedures to be followed to ensure that those working in the vicinity of Mt Roskill volcanic cone are aware of the heritage values of the cone and the steps which need to be taken to meet the conditions applying to work in this area.

The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction period.

2.1A With respect to the 20 metre wide strip situated to the north of the southern boundary of the designation within Winstone Park, during construction:

- a. Storage of materials, and vehicle or machinery parking shall only be carried out within the same area 10 metres extending from and parallel to the southern boundary of the designation;
- b. Prior to the commencement of any construction activity, a temporary 2 metre high fence shall be erected along the southern boundary of the designation to separate the Winstone Park reserve from all construction activities, and the fence shall not be removed until either all related construction activity is completed or the area is no longer required for that purpose.

2.1B Once construction of the motorway within the designated area between Dominion Road and Roseman Avenue is completed, any land on Mount Roskill, within the 18 metre strip previously designated (as referred to in Condition 1.8A), must be reinstated in conformity with the natural landscape and form in that vicinity, as soon as practicable.

2.2 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of this designation at all times and not on surrounding streets.

2.3 All storage of materials and loading and unloading of equipment associated with the construction works shall take place within the boundaries of this designation.

2.4 Pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable.

2.5 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the road during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.6 During construction, the New Zealand Standard NZS 6803:1999 Acoustics – Construction Noise, shall be complied with. The limits of Table 2 shall also be applied to school buildings.

2.7 Appropriate measures shall be taken during construction to minimise potential dust nuisance.

2.8 Pedestrian access between Keith Hay Park and the Mt Roskill Schools, and between Ernie Pinches Street and Stoddard Road shall be maintained during construction.

2.9 Prior to the commencement of construction in the vicinity of Winstone Park (at the Mt Roskill cone), Transit shall use its best endeavours to relocate the existing childrens' playground in the Park to a location approved by the Council.

3. Landscape and Visual Effects

3.1 A detailed landscape plan, including an implementation and maintenance programme, shall be prepared by a suitably qualified landscape architect in consultation with the Council, at the time of submitting an Outline Plan.

- a. The plan shall include details of the plant sizes at the time of planting and intended species.
- b. In preparing the landscape plan, the following matters shall be taken into account:
 - i. The integration of the highway alignment into the surrounding landscape;
 - ii. Mitigation of effects on properties in the vicinity of the alignment;
 - iii. Any proposed planting of mature trees (including replanting);
 - iv. Planting in respect of waterways, including stormwater ponds;
 - v. Planting of earth bunds;
 - vi. The suitability of particular species of plants to the conditions of any particular area, and the beneficial effects of any particular species in terms of air quality;
 - vii. The staging of landscaping with the staging of construction;
 - viii. Landscaping in respect of Maioro Street.
- c. Such a plan is to include appropriate measures for:
 - i. screening views of the motorway from adjacent properties and public places;
 - ii. screening noise attenuation fences;
 - iii. retention or relocation of existing trees where practicable;
 - iv. revegetation of the realigned stream located between Ernie Pinches Street and Stoddard Road.
- d. The landscaping shall be implemented in accordance with the landscaping plan within the first planting season following the completion of the construction works, and shall be maintained for the next five years.

3.2

- a. The Requiring Authority shall consult with the Department of Conservation ('DOC'), Auckland Conservation Board ('ACB') and the Auckland Volcanic Cones Society Inc ('AVCS') on the final design of the works shown on Figure A and associated safety fence at the base of the Mt Roskill Cone;
- b. The design of the safety fence shall incorporate materials, textures and colours appropriate to the visual and historical context of the cone;
- c. Batter slopes shall be planted with trees or shrubs suited to the conditions of the site and to the natural context of the cone;
- d. The associated safety fence shall be a minimum 1.4 metres in height and shall include appropriate safety features. The fence shall be designed to be as visually transparent as possible, while still meeting the required safety standards;
- e. The results of consultation with DOC, ACB and AVCS shall be taken into account in finalising the design of the batter slopes, reinstatement works and safety fence;
- f. Plans for the design of the batter slopes, reinstatement works and safety fence, together with a report on the consultation with DOC, ACB and AVCS, shall be provided to the Auckland City Council at the time an Outline Plan is submitted.
- g. A photographic record shall be taken as the cut proceeds to provide a visual record of the geology of the cone

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3.3 Vehicle access past the oak tree at the rear of St Martin's Church (1358 Dominion Road) shall be provided in a manner which minimises excavation and damage to the tree roots.

3.4 To the extent that stormwater management allows, a landscape bund shall be constructed along the boundary of Keith Hay Park and the motorway to achieve visual and landscaping mitigation. No part of the bund shall extend beyond the boundary of the designation without specific approval from Auckland City Council as land owner.

3A. Somerset Road Tress

Trees requiring trimming or removal for the construction of the Keith Hay Park pedestrian and cycle bridge

3A.1 All tree work identified on drawing S-35-126 revision OD dated 28 May 2003 (produced by Transit and URS NZ Ltd) shall be undertaken by a recognised arboricultural contractor who is approved by the Council's parks arborist.

3A.2 Transit's Contractor shall contact the Council's parks arborist a minimum of 5 working days prior to any arboricultural work commencing to arrange for a pre works commencement meeting. All contractors and sub-contractors involved in the arboricultural works shall be present.

3A.3 All tree removals and pruning works shall be undertaken in consultation with Council's parks arborist.

3A.4 All tree pruning works shall employ recognised arboricultural target pruning practices. All such works shall be supervised by the Council's parks arborist who shall be available in accordance with the 5 days notice required in condition 3A.2.

3A.5 All tree removal work shall employ recognised arboricultural felling and dismantling practices, and shall be undertaken in a manner that avoids or minimises damage or disturbance to adjacent trees to be retained.

Protection of seven trees on southern side of Somerset Road

3A.6 Prior to any construction activities commencing a temporary barrier shall be erected as close as practicable to the edge of the dripline of trees numbered 1211-1217 (as identified on drawing S-35-126 revision OD dated 28 May 2003 produced by Transit and URS NZ Ltd). The location of the temporary barrier shall be determined in consultation with the Council parks arborist. The temporary barrier shall be a minimum of 2 metres in height and shall be of sturdy construction. It shall remain in place for the entire duration of all works within the vicinity of the Somerset Road trees. The temporary barrier shall be clearly identified as a 'restricted area / tree protection area' by the placement of the appropriate signage.

3A.7 Any pruning on the southern side of the poplar trees numbered 1211-1217 that may be required to provide clearance from the construction site shall be undertaken in consultation with Council's parks arborist.

3A.8 All pruning works shall be performed by a qualified competent arborist using recognised arboricultural target pruning practice. All such works shall be supervised by the Council's parks arborist who shall be available in accordance with the 5 days notice required in condition 3A.2.

3A.9 Prior to any construction activities commencing, a layer of mulch shall be laid over the entire area within the fenced area referred to in 3A.6 above. The mulch shall be a minimum thickness of 200mm, and shall be maintained at this level for the entire duration of the construction works within the vicinity of the Somerset Road trees.

3A.10 At no time shall the fenced area referred to in 3A.6 above be used for storage even temporarily of construction materials, fill, or any other materials associated with the State Highway 20 project.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3A.11 At no time shall any vehicles or equipment be even temporarily parked, stored, or manoeuvred within the fenced area referred to in 3A.6 above.

3A.12 All excavations in close proximity to the dripline of trees 1211-1217 shall require direct supervision by a competent arborist. Any root pruning which is required shall be undertaken by the arborist using recognised root pruning procedures.

4. Sediment Control and Stormwater

4.1 The Requiring Authority shall implement suitable sediment control measures during all earthworks and after construction to ensure that all stormwater run off from the site is managed and controlled to ensure that in so far as is practicable no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with the Auckland City Operative District Plan 1999 (Isthmus) Annexure 14 Guidelines for sediment control. In the event that material is deposited on the street, the Requiring Authority shall take immediate action at their own expense, to clean the street.

4.2 The Requiring Authority shall implement suitable arrangements for stormwater treatment and detention in accordance with relevant ARC guidelines.

5. Noise (Following Construction)

5.1 A noise management plan, detailing noise reduction measures to be implemented, and prepared by a suitably qualified acoustic expert, shall be submitted to the Council at the time an Outline Plan is lodged. The noise management plan shall include:

a. Measures to ensure compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise – State Highway Improvements' (December 1999), provided that the noise management plan shall not apply to the Christ the King Parish Precinct zoned land occupied by Christ the King Church and School at 288-292 Richardson Road.

5.2 The noise management plan shall identify existing dwellings for which acoustic treatment is required in order to ensure compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise – State Highway Improvements' (December 1999). Those dwellings shall be referred to as 'affected dwelling(s)'.

5.3 Not less than three months prior to the completion of construction of the State highway, the Requiring Authority shall give written notice to the owner of each affected dwelling as follows:

a. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels;

b. Advising that the owner has nine months within which to decide whether or not to accept mitigation treatment to the dwelling.

5.4 The Requiring Authority shall advise the Council of:

a. All written notices served in accordance with condition 5.3;

b. Any responses received to those written notices;

c. Those affected dwellings in respect of which no response has been received.

5.5 Where acoustic treatment is required to a dwelling, the Requiring Authority shall be deemed to have complied with condition 5.1 above where:

a. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or

b. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six months after the completion of the State highway;

or

c. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six months after the completion of the State highway construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.6 Subject to condition 5.5, all noise mitigation work identified by the noise management plan shall be implemented before the use of the State highway commences.

5.7 Low noise generating surfaces, such as friction course surfacing, shall be investigated for use on the motorway and in Maioro Street as a method of meeting Transit's Guidelines.

6. Noise and Vibration from Blasting

6.1 Blasting activities shall be so controlled as to ensure that any ground vibration as the result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 'Structural Vibration in Buildings – Effect on Structures', will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetre per second (mm/s).

6.2 The noise created by the use of explosives for blasting shall either not exceed a peak overall sound pressure level of 128 dB (i.e. peak over pressure of 0.05 kPa) or alternatively the noise shall not exceed a peak sound level of 122 dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not subject to this designation).

[Refer also condition 2.1(l) relating to notifying residents of imminent blasting.]

7. Parking, Roading and Property Access

7.1 During the detailed design stage, the Requiring Authority will consult with the Council with regard to the most appropriate means (e.g. flush medians, right turn bays) for providing access on Council roads within the designation.

7.2 Any existing on-site parking and manoeuvring areas which are affected by the works shall, as far as practicable, and in consultation with the Council and the affected landowner, be relocated or reinstated to achieve compliance with District Plan standards. Details of any such relocations or reinstatements shall be provided to the Council at the time an Outline Plan is submitted.

7.3 Alternative access arrangements shall be provided as far as practicable, and in consultation with the Council and the affected landowner, where existing property access is removed or becomes unsafe as a result of the works. Details of any alternative access arrangements shall be provided to the Council at the time an Outline Plan is submitted.

7.4 The right of way serving the properties at 55B and 55C Stamford Park Road (Lots 1 and 2, DP46097) shall not be used by the Requiring Authority for construction access.

7.5 Any bus stops which need to be moved or shifted as direct a result of the proposed works shall be relocated in consultation with the Council. Christ the King School shall also be consulted about the relocation of the bus stop serving the school.

7.6 The Requiring Authority shall consult with the Council to preserve the Council's ability to construct a rapid transit connection at the Dominion Road interchange as set out in the Council's Notice of Requirement for designation for 'proposed enhancement of the Dominion Road passenger transport services'.

7.7 Hendry Avenue shall be severed into two cul-de-sacs for the purposes of construction of certain aspects of the project. The Requiring Authority shall reconsider whether the final form of Hendry Avenue should constitute cul-de-sacs or a through road after undertaking both further consultation with residents of Hendry Avenue, Stephen Lysnar Place and Kelsey Crescent and a further assessment of effects of both options. Transit will

The Proposed Auckland Unitary Plan (notified 30 September 2013)

consult with Council officers regarding the results of the further consultation and further assessment of effects before determining the final form of Hendry Avenue.

7.8 The State highway shall be constructed with 3m wide shoulders for traffic safety purposes and to provide for potential future bus lanes.

8. Pedestrian Access

8.1 Appropriate crossing facilities for pedestrians, to mitigate the effects of the proposed works, design and consultation with the Council, shall be provided at the following intersections and roads:

- a. the Hillsborough interchange;
- b. Sandringham Road / Stoddard Road intersection;
- c. Richardson Road / Maioro Street intersection;
- d. Maioro Street / New Windsor Road intersection;
- e. the Dominion Road interchange;
- f. Maioro Street;
- g. any other intersections included within the designation.

Details of crossing facilities shall be provided to the Council at the time an Outline Plan is submitted.

8.2 Fully signalised pedestrian crossings, with a separate phase for pedestrians shall be provided at Richardson Road / Maioro Street, and Maioro Street / New Windsor Road, for the safety of school children using these intersections.

8.3 Pedestrian access shall be provided from Hillsborough Road to Melrose Road.

8.4 Provision shall be made to ensure that the works do not preclude the Council's ability to construct the proposed southwestern cycleway. In particular, and in partnership with the Council, provision shall be made for a southwestern cycleway at the following locations:

- a. Adjacent to the motorway where it passes under May Road;
- b. To be accessed from the pedestrian / cycleway bridge at Ernie Pinches Street (with adequate provision for bicycle turning movements);
- c. In the vicinity of Hendry Avenue (particularly if a decision is made that the final form of Hendry Avenue shall constitute cul-de-sac heads).

8.5 Pedestrian / cycle bridges conforming to the design standards of the Austroads Guide to Traffic Engineering Part 6: Pedestrians shall be provided between Somerset Road / Frost Road and Keith Hay Park, and between Ernie Pinches Street and Stoddard Road. The Requiring Authority shall also consult with Mt Roskill Schools regarding the design and location of the pedestrian / cycle bridge between Somerset Road / Frost Road and Keith Hay Park. Details of the pedestrian / cycle bridges shall be provided to the Council at the time an Outline Plan is submitted.

8.6 Boundary fencing for pedestrian safety shall be constructed along the shared boundaries of the motorway and Keith Hay Park, Akarana Golf Club, and Winstone Park."

9. Archaeological and Geological Areas

9.1 The Requiring Authority shall employ at its expense a qualified archaeologist who shall:

- a. Be on site to monitor all initial earthworks in the immediate vicinity of the Mt Roskill cone, including surface stripping of the site, to establish whether any sub-surface archaeological features are present;
- b. Advise the Council in writing within 24 hours if any archaeological features have been discovered.

9.2 Detailed protocols for the management of archaeological and waahi tapu discoveries shall be specifically discussed with tangata whenua prior to construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9.3 If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched;
- c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation, City Planning of the Auckland City Council that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any authority required from the NZ Historic Places Trust is obtained.

9.4 The Requiring Authority shall employ at their expense a qualified geologist who shall:

- a. Be on site to monitor all initial earthworks in the immediate vicinity of the Mt Roskill cone;
- b. Periodically review construction activities in the vicinity of the Mt Roskill cone;
- c. Be available on call to inspect any geological features encountered during excavation at the base of the Mt Roskill cone and to enable identification of any significant geological features;
- d. Advise the Council in writing within 24 hours if any significant geological features have been discovered.

9.5 Any geological discoveries such as lava caves shall be recorded and, where practicable, damage to these features minimised. Records of any such geological discoveries shall be provided to the Auckland City Council, Auckland Regional Council and the Department of Conservation for information and future reference.

10. Lighting

10.1 Where encroachment into areas subject to view protection controls in the District Plan cannot be avoided by structures such as lighting poles and fixtures, such structures shall be designed to have minimum impact, taking into account the assessment criteria in Clause 5C.7.6.5 Rules: Volcanic Cones of the District Plan. Details of any such encroachments together with an assessment of effects shall be provided to the Council at the time an Outline Plan is submitted.

10.2 Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas.

11. Air Emissions

11.1 Onsite monitoring of air emissions from vehicles shall be carried out over a six week period at the Maioro Street / Richardson Road intersection, adjacent to Christ the King Church and School prior to any physical works associated with the motorway being undertaken in the vicinity. The results shall be provided to the Council at the time an Outline Plan is lodged. The monitoring results shall measure the levels of carbon monoxide, nitrogen dioxide, particulate matter (PM10), and hydrocarbons in relation to air quality guidelines.

11.2 A plan for post construction monitoring of air emissions from vehicles at the Maioro Street / Richardson Road intersection adjacent to Christ the King Church and School shall be provided to the Council at the time an Outline Plan is lodged. The monitoring programme shall include the following:

- a. Engagement of an air emissions expert with specialist equipment to monitor air emissions at the above location;
- b. Measurement of carbon monoxide, nitrogen dioxide, particulate matter (PM10), and hydrocarbons in relation to air quality guidelines;
- c. Details of the number and location of monitoring positions;
- d. A requirement for copies of all air emissions monitoring reports to be provided to the Council;

The monitoring shall be carried out over a six week period within one year of the opening of the SH 20 extension. Monitoring shall be undertaken during the time of year which is expected to give rise to worse case meteorological conditions in terms of air quality.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all relevant Council bylaws.
2. Under the Historic Places Act an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.
3. Some of the land is subject to existing designations. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.
4. The Council holds a comprehensive discharge consent and has a comprehensive stormwater management plan for the Oakley catchment.
5. The Requiring Authority and the Council will continue to work together to progress the design of the southwestern cycleway generally following the alignment of the State Highway 20 extension.

No attachments.

6734 State Highway 1 - Otahuhu Interchange

Designation Number	6734
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 at Otahuhu interchange, Otahuhu
Rollover Designation	Yes
Legacy Reference	Designation I14-38, Auckland City Council (Isthmus Section) District Plan 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Otahuhu Southern Motorway interchange.

Conditions

1. General

1.1 Except as modified by the conditions below, the work shall be undertaken in general accordance with the information provided by Transit New Zealand (Transit) at the hearing; the notice of requirement and supporting documents; namely, Waiohuru Peninsula to S.H.1 Connection, Assessment of Effects on the Environment (Vol. 1 – Vol. 6).

