

PART 7 - DESIGNATIONS

Using Part 7

Designations are shown in the Unitary Plan as:

- A schedule for each requiring authority which summarises the designations and notices of requirement (NoRs) they are responsible for;
- A full text version of each designation and NoR, which includes the purpose of the designation and any conditions; and
- An overlay on the planning maps for each designation and NoR, which shows the extent of the designation boundaries.

1 Schedules

The schedule(s) for each requiring authority are a quick reference list of all the designations a requiring authority is responsible. The schedules do not form part of a designation and the full text version of a designation should be relied upon for information on a designation.

The schedule identifies for each designation (from left to right):

- The number¹ of the designation;
- The purpose² of the designation; and
- The location³ of the designation.

An example of the Auckland Council's schedule of designations is set out below.

Designation Schedule - Auckland Council

Number	Description	Location
500	Auckland City Art Gallery ...	1 Kitchener Street, Auckland Central
501	Public open space	43-45 Viaduct Harbour Avenue to 119-117B and C Custom Street East, Central Auckland
....

Notes

1. The letter "R" at the front of the designation number indicates this is a NoR. Once a NoR is confirmed the letter "R" will be removed.
2. Sometimes the purpose of the designation has been shortened to fit the schedule. The purpose of the designation in the full text version of the designation should always be relied upon for information on a designation.
3. The location is intended to describe where the designation can be found on the planning maps (GIS viewer), which will show the extent of the designation boundaries. The location is normally described as the street address or legal description of the whole or part of the designated site, or the general locality for a designation over a large area. If the location changes (i.e. change of address or legal description in a subdivision), the designation may be updated with these new details without an alteration to the designation using section 181 of the RMA.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2 Text

The full text version of a designation should be relied on for information on the designation.

The full text version of the designation identifies (from top to bottom):

- The number¹ and name of the designation (in the header);
- The number¹ of the designation (first line of the table);
- The requiring authority responsible for the designation;
- The location³ of the designation;
- Whether it is a rollover designation from the previous district plan;
- The reference number of the rollover designation under the previous district plan;
- The lapse date⁴ which is the date the designation lapses¹ unless it has been given effect (i.e. no not lapse);
- The purpose of the designation (beneath the table);
- The conditions of the designation; and
- Any attachments to the designation such as plans and diagrams.

An example of Auckland Council's full text version of the designation for the Auckland City Art Gallery is set out below.

500 Auckland City Art Gallery

Reference Number	500
Requiring Authority	Auckland Council
Location	1 Kitchener Street, Auckland Central
Rollover Designation	Yes
Legacy Reference Number	Designation 306, Auckland Council District Plan (Central Area) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

This designation provides for the development, operation and maintenance of Auckland Art Gallery Toi o Tamaki and ancillary activities. The development works encompassed by this designation principally involve ...

Conditions

Plans and Information

1. The height, shape, and bulk of the proposed building works shall be carried out generally in accordance with the plans listed in the table below and which are comprised in Appendix 1 to these conditions (*these plans available on request*): ... etc

Attachments

No attachments.

Notes

1. The letter "R" at the front of a designation number indicates this is a NoR. Once a NoR is confirmed the letter "R" will be removed.
2. The name of a designation in the header is non-statutory and does not form part of the purpose of a

The Proposed Auckland Unitary Plan (notified 30 September 2013)

designation. If the non-statutory name changes (i.e. a park or road is renamed), the designation may be updated with these new details without an alteration to the designation using section 181 of the RMA.

3. The location is intended to describe where the designation can be found on the planning maps (GIS viewer), which will show the extent of the designation boundaries. The location is normally described as the street address or legal description of the whole or part of the designated site, or the general locality for a designation over a large area. If the location changes (i.e. change of address or legal description in a subdivision), the designation may be updated with these new details without an alteration to the designation using section 181 of the RMA.
4. If the lapse date of the designation is changed by giving effect to the designation or through an extension to the lapse date under section 184 or 184A of the RMA, the lapse date of the designation may be updated without an alteration to the designation using section 181 of the RMA.

3 Maps

The planning maps (GIS viewer) should be relied on for the extent of the designation boundaries¹.

Designations on the planning maps are identified by:

- An overlay with a "red" outline and the number of the designation (in red) inside; or
 - An overlay with a "tan brown" outline, dotted infill and the number of the designation (in tan brown) inside.
- This generally applies to a designation that imposes a restriction over a large area of land, water, subsoil, or airspace. For example a height restriction around an airport flight path.

The following information can be obtained from the planning maps (GIS viewer) on a site to which a designation applies:

- The number² of the designation(s);
- The name³ of the designation(s);
- The requiring authority;
- The address; and
- The legal description.

Notes

1. The planning maps (GIS viewer) introduce a scale and precision of mapping not achieved in previous planning documents. The Council has used its best endeavours (with the assistance of requiring authorities) to accurately map the extent of each designation boundary on the planning maps. Any concerns over the accuracy of any part of the mapping should be raised with the Council.
2. The letter "R" has not been used in the designation number to indicate a NoR on the planning maps (GIS viewer). However, "R" is used in the front of the designation number in the schedules and full text version of the designation to denote a NoR.
3. The name of the designation in the planning maps (GIS viewer) is non-statutory and does not form part of the purpose of a designation. The full text version of a designation should be relied upon for information on a designation.

4 Guidance

This non-statutory section is based on legislative requirements under the RMA, case law and best practise analysis on designations, notices of requirement (NoRs) and outline plans. It is intended to inform the public, practitioners and requiring authorities alike.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Amendments may be made to this section from time to time to recognise legislative changes, and the development of case law and best practise.

1 Introduction

Part 8 (sections 166 to 186) of the RMA relates to designations, NoRs and outline plans.

A designation is a provision in the Unitary Plan (district plan section), which gives effect to a NoR for a public work, project or work by a requiring authority. A NoR is the proposal or application for a designation¹. Only a requiring authority, which is a Minister of the Crown, local authority or approved network utility operator, can give notice of a requirement.

Once a NoR has been through the statutory process and been confirmed as a designation it can:

- Enable the use of land for a project or work;
- Restrict the use of land, water, subsoil, or airspace where this is necessary for the safe or efficient functioning or operation of such a project or work; and
- Require written approval from the requiring authority before any third party can undertake any activity within a designation that would prevent or hinder a public work, project or work to which it relates.

Before a requiring authority can construct a public work, project or work within a designation, an outline plan must normally be submitted to provide the Council with an opportunity to request any changes. An outline plan generally provides the detail of the public work, project or work, which may not have been available at the time the NoR was prepared and the designation confirmed.

The Unitary Plan includes those existing designations rolled over from the previous district plans “without” or “with” modification and any NoRs given to the Council by a requiring authority, which if confirmed following the statutory process will then each become a designation in the Unitary Plan.

¹ Hastings v Auckland City Council [2001] A068/01

2 Requiring Authority Status

Section 166 of the RMA defines a “requiring authority” as:

- A Minister of the Crown;
- A local authority; or
- An approved network utility operator.

Ministers of the Crown and local authorities are requiring authorities for public works, projects or works they have financial responsibility for.

Those network utility operators listed under section 166 of the RMA can apply to the Minister for the Environment for requiring authority status under section 167. The Minister can approve requiring authority status for a specific project or an entire network operation. The scope of the requiring authority status approved by the Minister under section 167 will be set out in Gazette Notice. Most eligible network utility operators have already obtained this status.

Network utility operators not listed under section 166 of the RMA cannot apply for requiring authority status under section 167. However, they can apply to the Governor-General to make regulations under section 360 for a project or work to be declared a network utility operation with requiring authority status. The requiring authority status approved by the Governor General will be set out in the regulations. Section 360 has been used sparingly since the enactment of the RMA.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

A list of the requiring authorities approved under section 167 or 360 is on the Ministry for the Environment website link below along with links to the related Gazette Notice or regulations:

www.mfe.govt.nz/rma/central/designations/requiring-authorities-table.html

3 Effect of a Designation

Section 176 of the RMA defines the effect of a designation.

3.1 Enabling Effect of a Designation

Section 176(1)(a) of the RMA states that section 9(3) does not apply to a public work, project or work undertaken by a requiring authority under a designation. This means the normal provisions of the Unitary Plan (district plan provisions) do not apply to a designation and the requiring authority is allowed to use the land for any activity within the scope of the designation.

Activities that fall outside the scope of a designation are subject to the normal provisions of the Unitary Plan.

A designation does not exclude other restrictions or duties under Part 3 of the RMA (i.e. National Environmental Standards or Unitary Plan regional provisions) or the general duties imposed under sections 16 and 17 (i.e. avoiding unreasonable noise and avoiding, remedying and mitigating adverse effects).

3.2 Restrictive Effect of a Designation

Section 176(1)(b) of the RMA states that no person may do anything within a designated site that would prevent or hinder a project or work to which the designation relates. Any person seeking to undertake an activity within a designation that would prevent or hinder a public work or project or work to which the designation relates must have written consent from the requiring authority.

This restriction includes:

- Undertaking any use of the land;
- Subdividing the land; or
- Changing the character, intensity, or scale of the use of the land.

It is best practise to provide a section 176(1)(b) approval with any application for resource consent that is within a designation.

Section 179 relates to the appeal of a person against a requiring authority's refusal to grant consent to undertake work within a designation. If a person (i.e. third party) applies to a requiring authority to do works on a designated site and this is refused, then that person is able to appeal this decision to the Environment Court.

4 Scope of a Designation

The scope of a designation is the nature of the activities that a requiring authority may undertake within the designation under section 176 of the RMA. It is what an ordinary member of the public would understand the scope to be when inspecting the designation in the district plan¹.

In the Unitary Plan the scope of a designation is determined by reference to:

- The purpose of the designation which is the "designated purpose";
- The conditions of the designation;
- Any other relevant plans, diagrams or documents referenced in the designation; and
- The extent of the designation boundaries on the planning maps.

In some cases it may be necessary to refer to the original NoR for guidance where the scope of a designation is unclear.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The purpose of a designation should provide the public a reasonable idea of what activities could take place within the designation². Some attempt should be made to describe the public work, project or work and provide some boundaries within which the effects would be contained. Stating the general purpose without further explanation is not sufficient².

For a network utility operator, the scope of the designation must also be consistent with the requiring authority status approved by the Minister under section 167 of the RMA or in the case of section 360, the status approved by the Governor General.

¹ Waimairi County Council v Hogan (1978) 2 NZLR 587

² Ngataranga Bay 2000 Inc v Minister of Defence (3) [1992] 2 NZRMA 318

5 Conditions on a Designation

Designations are not subject to the normal restrictions placed on resource consent conditions under section 108 of the RMA but they should still conform to legal principles.

The conditions on a designation can:

- Address a particular aspect of a NoR;
- Limit the extent of the designation; or
- Control the effects of the designation.

The Court of Appeal¹ has held that the Newbury tests² remain relevant to New Zealand courts and should continue to apply in relation to the RMA. According to the Newbury tests, a valid condition should:

- Be for a resource management purpose;
- Be fairly and reasonably related to the proposed work; and
- Not be so unreasonable that a reasonable council could not have recommended it (i.e. should not defeat the designation).

When recommending a condition on a designation, the Council should have regard to the potential effect of the conditions on the future operation of a designation and take care to ensure the conditions to not thwart the intent of the designation process³.

² Newbury District Council v Secretary of State for the Environment [1981] AC 578

³ A Guide to Designations under the Resource Management Act 1991, Ministry for the Environment

6 Lapsing of a Designation

Section 184 and 184A of the RMA relate to the lapsing of designations and extensions to the lapse date of a designation.

A designation lapses:

- Five years after inclusion in a district plan; unless
- It has been given effect to (i.e. implemented); or
- The designation specifies a longer lapse date.

Lapse dates are applied to designations to provide some certainty to those who may be affected by a designation. For a designation to be “given effect to” it would need to be able to be used for the designated purpose by the lapse date. If the requiring authority has not given effect to the designation by the lapse date, the designation lapses and can no longer be used.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Council can approve an extension to the lapse period of a designation within three months of the expiry of the lapse date for the designation. The Council must be satisfied that the requiring authority has made, and is continuing to make, substantial progress or effort towards giving effect to the designation.

7 Notices of Requirement

A notice of requirement (NoR) is a proposal or application for a designation, which may or may not survive the statutory process of submissions and appeals¹.

A NoR can be made by a requiring authority under sections 168 or by the Council as a requiring authority under section 168A for:

- A public work, project or work; or
- In respect of any land, water, subsoil, or airspace where a restriction is necessary for the safe or efficient functioning or operation of a public work, project or work.

Most NoRs enable a public work, project or work such as a school, road, park, airport or network utility. NoRs that restrict activities (on land, water, subsoil, or airspace) for the safe or efficient function or operation of a public work, project or work are less common but include height restrictions to protect a satellite path or airplane approach flight path to an airport.

¹ Hastings v Auckland City Council [2001] A068/01

7.1 Information to be provided with a Notice of Requirement

Form 18 of the Resource Management (Forms, Fees, and Procedure) Regulations 2003 sets out the information required in a NoR. This includes:

- The name of territorial authority being given the NoR;
- The name of the requiring authority;
- A description of the site to which the NoR applies;
- The nature of the proposed public work, project or work;
- The nature of the proposed restrictions that would apply;
- The effects that the public work, project or work would have on the environment, and the ways in which any adverse effects will be mitigated;
- The alternative sites, routes, and methods have been considered;
- The public work, project or work and designation or alteration are reasonably necessary for achieving the objectives of the requiring authority;
- Any resource consents needed for the proposed activity and whether these have been applied for;
- The consultation undertaken with those parties that are likely to be affected;
- The information required to be included in the NoR by the district plan, regional plan, or any regulations made under the RMA; and
- A list of the documents attached to the NoR.

Form 18 is available at the Ministry of the Environment website:

<http://www.mfe.govt.nz/rma/forms/form18.rtf>

In addition to this the Council considers that the following information should also be included with a NoR:

1. A fee for processing;
2. Sufficient information to understand the nature of the public, work, project or work, preferably including drawings or plans;
3. Details of current ownership of the land and the proposed land acquisition program;
4. The proposed sequence and timing of implementation of the public, work, project or work;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. An assessment against the relevant provisions of any national policy statement, New Zealand coastal policy statement, regional policy statement, proposed regional policy statement, plan and proposed plan;
6. An assessment against any relevant non-statutory strategies or plan documents; and
7. An assessment of those parties considered to be affected by the NoR.

7.2 Interim Effect of a Notice of Requirement

Section 178 of the RMA sets out the interim effect of a NoR, which is similar to the restrictive effect of a designation under section 176. Upon the requiring authority giving notice to the Council, no person may do anything that would prevent or hinder the proposal to which a NoR relates unless that person has the prior written consent of the requiring authority.

This restriction includes:

- Undertaking any use of the land;
- Subdividing the land; or
- Changing the character, intensity, or scale of the use of the land.

It is best practise to provide section 178 approval with any application for resource consent that is lodged with the Council after it has been given a NoR affecting the same site.

Section 179 relates to the appeal of a person against a requiring authority's refusal to grant consent to undertake work within a designation. If a person (i.e. third party) applies to a requiring authority to do works on a designated site and this is refused, then that person is able to appeal this decision to the Environment Court.

7.3 Notification of and Consultation on a Notice of Requirement

Sections 95 to 95F of the RMA relate to the notification of a NoR. If the Council is given a NoR, it must decide whether to process it on a non-notified, limited notified or full notified basis.

If a NoR is fully notified in a proposed plan or plan change the notification tests under Schedule 1 are slightly different. In addition to the full notification, the Council must pursuant to Schedule 1, clause 5(1B) also notify those landowners and occupiers it considers are likely to be directly affected by the NoR.

It is not mandatory for a requiring authority to undertake consultation on a NoR¹. However, consultation can be invaluable when considering alternatives and undertaking an assessment of effects on the environment, particularly if there are significant social effects that need consideration.

¹ Malfroy Area Residents Action Group v Rotorua District Council A 92/98

7.4 Recommendation and Decision on a Notice of Requirement

Section 168 and 172 of the RMA relate to the recommendation and decision on a NoR.

For NoRs by a requiring authority other than the Council, the Council makes a recommendation on the NoR to the requiring authority. The requiring authority will review the Council's recommendation and make its decision to accept or reject the recommendation in whole or in part. For NoRs by the Council as a requiring authority, the Council will make its own and final decision on the NoR.

The Council's recommendation on another requiring authority's NoR or its decision on its own NoR can either:

- Confirm the requirement;
- Modify the requirement;
- Impose conditions; or
- Withdraw the requirement.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

If a NoR is limited notified or fully notified, the decision will be notified to any submitters. If there are no appeals to the Environment Court against the decision or once any appeals have been resolved, the designation will be included in the Unitary Plan.

7.5 Alteration to a Designation

Section 181 of the RMA relates to the alteration of an existing designation.

A requiring authority that is responsible for a designation may give notice of a requirement to the Council to alter an existing designation. The process is subject to sections 168 to 179, as if it were a new notice of requirement.

However, the Council may alter a designation in an operative district plan or a notice of requirement in the proposed district plan without sections 168 to 179 applying in the following circumstances:

- The alteration involves no more than a minor change to the effects on the environment associated with the use or proposed use of land or any water concerned, or involves only minor changes or adjustments to the boundaries of the designation or requirement; and
- Written notice of the proposed alteration has been given to every owner or occupier of the land directly affected and those owners or occupiers agree with the alteration; and
- Both the territorial authority and the requiring authority agree with the alteration.

8 Outline Plans

Section 176A of the RMA relates to outline plans.

Before the public work, project or work is constructed within a designation, a requiring authority is normally required to submit an outline plan to the Council to request any changes. An outline plan generally provides the detail of the public work, project or work, which was not available at the time the NoR was prepared and confirmed as a designation.

Upon receipt of an outline plan, the Council has 20 working days to review the information and request any changes. The Council can only request changes and cannot impose conditions. The requiring authority must then decide whether to accept the changes requested by the Council. If the requiring authority decides not to make the changes, the Council may appeal against the decision to the Environment Court.

Section 176A does not envisage that the Council will recommend that the proposal not proceed¹. In this context the word “change” means make different, alter, or modify the proposal, without denying it altogether. The changes requested should not be so extensive as to negate the implementation of the designation¹.

¹ Waitakere City Council v Minister of Defence [2006] NZRMA 253

8.1 Consultation on an Outline Plan

There is no statutory requirement for consultation to be undertaken by a requiring authority during the preparation of an outline plan or for it to be notified under the RMA. Although a condition on a designation can require a requiring authority to undertake consultation during the preparation of an outline plan or the detailed design of a public work, project or works.

Requiring authorities should consult closely with the Council during the preparation of an outline plan, practically where this is for a significant proposal on older designation with a broad scope. There have been examples where requiring authorities has undertaken consultation with the public during the preparation of outline plans and also where a territorial authority has notified an outline plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8.2 Information to be Provided with an Outline Plan

Section 176A(3) states that an outline plan must show:

- The height, shape, and bulk of the public work, project, or work; and
- The location on the site of the public work, project, or work; and
- The likely finished contour of the site; and
- The vehicular access, circulation, and the provision for parking; and
- The landscaping proposed; and
- Any other matters to avoid, remedy, or mitigate any adverse effects on the environment.

In addition to this the Council considers that the following information should also be included in an outline plan:

1. Drawings or plans of the works to be constructed;
2. Explanation as to how an outline plan is within the scope of a designation including any conditions;
3. Information on any relevant national environmental standard that apply;
4. Information on any resource consents that are required (regional or otherwise); and
5. Information on how section 16 (Duty to avoid unreasonable noise) and section 17 (Duty to avoid, remedy or mitigate adverse effects) have been addressed.

Where an outline plan includes a significant proposal within a designation that has a broad scope and no or few conditions, the outline plan may need to be more comprehensive and address matters such as building height, bulk and location, noise and lighting, heritage and infrastructure etc. The underlying zones and overlays in the Unitary Plan provide a useful guide for such outline plans.

8.3 Outline Plan Waivers and Exceptions

Section 176A(2) of the RMA sets out when a requiring authority does not need to submit an outline plan to the Council. This is when:

- The project or work has otherwise been approved under the RMA (i.e. resource consent);
- The details of the project or work are incorporated into the designation; or
- The Council waives the requirement for an outline plan (in writing).

An outline plans cannot generally be sought for the removal or demolition of a building or tree on their own because this is not construction within the intent of section 176A1. The normal provisions of the Unitary Plan will continue to apply and, if necessary, a resource consent may need to be obtained.

The removal or demolition of a building or tree may only be included in an outline plan where they are either clearly associated with a proposal or where it is hindering the implementation of a designation (i.e. encroaching on a height restriction for a satellite path or airplane approach flight path to an airport).

1 Waitakere City Council v Minister of Defence [2006] NZRMA 253

9 Other Matters

This sections covers other matters that relate to designations, notices of requirement and outline plans.

9.1 Resource Consents

With the exception of section 9(3) of the RMA, a designation does not exclude other restrictions or duties under Part 3 of the RMA. A resource consent may still be required for:

- Any activity outside the scope of the designation;
- Any activity that does not comply with a regional rule; or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Any activity that does not comply with a National Environment Standard.

A designation only applies to land above mean high water springs and therefore cannot apply to the coastal marine area. A designation is also subject to the regional provisions rules in the Unitary Plan.

9.2 National Environmental Standards

An existing designation takes precedence over a National Environmental Standard unless it lapses or the extent of the designation altered. There are specific instances where this is not the case and section 43D and 176A of the RMA should be referred to.

9.3 Duty to Avoid, Remedy and Mitigate

The general duties in sections 16 and 17 of the RMA relating to avoiding unreasonable noise and avoiding, remedying and mitigating adverse effects apply to designations.

9.4 Underlying Zone

The underlying zone applies to the land within a designation but only to those activities that are outside the scope of the designation. When an activity is proposed that is not within the scope of a designation it will be assessed under the underlying zoning. The zone also indicates what the land could be used if it were not designated.

9.5 Public Works Act 1981

The Public Works Act 1991 ("PWA") provides the Crown with the statutory authority to acquire land for a public work. The acquisition process normally takes place after any resource consents have been obtained or a designation confirmed an involved compulsory acquisition if a settlement cannot be reached between the landowner and the Crown.

Because a designation can restrict the use of the land, in the event that the requiring authority does not own the site and has presumably not started negotiations, the landowner can apply to the Environment Court for the requiring authority to acquire or lease all or part of the land if:

- The landowner tried and were unable to sell the land, and either
- The designation prevents the reasonable use of land, or
- The person was the owner of the land when the designation was created.

More information on the PWA can be found at the Land information New Zealand website:

<http://www.linz.govt.nz>

Schedules and Designations

Airways Corporation of New Zealand Ltd

Designation Schedule - Airways Corporation of New Zealand Ltd

Number	Purpose	Location
100	Receiving station	Seagrove Road (Allotment 121 PSH of Waiau), Waiau Pa
101	Aerodrome purposes - communications facility	600 Scenic Drive, Waiatarua

100 Waiau Pa Receiving Station

Designation Number	100
--------------------	-----

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Airways Corporation of New Zealand Ltd
Location	Seagrove Road (Allotment 121 PSH of Waiau), Waiau Pa
Rollover Designation	Yes
Legacy Reference	Designation 9, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Receiving station.

Conditions

No conditions.

Attachments

No attachments.

101 Waiatarua Communications Facility

Designation Number	101
Requiring Authority	Airways Corporation of New Zealand Ltd
Location	600 Scenic Drive, Waiatarua
Rollover Designation	Yes
Legacy Reference	Designation ACNZ2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Aerodrome purposes - communications facility.

Conditions

1. To ensure that section 176A(3)(f) of the RMA has been adequately addressed, an outline plan shall include, as appropriate:
 - a. A statement on the relevant Plan objectives, policies and rules;
 - b. A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out; and
 - c. A visual impact and mitigation assessment where the proposed work is a new tower structure at Rua o tea Whenua, Designation 8527 (as provided for in condition 5.a.).

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

The Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition. Note that major earthworks may require a consent from the council.

3. All development on the site shall be within the “defined development area” as defined on plan number AL20963 sheets 1 and 2.

4. The maximum height of any development on the site shall be not more than 25m above ground level.

5. Development which is additional to that on the site as at 1 February 2000 (which included a tower structure, three “slim-line” masts, the Airways Corporation of New Zealand Ltd equipment building and the Transpower New Zealand Ltd repeater building) shall be limited to:

- a. The replacement of the existing tower structure with another facility, provided that when the new facility is completed and commissioned, the existing tower is decommissioned and demolished;
- b. Antennae attached to the existing tower or new tower (provided that these do not exceed the overall height limit);
- c. Up to four additional “slim-line” masts of similar design to the three existing masts;
- d. Accessory buildings with a maximum height of 4.5m; and
- e. The extension of the site access road

6. Native vegetation alteration (including removal) shall be restricted to:

- a. Removal of vegetation from within the “defined development area”; and
- b. Removal or pruning of any vegetation which compromises the operation of the facility.

Explanation (conditions 3-6):

It is noted that the site is also the subject of another designation (Designation 8527) and the above conditions apply to any development on the site. The site subject to this designation is visually prominent and substantially bush-clad. It contains communications facilities, including a dome radar tower, which have an important function for the region and beyond. The conditions are intended to provide for future development but to ensure such development is within a confined area of the site, and that natural and landscape values of the balance of the site are not compromised. The conditions are designed to allow the replacement of the existing dome radar tower, allowing the existing facility to continue to operate until the new facility is commissioned. The conditions are also intended to provide for the operation and limited expansion of other communications facilities on the site, specifically those for Airways Corporation of New Zealand Ltd and Transpower New Zealand Ltd.

Ardmore Airport Ltd

Designation Schedule - Ardmore Airport Ltd

Number	Purpose	Location
200	Airport purposes ...	Vicinity of Harvard Lane, Ardmore and an area surrounding Ardmore Airport

200 Ardmore Airport

Designation Number	200
--------------------	-----

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Ardmore Airport Ltd
Location	Vicinity of Harvard Lane, Ardmore and an area surrounding Ardmore Airport
Rollover Designation	Yes
Legacy Reference	Designations 9, 38 and 39, Auckland Council District Plan (Papakura Section) 1999; and Designation 234, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Airport purposes - the purpose of this designation is to provide for the efficient operation and growth of Ardmore Airport by enabling airport activities and flights while defining airport approach and landuse controls.

The extent of the designation is described in detail within the wording included as Attachment 1 and is illustrated on:

- Ardmore Airport Designation Plan WP47, Attachment 2;
- Ardmore Airport Ltd Protection Areas WP49, Attachment 3; and
- Airport Height Surfaces, Attachment 4.

Specific definitions relating to this designation are included as Attachment 5.

Conditions and Restrictions

1. Height Restriction

No building, structure, mast, pole, tree or other object shall penetrate any of the approach surfaces, transitional surfaces, horizontal surface or conical surface as defined in this designation and illustrated on the Airport Height Surfaces drawing (Attachment 4). Provided that where there is any conflict between these height control limits and the Auckland International Airport height controls, the lower height restriction shall apply.

If developments and land uses within the area below the horizontal surface or conical surface are proposed to penetrate either of these two surfaces, and will also be higher than 9m above the terrain, then under Section 176 of the Resource Management Act 1991, the proposal shall be referred for consent to the Airport Authority.

2. Land Use Restriction: Rural Aerodrome Protection Areas (Fixed Wing Aircraft Operation)

The Rural Aerodrome Protection Areas are located under each of the flight paths. The areas are illustrated on the Ardmore Airport Ltd Protection Areas drawing WP49 (Attachment 3). The Rural Aerodrome Protection Area extends from the runway bases P, Q, R and S for a distance of 900m.

The land use restriction is essential as aircraft pass over the Rural Aerodrome Protection Areas on landing and take-off at low altitudes. These areas are subject to a high level of aircraft noise and there is also a relatively greater risk of aircraft accident in these areas than elsewhere.

Land uses within the Rural Aerodrome Protection Areas which may be adversely affected by aircraft noise or which may detrimentally affect the safe operation of aircraft should be avoided.