2. Construction

2.1 Prior to commencement of any works on any part of the land included within designation, the Requiring Authority shall submit a Construction Management Plan to the Auckland City Council. The Construction Management Plan shall include specific details relating to the demolition, construction and management of all works associated with this project, including:

- a. Details of the site manager, including contact details (phone, facsimile, postal address);
- b. The location of a large notice board on the site that clearly identifies the name, telephone number, address for the service of the site or project manager
- c. Any means, such as restriction on the size of the construction vehicles and machinery, required to ensure

The Proposed Auckland Unitary Plan (notified 30 September 2013)

that no damage occurs to street trees throughout the construction period;

d. Any means of protection of services such as pipes and water mains within the road reserve;

e. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;

f. Measures to be adopted to ensure that pedestrian access past the works is provided where practicable and that such access is safe;

g. Location of workers conveniences (i.e. portaloos);

h. Ingress and egress to and from the works for vehicles during the construction period;

i. Proposed maximum numbers and timing of truck movements throughout each day and the proposed route;

j. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures, including the use of water sprays to control dust nuisance on dry or windy days; and

k. Location of vehicle and construction machinery accesses during the construction period.

2.2 The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction period.

2.3 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the designation at all times and not on surrounding streets.

2.4 All storage of materials and loading or unloading of equipment associated with the construction works shall take place within the boundaries of the designation.

2.5 Pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable.

2.6 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the road during the site preparation and construction phase of development. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existing prior to such damage to the satisfaction of the Auckland City Council.

3. Dust

3.1 A Dust Mitigation Plan shall be prepared by the Requiring Authority and submitted to the Council for approval prior to the commencement of works. The purpose of the Plan is to minimise dust nuisance from construction works. The Plan shall:

a. Specify all methods proposed to be employed to control dust from earthworks;

b. Specify the methods proposed to address problems if the dust is not satisfactorily mitigated;

c. Include the contact details of a contact person for residents and the Auckland City Council in the event of a dust problem.

The Requiring Authority shall ensure that the approved Dust Mitigation Plan is complied with.

4. Landscape and Visual Effects

4.1 On completion of the works, or on completion of each stage of the works, all bare land, including batter slopes, shall be grassed and planted or otherwise treated to achieve slope stability and prevent siltation through runoff and dust.

4.2 A Landscape Plan shall be prepared and submitted by the Requiring Authority with the outline plan of works for the approval of the Auckland City Council. Planting shall be carried out in accordance with the Landscape Plan. The following matters shall be incorporated into the Landscape Plan by the Requiring Authority:

a. The angle and extent of cut and batter slopes;

b. The preparation and implementation of a planting plan that will enable the integration of the proposed

The Proposed Auckland Unitary Plan (notified 30 September 2013)

interchange into the existing landscape as far as possible;

c. The retention of existing vegetation and trees along the motorway corridor where practicable, and the identification of existing vegetation and trees along the motorway to be removed;

d. The use of locally sourced native species where practicable;

e. The methods for removal and control of plant pests;

f. The use of vegetation on embankments and berms suitable for the diffusion of stormwater discharge;

g. Methods for screening views of the motorway from adjacent properties and public places where practicable;

h. The Landscape Concepts prepared by Opus and submitted as part of the Notice of Requirements in September 2000;

j. The integration of noise barriers, final details of which (in relation to design, specification and placement) shall be determined during the detailed design and incorporated in any outline plan, if required;

k. Details on species proposed to be planted, and any specimen tree theme, including their size at the time of planting. Where conditions are suitable, specimen trees shall be at least PB95 and 2.5 metres in height.

l. The arboricultural techniques proposed to protect trees, which are to be retained, and for any works to trees that are to be retained.

Planting in accordance with the approved plan shall be implemented no later than the first planting season immediately following completion of construction and maintained thereafter to the satisfaction of the Auckland City Council.

5. Sediment and Stormwater Control

5.1 The Requiring Authority shall implement suitable sediment control measures during all earthworks and after construction to ensure that all stormwater run off from the site is managed and controlled to ensure that, in so far as it is practicable no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with the Auckland City Operative District Plan 1999 (Isthmus) Annexure 14 Guidelines For Sediment Control. In the event that material is deposited on the street, the Requiring Authority shall take immediate action, at its own expense, to clean the street.

5.2 The Requiring Authority shall implement suitable arrangements for stormwater treatment and detention in accordance with relevant Auckland Regional Council guidelines.

6. Noise

6.1 The works shall be designed and constructed to ensure compliance with the noise limits specified in Transit New Zealand's Guidelines for the Management of Traffic Noise for State Highway Improvements, December 1999 (Transit's Noise Guidelines), or to ensure that existing noise levels as a result of the works do not exceed those included in the column labelled Existing Level (dBA 24 hour Leq) of Appendix 1 to these Conditions, whichever is the lower noise level, except that for those properties with frontage on to the western side of Fencible Place, the noise levels shall not exceed 62dBA as measured 1 metre from the facade of any habitable building on the site. For the purpose of this condition, the Sikh Temple in Princes Street shall be classified as a school.

6.2 A suitably qualified consultant shall prepare, on behalf of the Requiring Authority, a detailed Noise Management Plan after consultation with the Auckland City Council. The Noise Management Plan shall be submitted for approval to the Auckland City Council prior to construction commencing and the approved plan shall be complied with. The purpose of the Plan is to describe the method by which noise associated with traffic using the roading within the designation will comply with noise limits specified in 6.1 above. Such methods may include, but not be limited to:

a. Additional acoustic fencing;

b. Acoustic insulation on dwellings and buildings; and

c. Material on the motorway carriageway.

Where a fence and/or bunding are used, and the location allows, the barrier shall be landscaped with plantings where practicable.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6.3 Noise monitoring shall be undertaken in accordance with NZS 6801:1999 Measurement of Sound to ensure compliance with this condition. The Requiring Authority shall ensure that representative noise monitoring of the motorway route is undertaken at its expense by a suitably qualified and experienced acoustic consultant within nine months of opening the whole route. Results of all noise monitoring of the motorway route shall be supplied to the Auckland City Council within six weeks of the monitoring being complete. Where such monitoring demonstrates non-compliance with the Guidelines or an increase above the existing noise levels included as Appendix 1 to these Conditions, the Requiring Authority shall take steps to ensure compliance with the Guidelines, or to ensure the existing noise levels included as Appendix 1 to these Conditions are not exceeded, whichever is the lesser level, except that for those properties with frontage on to the western side of Fencible Place, the noise levels shall not exceed 62dBA as measured 1 metre from the facade of any habitable building on the site.

6.4 During construction, New Zealand noise standard "NZ 6803:1999 Acoustics-Construction Noise" shall apply and noise shall comply with the limits set down in Table 2 of NZ6803: 1999 or, where this is impracticable, alternative strategies to be outlined in the Construction Noise Management Plan shall be implemented to ensure that construction noise does not exceed the above-mentioned levels for affected persons.

6.5 Prior to commencement of any construction activity on the site the Requiring Authority or its contractors, shall submit a Construction Noise Management Plan to the Auckland City Council for approval. The purpose of this Plan is to describe the methods by which noise associated with the construction works is to be managed to reduce (where required) any impacts on adjoining residential areas. In particular, the Construction Noise Management Plan shall identify:

- a. The matters referred to in paragraph 8.4(a) to (e) of NZ6803:1999 Acoustics – Construction Noise;
- b. Methods of managing noise such as temporary acoustically designed construction noise fence;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency (referenced to NZ6803:1999);
- d. Contingency methods in the event of any incidence of non-compliance; and
- e. Procedures for handling noise complaints.

The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during the construction works.

7. Construction Hours

7.1 Except for unseen emergency situations and in accordance with Notes 1 and 2 below, hours of work during the construction phase shall be:

- a. Weekdays: 7.00 am to 6.00 pm;
- b. Saturdays: 8.00 am to 5.00 pm; and
- c. Sundays and Public Holidays: No work.

Note 1:

These restrictions exclude any special operations subject to the notification of, and discussion with, affected parties.

Note 2:

Except that any construction works within the motorway may involve work outside the above hours and such works are excluded from the above hours of work. All construction works within the motorway must be carried out in such a way that they comply with NZS6803:1999 Acoustics - Construction Noise (in accordance with Condition 6.4 above). For this purpose, 'construction works within the motorway' shall be all land within the designation boundary.

8. Parking, Rounding, and Property Access

8.1 Details of the improvements to the Princes Street/Albert Street intersection shall be submitted by the Requiring Authority to the Council, prior to construction. This shall include a safe and efficient signalised

The Proposed Auckland Unitary Plan (notified 30 September 2013)

pedestrian crossing.

8.2 A standard cul-de-sac shall be formed at the northern end of Todd Place.

8.3 Any existing on-site parking and manoeuvring areas which are affected by the works shall, as far as practicable, and in consultation with the Auckland City Council, and the affected landowner, be relocated or reinstated to achieve compliance (or not increase non-compliance) with District Plan standards.

8.4 Alternative access arrangements shall be provided in consultation with the Auckland City Council where existing property access is removed or becomes unsafe as a result of the works.

8.5 Any bus stops, which need to be moved or shifted as a direct result of the proposed works, shall be relocated in consultation with the Auckland City Council.

8.6 Any altered roading or footpath layout or any new roading or footpath layout shall provide safe and efficient space for pedestrian and cycle traffic.

8.7 McManus Place shall be used as a construction access only during construction of the fourth lane to the motorway in its vicinity and during reclamation works as set out in the Construction Management Plan.

9. Archaeological and Geological Areas

9.1 Detailed protocols for the management of archaeological and waahi tapu discoveries shall be specifically discussed with tangata whenua prior to construction.

9.2 If any archaeological sites, including human remains, are exposed during site works then the following procedures shall apply:

- a. Immediately it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched;
- c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation, and the Manager: City Planning of the Auckland City Council that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any authority required from the New Zealand Historic Places Trust is obtained.

9.3 Any geological discoveries (such as lava caves) shall be recorded by the Requiring Authority and, where practicable, damage to these features minimised. Records of any such geological discoveries shall be provided to the Auckland Regional Council and Manager: City Planning of the Auckland City Council for information and future reference.

10. Lighting

10.1 The Requiring Authority shall ensure that lighting is so designed and screened to minimise the amount of lighting over spill and illumination of residential areas.

11. Vibration Management Plan

11.1 A Vibration Management Plan shall be submitted by the Requiring Authority for approval to the Auckland City Council prior to the commencement of the works. The approved plan shall include details of how the works will comply with the requirements of German Standard DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction. The Requiring Authority shall ensure that all works associated with the designation comply with the approved plan.

12. Ecological Impact Mitigation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12.1 The exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

12.2 Prior to any disturbance or removal of trees subject to general tree protection in the District Plan, the Requiring Authority shall contact Auckland City Council and identify the affected trees and the proposed mitigation works. Mitigation works could include avoiding the tree (if practicable), relocation or removal and replacement.

12.3 Where trees are to be retained and, where practicable, the trees shall be fenced no closer than the drip-line of the tree with a 1.0m high fence. No equipment or material shall be stored within the fenced off area for the duration of the works. Where roots of such trees need to be cut, they shall be cut and treated according to recognised arboricultural practice.

13. Protection of Existing Network Utility Operators

13.1 The Requiring Authority, in consultation with Auckland City Council and Manukau City Council (in its capacity as requiring authority), shall prepare a Network Utility Operators Management Plan that has particular regard to the needs of other network utility operators affected by the proposed works, with the objective of allowing those operators to maintain their existing level of service. The Management Plan shall be prepared after consultation with the various Network Utility Operators and shall address issues such as, but not limited to:

- a. Access;
- b. Protection of existing infrastructure;
- c. Mitigation / remediation measures;
- e. Safety measures;
- f. Landscaping;
- g. Runoff; and
- h. Dust and vibration.

The Management Plan shall be submitted for approval to the Auckland City Council prior to the works commencing and the approved plan subsequently complied with.

13.2 The Network Utility Operators' Plan shall include provision for the following matters in relation to Transpower New Zealand Limited ("Transpower"):

- a. Adequate protection of the six existing transmission lines and Otahuhu Substation from any adverse effects of the proposed works; and
- b. Details of the works that are likely to have an adverse effect on Transpower assets, to be determined in consultation with Transpower, prior to the commencement of any works and shall be included in the approved Management Plan.
- c. Transpower shall be notified of all works likely to adversely affect Transpower assets within a reasonable timeframe, to enable sufficient time for Transpower to plan and carry out any works on its assets required due to the works subject to the designation.

In particular, the Network Utility Operators Management Plan shall address the following matters in relation to Transpower:

- i. Ensure that existing access arrangements to transmission towers are retained where practicable. Where the Requiring Authority requires or causes a change in access arrangements, then alternative arrangements shall be made that ensures safe 4-wheel drive 24hr access to the tower base (including during the construction period) or other options that will enable Transpower to undertake necessary works. Details of such access arrangements are to be provided in the Plan;
- ii. Show final details of the construction of all retaining structures to be constructed within 6 metres of the outer edge of the visible foundation of a transmission tower.
- iii. Ensure that all works comply with the following, unless specifically provided in terms of clause 3(f) below:
All mobile plant operated in relation to the proposed works to maintain a 4-metre clearance from Transpower conductors at all times.
 - No temporary buildings, scaffolding or stationary plant be located within 8m of any conductor.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- All earthworks (including stockpiles) underneath the conductors to maintain a minimum of 7.5m vertical clearance distances from conductors at all times.
- Transpower's written approval is required prior to undertaking any earthworks within 6m of the outer edge of the visible foundation of a transmission tower, or greater than 3m in depth between 6m and 12m from the outer edge of a tower, or any works that could create an unstable batter which may adversely affect a tower.
- iv. Where the Requiring Authority wishes to undertake works or activities within distances specified in the clause above, the Management Plan shall outline the procedures and requirements necessary for Transpower to be able to consider and approve or modify such an encroachment as appropriate.
- v. Final details on suitable vehicle collision protection for the following transmission towers to an agreed standard in consultation with Transpower:
 - Tower #4 on the Henderson – Otahuhu A line;
 - Any other towers that are affected as a result of the works subject to the designation.
- vi. Provide a Dust and Vibration Management Plan for the works which shall include mitigation measures to be undertaken to minimise dust and vibration effects on the existing transmission lines and Otahuhu Substation equipment.
- vii. Final details of landscape plantings to ensure that:
 - No part of any vegetation will encroach into an area closer than 4 metres to any conductors of the lines. The 4-metre clearance relates to vertical, horizontal and felling distance clearances;
 - Vegetation planted in close proximity to tower bases does not adversely affect existing tower foundations (i.e. cause corrosion by creating a damp environment); and
 - Vegetation does not preclude physical access to a tower.

14. Management Plans, Mitigation Plans and Outline Plans

14.1 Prior to the commencement of the works, Transit New Zealand shall submit to Council the relevant Management or Mitigation Plans required under Conditions 2.1, 3.1, 4.2, 6.2, 6.5, 11.1 and 13.1 above.

14.2 The Plans shall be submitted to Council as soon as reasonably practicable, and in any event, allowing sufficient time for review by Council and discussion with Transit.

14.3 Any Management, Mitigation or Outline Plans may be submitted in stages to reflect any proposed staging of the physical works.

14.4 If Council and Transit agree on the terms of such Management or Mitigation Plans, that agreement shall be deemed to be a waiver (such waiver may be subject to specific reservations) in relation to that Plan or relevant part of that Plan pursuant to section 176A(2)(c) of the RMA of the requirement for an Outline Plan under section 176A.

14.5 If Council and Transit do not agree on the terms of such Plan or Plans, the relevant provisions of section 176A of the RMA shall apply in respect of any part not agreed.

14.6 The works shall be undertaken in accordance with the approved Management or Mitigation Plan or accepted Outline Plan (as the case may be).

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all relevant Council bylaws.
2. Under the Historic Places Act an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.
3. Some of the land is subject to existing designations. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. The Public Works Act 1981 makes provision for the following (among other things):

- a. For those landowners whose property is required to be taken (either in whole or in part) for the purpose of the project works, they will have a basic entitlement to compensation under Section 60 of the Public Works Act, irrespective of whether the land is acquired compulsorily or on a willing-buyer, willing-seller basis.
- b. Disturbance payments, compensation for loss on repayment of mortgage, and compensation for business loss may in some cases also be claimed under sections 66 to 68 of the Public Works Act.
- c. Compensation for injurious affection can be claimed under Section 63 of the Public Works Act.
- d. Compensation for tenants under section 75 of the Public Works Act 1981 if vacant possession of the tenant's land or premises is required to carry out the project. This includes certain compensation for removal costs (within a distance of 80 km) for residential and business tenants. The booklet titled "A Guide to Landowners Rights: When the Crown wishes to acquire your Land for a Public Work" published by Land Information New Zealand provides useful information on the entitlements under the Public Works Act. This is not a full description of the compensation available under the Public Works Act. Any landowners/tenants who consider themselves potentially or actually affected by the designation are encouraged to seek their own legal advice in terms of their entitlement.

No attachments.

6735 State Highway 1 - Victoria Park Tunnel

Designation Number	6735
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from Wellington Street to Victoria Park, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 283, Auckland Council District Plan (Central Area) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation is to include, and allow for, the control of this State Highway, including planning, design, supervision, construction and maintenance in accordance with the provisions of the Government Roadway Powers Act 1989.

Conditions

GENERAL

1. General

1.1 Except as modified by the conditions below and subject to final design, the project works shall be undertaken in general accordance with the information provided at the hearing by the Requiring Authority (Transit New Zealand), the Notices of Requirement and the supporting documents, namely:

- a. 'Harbour Bridge To City Project - Overview, Notices of Requirement and Attachments - Volume 1', prepared for Transit New Zealand by Beca Infrastructure Ltd, dated October 2005;
- b. 'Harbour Bridge To City Project - Assessment of Environmental Effects - Volume 2', prepared for Transit New Zealand by Beca Infrastructure Ltd, dated October 2005;
- c. 'Harbour Bridge To City Project - Technical Appendices - Volume 3', prepared for Transit New Zealand by Beca Infrastructure Ltd [et al.] dated October 2005;
- d. 'Harbour Bridge To City Project - A3 Plans - Volume 4', prepared for Transit New Zealand by Beca Infrastructure Ltd, dated October 2005;
- e. Further information provided with the response provided under Section 92 Resource Management Act 1991

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(dated 2 February 2006).

Note: The Harbour Bridge to City project has been renamed the "Vic Park Tunnel Project" (the Project).

1.2 As soon as practicable following completion of construction of the Vic Park Tunnel (VPT) Project, the Requiring Authority shall give notice to the Auckland City Council in accordance with Section 182 of the Resource Management Act ("RMA") for removal of those parts of the existing designations (those in existence prior to the lodgement of the new designation subject to condition 1.1 above) between the Auckland Harbour Bridge and Wellington Street overbridge, being:

1. A07-01 'Motorway' and A07-01A 'Motorway': Shelly Beach Priority Lane in the Auckland City District Plan: Isthmus; and
2. 283 'Motorway' in the Auckland City District Plan: Central Area.

1.3 As soon as practicable following completion of construction of the Project, the Requiring Authority shall give notice to Auckland City Council in accordance with Section 182 of the RMA for removal of those parts of the designation which are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note:

This condition is specific to land no longer required for construction purposes once the Project is completed.

1.4 A liaison person shall be appointed by the Requiring Authority for the duration of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons.

1.5 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the designation boundary on individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is later.

1.6 The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

2. Project Management Plan ("PMP") and Outline Plans

2.1 The Requiring Authority shall prepare a PMP, which shall include mitigation/management plans as referred to in conditions dealing with specific issues below. A schedule of how the subsidiary plans that are required by these conditions relate back to the PMP follows these conditions as Annexure A.

2.2 No works shall be undertaken in any particular location(s) until:

1. The PMP, or such part(s) of the PMP as are relevant to the location(s) are submitted to and approved by the Auckland City Council (Group Manager: City Planning); and
2. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (RMA) in relation to the works in the location(s), have been submitted to the Auckland City Council.

2.3 Where an outline plan or plans are required by section 176A of the RMA for works in any particular location(s) and the Auckland City Council agrees that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 of the RMA, then the PMP or relevant part(s) of the PMP shall be deemed to be a waiver of the requirement for an outline plan in respect of the works in the particular location(s), as provided for in section 176(2)(c) RMA.

2.4 The works shall be undertaken in accordance with the approved PMP and outline plan of works (where required).

3. Other Plans

3.1 The PMP shall include an Environmental Management Plan (EMP) to be provided to the Auckland City

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Council prior to the commencement of works. The purpose of the Environmental Management Plan is to avoid, remedy or mitigate all adverse environmental effects associated with the construction and operation of the Project. The EMP is to include a Construction Environmental Management Plan (CEMP) and Environmental Monitoring Guidelines (EMG).

3.2 The PMP shall include a Construction Management Plan (CMP) to be provided to Auckland City Council (Group Manager: City Planning) prior to commencement of works. The purpose of the CMP is to avoid, remedy or mitigate any effects of construction, through methods identified in the CMP, including the preparation of management plans. The CMP shall be prepared in consultation with the directly affected parties and parties affected by proximity (including other neighbouring submitters) as shown in Appendix 1 to the decision (refer to Plan Modification 32).

3.3 The CMP shall include specific details relating to the demolition, construction and management of all works associated with the Project, including the details indicated below:

1. Details of the site or project manager, including their contact details (phone, facsimile (if any), postal address, email address);
2. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
3. An outline construction programme of the works indicating in particular likely time periods for partial or complete road closures and anticipated traffic diversion effects;
4. Any means to ensure that no damage occurs to street trees throughout the construction period;
5. Any means of protection of services such as pipes and watermains within the road reserve;
6. Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
7. Location of workers' offices and conveniences (e.g. portaloos);
8. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places, including wheel wash for construction vehicles. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
9. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;
10. Procedures for ensuring that blasting events, if any, occur at times least likely to disturb all people in the immediate vicinity of the construction areas, and for reasonable notice or warning of any blasting events to be given;
11. Procedures to be followed to ensure that those working in the vicinity of identified heritage features are aware of the heritage values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
12. Procedures to be followed to ensure that iwi representatives are notified of the proposed commencement of works and of the discovery of any koiwi or other artefacts;
13. Procedures to be followed in the event that any historic artefacts are disturbed, being in accordance with any Authority obtained under the Historic Places Act;
14. Means of ensuring the safety of the general public;
15. Methods for receiving and responding to complaints about construction dust and odour from the works;
16. Protocols for offering mitigation such as temporary relocation of households where noise and other impacts cannot be managed to comply with relevant standards.

NOISE AND VIBRATION

4. Operational Noise

4.1 A Noise Management Plan (NMP) shall be prepared by a suitably qualified acoustics expert for the purposes of avoiding, mitigating or remedying any adverse noise effects from the operation of the Project following its construction. The NMP shall be provided to the Auckland City Council (Group Manager: City Planning) prior to the commencement of works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4.2 The NMP shall include:

1. General measures to achieve, at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999), including (but not limited to) the following mitigation measures:
 - i. the construction of noise walls (to a maximum of 5 metres in height in the St Mary's Bay area);
 - ii. the use of Open Graded Porous Asphalt "OGPA" or equivalent material to surface the carriageway;
2. Specific measures for existing dwellings, where these are necessary in addition to the general measures under (a) above to achieve at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999).

4.3 The NMP shall identify the existing dwellings for which specific measures are required in accordance with condition 4.2.2) above. These dwellings are referred to as the 'affected dwelling(s)'.

4.4 Not less than three months prior to the completion of construction of the Project, the Requiring Authority shall give written notice to the owner of each affected dwelling:

1. Advising the options available for mitigation treatment to the affected dwelling and the predicted benefits of implementation of such options in term of noise levels; and
2. Advising that the owner has six months within which to decide whether or not to accept mitigation treatment to the dwelling.
3. Once an agreement on mitigation is reached between the Requiring Authority and the owner, the mitigation shall be implemented in an accepted timeframe between the Requiring Authority and the owner.

4.5 The Requiring Authority shall advise the Auckland City Council (Group Manager: City Planning) of:

1. All written notices served in accordance with condition 4.4;
2. Any responses received to those written notices;
3. Those affected dwellings in respect of which no response has been received.

4.6 Where specific measures are required for an affected dwelling, the Requiring Authority shall be deemed to have complied with condition 4.1 where:

1. The Requiring Authority has completed noise mitigation treatment to an affected dwelling; or
2. The owner of the affected dwelling has refused to accept the Requiring Authority's offer to implement noise mitigation treatment to the dwelling prior to the expiry of six months after the practical completion of the Project; or
3. The owner of the affected dwelling cannot after reasonable enquiry be found prior to the expiry of six months after the completion of construction of the Project.

4.7 Subject to condition 4.6, all noise mitigation measures identified by the NMP shall be implemented prior to the completion of construction of the Project.

4.8 As required by the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999), measurements of noise levels existing prior to construction shall be used to establish ambient noise levels. Measurements shall be undertaken by a suitably qualified person and the results of 24 hour ambient noise measurements at a total of six (6) positions within 100 metres of the designation boundary, together with site maps and photographs detailing the measurement positions and key data on measurement conditions shall be forwarded to the Auckland City Council (Group Manager: City Planning) prior to the commencement of construction.

4.9 Following completion of the Project, the Requiring Authority shall arrange for an appropriately qualified person to undertake monitoring of the level of traffic noise at the above six (6) sites for which ambient noise level data has been previously recorded, within a period between 2 and 3 years following completion of construction of the Project and shall report the findings of monitoring to the Auckland City Council (Group Manager: City Planning), within one month of the monitoring being undertaken.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. Operational Vibration

5.1 Vibration levels of the existing State Highway 1 operations shall be measured at critical locations nominated by Transit New Zealand, and submitted to the Auckland City Council (Group Manager: City Planning), prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

6. Construction Noise and Vibration

6.1 The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction periods of the Project and shall include the following:

Noise

1. The CMP shall include a Construction Noise and Vibration Management Plan (CNVMP) describing the measures adopted to, as far as practicable, meet the requirements of NZS6803:1999 Acoustics - Construction Noise. The CNVMP shall refer to noise management measures set out in Annexure E of NZS6803:1999, and as a minimum shall address the following;

- i. Construction sequence;
- ii. Machinery and equipment to be used, including the use of non-percussive machinery where practicable;
- iii. Hours of operation, including times and days when noisy construction work would occur;
- iv. The design of noise mitigation measures such as temporary barriers or enclosures;
- v. Construction noise limits for specific areas;
- vi. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes;
- vii. Methods for monitoring and reporting on construction noise.
- viii. Methods for receiving and responding to complaints about construction noise.

Vibration

2. The CNVMP shall also describe measures adopted to, as far as practicable, meet the vibration criteria of the German Standard DIN 4150, and shall address the following aspects:

- i. Vibration monitoring measures;
- ii. Criteria;
- iii. Possible mitigation measures;
- iv. Complaint response;
- v. Reporting procedures;
- vi. Notification and information for the community of the proposed works;
- vii. Vibration testing of equipment to confirm that the vibration limits will not be exceeded;
- viii. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- ix. Operational times;
- x. Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works.

7. Blasting

7.1 If any blasting is required during construction, it shall be so controlled as to ensure that any ground vibration as a result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause any reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 'Structural Vibration in Buildings - Effect on Structures', will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetre per second (mm/s).

7.2 The noise created by the use of explosives for blasting shall not exceed a peak overall sound pressure of 128dB (i.e. peak over pressure of 0.05kPa) or alternatively the noise shall not exceed a peak sound level of 122dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any

The Proposed Auckland Unitary Plan (notified 30 September 2013)

occupied building (that is not subject to this designation).

CONSTRUCTION TRAFFIC

8. Traffic Management Plan

8.1 The Construction Management Plan shall include a Traffic Management Plan (TMP). In developing the TMP:

1. The Requiring Authority shall use advanced traffic modelling tools to better understand the effects of construction of the Project on the affected road network. These tools will be developed and calibrated in conjunction with the Auckland City Council (Group Manager: City Planning) and have the ability to simulate lane restrictions and road closures;

2. The Requiring Authority shall undertake measures to avoid road closures and also the restriction of vehicle and pedestrian movements to the greatest extent practicable. In particular, the measures shall ensure that vehicle and pedestrian accesses in the vicinity of the Victoria Street / Franklin Road intersection are maintained to the greatest extent practicable during the construction period, so as to provide full access for vehicle movements from Franklin Road into Victoria Street and at a minimum left turn access from Victoria Street into Franklin Road.

8.2 The TMP shall describe the measures that will be undertaken to achieve, as far as practicable, the following:

1. Methods of avoiding, remedying or mitigating the local and network wide effects of construction of the Project. In particular, the TMP shall describe:

i. Traffic management measures to address and maintain, where practicable traffic capacity, including bus services, at traffic peak hours during week days and weekends in Victoria Street, Beaumont Street, Fanshawe Street, Franklin Road, Cook Street, College Hill and Union Street;

ii. Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses (including the restriction of right turn movements into Franklin Road);

iii. Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (eg intersections/tunnel) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;

iv. Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks);

v. The numbers, frequencies, routes and timing of construction traffic movements; and

vi. Monitoring to measure the impact of traffic, in terms of traffic speeds and volumes on those roads described in 8.2.1(i);

vii. Alternative locations to mitigate the temporary loss of off street parking during construction;

viii. Traffic management measures to ensure, to the greatest extent practicable, that during the peak trading hours of the Victoria Park New World, namely 4.00pm to 7.00pm on weekdays and 11.00am to 4.00pm on weekends:

a. access for vehicle movements from Franklin Road into Victoria Street (and at a minimum left turn access from Victoria Street into Franklin Road) is maintained; and

b. access is maintained to the carpark of the Victoria Park New World.

2. Methods to manage the effects of traffic during construction, including the requirement to detour or divert traffic. These methods shall:

i. Seek to avoid, remedy or mitigate effects on access to and from residential areas in Franklin Road, Beaumont Street and Victoria Street and the effects of traffic noise at night.

ii. Seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area particularly on Franklin Road, Victoria Street and Beaumont Street including the New World supermarket and the Victory Christian Church.

3. Traffic management measures during construction to be developed in consultation with the Auckland Regional Transport Authority (ARTA), Bus and Coach Association and the Auckland City Council to address and maintain, where practicable, traffic capacity at peak hours to provide for passenger transport services on the road network.

4. Consultation with the Auckland City Council (Group Manager: City Planning) with regard to the most

The Proposed Auckland Unitary Plan (notified 30 September 2013)

appropriate means for providing access on Council roads within and adjacent to the designation.

5. Identification of any existing on-site parking and manoeuvring areas which are affected by the works. Then, as far as practicable, and in consultation with the Auckland City Council (Group Manager: City Planning) and the affected landowners, how the affected areas will be relocated or reinstated to achieve compliance with the Auckland City District Plan: Isthmus Section 1999 or Auckland City District Plan: Central Area Section 2004 or to a similar standard to that existing.

6. Measures to maintain existing vehicle access to the greatest extent practicable or where the existing property access is to be removed or becomes unsafe as a result of the works, to provide alternative access arrangements to an equivalent standard as that removed, as far as practicable, and in consultation with the Auckland City Council (Group Manager: City Planning) and the affected landowner.

7. Details on the maintenance of pedestrian access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable. Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. This shall include the areas of high pedestrian traffic of Fanshawe Street, Wellington Street, Franklin Road, Union Street, Cook Street, Victoria Street and Beaumont Street as well as Point Erin, St Mary's Bay and Victoria Park reserve areas.

8. Consistency with Transit New Zealand 'Code of Practice for Temporary Traffic Management' (COPTTM).

9. Recognition of the need for the Auckland City Council to access and maintain its roading network during the construction phase of the Project.

10. Recognition of the need to coordinate and to consult directly with the proponents of any major construction occurring concurrently with, and in the vicinity of, the Project during construction.

8.3 During construction of the proposed tunnel, Transit shall ensure that all storage and vehicle parking takes place within the boundaries of the designation or in compliance with all parking restrictions and Council bylaws.

8.4 Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the designation at all times and not on surrounding streets.

8.5 All storage of materials and equipment associated with the construction works shall take place within the boundaries of the designation.

8.6 Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standard as existed prior to such damage at no cost to the Auckland City Council.

OPERATIONAL TRAFFIC

9. Traffic management measures that are practicable will be developed by Transit in consultation with ARTA and the Northern Busway partners and implemented, if required, to provide northbound bus priority through the Fanshawe Street / Beaumont Street intersection and the St Mary's Bay section of the motorway corridor.

PUBLIC OPEN SPACE AND AMENITY

10. Trees

10.1 The Requiring Authority is to produce a feasibility report, prepared by a qualified arboriculturalist and transplanting specialist, on transplanting the scheduled London Plane Trees in Victoria Park which are affected by the proposed designation and works to a location to be determined in consultation with Auckland City. This feasibility report shall address the likelihood of tree survival, the effects of relocation (temporary or permanent), the timeframes required and their effects on the Project, and the overall benefits/costs. If transplanting one or more of the trees is found to be feasible by the transplanting specialist, and Transit agrees with the estimated cost of transplantation, the transplantation shall be undertaken prior to the commencement of the works in that vicinity. The transplanting shall be accompanied by a maintenance programme approved in advance by the Auckland City Arborist.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10.2 The methodology for relocating any such trees shall be approved by the Auckland City Arborist.

10.3 In the event that it is not feasible to transplant one or more of the scheduled London plane trees, their removal shall be mitigated by the planting of an appropriate number of London plane trees in Victoria Park with the intent that the ring of trees that delineates the Park is maintained. The Auckland City Arborist is to determine how many replacement trees will be required in the case of each London plane tree so removed. The replacement trees shall be planted within the next available planting season. If the planting positions are not available until after the construction period is complete, the trees shall be grown on in a nursery until required. These trees shall be a minimum of 6m high when planted. Each of the trees shall have a two year maintenance programme approved by the Auckland City Arborist. The planting locations for the replacement trees shall be addressed as part of the Requiring Authority's landscape mitigation package and shall be approved by the Auckland City Arborist.

10.4 The Requiring Authority shall develop a tree mitigation package comprising transplanting or replanting of trees, and planting of new trees.

10.5 The removal of any elm trees is to follow MAF (Biosecurity New Zealand) requirements. All plant and machinery used during any such removal must be cleaned before off-site use.

10.6 Monitoring of the groundwater conditions is to be undertaken around trees in the vicinity of the tunnel excavation during construction. If, in the opinion of the Auckland City Arborist, groundwater levels decline to a level that may adversely affect tree health, appropriate remedial measures shall be undertaken by the Requiring Authority to the satisfaction of the City Arborist.

10.7 Conditions 10.8 to 10.15 apply to trees within the designation area that would be subject to Tree Protection rules under the underlying zoning provisions of the District Plan ("Protected Trees").

10.8 Removal, trimming/pruning or works within the drip line of Protected Trees shall be limited to those trees identified in Appendix 2 of the decision (refer to Plan modification 32). A tree may be added to this Appendix with the approval of the Auckland City Arborist.

10.9 A suitably experienced, Council approved arborist ('nominated arborist') shall be employed by the Requiring Authority for the duration of the works, at the Requiring Authority's expense, to monitor, supervise and direct all works within the drip line or in the vicinity of those Protected Trees to be retained.

10.10 Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions of designation that pertain to the retained vegetation are explained by the nominated arborist to all contractors or sub-contractors who will be working on site within the drip-line of, or adjacent to, any protected vegetation that is covered by the designation.

10.11 A copy of the conditions of designation pertaining to the Protected Trees shall be held at the main construction site office, on site, at all times.

10.12 The following measures shall be taken in respect of the remaining Protected Trees within the designation area:

1. Prior to the commencement of construction activity temporary protective fencing shall be erected around the Protected Trees to be retained, and shall remain in place for the duration of the Project. The purpose of the temporary protective fencing is to provide an area around the retained trees that will facilitate their successful retention during the construction process. The parameters of the enclosure shall be as directed by the nominated arborist.

2. Except as provided for in conditions below, the area within the temporary protective fencing shall be considered a total exclusion zone. The Requiring Authority and/or its agents shall not:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. Enter into the delineated area without prior consultation and agreement from the nominated arborist;
 - ii. Alter the dimensions of the delineated area without prior consultation and agreement from the nominated arborist;
 - iii. Store diesel, cement, building materials, site huts, spoil, equipment, or machinery within the delineated area;
 - iv. Spill substances likely to be injurious to tree health within seepage distance of the delineated area
3. The temporary protective fencing shall be constructed with a solid face (e.g. plywood or corrugated iron) and attached to a sturdy framework of freestanding scaffolding or posts. It must be constructed to a minimum height of 1.8m and must remain in place for the duration of the Project.

10.13 The nominated arborist shall undertake all necessary trimming and pruning works, including the pruning of tree roots uncovered during excavations. Exposed roots shall be covered and kept moist.

10.14 The nominated arborist shall undertake a tree monitoring program throughout the construction phase, including monitoring of:

- a. The condition repair and location of the temporary protective fencing;
- b. Any excavation within the drip line of Protected Trees;
- c. General tree health; and
- d. Compliance with the conditions of designation by way of fortnightly inspections during the construction period. A copy of the monitoring results from each visit shall be sent to the Auckland City Arborist, with one copy being retained on site by the Project Manager, while a further copy is to be retained by the nominated arborist.

10.15 During the construction process the Requiring Authority shall implement, where practicable, any recommendations made by the nominated arborist on the installation of irrigation systems, mulch, or remedial pruning works if they are required to improve tree health.