Within the Rural Aerodrome Protection Areas, any new proposals for buildings or solid structures exceeding 4m in height above ground level shall be referred for consent to the Airport Authority. This specific height restriction overrides the general height restriction in (Height Restriction) above.

In assessing buildings and structures that exceed 4m in the Rural Aerodrome Protection Areas, the Airport

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Authority will consider the need for the proposal, siting, height and construction materials.

In considering other land uses, the Airport Authority will take into account possible height intrusion, the likelihood of dust, glare, electrical interference and the possibility of the proposal attracting birds to the area or promoting the gathering of people in the area.

3. Sound Emissions – Air Noise Boundary /Inner Control Boundary and Outer Control Boundary

The Air Noise Contours are shown on planning maps as a Noise Notification Area Overlay.

The Airport shall be managed to ensure that the noise emissions from Aircraft Movement shall not exceed Ldn 65 dBA outside the Air Noise Boundary, Ldn 60 dBA outside the Inner Control Boundary and Ldn 55 dBA outside the Outer Control Boundary. Noise levels shall be calculated as stated in NZS6805:1992 Airport Noise Management and Land Use Planning as a 3 month rolling logarithmic average using the FAA Integrated Noise Model (INM) and records of actual aircraft operations.

The following operations are excluded from compliance with this rule:

- a. Aircraft landing in an emergency;
- b. Emergency flight operations;
- c. One Airshow per calendar year as defined in Condition 9; and
- d. Use of sealed runways 07/25 for maintenance purposes for seven days per calendar year.

Rules to control activities establishing within the Air Noise Contours are included within 4.4.1.2 Airfield noise notification areas of the Unitary Plan.

Explanation:

Council considers that it is important to ensure that the effects associated with aircraft operational noise are managed, as far as practicable, at the source of these emissions. The noise contours define the locations at which the maximum sound exposure, expressed in Ldn dBA, must not be exceeded. This condition places a requirement on aircraft operations associated with the Airport to comply with this limit specified at the Air Noise Boundary, Inner Control Boundary and Outer Control Boundary.

4. Maximum Noise Level from any Aircraft

Except for aircraft listed in a. and b. below, the maximum permissible noise level from any aircraft operating from the Airport shall not exceed SEL 115 dBA at the measurement point specified as on runway centre line, 1700m from commencement of the take-off roll:

- a. Aircraft based at the Airport on 1 July 2004. The Hawker Hunter aircraft based at the Airport on 1 July 2004 will be permitted up to maximum of 58 movements per annum out of the limit of 180 movements per annum specified in condition 6.b.; and
- b. Aircraft brought to the Airport for maintenance/restoration that have the potential to exceed SEL 115dBA as specified above are permitted to operate for the sole purpose of undertaking essential flight checks and departure from the Airport. Any such operations will not exceed a total of 16 takeoffs per annum. These takeoffs and subsequent landings are included in the total number of 180 Ex-military jet movements per annum specified in condition 6.b.

To confirm compliance with this rule, Council may request the Airport Authority to provide a certificate from a person with appropriate acoustic qualifications for aircraft with noise outputs that have the potential to exceed the maximum permissible noise level. Such certificate shall be provided to Council within 6 weeks of the request and shall confirm that the aircraft complies with the requirements of this Condition.

Explanation:

To control the single event noise exposure to the local community Council considers that it is important to set a maximum permissible noise level for aircraft operating from the Airport. The maximum SEL noise level is based

The Proposed Auckland Unitary Plan (notified 30 September 2013)

on noise measurements of existing aircraft at the Airport. However, any new aircraft operated from Ardmore must comply with the maximum SEL noise level. This provision allows Council to request a certificate confirming compliance with the maximum permissible noise level.

5. Restricted Flight Hours

The following restricted flight hours apply to specific aircraft operations from Ardmore Airport:

- a. Circuit training and scheduled flights are not permitted between the hours of 10pm (extended to 10.30pm in daylight savings) and 7am New Zealand Local Time (NZLT) Monday – Saturday and between the hours of 8pm Sunday night and 7pm Monday morning;
- b. Ex Military Jet Aircraft operations are not permitted between the hours of 8pm and 7am New Zealand Local Time (NZLT);
- c. Jet aircraft that do not meet the International Civil Aviation Organisation noise standard contained in ICAO Annex 16, Volume 1, Chapter 3 or the equivalent 'Stage 3' United States Federation Aviation Administration noise limits contained in CFR 14 Part 36, are not permitted to operate between the hours of 10pm and 7am New Zealand Local Time (NZLT);
- d. Except as permitted by by Condition 9 Aerobatic Flight over the Airport shall be limited to a maximum of 12 hours per annum and shall be conducted between the hours of 9am to 4pm Monday to Saturday and 9am to 12 noon on Sunday New Zealand Local Time (NZLT);
- e. Hover training practice shall only take place between the hours of 8am and 7pm Monday to Friday and 9am and 1pm on Saturdays New Zealand Local Time (NZLT) provided that hover training may take place on Saturdays between 1pm and 5pm NZLT and on Sundays between 9am NZLT and 4pm NZLT where the activity takes place no closer than 150m from any external boundary of the Airport. Notwithstanding the above, no hover training practice shall take place on Public Holidays; and
- f. Variations to the restricted hours on night training under clause a. of this condition may be approved under limited circumstances by the Ardmore Airport Noise Consultative Committee, but in any event, operation will not be permitted after 11pm New Zealand Local Time (NZLT).

Explanation:

This condition has been included after extensive consultation between the Airport Authority and local residents in order to minimise disturbance during noise sensitive hours. This condition together with Conditions 3 and 4 and the Noise Management Plan will have the effect of minimising noise from aircraft during noise sensitive hours.

6. Ex-Military Jet Aircraft Movements

Except as permitted by condition 9, Ex Military Jet Aircraft movements shall be restricted to:

- a. 170 movements per calendar year averaged over a three year period;
- b. 180 movements in any one calendar year;
- c. 10 movements in any one seven day period; and
- d. No simultaneous or parallel take-offs.

Explanation:

The purpose of this condition is to safeguard against any potential for significant increases in annual and weekly Ex Military Jet Aircraft movements due to noise emission space becoming available within the Air Noise Boundary in the event of an unlikely significant reduction in General Aviation activity.

7. General Sound Emissions

- a. Sound emissions from sources other than Aircraft Movement, Aircraft Taxiing, Aircraft Engine Testing, and one Airshow per calendar year as defined under condition 9 shall be restricted to the following limits set out in Table 1 measured at or within the boundary of any residential zone or at or within the notional boundary of any residential dwelling existing as at 19 September 2001 (and which is not under the ownership of the Airport Authority).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Table 1:

Monday to Friday 7am - 10pm and Saturday 7am - 5pm	L ¹⁰ 55 dBA
All other times	L ¹⁰ 45 dBA
Additionally, every day 10pm - 7am	L _{max} 75 dBA

Notes:

- Measurements shall be taken at or within the boundary of any residential zone or at or within the Notional Boundary of any residential dwelling.
- Measurement and assessment of noise shall be in accordance with the standards prescribed in NZS6801: 1991 Measurement of Sound and NZS 6802:1992 Assessment of Environmental Sound.
- The noise shall be measured using a sound level meter complying with the international standards IEC 651 (1979) Sound level meters Type 1 and IEC 804 (1985) Integrating-averaging sound level meters Type 1.

Explanation:

Given the level of activity within the Airport (Special Purpose) Zone associated, for example, with the servicing of aircraft, there is potential for adverse noise effects. The noise limits in Table 1 are based on the guidelines contained in New Zealand Standard 6802:1992 – Assessment of Environmental Noise. The provisions have been included to protect residents within close proximity to the Airport from noise generated by activities other than those exceptions specified.

8. Engine Testing

a. All aircraft engine testing undertaken within the Airport (Special Purpose) Zone shall be restricted to the following noise limits set out in Table 2 below measured at or within the boundary of any residential zone or at or within the notional boundary of any dwelling existing as at 19 September 2001 (and which is not under the ownership of the Airport Authority):

Table 2:

7am - 10pm (7 day rolling average)	L _{eq} 55 dBA
10pm - 7am (7 night rolling average)	L _{eq} 45 dBA and L _{max} 75 dBA

b. Aircraft engine testing is required to be undertaken within the appropriate engine testing enclosure, where it is safe to do so.

c. Ten testing sessions per year undertaken between 9.00am and 4.00pm Monday to Friday are exempt from the requirements of Condition 8.a. and b. (a session being a series of engine test events carried out on the same day with a total duration of no more than 20 minutes).

Explanation:

This Condition recognises that there is operational necessity for testing aircraft engines as a core function of the Airport, while limiting the potential for adverse effects on the amenity of surrounding residences, particularly at night. The rule allows up to 10 tests per year during working hours for engines with particularly noisy characteristics.

9. Airshow

Notwithstanding anything to the contrary in condition 4, one Airshow within the MBZ shall be permitted within any calendar year based on the following limitations:

- The flying programme for the Airshow shall be limited to a period of not more than 3 days plus 2 specified days' practice, with alternate days if unable to practice because of poor weather conditions;
- The hours permitted for the Airshow and practices shall be between the hours as specified in Table 3:

Table 3:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Monday to Thursday inclusive	7am - 8pm
Friday and Saturday	7am - 8pm (except that one only of these days may extend to 10pm)
Sunday	7am - 6.30pm

- c. Practice for the Airshow shall be permitted only in the 2 weeks preceding the Airshow;
- d. The noise and environmental aspects of the flying programme for the Airshow and Airshow practice ("the flying programme") shall be reviewed by Council, which may request changes necessary to avoid unreasonable noise exposure on the community; and
- e. The flying programme shall be submitted to the Council no later than 90 days prior to the Airshow taking place. Both the Council and the Airport Authority are to consult with each other as to the noise issues and proposed changes to the flying programme. Comments are to be provided by Council within 10 working days of receipt of the proposed flying program.

Explanation:

Annual Airshows at the Airport are an integral part of the Airport operations and provide social and economic benefits to the local and wider community. This rule provides for annual Airshows at Ardmore to continue with limitations on the show duration and practice times and requires the Airport Authority and Council to work together to achieve best practice noise management.

10. Noise Management Plan

The operation of the Airport shall be in accordance with the current Ardmore Aerodrome Noise Management Plan. With the exception of those provisions contained in Appendix A of that Plan, the Ardmore Aerodrome Noise Management Plan shall be reviewed on a 12 monthly basis or as necessary to ensure Best Practicable Options in terms of noise management are achieved, in accordance with the document amendment procedures contained in that Plan.

Explanation:

Council recognises that there are many aspects of airport operations which are best controlled through a Noise Management Plan as opposed to specific rules due to potential conflict with other regulations and the need to allow aspects of Airport operations to be continually modified and improved in response to industry changes and to achieve best practice noise management. The objectives of the Noise Management Plan are to:

- a. Provide the basis for ongoing noise management and mitigation at the Airport;
- b. Establish the Ardmore Airport Noise Consultative Committee, as set out in the Noise Management Plan, which replaces the Environmental Working Group;
- c. Define roles and responsibilities in relation to airport noise management;
- d. Provide a repository of agreed noise abatement procedures; and
- e. Encourage the parties to work together co-operatively, sharing information and reaching decisions by consensus and agreement.

11. Affected Dwellings

The Airport Authority shall, if so required by the owners of the Affected Dwellings defined in b. below, pay for any remedial or supplementary works that are considered necessary to ensure that the internal acoustic environment of habitable rooms in those dwellings does not exceed a maximum of Ldn 45 dBA with all external doors and windows closed as the result of aircraft movements represented in the Air Noise Boundary noise contour as shown on Unitary Plan maps.

Where compliance with the design level relies on doors and windows being closed, alternative approved mechanical ventilation in accordance with the Building Code shall be provided. This condition is subject to the following:

- a. Notice of such requirement must be given in writing to the Registered Office of the Airport Authority within 3 months of the receipt by the owners of written notice from the Airport Authority advising the owners of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

operative date of this condition and the rights conferred by this condition;

b. The Affected Dwellings are deemed to be those existing habitable dwellings located within the Ldn 65dBA Air Noise Boundary contour as at 19 September 2001. In any case where any existing habitable dwelling is in the course of completion, extension or repair as at 19 September 2001, then the notice to the Airport Authority referred to above must be given within 3 months following the date on which the dwelling is certified as complete by the Council pursuant to the Building Act 2004, or the date of written notice from the Airport Authority advising the Owners of the operative date of this rule, whichever is the later; and

c. For the purposes of this condition engineers with appropriate qualifications appointed by the Airport Authority and engineers with appropriate qualifications appointed by Council shall act as the certifiers for the purpose of determining the nature and extent of the remedial or supplementary works required pursuant to this rule and their determination shall bind the Airport Authority, the Council and the Owners respectively in relation to their various interests pursuant to this rule.

Subject to the foregoing, the obligations of the Airport Authority under this rule shall not extend to any subsequent structures, alterations or additions to any of the Affected Dwellings commenced after 19 September 2001.

Explanation:

This condition has been included to allow those persons living within the Air Noise Boundary to seek compensation from the Airport Authority to ensure that the internal acoustic environment of habitable rooms in those dwellings does not exceed a maximum of Ldn 45 dBA with all external doors and windows closed.

12. Best Practicable Option

In administering the conditions of this designation, the Airport Authority shall adopt the best practicable options including, but not limited to, management procedures and Operational Controls to reduce the exposure of the community to noise from Aircraft and Airport activities.

13. Monitoring

The Airport Authority shall be responsible for monitoring and reporting of noise (without limiting Council's powers) associated with the Airport and flight activity. Such monitoring shall include:

- a. Calculation of aircraft noise as stated in NZS6805: 1992 (s1.4.2.2) using the FAA Integrated Noise Model (INM) and records of actual aircraft operations and calculated as a 3 month rolling logarithmic average. The results of this calculation together with underlying inputs shall be reported to the Council annually once the Airport has reached 220,000 movements. The INM Study is to be developed by a recognised user of the INM with strict adherence to the policies and procedures specified in the INM User's Guide. An executable version of the Study shall be provided to Council via CD-ROM or other suitable electronic means. The use of substitution or surrogate aircraft within the model will be notified in the reporting procedure and will be as agreed between the Airport Authority and Council experts. The INM model used to assess compliance is to be the version used to develop the Unitary Plan contours. The contours may be updated with later versions of the INM in future reviews of the Unitary Plan. When the calculated 3 month average reaches Ldn 64.5 dBA, physical noise monitoring shall be undertaken to confirm compliance with condition 4;
- b. The recording of Ex Military Jet Aircraft movements on a monthly basis with any records kept to be provided to Council in collated form within 48 hours upon request by the Council;
- c. The administration and logging of all engine testing activity, with records to be provided to Council in collated form within 48 hours upon request by the Council; and
- d. Further such contingency monitoring as required by the Council if the Council becomes aware of significant changes to Airport operations.

Noise from the following operations shall be excluded from the compliance calculations set out in a. to b. above:

- i. Aircraft landing in an Emergency;
- ii. Emergency Flight operations; and
- iii. One airshow per year as defined within condition 3.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Attachments

Attachment 1: Description of Designation

Location of Runway Centrelines

At the outer ends of the approach surfaces, the extended centrelines for the two sealed runways pass through the following co-ordinates:

Runway 03/21	Northeast End (A)	685622.19N 785 805.46mN 321337.19E 421 368.93mE
	Southwest End (C)	680398.65N 780 644.15mN 315993.55E 416 087.12mE
Runway 07/25	East End (B)	683323.04N 783 508.44mN 322309.31E 414 878.32mE
	West End (D)	683322.82N 783 505.83mN 314843.93E 414 878.32mE

The above co-ordinates are in terms of the NZGD 2000 Mt Eden Meridional Circuit Mount Eden Grid (Central Meridian Scale Factor 0.9999).

The co-ordinates for Runways 03/21 and 07/25 are based on surveyed fixes of the threshold centreline markings extended for 3000m outward from the two bases.

The centreline for the grass runway 03/21 is parallel to and 150m from the centreline of the sealed runway 03/21.

Location of Bases

For Ardmore Airport, the bases for the approach surfaces for the sealed runways are each 90m long, i.e. extending for 45 m at each side of the runway centreline. The bases are perpendicular to the runway centrelines, are horizontal, and the elevation of each base is the ground level of the highest ground level on the runway centreline at the base location.

The centres of the bases are located at the following co-ordinates:

Runway 03/21	Northeast End (R)	783 708.98mN 419 223.51mE
	Southwest End (S)	782 740.83mN 418 232.76mE
Runway 07/25	East End (P)	783 507.40mN 419 340.86mE
	West End (Q)	783 500.88mN 417 877.99mE

The above co-ordinates are in terms of the NZGD 2000 Mt Eden Meridional Circuit Mount Eden Grid (Central Meridian Scale Factor 0.9999).

Bases P, Q and R coincide with the physical ends of the sealed runways. Base S is inset 25m from the southwest end of the runway.

The level for Base S is R.L. 32.32 and for Base R is R.L 32.87

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The level for Base Q is R.L. 29.79 and for Base P is R.L 33.71

The bases for the grass 03/21 runway lie 30m beyond the ends of the runway and are 80m long, extending for 40m at each side of the runway centreline.

Approach Surfaces

The Approach surfaces defined in this specification include take-off/climb requirements. Each approach surface rises from a base.

Approach surfaces for the sealed runways rise from P, Q, R and S respectively at a gradient of 2.5 percent (1 in 40) and continue upwards and outwards for a horizontal distance of 3000m from their respective bases. Each approach surface is symmetrically disposed about the extended centreline and its sides diverge uniformly outwards at a rate of 10 percent.

Approach surfaces for the grass runway rise from the bases defined for the runway at a gradient of 2.5 percent (1 in 40) for a horizontal distance of 2600m. These approach surfaces are symmetrically disposed about the extended centreline of the runway strip and their sides each diverge uniformly outwards at a rate of 10 percent.

Side Clearances (Transitional Slopes)

Side clearances rise upwards and outwards from the sides of the approach surfaces for the sealed runways at a gradient of 1 in 7 to intercept the horizontal surface at 80m AMSL.

For the grass runway, side clearances rise upwards and outwards from the sides of the approach surfaces at a gradient of 1 in 5 to intercept the horizontal surface at 80m AMSL.

Horizontal Surface

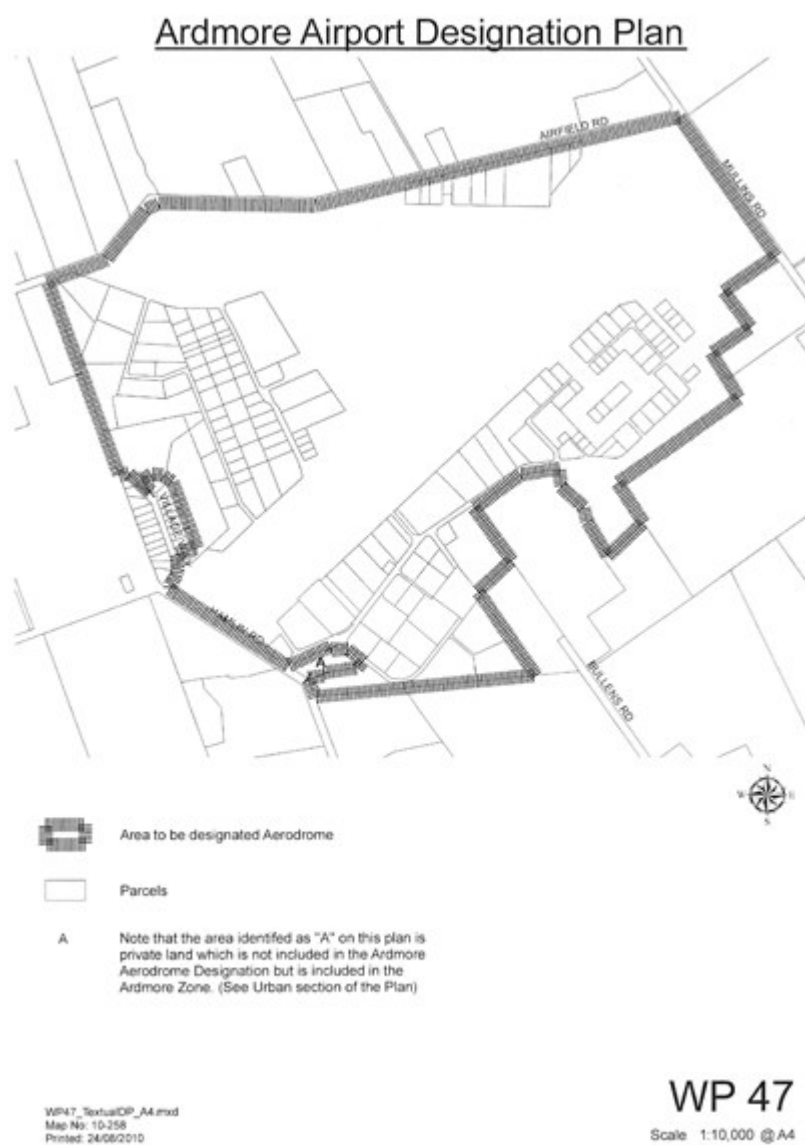

The horizontal surface overlays the airport and extends from above the airport for a radius of 4000m from bases P and Q. This flat horizontal surface is at 80m AMSL. The airport level is 35m AMSL. This corresponds to a level 1.5 metres above reference mark "J" on S.O. 49594.

Colonial Surface

The sloping conical surface rises upwards and outwards from the periphery of the horizontal surface at a gradient of 5 percent (1 in 20) for a further 2100m until it reaches a height of 185m AMSL.

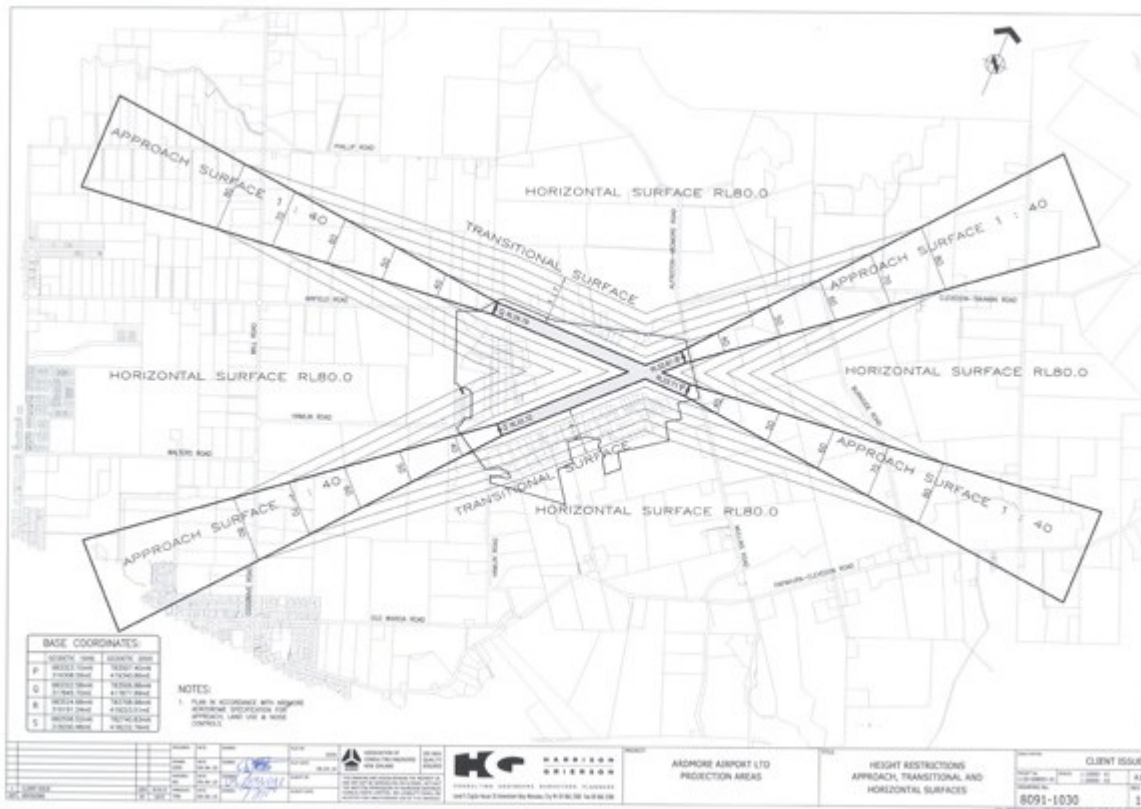

Attachment 2: Ardmore Airport Designation Plan WP47

The Proposed Auckland Unitary Plan (notified 30 September 2013)

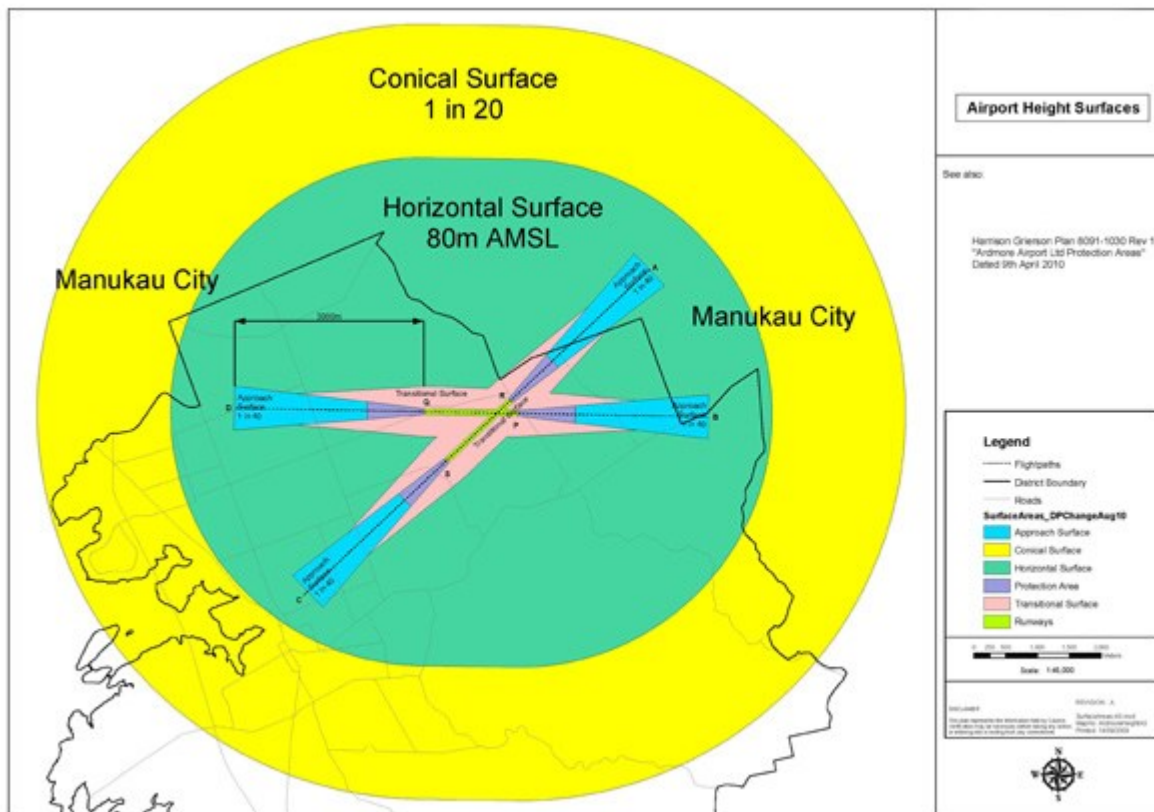

Attachment 3: Ardmore Airport Ltd Protection Areas drawing WP49

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Attachment 4: Airport Height Surfaces

Attachment 5: Definitions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Activities Sensitive to Aircraft Noise (ASAN)

means household units, residential activities, camping grounds, comprehensive residential development, studio warehousing, temporary household units, bed and breakfast accommodation, farmstays, rehabilitation facilities, pre-school/education facilities, schools, other educational facilities, child care centres and other care centres, hospitals, other health care facilities, rest homes and other homes for the aged, traveller's accommodation.