11. Auckland City Parks and Reserves

11.1 The design of the Victoria Park tunnel shall not preclude undergrounding of the southbound carriageway in the future.

11.2 The design of the Victoria Park tunnel shall not unreasonably preclude surface parks and recreational land uses from locating above it.

11.3 All land owned by the Auckland City Council shall be restored to its pre-construction state, or as otherwise agreed by the Auckland City Council (Manager Property Group) and the Requiring Authority in accordance with the Urban Design and Landscape Mitigation Plan.

11.4 Any structures and associated infrastructure required to be located within Victoria Park to provide emergency access to and egress from the Victoria Park tunnel shall be:

- 1. Made as unobtrusive as practicably possible, while achieving their necessary functionality;
- 2. Located in a manner consistent with existing buildings and site features, or otherwise near the periphery of Victoria Park, to the extent practicable;
- 3. If possible integrated into other Park features or structures;
- 4. Suitably designed and landscaped to minimise their adverse effects.

11.5 The design and location of any such structures in Victoria Park shall be approved by the Auckland City Council (Group Manager: Community Planning) prior to its construction.

11.6 A site-specific slope stability assessment shall be carried out by a suitably qualified engineer for the southern abutments of the Shelly Beach Road overbridge and Jacob's Ladder Pedestrian Bridge, as well as at any location where Tunnel Project works are within 10m of the St Mary's Bay cliff face. Where a moderate or greater risk of instability is assessed as a result of works on the Project, a slope movement monitoring system

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall be installed with site-specific stability criteria and trigger levels. If the slope movement monitoring system observes deformation in excess of specified trigger levels as a result of the Project works, the Auckland City Council (Group Manager: Community Planning) in consultation with Transit New Zealand's nominated contractor shall coordinate the appropriate remedial actions. Where practicable, stabilisation works shall be undertaken in a manner that is sensitive to the natural character and gateway values of this area.

12. Integrated Urban Design and Landscape Mitigation Plan

12.1 The PMP shall include an integrated Urban Design and Landscape Mitigation Plan ("UDLMP") to be provided to the Auckland City Council (Group Manager: Community Planning) prior to or together with the outline plan of works for the Project or relevant Project stage. The UDLMP shall be prepared by a suitably qualified person or persons and shall take into account the following:

1. Transit New Zealand's "Guidelines for Highway Landscaping" (dated September 2002);
2. Transit New Zealand's "Central Motorway Improvements: Urban Design Framework" (dated 6 September 2001); and
3. Transit New Zealand's "Urban Design Implementation Principles" (2006).

12.2 The UDLMP is to be based on the draft "Vic Park Tunnel Urban Design Framework" dated 20 October 2006, prepared for Transit New Zealand by Boffa Miskell Limited, and shall include the following key principles:

1. The importance of the tree-lined St Mary's Bay cliffs as a gateway to Auckland City;
2. The existing landscape values of the area;
3. Treatment of the motorway corridor subject of the notices of requirement in a unified way;
4. The considered and careful use of major structural elements;
5. The design of noise barriers as possible sculptural elements (i.e., well designed, elegant and functional structures) but without detracting from principles 1 and 2 above;
6. Support for a strong pedestrian experience;
7. Recognition of Maori values, associated with the history of settlement and use of the area, including the connection with Watchmans Island (Motu Ngaengae) and the former pa site on Te To headland.

12.3 The UDLMP shall consist of:

1. The Final Urban Design Framework: The Framework shall depict the overall urban design concept, the design intent, layout and mitigation proposals for key components and areas (or sectors) of the Project, and provide a framework for the design, layout, landscape planting and streetscape measures. The Framework will:
 - i. Be determined in consultation with the Auckland City Council (Group Manager: Community Planning) and relevant iwi (by way of a joint working party);
 - ii. Consider further comments that may be obtained from the Auckland City Council Urban Design Panel (which shall be obtained prior to lodgement of the UDLMP with the Auckland City Council (Group Manager: Community Planning)); and
 - iii. Consider further comments from a stakeholder workshop to which affected parties listed in Appendix 1 to the decision (refer to Plan Modification 32) will be invited.
2. Detailed Design Plans: These plans shall depict landscape and streetscape design elements for the Project, as appropriate, and shall consist of:
 - i. An overall "masterplan" of the Project showing the location and extent of landscape and streetscape improvements and mitigation measures;
 - ii. Where required, detailed concept plans for each sector of the route, including cross-sections and elevations of common and site-specific landscape and streetscape elements.

12.4 Contents of detailed design plans.

1. Streetscape elements to be included in the detailed design plans as described in condition 12.3 (2.) shall include:
 - i. Noise attenuation barriers no greater than 5m in height;
 - ii. Road safety barriers;
 - iii. Retaining walls;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- iv. External appearance and safety consideration (eg stone-throwers) of tunnel portals, the edges of the tunnel portal approaches, and emergency egress;
- v. The relocated Birdcage (Rob Roy) Hotel and surrounding Franklin Road precinct;
- vi. Open space in front of the relocated Birdcage Hotel and between the southern tunnel portal and Franklin Road;
- vii. Replacement of pedestrian and park facilities displaced by the Project;
- viii. The new pedestrian footbridge and other new pedestrian facilities proposed by the Project, including those within the St Mary's Bay reserve and Victoria Park;
- ix. Local road reserves affected by the designation, including Franklin Road, Victoria Street, Beaumont Street, and Fanshawe Street;
- x. The Fanshawe Street/Beaumont Street intersection and the Victoria Street West/Franklin Road/Union Street intersection, including the following elements:
 - Sensitivity to the safety of pedestrians;
 - Improved pedestrian linkages;
 - Consistency with local traffic plans and requirements;
 - Landscaping and design consistent with the Urban Design Framework which also recognises the setting and context of the surrounding area including significant cultural and historic features (if any);
- xi. Streetlights and sign gantries;
- xii. Preservation of the Jacob's Ladder pedestrian route in recognition of that route's historic significance and social value.

2. Landscape elements to be included in the detailed design plans as described in 12.3 (2) shall include the following:

i. A plan for the St Mary's Bay Reserve from Shelley Beach Road through to Beaumont Street, developed in accordance with the following concepts:

- The final Urban Design Framework;
- The recognition of the tree-lined St Mary's Bay cliffs as a gateway to Auckland City;
- The existing high natural character of the area;
- The importance of good pedestrian linkages including footpaths, boardwalks and the access to the pedestrian overbridge and Jacob's Ladder;
- The need for ground contouring and landscaping which avoids surface water ponding, where practicable, and that is sensitive to user amenity and safety and the ability to appreciate existing views, having regard to the effects of any noise barriers that are installed;
- Replacement and replanting of trees affected by the works and noise barrier.

ii. A plan for the western end of Victoria Park, developed in accordance with the following concepts:

- The Victoria Park Management Plan (2005);
- The final Urban Design Framework;
- Recognition of the existing character and design of the Park;
- The maintenance of a ring of Plane Trees and the location of landscaping features having regard to the amenity of the Park;
- Public access and use including access ways and recreational activities;
- Effective and imaginative use of the space directly under the viaduct structure;
- Minimising the effect of the location and design of any structures and associated infrastructure required for emergency access to or egress from the tunnel;
- Areas identified for active recreation including re-establishment of existing activities or new activities such as playgrounds etc and associated parking.

iii. Specific vegetation removal and modification plans showing all scheduled and non-scheduled trees and significant vegetation to be removed/relocated/modified and the landowner(s) involved;

iv. Specific planting plans showing the trees and vegetation to be retained, all new planting, and a detailed plant list and specifications including number, size and species;

v. Planting programme - the staging of planting in relation to the construction programme;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

vi. Detailed specifications relating to (but not limited to) the following:

- Vegetation protection (for desirable vegetation to be retained);
- Weed control and clearance;
- Ground preparation (topsoiling and decompaction to ensure rapid plant establishment and ongoing vigour);
- Mulching;
- Plant supply and planting;
- Maintenance regime (requirements and programme);
- Performance standards (for site preparation, plant supply, planting and maintenance).

12.5 Where appropriate, landscape mitigation proposals outside of the designation (e.g. Victoria Park, St Mary's Bay reserve, Westhaven Drive and Point Erin) may be agreed by the Requiring Authority with the appropriate landowner and subsequently implemented.

12.6 In developing the UDLMP consideration shall also be given to:

1. Other measures that may assist the Auckland City Council to promote safety and security for local residents and open space users;
2. Other measures to assist the Auckland City Council to promote a positive pedestrian experience within the Project area, including the development of pedestrian links in Freeman's Bay (Napier Street to the Birdcage Hotel), through Victoria Park and the St Mary's Bay reserve;
3. Cooperating with the Auckland City Council to identify and to provide opportunities to accommodate any stakeholder funded art works;
4. The requirement that Transit's financial commitment to the urban design process is limited to the mitigation of Project-related effects resulting from within its designation.

12.7 The noise barrier along the St Mary's Bay Reserve shall be designed in accordance with the principles of the Urban Design Framework. This design shall take into account the following considerations:

- The provision of acoustic barriers beside the carriageway to achieve, at a minimum, compliance with the Transit New Zealand 'Guidelines for the Management of Road Traffic Noise - State Highway Improvements' (December 1999). Such barriers, where appropriate, shall be transparent.
- Allowing maximum appreciation by southbound motorists of the gateway effect of the tree-lined cliffs;
- Allowing good views of the Westhaven Marina and the Waitemata Harbour from properties on the cliffs and also from the adjacent walkway;
- Making the barrier itself an attractive landscape element;
- The cost, constructability, and the maintenance requirements of the barrier (including cleaning, removal of graffiti and any advertising posters).

12.8 A management and maintenance plan shall be prepared by the requiring authority and implemented for all noise barriers to ensure that, to the extent practicable, the barriers are continually maintained in good condition and free of graffiti and other defacements that may affect the visual amenity of the surrounding areas.

12.9 Prior to planting and throughout the ensuing maintenance period, all weed species declared as plant pests in the Auckland region by the ARC (including Total Control/Containment Pests/Surveillance Pests & Research Organisms) shall be controlled and removed from the designated areas by the requiring authority

12.10 In areas where shrub mixes are used, planting densities shall ensure low canopy coverage has been attained by the end of the maintenance period, which will run for three years following the completion of the construction works.

12.11 Where native plants are used, the composition shall reflect the natural plant associations of the area, and the mixes (where relevant) shall be of suitable richness and diversity to encourage self-sustainability once established. This will require the inclusion of appropriate successional species, including canopy tree species

The Proposed Auckland Unitary Plan (notified 30 September 2013)

either in the initial planting mix or as enrichment planting.

12.12 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

12.13 Planting areas shall be mulched using suitable weed-free, granular organic mulch. The only exceptions to this shall be where the slopes are too steep to allow for its retention. In such cases a neutral or black coloured biodegradable or photodegradable geotextile is to be used.

12.14 The landscaping shall be implemented in accordance with the UDLMP within the first planting season following the completion of the construction works provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for the next 3 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping may be implemented after the first planting season of each stage.

13. Lighting

13.1 Motorway lighting should be designed and screened to minimise the amount of lighting overspill and illumination of residential areas.

AIR QUALITY

14. Dust

14.1 The Requiring Authority shall ensure that the Construction Environmental Management Plan developed for the Project contains measures to control dust, generated during the construction process, in order to minimise dust deposition and nuisance beyond the designation boundaries.

Contaminated site/odour

14.2 The Requiring Authority shall ensure that the Construction Environmental Management Plan developed for the Project contains appropriate mitigation measures to control offensive odours, generated as a result of the construction process, occurring beyond the designation boundaries.

15. Monitoring and Review

15.1 At least 6 months prior to commencement of construction of the project, an air quality monitoring station is to be established at a site comparable with the station located within the car park of the Victory Christian Church during 2005 / 2006.

1. The station will monitor the following parameters for a period of six months prior to construction of the project commencing:

- i. Fine particulates (PM10) in accordance with the specifications given in the National Environmental Standards, Air Quality;
- ii. Meteorological measurements of wind speed, wind direction and temperature.

2. The station will monitor the following parameters during construction of the project:

- i. Dust, measured as Total Suspended Particulates (TSP) using a continuous particulate monitor equivalent to that used to measure fine particulates prior to construction;
- ii. Meteorological measurements of wind speed, wind direction and temperature.

3. The station will monitor the following parameters for a period of twelve (12) months after completion of construction of the Project:

- i. Fine particulates (PM10), carbon monoxide (CO) and oxides of nitrogen (NOx) in accordance with the specifications given in the National Environmental Standards, Air Quality;
- ii. Meteorological measurements of wind speed, wind direction and temperature.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Results of the monitoring in summary form, assessed against the National Environmental Standards, Air Quality and the Auckland Regional Council target values, shall be reported quarterly to the Auckland City Council.

15.2 Prior to commissioning of the air quality monitoring station, Transit will submit a plan to the Auckland City Council (Group Manager: City Planning) detailing how it will comply with condition 15.1 above.

16. Iwi Matters, Archaeological, Heritage

16.1 An Auckland City Council approved and qualified archaeologist and a Kaitiaki monitor approved by Ngati Paoa and Ngati Whatua shall be provided with 7 working days' notice of the commencement of initial earthworks for the Project in relation to each of the tunnel alignment, its approaches, the basement excavation of the Birdcage Hotel and the relocation site for the Hotel in order that they may be present to monitor those activities.

16.2 Detailed protocols for the management of archaeological, koiwi and waahi tapu discoveries shall be developed in conjunction with tangata whenua prior to construction.

16.3 If any koiwi are exposed during site works the following procedures shall apply:

- a. Immediately after it becomes apparent that koiwi have been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched;
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust, the Auckland City Council (Group Manager: City Planning) and, where appropriate, the New Zealand Police as soon as possible so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the koiwi until any approval required has been obtained.

16.4 The Requiring Authority shall develop a methodology and monitoring programme for the relocation and restoration of the Birdcage Hotel (formerly the Rob Roy) to be agreed in writing by the Auckland City Council (Group Manager: City Planning) prior to the works commencing and shall:

- a. Take into account the Conservation Plan undertaken by Matthews and Matthews Architects, dated January 2003, and in particular, the policies and schedule of significant features; and
- b. Include an inventory of those parts of the Birdcage Hotel (interior and exterior) which are proposed to be: left in place and protected during relocation; removed and reinstated; and those to be removed and not reinstated;
- c. Include a schedule of the planned restoration and reinstatement works for the Birdcage Hotel and surrounds (including the forecourt area) and additions to the building as part of the relocation; and
- d. Include regular liaison and consultation with the Auckland City Council (Group Manager: City Planning) and the New Zealand Historic Places Trust during the relocation phase.

16.5 All work concerned with the relocation and restoration of the Birdcage Hotel as approved under Condition 16.4 shall be carried out under the direction of an appropriately qualified architectural conservation specialist, the appointment of whom is to be agreed in advance in writing by the Auckland City Council (Group Manager: City Planning).

16.6 Prior to the commencement of construction activities in the vicinity of the Campbell Free Kindergarten, a Condition (Dilapidation) Report on the structure of the Kindergarten building shall be agreed in writing by the Auckland City Council (Manager Property Group) and shall:

- a. Be prepared by a suitably qualified building certifier;
- b. Make any necessary recommendations for reinforcing the Kindergarten;
- c. Include a definition of the level of effects to be considered 'significant' pursuant to Condition 16.8; and
- d. Include consultation by the requiring Authority with the New Zealand Historic Places Trust.

16.7 Prior to the commencement of construction activities in the vicinity of the Campbell Free Kindergarten, the structure of the Kindergarten building shall be reinforced as per the recommendations of the Condition

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(Dilapidation) Report of Condition 16.6. This reinforcement work shall be certified by a building certifier familiar with the Condition (Dilapidation) Report and shall be completed, inspected and agreed in writing by the Auckland City Council (Manager Property Group) prior to the Project works commencing.

16.8 During construction, the effects of vibration on the Birdcage Hotel, Campbell Free Kindergarten, Auckland Municipal Destructor and Depot (also known as the Victoria Park Market) and the former Auckland Gas Company buildings in Beaumont Street shall be monitored by the Requiring Authority and the results of the monitoring provided to the Auckland City Council (Group Manager: City Planning). Appropriate action shall be undertaken if the effects of vibration are significant, including any reasonable restoration or reconstruction of any heritage elements of the buildings noted above, and in the event of damage or failure as a direct result of the Project works, at the cost of the Requiring Authority and to the written approval of the Auckland City Council.

16.9 Prior to the commencement of the Project works, recording of the historical significance of the HMNZS Ngapona, including exterior and interior photographic archival documentation, shall be undertaken and a report prepared. This report is to be completed in consultation with the New Zealand Historic Places Trust and the Auckland City Council.

SERVICES

17. Infrastructure Service Networks

17.1 The Requiring Authority shall liaise with the providers of infrastructure service networks including, but not limited to: water, gas, stormwater, wastewater, power and telecommunications, to develop methodologies and timing for necessary services relocation with the objective of minimising disruption to the operation of these networks during construction of the Project.

Advice Notes

1. The Requiring Authority shall obtain all other necessary consents and permits and comply with all relevant Auckland City Council bylaws, and obtain any approvals under the Reserves Act (where required.)

2. The Requiring Authority shall obtain all necessary resource consents and permits in relation to sediment and stormwater discharges from the Auckland Regional Council.

3. Under the Historic Places Act 1993, an Authority to Modify an Archaeological Site is required from the NZ Historic Places Trust before any work takes place on an archaeological site.

4. All archaeological sites are protected under the provisions of the Historic Places Act 1993. It is an offence under that Act to modify, damage or destroy any archaeological site, whether the site is recorded or not. Application must be made to the New Zealand Historic Places Trust Pouhere Taonga for an authority to modify or destroy archaeological site(s).

5. Some of the land is subject to existing designations and the provisions of Section 177 of the Resource Management Act 1991 apply accordingly.

6736 State Highway 1 and 16 - Central Motorway Junction, Auckland Central

Designation Number	6736
Requiring Authority	New Zealand Transport Agency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	State Highway 1 and 16 from Grafton Road, Grafton to Wellington Street, Auckland Central and State Highway 16 from Parnell Rise to Newton Road, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 284, Auckland Council District Plan (Central Area) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The designation is to include, and allow for, the control of this State Highway, including planning, design, supervision, construction and maintenance in accordance with the provisions of the Government Roadway Powers Act 1989.