Aerobatic Flight

a. an intentional manoeuvre in which the aircraft is in sustained inverted flight or is rolled from upright to inverted or from inverted to upright position; or,
b. manoeuvres such as rolls, loops, spins, upward vertical flight culminating in a stall turn, hammerhead or whip stall, or a combination of such manoeuvres

Aerodrome

means Ardmore Aerodrome as defined by land contained within the Aerodrome boundary.

Aerodrome Boundary

means the boundary of the land designated by the Airport Authority for aerodrome purposes.

Air Noise Boundary

is a line formed by the outer extremity of the 65dBA Ldn noise contour.

Air Noise Boundary Area

means the area identified as an Air Noise Boundary on the Noise Notification Areas - airports overlay by a line formed by the outer extremity of the Ldn 65dBA noise contour.

Aircraft

in terms of the Civil Aviation Act 1990, means any machine that can derive support in the atmosphere from the reactions of the air otherwise than by the reactions of the air against the surface of the earth.

Aircraft Engine Testing Noise

means aircraft testing for the purposes of engine maintenance and does not include normal operational aircraft engine run-ups. (i.e.: aircraft warming up prior to take-off) or any noise generated by the taxiing or towing of aircraft to or from the designated engine testing location.

Aircraft Movement

means one aircraft take-off, landing, touch-and-go, or missed approach. A "Touch-and-go" shall be deemed to be two aircraft movements.

Airport Authority

means Ardmore Airport Limited or any person appointed in place of Ardmore Airport Limited as the requiring authority for Ardmore Aerodrome pursuant to section 180 of the Resource Management Act 1991.

Airshow

means the event referred to in condition 9 of Designation 200.

Aviation activities

Means runways, taxiways and navigational equipment, passenger terminals, maintenance workshops, aircraft testing facilities and any residential, commercial or industrial activity ancillary to the operational function of the airport such as warehousing for freight collection and despatch and storage of aviation and other fuels and hazardous substances which are necessary for the operation of the Aerodrome.

Best practicable option

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in relation to an emission of noise means the best method for preventing or minimising the adverse effects on the environment having regard, among other things, to:

- a. the nature of the emission and the sensitivity of the receiving environment to adverse effects;
- b. the financial implications and the effects on the environment of that option when compared with others; and
- c. the current state of technical knowledge and the likelihood that the option can be successfully applied.

CAA

CAA means the Civil Aviation Authority of New Zealand.

CAR

means Civil Aviation Rule.

Circuit training

means the use of the Fixed Wing Circuit or the Helicopter Circuit for training purposes.

Commercial activities

Means those activities such as real estate offices, banks, post office, shoe repairs, tourist agencies, hairdressers, dry cleaners, self service laundries and other similar uses whose functions are similar in character to shops in respect to their effect on the neighbourhood.

dBA

is a measurement of sound pressure level which has its frequency characteristics modified by a filter so as to more closely approximate the frequency bias of the human ear.

Ex-Military Jet aircraft ("EMJ").

means any Fixed wing aircraft designed for military purposes propelled other than by a propeller.

Fixed Wing Circuit

means that pattern, located on the southern side of the Aerodrome flown by fixed wing aircraft for the purpose of sequencing themselves to or from runways 03/21 and/or 07/25 grass.

General Aviation

is defined by the Civil Aviation Authority (CAA) as all aviation activity at civil aerodromes other than regular passenger flights scheduled by international and domestic airlines.

Habitable Room

means a room used for activities normally associated with domestic living, but excludes any bathroom, laundry, water closet, pantry, walk-in wardrobe, corridor, hallway, lobby, clothes drying room, garage.

Helicopter Circuit

means that pattern located on the northern side of the Aerodrome flown by helicopters.

Inner Control Boundary

Is a line formed by the outer extremity of the 60 dBA Ldn noise contour.

Inner Control Boundary Area

means the area identified as Inner Control Boundary Area on the Noise Notification Areas - airport overlay by a line formed by the outer extremity of the Ldn 60dBA noise contour and the outer extremity of the Ldn 65dBA noise contour.

L10

means the noise level which is equalled or exceeded for 10% of the measurement period. L10 is an indicator of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the mean maximum noise level and is used in New Zealand as the descriptor for intrusive noise (in dBA).

Ldn (Day/Night Level)

means the day night noise level which is calculated from the 24 hour Leq with a 10 dBA penalty applied to the night-time (2200-0700 hours) Leq.

Lmax (Maximum sound pressure level)

means the maximum sound pressure level measured during the sampling period.

Leq (Time-average sound level)

means the time averaged noise level (on a logarithmic, energy basis).

MBZ

means that area denominated under Civil Aviation Rules as the Ardmore Mandatory Broadcast Zone or MBZ.

NZS 6805:1992

refers to the New Zealand Standard NZS 6805: 1992 "Airport Noise Management and Land Use Planning".

Obstacle Limitation Surfaces (OLS)

means those defined areas about and above an aerodrome intended for the protection of aircraft in the vicinity of an aerodrome.

Outer Control Boundary

is a line formed by the outer extremity of the 55 dBA Ldn noise contour.

Outer Control Boundary Area

means the area identified as Outer Control Boundary Area on the Noise Notification Areas - overlay map by a line formed by the outer extremity of the Ldn 55dBA noise contour and the outer extremity of the Ldn 60dBA noise contour.

Scheduled Flight

means freight or passenger flights that are established on a permanent timetable basis.

SEL (Sound Exposure Level)

means the A-weighted sound level which if maintained constant for a period of 1 second, would convey the sound energy as is actually received from a given noise event.

$$SEL = 10 \log \int_{t_1}^{t_2} \left[\frac{P_A(t)}{P_0} \right]^2 dt$$

Note:

Where p is in pascals and t is in seconds, p₀ is the reference sound pressure of 20 micropascals.

Auckland Council

North and West

Designation Schedule - Auckland Council (1/3)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

North and West

Number	Purpose	Location
400	Regional park ...	1181 Takatu Road, Takatu Peninsula, Tawharanui

The Proposed Auckland Unitary Plan (notified 30 September 2013)

430	Regional park ...	Southern part of Pakiri Coast (vicinity of Witten Road, Spencer Road and M Greenwood Road)
R431	Regional park ...	Pakiri River Road, Pakiri Coast
R432	Regional park ...	Te Arai Point Road, Te Arai

400 Tawharanui Regional Park

Designation Number	400
Requiring Authority	Auckland Council
Location	1181 Takatu Road, Takatu Peninsula, Tawharanui
Rollover Designation	Yes
Legacy Reference	Designation 201, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

- Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
- Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
- The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ol style="list-style-type: none"> Water Tables and track drainage Track surfaces Track structures Modification of vegetation up to 1m from the edge of the track

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

401 Mahurangi Regional Park

Designation Number	401
--------------------	-----

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Auckland Council
Location	190 Ngarewa Drive, Mahurangi West; Ridge Road, Mauhurangi East; and Big Bay and Lagoon Bay, Mahurangi East
Rollover Designation	Yes
Legacy Designation	Designation 202, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

403 Muriwai Regional Park

Designation Number	403
Requiring Authority	Auckland Council
Location	447 Motutara Road, Muriwai
Rollover Designation	Yes
Legacy Designation	Designation 205, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

404 Scandrett Regional Park

Designation Number	404
Requiring Authority	Auckland Council
Location	114 Scandrett Road, Mullet Point, Mahurangi East
Rollover Designation	Yes
Legacy Designation	Designation 206, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place, an Outline Plan of Works is required.

2. The following shall be submitted with the Outline Plan of Works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Exemptions:

Conditions 1 and 2 do not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan.

3. An outline plan of works for any works or development shall include an assessment of effects and appropriate mitigation of impacts in relation to the coastal and landscape values of the site.

Advice Notes

1. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT be advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

2. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

3. The requiring authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to the condition in order to confirm an outline plan is not required.

415 Long Bay Regional Park

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	415
Requiring Authority	Auckland Council
Location	2000 Beach Road, Long Bay
Rollover Designation	Yes
Legacy Designation	Designation 117, Auckland Council District Plan (North Shore Section) 2002; and Designation 180, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

- Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
- Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
- The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ol style="list-style-type: none"> Water Tables and track drainage Track surfaces Track structures Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

Requiring Authority	Auckland Council
Location	2911 South Head Road, South Head
Rollover Designation	Yes
Legacy Designation	Designation 210, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest
-------------------	--	--

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. 417 Rosedale Landfill

Designation Number	417
Requiring Authority	Auckland Council
Location	62 Greville Road, Albany
Rollover Designation	Yes
Legacy Reference	Designation 116, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Refuse disposal.

The Rosedale Landfill and Constellation Drive Transfer Station are designated by the Auckland Regional Council pursuant to the powers given to it by Section 707AA of the Local Government Act 1974. Operation and management of these facilities is vested in Northern Disposal Systems Ltd, a LATE of the Auckland Regional Services Trust.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Rosedale Landfill currently receives all of the refuse from within the city, from within the North Shore and from various localities beyond the North Shore. The landfill has sufficient capacity to continue operations past the turn of the century. The Council has long held the view that the Rosedale Landfill is not well located to serve as a regional refuse facility because of its impact on local residential properties, its likely effect upon the planned development of the Greville Road area for housing and upon the Council's desire to achieve high urban environmental standards throughout the Albany Basin. Consequently, the Council has resisted proposals for major extensions to the Rosedale Landfill, and has instead given planning consent to two limited extensions only. These consents recognised and sought to overcome the short-term difficulties facing the Auckland Regional Council in disposing of the North Shore's refuse.

The planning approval given by the Council to the second extension stipulated that there was to be no further expansion of the Rosedale Landfill beyond the limits of that consent and imposed a number of conditions on the establishment, operation and management of the landfill. Issues relating to the landfill designation were again considered in 1996 during the hearing of submissions to the proposed District Plan. As a result, consent to dispose of refuse in the Rosedale Landfill expires during the year 2005. The Development Plan for the landfill, showing the finished landform, and the conditions attached to its operation and management are incorporated within the District Plan as Appendix 14H. A Management Plan for the landfill is being prepared by Northern Disposal Systems Ltd in consultation with the Council. This Plan will set out the approved guidelines for the management and operation of the landfill.

The Council's longterm intention for the site as a reserve is indicated by a policy in Section 19.3.2. A possible end use proposal is shown in Appendix 14I. The Council does, however, reserve its right to develop and use the facility in a manner appropriate to the circumstances existing at the time in the future when development and use of the landfill for urban type purposes is possible.

Conditions

1. Major Control Requirements

1.1 The development of the Rosedale Landfill (hereinafter referred to as the 'landfill') shall proceed in accordance with the provisions of the Development Plan included in Appendix 14H.

1.2 The landfill shall be operated in conjunction with a refuse transfer station and shall not be open to the general public except in an extreme emergency.

1.3 All vehicles shall enter and leave the landfill from Greville Road and no vehicle access shall be permitted from Rosedale Road.

1.4 Except insofar as is necessary to construct vehicle access as soon as practical from the Stage 1 extension to Greville Road, as required in Condition 4 of Major Control Requirements of the Consent Order for the Rosedale Landfill Stage 1 Extension, the Auckland Regional Council shall not commence landfill until both the present landfill and the Stage 1 extension are full.

1.5 There shall be no consent given at any stage in the future to the further extension of refuse disposal facilities at or within the vicinity of Rosedale Road.

1.6 That refuse disposal on the landfill site shall cease in the year 2005.

1.7 The landfill shall be operated and developed so that the final levels of refuse landfill and restoration works shall comply with the levels depicted on the Development Plan, except insofar as any modification may be agreed between the ARC and the city Council. It is acknowledged that this obligation shall be satisfied as soon as practicable after the refuse landfill is complete and following satisfaction of the obligation at that time, the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ARC shall not have a continuing obligation in this regard.

1.8 All works of an engineering nature shall require approval of the City Engineer.

2. Establishment Works

2.1 The ARC shall obtain all necessary water rights from the Regional Water Board for the collection and disposal of leachate and shall comply with the terms and conditions of these rights.

2.2 The ARC shall obtain all necessary water right and engineering approvals from the city Council for sediment erosion and silt collection, and for the construction of the proposed culvert to carry the flow of the tributary to the Oteha Stream through the landfill site, as well as for such connecting pipes as are required for the tributary stream in the culvert beneath Greville Road, the runoff from existing landfill areas, natural seepage and the like.

2.3 The ARC shall place a seal of clay compacted to a minimum depth of one metre over the top of the culvert. This clay seal shall be provided to the satisfaction of the Regional Water Board to ensure that leachate is directed to the leachate drain, and to the satisfaction of the city Council to ensure that sound engineering practice is followed.

2.4 The ARC shall obtain engineering approval from the city Council for an overland flow path for the tributary stream, this flow path being maintained at each stage in the operation of the landfill as well as in the ultimate development of the land for recreational purposes. However, the ARC is advised that it may be necessary for the Council to obtain the approval of the Regional Water Board to a modification of Water Right No. 833824 held by the Council.

2.5 The overland flow path shall be designed to come into operation immediately the upstream detention pond has reached its design peak level.

2.6 The ARC shall construct drains for the collection of leachate. These drains shall be provided to the satisfaction of the Regional Water Board to convey leachate from the landfill to a proposed leachate recirculating system or to the existing 80mm leachate pumping main to the North Shore Drainage Board treatment plant and to the satisfaction of the city Council to ensure that sound engineering practice is followed.

2.7 The entrance and access road off Greville Road, including such widening of the carriageway as may be necessary, shall be designed, constructed and sealed to the satisfaction of the city Council.

2.8 The internal road giving access to the disposal site shall be sealed from Greville Road to the wheelwash.

2.9 The wheelwash facility shall be designed to the satisfaction of the city Council and maintained in a manner that at all times ensures the effective cleaning of vehicles leaving the landfill.

2.10 The excavation of cover material by earthmoving machinery shall only occur between the hours of 7.00 am and 8.30 pm, Mondays to Saturdays. There shall be no excavation on Sundays.

2.11 The ARC shall ensure that all earthmoving machinery is equipped with effective mufflers.

2.12 Screen planting along the Greville Road frontage and eastern boundary of the landfill shall commence during the first planting season after the requirement is finally confirmed. In this regard a planting plan shall be prepared by the ARC and approved by the city Council prior to planting commencing. The planting plan shall determine which existing trees and vegetation shall be retained.

2.13 Such fire breaks shall be provided around the edge of the disposal site as may be required by the New

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Zealand Fire Service.

2.14 All signage shall be the subject of separate planning approval.

3. Landfill Management and Operations

3.1 All landfill operations shall be under the direct supervision of the ARC.

3.2 At the end of each day refuse shall be covered either with soil or fine mesh netting. The manner for dealing with refuse left overnight shall be monitored and the Medical Officer of Health shall have the right to direct that it be covered with soil should he/she consider that this practice is necessary.

3.3 The ARC shall deal with hazardous wastes in accordance with its Refuse Disposal Baylaw 1976.

3.4 Immediate and effective action shall be taken to deal with refuse that is particularly objectionable because of smell.

3.5 Immediate and effective action shall be taken to eliminate vermin or insect infestation should this become evident. Where necessary, this action shall include an ongoing programme of eradication.

3.6 Should the ARC devise an acceptable technique for effectively stopping seagulls from gathering at the landfill, it shall apply this technique immediately.

3.7 Temporary contour drains shall be formed around the landfill to the satisfaction of the city Council to intercept stormwater flowing from higher ground and areas of covered refuse.

3.8 Permanent stormwater drainage for the completed landfill shall be installed as required to the satisfaction of the city Council.

3.9 Landfill operations including earthworks associated with land-filling shall be carried out under the supervision of an appropriately qualified person who shall ensure that these works are undertaken in a manner that ensures the stability of the land and all pipelines contained therein.

3.10 Refuse shall be conveyed to the landfill in totally enclosed vehicles. The only exception to this shall be in the event that the landfill is opened to the general public in an extreme emergency. In this event, the ARC shall charge an additional fee for loads which, in the opinion of the ARC staff, are insecure.

3.11 Windblown litter shall be contained effectively within the landfill by the erection of nets and screens, and these shall be cleared of litter at weekly intervals or more frequently as necessary.

3.12 The ARC shall carry out patrols along the Greville Road and State Highway 1 frontage of the landfill to pick up:

- a. Litter blown beyond the nets and screens at weekly intervals or more frequently as necessary; and
- b. Refuse illegally deposited at the roadside as required.

3.13 The ARC shall ensure that all operating equipment used on the landfill is equipped with effective mufflers.

3.14 That the operation of the landfill shall comply with the rules of the proposed District Plan with regard to Odour (Rule 10.4.2), Dust (Rule 10.4.3) and Noise (Rule 10.5).

4. Completion Works

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4.1 The ARC shall place a minimum of 500mm of soil on the finished surfaces of the landfill as soon as practicable after refuse land-filling is complete and sow the area with grass.

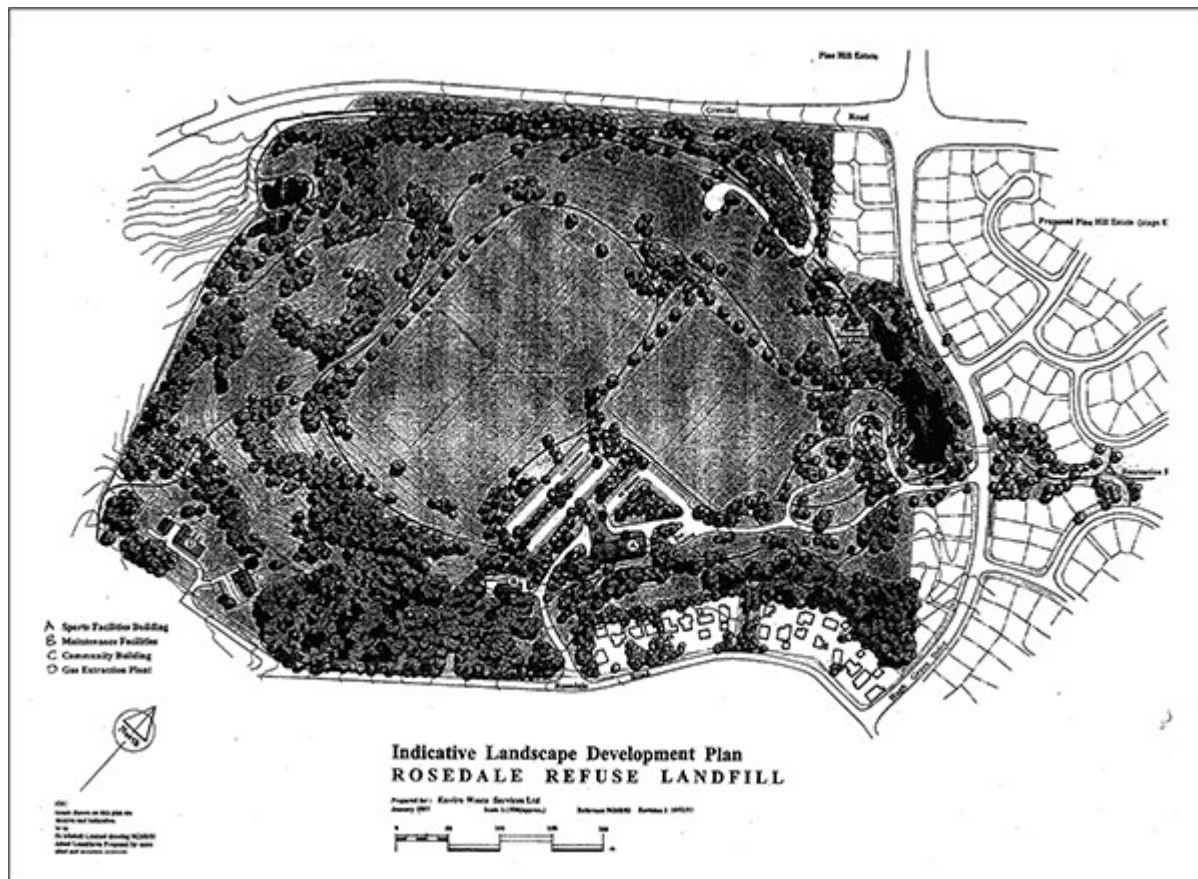

4.2 The ARC shall have a continuing responsibility for leachate collection and disposal beyond the life of the landfill as a disposal facility until such time as the Regional Water Board gives written notice to the Council that this is no longer required.

4.3 Should sewerage reticulation be provided in the vicinity of the landfill prior to the Regional Water Board giving notice to the Council under Clause 4.2 above, the Council may require the leachate drains to be connected to this reticulation at the ARC's cost.

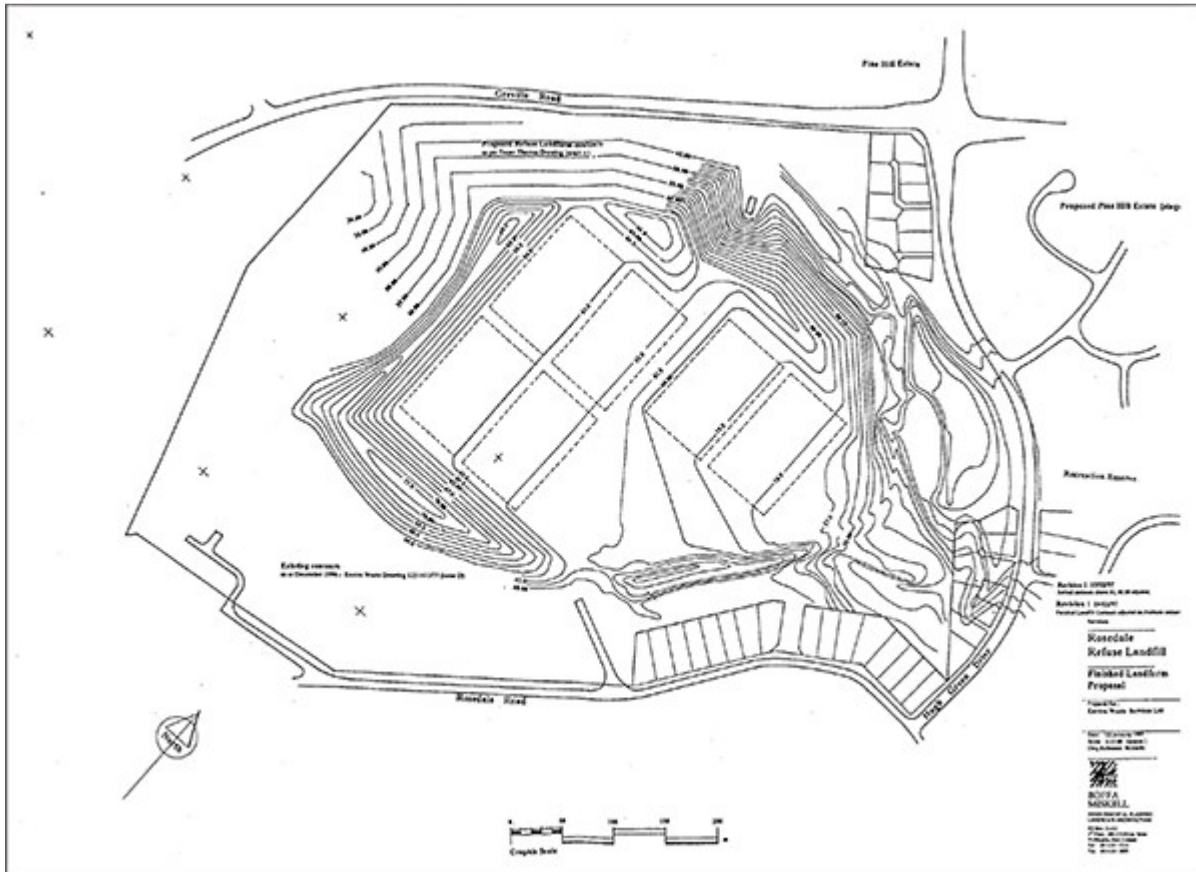

4.4 The City Council is concerned as to the eventual ownership of the completed landfill and its further development (after proper completion of the landfill works) to a state suitable for recreational or associated public use. Whilst these matters are affected by legal conditions which impose constraints on the ARC's powers, the ARC shall continue to participate in discussions on these issues with the Council.

14I Possible End Use Proposal for Refuse and Disposal Site at Rosedale Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

418 Waitakere Ranges Regional Parkland

Designation Number	418
Requiring Authority	Auckland Council
Location	300 Scenic Drive, Titirangi; 601 Huia Road, Parau; and, Whatapu Road, Huia, Waitarua
Rollover Designation	Yes
Legacy Designation	Designation WCCRP, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:
 - a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:
 - i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
 - ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.
2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-

The Proposed Auckland Unitary Plan (notified 30 September 2013)

subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

419 Waikumete Cemetery

Designation Number	419
Requiring Authority	Auckland Council
Location	4128A Great North Road, Glen Eden
Rollover Designation	Yes
Legacy Designation	Designation C1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Cemetery and crematorium.

Conditions

Outline Plan of Works

1. Before any works, including new buildings, are undertaken an Outline Plan of Works shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 1, from requiring an outline plan of works. The Outline Plan of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan of Works.

Exemptions

2. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of cemetery infrastructure	Nature of works
--	-----------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Burials	The construction of works associated with interments, including ornamental gardens.	Structures, such as burial plots, berms, headstones and mausoleums.
Paths and tracks	Construction and maintenance of paths and tracks in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of paths and tracks up to 2.5 metres in width, including the construction of structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing paths and tracks involving: <ul style="list-style-type: none"> i. Water tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of native vegetation up to 1 metre from the edge of the track.
Minor buildings, structures and utility services, including drainage systems	Construction and maintenance of minor buildings and structures and utility services	The construction of utility services and minor structures, such as notice boards, information kiosks, signs, outdoor seating, entrance gates, shade shelters, pavilions and toilet blocks.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of native vegetation up to 1 metre from the edge of the car park or road, or within the car park for safety reasons
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Cemetery Management Plan

3. Cultural / Heritage / Archaeological

Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for the purpose of a cemetery but is to conserve and protect the recognised natural, cultural and historic values that significantly contribute to the cemetery setting.

This condition (Condition 2) will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 2 in order to confirm an outline plan is not required.
2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.
3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.
4. The Cemetery Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a cemetery.

Designation Number	420
Requiring Authority	Auckland Council
Location	54 O'Neills Road, Swanson
Rollover Designation	Yes
Legacy Designation	Designation C2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Cemetery.

Conditions

Outline Plan of Works

1. Before any works, including new buildings, are undertaken an Outline Plan of Works shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 1, from requiring an outline plan of works. The Outline Plan of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan of Works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Exemptions

2. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of cemetery infrastructure		Nature of works
Burials	The construction of works associated with interments, including ornamental gardens.	Structures, such as burial plots, berms, headstones and mausoleums.
Paths and tracks	Construction and maintenance of paths and tracks in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of paths and tracks up to 2.5 metres in width, including the construction of structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing paths and tracks involving: <ul style="list-style-type: none"> i. Water tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of native vegetation up to 1 metre from the edge of the track.
Minor buildings, structures and utility services, including drainage systems	Construction and maintenance of minor buildings and structures and utility services	The construction of utility services and minor structures, such as notice boards, information kiosks, signs, outdoor seating, entrance gates, shade shelters, pavilions and toilet blocks.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of native vegetation up to 1 metre from the edge of the car park or road, or within the car park for safety reasons
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Cemetery Management Plan

3. Cultural / Heritage / Archaeological

Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for the purpose of a cemetery but is to conserve and protect the recognised natural, cultural and historic values that significantly contribute to the cemetery setting.

This condition (Condition 2) will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing

The Proposed Auckland Unitary Plan (notified 30 September 2013)

fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;

ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or

iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 2 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. 426 Te Muri Regional Park

Designation Number	426
Requiring Authority	Auckland Council
Location	184 Hungry Creek Road, Mahurangi West
Rollover Designation	Yes
Legacy Designation	Designation 209, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure	Nature of works
--	-----------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services Maintenance, repairs and minor alterations to buildings, structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

427 Wenderholm Regional Park

Designation Number	427
Requiring Authority	Auckland Council
Location	37 Schischka Road, Wenderholm
Rollover Designation	Yes
Lapse Date	Given effect to (i.e. no lapse date)
Legacy Reference	Designation 211, Auckland Council District Plan (Rodney Section) 2011

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

430 Regional Parkland at Pakiri

Designation Number	430
Requiring Authority	Auckland Council
Location	Southern part of Pakiri Coast (vicinity of Witten Road, Spencer Road and M G
Rollover Designation	Yes
Legacy Designation	Designation 208, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure	Nature of works
--	-----------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services Maintenance, repairs and minor alterations to buildings, structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

R431 Regional Parkland at Pakiri

Designation Number	R431
Requiring Authority	Auckland Council
Location	Pakiri River Road, Pakiri Coast
Rollover Designation	No
Legacy Designation	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

R432 Te Arai Regional Park

Designation Number	R432
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Auckland Council
Location	Te Arai Point Road, Te Arai
Rollover Designation	No
Legacy Designation	N/A
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

- Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
- Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
- The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ol style="list-style-type: none"> Water Tables and track drainage Track surfaces Track structures Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

Central

Designation Schedule - Auckland Council (2/3)

Central

Number	Purpose	Location
500	Auckland City Art Gallery ...	1 Kitchener Street, Auckland Central
501	Public open space	445-47 Pakenham Street East to 119-117B and C Custom Street East, Central Auckland

The Proposed Auckland Unitary Plan (notified 30 September 2013)

502	Community facility ...	44-48 Lorne Street, Auckland Central
503	Community facility ...	2 Freyberg Place, Auckland Central
504	Community facility ...	86-102 Customs Street West, Auckland Central
505	Public open space	58-130 Hamer Street and 92-150 Brigham Street, Auckland Central
506	Road and public open space - Gateway Plaza	141-177 Halsey Street, Auckland Central
507	Road and public open space	164-188 Madden Street, Auckland Central
508	Public open space	31-79 Daldy Street, Auckland Central
509	Public open space	49-63 Jellicoe Street, Auckland Central
510	Public open space ...	4 and 12 Hamer Street, and 49-63 Jellicoe Street, Auckland Central
511	Public open space / road	141-171 Pakenham Street West, 31-79 Daldy Street, 38-58 Gaunt Street and 155-167 Fanshawe Street, Auckland Central
512	Public open space / road	141-171 Pakenham Street West, 37-55 Madden Street and 8-56 Brigham Street, Auckland Central
513	Community facility ...	20 St Mary's Road, Ponsonby
514	Local park ...	84 St Mary's Road, Ponsonby
515	Local park ...	Selby Square, St Mary's Bay
516	Council carpark and reserve ...	23 Tamaki Drive, Orakei
517	Council carpark	Motions Road, Westmere
518	Council carpark	731 Great North Road, Grey Lynn
519	Community facility ...	1 Ponsonby Road, Ponsonby
520	Community facility ...	52 Hepburn Street, Freemans Bay
521	Community facility ...	18-20 Huia Road, Pt Chevalier
522	Community facility ...	474 Great North Road, Grey Lynn
523	Local park ...	Dominion Road (adjoins railway), Eden Terrace
524	Community facility ...	22 Tahapa Crescent, Meadowbank
525	Local park ...	337 Kohimarama Road, Kohimarama
526	Community facility ...	83 Crossfield Road, Glendowie
527	Local and sports park ...	93-123 Riversdale Road, Avondale
528	Local and sports park ...	93-123 Riversdale Road, Avondale
529	Local park ...	1625-1627 Great North Road, Waterview
530	Local park ...	1628 Great North Road, Waterview
531	Local park ...	1 Trent Street, Avondale
532	Community facility ...	82-84 St Luke's Road, Mount Albert
533	Local park ...	58-70 Balmoral Road, Mount Eden
534	Community facility ...	195-199 Manukau Road, Epsom
535	Local park ...	12 Wilding Avenue, Epsom
536	Community facility ...	174 Green Lane West, Greenlane

The Proposed Auckland Unitary Plan (notified 30 September 2013)

537	Community facility ...	431-435 Remuera Road, Remuera
538	Community facility ...	93-99 Rosebank Road, Avondale
539	Local and sports park ...	56-60 Owairaka Avenue, Owairaka
540	Community facility ...	13 May Road, Mount Roskill
541	Community facility ...	20 Findlay Street, Ellerslie
542	Council works depot	36 Mountain Road, Mount Wellington
543	Community facility ...	139 Mount Wellington Highway, Mount Wellington
544	Community facility ...	14-50 Dunkirk Road, Panmure
545	Local park ...	77 Wolverton Street, Avondale
546	Local park ...	80R-80S Wolverton Street, Avondale
547	Mount Smart Stadium ...	2 Beasley Avenue, Penrose
548	Community facility ...	5 Olea Road, Onehunga
549	Council carpark	Mount Wellington Highway (Lot 1 DP 103286), Mount Wellington
550	Community facility ...	578 Blockhouse Bay Road, Blockhouse Bay
551	Local and sports park ...	69 Captain Springs Road, Te Papapa
552	Community facility ...	28-34 Mason Avenue, Otahuhu
553	Refuse processing centre	81 Captain Springs Road, Te Papapa
554	Road	141-171 Pakenham Street, Central Auckland
555	Road	65-75 Jellicoe Street, Central Auckland

500 Auckland City Art Gallery

Designation Number	500
Requiring Authority	Auckland Council
Location	1 Kitchener Street, Auckland Central
Rollover Designation	Yes
Legacy Designation	Designation 306, Auckland Council District Plan (Central Area) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

This designation provides for the development, operation and maintenance of Auckland Art Gallery Toi o Tamaki and ancillary activities. The development works encompassed by this designation principally involve excavation, seismic strengthening, heritage conservation (including restoration) demolition of infill buildings, alterations and extensions to the Art Gallery building. The existing interior and plant spaces will be modernised to increase the display and temporary exhibition space and related front-and back-of-house spaces, and to improve connections within and adjacent to the Art Gallery building. The principal activities of the Auckland Art Gallery include the collection, research and display of works of art and their associated interpretation, management and conservation. Closely related ancillary activities include the operation of a research library and the delivery of education and public programmes, together with the provision of visitor amenities including a shop, a cafe, a gallery shop and function and event facilities.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Plans and Information

1. The height, shape, and bulk of the proposed building works shall be carried out generally in accordance with the plans listed in the table below and which are comprised in Appendix 1 to these conditions (*these plans available on request*):

Drawing Title	Drawing number	Revision
Urban Plan	DP01	C
Designation Plan	DP02	A
Basement Floor Plan	DP03	C
Lower Ground Floor Plan	DP04	C
Ground Floor Plan	DP05	C
Mezzanine Floor Plan	DP06	C
Level 1 Floor Plan	DP07	C
Level 2 Floor Plan	DP08	C
Level 3 Floor Plan	DP09	C
Roof Plan	DP10	D
West Elevation	DP11	D
North Elevation	DP12	D
East Elevation	DP13	D
Section A	DP14	C
Section B	DP15	D
Section C + Section D	DP16	D
Section E	DP17	D
Existing/Proposed Plan	DP18	C
Existing/Proposed West Elevation	DP19	D
Existing Loading and External Public Space	DP20	D
Proposed Loading and External Public Space	DP21	D
Existing Water Features	DP22	C
Proposed Water Features	DP23	C
Section F	DP24	B

Building height

2. The requiring authority shall engage a licensed cadastral surveyor to certify to the Manager Planning - Central/Islands in writing, both at the construction of framing to the upper level roofs and at the completion of the upper level roofs, that the building work completed at each of these stages is in accordance with the indicated RLs (reduced levels) and dimensions on the plans listed in condition 1 above.

Should any height infringements result:

- the certificate provided by the licensed cadastral surveyor shall specify the relevant difference in height; and
- the upper level roofs will be required to be reduced in height to comply with the applicable heights indicated on the approved plans in Appendix 1 (plans available on request).

The RL's and dimensions on the plans listed in condition 1 above shall prevail where there is any difference between them and what may be demonstrated by scaling from drawings.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

External Glazing

3. The external vertically glazed surfaces of the Art Gallery North Atrium shall have, after the application of a soft low-E coating, a visible light transmission of no less than 81% and a visible light reflection of no greater than 9%. Roller blinds, drapes, curtains, banners, large flat art works and other objects that would prevent there being any visibility through the Art Gallery North Atrium of Albert Park from Kitchener Street shall not be used or installed in the Art Gallery North Atrium.

For the avoidance of doubt, this condition shall not prevent the floor-based display or suspension of works of art in the Art Gallery North Atrium. Any work of art in the Art Gallery North Atrium that partially obscures visibility of Albert Park through the Art Gallery North Atrium as viewed from a mid-point on Upper Khartoum Place, Kitchener Street (as specified in the attached illustration) shall be temporary in nature, with the display period not exceeding 12 months for that work. Any temporary work(s) of art in the Art Gallery North Atrium shall allow at least 60 percent of the views of Albert Park to be maintained through the east window of the Art Gallery North Atrium as viewed from that same mid-point on Upper Khartoum Place, Kitchener Street.

Prior to the Building Consent being issued for the construction of the Art Gallery new extensions, the requiring authority shall submit for the approval of the appointed independent heritage architect, Diane Hatada Jones, a schedule of external glazed surfaces together with details and specifications of the glazing systems designed for the remainder of the proposed Art Gallery new extensions (the areas excluding the North Atrium).

Note: With regard to the external glazed surfaces for the remainder of the proposed Art Gallery new extensions it is expected that the glass selected shall be appropriate for use in a functioning art museum which includes close environmental controlled interior gallery space. It is also expected that the glass selected for new glazing shall be sympathetic in appearance to the original heritage fabric of the Art Gallery. However the evaluation and approval of the schedule of external glazed surfaces should only be concerned with significant appearance issues and not fine level details. Existing windows to the heritage gallery will retain the current glass unless replacement of breakages is required, in which case the new material shall be a close match to that replaced.

Heritage

4. No work is to be undertaken on site for any demolition of original fabric until detailed drawings and specifications for the ensuing work have been completed and written approval has been subsequently obtained from the appointed independent heritage architect, Diane Hatada Jones, particularly in relation to the following matters:

- a. The emerging revised design for the south atrium and its interior components;
- b. Subject to condition 7 below (which applies to the exposed roof surface over the daylit gallery) the exterior, design and general appearance of roof plan elements, and in particular of structures or components that are elevated above the general new roof surfaces;
- c. The visibility of the East Gallery as seen from Albert Park, in relation to the evolving design and materials of the surrounding new gallery structure;
- d. The detailed design of, and use of materials in, the proposed raised East Gallery floor panels and their edges, bridging elements, architectural restoration, and lighting, to the intent that the original form and proportions of the East Gallery remain visually evident despite the new raised floor panels, and that the addition of the floor panels is reversible leaving the restored East Gallery intact, should such an action ever be contemplated;
- e. The detailed ground-level interface between Albert Park and new gallery elements;
- f. The on-going design and material resolution of the stone-clad base to the proposed northern building elements, to ensure a simple but legible relationship and visual narrative with the old Kitchener wing;
- g. The location, nature and impact of all seismic strengthening;
- h. The restoration of the East Gallery ceiling skylight, including the surviving maintenance gantry inside the roof lantern;
- i. The extent and location of major external gallery promotional, directional and other signage where this has a potential visual or physical impact on historic components of the gallery or Albert Park;
- j. The detailed design and alignment of the amphitheatre proposed for the north-eastern corner of the new northern wing in relation to its ground excavation impact on the park and nearby major trees;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

k. The design and location of pedestrian pathways in the entrance forecourt and at the northern end of the building between Kitchener Street and Albert Park to ensure visual and physical connectivity between Kitchener Street, the Art Gallery and Albert Park.

5. An investigation shall be conducted in locations agreed with the appointed independent heritage architect, Diane Hatada Jones, in respect of the possibility of surviving but hidden architectural detail and its adequate recovery or restoration in authentic form inside spaces of the 1887 Grainger and D'Ebro structures and the East Gallery.

6. An investigation shall be carried out, in consultation with the appointed independent heritage architect, Diane Hatada Jones, during project excavations in respect of the known entrances off Kitchener Street to the World War II tunnel system under Albert Park and, if considered appropriate by the appointed independent heritage architect, Diane Hatada Jones, provision for a limited form of access to the tunnels from within the Art Gallery building shall be made.

7. The material, colour, and tone of the exposed roof surface over the daylit gallery shall be the subject of appropriate visual assessment and be selected, to the approval in writing of the appointed independent heritage architect, Diane Hatada Jones, prior to its installation. This new roof shall be visually minimised by being a close visual match to the dark tones of the backdrop trees and to the general hues of the slate surfaces and metal flashings on the existing Grainger and D'Ebro gallery roof, as seen in the foreground in the heritage views from Wellesley Street between Elliott and Queen Streets. In regard to the above, "tones" means lightness or darkness but not colour; and "hues" means colours but not lightness or darkness.

8. The surrounds of the services (cooling) tower identified in plan drawing number DP10 Rev C listed in condition 1 above shall comprise semi-opaque, fritted, or frosted frameless glass and shall be the subject of appropriate visual assessment and be selected to the approval in writing of the appointed independent heritage architect, Diane Hatada Jones.

9. The appointed independent heritage architect, Diane Hatada Jones is to be advised of adequately in advance, and invited to be present at, regular site meetings with the contractor during the construction phase to enable appropriate consultation with Council staff and advisers and monitoring on all aspects of the project as it impacts on the heritage values of the scheduled building.

10. An illustrative record consisting of photographs and drawings is to be made, by an appropriately qualified and experienced conservation architect, of both the building and its surrounds, particularly the areas subject to alteration, prior to the proposed works commencing on site. Once during the project and also on completion of the project. Each internal and external space or element shall be photographically recorded from one or more locations, chosen so that the locations are accurately also available in the finished project, thus producing exactly equivalent 'before', 'during' and 'after' archival images. This publication, to also include a comprehensive record of images of the building from previous eras, is to be presented in bound form for Auckland Council records and a further copy of this record shall be available in the Auckland Art Gallery library.

11. Method statements must be agreed in writing with the appointed independent heritage architect, Diane Hatada Jones for all works which necessitate the protection of heritage fabric prior to construction commencing.

Archaeological

12. A plan at A1 scale is to be produced before work commences and kept on display on site showing current and proposed structures, overlain by known historic walls, paths, buildings, tunnels and entrances, and discovered radar anomalies, in order that monitoring authorities and any persons undertaking construction work on the site can best anticipate predictable subsurface elements. This plan should be similar in content to the plan attached in Appendix 2 to these conditions (plans available on request) but with the result of the ground-

The Proposed Auckland Unitary Plan (notified 30 September 2013)

penetrating radar investigation added to the data shown on that plan. Such detail shall all be shown as accurately as records allow. A copy of this archaeological plan shall be provided to the Manager Planning - Central/Islands in advance of work commencing.

13. The requiring authority shall employ, at its expense, a qualified archaeologist who shall:

- a. Be on site to monitor all earthworks, including surface stripping of the site to establish whether any subsurface archaeological features are present: (this recognises that initial earthworks may go deeper than merely preliminary surface stripping. Additionally it is not just within the preliminary stages that archaeological evidence may be uncovered).
- b. Certify to the Council (Manager Planning - Central/Island) in writing whether or not any archaeological features have been discovered and if so, describe the immediately evident nature of the features as observed by the monitoring archaeologist prior to any formal investigation or recovery.

Refer Advice Note 2 below.

14. Following archaeological authorisation by the New Zealand Historic Places Trust and the Auckland Council, when each area of earthworks commences, sufficient time must be allowed for any exposed features to be professionally excavated and recorded by the archaeologist referred to in condition 13. This may entail programming surface clearance of each area of proposed earthworks ahead of the next stage of works, to allow any archaeological excavation to take place without unduly holding up the main work.

15. In the event that Koiwi (human remains) are uncovered in the process of excavation, work on the area concerned will cease immediately and Auckland Council (Manager Heritage) and the New Zealand Historic Places Trust (Regional Archaeologist) will be immediately contacted in order that appropriate investigation, iwi protocols, and further action can be defined. Work will not recommence on the area concerned until written authority is received from both the Auckland Council and New Zealand Historic Places Trust.

16. The requiring authority shall ensure that not less than seven days before any excavation associated with the works commences, representatives of tangata whenua are advised of, and invited to be present during, the excavations.

Construction

17. Prior to commencement of any works on the site, the requiring authority shall submit a construction management plan to the satisfaction of the Council (Manager - Central Resource Consenting and Compliance in consultation with Auckland Transport). The management plan shall include specific details relating to the excavation of the site, or part thereof, and the construction and management of all works associated with the proposed development, including:

- a. Details of the site or project manager, including their contact details (phone, facsimile, postal address);
- b. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. Methods or restrictions, such as a restriction on the size of construction vehicles and machinery, to be employed to ensure that no damage occurs to street trees throughout the construction period;
- d. Measures to be adopted to ensure the protection of services such as pipes and water mains. in adjoining public roads and Albert Park;
- e. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of demolition materials, rubbish, storage and unloading of building materials and similar construction activities;
- f. Measures to be adopted to ensure that pedestrian access past the works is provided where practicable and that such access is safe;
- g. Location of workers conveniences (eg portaloos);
- h. Ingress and egress to and from the site for vehicles during the demolition and construction period;
- i. Proposed maximum numbers and timing of truck movements throughout each day and their proposed routes;
- j. Procedures for controlling sediment runoff, dust, the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control

The Proposed Auckland Unitary Plan (notified 30 September 2013)

dust nuisance on dry or windy days;

k. Location of vehicle, and demolition and construction machinery access during the construction period;

l. Hours of operation and days of the week for demolition and construction activities;

m. Means of ensuring the safety of the general public;

n. Procedures for ensuring that residents in the immediate vicinity of the site are given prior notice of the commencement of demolition and construction activities and informed about the expected duration and effects (e.g. noise, dust, traffic) of the works;

o. Procedures to be followed to ensure that those working in the vicinity of identified heritage features are aware of the heritage values of these features and the steps which need to be taken to meet the conditions applying to work on the site;

p. Procedures to be followed in the event that any historic artefacts are disturbed. The New Zealand Historic Places Trust protocol shall be the base standard to be adopted. The construction management plan shall be implemented and maintained to the satisfaction of the Council (Manager - Central Resource Consenting and Compliance).

18. To prevent contamination of drains with water containing soil sediment, no stock piling of excavated material is permitted on the site (except where it is to be reused on the site). Any surplus excavated material shall be removed from the site and deposited in an approved landfill except where this is to be reused on the site and stored and maintained to a reasonable standard.

19. The requiring authority shall implement suitable sediment control measures during demolition, excavation and for the total period of construction in accordance with the guidelines on siltation control in the Unitary Plan. This is to include measures such as a wheel wash to ensure that all stormwater run-off from the site is managed and controlled to ensure that no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems or is deposited on roads. In the event that material is deposited on the road, the requiring authority shall take immediate action at its own expense to clean the road.

20. A wheel wash shall be installed and used on the site during the full period of demolition, excavation and construction works to ensure that loose material associated with pile works, removal of soil and debris, and delivery of construction materials is not carried by vehicle tyres and deposited on public roads. During such times the road carriageway adjacent to the site shall be hosed down at the end of each working day.

21. The loading and unloading of all vehicles and storage of plant and equipment associated with the excavation and construction on the site, shall take place within the designated area unless otherwise allowed by the written approval of the Council (Manager Planning - Central/Islands).

22. Temporary protection shall be installed where required to prevent vehicles damaging footpaths, kerbs and roads. Safety barriers and warning signs shall be installed as necessary and maintained at all times to ensure that the health and safety of the public and workers on the site is ensured. In the event that damage occurs to the roads, kerbs or footpaths as a result of demolition or construction works, the roads, kerbs or footpaths shall be fully reinstated at the requiring authority's expense.

23. All reinstatement work of the affected roads, footpaths, street furniture, trees and services shall be carried out at the direction of, and to the satisfaction of, the Council in consultation with Auckland Transport.

24. All existing crossings no longer required shall be reinstated as kerb and footpath and the cost of this borne by the requiring authority. All works associated with the relocation and creation of on-street loading space is to be to the satisfaction of the Council in consultation with Auckland Transport and the cost of these works shall be borne by the requiring authority.

Noise Management

25. Prior to commencement of the works the requiring authority shall prepare a construction noise management

The Proposed Auckland Unitary Plan (notified 30 September 2013)

plan for the approval of the Council (Manager Planning - Central/Islands). The plan shall include an assessment of the likely demolition and construction noise levels and propose a noise mitigation plan. The requiring authority shall employ, at its expense, a suitably qualified acoustic consultant to monitor the works and ensure that the noise mitigation management plan is implemented and maintained to the satisfaction of the Manager - Central Resource Consenting and Compliance.

Traffic Management

26. Prior to any works commencing on the site, the requiring authority shall submit a traffic management plan for the approval of the Council in consultation with Auckland Transport. The plan shall address all relevant details as listed in Appendix 3 to these conditions (available on request). All works shall be carried out in accordance with the approved traffic management plan.

27. Any proposed changes to the layout of the Mayoral Drive/Wellesley Street/Kitchener Street intersection to facilitate demolition and construction activity associated with the Art Gallery development works shall be subject to analysis prepared by the requiring authority covering delay and capacity impacts. The results of this analysis shall be submitted with the proposed traffic management measures as part of the traffic management plan submitted in accordance with condition 26 above.

Movement of Service vehicles from Wellesley Street (Post-Construction)

28. Shorter wheelbase (8m) rigid trucks servicing the Art Gallery shall be allowed to reverse on to the site from Wellesley Street at any time (preferably avoiding the 4:00pm to 7:00pm weekday peak traffic period), subject to a marshal being in attendance to manage pedestrian movements on the Wellesley Street footpath when the truck is accessing the site.

29. Longer wheelbase (11m) rigid trucks servicing the Art Gallery shall be allowed to reverse onto the site from Wellesley Street at all times except the 4:00pm to 7:00pm peak period Monday to Friday (public holidays excepted) subject to a marshal being in attendance to manage pedestrian movements on the Wellesley Street footpath when the truck is accessing the site.

30. Articulated truck access to service the Art Gallery from Wellesley Street is restricted to the 7:00pm to 7:00am period on weekdays (public holidays excepted). Any articulated vehicles coming to the site should be scheduled with traffic management pre-arranged and the following Temporary Traffic Management Procedure should be introduced while the truck is manoeuvring onto the site. Part of any approved traffic management plan as outlined in Condition 26 above should include the requirement to advise both the Council (Manager - Central Resource Consenting and Compliance) and Auckland Transport one week in advance of the scheduled arrival of an articulated truck.

Temporary Traffic Management Procedure:

- a. Stop the eastbound through movement on Wellesley Street (direct traffic into Kitchener Street);
- b. Stop the right turn into Wellesley Street from Mayoral Drive; and
- c. Manage pedestrian movements on Wellesley Street footpath.

Note: For unscheduled rigid trucks, the proposed loading zones on either side of the vehicle crossing would allow the trucks to pull out of the traffic stream. The driver would then report to and get the necessary personnel from the Art Gallery for assistance with marshalling while the truck is reversing onto the site.

Parking

31. The requiring authority, in conjunction with the Art Gallery management. Council's Transport Strategy Group and the Auckland Transport, shall develop and implement a travel plan for the Art Gallery to assist both patrons and staff. The purpose of the travel plan shall be to promote alternative modes of transport to the motor car by recommending how demand for private commuter trips to/from the site can be minimised, particularly during the peak traffic periods. The travel plan shall be submitted for the approval of the Manager: City Planning prior to the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

commencement of the operation of the developed Art Gallery.

32. The requiring authority shall seek the approval of the Council (Manager - Central Resource Consenting and Compliance) in consultation with Auckland Transport to the following changes to the on-street parking controls:

- a. The P60 parking spaces outside the Art Gallery on Kitchener Street shall be changed to a P5; and
- b. That part of the P60 parking area on the northern side of Wellesley Street shall be changed to a time restricted bus parking area.

The full cost of giving effect to these changes shall be borne by the requiring authority.

33. The requiring authority shall seek the approval of the Council (Manager: Transport Safety Assets and Operations) to amend the other on-street parking controls impacted by the development of the Art Gallery to be generally in accordance with Traffic Planning Consultants Ltd drawing No. 03125-02 dated 2.8.05 and attached in Appendix 4 to these conditions (available on request).

The full cost of giving effect to these changes shall be borne by the requiring authority.

Landscape and Tree Works

34. Landscaping and tree works within the designated area shall be expressly authorised by resource consents where required by the Unitary plan and shall be carried out in accordance with conditions of any such resource consents.

General

35. A copy of this designation and its conditions and appendices (all available on request) shall be held on site at all times during the establishment and construction phase of the activity, and its provisions shall be drawn to the attention of all contractors, subcontractors and site supervisory staff.

Advice Notes

1. All archaeological sites (whether scheduled, registered or not) are protected under the provisions of the Historic Places Act 1993. It is an offence under this Act to destroy, damage or modify any archaeological site, whether or not the site is entered on the New Zealand Historic Places Trust Register of historic places, historic areas, waahi tapu and waahi tapu areas. Under Sections 11 and 12 of the Act, application must be made to the New Zealand Historic Places Trust for an archaeological site(s) where the avoidance of any effect on the site is not practicable.

2. Albert Park is scheduled as an archaeological site in the district plan, and this is recognised by the New Zealand Historic Places Trust (NZHPT). Notwithstanding this particular status for the park itself, the discovery of any archaeological feature or material on land beyond the scheduled archaeological site immediately ranks the location as a protected archaeological site under the Historic Places Act 1993. An application would need to be made to the NZHPT for a 'Consent to Modify' for the archaeological site (including the information required in section 11(2) of the Historic Places Act 1993), and resource consent from the Auckland City Council may be required prior to any excavation, modification or professional investigation taking place. Further work in the area must cease pending the application and granting of the required consents.

Requiring Authority	Auckland Council
Location	2 Freyberg Place, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 304, Auckland Council District Plan (Central Area) 2005

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. Where any works or development involve the demolition of, or, alterations or additions to a scheduled historic heritage place, an Outline Plan of Works is required.
2. The following shall be submitted with the Outline Plan of Works:
 - a. An assessment of the effects on the historic heritage values of the place; and
 - b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Exemptions:

Conditions 1 and 2 do not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan.

Advice Notes

1. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.
2. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.
3. The requiring authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to the condition in order to confirm an outline plan is not required.

508 Daldy Street Open Space

Designation Number	508
Requiring Authority	Auckland Council
Location	31-79 Daldy Street, Auckland Central
Rollover Designation	Yes
Legacy Designation	Designation 382, Auckland Council District Plan (Central Area) 2005
Lapse Date	Five years from when the Unitary Plan becomes operative unless given effect to prior

Purpose

Public open space.