Conditions

1. Prior to the lodgement of any outline plan of works for activities on the following sites:
 - a. 11 Stanley Street (Lot 11 DP 19627);
 - b. 13-15 Stanley Street (Part Allotment 19 Section 9 Auckland City);
 - c. 17 Stanley Street (Lot 3 DP 19627);
 - d. 21 Stanley Street (Lots 1 and 2 DP 19627);
 - e. 1-3 Beach Road (Lot 15 DP 19627);
 - f. 17-35 Beach Road (Lots 8, 9 and 10 DP 19627); and
 - g. 20 Churchill Street (Lot 7 DP 19627).

The NZTA will consult with the NZ Historic Places Trust and Ngati Whatua o Orakei regarding the effects of the works on historic features on the affected sites.

6738 State Highway 16 - Te Atatu

Designation Number	6738
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from Whau Creek to Henderson Creek, Te Atatu
Rollover Designation	Yes
Legacy Reference	Designation NZTA1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Alteration to designation NZTA1, SH16, between Whau River and Henderson Creek, to include widening of the SH16 carriageway, modifications to the existing Te Atatu interchange, ancillary safety and operational services, temporary works, a cycleway and pedestrian path, and ancillary works and services – NOR1.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

For a complete set of conditions, refer to the Waterview Connection Proposal Board of Inquiry decision titled “Final Report and Decision of the Board of Inquiry into the New Zealand Transport Agency Waterview Connection Proposal - Volume 2” dated June 2011.

General Designation Conditions

DC.1

Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by the New Zealand Transport Agency (NZTA being the Requiring Authority), the Notice(s) of Requirement and the supporting documents, and supplementary information provided in evidence. This information is summarised as follows:

(a) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Parts A-E;

(b) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part F: Plans and Drawings, except as updated through the hearing (Refer Schedule A for current plan and drawing references); and

(c) Waterview Connection Project. Assessment of Environmental Effects Report (dated August 2010). Part G: Technical Reports:

(i) Technical Report G.1 Assessment of Air Quality Effects

(ii) Technical Report G.2 Assessment of Archaeological Effects

(iii) Technical Report G.3 Assessment of Avian Ecological Effects

(iv) Technical Report G.4 Assessment of Coastal Processes

(v) Technical Report G.5 Assessment of Construction Noise Effects

(vi) Technical Report G.6 Assessment of Freshwater Ecological Effects

(vii) Technical Report G.7 Assessment of Groundwater Effects

(viii) Technical Report G.8 Assessment of Herpetofauna Ecological Effects

(ix) Technical Report G.9 Assessment of Land and Groundwater Contamination

(x) Technical Report G.10 Assessment of Lighting Effects

(xi) Technical Report G.11 Assessment of Marine Ecological Effects

(xii) Technical Report G.12 Assessment of Operational Noise Effects

(xiii) Technical Report G.13 Assessment of Ground Settlement Effects

(xiv) Technical Report G.14 Assessment of Social Effects

(xv) Technical Report G.15 Assessment of Stormwater and Streamworks Effects

(xvi) Technical Report G.16 Assessment of Temporary Traffic Effects

(xvii) Technical Report G.17 Assessment of Terrestrial Vegetation Effects

(xviii) Technical Report G.18 Assessment of Transport Effects

(xix) Technical Report G.19 Assessment of Vibration Effects

(xx) Technical Report G.20 Assessment of Visual and Landscape Effects

(xxi) Technical Report G.21 Construction Environmental Management Plan (CEMP)

(xxii) Technical Report G.22 Erosion and Sediment Control Plan (ESCP)

(xxiii) Technical Report G.23 Coastal Works

(xxiv) Technical Report G.24 Geotechnical Interpretive Report

(xxv) Technical Report G.25 Traffic Modelling Report

(xxvi) Technical Report G.26 Operational Model Validation Report

(xxvii) Technical Report G.27 Stormwater Design Philosophy Statement

(xxviii) Technical Report G.28 Geotechnical Factual Report – 500 Series

(xxix) Technical Report G.29 Geotechnical Factual Report – 700 Series

(xxx) Technical Report G.30 Assessment of Associated Sediment and Contaminant Loads

(xxxi) Technical Report G.31: Technical Addendum Report (September 2010)

(d) PT & Active Mode Transport Routes Existing and Proposed (Refer Schedule A, Row 22).

(e) Waterview Connection Project, Evidence and Supplementary Information provided to the Board of Inquiry:

(i) Evidence in Chief (Numbers 1-37)

(ii) Rebuttal Evidence (Numbers 1-33)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(iii) Supplementary Information (Numbers 1-8)

DC.1A

Within 3 months of the designations being confirmed for the Project (or at least 1 month prior to any Auckland Council approvals or certifications required by these Conditions, whichever is the earlier), the NZTA shall update and finalise to the satisfaction of the Major Infrastructure Team Manager, Auckland Council all drawings and Plans cited in Schedule A, and provide a full set of the information and documentation referred to in Condition DC.1 to the Major Infrastructure Team Manager Auckland Council. At the same time the NZTA shall prepare to the satisfaction of the Major Infrastructure Team Leader, Auckland Council, a document for each designation which sets out the designation and have attached to it in text format a comprehensive set of the conditions imposed by the Board of Inquiry in its Final Decision as summarised in Schedule B, inclusive of any standard conditions and advice notes.

In particular (but not limited to), the following Plans will need to be amended in light of these Final Conditions:

- (a) F.2 Operational Scheme Plans (refer Schedule A, Row 3) require amendment detailing the amended location of the ventilation stacks and southern ventilation buildings;
- (b) F.5 Construction Scheme Plans (refer Schedule A, Row 4) require amendment to detail changes to the construction footprint for the amended location of the ventilation stacks and southern ventilation buildings and reconfiguration of Construction Yard 1);
- (c) F.6 Construction Yard Plans 101 and 107 (refer Schedule A, Row 7), detailing amendments to the Construction Yard 1 in light of the reconfiguration of this Yard and for Construction Yard 7 in light of the relocation of the northern ventilation stack (refer Schedule A, Row 34);
- (d) F.8 Plans of Structures and Architectural Features (refer Schedule A, Row 9), detailing the amended location of the northern ventilation stack and the design and location of the southern ventilation building and stack;
- (e) The CNVMP (including flow diagram and the supplementary evidence produced by Ms Wilkening) (refer Schedule A, Rows 36, 37 and 39);
- (f) The areas of the Open Space Restoration Plans (Schedule A, Row 30) to:
 - (i) Extend these areas in geographic extent to provide for the works identified in the Management Plan notations identified in the OS Conditions (in particular OS.5 and OS.6) (e.g. these areas will (as relevant) include Eric Armishaw Park, Howlett Reserve and Waterview Esplanade Reserve); and
 - (ii) Exclude the operational area of designation required for the northern ventilation stack (as identified through the OPW process (refer Condition DC.8); and
- (e) Schedule A, Row 28 the Plan detailing proposed open space impacts and replacements needs to be updated to recolour the two land parcels on Hendon Avenue (which are excluded from the replacement calculations) to 'brown' to confirm they are part of the operational impact and will not be returned as open space.

DC.2

The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

DC.3

The NZTA shall update and finalise the relevant Construction and Operational Management Plans required under these conditions to ensure compliance with the designation conditions imposed by the Board of Inquiry. The relevant Management Plans shall be submitted to the Major Infrastructure Team Manager, Auckland Council within the timeframes specified in the following conditions. No works shall be undertaken until the relevant management plans have been finalised and certified or approved in accordance with the relevant conditions.

DC.4

Any Management Plans submitted to the Major Infrastructure Team Manager, Auckland Council for approval or certification may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall clearly show the integration with adjacent stages and interrelated activities.

DC.5

In the event of any dispute, disagreement or inaction arising as to any Auckland Council Manager certification/ approvals required by the designation conditions, or as to the implementation of or monitoring required by the conditions, matters shall be referred in the first instance to the NZTA Regional State Highway Manager and to the Resource Consents Manager, Auckland Council to determine a process of resolution. If a resolution cannot be agreed, then the matter may be referred to an independent appropriately qualified expert, agreeable to both parties, setting out the details of the matter to be referred for determination and the reasons the parties do not agree. The independent appropriately qualified expert shall be appointed within 10 working days of the NZTA or Auckland Council giving notice of their intention to seek expert determination. The expert shall, as soon as possible, issue his or her decision on the matter. In making the decision, the expert shall be entitled to seek further information and hear from the parties as he or she sees fit.

Advice note: The dispute resolution process provided for in this condition does not prejudice any party's right to take enforcement action in relation to the implementation of the designation conditions. However, the dispute resolution process will be applied before any formal enforcement action is taken by the Council, except in urgent situations.

DC.6

Except for Conditions DC.7, DC.8 and DC.9, the NZTA shall be exempt from providing an Outline Plan of Works for the Project, as provided for in Section 176A (2)(a) and (b) of the RMA.

Advice note: The Construction and Operational Management Plans, together with the provision of detailed drawings required by Condition DC.1(b) are considered sufficient detail in all aspects of the Project, with the exception of proposed works for the northern and southern ventilation buildings and stacks where further details are required.

DC.10

The NZTA shall give notice to the Manager Regional and Local Planning, Auckland Council in accordance with Section 182 and 181 respectively of the RMA for:

(a) Within six months of the State highway opening (being operational), removal of those parts of the designation that are not required for the long term operation, maintenance and mitigation of effects of the State highway.

Note: this condition is specific to land no longer required for construction purposes once the Project is completed and includes the land of 6 Barrymore Road, refer Condition OS.17.

(b) The designation to be altered to remove those conditions no longer required for long term operation and maintenance of the Project.

DC.12

Unless otherwise provided for by Condition RC.2, if any monitoring required to be undertaken by any party by the designation conditions indicates non-compliance with any designation condition, the NZTA must provide written notice to the Major Infrastructure Team Manager Auckland Council as soon as it becomes aware of same, stating the following:

(a) A description of the non-compliance; and

(b) The measures NZTA proposes for addressing the non-compliance, including any additional mitigation measures.

Subject to the Council's approval, the NZTA must implement the additional mitigation measures to address the non-compliance.

DC.13

Pursuant to Section 36(1)(d) of the RMA, the requiring authority is required to pay to Auckland Council any

The Proposed Auckland Unitary Plan (notified 30 September 2013)

administrative charge for the carrying out by the local authority of its functions in relation to the administration, monitoring, and supervision of designation conditions.

DC.14

The servants of agents of Auckland Council shall be permitted to have access to relevant parts of the Project at all reasonable times for the purpose of carrying out inspections, investigations, tests, measurements and/or to take samples.

Construction Environment Management Plan Conditions

CEMP.1

Except where provided for in Condition CEMP.1A below, the NZTA shall update and finalise the draft Construction Environmental Management Plan (CEMP) including all the Management Plans which form part of the CEMP and are included as appendices, submitted with this application to ensure compliance with the consent and designation conditions imposed by the Board of Inquiry. The CEMP shall be provided to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to the commencement of works to certify compliance and consistency with the conditions. Construction shall not commence until certification is obtained.

Advice note: For clarity the CEMP will be updated and finalised in accordance with the conditions. Any amendments will be limited to reflecting the requirements of the conditions, specifying personnel, and completing the Environmental Risk Register.

Advice note: Particular care must be taken with development and operation of Construction Yard 7. When the CEMP is being updated and finalised, consideration must be given to the contents of the draft SSCEMP prepared for Construction Yard 7 (Row 41, Schedule A) recognising changes required by inclusion of the ventilation stack in this yard.

CEMP.1A

In the case of the trial embankment, where works will commence well in advance of the main construction works for the Causeway, the NZTA will provide to the Major Infrastructure Team Manager, Auckland Council, a site-specific CEMP for review and approval at least 20 working days prior to commencement of the trial embankment works.

CEMP.1B

For the purposes of staging works, as some works may commence well in advance of others, the NZTA may provide staged or site specific CEMPs for those works to the Major Infrastructure Team Manager, Auckland Council. The NZTA shall consult with the Team Manager about the need and timing for any other site-specific or staged CEMPs and shall provide any required site-specific or staged CEMPs to the Major Infrastructure Team Manager, Auckland Council for review at least 20 working days prior to commencement of such the specific stage (including enabling) or site works.

CEMP.2

The certification process of the CEMP (and its appendices) shall confirm that the CEMP gives effect to the relevant conditions, as well as those matters in CEMP.6, and that it includes details of:

- (a) Staff and contractors' responsibilities;
- (b) Training requirements for employees, sub-contractors and visitors;
- (c) Environmental incident and emergency management;
- (d) Communication and interface procedures (in accordance with the Communication Plan required under Condition PI.2);
- (e) Environmental complaints management (including the procedures required under Condition PI.4);
- (f) Compliance monitoring;
- (g) Reporting (including detail on the frequency of reporting to the Auckland Council);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (h) Environmental auditing; and
- (i) Corrective action.

CEMP.3

The management of key environmental effects associated with the construction phase of the Project is detailed within environmental management plans that are included in the CEMP as appendices. This suite of management plans as shown on Figure CEMP.A comprises:

- (a) Construction Noise and Vibration Management Plan (CNVMP);
- (b) Construction Air Quality Management Plan (CAQMP);
- (c) Erosion and Sediment Control Plan (ESCP);
- (d) Temporary Stormwater Management Plan (TSMP);
- (e) Ecological Management Plan (ECOMP);
- (f) Groundwater Management Plan (GWMP);
- (g) Settlement Effects Management Plan (SEMP);
- (h) Contaminated Soils Management Plan (CSMP);
- (i) Hazardous Substances Management Plan (HSMP);
- (j) Archaeological Site Management Plan (ASMP);
- (k) Construction Traffic Management Plan (CTMP);
- (l) Concrete Batching and Crushing Plant Management Plan (CBCPMP);
- (m) Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP) (to be prepared in accordance with Condition CEMP.15);
- (n) Waste Management Plan (to be prepared in accordance with Condition CEMP.10); and
- (o) Temporary Construction Lighting Management Plan (to be prepared in accordance with Condition L.2).

CEMP.4

The CEMP shall be implemented and maintained throughout the entire construction period.

CEMP.5

A copy of the CEMP shall be held on each construction site at all times and be available for inspection on request by the Auckland Council.

CEMP.6

The finalised CEMP shall include specific details on demolition, construction and management of all works associated with the Project. The certification process of the CEMP shall confirm that the CEMP includes details of the following:

- (a) Details of the site or Project manager and the community liaison person, including their contact details (phone, facsimile, postal address, email address);
- (b) The location of large notice boards that clearly identify the NZTA and the Project name, together with the name, telephone, email address and address for service of the site or Project manager and the community liaison person;
- (c) An outline construction programme of the work indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- (d) The hours of work, which should reflect the need to ensure that residents enjoy reasonable freedom from noisy or intrusive construction activity in their neighbourhood at night, on Sundays and during public holidays;
- (e) Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/ storage of rubbish, storage and unloading of building materials and similar construction activities;
- (f) Location of worker's offices and conveniences (e.g. portaloos);
- (g) Procedures of controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- (h) Methods to stabilise ingress and egress points to construction sites, to the standard required by ARC Technical Publication 90 (Nov 2007);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (i) Procedures for ensuring that residents within 100m of construction areas or other people whose use of an area may be disrupted by construction works (for example the Te Atatu Boating Club for works on the Whau River) are given notice of the commencement of construction activities and are informed about the expected duration of the works, including potentially through the community liaison person;
- (j) Procedures to be followed to ensure that those working in the vicinity of identified heritage and ecological features are aware of the heritage or ecological values of these features and the steps which need to be taken to meet the conditions applying to work on the site;
- (k) Means of ensuring the safety of the general public;
- (l) Procedures for the community liaison person to receive and respond to complaints about construction activities, including dust and odour from the works;
- (m) Methods of mitigating the local and network wide effects of construction of individual elements of the Project, including measures to ensure that parking of staff vehicles on surrounding streets is restricted;
- (n) All temporary boundary/ security fences shall be maintained in good order, with any graffiti removed as soon as possible;
- (o) Confirmation of a Project Arborist and completion of a STEM assessment of the preliminary list of Amenity Trees in Schedule E.7 of the AEE to confirm the final Amenity Trees; and
- (p) The process to minimise removal of Amenity Trees, maximise the protection of those retained, undertake relocation of Amenity Trees and replacement planting of specimen trees (in accordance with Conditions LV.10 and ARCH.9)).
- (q) Advice note: For the purposes of CEMP.6(o) and (p), Amenity Tree is defined as a tree or trees that contribute significantly to amenity, taking into account its form, size, health, ecological or historical significance (a preliminary list of these trees is provided in Appendix E.7 of the AEE).

CEMP.7

The layout of the 12 Construction Yards, including associated buildings, fencing and site access shall be developed in accordance with Waterview Connection Project Construction Yards Plans (Refer Schedule A, Row 7). The layout drawings shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to the occupation of the yard, for review and certification that the final layout of the construction yards is in accordance with the conditions. The layout drawings shall incorporate the following:

- (a) The main access to the construction yards to be located as far as practicable from residential dwellings, taking into account site and public safety and environmental constraints, in the locations shown on Waterview Connection Project Construction Yards Drawings (Refer Schedule A, Row 7);
 - (b) Noisy construction activities to be located as far as practicable, and preferably no less than 100m, from residential dwellings; Construction of temporary boundary/ security fences to be undertaken in a manner which minimises impacts on existing trees;
 - (c) Temporary acoustic fences and visual barriers;
 - (d) Temporary buildings greater than 8 metres in height to be located in a position which minimises visual impact on adjacent residential dwellings; and
- Location of workers' and Project vehicle parking.

CEMP.8

All storage of material and equipment associated with the construction works shall take place within the boundaries of the designation.

CEMP.9

Temporary protection shall be installed to prevent vehicles damaging drains, footpaths, berms, kerbs, vehicle crossings and the roads during the site preparation and construction phase of the Project. Any damage to the drains, footpaths, berms, kerbs, vehicle crossings and the road attributable to any vehicle associated with construction activities shall be repaired to the same or similar standards as existed prior to such damage at no cost to the Auckland Council.

CEMP.10

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The NZTA shall finalise and implement the Hazardous Substances Management Plan (HSMP), through the CEMP (as per Condition CEMP.1), submitted with this application, prior to works commencing on site. The certification process of the CEMP shall confirm that the HSMP clearly identifies the requirements for proper storage, handling, transport and disposal of hazardous substances during the construction phase of the Project and confirm that there shall be no storage of explosives on the Project site.

CEMP.11

The NZTA shall develop and implement a Waste Management Plan in accordance with the waste management principles, controls and methods set out in the CEMP. The Plan shall be provided to the Major Infrastructure Team Manager, Auckland Council and be implemented throughout the entire construction period.