Conditions

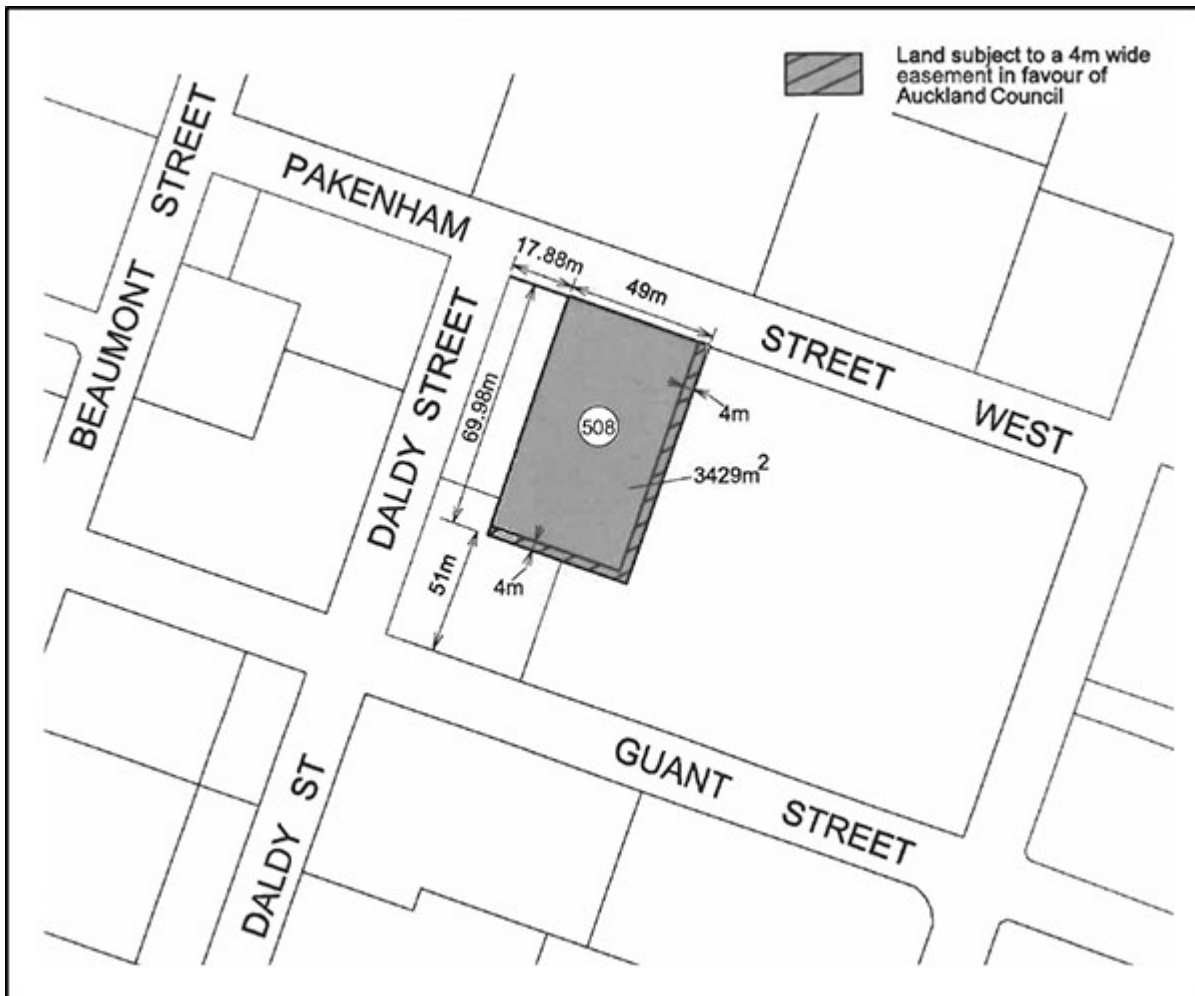

1. With respect to the land shown as 'subject to a 4 metre wide easement in favour of Auckland City Council' on Parts A and B of Proposed Plan Modification No. 25: Notice of Requirement, the designation shall be removed under section 182(4) of the Resource Management Act 1991 upon:

- The completed development of Central Park in Quarter Area 2. The development of the park is intended to take place in conjunction with, or prior to the development of adjacent land, as set out in a Heads of Agreement between Auckland City Council and Viaduct Harbour Holdings Limited dated 30 June 2010; or
 - The date upon which an open space zoning for the Central Park land (inclusive of the land subject to the 4m wide easement) is operative;
- whichever is sooner.

Diagram of Designation 508 - Public Open Space

509 Jellicoe Street Open Space

Designation Number	509
Requiring Authority	Auckland Council
Location	49-63 Jellicoe Street, Auckland Central
Rollover Designation	Yes
Legacy Designation	Designation 389, Auckland Council District Plan (Central Area) 2005
Lapse Date	28 May 2025

Purpose

Public open space.

Conditions

1. At least 20 working days prior to the construction or use of the designated open space area, the written approval of the Manager Planning - Central/Islands shall be obtained for a Site Emergency and Evacuation Plan including measures relating to emergency evacuation from the area should a release of hazardous substances, fire or explosion occur at any of the Sanford, Marstel, Shell, BST or Pacific Terminals facilities. This Plan shall

The Proposed Auckland Unitary Plan (notified 30 September 2013)

be prepared by a suitably experienced person and shall include alarm and notification procedures, egress routes and muster points at a location deemed to be a safe distance from existing hazard sources. The Plan shall be drafted in consultation with the appropriate authorities and the operators of the hazardous facilities.

2. If any archaeological site is exposed during site works then the following procedures shall apply:

- a. Immediately when it becomes apparent that an archaeological site has been exposed, all site works shall cease, except that works may continue to prevent the escape of any contaminants that would result in any further pollution of the environment;
- b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts are untouched; and
- c. The site supervisor shall notify tangata whenua, New Zealand Historic Places Trust, Department of Conservation and the Manager Planning - Central/Islands of Auckland Council that an archaeological site has been exposed, so that appropriate action can be taken. This is to ensure that such persons are given reasonable time as determined by the Council to record the archaeological features, including a photographic record, before work recommences on the site.

3. Artworks are not provided for under this designation and any resource consents required under the Unitary Plan should be obtained.

4. The period within which this designation shall lapse if not given effect to, in accordance with section 184(1) of the Resource Management Act 1991 shall be 15 years from the date on which it is confirmed (i.e 28 May 2025).

510 Hamer Street and Jellicoe Street Open Space

Designation Number	510
Requiring Authority	Auckland Council
Location	4 and 12 Hamer Street and 49-63 Jellicoe Street, Auckland Central
Rollover Designation	Yes
Legacy Designation	Designation 385, Auckland Council District Plan (Central Area) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public open space and activities and ancillary structures including: recreational activities; water features; coastal edge access; roads, public lanes and walkways; public event spaces; entertainment and gathering (excluding "Events" and "Major Events" as defined below; ancillary retail activities; and the excavation and remediation/removal of any contaminated soil.

Definitions:

1. Events: Temporary and organised activities including but not limited to gatherings, parades, protests, weddings, private functions (independent premises), festivals, film shoots, concerts, celebrations, multi-venue sports events of significant scale, fun runs, marathons, duathlons and triathlons.
2. Major events: A Major event declared as a Major Event in accordance with the provisions of the Major Events Management Act 2007. The duration of the major event shall be limited to the duration of the actual Major Event plus four weeks before the commencement of the event and four weeks after the end of the event.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

1. At least 20 working days prior to the construction or use of the designated open space area, the written approval of the Manager Planning - Central/Islands shall be obtained for a Site Emergency and Evacuation Plan including measures relating to emergency evacuation from the area should a release of hazardous substances, fire or explosion occur at any of the Sanford, Marstel, Shell, BST or Pacific Terminals facilities. This Plan shall be prepared by a suitably experienced person and shall include alarm and notification procedures, egress routes and muster points at a location deemed to be a safe distance from existing hazard sources. The Plan shall be drafted in consultation with the appropriate authorities and the operators of the hazardous facilities.
2. If any archaeological site is exposed during site works then the following procedures shall apply:
 - a. Immediately when it becomes apparent that an archaeological site has been exposed, all site works shall cease, except that works may continue to prevent the escape of any contaminants that would result in any further pollution of the environment.
 - b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts are untouched.
 - c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation and the Manager Planning - Central/Islands of the Auckland Council that an archaeological site has been exposed, so that appropriate action can be taken. This is to ensure that such persons are given reasonable time as determined by the Council to record the archaeological features, including a photographic record, before work recommences on the site.
3. Artworks are not provided for under this designation and any resource consents required under the Unitary Plan should be obtained.
4. As part of any outline plan of works process, the requiring authority shall undertake consultation with industrial operators abutting or occupying the designated area to address significant reverse sensitivity issues through the open space design process.
5. The period within which this designation shall lapse if not given effect to, in accordance with Section 184(1) of the Resource Management Act 1991, shall be 15 years from the date on which it is confirmed.

513 St Mary's Road Library and Community Facility

Designation Number	513
Requiring Authority	Auckland Council
Location	20 St Mary's Road, Ponsonby
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Designation	Designation B07-27, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place, an Outline Plan of Works is required.

2. The following shall be submitted with the Outline Plan of Works:

- An assessment of the effects on the historic heritage values of the place; and
- A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Exemptions:

Conditions 1 and 2 do not apply in the following circumstances:

- In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- Where there is a conservation plan or similar plan for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan.

3. An Outline Plan of Works for any works or development shall include an assessment of effects and appropriate mitigation of impacts in relation to the protected titoki tree.

Advice Notes

1. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

2. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

3. The requiring authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to the condition in order to confirm an outline plan is not required.

514 St Mary's Road Local Park

Designation Number	514
Requiring Authority	Auckland Council
Location	84 St Mary's Road, Ponsonby
Rollover Designation	Yes
Legacy Designation	Designation B07-29, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Local park including esplanade reserves, accessways and walkways. Works include parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place, an Outline Plan of Works is required.
2. The following shall be submitted with the Outline Plan of Works:
 - a. An assessment of the effects on the historic heritage values of the place; and
 - b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Exemptions:

Conditions 1 and 2 do not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
 - ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
 - iii. Where there is a conservation plan or similar plan for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan.
3. An Outline Plan of Works for any works or development shall include an assessment of effects and appropriate mitigation of impacts in relation to the coastal values of the site.

Advice Notes

1. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.
2. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

3. The requiring authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to the condition in order to confirm an outline plan is not required.

521 Huia Road Community Facility

Designation Number	521
Requiring Authority	Auckland Council
Location	18-20 Huia Road, Pt Chevalier
Rollover Designation	Yes
Legacy Designation	Designation D04-11, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. All activities, works and buildings not fully described in the notice of requirement shall be the subject of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

either:

- a. A new notice of requirement, which shall be publicly notified, pursuant to Section 168A of the Resource Management Act; or
- b. A notice to alter the designation, pursuant to section 181 of the Resource Management Act, which notice shall be publicly notified unless the alteration is minor and affected persons agree in accordance with the provisions of section 181(3) of the Act.

2. Eleven parking spaces shall be provided on the site, with at least three of these available for the community house function. These spaces shall be designed and located to the satisfaction of the Council.

3. Activities in the community house shall cease by 11:00 pm each day from Sunday to Thursday (both inclusive) and by midnight on Fridays and Saturdays.

4. The 1.8m high fence of permanent materials on western boundary of No. 18 and 20 Huia Road and the northern boundary between No. 20 and 22 Huia Road shall be maintained to the satisfaction of the council.

5. The front of the building shall be landscaped to the satisfaction of the council.

6. The provision of parking and landscaping in accordance with the above conditions shall be deemed to fully implement the designation. The designation shall otherwise lapse in 2 years time, subject to any extensions which may be granted in accordance with section 184 of the Resource Management Act 1991.

537 Remuera Library

Designation Number	537
Requiring Authority	Auckland Council
Location	431-435 Remuera Road, Remuera
Rollover Designation	Yes
Legacy Designation	Designation E11-07, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place, an Outline Plan of Works is required.
2. The following shall be submitted with the Outline Plan of Works:
 - a. An assessment of the effects on the historic heritage values of the place; and
 - b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Exemptions:

Conditions 1 and 2 do not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan.

Advice Notes

1. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a

The Proposed Auckland Unitary Plan (notified 30 September 2013)

retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

2. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

3. The requiring authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to the condition in order to confirm an outline plan is not required.

Designation Number	538
Requiring Authority	Auckland Council
Location	93-99 Rosebank Road, Avondale
Rollover Designation	Yes
Legacy Designation	Designation F03-08, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. Hours of operation shall be from 6am to 11pm Sunday-Thursday and public holidays, and from 6am to 12 midnight Friday and Saturday.

2. Building works within the building envelope and footprint.

3. Building works outside of the existing building footprint where the building additions meet the following criteria:

- the increase in building footprint is not more than 20m² in area;
- the height of the building addition is less than the existing building and complies with height in relation to boundary and yard controls applicable to external boundaries;
- the addition is finished in materials and/or colours which match the existing building;
- an outline plan has been submitted for the building works where an increase in building footprint is proposed;
- a covered pedestrian walkway between the library and the community centre is provided.

4. That no use of the outdoor space to the north of the community hall and facing the Housing New Zealand owned site at 3-5 Highbury Street, Avondale, shall occur after 10pm, Monday to Sunday.

5. That the noise level arising from any activity on the site must comply with the standards in section 7.8.1.10 of the Auckland Council District Plan (Isthmus Section) 1999.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. That the occupancy of the community hall shall not exceed 220 persons.

547 Mount Smart Sports and Entertainment Centre

Designation Number	547
Requiring Authority	Auckland Council
Location	2 Beasley Avenue, Penrose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rollover Designation	Yes
Legacy Designation	Designation G11-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Mt Smart Stadium is used as a multi-purpose facility for entertainment and sporting events, community events and informal recreation.

Conditions

No conditions.

Attachments

No attachments.

548 Fergusson Domain Community Facility

Designation Number	548
Requiring Authority	Auckland Council
Location	5 Olea Road, Onehunga
Rollover Designation	Yes
Legacy Designation	Designation G11-14, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. An outline plan of works for any works or development should include (inter alia) an assessment of effects and associated mitigation of impacts in relation to parking demand.
2. Future development proposals should include (inter alia) an assessment of the parking demand generated by the centre and how this can be provided for.

549 Mt Wellington Highway Car Park

Designation Number	549
Requiring Authority	Auckland Council

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	Mount Wellington Highway (Lot 1 DP 103286), Mount Wellington
Rollover Designation	Yes
Legacy Designation	Designation G13-17, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Description

Council carpark.

Conditions

No conditions.

550 Blockhouse Bay Library

Designation Number	550
Requiring Authority	Auckland Council
Location	578 Blockhouse Bay Road, Blockhouse Bay
Rollover Designation	Yes
Legacy Designation	Designation H04-06, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes

Conditions

1. The maximum height shall be 9m.
2. The front yard shall be an average of not less than 2m.
3. Landscaping shall be provided and maintained in such a manner to create and preserve a good standard of visual amenity.
4. An outline plan of works for any works or development shall include an assessment of effects and appropriate mitigation of impacts in relation to erosion and sediment control.

551 Captain Springs Road Local and Sports Park

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	551
Requiring Authority	Auckland Council
Location	60 Captain Springs Road, Te Papapa
Rollover Designation	Yes
Legacy Designation	Designation H11-24, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Local and sports park including esplanade reserves, accessways and walkways. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes.

Conditions

1. That the term for implementation of this designation be 10 years from 2 November 2007, in accordance with Section 184A(2) of the Resource Management Act.
2. That any development of the site is subject to the following development controls (with the exception of lighting poles and associated fixtures):
 - a. The maximum permitted building height, as measured from finished ground level following earthworks to create suitable sports fields and open space, is 10m;
 - b. The maximum building coverage is 15%; and
 - c. All buildings shall be set back 6m from the southern boundary of the site. With the exception of retaining walls and fences specifically for the purpose of preventing balls straying beyond play and minimising conflict with other uses, all buildings shall be set back 6m from the western and eastern boundaries of the site. Where the site adjoins land to the north zoned [insert new name for this Open Space 3 Zone site in the Unitary Plan], there is no yard requirement.
4. The maximum height of any lighting poles and associated fixtures shall not exceed a height of 20m, as measured from the finished ground following earthworks to create suitable sports fields.
5. All buildings and structures shall be set back by a horizontal distance of at least 12m from the centreline of the Henderson - Otahuhu A high voltage transmission line.
6. With the exception of lighting poles and associated fixtures, any buildings or parking areas that are visible from the adjoining land zoned [insert new names for this Open Space 4 and Open Space 2 Zone sites in the Unitary Plan] shall be appropriately landscaped, consistent with ensuring safety to pedestrians and other users, by adopting Crime Prevention Through Environmental Design (CPTED) principles.
7. All activities shall comply with the separation distances specified in NZECP 34:2001. (Note: this applies to the 220kV Transpower line).
8. The use of artificial light producing an illuminance in excess of 150 lux measured at any point on the site in a horizontal or vertical plan at ground level shall not be permitted to extend beyond 10pm during weekdays and Saturday and up to 9pm on Sunday and public holidays.
9. No activity shall be permitted to create any noise with results in the following standards being exceeded – the L10 noise level and maximum level (Lmax) arising from any activity measured at or within the boundary of any residentially zoned property shall not exceed the following limits:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Monday to Saturday 7.00am-10.00pm	L10 55dBA
Sunday & Public Holidays 9.00am-6.00pm	L10 55dBA
At all other times	L ¹⁰ 40dBA L _{max} 75 dBA, or background (L95) plus 30dBA, whichever is the lower

Crowd noise shall not be included in any assessment of noise levels. The above noise levels shall be measured and assessed in accordance with the requirements of the NZS 6081: 1991 "Measurement of Sound" and NZS 6802:1991 "Assessment of Environmental Sound".

10. Prior to use of the site as sports fields the following shall have been implemented:

- a. The extension of the adjacent car park at Waikaraka Park to provide one hundred (100) additional car parking spaces (including 3 mobility impaired spaces) shall be completed to Council's satisfaction, and secure parking for bicycles shall also be provided;
- b. A footpath, designed and constructed in accordance with Council standards, shall be provided along the western side of Captain Springs Road, from the intersection with Neilson Street to the southern side of the vehicle entrance to the car parking area;
- c. A pedestrian path, with a minimum width of 1.5m, shall be provided along the full length of the southern side of the vehicle access to the car parking area on Waikaraka Park; and
- d. Access for pedestrians, including those in wheelchairs, shall be provided to the sports fields, and linking to the coastal walk and cycleway.

11. That the following be submitted as part of the Outline Plan of Works prior to the construction of the sports fields:

- a. Details of the form of the sports fields, including whether artificial surfaces or other such methods are proposed to improve access to facilities.
- b. Assessment of safety issues, including Crime Prevention Through Environmental Design and CCTV cameras if required.
- c. A full earthworks methodology, showing cut to fill balance and existing and proposed finished contours, retaining walls, and batter slope gradient. This methodology shall include details of suitable sediment control measures to be used to ensure that all stormwater run off from the site is managed and controlled to ensure that no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with the Council's sediment control policy.
- d. A report from a Chartered Professional Structural or Geotechnical Engineer confirming that all buildings, retaining walls and batter slopes can be safely constructed and if required, indicating any measures to be taken to mitigate the effects of soil instability on the proposed use and beyond the site. Light framed structures and buildings are preferred but alternative design methods will be accepted if satisfactory evidence is provided to ensure that there will be no danger to the structure, its occupants or surrounding properties caused by subsoil decomposition;
- e. A Site Management Plan including the following:
 - i. specific details relating to the construction and management of all works associated with this development, and including if relevant:
 - Hours of earthworks and construction;
 - Details of the site manager, including their contact details (phone, facsimile, postal address). A telephone number for after hours emergencies shall also be supplied.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- The location of a large notice board on the land that clearly identifies the name, telephone number and address for service of the site manager;
 - The address to which the work relates;
 - Any means, such as a restriction on the size of construction vehicles and machinery accessing the land, required to ensure that no damage occurs to trees on land, remainder of the site or adjacent to the site, throughout the construction period;
 - Any means of protection of services such as pipes and water mains within the legal road;
 - Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
 - Location of workers conveniences (e.g. portaloos);
- ii. detailed procedures to control the on-site or off-site impacts of the following matters during the proposed works:
- Dust; which must be controlled according to the Good Practice Guide for assessing and managing the environmental effects of Dust Emissions, Ministry for the Environment 2001;
 - Landfill gas encountered during the proposed works;
 - Refuse or contaminated material;
 - Suspended sediment or leachate run-off;
- iii. (Contingency Plan) detailing the procedures to deal with any potential adverse health or environmental impacts in the event of encountering landfill gas, leachate, or hazardous material (notably asbestos) during the proposed works; and
- iv. (Health and Safety Plan) providing details of how the effects of the contaminated material will be minimised, including for the workers involved in the site development and on-going maintenance. The plan must be in accordance with the Cleanup of Contaminated Sites, Occupational Safety & Health Service, Department of Labour, 1994.
- f. A contamination report detailing how the activity complies with council guidelines "Tier 1 Soil Screening Criteria - human health". This report shall include details of the investigations to be undertaken in accordance with the "Contaminated Land Management Guidelines No). 5 Site Investigation and Analysis of Soils", MFE 2003.
- g. A methodology for works in close proximity to the Henderson - Otahuhu A high voltage transmission line. This shall include measures to ensure compliance with the New Zealand Electrical Code of Practice (NZECP) 34:2001, including but not limited to the following:
- i. In accordance with NZECP 34:2001, Section 2, in the case of any tower supporting any conductor, no person shall excavate or otherwise interfere with any land:
- At a depth greater than 300mm within 6m of the outer edge of the visible foundations of the tower; or
 - At a depth greater than 3m, between 5m and 12m of the outer edge of the visible foundation of the tower; or
 - In such a way as to create an unstable batter;
- ii. Excavated or other material shall not be deposited under or near the Henderson - Otahuhu A high voltage transmission line so as to reduce the vertical distance from the ground to the conductors to a distance less than:
- 7.5m vertically, across or along roads or driveways or on any other land traversable by vehicles;
 - 6.0m vertically, on any land not traversable by vehicles due to inaccessibility; and
 - 4.5m in any distance other than vertical on all land;
- iii. All machinery and mobile plant operated on proposed site shall maintain a minimum clearance distance of 4m from the Henderson - Otahuhu A line conductors at all times; and
- iv. The approved management plan shall be implemented and maintained throughout the entire period of works.
- h. Details of the provision made to protect existing and proposed structures, pipework, infrastructure and other site works from any effects caused by the escape of methane gas resulting from the decomposition of fill.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

i. A Lighting Plan prepared by a recognised lighting specialist and shall include details of the design and compliance with AS 2560.2.3 Sports Lighting for Football (All Codes), the Auckland Council Environmental Protection Bylaw (2008), Clause 13.5.4, regarding glare at the boundary and to ensure that the spill light does not exceed 79 lux at the Eastern Boundary and 10 lux at all other boundaries. The Lighting Plan shall include details of the luminaires, which shall be of modern design with zero upward wasted light output and zero tilt to limit glare and cut off, particularly to any of the residential properties to the south of the site across the adjacent bay and shall demonstrate that the requirements of AS 4282 Table 2.2 are satisfied to fully comply with the Auckland Council Environmental Protection Bylaw (2008), Clause 13.5.4, in respect to glare.

j. A Landscape Plan shall be prepared and shall ensure that visual links between the Notice of Requirement area, the Manukau Harbour, and the existing Waikaraka Park are maintained while also being consistent with ensuring safety to pedestrians and other users through appropriate use of Crime Prevention Through Environmental Design (CPTED) principles. It shall show as a minimum, where planting will be retained, transplanted trees, trees for removal, mitigation planting for the loss of any generally protected trees. This plan shall include:

- i. Any planting to mitigate increases in ground level;
- ii. Details of the plant species and sizes, all of which shall be locally sourced and coastal tolerant;
- iii. Details of the depth of planting required and the estimated depth of roots, once fully grown. Unless information confirms the depth of the fill on site allows deeper rooting plants, to prevent potential contamination effects, all plants shall be shallow rooting, not extending beyond a depth of 1m when fully grown;
- iv. Confirmation that the location of any trees shall not conflict with the Electricity (Hazards from Trees) Regulations 2003 and any tall growing trees/vegetation (exceeding a mature height of 1m) are located at least 12m away from the centre line of the Henderson - Otahuhu high voltage transmission line; and
- v. Details of how the proposed landscaping of the site has considered the historic heritage of Waikaraka Park and its location adjacent to the Manukau Harbour, through an information plaque or other means to ensure information is publicly available on the site's history.

552 Mason Avenue Community Facility

Designation Number	552
Requiring Authority	Auckland Council
Location	28-34 Mason Avenue, Otahuhu
Rollover Designation	Yes
Legacy Designation	Designation I14-39, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Community facility - for community recreation and gathering, and formal and informal learning including community centres, halls, libraries, child care and markets. Works include buildings, parking, operation, maintenance and upgrade of land for the aforementioned purposes. This designation shall also provide for formal and informal outdoor recreation.

Conditions

General

1. Outline plans may be submitted in stages to reflect any proposed staging of the works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Any land taken or held for works shall be maintained to a reasonable standard until physical works commence.
3. That the period within which this designation shall lapse if not given effect to will be 15 years from November 2003.

Construction

4. A construction management plan shall be provided prior to the commencement of each stage of construction. The construction management plan shall include specific details relating to avoiding, remedying or mitigating adverse effects on the environment of the earthworks, construction and management of all works associated with this development as follows:
- a. Details of the site manager, including their contact details (phone, fax, postal address);
 - b. The location of a large noticeboard on the site that clearly identifies the name, telephone number and address for service of the site manager;
 - c. Measures to be adopted to maintain the site in a tidy condition in terms of disposal / storage of rubbish, storage and unloading of building materials and similar construction activities;
 - d. Ingress and egress to and from the site for vehicles and construction machinery during the site works period;
 - e. Proposed location of any wheel-wash facilities; and
 - f. Proposed numbers and timing of truck movements throughout the day and the proposed routes.

The above details shall be shown on a site plan and supporting documentation as appropriate. The approved construction management plan shall be implemented and maintained throughout the entire construction period.

5. During construction NZS 6803:1999 Acoustics – Construction noise shall be complied with. The noise limits of Table 2 of NZS 6803:1999 shall apply.
6. The hours of work during construction shall be limited to:

Weekdays	7.00am to 6.00pm
Saturdays	8.00am to 5.00pm
Sundays and public holidays	No work

Sediment and Stormwater Control

7. The requiring authority shall implement suitable sediment control measures during all earthworks and after construction to ensure that all stormwater run off from the site is managed and controlled to ensure that, in so far as it is practicable no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with Annexure 14 of the Plan 'Guidelines for sediment control'. In the event that material is deposited on the street, the requiring authority shall take immediate action to clean the street.

Landscaping and Trees

8. The following trees shall not be cut, damaged, altered, injured, destroyed or partly destroyed other than in accordance with an outline plan submitted and processed in terms of Section 176A of the Resource Management Act 1991:
- a. Indigenous trees (including the roots) over 6m in height or with a girth (measured at 1.4m above the ground) greater than 600mm; and
 - b. Exotic trees (including the roots) over 8m in height or with a girth (measured at 1.4m above the ground) greater than 800mm;
- In the case of a tree with multiple trunks (such as pohutukawa) the girth measurement shall be the aggregate or collective measurement of all trunks which have a circumference of 250mm or more. Provided that regular minor trimming or maintenance effected by hand operated secateurs or pruning shears, may be undertaken in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

accordance with accepted arboricultural practice, and that removal or trimming required to safeguard life and property is permitted without an outline plan.

9. A detailed landscape plan, including an implementation and maintenance programme, shall be submitted with the outline plan. The plan shall include details of plant sizes at the time of planting and intended species.

10. The landscaping shall comply with the guidelines for planting set out in the Otahuhu centre's mainstreet plan.

11. The landscaping shall be implemented in accordance with the landscaping plan within the first planting season following completion of the construction works and shall be maintained thereafter.

Noise (excluding construction noise)

12. The noise from activities within the site shall not exceed the following levels when measured at or within the boundary of any residential zoned property adjoining the designated land:

Monday to Saturday 7.00am-10.00pm	L10 55 dBA
Sundays and public holidays 9.00am-6.00pm	L10 55 dBA
At all other times	L10 40 dBA L _{max} 75 dBA or background (L95) plus 30 dBA, whichever is the lower

The noise levels shall be measured and assessed in accordance with NZS 6801:1991 Measurement of Sound and NZS 6802:1991 Assessment of Environmental Sound.

13. At the time an outline plan is submitted for building on the site, the requiring authority shall provide certification from an experienced acoustical consultant confirming that the design and materials to be used for the building(s) are such that the noise levels set out in 5.1 above can be complied with.

14. The requiring authority shall construct 2m high solid acoustic fence or wall along the southern and western boundaries of the site where it adjoins residential zoned properties on Hall Avenue and Nikau Road. Details of the fence or wall shall be provided in with the first outline plan submitted for the site. The fence shall be constructed before the commencement of the use of buildings on the site.