CEMP.12

The CEMP shall be reviewed by the NZTA at least annually or as a result of a material change to the Project. The review shall take into consideration:

- (a) Compliance with designation and consent conditions;
- (b) Any changes to construction methods;
- (c) Key changes to roles and responsibilities within the Project;
- (d) Changes in industry best practice standards;
- (e) Changes in legal or other requirements;
- (f) Results of inspections, monitoring, incidents, corrective actions, internal or external assessments; and
- (g) Public complaints.

A summary of the review process undertaken shall be kept by the NZTA, provided annually to the Major Infrastructure Team Manager, Auckland Council and made available (with any related data) to the Auckland Council upon request.

CEMP.13

Following the review process (as described in Condition CEMP.12), the CEMP may require updating. Any material change proposed to the CEMP (including appended Management Plans) shall be submitted for approval to the Major Infrastructure Team Manager, Auckland Council at least 10 working days prior to the proposed changes taking effect.

Advice note:

Material change will include amendment to any base information informing the CEMP or any process, procedure or method of the CEMP (such as the environmental constraints map, compliance monitoring process, complaints procedure or mitigation / remedial methods identified) which has the potential to increase adverse effects on a particular value. For clarity changes to personnel and contact schedules do not constitute a material change.

CEMP.14

The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan (EISDCMP). The EISDCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council, and include:

- (a) Methods and measures:
 - (i) To ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities.
 - (ii) To appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines
 - (iii) To ensure that no activity is undertaken during construction that would result in ground vibrations and/or ground instability likely to cause material damage to the transmission lines, including support structures.
 - (iv) To ensure that changes to the drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations for any high voltage transmission line support structure.
- (b) Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Electricity (Hazard from Trees) Regulations 2003, including, but not limited to, the provisions of Schedule (Growth Limit Zones) to those Regulations.

(c) Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001), including, but not limited to, the provisions of:

- (i) Clause 2.2 with respect to excavations near overhead support structures;
- (ii) Clause 2.4 with respect to buildings near overhead support structures;
- (iii) Section 3 with respect to minimum separation between buildings and conductors;
- (iv) Section 5 with respect to minimum safe distances for the operation of mobile plant; and,
- (v) Table 4 with respect to minimum safe separation distances between the ground and the overhead conductors.

(d) Confirmation that Transpower has been provided a copy of the EISCDMP for their review at least 20 working days prior to construction.

Advice note: With respect to clause (c), specific consideration must be given to the height and location of temporary structures (such as Project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers).

CEMP.15

The NZTA will be responsible for all service relocations required for construction of the Project. The NZTA shall liaise with the providers of infrastructure service networks (including, but not limited to water, gas, stormwater, wastewater, power and telecommunications), and private property owners with on-site services to develop methodologies and timing for necessary services relocation required for the Project, with the objective of minimising disruption to the operation of these service networks and onsite services.

Advice note:

(a) It is noted that if separate consents are required for relocations for any services of network utility operators or landowners, such consents will be obtained before construction commences in the relevant area, and any effects of those relocations would be considered at that time. The same applies to any alteration of consents if required.

(b) Network infrastructure owned and operated by Watercare Services is located within the designations. An operating agreement will be developed by the NZTA and Watercare Services which will include appropriate notification and access protocols where works are to be undertaken by either network operator on or adjacent to Watercare Services infrastructure within the designations.

Public Information Conditions

PI.1.

A community liaison person shall be appointed by the NZTA for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the Project. The liaison person's name and contact details shall be made available in the CEMP and on site signage by the NZTA. This person must be reasonably available for on-going consultation on all matters of concern to affected parties arising from the Project.

PI.2.

The NZTA shall prepare and implement a Communications Plan that sets out procedures detailing how the public, Ministry of Social Development, Housing New Zealand Corporation and other organisations representing the particular demographic characteristics of the community (including but not limited to Primary Health Organisations, general practitioners, youth, education organisations, aged care groups and groups representing ethnic and migrant communities) will be communicated with throughout the construction and monitoring periods (as prescribed in the designation and consent conditions).

In preparing the Communications Plan, the NZTA will liaise with Auckland Council to access its community liaison databases. The Communications Plan will include details of:

- (a) The site or Project manager and the community liaison person, including their contact details (phone,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

facsimile, postal address, email address);

(b) In accordance with these Conditions, the database of the key construction activities and monitoring requirements that are the subject of the Communications Plan;

(c) The database of stakeholders and residents who will be communicated with;

(d) Communication methods, an assessment of how these methods reach the different audience/ stakeholder groups (including those methods set out in Condition CEMP.6), and detail on when each of these methods will be used (e.g. regular communication or event specific methods);

(e) The appointed specialist in Environmental and Occupational Medicine, including contact details (as per Condition SO.13);

(f) Any stakeholder specific communication plans required; and

(g) Monitoring and review procedures for the Communications Plan.

The Communications Plan shall be written in accordance with the external communication procedures set out in the CEMP and provided at least 20 working days prior to construction commencing, to the Major Infrastructure Team Manager, Auckland Council, Working Liaison Group and the Community Liaison Group(s) established by Condition PI.5. The structure of the communication groups set out in these conditions is attached as Figure PI.A.

PI.3.

At least 15 working days prior to the commencement of construction, and at 15 working day intervals thereafter, or as required depending on the scale of works and effects on the community, advertisements will be placed in the relevant local newspapers and community notice boards (as identified in Condition CEMP.6(b)) detailing the nature of the forthcoming works, the location of the forthcoming works and hours of operation. All advertisements will include reference to a 24 hour toll free complaints telephone number. Where relevant, advertisements will also include but not be limited to details of:

(a) Any traffic disruptions or controls or changes to property access, pedestrian/ cycle routes and bus stops; and

(b) Any other construction activities, including night time works, blasting, and structure-borne noise, as identified in the conditions.

PI.4.

The NZTA shall manage, investigate and resolve (as appropriate) all complaints for the duration of the construction works in accordance with the environmental complaints section of the CEMP. The implementation strategy for complaints includes:

(a) A 24 hour toll free telephone number and email address, which shall be provided to all potentially affected residents and businesses. The number shall be available and answered at all times during the entire duration of the works for the receipt and management of any complaints. A sign containing the contact details shall be located at each site specific work activity;

(b) The NZTA shall maintain a record of all complaints made to this number, email or any site office, including the full details of the complainant and the nature of the complaint;

(c) Upon receiving a complaint, within 10 days of complaint receipt, a formal written response will be provided to the complainant and Auckland Council;

(d) The NZTA shall undertake corrective action where necessary to resolve any problem identified. All action taken and relevant information shall be documented. For the avoidance of doubt, 'where necessary' refers to where the works are not being carried out in accordance with conditions of this designation;

(e) Where issues and complaints about effects cannot be resolved through the CEMP complaints management process, a meeting shall be held between the NZTA, the complainant and the Auckland Council representative(s) to discuss the complaint and ways in which the issue may be resolved. If parties cannot agree on a resolution, an independent qualified mediator will be appointed, agreeable to all parties and at the shared cost of all parties, to undertake mediation of the dispute or concerns; and

(f) All information collected in Conditions PI.4 (b), (c) and (d) shall be detailed in a Construction Compliance Report (including the means by which the complaint was addressed, whether resolution was reached and how the response was carried out) prepared by the NZTA. This Report shall be submitted to the Major Infrastructure

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Team Manager, Auckland Council on a quarterly basis commencing at the beginning of the works and for the entire duration of construction.

PI.5.

The NZTA shall establish Community Liaison Group(s) at least two months prior to construction commencing in each of the following key construction areas:

- (a) Te Atatu (including the SH16 Causeway)
- (b) Waterview (including works to St Lukes on SH16 and on the Waterview Estuary and Causeway Bridges)
- (c) Owairaka

and hold regular meetings (at least three monthly) throughout the construction period and up to 24 months following construction completion relevant to these areas (or less if the members of the Group agree), so that on-going monitoring information can continue to be disseminated.

The Community Liaison Group(s) shall be open to all interested parties within the Project area including, but not limited to the following groups:

- (a) Auckland Council and Auckland Transport;
- (b) Educational facilities within the Project area (including schools, kindergartens, childcare facilities and Unitec Institute of Technology);
- (c) Relevant community/ environmental groups (including but not limited to Friends of Oakley Creek, Star Mills Preservation Group, Cycle Action Auckland and representatives from those organisations identified in the Communications Plan (as required by Condition PI.2) and local residents;
- (d) Department of Conservation;
- (e) Local Boards;
- (f) Iwi groups with Mana Whenua;
- (g) Public transport providers; and
- (h) Housing New Zealand Corporation.

Advice note: The purpose of the Community Liaison Group(s) is to provide a regular forum through which information about the Project can be provided to the community, and an opportunity for concerns or issues to be raised.

PI.6.

The Community Liaison Group(s) shall be provided opportunities to review and comment on the following (amongst other things):

- (a) The Outline Plan of Works detailing designs for the northern and southern ventilation buildings and stacks (the outcomes of this consultation will be reported in accordance with the processes required in DC.8(n) and DC.9(k);
- (b) The Open Space Restoration Plans (as required by Condition OS.3);
- (c) Finalisation and amendment to Urban Design and Landscape Plans (UDL Plans) (as required by Condition LV.1);
- (d) The Oakley Inlet Heritage Plan (as required by Conditions OS.5(b)(i) and ARCH.6);
- (e) The detail of the Oakley Creek restoration (as required by Condition STW.20);
- (f) Publicly available results of environmental monitoring as required by the designation and/or these Consents (e.g. air quality monitoring); and
- (g) The finalisation of the STEM assessment required by CEMP.6(o) and a schedule of trees that are required to be removed for consideration of timber use in heritage projects as required by Condition SO.7.

Advice Note: Attention is drawn to the Vegetation conditions concerning identification and protection of Significant Vegetation and Valued Vegetation.

- (h) Detailed design features of the Te Atatu underpass (e.g. lighting and architectural treatment).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Temporary Traffic Conditions

TT.1

The NZTA shall update and finalise the Construction Traffic Management Plan (CTMP) submitted with this application, in accordance with these conditions, and implement it through the CEMP.

In finalising the CTMP, the NZTA shall:

- (a) Provide simulation modelling demonstrations to better understand the effects of construction of the Project on the affected road network;
- (b) Include measures to avoid road closures and restrictions of vehicle, bus, cycle and pedestrian movements;
- (c) Where road closures or restrictions cannot reasonably be avoided the particular vulnerabilities and sensitivities of pedestrian diversions and restricted conditions shall be taken into account in the planning of any closures or restrictions.

TT.2

The CTMP shall require the development of Site Specific Traffic Management Plans (SSTMPs) and their approval by the Traffic Management Project Governance Group (as defined by the CTMP), for each construction activity that may affect traffic or transportation infrastructure and services. The SSTMPs shall be provided to the Traffic Management Coordinator(s) for the relevant Road Controlling Authority at least 10 working days prior to each construction activity.

TT.3

Each SSTMP shall describe the measures that will be undertaken to avoid, remedy or mitigate the local and network wide effects of construction of the Project. In particular, the SSTMP shall include the following matters:

- (a) Traffic management measures to address and maintain, traffic capacity, including bus services, at peak traffic periods during weekdays (6:00 to 9:00 and 16:00 to 19:00) and peak traffic periods at weekends (including Te Atatu Road, Great North Road and Richardson Road);
- (b) Methods to manage the effects of traffic during construction including the requirement to detour or divert traffic. These methods shall seek to avoid, remedy or mitigate effects on access to and from businesses and other organisations in the area;
- (c) Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- (d) Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections/ overbridges) and the use of staging to allow sections of the Project to be opened to the traffic while other sections are still under construction;
- (e) Methods to manage the effects of the delivery of construction material, plant and machinery (including cranes and oversized trucks) during construction;
- (f) Any routes where construction traffic movements will be restricted (either for particular times for construction periods);
- (g) Measures to maintain existing vehicle access, as far as practicable, or where the existing property access is to be removed or becomes unsafe as a result of the construction works, measures to provide alternative access arrangements in consultation with the Auckland Council and the affected landowner; and
- (h) Measures to maintain pedestrian and cycle access with thoroughfare to be maintained on all roads and footpaths adjacent to the construction works, where practicable (e.g. unless provision of such access is severed by the works or such access will become unsafe as a result of the construction works). Such access shall be safe, clearly identifiable, provide permanent surfacing and seek to minimise significant detours. (This Condition does not act as a qualification to the commitment to maintain access to open space and education facilities, as required in Condition OS.13).

TT.4

The SSTMPs shall include traffic management measures developed in consultation with the Auckland Transport, Bus and Coach Association and the Auckland Council, to address and maintain, where practicable, existing levels of service for buses particularly at peak periods (6:00 to 9:00 and 16:00 to 19:00) on weekdays.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

TT.5

The NZTA shall consult with the Traffic Operations Manager, Auckland Transport with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation. The NZTA shall also coordinate and consult directly with the proponents of any major construction or major traffic generating event occurring concurrently with, and in the vicinity of the Project.

TT.6

The SSTMPs shall include measures developed in consultation with Auckland Transport to, as far as practicable, enable continued public walking and cycling passage along the existing Northwestern Cycleway (between Te Atatu Interchange and St Lukes Interchange) and along Great North Road and the public walkway along Oakley Creek, with any interruptions being as short as feasible.

TT.7

The NZTA shall undertake construction works so as to avoid significant long duration impacts or the full closure of Te Atatu Road for all road users heading to or from the Te Atatu Peninsula and to ensure that access for emergency service vehicles is maintained.

TT.8

The NZTA shall restrict construction truck movements during peak hours (6:00 to 9:00 and 16:00 to 19:00) on weekdays and during the peak periods at the weekends to avoid the following:

- (a) Te Atatu Road Interchange, during both morning and afternoon peak hours
- (b) Great North Road Interchange, city bound during the morning peak hours
- (c) Great North Road Interchange, west bound onto SH16 and southbound onto Great North road during the afternoon peak.

Construction truck movements during these hours shall only be allowed under exceptional circumstances agreed in advance with the Traffic Management Project Governance Group.

TT.9

The NZTA shall maintain at least the existing active traffic lane configuration capacity on SH16, at the Te Atatu Interchange area, Te Atatu Road, Richardson Road and on Great North Road during peak periods being 6:00 to 9:00 and 16:00 to 19:00 on weekdays and during the peak periods on weekends, for the duration of the temporary construction programme.

TT.10

The NZTA shall monitor the impact of construction traffic in terms of traffic speeds and volumes on SH16, Great North Road, Te Atatu Road and Richardson Road throughout the construction period to confirm the expected traffic effects as set out in the Temporary Traffic Assessment (Technical Report G.16) submitted with this application.

- (a) This monitoring will be undertaken on a daily, weekly and monthly basis; and
- (b) Monitoring results will be made available to the Traffic Operations Manager, Auckland Transport on request.

TT.11

If monitoring undertaken pursuant to Condition TT.10 indicates that traffic volumes or traffic conditions are significantly different from those expected, the SSTMPs will be reviewed and as appropriate amended to the satisfaction of the Traffic Management Project Governance Group.

Operational Traffic Conditions

Integration with Local Road Network

OT.1

The NZTA shall prepare in collaboration with Auckland Transport a Network Integration Plan (NIP) for the Project, or relevant Project phases, to demonstrate how the Project integrates with the existing local road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

network and with future improvements (identified in the Western Ring Route (Northwest) Network Plan) planned by the Auckland Council. The NIP shall include details of proposed physical works at the interface between the State highway and the local road network, and shall address such matters as pedestrian/ cycle ways, lane configuration, traffic signal co-ordination, signage and provision for buses

In addition, the NIP will address:

- (a) The commitment of the NZTA to progress bus priority measures northbound on Great North Road as part of the reinstatement of Great North Road, as proposed by Auckland Transport and indicated on the Plans Great North Road Option 1 Proposed Road Marking (Schedule A, Row 33), subject to the agreement with Auckland Transport;
 - (b) How the works committed to by the NZTA for pedestrian and cycle ways, as detailed in the PT and Active Mode Transport Routes Plan Set (Condition DC.1(d) (refer Schedule A, Row 22)), integrate with pedestrian and cycle ways on the wider transport network;
 - (c) The Richardson Road Bridge, which shall be designed in general accordance with the structural plans (Schedule A, Row 9) and the commitment of the NZTA to provide a 2m footpath on Richardson Road Bridge, subject to confirming appropriate bus stop locations with Auckland Transport;
 - (d) Integration of the works proposed on Te Atatu Road to appropriately transition between the Waterview Connection Project and any projects being progressed by Auckland Transport;
 - (e) Opportunities to review traffic signal timings at the Te Atatu Interchange with a view to minimising delays to all users, including cyclists on the SH16 cycle way; and
 - (f) The commitment of the NZTA to provide for cycle “aspects” (cycle signal lights) at the Great North Road Interchange.
 - (g) As part of detailed design at the Te Atatu Interchange, the installation of underpasses and/or overbridges, provided however that should some not prove feasible in civil or traffic engineering design terms, the installation of coordinated traffic signal operation for cyclists on the north-western cycleway by means of synchronised cycle lights which seek to reduce delays for cyclists.
- Works identified in the NIP which are the responsibility of the NZTA, will be undertaken as at the time of construction works for the Project.

Noise and Vibration Conditions – Construction

CNV.1

The NZTA shall finalise and implement through the CEMP, a Construction Noise and Vibration Management Plan (CNVMP) throughout the entire construction period of the Project.

The CNVMP shall describe the measures adopted to meet:

- (a) the noise criteria set out in Conditions CNV.2 and 3 below;
- (b) the vibration criteria set out in Condition CNV.4 below; or
- (c) where (a) or (b) cannot be met, the process that will be followed to appropriately mitigate noise and vibration effects including methods that may be applied outside the designation.

The CNVMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CNVMP, as a minimum, addresses the following:

- (i) Construction noise and vibration criteria (Conditions CNV.2, CNV.3, and CNV.4);
- (ii) Hours of operation, including times and days when noisy and/or vibration inducing construction activities would occur;
- (iii) Machinery and equipment to be used;
- (iv) Vibration testing of equipment to confirm safe distances to buildings prior to construction;
- (v) Preparation of building condition surveys of critical dwellings prior to, during and after completion of construction works;
- (vi) Roles and responsibilities of personnel on site;
- (vii) Construction operator training procedures;
- (viii) Methods for monitoring and reporting on construction noise and vibration;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (ix) A hierarchy of mitigation options that will be assessed for the Project noise mitigation, including alternative strategies where full compliance with the relevant noise and/or vibration criteria cannot be achieved;
- (x) Management schedules containing site specific information;
- (xi) Measures for liaising with and notifying potentially affected receivers of proposed construction activities and the potential for noise and vibration effects, specifically:
 - PPFs located within a horizontal distance of 35 metres of underground excavation works, along the tunnel alignment shall receive prior notification not greater than 7 days (and not less than 24 hours) prior to the commencement of works.
 - Methods for ensuring residents affected by night works (within 100m of the construction site night works, as defined on the maps (refer Schedule A, Row 35) are notified of such works (i.e. any works during the hours of 20:00 to 06:30) at least 5 days prior to the commencement of any such work.
 - The maps showing PPFs to be notified of night works (refer Schedule A, Row 35, shall be reviewed and included within the CNVMP.
- (xii) Methods for receiving and handling complaints about construction noise and vibration;
- (xiii) Measures for preventing the occurrence of rogue fly rock, including management of charge weights and face loading procedures, stemming of charge holes and profiling of the face to maintain minimum burden (face cover);
- (xiv) Investigations on the practicability of implementing permanent noise mitigation works for construction mitigation (as per Condition CNV.7);
- (xv) Investigations of the practicability of implementing Building Modification mitigation, as required in accordance with Conditions ON.6 and ON.11, prior to commencement of construction within 100m of the relevant PPFs (including those on the Unitec site); and
- (xvi) The process for developing Site Specific Noise Management Plans (SSNMP), in accordance with the SSNMP Flow Chart (refer Schedule A, Row 36), including templates and a certification process for the Major Infrastructure Team Manager, Auckland Council (in accordance with Condition CNV.13) to confirm the process of SSNMP review of noise mitigation options where, the modelled/predicted levels or subsequent actual levels exceed the criteria in Conditions CNV.2 and/or CNV.4.

CNV.2

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction noise (excluding noise from blasting Monday to Saturday inclusive) shall be measured and assessed in accordance with NZS 6803:1999 "Acoustics - Construction Noise" and shall comply with the following criteria:
 Note: In Condition CNV.2 (T) means a duration between 15 minutes and 60 minutes, in accordance with NZS6803:1999.

(a) Project Construction Noise Criteria: Residential Receivers

Time of Week	Time period	Project Construction Noise Criteria (Long Term Construction) dB		
		Sectors 1-7	Sectors 8-9	All Sectors
		LAeq(T)	LAeq(T)	LAeq(T)
Monday- Saturday	0630-0730	60	45	75
	0730-1800	70	70	85
	1800-2000	65	65	80
	2000-0630	60	45	75
Sundays and Public Holidays	0630-0730	45	45	75
	0730-1800	60	45	85
	1800-2000	45	45	75
	2000-0630	45	45	75

(b) Project Construction Noise Criteria: Commercial and Industrial Receivers

Time Period	Project Construction Noise Criteria (Long Term Construction) dB
	LAeq(T)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

0730-1800	70
1800-0730	75

(c) Project Construction Noise Criteria: Internal Structure-borne Noise from tunnelling for Residential Receivers

Time Period	Project Construction Noise Criteria Inside	
0600-2200	35 dB LAeq(T)	All habitable rooms
2200-0600	30 dB LAeq(T)	Bedrooms

(d) Project Construction Noise Criteria: Internal noise for Licensed Educational Facilities

Time Period (School Days)	Project Construction Noise Criteria Inside	
Teaching Hours	45 dB LAeq(T)	Classrooms, library, offices, teaching, laboratories, manual arts, workshops
Teaching Hours	40 dB LAeq(T)	School hall, lecture theatres

Note: In Condition CNV2(d) "Teaching hours" means: Primary schools and Kindergartens: 9am to 3pm Unitec: 8am to 9pm

CNV.4

Except where certified by the Council through the SSNMP (in accordance with Condition CNV.13), construction vibration received by any building shall be measured and assessed in accordance with the German Standard DIN 4150-3:1999 "Structural vibration – Part 3: Effects of vibration on structures", and shall comply with the criteria set out as follows:

Type of Structure	Short-term vibration			Long-term vibration	
	PPV at the foundation at a frequency of				
	1-10 Hz (mm/s)	1-50 Hz (mm/s)	50-100 Hz (mm/s)	PPV at horizontal plane of highest floor (mm/s)	PPV at horizontal plane of highest floor (mm/s)
Commercial/Industrial	20	20-40	40-50	40	10
Residential/School	5	5-15	15-20	15	5
Historic or Sensitive structures	3	3-8	8-10	8	2.5

CNV.5

Notwithstanding Condition CNV.3 above,

(a) Blasting activities shall be conducted so that 95% of the blasts undertaken (measured over any twenty blasts on the foundation of any building outside the designation boundary) shall produce peak particle velocities not exceeding 5mm/s and 100% of the blasts undertaken shall produce peak particle velocities not exceeding 10mm/s irrespective of the frequency of the blast measured.

(b) Construction activities, which occur within Sectors 1, 6, 8 and 9 which are identified in Technical Report no. G.19 Assessment of Vibration Effects, as being at a 'High Risk' of exceeding the DIN 4150-3:1999 criteria (being excavation, piling, compaction and drilling) shall be conducted so that 95% of the activities undertaken (measured over at least 20 representative samples of the relevant activity on any residential building) shall produce peak particle velocities not exceeding the relevant criterion in DIN 4150-3:1999 and 100% of the activities undertaken shall not exceed 10mm/s irrespective of the frequency of the activity measured.

CNV.6

Blasting shall be undertaken between 09:00h and 17:00h, Monday to Saturday, except that blasting may be undertaken between 09:00h and 17:00h on Sundays where:

- (a) The blasting is at least 50m inside the Sector 8 tunnel;
- (b) The blasting produces peak particle velocities at any residential building not exceeding 0.5mm/s; and
- (c) The Project construction noise criteria set out in Condition CNV.2 for Sundays are complied with.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

CNV.7

Where practicable, permanent (traffic) noise barriers, required in any Sector as Detailed Mitigation Options for operational noise following completion of the Project (in accordance with Conditions ON.3 to ON.5) shall be erected prior to noise generating construction works commencing. Where this is not practicable, temporary noise mitigation measures shall be implemented in accordance with the CNVMP, prior to noise generating construction works commencing.

CNV.8

Pile driving or pile removal shall not be undertaken at night (i.e. during the hours of 20:00 – 06:30).

CNV.9

The concrete batch plants, rock crushing plants and the loading bays and conveyors for such plants shall be fully enclosed.

CNV.13

SSNMPs (required by Condition CNV.1(xvi)) above, shall be submitted to Major Infrastructure Team Manager, Auckland Council for review and certification at least 7 working days prior to the proposed works commencing. A decision will be provided by the Council within 5 working days of receipt of the SSNMP.

Works will not commence until certification is received from the Major Infrastructure Team Manager, Auckland Council. The Council may, at its discretion, waive the requirement for SSNMPs to be submitted to the Council where an SSNMP is required.

If monitoring shows that levels specified in a SSNMP are being exceeded, work generating the exceedence will stop and not recommence until further mitigation is implemented in accordance with an amended SSNMP certified by Council.

Advice note: It is accepted that the criteria of CNV.2 and CNV.4 may not be met at all times, but that the NZTA will take all practical steps to achieve compliance, taking into account the hierarchy of mitigation options outlined in Condition CNV.1 (ix).

Noise Conditions – Operation

ON.1

For the purposes of Conditions ON.2-ON.14 the following terms will have the following meanings:

- Appendix E – means Appendix E to the Technical Report G.12 'Assessment of Operational Noise Effects' submitted with this application.
- BPO – means Best Practicable Option.
- Building Modification Mitigation – has the same meaning as in NZS 6806:2010.
- Design Year – means a point in time that is 10 years after the opening of the Project to the public
- Emergency Mechanical Services – means mechanical services used for emergency situations only.
- Habitable room – has the same meaning as in NZS 6806:2010.
- Noise Criteria Categories – means groups of preference for time-averaged sound levels established in accordance with NZS 6806:2010 when determining the BPO mitigation option; i.e. Category A - primary noise criterion, Category B - secondary noise criterion and Category C - internal noise criterion.
- NZS 6806:2010 – means NZS 6806:2010 Acoustics – Road-Traffic Noise – New and Altered Roads.
- PPFs – means only the premises and facilities identified in green, yellow or red in Appendix E.
- Structural mitigation – has the same meaning as in NZS 6806:2010.

ON.2

The NZTA shall implement the traffic noise mitigation measures identified as the "Preferred Mitigation Options" in Appendix E as part of the Project, in order to achieve the Noise Criteria Categories indicated in Appendix E ("Identified Categories"), where practicable and subject to Conditions ON.3-ON.11 below.

ON.3

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The detailed design of the structural mitigation measures of the “Preferred Mitigation Options” (the Detailed Mitigation Options) shall be undertaken by a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council prior to construction of the Project, and, subject to Condition ON.4, shall include, as a minimum, the following:

- (a) Noise barriers with the location, length and height in general accordance with Appendix E and designed in accordance with the ULDF (Section B) (refer Schedule A, Row 38); and
- (b) A requirement that Open Graded Porous Asphalt (“OGPA”) or equivalent low-noise generating road surface be used on all surface roads throughout the Project, except at the Great North Road Interchange; and
- (c) For the Great North Road Interchange, a requirement that Twin Layer Open Graded Porous Asphalt (“Twin Layer OGPA”) or equivalent low-noise generating road surface be used as shown in Appendix E.

ON.4

Where the design of the Detailed Mitigation Options identifies that it is not practicable to implement a particular structural mitigation measure in the location or of the length or height included in the “Preferred Mitigation Options”, either:

- (a) If the design of the structural mitigation measures could be changed and would still achieve the same Identified Category at all relevant PPFs, and a suitably qualified expert approved by the Major Infrastructure Team Manager, Auckland Council, certifies to the Auckland Council that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed mitigation measures; or
- (b) If the changed design of the structural mitigation measure would change the Noise Criteria Category at any relevant PPF from Category A or B to Category C but Major Infrastructure Team Manager, Auckland Council confirms that the changed structural mitigation measure would be consistent with adopting BPO in accordance with NZS 6806:2010, the Detailed Mitigation Options may include the changed structural mitigation measures.

ON.5

The Detailed Mitigation Options shall be implemented prior to completion of construction of the Project.

ON.6

(a) Sectors 1 to 8 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options:

- i. A noise level increase of 3 decibels or more will occur due to road-traffic noise from the Project; and
- ii. Habitable spaces are likely to receive in excess of 45 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year.

For those PPFs, following the process set out in Conditions ON.7 to ON.11, it shall be determined which Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces.

(b) Sector 9 - Prior to construction of the Project, a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council shall identify those PPFs within 100m of the edge of the closest traffic lane of the motorway carriageway where, following implementation of all the structural mitigation measures included in the Detailed Mitigation Options, habitable spaces are likely to receive in excess of 40 dB LAeq(24h) from motorway operational noise with windows closed, in the Design Year. For those PPFs, following the process set out in ON.7 and ON.8, it shall be determined if Building Modification Mitigation may be required to achieve 40 dB LAeq inside habitable spaces. For those PPFs where Building Modification Mitigation is required to achieve 40 dB LAeq inside habitable spaces, this shall be implemented following the process set out in ON.9 to ON.11.

ON.7

(a) Prior to commencement of construction of any sector of the Project in the vicinity of a PPF identified under Condition ON.6, the NZTA shall write to the owner of each such building seeking access for the purpose of measuring internal noise levels and assessing the existing building envelope in relation to noise reduction

The Proposed Auckland Unitary Plan (notified 30 September 2013)

performance.

(b) If the owner(s) of the building approve the NZTA's access to the property within 12 months of the date of the NZTA's letter (sent pursuant to Condition ON.7(a)), then no more than six months prior to commencement of construction in any sector of the Project, the NZTA shall instruct a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council, to visit the building to measure internal noise levels and assess the existing building envelope in relation to noise reduction performance.

ON.8

Where a PPF identified under Condition ON.6 is identified, the NZTA shall be deemed to have complied with Condition ON.7 above where:

- (a) The NZTA (through its acoustics specialist) has visited the building; or
- (b) The owner(s) of the building approved the NZTA's access, but the NZTA could not gain entry for some reason after repeated attempts; or
- (c) The owner(s) of the building did not approve the NZTA's access to the property within the time period set out in Condition ON.7(b) (including where the owner(s) did not respond to the NZTA's letter (sent pursuant to Condition ON.7(a) within that period); or
- (d) The owner(s) of the building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

If any of (b) to (d) above apply to a particular Building, the NZTA shall not be required to implement any Building Modification Mitigation at that Building

ON.9

Subject to Condition ON.8, within 6 months of the assessment required under Condition ON.7(b), the NZTA shall give written notice to the owner of each PPF identified under Condition ON.6:

- (a) Advising of the options available for Building Modification Mitigation to the building; and
- (b) Advising that the owner has three months within which to decide whether to accept Building Modification Mitigation for the building, and if the NZTA has advised the owner that more than one options for building modification mitigation is available, to advise which of those options the owner prefers.

ON.10

Once an agreement on Building Modification Mitigation is reached between the NZTA and the owner of an affected building, the mitigation shall be implemented (including the NZTA undertaking any required third party authorisation) in a reasonable and practical timeframe agreed between the NZTA and the owner. Building Modification Mitigation shall be to the standard specified in section 8.3.2 of NZS 6806:2010.

Advice Note: The NZTA will be responsible for obtaining any necessary building consents or other approvals to undertake the above Building Modification Mitigation.

ON.11

Subject to Condition ON.8, where Building Modification Mitigation is required, the NZTA shall be deemed to have complied with Condition ON.10 above where:

- (a) The NZTA has completed Building Modification Mitigation to the Building; or
- (b) The owner(s) of the Building did not accept the NZTA's offer to implement Building Modification Mitigation prior to the expiry of the timeframe stated in Condition ON.9(b) above (including where the owner(s) did not respond to the Requiring Authority within that period); or
- (c) The owner of the Building cannot, after reasonable enquiry, be found prior to completion of construction of the Project.

ON.12

The NZTA shall manage and maintain the Detailed Mitigation Options to ensure that, those mitigation works are maintained to retain their noise attenuation performance indefinitely

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ON.14

(a) Prior to construction, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake a minimum of 8 (eight) representative measurements of ambient noise levels. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(b) Following completion of the work, the NZTA shall arrange for a suitably qualified and experienced acoustics specialist approved by the Major Infrastructure Team Manager, Auckland Council to undertake traffic noise monitoring at the same sites surveyed in Condition ON.14 (a) above, within 2 to 3 years following completion of construction of the Project. Measurements shall be undertaken in accordance with the requirements of Section 5.2 of NZS6806:2010.

(c) The results of the noise level monitoring in accordance with ON.14(b) above shall be used to verify the computer noise model of the Detailed Mitigation Option. A report describing the findings of the verification shall be provided to the Major Infrastructure Team Manager, Auckland Council within one month of it being completed.

Vibration Conditions - Operation

OV.1

Existing ambient vibration levels shall be measured at critical locations nominated by the NZTA, and submitted to the Major Infrastructure Team Manager, Auckland Council for approval prior to the commencement of works. These baseline measurements will establish pre-Project vibration levels for comparison with future vibration levels.

Air Quality Conditions – Construction

GENERAL CONDITIONS

AQ.1.

The NZTA shall finalise and implement, through the CEMP, the Construction Air Quality Management Plan (CAQMP) and Concrete Batching and Crushing Management Plan (CBCMP) submitted with the application. The CAQMP and CBCMP shall be provided to the Major Infrastructure Team Manager, Auckland Council at least 20 working days prior to construction activities being undertaken for review and certification that the CAQMP and CBCMP includes the following details:

- (a) Daily visual monitoring of dust emissions;
- (b) Procedures for responding to process malfunctions and accidental dust discharges;
- (c) Criteria, including consideration of weather conditions and procedures for use of water sprays on stockpiles and operational areas of the site;
- (d) Continuous monitoring of Total Suspended Particulate (TSP) concentrations and meteorology;
- (e) Monitoring of the times of detectable odour emissions from the ground;
- (f) Procedures for responding to discharges of odour (including in the event of excavation of contaminated sites);
- (g) Monitoring of construction vehicle maintenance;
- (h) Process equipment inspection, maintenance, monitoring and recording, including baghouses, pressure relief valves and high level alarms;
- (i) Complaints investigation, monitoring and reporting; and
- (j) The identification of staff and contractors' responsibilities.

AQ.2.

The NZTA shall review the CAQMP and CBCMP at least annually and as a result of any material change to the Project. Any consequential changes will be undertaken in accordance with Condition CEMP.13.

AQ.3.

All construction activities shall be operated, maintained, supervised, monitored and controlled at all times so that all emissions authorised by this consent are maintained at the minimum practicable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

AQ.4.

The NZTA shall undertake construction activities in accordance with the CEMP, CAQMP and CBCMP, such that:

- (a) Hard surfaced areas of the construction yards and active construction areas are vacuum swept or scraped down at least twice each week and additionally as reasonably required;
- (b) All unsealed areas of the site used for vehicle movement are maintained visibly damp by the use of water sprays or a water cart during weather conditions where the potential for dust emissions exist;
- (c) Wheel wash systems are installed at all truck exits from unpaved areas of the site onto public roads are used for all trucks that depart from the site;
- (d) All stockpiles are constructed and positioned to minimise the potential for dust emissions. The surfaces of all stockpiles are maintained adequately damp at all times to minimise the release of particulate matter;
- (e) Belt conveyors for moving dry materials are fitted with water sprays or enclosed to minimise wind entrainment of dust. Where installed, water suppression is used whenever the conveyors are used for moving dry materials.

AQ.5.

Unless expressly provided for by conditions of this consent, there shall be no odour, dust or fumes beyond the site boundary caused by discharges from the site which, in the opinion of an enforcement officer, is noxious, offensive or objectionable.

AQ.6.

All offensive or objectionable dust beyond the boundary of the site caused as a result of processes on the site shall be mitigated forthwith in accordance with the requirements of the Construction Air Quality Management Plan.

AQ.7.

Beyond the site boundary there shall be no hazardous air pollutant caused by discharges from the site that causes, or is likely to cause, adverse effects on human health, environment or property.

AQ.8

No discharges from any activity on site shall give rise to visible emissions, other than water vapour, to an extent which, in the opinion of an enforcement officer, is noxious, dangerous, offensive or objectionable.

MONITORING

AQ.14

The NZTA shall undertake visual inspections of dust emissions as follows:

- (a) Visual inspections of all active construction areas at least three times daily during October to April inclusive, whenever there are construction activities. The results of visual monitoring shall be logged.
- (b) Visual inspections of dust emissions from the concrete batching plants and rock crushing plant shall be undertaken daily while the plant is operating

AQ.15

The operation of water sprays shall be checked at least once each day.