Bulk and Location Controls

15. Building development shall comply with the following bulk and location requirements:

a. Maximum height 10m.

Except that the recreation and youth centre can be built to a maximum height of 11m in accordance with the following drawings by the Architecture Office:

- i. 'New Otahuhu recreation centre', preliminary elevations, job no. 04-042, drawing no. SK002 Rev 2 dated 19-11-04
- ii. 'New Otahuhu recreation centre', preliminary site layout, job no. 04-042, drawing no. SK001 Rev 1 dated 4-11-04

553 Pikes Point Transfer Station

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	553
Requiring Authority	Auckland Council
Location	81 Captain Springs Road, Te Papapa
Rollover Designation	Yes
Legacy Reference	Designation H11-16, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Refuse processing centre.

Conditions

1. All new activities, works and buildings not in conformity with the notice of requirement or not otherwise provided for by the zone provisions of the Unitary Plan shall be the subject of either:

- a. A new notice of requirement, which shall be publicly notified, pursuant to Section 168 of the Resource Management Act; or
- b. A notice to alter the designation, pursuant to section 181 of the Resource Management Act, which notice shall be publicly notified unless the alteration is minor and affected persons agree in accordance with the provisions of Section 181(3) of the Act.

2. Unless lapsed prior to 15 June 2010, the expiry date of this designation was extended to 1 November 2015, by section 78 of the Local Government (Auckland Transitional Provisions) Act 2010.

554 Daldy Street

Designation Number	1570
Requiring Authority	Auckland Council
Location	Daldy Street from Pakenham Street West to Madden Street, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 372, Auckland City Council District Plan (Central Area Section) 2005
Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior

Description

Road.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 15 (fifteen) years after the date on which it is included in the Unitary Plan unless:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

Diagram of Designation 554 - Road

555 Jellicoe Street

Designation Number	555
Requiring Authority	Auckland Council
Location	West end of Jellicoe Street, Wynyard Quarter
Rollover Designation	Yes
Legacy Reference	Designation 386, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior

Description

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Road.

Conditions

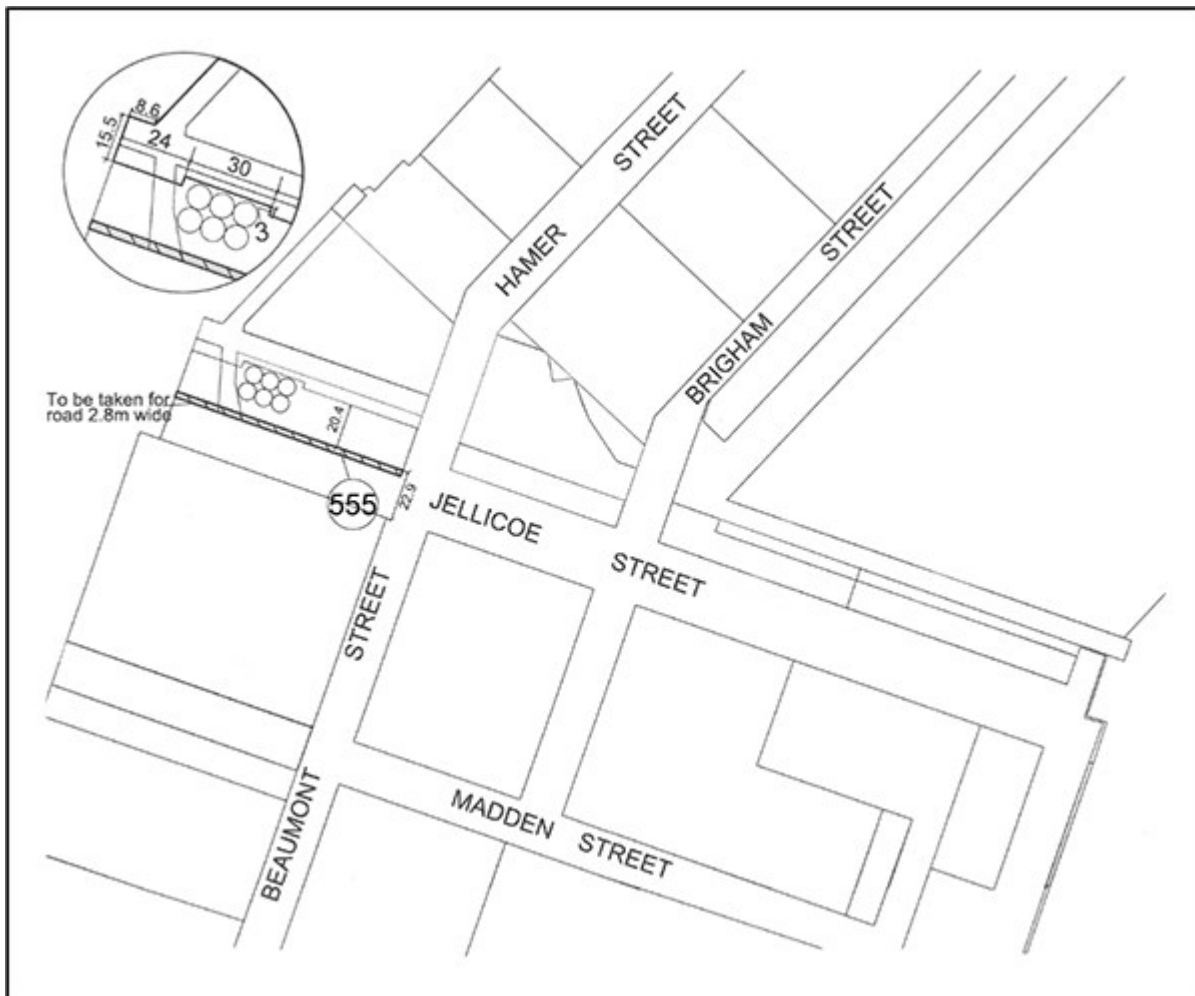

1. If any archaeological site is exposed during site works then the following procedures shall apply:
 - a. Immediately when it becomes apparent that an archaeological site has been exposed, all site works shall cease, except that works may continue to prevent the escape of any contaminants that would result in any further pollution of the environment; and
 - b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts are untouched.

The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation and the Manager Planning of the council that an archaeological site has been exposed, so that appropriate action can be taken. This is to ensure that such persons are given reasonable time as determined by the Council to record the archaeological features, including a photographic record, before work recommences on the site.

2. The period within which this designation shall lapse if not given effect to in accordance with section 184 of the Resource Management Act 1991 shall be 15 years from the date on which it is confirmed.

600 Tawhitokino Regional Park

Designation Number	600
Requiring Authority	Auckland Council
Location	265 Kawakawa Bay Coast Road, Clevedon
Rollover Designation	Yes
Legacy Designation	Designation 188, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor

The Proposed Auckland Unitary Plan (notified 30 September 2013)

infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest
-------------------	--	--

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

601 Hunua Ranges Regional Park

Designation Number	601
Requiring Authority	Auckland Council
Location	Moumoukai Road, Hunua
Rollover Designation	Yes
Legacy Designation	Designation 189, Auckland Council District Plan (Manukau Section) 2002; Designation 192, Auckland Council District Plan (Manukau Section) 2002; and Designation 100, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest
-------------------	--	--

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

602 Regional Botanic Gardens

Designation Number	602
Requiring Authority	Auckland Council
Location	100 Hill Road, Manurewa
Rollover Designation	Yes
Legacy Designation	Designation 190, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Auckland Botanic Gardens - to create and maintain gardens, buildings, structures and visitor services for the propagation, display, conservation, education and research of plants, and to facilitate the development of trails and visitor infrastructure for informal outdoor recreation activities, education and events. Works include operation, upgrade and maintenance associated with the aforementioned activities.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

General

1. Any works are to be undertaken in accordance with either the approved Auckland Botanic Gardens 2001 or any subsequent management plan.
2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ol style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ol style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

604 Tapapakanga Regional Park

Designation Number	604
Requiring Authority	Auckland Council
Location	95 Deerys Road, Orere Point
Rollover Designation	Yes
Legacy Designation	Designation 193, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.

2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-subsurface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

605 Duder Regional Park

Designation Number	605
--------------------	-----

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Auckland Council
Location	933R North Road, Clevedon
Rollover Designation	Yes
Legacy Designation	Designation 270, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

- Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
- Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).
- The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ol style="list-style-type: none"> Water Tables and track drainage Track surfaces Track structures Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations.

The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

607 Manukau Memorial Gardens

Designation Number	607
Requiring Authority	Auckland Council
Location	361 Puhinui Road, Papatoetoe
Rollover Designation	Yes
Legacy Designation	Designation 222, Auckland Council District Plan (Manukau Section) 2002; Designation 222A, Auckland Council District Plan (Manukau Section) 2002; and Designation 223, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Cemetery and crematorium.

Conditions

Outline Plan of Works

1. Before any works, including new buildings, are undertaken an Outline Plan of Works shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 1, from requiring an outline plan of works. The Outline Plan of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan of Works.

Exemptions:

2. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of cemetery infrastructure		Nature of works
Burials	The construction of works associated with interments, including ornamental gardens.	Structures, such as burial plots, berms, headstones and mausoleums.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Paths and tracks	Construction and maintenance of paths and tracks in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of paths and tracks up to 2.5 metres in width, including the construction of structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing paths and tracks involving: <ul style="list-style-type: none"> i. Water tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of native vegetation up to 1 metre from the edge of the track.
Minor buildings, structures and utility services, including drainage systems	Construction and maintenance of minor buildings and structures and utility services	The construction of utility services and minor structures, such as notice boards, information kiosks, signs, outdoor seating, entrance gates, shade shelters, pavilions and toilet blocks.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of native vegetation up to 1 metre from the edge of the car park or road, or within the car park for safety reasons
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Cemetery Management Plan

3. Cultural / Heritage / Archaeological

Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for the purpose of a cemetery but is to conserve and protect the recognised natural, cultural and historic values that significantly contribute to the cemetery setting.

This condition (Condition 2) will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 2 in order to confirm an outline plan is not required.
2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.
3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.
4. The Cemetery Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a cemetery.

608 Regional Parkland at Waitawa

Designation Number	608
Requiring Authority	Auckland Council
Location	1168 Clevedon-Kawakawa Road, Clevedon
Rollover Designation	Yes
Legacy Reference	Designation 312, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m ² in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

610 Manukau Memorial Gardens

Designation Number	610
Requiring Authority	Auckland Council
Location	431 Puhinui Road, Papatoetoe
Rollover Designation	Yes
Legacy Designation	Designation 222B, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Five years from being operative in the Draft Unitary Plan unless given effect to prior

Purpose

Cemetery (extension B).

Conditions

Outline Plan of Works

1. Before any works, including new buildings, are undertaken an Outline Plan of Works shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under Condition 1, from requiring an outline plan of works. The Outline Plan of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan of Works.

Exemptions

2. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of cemetery infrastructure		Nature of works
Burials	The construction of works associated with interments, including ornamental gardens.	Structures, such as burial plots, berms, headstones and mausoleums.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Paths and tracks	Construction and maintenance of paths and tracks in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of paths and tracks up to 2.5 metres in width, including the construction of structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing paths and tracks involving: <ul style="list-style-type: none"> i. Water tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of native vegetation up to 1 metre from the edge of the track.
Minor buildings, structures and utility services, including drainage systems	<div>Construction and maintenance of minor buildings and structures and utility services</div> <div>Maintenance, repairs and minor alterations to buildings, structures and utility services</div>	The construction of utility services and minor structures, such as notice boards, information kiosks, signs, outdoor seating, entrance gates, shade shelters, pavilions and toilet blocks.
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of native vegetation up to 1 metre from the edge of the car park or road, or within the car park for safety reasons
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Cemetery Management Plan

3. Cultural / Heritage / Archaeological

Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

- a. An assessment of the effects on the historic heritage values of the place; and
- b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for the purpose of a cemetery but is to conserve and protect the recognised natural, cultural and historic values that significantly contribute to the cemetery setting.

This condition (Condition 2) will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 2 in order to confirm an outline plan is not required.
2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT be advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.
3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.
4. The Cemetery Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a cemetery.

611 Greenmount Refuse Disposal

Designation Number	611
Requiring Authority	Auckland Council
Location	1 Harris Road, East Tamaki
Rollover Designation	Yes
Legacy Reference	Designation 195, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The Greenmount Landfill is designated as Interim Regional Refuse Disposal Landfill for the purposes of and in relation to refuse disposal.

The list of activities which are provided for by the designation are the following:

- Refuse landfill;
- Receipt, storage and disposal of refuse;
- Collection, disposal and power generation from landfill gas;
- Reception and weighbridge facilities;
- Stormwater control;
- Leachate control;
- Ancillary buildings and structures; and
- Other activities ancillary to the above activities and the operation of a refuse landfill.

Explanation:

For some eight years commencing in 1960 the Manukau City Council itself used part of the quarried area for

The Proposed Auckland Unitary Plan (notified 30 September 2013)

refuse disposal. In 1980 the site opened as a regional refuse disposal landfill as a means of backfilling the quarried area. The site was designated for this purpose at the requirement of the Auckland Regional Authority.

A large portion of the land is the subject of a bequest, under the will of the late Mrs SJ Lushington, to the territorial authority in whose district the land is situated, upon trust for public recreation purposes. Reflecting this bequest, the site has the underlying zoning of Public Open Space. Prior to its end use as a recreation area, the landfill continues to be used for refuse disposal purposes.

The site is well located for the purposes of refuse disposal on a regional basis and in 1985 the Regional Authority served a further requirement to extend the quarrying and landfill operation onto an adjoining site (Lot 2 DP 81107).

In 1992 Northern Disposal Systems Ltd (NDS) took over responsibility for the Greenmount refuse disposal operations from the former Auckland Regional Council. NDS is a Local Authority Trading Enterprise (LATE) established under the Auckland Regional Services Trust (ARST). NDS has subsequently purchased the Stevensons Quarry land and this is to be passed to Auckland Council for recreation uses at the completion of land filling along with the Lushington Estate.

The Auckland Council retains the power to designate for Northern Disposal Systems' facilities. In 1995 the former Auckland Regional Council requested that the existing designation for the whole site be carried over into the reviewed Manukau City District Plan. Northern Disposal Systems has been granted a land use consent to carry on land filling until the year 2003. The Greenmount refuse disposal operation is to be managed in accordance with the resource consents obtained in respect of this site and the associated consent conditions.

The Greenmount refuse disposal operation is primarily a land filling operation. A gas collection system and gas fired power station are components of that operation.

Greenmount is designed as a co-disposal sanitary landfill for the disposal of domestic and special wastes.

Conditions

A. General

- i. That any new development or redevelopment within the designation complies with the performance standards set out within this condition. Developments and redevelopments within the designation which comply with the Performance Standards within this condition shall be a Permitted Activity.
- ii. Any developments or redevelopments which do not comply with any of the performance standards contained within this condition, shall require a Restricted Discretionary resource consent. When making its decision regarding the application for Restricted Discretionary resource consent, the Council shall restrict the exercise of its discretion to matters specified in Chapter 8 of the Auckland Council District Plan (Manukau Section) 2002 and will have regard to the Assessment Criteria contained within Chapter 8 of the District Plan specified in the appropriate clause of this condition.

B. Access to the Primary Road Network

This clause of the condition applies to that part of designation 611 that has frontage to the primary road network.

- i. In accordance with Rule 8.10.3(b) of the Auckland Council District Plan (Manukau Section) 2002, any activity within the designation requiring a vehicle access point to be constructed onto the primary road network or within 50 metres of the projected road boundary of an intersection onto the urban primary road network, requires a Restricted Discretionary resource consent. When making its decision regarding the application for Restricted Discretionary resource consent, the Council shall restrict the exercise of its discretion to matters contained in 8.12.2.1 and will have regard to the appropriate Assessment Criteria contained within Rule 8.12.2.3 of the Auckland Council District Plan (Manukau Section) 2002.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.0 Performance Standards — Design of Access to Road Network

1.1 Vehicle Crossing Design

a. Vehicle crossings shall intersect with the carriageway at an angle of between 45° and 90° and cross the property boundary at an angle of between 75° and 105°.

b. Vehicle crossings shall comply with the following minimum and maximum widths. This rule also applies to vehicle crossings shared by more than one property.

	Min Width of Crossing	Max Width of Crossing
one-way	3.0 metres	6.0 metres
two-way	3.0 metres	9.0 metres

1.2 Gradients

The grade of vehicle crossings shall not exceed 1:8. For curved ramps and driveways, the gradient is measured along the inside radius.

1.3 Prohibited Areas

No vehicle crossing shall be located within those frontages of a property at intersections defined within Figure 8.3 of the Auckland Council District Plan (Manukau Section) 2002.

1.4 Separation of Driveways

The following minimum separation distances shall apply to vehicle crossings:

- Three metres between vehicle crossings as measured at the kerb.
- 1.5 metres between the vehicle crossing and the applicant's side of property boundary as measured at the kerb and perpendicular to the kerb. This provision shall not apply in respect of vehicle crossings shared by adjoining properties.

1.5 Swept Paths

All vehicle crossings within the primary road network, or within roads within which a centreline is defined shall be designed to accommodate the swept path of the largest vehicle expected to use it. When turning left the vehicle must not be required to cross the road centreline or the right hand edge of the rear traffic lane where there is more than one lane.

1.6 Separate Entry and Exits

Where activities provide separate entry and exit crossings they are to be clearly marked as such.

1.7 Impact on Street Furniture, Street Trees and Traffic Signs

No vehicle crossing shall result in the removal or relocation of a street tree, traffic signals, street light, bus shelter, traffic sign, or street furniture without the consent of Council first being obtained.

1.8 Assessment Criteria

When assessing any application for Restricted Discretionary Resource Consent for non-compliance with any of the Performance Standards in clauses 1.1 to 1.7 of this condition, Council restricts the exercise its discretion to matters specified in Rule 8.11.8.1 and will have regard to the Assessment Criteria contained within Rule 8.11.8.3 of the Auckland Council District Plan (Manukau Section) 2002.

2.0 Performance Standards — Parking and Vehicle Circulation

2.1 Provision of Parking

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.1.1 Number of Parking Spaces to be Provided

- a. The number of parking spaces to be provided shall be determined in accordance with Rule 8.27 Schedule 8A of the District Plan.
- b. When the assessment of the number of parking spaces required in respect of the use of any land or building results in a fraction, a fraction under one half shall be disregarded and fractions of one half or more shall require an additional parking space.

2.1.2 Diminution of Land Available

The parking area that is made available about a building in compliance with the requirements for off-road parking shall not be diminished by the subsequent construction of any structure, by the storage of goods, or by any other activity, but a private garage may be erected.

2.1.3 Allocation of Parking Spaces

The requiring authority or other occupier of the site shall not unreasonably allocate or manage the parking spaces so as to prevent staff, fleet vehicles, visitors or particular occupiers associated with that site from utilising this parking.

2.1.4 Assessment Criteria

When assessing any application for Restricted Discretionary Resource Consent for non-compliance with any of the Performance Standards in clauses 2.1.1 to 2.1.3 of this condition, Council shall restrict the exercise of its discretion to matters specified in rule 8.24.2.1 and will have regard to the Assessment Criteria contained within Rule 8.24.2.3 of the Auckland Council District Plan (Manukau Section) 2002.

2.2 Provision of Loading Space

2.2.1 Any activity within the designation that generates delivery trips by heavy vehicles, shall make adequate provision on the site for a loading space.

2.2.2 Part of any yard of a site may be used to provide a loading space for any site provided that the loading space and method of loading shall at no time:

- a. cause the footpath or access to the rear of the site or access to an adjacent property to be blocked; or
- b. create a traffic hazard on the road.

2.2.3 Number of Loading Spaces to be Provided

The number of loading spaces to be provided in respect of any of the following uses on any particular site shall be determined according to the following table:

Gross Floor Area of Activity (Square Metres)	Number of Off-Road Loading Spaces to be Provided
0-20,000	1
20,001-50,000	2
Over 50,000	2 + 1 for every additional 25,000m ² of gross floor area

2.2.4 Assessment Criteria

When assessing any application for Restricted Discretionary Resource Consent for non-compliance with any of the Performance Standards in clause 2.2.3 of this condition, Council shall restrict the exercise of its discretion to matters specified in rule 8.24.4.1 and will have regard to the Assessment Criteria contained within Rule 8.24.4 of the Auckland Council District Plan (Manukau Section) 2002.

2.3 Design of Parking and Circulation Areas

All parking in the form of a parking lot or a parking building, shall conform with layout, access and any other requirements of this condition.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.3.1 Vehicle Dimensions

Each parking space to be provided in terms of this Section shall be in accordance with the dimensions specified in Figure 8.5 of the Auckland Council District Plan (Manukau Section) 2002 and suitably laid out to accommodate a 90 percentile motor car as defined by the Ministry of Transport. The dimensions and tracking curve of this vehicle are shown in Figure 8.7 of the Auckland Council District Plan (Manukau Section) 2002.

2.3.2 Reverse Manoeuvring

All parking areas shall be designed to ensure that vehicles are not required to reverse either onto or off the site; and are not required to execute more than a three point turn to exit the site based on the 90 percentile motor car as defined within Figure 8.7 of the Auckland Council District Plan (Manukau Section) 2002.

2.3.3 Vehicle Queuing

Sites shall be laid out in such a way that vehicles using or waiting to use on site facilities shall not queue into the adjoining road or obstruct entry to or exit from the site. The minimum distance between any such facility and the mid point of the property boundary edge of any vehicle crossing to the site shall be 12 metres (the property boundary having been adjusted for any proposed road widening).

2.3.4 Design and Constructional Details

All public and private parking areas shall comply with the following requirements:

- a. The parking spaces and access drives and aisles required in respect of the site in question shall, before the commencement of the Permitted Activity of that site, be formed, sealed and permanently marked or laid out in accordance with approved plans to the Council's satisfaction;
- b. The parking area shall be maintained at all times so as not to create a dust nuisance;
- c. Stormwater drainage from the parking area shall be constructed to the satisfaction of the Council;
- d. Provision shall be made to illuminate access driveways and pedestrian areas within public parking areas used during the hours of darkness. Illumination shall not be directed towards any adjacent residentially zoned land. Refer also to Rule 5.18.2 Artificial Lighting of the Auckland Council District Plan (Manukau Section) 2002;
- e. Parking areas and signs and markings shall be maintained by the owner or occupier so that at all times they remain legible and available for use by vehicles;
- f. All parking spaces provided to meet the requirements of clause 2.1.1 of this condition shall be right angled parking spaces;
- g. The design and layout of parking areas shall be such that vehicles are not required to reverse a distance greater than 30 metres to enter or exit any parking space or exit any parking aisle in the event that the parking spaces within the aisle are occupied; and
- h. Where there are several separate parking areas within a site (or sites where joint parking areas are involved), then internal vehicular access between the parking areas shall be provided so that vehicles do not have to use the adjoining road network to travel between carparks.

2.3.5 Provisions for Disabled Persons

Where it is proposed to establish the use of any land or erect any building and that use or building is listed in Section 25 of the Disabled Persons Community Welfare Act 1975 carparking spaces for the exclusive use of vehicles driven by persons with disabilities or any person accompanying a person or persons with disabilities, shall be provided as follows:

- a. No fewer than one carparking spaces for the disabled shall be provided where the total number of carparking spaces is between 1 and 10; no fewer than two carparking spaces for the disabled shall be provided where the total number of parking spaces is between 11 and 99; and one additional carparking spaces for the disabled for each additional 50 parking spaces or part thereof;
- b. Such carparking space or spaces shall be credited towards the number carparking spaces required; and
- c. Such carparking spaces shall be designed in accordance with the requirements of the New Zealand Standard Specification 4121 (1985). Access from such carparking spaces to buildings shall also be designed in accordance with these standards and carparking spaces shall be so located to ensure that the distance to be traversed is as short as possible.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.3.6 Design of Loading Spaces

a. Location

A loading space or loading spaces shall be so located as to fulfil the purpose for which loading is required in relation to the functional design of the building and the area and shape of the site. The extent of the area required for manoeuvring in respect of any loading space shall be sufficient to accommodate the largest vehicle that is expected to utilise the loading space. In determining that area there shall be taken as a minimum guide the 90 percentile truck tracking curve shown in Figure 8.8 of the Auckland Council District Plan (Manukau Section) 2002;

b. Loading Docks Fronting Roads or Service Lanes

The minimum dimensions for a loading dock fronting directly on to a road or service lane shall be sufficient to accommodate the largest vehicle that is expected to utilise the loading space. As a minimum guide, they shall be 3.5m wide by 3.5m high by 7.5m deep measured from the road or service lane boundary of the site. In the case of a loading dock to be used by articulated vehicles, the dock shall not be less than 11m deep measured from the road or service lane boundary of the site; and

c. Reverse Manoeuvring

Except for loading areas with access to a cul-de-sac or service lane, all loading areas shall be designed to ensure that the vehicles using them are not required to reverse either onto or off the site and are not required to execute more than a three point turn to exit the site (based on the appropriate truck tracking curve). In complying with the above the truck tracking curve shall not track over any defined parking spaces required to satisfy Performance Standard 1 of this condition or require a vehicle to reverse more than 30 metres on site.

2.3.7 Assessment Criteria

When assessing any application for Restricted Discretionary Resource Consent for non-compliance with any of the Performance Standards in clauses 2.3.1 to 2.3.6 of this condition, Council shall restrict the exercise of its discretion to matters specified in Rule 8.24.4.1 and will have regard to the Assessment Criteria contained within Rule 8.24.8 of the Auckland Council District Plan (Manukau Section) 2002.

2.4 Acceptance of Cash in Lieu of Parking Spaces

a. Where it is not reasonable or practicable to make provision for the parking requirement in respect of the designated site on the site or sufficiently close to it for constant use by vehicles in connection with the site, the Council may instead of enforcing the provision, accept payment of a sum of money not exceeding the cost including land value, of providing the parking requirement on that site. Alternatively Council may elect to accept a sum based on the cost of providing any parking shortfall on land in the vicinity of the site or the cost of providing parking on a nearby site set aside for carparking purposes, providing that this sum does not exceed that specified above;

b. Any payment made under subsection (a) of this rule shall contribute to satisfying the requirements of the scheme for parking provision in respect of the site, and shall be kept in a separate account in the Council's name and applied by the Council from time to time as opportunity offers in the acquisition of land and the making of provision for parking as close as, is reasonable and practicable to the site in respect of which the parking area was required to be provided. Notwithstanding the above Council may apply not more than half of any payment made under Section (a) of this rule on passenger transport infrastructure in the vicinity of the site providing that the site and use of the site in question would benefit from the provision of this infrastructure; and

c. When the cash in lieu of parking is used by Council to provide parking spaces, a number of parking spaces equivalent to their respective contribution to the cost of formulation will be made available for use by the owners of sites for which cash in lieu of parking has been accepted.

2.5 Traffic Management Works

The Council shall assess any Outline Plan of Works or any resource consent under (ii) and (ii) of this condition submitted by the requiring authority for any development or redevelopment of the designated site having regard to the potential transportation related effects of the development.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The requiring authority shall be required to meet the reasonable costs of all access and traffic management works (including any additional land required to accommodate these works) associated with an activity on the designated site to the extent that such works are required to meet safety, access, egress, or amenity considerations related to the activity or where the works are required to mitigate the likely adverse effects from the activity on the safety or operation of the transport network.

Advice Notes

1. The Greenmount Landfill is also subject the to following regional resource consent and their conditions, granted by the former Auckland Regional Council and in accordance with the conditions (or any subsequent modifications of these conditions):

- No. 928676 Diversion and discharge of stormwater
- No. 928677 Discharge of leachate and landfill gas through the clay liner
- No. 928678 Diversion of groundwater
- No. 949458 Discharge of landfill gas to the atmosphere
- No. 949459 Discharge contaminants onto and into land; and
- Resource consent PRM6291/1 issued by the former Manukau City Council.

2. There are additional consents in relation to the methane gas and power generation plant.

612 Whitford Landfill

Designation Number	612
Requiring Authority	Auckland Council
Location	373 Whitford-Maraetai Road, Whitford
Rollover Designation	Yes
Legacy Reference	Designation 229, Auckland Council District Plan (Manukau Section) 2002
Lapse date	Given effect to (i.e. no lapse date)

Purpose

Rule 10.2.8.1.1 Whitford Landfill Landfilling Designation (Zone 1): Purposes

a. Subject to the conditions set out in Rule 10.2.8.1.1.1, the area shown as "Zone 1" in Figure 10.2.1 may be used for the purposes of:

- A refuse landfill and for the ponding and disposal of leachate
- Recycling and composting
- Residents' transfer station
- Recreational paths
- Other activities ancillary to the above activities

b. In these conditions "Landfill Operator" means the Manukau City Council in its capacity as operator of the Whitford Landfill; and also includes a Local Authority Trading Enterprise (LATE) and where the LATE is not a company, the members of the LATE; or other successor or successors as operator of the Whitford Landfill.

Explanation:

The Whitford Landfill has been designated for many years. In 2005 a Notice of Requirement was sought to alter

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the existing designation in order to increase the life of the Landfill beyond 2014. The Council decided that the new time frame would allow landfilling for approximately 35 years, to coincide with the expiry date of ARC consents. The landfill area is shown in Figure 10.2.1.

The designation is identified by four areas which are referred to as Landfill Zones 1, 2, 3 and Landfill Zone 1/Quarry. Each zone is also referred by descriptive names, such as "Excavation of Cover Material Designation".

Zone 1 and Landfill Zone 1/Quarry make provision for the disposal of refuse during the planning period having regard to the topography of the land, so that while full use can be made of material available within the area for covering refuse, the operation can be conducted with a minimum of detraction from the amenities of the neighbourhood. The combined areas currently designated at Whitford for landfill purposes (Zone 1 and Landfill Zone 1/Quarry) have a life of approximately 35 years.

The southern part of the designation, Zone 2 known as the "O'Brien Property" was purchased by the Council as a source of additional cover material, to the landfill, with the purpose of reducing the traffic and other effects of importing cover material from elsewhere.

The northern part of the designation, Zone 3 known as "Curries Farm", was purchased by the Council for the spray irrigation of leachate from the landfill. On 21 November 1994 Manukau City Council granted a resource consent for the spray irrigation of treated leachate on to part of the land in the northern part of the designation.

Special conditions and restrictions are set out for each of the zones of the designated area for the future protection of the amenities of the area.

Council has undertaken the realignment and upgrading of sections of Ormiston Road in order to improve the principal route to the landfill and for the benefit of other road users. The Landfill Operator also has a number of consents from the Auckland Regional Council covering aspects of the landfill activities. The rules in this Plan complement the conditions of the ARC consents and Council will take the ARC consents into account.

Recognising the need for correct loading of trucks and trailers carrying refuse through the City, access roads leading to the designated area will be patrolled at regular intervals (including weekends), by Council, and it will enforce its powers under its Bylaws and the Litter Act 1979.

Conditions

Restrictions on Footprint

a. The disposal of refuse shall be confined to the area showing the limits of refuse disposal in Figure 10.2.2 at the rear of this section.

Proviso:

No areas outside the Interim Footprint shown in Figure 10.2.2 at the rear of this section may be developed or used for refuse disposal except in accordance with the relevant parts of the Management Plan required under condition (d) and approved under condition (f).

General Requirements

b. The landfill and all associated activities, development and works (including postclosure aftercare) shall:

- Be designed, constructed, operated and maintained as a modern landfill in accordance with currently recognised good sanitary landfill practice
- Be undertaken in accordance with such practice by persons appropriately qualified and experienced for the particular purpose
- Comply in all respects with these conditions to the satisfaction of the Council's Director of Planning and Resource Management or other specified officer and any other statutory authority having regulatory jurisdiction over the matter

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Proceed in accordance with the Management Plan referred to in condition (d) but as amended from time to time in accordance with these conditions of the designation. No development may proceed until the relevant part of the Management Plan has been approved
- Be subject to compliance with all necessary resource consents from the Auckland Regional Council and any other applicable statutory requirements.

(For the avoidance of doubt where any conditions attaching to any necessary resource consent or any other statutory requirements impose more stringent requirements on the landfill than these conditions, then the more stringent requirements shall prevail).

c. A residents transfer station and recycling facilities shall be established and maintained on the landfill site for so long as the site is used for refuse disposal purposes.

Management Plan

d. The Landfill Operator shall maintain and keep current the following plans and manuals ("the Management Plan"), the basis of which shall be the Landfill Management Plan held by the Council in its records on the Whitford Landfill and as subsequently approved by the Council. The Landfill Management Plan shall be completed no later than 3 months after the confirmation of the designation.

Plans and Manuals Comprising the Management Plan:

- Design Manual
- Construction Manual
- Monitoring Manual
- Operations Manual
- Contingency Manual
- Site Landscaping Plan
- Post-Closure Aftercare Plan

e. The Management Plan (and any amendments) shall give effect to these conditions and otherwise generally accord with the Outline Management Plan.

f. Each part of the Management Plan (and any amendments) shall:

- Be subject to the approval of:
- The Council in consultation with the Peer Review Panel referred to in condition (j); and
- The ARC in relation to matters it is required to approve by legislation
- When so approved, be strictly adhered to at all times
- Be subject to review (including a review of the performance of the practices and procedures in the Plan) by the Peer Review Panel on an annual basis or earlier if required by the Council.

g. Amendments shall be made to the Management Plan to incorporate:

- Requirements of the Council to ensure compliance with these conditions (including requirements made on the advice of the Peer Review Panel)
- Requirements of the ARC in relation to matters it is required to approve by legislation
- Changes sought by the Landfill Operator to give better effect to these conditions which have been reviewed by the Peer Review Panel and have the approval of the Council and the ARC where appropriate
- The requirements of any applicable enactment.

Any amendments required by this clause shall be incorporated without delay in and shall form part of the approved Management Plan.

Matters to be covered in the Management Plan

h. The Management Plan shall contain provisions dealing with the following matters:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

	Specific Condition References
Waste Acceptance Criteria indicating categories of refuse accepted at the Landfill	(w)
Stages of development	(-)
The separation of existing and future areas of refuse placement	(-)
Right of access	(r)
Hours of operation	(t)
Categories of refuse accepted at the landfill	(w)(x)(y)
Liner construction	(b)
Site Access, internal roading, vehicle stacking areas and traffic management	(u)
Occupational Safety and Health	(-)
Mediation	(p)
Methods of handling and disposal of refuse including controlled waste	(w)(x)(y)
Refuse covering and capping	(cc)
Landscape amelioration, maintenance and restoration work	(tt)-(xx)
Litter control	(mm)
Recycling, residents waste transfer station and composting operations	(c)
Stormwater management	(-)
Leachate management	(v)
Landfill gas management	(jj)
Nuisance control	(ll)-(pp)
Monitoring and record keeping	(qq)-(ss)
Contingency plans	(d)
Emergency procedures	(-)
Site closure and rehabilitation	(tt)-(xx)
Aftercare requirements	(yy)
Community liaison	(p)
Cultural Heritage Sites	(-)
Such other matters as are considered appropriate from time to time by the Council (which may include matters drawn to its attention by the Peer Review Panel or the ARC)	(-)

i. The Management Plan shall expressly require compliance with these conditions:

- That gas wells and other permanent engineering features are located so as to be as unobtrusive as possible from adjacent land and to be compatible with the site Landscaping and Post-Closure Aftercare Plans
- That a layer of low permeability materials be constructed above the existing landfill to direct leachate from new refuse to new leachate collection drains. The layer shall be of such thickness and permeability as to ensure the minimisation of movement of leachate into the underlying refuse and the avoidance of adverse environmental effects.

Peer Review Panel

j. For the operating life of the landfill and such further period as the Council may require the Landfill Operator shall establish and maintain an independent Peer Review Panel The composition of the Peer Review Panel shall

The Proposed Auckland Unitary Plan (notified 30 September 2013)

be as approved by the Council's Manager — Resource Consents and Compliance, and the Auckland Regional Council following consultation with any Community Committee established under condition (p); and shall comprise not less than 3 nor more than 5 suitably qualified and experienced persons one of whom shall be the nominee of any Community Committee established under condition

p. The objectives of the Peer Review Panel will be to ensure that the conditions of this Rule are met and to ensure that all engineering works authorised by the ARC achieve design specifications.

k. All reasonable costs of the Peer Review Panel in undertaking its functions set out in these conditions shall be met by the Landfill Operator.

l. The Peer Review Panel may co-opt other specialist members to assist in any of its functions for specified periods subject to the approval of the Council, and after consultation with the Landfill Operator. The Peer Review Panel shall appoint one of its members as convener.

m. The Peer Review Panel shall undertake all of the following functions save to the extent modified by the ARC in respect of matters over which it has jurisdiction:

- i. Reviewing the adequacy of the various parts of the Management Plan prior to their initial approval by the Council and thereafter on an annual basis.
- ii. Being satisfied that conditions (a) and (b) are being complied with and that the landfill and all associated activities and works (including post closure aftercare) are adequate to ensure the ongoing containment of refuse and leachate.
- iii. Reviewing any proposed modifications to the design, construction, operation or aftercare of the landfill and all associated activities and works.
- iv. Taking such steps as are necessary to ensure that the following are undertaken to its satisfaction:
 - The monitoring of the construction and performance of the landfill liner
 - The monitoring and testing referred to in condition (qq) the evaluation of the results of the monitoring and any consequential testing.
- v. From time to time drawing to the Council's and the ARC's attention any changes to the management plan that it considers necessary or desirable and any other matter which, in the opinion of the Peer Review Panel, the Council or the ARC should deal with or be aware of.
- vi. Reporting to the Council at 6 monthly intervals, or sooner if required by the Council, on all the above matters as appropriate and otherwise describing the status of the landfill project, particularly with regard to compliance with these conditions.
- vii. Consulting with the Community Committee on any matters relating to the landfill at the same frequency as it is required to report to the Council and promptly providing the Committee with copies of its reports.
- viii. Consulting with and reporting to the Landfill Operator from time to time on the above matters.

General Duties of the Landfill Operator

n. The Landfill Operator shall:

- Do all things necessary to enable the Council, any other relevant statutory regulatory authority and the Peer Review Panel to perform their functions, and without limiting that obligation, it shall supply those bodies with all information reasonably necessary for its purposes and permit access to the landfill site at all reasonable times.

Review of the Management Plan by Landfill Operator

o. The Landfill Operator shall undertake its own review:

- Annually of all parts of the Management Plan for the purpose of ensuring ongoing compliance with these conditions
- The Landfill Operator shall also report to the Council annually, summarising its annual review.

The Landfill Operator shall also prepare reports for the Council annually on:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. Significant changes made to the design construction, operation or management of the landfill and all associated activities and work including aftercare.
- ii. Environmental monitoring results in summarised form.
- iii. Incidents involving non compliance with these conditions and actions taken to remedy them. and five yearly on:
- iv. Significant local or international advances made in any aspect of landfill design, construction, operation or management that may have benefits for the Whitford Landfill, and how it is intended to incorporate them, if at all.
- v. Details of any alternative methods of refuse disposal that could affect the future viability of the landfill operation.
- vi. The effects of landfill traffic on the local road network that serves the landfill site taking into account overall traffic conditions at the time.

The first five yearly report shall be submitted to the Council on or as soon as practicable after 1 June 1999. The reports shall in each case (with the exception of the report referred to in (vi)) deal with the preceding year or five years as appropriate.

Community Committee

p. The Landfill Operator shall:

- Consult with tangata whenua and representatives of local residents (including the Whitford Residents and Ratepayers Association) to facilitate the establishment of a Community Committee comprising up to five representatives of those groups, a representative of the Landfill Operator and up to two representatives of the Council
- Ensure, as far as practicable, that those living in close proximity to the landfill and those living in the broader Whitford Community are represented on the Committee
- Discuss matters relevant to the landfill including, but without limitation, concerns and complaints of residents and aspects of non compliance and ways of alleviating them
- Disseminate information to the Committee about the landfill and about any future proposals for the landfill
- Ensure its representative attends meetings of the Committee on a quarterly basis or sooner if requested by the Council's Director of Environmental Management
- Ensure its representative attends any mediation held at the request of the Council's representative in the event of disagreement between the Landfill Operator and members of the Committee over matters relating to the landfill.

Archaeological

q. In the event of archaeological features being uncovered (e.g. shell midden, hangi, or oven stones, pit depressions, defensive ditches, artefact material or human bones), work is to cease in the vicinity of the discovery and the Manukau City Council, the New Zealand Historic Places Trust and the appropriate iwi authorities shall be contacted so that appropriate action can be taken. This includes such persons being given a reasonable time to record and recover archaeological features discovered before work may commence.

Right of access

r. Right of access to the Whitford Landfill for the purposes of refuse disposal shall be restricted to the following users:

- i. Refuse Vehicles
- ii. Private vehicles of residents from within the area shown on Figure 10.2.3 at the rear of this section.

The Landfill Operator shall licence all Refuse Vehicles. All vehicles shall be required to display a registration number issued by the Landfill Operator. Vehicles not so licensed and displaying a registration number shall be prohibited from using the landfill except where a temporary licence is granted.

Return trips by Refuse Vehicles shall be limited as follows:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- During the operating life of the Quarry, while quarry product is being extracted and removed from the site, the number of return trips generated in any one year by Refuse Vehicles shall not exceed an average of 110 per day (12 month average), corresponding to a refuse quantity of 275,000 tonnes per annum.
- Once the Quarry has ceased to extract and remove rock from the site, but while final quarry remedial works are being undertaken, the combined number of return trips generated in any one year by Refuse Vehicles and quarry trucks shall not exceed an average of 210 per day (12 month average), provided, however, that the permitted number of return trips by Refuse Vehicles shall not be greater than 155 per day (12 month average), corresponding to a refuse quantity of 350 tonnes per annum.
- After completion of quarry remedial works, the number of return trips generated in any one year by Refuse Vehicles shall not exceed an average of 155 per day (12 month average), corresponding to a refuse quantity of 350,000 tonnes per annum.

s. The Landfill Operator shall require that all roads be fully enclosed or secured.

Hours of operation

t. The hours of operation may not commence before 7.00am Monday–Friday, 7.30am Saturday and 11.00am on Sunday; and shall cease no later than at 6.00pm Monday to Saturday and 4.00pm on Sunday; subject to the following limitations and exceptions:

i. The landfill shall be closed on Good Friday, Christmas Day and New Year's Day; and where practicable on other public holidays having regard to the requirements of transfer station operations.

ii. The hours of operation may be extended to no later than 9.00pm (Monday to Saturday) for equipment maintenance works and office work only, except in cases of emergency.

iii. Delivery of refuse to the site shall be limited as follows:

- Deliveries from commercial and industrial users:

Monday–Friday: 7.30am to 5.00pm

Saturday: 7.30am to 2.00pm, but extended to 5.00pm for Transfer Station transporters.

- Deliveries from private users:

Monday–Sunday: 11.00am to 3.00pm

Proviso:

On Saturdays following a week in which there is a public holiday these hours may be extended to 4.00pm for the commercial vehicles of Manukau City Councils domestic refuse contractors.

Site Access

u. Entrance gates across the access to the landfill shall be provided and locked outside the hours of operation of the landfill. In order to provide for circumstances where the hours of operation of the quarry do not coincide with those of the landfill, the quarry operator shall be provided with a key to the entrance gates to enable quarry vehicles to access the quarry during the quarry's hours of operation. For the avoidance of doubt, landfill trucks that are commercial and industrial users may park or "stack" on the area to be retained for stacking of vehicles shown on Figure 10.2.6 during the period shortly before 7.30am, but may not travel beyond that area until 7.30am

Initial Establishment Works

v.

i. The following works shall be undertaken as soon as practicable unless otherwise specified in general accordance with the relevant provisions of the Management Plan:

- Earth embankment construction and screen planting along the Trig Road and Whitford-Maraetai Road frontages which shall be carried out progressively.

ii. In addition to v(i) above the ongoing maintenance of the following works are required:

- Earth embankment construction and screen planting along the Trig Road and Whitford-Maraetai Road frontages

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Fencing of the boundaries of the designated areas shown in Figure 10.2.1 of Chapter 10.2 with a stock-proof fence.

Proviso:

Where areas abutting a boundary of the designated site are intended to be used for landfill purposes then the Council may waive this requirement in respect of the relevant part of the boundary.

iii. The following operational conditions shall apply:

- The retention of the existing access and entrance facilities off Whitford-Maraetai Road as indicated on Figure 10.2.2 of Chapter 10.2
- The retention of areas for stacking of refuse vehicles off public roads as indicated on Figure 10.2.6 of Chapter 10.2
- The continued upgrading of leachate treatment and storage facilities to comply with any relevant resource consents.

Restrictions on Waste

w. Wastes disposed of to the Landfill must comply with the Whitford Landfill Waste Acceptance Criteria as set out in the Landfill Management Plan.

x. Permitted Waste — The categories of refuse permitted to be disposed of at the landfill shall be limited to the following:

- General household, commercial or industrial refuse, but excluding prohibited waste
- Clean fill
- Offal and animal carcasses

Buffering

aa. A buffer zone of 30 metres shall be left between the landfill operations and the following boundaries of the site:

- i. The Whitford-Maraetai Road boundary.
- ii. The Trig Road boundary.
- iii. The boundary with Allotment 30, Maraetai Parish.

The buffer in (i) and (ii) (and in (iii) if required by the Council) shall be screened with planting and bunding and otherwise developed to present an attractive buffer and as far as possible to screen the landfill from nearby dwellings and adjoining roads; and to minimise noise generated by the landfill.

The planting shall be augmented as necessary from time to time with an appropriate mix of indigenous species in order to maintain a vegetative screen at all times throughout the life of the landfill. Details of the development, planting and bunding shall be included in the Management Plans.

Refuse Placement and Cover Explanatory Statement:

Refuse placement and cover is controlled by a regional resource consent.

Noise

cc. Construction noise — construction noise from site development works and building construction on the site shall be as recommended in, and be measured and assessed in accordance with NZ 6803P" 1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work". Construction activities shall be clearly identified in the Management Plan (Construction Manual).

dd. Landfill operations — The corrected noise level (L10) of any landfill operations as measured at or within the notional boundary of any existing dwelling outside the landfill site shall not exceed the following limits:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Monday to Friday	7.00am-6.00pm	55 dBA
Saturday	7.30am-6.00pm	55 dBA
Sunday and all other times		45 dBA

Note:

Notwithstanding the standards in this rule the Landfill Operator should aim at achieving a corrected L10 noise level of 50dBA at the notional boundary of any rural property between 7.00am and 6:00pm from Monday to Saturday, as a matter of good practice.

ee. The notional boundary shall be taken to be a line 20 metres from the facade of any existing dwelling or the legal boundary where this is closer to the dwelling.

ff. Subject to the express provisions of these conditions, noise levels shall be measured and assessed in accordance with the requirements of New Zealand Standards (NZS 6801:1991 Measurement of Sound and NZS 6802:1991 Assessment of Environmental Sound)

gg. The noise shall be measured with a sound level meter complying with the International Standard IEC 651 (1979): Sound Level Meters, Type I,

hh. A certificate from an acoustical engineer shall be given to the Council within seven days of its request and shall demonstrate that the above performance standards are being complied with. In the event of non-compliance, information shall be given to the Council setting out reduction measures to ensure compliance which shall be implemented forthwith.

Gas Emission

ii. A gas control system shall be installed progressively for the collection and burning or utilization of landfill gas so as to mitigate odours from gas. Details of the system shall be included in the Management Plan.

Protection of Ground Water and Containment System

jj. The Landfill Operator shall ensure that all necessary measures are taken to ensure ground water levels on site are controlled or other alternative measures are undertaken so as to provide in either case for the effective containment of leachate.

Nuisances

kk. Odour — Effective procedures to control discharges to air shall be implemented to ensure compliance with the conditions of any air discharge permit granted by the ARC under section 15 of the RMA. In particular but without limitation the following measures shall be undertaken to prevent that occurrence:

- Malodorous special wastes shall be accepted only by prior arrangement and shall be covered immediately upon acceptance. Furthermore, malodorous special waste shall only be accepted when there is sufficient fresh refuse or cleanfill available, and in any event no later than 3.00pm Monday to Friday.
- The collection and treatment of landfill gas shall be undertaken in accordance with the relevant conditions on the Air Discharge Permit granted by the ARC.
- The avoidance as far as practicable of practices which require excavation into old refuse
- The use of cover material as set out in condition (cc)
- The implementation of a policy of liaison with the producers of potentially odorous loads to minimise the occurrence of problems
- The use of odour neutralising or masking sprays.

ll. Litter — Effective procedures shall be implemented by the Landfill Operator to:

- Prevent the escape of litter from the landfill
- Ensure all reasonable steps are taken to keep the roads leading to the landfill and properties adjacent to the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

landfill free from litter

- Promptly clean up any materials dumped in the vicinity of the site entrance, including Trig Road
- Promptly, if so requested by the Council, remove any litter that appears to have come from the landfill operations.

mm. Vermin, Insects, and Birds — Effective control and eradication procedures shall be implemented at the site to minimise the incidence of birds, rodents, insects and any other form of potential nuisance. Full details shall be set out in the Management Plan.

nn. Dust and Mud Control — Effective control procedures including the following shall be implemented:

On site:

- Sealing the entrance road
- Sealing heavily trafficked permanent roads
- Cleaning roads where required
- The use of water sprays and water carts
- Maintain a permanent wheel wash and hose down facilities at an appropriate location

Off site:

- Cleaning of roads leading to the landfill to remove mud emanating from the landfill.

oo. Fires — The intentional burning of refuse and any other material apart from the landfill gas is prohibited. The Landfill Operator shall maintain and operate a fire protection system to the satisfaction of the Council and any other relevant statutory authority having regulatory control over the matter.

Monitoring and Records

pp. The Management Plan shall provide for a monitoring programme which shall be carried out by the Landfill Operator. The programme shall accord with the provisions of the Outline Management Plan on monitoring and provide for the monitoring and testing of the following during the landfill life and the aftercare period:

- Construction and performance of the landfill liner
- Ground and surface water
- Leachate
- Landfill gas
- Noise
- Other things or matters required to be monitored by the Council or the ARC.

Monitoring and testing shall be carried out with such regularity as is required by the conditions of the ARC consents provided that if there are no such consents applicable then the monitoring and testing should be carried out with such regularity as the Council or other relevant statutory regulatory authority requires.

Persons undertaking monitoring and testing for the Landfill Operator shall be approved by the Council or other relevant statutory regulatory authority after consultation with the Peer Review Panel.

The Landfill Operator shall permit the Council to have access to the landfill at all reasonable times for the purpose of any inspection or monitoring the Council might wish to undertake.

qq. The Landfill Operator shall keep detailed records on the following:

- All monitoring activities and results including non-standard results
- Engineering works including civil, mechanical and electrical (which records shall include "as-built" drawings)
- Quantities of refuse (including details according to type) delivered to the site and/ or removed from the site
- Placement of controlled waste disposed of on-site according to type and quantity
- Complaints
- Fires

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Special waste
- Test results
- Pest control
- Emergencies
- The contingency plan and its effectiveness
- Failures or events contrary to these conditions or the Management Plan and the actions taken to alleviate the consequences.

rr. The Landfill Operator shall report to the Peer Review Panel monthly on the matters listed in (rr), and promptly comply with any request by the Panel or the Council or other relevant statutory regulatory authority for copies of the records required by condition (rr).

Completion Works and Closure Report

ss. All structures no longer required for the landfill shall be removed at the earliest practical opportunity on completion of their functions.

Prior to landfilling above RL90m within the shaded area indicated on Figure 10.2.5, ("the Shaded Area"), the Landfill Operator shall submit to the Peer Review Panel a report prepared in accordance with best industry practice that, amongst other things:

- a. Analyses historical settlement at the Landfill,
- b. Predicts the rate of settlement in the shaded area based on historical Landfill settlement patterns, and
- c. Identifies a fill sequence and pre-settlement fill contour plan for the Shaded Area that allows for a degree of over-filling. If the Peer Review Panel accepts the report and advises the Manager — Compliance Enforcement and the Whitford Landfill Community Liaison Committee in writing that it confirms the conclusions reached in that report then a degree of over-filling shall be permitted in the Shaded Area to allow for ongoing settlement.

The degree of over-filling shall relate to the predicted rate of settlement identified in the report and ensure a settled profile in the Shaded Area will be achieved at or about the contour levels shown in Figure 10.2.5 within 5 years of final waste placement.

Each completed Landfill stage shall, as soon as practicable after completion of refuse placement in that stage be capped, topsoiled and landscaped so as to render the site suitable for an end use for public recreational and open space purposes. Subject to ARC permit conditions relating to the clay cap, any trees or shrubs to be planted on the finished Landfill shall be selected and located so that generally they will not grow to a height exceeding RL120 metres.

tt. As part of the Site Landscaping and Post-Closure Aftercare Plans, the Landfill Operator shall include detailed provisions, prepared in consultation with the Council, the Community Committee and owners of adjacent sites to give effect to the above requirements to the satisfaction of the Council.

uu. Capping shall be a minimum of 600mm depth of clay-based material and shall be compacted in at least 2 layers to achieve a permeability generally in the range of 10⁻⁷ to 10⁻⁸m/second, or such alternative equivalent design as the Landfill Operator may propose, to the approval of the Auckland Regional Council, or through a resource consent. Capping in areas where plants are to be located must be sufficient to ensure that root systems do not penetrate the cap.

vv. The preparation of areas of rehabilitated landfill that are to be planted shall be adequate to ensure healthy planting and growth of grass, shrubs or trees or a combination thereof. Details shall be provided in the Management Plan.

ww. A closure report shall be prepared to the satisfaction of the Council and the ARC and submitted no later than 6 months after the last refuse is placed on the landfill site.

Time Frame

The Proposed Auckland Unitary Plan (notified 30 September 2013)

xx. The settled contours of the Landfill shall be within the envelope shown on Figure 10.2.5 (which shall be entitled "Whitford Landfill Post Settlement Contours"). With the exception of final restoration work, all landfilling on the site shall cease by the end of 2041 or such earlier year as specified in an ARC consent unless the period is extended by a resource consent. Final restoration work shall be completed as soon as practicable.

Post-Closure Aftercare

yy. The Landfill Operator shall:

- Be responsible on a continuing basis for:
 - the control of groundwater and stormwater
 - the collection and disposal of leachate and landfill gas, and
 - the post-closure aftercare of the landfillfor a period of 30 years or such longer period as the Council and/or the ARC require.
- Prepare a post closure plan to the satisfaction of the Manager — Compliance Enforcement, at least 10 years before the anticipated closure of the Landfill which will describe the measures that will be taken to prepare the Landfill for its future use. The plan will include an estimate of ground levels, planting/landscaping and final use proposals, estimate of truck numbers, and measures to control gas and leachate.
- Prepare a post closure aftercare completion report to ensure and demonstrate to the satisfaction of the Council, the ARC and any other appropriate regulatory authority that the Landfill is in a state that does not present or have the potential to present any risk or adverse effect on or to the environment, and that there is no need for any further control, treatment or measures of any kind to ensure the continuation of that state.

Post-Closure Aftercare Fund Bond

aaa. Any person or body other than the Council which is involved as Landfill Operator of the landfill shall forthwith upon any written request of the Council enter into and maintain a cash (or equivalent) bond in favour of the Council and the Auckland Regional Council and drawn in terms satisfactory to the bond holders to provide security for early closure, environmental remediation, and post-closure aftercare; and to ensure compliance with these conditions, the conditions of any resource consents and with the Management Plan and to provide security for the Council's costs and charges relating to these conditions.