AQ.16

Continuous monitoring of TSP concentrations shall be undertaken in at least one location in Sector 1, in at least two locations in Sectors 5 and/or 7, and in at least two locations in Sector 9 while construction activities are being undertaken in those Sectors. The locations of continuous TSP monitors shall, as far as practicable, comply with the requirements of AS/NZ 3580.1.1:2007 Method for Sampling and Analysis of Ambient Air – Guide to Siting Air Monitoring Equipment.

AQ.17.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Continuous monitoring of wind speed and direction shall be undertaken in at least one location in each of Sector 1, Sectors 5 or 7 and Sector 9 while construction activities are being undertaken in those Sectors. The locations of wind speed and direction monitors shall, as far as practicable, comply with the requirements of AS 2923:1987 Ambient Air – Guide for the Measurement of Horizontal Wind for Air Quality Applications and be at the same locations as the TSP monitors required by Condition AQ.16.

AQ.18.

The locations and types of continuous TSP and meteorological monitoring sites required by Conditions AQ.16 and AQ.17 shall be selected by the NZTA in consultation with the Auckland Council. In the event of a failure of the monitoring equipment, this shall be repaired or replaced within 2 working days

REPORTING

AQ.19.

All records, logs, monitoring and test results that are required by the conditions of this consent shall be made available on request, during operating hours, to an Auckland Council enforcement officer and shall be kept for the duration of the consent.

AQ.20. If the monitoring required by Condition AQ.16 shows that concentrations of TSP in ambient air at or beyond the boundary of the site exceeds 80 micrograms/m³ as a 24-hour average, the NZTA shall undertake an investigation into the cause of the exceedance in accordance with the CAQMP.

AQ.21.

A report into the outcome of any investigation required by Condition AQ.20 shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 10 working days of the exceedance. If the cause of the exceedance is identified as being an activity undertaken on the site, the report shall also identify additional measures to be taken to reduce discharges of particulate matter into air from that activity.

AQ.22.

Log books shall be maintained that record all relevant information that is required to demonstrate compliance with the conditions of this consent. This information shall include, but is not limited to:

- (a) Visual assessments of any dust emissions from the site and the source;
- (b) Any dust control equipment malfunction and any remedial action taken;
- (c) When a water cart was used and, if so, the frequency of use and the volume of water used (including identification of location);
- (d) All relevant details of the TSP and meteorological monitoring required by Conditions AQ.16 and AQ.17;
- (e) Any additional dust control measures undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

AQ.23.

The NZTA shall maintain a log of any complaints received relating to air quality. Details of each complaint received shall be forwarded to the Major Infrastructure Team Manager, Auckland Council within 24 hours of receipt of the complaint. The log shall include any complaints lodged with the Auckland Council where the Council has informed the NZTA of the complaint. The log shall include, but not be limited to the following:

- (a) The date, time, location and nature of the complaint;
- (b) Weather conditions at the time of the complaint (including approximate wind speed, wind direction, cloud cover);
- (c) Any possible other contributing factors (such as a fire, smoky vehicle, a local chimney emission, etc.);
- (d) The name, phone number and address of the complainant (unless the complainant elects not to supply these details);
- (e) Any remedial actions undertaken; and
- (f) The date and time of the entry and the signature of the person entering the information.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Landscape and Visual Conditions

LV.1.

The Urban Design and Landscape Plans (UDL Plans) (Plan Set F.16, refer Schedule A, Row 17) shall be reviewed and revised in accordance with the conditions and submitted to the Major Infrastructure Team Manager, Auckland Council for certification that they comply with the conditions of the consents/ designation prior to construction of the relevant Project stage, at least 20 working days prior to the commencement of construction.

The UDL Plans shall be updated to:

- (a) Reflect relevant details from the PT and Active Mode Transport Routes Plan Set (Schedule A, Row 23);
- (b) Remove the playing field at Waterview Reserve;
- (c) Confirm the reconfigured bund design at Alwyn Avenue (Schedule A, Row 42);
- (d) Reflect landscaping required in relation to the northern vent stack in Waterview Glades pursuant to Conditions DC.8.

LV.2.

In certifying the UDL Plans, prepared in accordance with Condition LV.1, the Major Infrastructure Team Manager, Auckland Council shall be satisfied the UDL plans includes:

- (a) The visual mitigation of infrastructure as detailed in Section B of the UDLF (refer Schedule A, Row 38).
- (b) Incorporation of art or art through design of structures, particularly as it relates to noise barriers and the Great North Road Interchange piers and ramps (Refer to clauses (g) and (i) below).
- (c) Planting to screen houses and noise walls (including cross section details);
- (d) Planting along the corridor on Traherne Island, in accordance with these conditions and the Ecological Management Plan;
- (e) Specimen planting on the Great North Road Interchange and the Te Atatu Road Interchange;
- (f) Specimen planting at the tunnel portals (except where this is within the OPW area);
- (g) Finalisation of the noise barriers (as required by Condition ON.3(a)) in accordance with the design principles for noise walls (refer Schedule A, Row 32);
- (h) Delineation of the final areas of the Open Space Restoration Plans in accordance with the Open Space Restoration Plans (Schedule A, Row 30), and reference that all works within the Open Space Restoration Plan Areas are subject to Conditions OS.1 to OS.8;
- (i) Oakley Inlet Heritage Plan, prepared in accordance with Conditions OS.5, and in particular, consideration shall be given to the design treatment of the Great North Road Interchange piers and ramps to take into consideration the impact of the structures on the visual quality of the open space beneath;
- (j) Ecological Management Plan, prepared in accordance with Conditions V.1, A.1, H.1, F.1 and M.1;
- (k) Western Ring Route: Maioro Street Interchange and Waterview Connection - Oakley Creek Rehabilitation and Restoration Guidelines (Boffa Miskell, 2010); and
- (l) Details of artworks or art through design of structures within the Project (e.g. design detailing of median barriers, bridge railings, safety barriers, piers, retaining walls and tunnel portals), in accordance with Section B of the Urban Landscape and Design Framework (UDLF June 2010) (refer Schedule A, Row 38) and F.8:Plans of Structures and Architectural Features, but excluding the north and south ventilation buildings, plans sections and elevations.

LV.3.

The NZTA shall have implemented the UDL Plans within 6 months of practical completion of construction of the Project.

LV.4.

The landscaping shall be implemented in accordance with the UDL Plans within the first planting season following the completion of the construction works, provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for a period of 10 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping shall be implemented

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in accordance with this Condition for each stage unless subsequent construction staging requires use of the proposed landscaping area.

Advice note: On-going control and management of the landscaping within the designation is the responsibility of the NZTA.

LV.5.

The NZTA shall implement the UDL Plans taking into account the pest plant management guidelines detailed in the Ecological Management Plan (as required by Condition CEMP.3).

LV.6.

The UDL Plans shall make provision for close planting of fast growing native shrubs or small trees (Griselinia, Karo, Tarata or similar) along the security boundary of Construction Yard 1 facing Te Atatu Road. This planting shall be implemented prior to operational use of the yard and maintained in a healthy state for the duration of the works programme. Such planting shall occur at no greater than 1.0m centres and shall comprise plants that are Pb28 or larger at the time of planting.

LV.8.

The NZTA shall ensure that any areas within the designation affected by construction activities have sub-soil rehabilitated and top-soil replaced so that the hydrological response including the volume of stormwater runoff generated is as close as practicable to the predevelopment situation. The methodologies to achieve this shall be documented and provided to the Major Infrastructure Team Manager, Auckland Council with the revised UDL Plans submitted pursuant to Condition LV.1.

LV.10.

The UDL Plans shall identify all Amenity Trees required to be removed over the construction of the Project (in accordance with Condition CEMP.6(o) and (p)). Replacement trees shall be sized at 160Lt and will either draw from the Coastal Forest or Basalt Rock Forest ecotypes listed in the Landscape Planting Schedules (provided in F.16, refer Schedule A, 17) or an agreed alternative species (confirmed by Major Infrastructure Team Manager, Auckland Council), except in the case of those trees subject to Condition ARCH.9.

Advice note: This does not necessarily apply to any replacement planting in the Open Space Restoration Plan areas, which will be confirmed in approval from Auckland Council and will be in accordance with relevant Auckland Council Park guidelines (see Condition OS.4).

LV.11.

The UDL Plans shall make provision for the rehabilitation of McCormick Green at the completion of the SH16 construction works and removal of the construction stormwater pond. Works will be in general accordance with the UDL Plans 202 and 203, (Refer Schedule A, Row 17), providing for replacement Amenity Tree planting in accordance with Condition LV.10 above.

Open Space Conditions

OS.1 For the purposes of Conditions OS.2 – OS.15 the following terms will have the following meanings:

- Full size – means a football (soccer) field with the dimensions 100m x 60m.
- Half size – means a football (soccer) field with the dimensions less than 100m x 60m but no smaller than 50m x 30m.
- Toddler – means a playground specifically designed for children between the ages of 1 and 3
- Junior – means a playground specifically designed for children between the ages of 4 and 8
- Youth – means a playground specifically designed for children between the ages of 9 – 14 years
- Open Space Restoration Plans – means those plans listed in Schedule A, row 30.
- Open for Play - means the sports field has a level surface and a dense weed-free sward of mature grass, goal posts and lighting if indicated in the Open Space Restoration Plans approved by the Auckland Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Sand - carpeted - means the field has been levelled and irrigated, and conventional sub-soil drains, slit drains and a 50mm deep sand carpet have been installed. The field has been stolonised with a warm season grass such as kikuyu or couch.
- Auckland Council Park Guidelines – means the document by Auckland City Council titled “Furnishing our parks: design guidelines for park furniture”, dated September 2009
- Park furniture – means those items described in the Auckland Council Park Guidelines
- AS2560 – means the Australia New Zealand Standard for lighting of sports fields.
- AS4282 – means the Australia New Zealand Standard for the control of the obtrusive effects of outdoor lighting.
- Way finding exercise – means a process for determining the number, size, location and content of signage to provide clear direction for all park users.
- Skate-park for the purpose of conditions OS.5(b)(iii) means a skate park with a size of approximately 1,400 sq. m. (generally 25 wide x 55m long), incorporating a range of design variations. Suitable for beginners (providing training facilities to develop their skills) but primarily catering for intermediate to advanced level skaters.
- BMX bike track for the purpose of condition OS.5(b)(iii) means a low maintenance, non-competition BMX bike track, incorporating a range of design variations. Primarily catering for beginner and intermediate riders.

OS.2

The NZTA shall prepare Open Space Restoration Plans to outline how the open space replacement land, as defined in the Open Space Restoration Plan Areas (Schedule A, Row 30) (including land occupied during construction) will be reinstated or replaced on completion of construction, for handover to Auckland Council and those areas identified in Condition DC.1A(f) and RC.3(f). Following the consultation detailed in Condition OS.3 below, the Open Space Restoration Plans listed in Condition OS.3(a) to (f) shall be submitted within 12 months of construction commencing in the specific areas affecting the reserves or within 12 months of occupation of open space, whichever is the sooner, to the Major Infrastructure Team Manager, Auckland Council.

Advice note: Conditions OS.9 and OS.10 require certain works to be provided prior to occupation of Construction Yards 6 and 7 (Waterview Reserve) and Construction Yards 9-12 (Alan Wood Reserve) and this may impact on the timing of Open Space Restoration Plans for these areas.

OS.3

The Open Space Restoration Plans shall be prepared in consultation with the Auckland Council, Iwi, the Community Liaison Groups (Condition PI.5), NZHPT, and other recreation users and other user representatives identified by Auckland Council. The Open Space Restoration Plans shall comprise the following specific plans:

- (a) Waterview Reserve Restoration Plan;
- (b) Alan Wood Restoration Plan (including Hendon Park and 25 Valonia Street);
- (c) Oakley Creek Esplanade (Waterview Glades) Restoration Plan;
- (d) Jack Colvin Park Restoration Plan;
- (e) Rosebank Domain Restoration Plan;
- (f) Harbourview-Orangihina Reserve Restoration Plan.
- (g) The areas of the Open Space Restoration Plans are shown in the Open Space Restoration Plan Areas (Refer Schedule A, Row 30).

OS.4

All Open Space Restoration Plans shall be prepared in general accordance with the UDL Plans (Schedule A, Row 30), and shall include, but not be limited to, the following:

- (a) Details of, including the location, of any artworks and educational signage, and directional signage. In the case of Alan Wood Reserve, Waterview Reserve and Oakley Creek Esplanade (Waterview Glade) this shall include a “way-finding exercise” in accordance with Auckland Council practice, to determine all signage to be provided; and
- (b) Evidence of integration with the Oakley Creek restoration works required under Conditions STW.5, STW.20,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

V.16 and LV.2(i); and a summary of the consultation

undertaken (as required by Condition OS.3) and the response received; and

(c) Details of any vehicle access through the reserves and parking areas; and

(d) Park furniture (including quantity and quality) to be provided in accordance with relevant Auckland Council Park guidelines, except for:

(i) The riparian area within Alan Wood Reserve where the only furniture required is a maximum of 10 seats; and

(ii) Oakley Creek Esplanade (Waterview Glades) where the only furniture required is replacement of 3 existing seats; and

(e) The inclusion and integration of the design for all pedestrian and cycleway linkages and facilities detailed on the PT and Active Mode Transport Routes (Schedule A, Row

22). The design integration shall be in accordance with CPTED principles;

(f) Implementation programme, including sequencing of works and completion dates. This shall include works that could be implemented prior to practical completion of construction works or are outside the Project area (e.g. upgrading of the Waterview Esplanade Reserve set out in Condition OS.5(b)(vii);

(g) Implementation programmes for planting and field reinstatement. This shall include:

(i) A 12 month maintenance period for built structures and soft landscaping; and

(ii) For any landscaping accessible to horses an assessment to demonstrate that the planting schedule is not toxic to horses and that consultation on this has been undertaken with the Te Atatu Pony Club;

(h) The specific requirements for each Restoration Plan area as set out in Conditions OS.5 – OS.8;

(i) Documentation of consultation undertaken required by Condition OS.3 and the views and concerns expressed by this consultation and the written approval of the Manager Community and Cultural Policy.

Advice note:

For the avoidance of doubt provision of (a) to (h) above will require elevations, cross sections, engineering drawings and written documentation to supplement the UDL Plans. It is also noted that the UDL Plans identify landscaping, planting and other works beyond the Open Space Restoration Plans (refer Conditions LV.1 – LV.6, LV.9 and LV.10). Educational signs and artworks are particularly encouraged.

OS.13

During construction, the NZTA shall maintain pedestrian accessways to all open space available for public use during construction and education facilities where access is affected by the works, including any public access that crosses private land. Such access shall be safe, clearly identifiable, provide appropriate surfacing and seek to minimise significant detours. The access shall be of a same or similar standard as that disrupted and will be provided and maintained by the NZTA.

Advice note: This specifically includes the existing pedestrian access that provides a connection to the crossing over Oakley Creek between 1510 Great North Road and Unitec Mt Albert Campus.

Jack Colvin Park Restoration Plan (Specific)

OS.8

In preparing the Jack Colvin Park Open Space Restoration Plan, equivalent reinstatement of the benched seating area will be offered to Auckland Council.

OS.15

The works shall not result in any permanent loss of carparking from Western Springs Garden carpark.

Social Conditions

SO.1

In addition to the Community Liaison Groups established pursuant to Condition PI.5, the NZTA shall establish an Education Liaison Group (including representatives from local schools, kindergartens, childcare facilities, Unitec Institute of Technology, the Ministry of Education and Housing New Zealand Corporation), to provide a forum through which:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- (a) Relevant monitoring data can be provided (e.g. air quality monitoring);
- (b) Notice can be provided of when particularly noisy activities will occur in close proximity to schools and education facilities, to enable the opportunity to identify any potential conflict with particular sensitive periods, and the requirement for specific mitigation strategies (e.g. rescheduling of construction activities where practicable);
- (c) Particular concerns can be raised by educational facilities or parents, discussed and potentially addressed;
- (d) Notice can be provided of potential construction impacts on school transport routes (including pedestrian/cycle access) to enable the opportunity to identify specific mitigation preferences of the education facilities (e.g. any detour routes) and to enable these facilities to appropriately inform students and/or parents; and
- (e) Learning and teaching opportunities for educational facilities to participate in Project works (e.g. planting or artworks).

The Education Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period. The Education Liaison Group shall continue to meet for at least 12 months following the completion of the Project (or less if the members of the Education Liaison Group agree), so that ongoing monitoring information can continue to be disseminated.

SO.2

In addition to Condition SO.1(b) above, where noisy construction activities (that are projected to exceed the Noise Criteria in the CNVMP) are proposed in close proximity or adjacent to schools/ childcare centres, the NZTA shall, when preparing their SSNMP (in accordance with Condition CNV.1) give specific consideration to options to carry out these works outside school hours or during school holidays as a mitigation option.

SO.6

In addition to the Community Liaison Group established pursuant to Condition PI.5, the NZTA shall establish a Working Liaison Group (WLG) inviting the following:

- (a) Auckland Council;
- (b) Housing New Zealand Corporation;
- (c) Te Kawerau Iwi Tribal Authority;
- (d) Ngati Whatua o Orakei;
- (e) KiwiRail;
- (f) Department of Conservation;
- (g) Ministry of Education; and
- (h) Local Boards.

The purpose of this WLG will be to provide a forum through which:

- (a) Opportunities for public work development (including social housing, passenger transport or recreation / open space) are identified in areas where the NZTA confirms that the designation is no longer required (e.g. following construction activities);
- (b) Comment can be provided on updated Urban Design and Landscape Plans, including the finalised designs of structural elements for the Project (prior to their submission to the Auckland Council);
- (c) Opportunities for integration of other environmental projects (e.g. restoration plantings) are identified;
- (d) Consideration is given to appropriate protocols for commencement and completion of construction activities (including blessings for commencement of construction phases); and
- (e) Comment can be provided by Te Kawerau a Maki on the detailed lighting design of SH16, to consider how lighting effects on cultural sites and practices might be mitigated without compromising traffic safety or those performance standards identified in Condition L.1.

The Working Liaison Group shall be established at least 2 months prior to construction commencing and shall have regular meetings (at least three monthly) throughout the construction period.

SO.7

A schedule of trees that require removal for construction of the Project will be identified and reported to the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Community Liaison Group for their consideration of potential provision of timber for heritage projects (including in particular the provision of Robinia wood for heritage boat building). If the demand for this timber is identified to the Construction Team, appropriate measures for felling and removal from the site will be confirmed.