The bond shall be for an initial sum of up to \$2.1 million, which sum shall be incremented by up to \$3.00 per tonne of refuse deposited at the landfill after 1 April 1994, up to a total sum not exceeding \$12.6 million. Both the bond fund and the increments shall be adjusted annually according to the Works Construction Cost Index, or other suitable alternative approved by the Council's Manager — Resource Consents and Compliance, and the Auckland Regional Council.

The actual amounts of the initial sum, the increments, and the total sum shall be fixed by the Council having regard to the proportionate interest of the relevant person or body in the operation of the Whitford Landfill.

Proviso as to review:

The maximum amounts of the initial sum, the increments and the total sum may be subject to review at the time of any review of the district plan or pursuant to any change to the district plan to ensure that those limits provide adequate security for the above purposes. In the event of any change in any of the above mentioned sums, the bond shall be amended accordingly.

Monitoring Charge

bbb. The Landfill Operator shall pay the Council's reasonable monitoring charges relating to the conditions in this Ordinance as they fall due.

Community Fund

ccc. The landfill operator shall from 1 July 1997 contribute to a Trust established by the Council for the benefit of the local community within the vicinity of the Whitford Landfill.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Such contribution shall be a levy of:

- 50 cents per tonne for each tonne of refuse received from the District of Manukau and
- \$1 per tonne for refuse received from outside the District of Manukau.

These levies shall be reviewed by the Council at five yearly intervals with the first review to be made on 1 July 2011. The review may take into account, among other factors, any changes to the Consumer Price Index, with the Reference Index being the June Quarter of 2006.

Maintenance of Internal Access Roads

ddd. The existing sealed access road within the Joint Landfill/Quarry Area shall be maintained at all times to minimise the potential of body rattle due to uneven road surfaces. This access road shall be inspected on a 6 monthly basis as part of a detailed walkover with an engineer who shall report to the Landfill Community Committee on the works (if any) that may be necessary to minimise the potential for body rattle. The works shall be undertaken by the Landfill Operator in an expeditious manner and to the satisfaction of the Manager — Compliance Enforcement.

Rule 10.2.8.1.2 Whitford Landfill Excavation of Cover Material Designation (Zone 2): Purposes

Subject to the conditions in Rule 10.2.8.1.2 the area shown as Zone 2 in Figure 10.2.1 may be used for the purposes of:

- mineral extraction other than topsoil complying with the provisions of Rule 10.2.8.1.2.1 except that mineral resources extracted from the designated site may not be transported off the designated site.

Rule 10.2.8.1.2.1 Conditions

a. Before commencing any operations the Landfill Operator shall furnish an Excavation Management Plan to the Council which shall include the following information in plan form and in explanatory material:

- i. Demarcation of the area to be excavated
- ii. Existing contours
- iii. Final contours including proposals for the coordination of final levels of adjoining land
- iv. Ultimate drainage of quarried lands
- v. An indication of the period over which quarrying will continue, and of staged development
- vi. Location of buildings and plant
- vii. Provision for the disposal and/or stockpiling of overburden, waste and excavated material, including the areas to be used for stockpiling
- viii. Areas for stockpiling of topsoil
- ix. Provision for screening unsightly features from public view and fencing dangerous or potentially dangerous features
- x. Description of methods to be employed to prevent contamination of air or natural water and to comply with the noise provisions of these conditions
- xi. Provision for the progressive restoration of the site such that the land will be left in a condition suitable for the establishment of those uses to which the land may subsequently be put
- xii. A landscape plan indicating the uses the excavated areas will be put to once the excavation has been completed.

b. The Excavation Management Plan and any amendments shall be subject to the approval of the Council and the ARC (in relation to matters required to be approved by ARC) in consultation with the Peer Review Panel referred to in Condition (j) of Rule 10.2.8.1.1 and when so approved shall be strictly adhered to at all times.

c. No excavation shall occur prior to an Archaeological Management Plan being approved by the Manager — Resource Consents and Compliance. The Archaeological Management Plan shall demonstrate that all necessary authorities under Historic Places Act 1993 have been granted by the Historic Places Trust.

d. No topsoil shall be disposed of by sale or otherwise permanently removed from the site except as may be

The Proposed Auckland Unitary Plan (notified 30 September 2013)

specified in the Excavation Management Plan and approved by the Council.

e. No blasting shall occur on the site.

f. The excavated area and haul roads shall be wetted down on a regular basis during dry/windy conditions to the approval of the Council's Manager — Resource Consents and Compliance to mitigate any dust nuisance.

g. Noise conditions — The corrected noise level (L10) of any excavation operations as measured at or within the notional boundary of any rural dwelling outside the site shall not exceed the following limits:

Monday to Friday	7.00am-6.00pm	55 dBA
Saturday	7.30am-6.00pm	55 dBA
Sundays and all other times		45 dBA

i. The notional boundary shall be taken to be a line 20 metres from the facade of any existing dwelling or the legal boundary where this is closer to the dwelling.

ii. The noise levels shall be measured and assessed in accordance with the requirements of New Zealand Standards (NZS 6801: 1991 Measurement of Sound and NZS 6802:1991 Assessment of Environmental Sound)

iii. The noise shall be measured with a sound level meter complying with the International Standard IEC 651 (1979): Sound Level Meters, Type I.

Rule 10.2.8.1.3 Whitford Landfill Spray Irrigation Designation (Zone 3): Purposes

Subject to the conditions set out for each activity in Rule 10.2.8.1.3 the area shown as Zone 3 in Figure 10.2.1 may be used for the following purposes:

Rule 10.2.8.1.3.1 Conditions

a. The spray irrigation of treated leachate including the construction and operation of a leachate storage pond.

i. The above activities shall be carried out in accordance with Land Use Consent 1360 granted by Manukau City Council and the technical information and plans B11/134 held by the Council.

b. Stormwater management and the construction of treatment facilities, ponds and wetlands.

i. The above activities shall be carried out in compliance with resource consents granted by the ARC dated 5 December 1994 being Permit Nos. 939343, 939345, 939346, and 939348 -939357.

c. Mineral extraction

i. The above activities shall be carried out in compliance with the provisions of Rule 10.2.8.1.2.1

Rule 10.2.8.1.4 Conservation Covenant

There shall be no activities inconsistent with the Conservation Covenant within the area subject to a Conservation Covenant (indicated as "Bush Protection Area" on Figure 10.2.1).

After the Quarry operations and remedial works have ceased the Requiring Authority shall, to the satisfaction of the Manager — Compliance Enforcement, in the Conservation Covenant area implement the weed and pest-animal control programme that has been established and approved in accordance with the Quarry Notice of Requirement, subject to any additions and alterations inserted by the Manager — Compliance Enforcement.

Explanation:

In accordance with condition 2(d) of the Whitford Quarry Notice of Requirement a Conservation Covenant applies to the areas noted and identified as "Bush Protection Area" identified in Figure 10.2.1 in perpetuity to the effect that any native bush in that area shall not be damaged or destroyed ("the Conservation Covenant"). It is to be noted that the area to which the Conservation Covenant applies includes land designated as Landfill that is to be protected in order to mitigate the effects of the Quarry, not the effects of the Landfill.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rule 10.2.8.1.5 Management of Cultural Heritage

The Landfill Management Plan shall incorporate suitable measures for monitoring of and avoiding adverse effects on cultural heritage sites, including but not limited to:

- i. Measures to protect the pa site RI 1/333 to the southwest of the Whitford Quarry extension area from damage from landfilling activities and any encroachment of heavy machinery, in accordance with accepted archaeological practice.
- ii. Involvement of Ngai Tai Umupuia in the identification and management of cultural heritage sites
- iii. Ceasing work in the immediate vicinity if subsurface archaeological evidence is unearthed during construction (e.g. intact shell midden, hangi, storage pits relating to Māori occupation, or cobbled floors, brick or stone foundation, and rubbish pits relating to Maori occupation), and contacting the Manukau City Council, Historic Places Trust and tangata whenua so that appropriate action can be taken. This includes such persons being given an reasonable time to record and recover archaeological features discovered before work commences.
- iv. applying for an Authority to Modify under Section 11 of the Historic Places Act 1991, in addition to any required approval of the Manukau City Council, if modification of an archaeological site is necessary. (Note that this is a legal requirement).
- v. in the event of human remains being uncovered ceasing work in the immediate vicinity and contacting the tangata whenua, Historic Places Trust and NZ Police so that appropriate arrangements can be made.

Rule 10.2.8.1.6 Outline Plan for O'Brien Block

An outline plan for work in the O'Brien block (Part Allotment 35 DP 15031 CT 778/186) in terms of s176A of the Resource Management Act 1991 will be required prior to the commencement of work. The plan shall include but not be limited to information about the depth of excavations for cover material, a plan of the excavation, proposals for protecting slope stability adjacent to the pa site and the covenanted area.

Note:

That if excavation is proposed on the O'Brien Block, including to the east of the Hog Hill Stream, a resource consent will be needed from the Auckland Regional Council.

Rule 10.2.8.1.7 Coordination between the Quarry and The Landfill

Appropriate procedures shall be incorporated into the Landfill Management Plan to deal with coordination between the Quarry and the Landfill over issues including but not limited to, stormwater, noise and dust, and the Landfill Manager or other person responsible for the day to day operating of the Landfill, will be the first point of contact.

Rule 10.2.8.1.8 Height of Existing Water Tank Ridge

Landfill activities shall not lower the height of the existing water tank ridge / saddle immediately south of Contour Plan U (the area to be defined by a survey of the land undertaken in consultation with the owners of the property at 382 Ara Kotinga Road, Whitford, within 6 months of the designation being confirmed). Additional screen planting shall be undertaken along this saddle in consultation with the owner of the property at 382 Ara Kotinga Road, Whitford, within 24 months of the designation being confirmed.

Designation Number	613
Requiring Authority	Auckland Council
Location	128 Ormiston Road
Rollover Designation	Yes
Legacy Reference	Designation 306, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Stormwater Management Area for the purpose of protecting the performance of the stream and minimise the risk of flooding to properties.

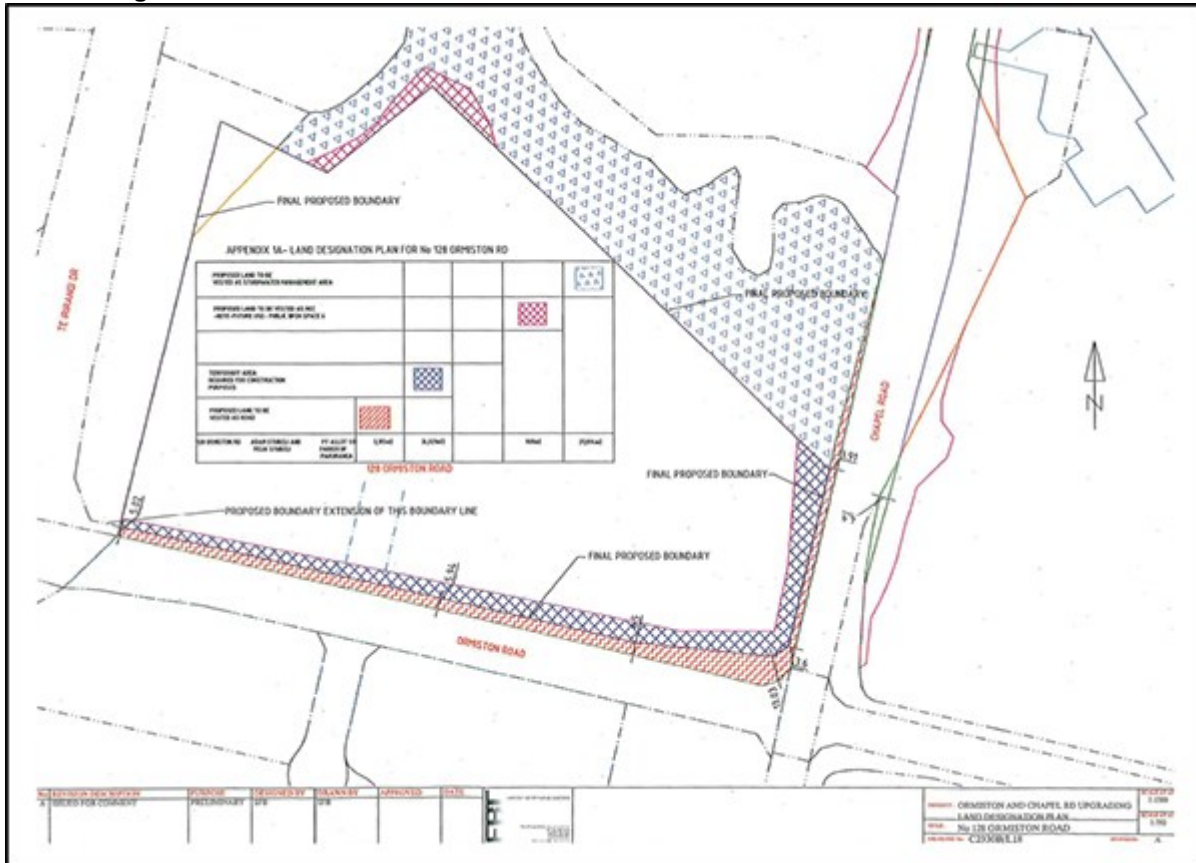

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The scope and extent of the works envisaged within the designation shall be in accordance with the Notice of Requirement and the plans submitted with the Notice of Requirement (identified as Council reference Proposal 37431) and subject to any modification required to comply with the conditions set out below.
2. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works.

616 Awhitu Regional Park

Designation Number	616
Requiring Authority	Auckland Council
Location	216 Brook Road, Waiuku
Rollover Designation	Yes
Legacy Designation	Designations 99 and 99A, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Regional park - for recreational use (including the ongoing operation and maintenance of trails and visitor infrastructure for informal outdoor recreation activities) and for the conservation of natural and cultural values.

Conditions

General

1. Any works are to be undertaken in accordance with either the approved Regional Parks Management Plan (2010) or any subsequent management plan.
2. Before any works, including new buildings, are undertaken an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Council unless the works are exempt, under

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Condition 3, from requiring an outline plan of works. The Outline Plan(s) of Works shall show those matters required by Section 176A of the Act and those matters specified in the following conditions (where relevant). All work shall be undertaken in accordance with the Outline Plan(s).

3. The following works will be exempt from an outline plan of works, except where the works involve a scheduled heritage place, pursuant to section 176A (2) of the Resource Management Act 1991:

Development and maintenance of park infrastructure		Nature of works
Tracks	Construction and maintenance of tracks and trails in a manner that prevents erosion and/or avoids sensitive natural and cultural features and sites	Construction and maintenance of tracks and trails up to 1.5m in width, including the construction of track structures, such as directional signs, information signs, safety barriers, foot-bridges, steps, board walks and rafts, and the maintenance of existing tracks involving: <ul style="list-style-type: none"> i. Water Tables and track drainage ii. Track surfaces iii. Track structures iv. Modification of vegetation up to 1m from the edge of the track
Buildings, structures and utility services, including drainage systems	Construction and maintenance of minor recreational structures and utility services	The construction of utility services and minor recreational structures, such as notice boards, information kiosks, signs, picnic tables, styles, entrance gates and shade shelters and toilet blocks up to 60m2 in area.
	Maintenance, repairs and minor alterations to buildings, structures and utility services	
Car parking and roads	Construction and maintenance identified in an approved management plan and minor alterations to existing car parks and roads	Works associated with approved car parking areas and access roads, including the modification of vegetation up to 1m from the edge of the car park or road, or within the car park for safety reasons
Farming, including farm woodlots	Construction and maintenance of farming structures and roads	Works associated with operating and maintaining existing farm operations, including management livestock fencing and the fencing of conservation and cultural heritage sites, and livestock management fences and structures, such as stockyards
Vegetation	Management of vegetation for specified reasons	Vegetation management involved in: <ul style="list-style-type: none"> i. Removal of non-native and non-scheduled plants ii. The development of approved works iii. The maintenance of view shafts identified in the Regional Parks Management Plan iv. Management of farm woodlots, including their harvest

Note:

This condition does not prevent the use of the land for the purpose of Regional Park.

Cultural / Heritage / Archaeological

4. Where any works or development involve the demolition of, or alterations or additions to a scheduled historic heritage place (item) an outline plan of works is required. The following shall be submitted with the outline plan of works:

a. An assessment of the effects on the historic heritage values of the place; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. A consideration of alternative methods and/or appropriate mitigation to prevent or avoid damage, loss or destruction of the values of the historic heritage place

Note:

For the avoidance of doubt, this condition does not prevent the use of the land for park purposes, but is to conserve and protect the recognised natural and cultural values that significantly contribute to the park.

Exemptions:

Condition 4 will not apply in the following circumstances:

- i. In respect of buildings or structures, the redecoration, repair and/or insignificant alteration of any existing fabric or detailing carried out in a manner and design and with materials similar in appearance to those originally used, which does not detract from those features for which the place has been scheduled;
- ii. Any routine maintenance which does not destroy, compromise, damage or impair the heritage values of the scheduled place; or
- iii. Where there is a conservation plan or similar plan that has been prepared for the management of the scheduled historic heritage place and the proposed new works are in accordance with this conservation plan. The conservation plan or similar plan may be prepared as a document supplementing the approved Regional Parks Management Plan, prepared in terms of section 83 of the Local Government Act 2002, but must include an assessment of the historic heritage values of the place, relevant management policies and objectives, and a specific management plan and a monitoring regime.

Transport

4. An Integrated Transport Assessment shall be prepared and accompany any Outline Plan of Works which results in:

- a. Predicted vehicle movements to and from the park exceeding 100 vehicle movements per hour (excluding events).

The Integrated Transport Assessment (ITA) report shall be produced by a suitably qualified traffic engineer and/or transportation planner to the satisfaction of Auckland Transport, Manager of Road Corridor Operations. The ITA shall give particular consideration to the following matters:

- i. The effects on the surrounding public road network arising from parking usage, access, loading, traffic generation in the park, including addressing any real or potential road safety implications;
- ii. Pedestrian accessibility to the site and the need for any infrastructure to ensure safe crossing points are provided for including provision for cyclists and horse riding if appropriate);
- iii. Where passing bays are proposed on any road which is only wide enough for one way traffic; and
- iv. Public transport accessibility, including tourist buses and campervan, particularly onsite manoeuvring.

Parking and Access

5. The following works related to new roading and/or additional parking shall be constructed to the satisfaction of council:

- i. The first 20m of access from any sealed public road shall be appropriately sealed with all-weather dust free surface; and
- ii. Parking and loading areas immediately adjoining a public road shall be designed and constructed in accordance with AS/NZS 2890.1:2004 standards or any subsequent revisions.

Advice Notes

1. The Requiring Authority and operational staff are encouraged to seek advice from council's Heritage Unit prior to undertaking the exemptions to Condition 4 in order to confirm an outline plan is not required.

2. Work affecting both recorded and unrecorded pre-1900 archaeological sites (including surface and sub-surface marine and terrestrial deposits, building or structures) is subject to an authority under the Historic Places Act 1993. Any activity that may modify, damage or destroy an archaeological site requires an authority

The Proposed Auckland Unitary Plan (notified 30 September 2013)

from the New Zealand Historic Places Trust (NZHPT) in order for the work to proceed lawfully. If an unrecorded archaeological site is discovered while undertaking work, work must cease and the NZHPT advised of the discovery. The NZHPT will inform the designating authority of the protocol, which may require obtaining a retrospective authority to modify. In addition to advising the NZHPT, Council's Heritage Unit shall be advised of the discovery.

3. Examples of evidence of archaeological sites include (but are not limited to) burnt and fire cracked stone, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials.

4. The Regional Park Management Plan is prepared in accordance with Section 83 of the Local Government Act 2002 and, where appropriate, Section 41 of the Reserves Act 1977. Public consultation is required at the time of preparing or amending a management plan or development plan for a Regional Park.

620 Whitford Quarry

Designation Number	620
Requiring Authority	Auckland Council
Location	401 Trig Road, Whitford
Rollover Designation	Yes
Legacy Reference	Designation 233, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Whitford Quarry.

Joint Landfill/Quarry Area — Explanatory Statement

As well as being used for landfill purposes, the Joint Landfill/Quarry Area is also used for the purpose of stockpiles, water reticulation and treatment systems, access for vehicles and minor buildings.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Introduction

I. Any reference in these conditions to a specified officer of the council includes an officer and/or a person authorised by the City Manager to act in the place of the specified officer, being an officer and/or a person having experience, professional competency and responsibility, as appropriate, in respect to the matters concerned.

II. Any reference in these conditions to the term "Quarry Operator" means the council in its capacity as Requiring Authority, and includes any person or body that is operating the quarry on behalf of the council, or as or on behalf of any successor to the council in its capacity as Requiring Authority or as quarry owner.

III. Point of Contact. The Landfill and Quarry operators have agreed to identify a single nominated person who shall be the key point of contact for members of the community and/or Council officers, to contact at all times during normal working hours. The initial point of contact will be the Landfill Site Manager, but may change from time to time following consultation between the Landfill and the Quarry operators and the community. The person shall be available during normal working hours and their name shall be made known through the regular Quarry and Landfill Community Committee meetings and to the Chairperson of the Whitford Residents and Ratepayers Association.

a. Quarry Management Plan (QMP)

I. The Whitford Quarry shall be operated in accordance with the latest version of the Whitford Quarry Management Plan as approved by the council. The Plan shall include the following information in plan form and in explanatory material and any other additional information requested by the Manager Southern Resource Consents and Compliance;

- i. Demarcation of areas to be excavated;
- ii. Areas to be used for the disposal and/or stockpiling of overburden, waste and excavated material, including areas to be used for stockpiling;
- iii. Areas for stockpiling of topsoil;
- iv. Location of built structures including buildings and crusher;
- v. Proposals for the co-ordination of final levels of adjoining land;
- vi. The ultimate drainage of quarried lands;
- vii. An indication of the period over which quarrying will continue, and of staged development;
- viii. An Operations Manual containing the following:
 - Management of air pollution
 - The Noise Management Plan (NMP)
 - Stormwater management
 - Leachate monitoring and management
 - Coordination procedures with the Landfill Site Manager in mitigating the above
 - Contingency plans
 - Emergency procedures
- ix. Reference as appropriate to:
 - Relevant parts of the Assessment of Environmental Effects dated 16 September 2005, noted by Council as P28899 and lodged in support of the Notice of Requirements with specific reference to Volume 3, Figure Q5 entitled 'Quarry Management Plan', noted by Council as 22293/206-FH05 and dated June 2005, which is to be attached to the Quarry Management Plan;
 - Relevant evidence lodged in support of the Notice of Requirement at the Commissioners Joint Hearing in February and March 2006, and the Quarry Management Plan dated 5 December 2000 as appropriate.
- x. Specific reference to the need for good quarrying practice to minimise visual impact.
- xi. A section addressing monitoring, that will include all records, analysis and reporting requirements, including reporting to the Whitford Quarry Community Committee;
- xii. Specific reference to the seeding of the overburden batter areas as proposed through the evidence lodged in support of the Notice of Requirement.
- xiii. Copies of the resource consents relevant to the quarry operations, with specific reference to the consent

The Proposed Auckland Unitary Plan (notified 30 September 2013)

conditions in each relevant section of the Quarry Management Plan;

xiv. A section addressing quarry management, that will specify the roles of staff employed at the site;

xv. Separate and identifiable sections addressing rehabilitation and slope stability, with specific reference to conditions 2(o) and (t) of this Designation;

xvi. Reference to other legislation and statutory approvals relevant to the environmental compliance of operations at the site.

xvii. A requirement for:

- The Requiring Authority to identify its quarry boundaries with identifiable markers and monitor these on a six monthly basis to ensure quarrying operations do not go beyond those boundaries;
- A plan to be attached to the Quarry Management Plan to clearly show the quarry boundaries;

xviii. A section addressing erosion and sedimentation management.

The Quarry Management Plan shall also record the following:

a. That in order to further mitigate the effects of traffic on the environment, the Requiring Authority, in consultation with the Landfill Site Manager and the Quarry Operator, shall use its best endeavours to utilise the empty quarry trucks travelling to the site for the transportation of cover material, in order to minimise the total number of heavy vehicles travelling on Whitford Roads. The Requiring Authority shall inform the Whitford Quarry Community Committee every 6 months on the actions it has taken to achieve this objective. These details will be included within the Quarry Management Plan;

b That all trucks shall enter and leave the Quarry site via the joint Quarry/Landfill access road. The upper Quarry track to Trig Road shall be secured by a locked gate and shall be used in emergencies only. The gate shall be fitted with a notice to the satisfaction of the Manager Southern Resource Consents and Compliance bearing the words "Quarry — Emergency Use Only" or words to like effect;

c. That any native bush contained within the areas of unformed road identified on Figure 5.9 attached to this designation will not be damaged or destroyed unless such damage or destruction is necessary to facilitate the formation of the road.

The QMP shall be submitted by the Requiring Authority to the Manager Southern Resource Consents and Compliance for approval. The approved QMP, subject to any additions and alterations inserted by the Manager Southern Resource Consents and Compliance, shall be implemented by the Requiring Authority to the satisfaction of the Manager Southern Resource Consents and Compliance.

II. The Quarry Management Plan shall be reviewed every 5 years from the date the designation is confirmed, except that this may be postponed by the Manager Southern Resource Consents and Compliance where the QMP has been subject to a requirement or a plan change or District Plan review within the previous 5 years.

III. Amendments shall also be made to the QMP from time to time to incorporate:

i. Requirements of the Council to ensure more effective monitoring of the quarry operation and compliance with these conditions.

ii. Requirements of the Council (regional consents) in relation to matters it is required to approve by legislation.

iii. Changes sought by the Quarry Operator to give better effect to these conditions which have the approval of the Council where appropriate.

vi. The requirements of any applicable legislative enactment.

IV. The Quarry Operator shall, when seeking approval to make changes to the QMP, provide details of the consultation it has undertaken with the Quarry Community Committee. The consultation shall be to the satisfaction of the Manager Southern Resource Consents and Compliance before approval is given to any changes to the QMP.

V. Upon completion of any amendments to the QMP, copies shall be provided to the Manager — Resource Consents and Compliance, the ARC, the chair of the Quarry Community Committee and the chair of the Whitford Residents and Ratepayers Association.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. Site Rehabilitation

Upon the completion of any stage of the Quarry development, the Requiring Authority shall undertake rehabilitation planting in accordance with condition (o) and shall implement an adequate erosion standard as confirmed by the Requiring Authority's ecologist/arborist. These works shall be carried out within the planting season immediately following the cessation of the quarrying activities.

c. Co-ordination between the Quarry and the Landfill

i. Stormwater Run-off

All construction and excavation activity shall be undertaken in a manner that ensures stormwater run-off from any activity within the Quarry drains into an approved stormwater management system controlled by the Landfill Operator.

The Requiring Authority shall establish procedures, to be contained in the Combined Operations Agreement or other similar document, that in the event of any unplanned discharge of sediment, the Quarry Operator shall immediately contact the Landfill Site Manager and together they shall take effective action to ensure sediment flow into the Waikopua Estuary complies with the relevant Auckland Regional Council Permits granted for the Whitford Quarry and the Whitford Landfill. The action taken and its effectiveness (including any monitoring) shall be promptly communicated to the Manager Southern Resource Consents and Compliance and the Chairperson of the Whitford Quarry Community Committee.

ii. Noise and Air Pollution

The Requiring Authority shall establish procedures, to be contained in the Combined Operations Agreement or other similar document, that in achieving compliance with the noise and air pollution controls, the Quarry Operator shall, where necessary, ensure co-ordination with any actions undertaken by the Landfill Site Manager.

d. Conservation Covenant

The Requiring Authority shall take immediate steps to covenant the areas notated and identified as "Bush Protection Area" identified on Figure 5.9 attached to this designation in perpetuity to the effect that it shall not damage or destroy any native bush in that area ("the Conservation Covenant").

In so far as the areas notated and identified as "Bush Protection Area" in Figure 5.9 include land that is unformed road, the covenant shall only apply to that unformed road as and from any point in time at which that road is stopped, provided that this condition shall not impose any obligation on the Requiring Authority or the Council to stop the road. The Covenant so entered into by the Requiring Authority shall be registered as an encumbrance on the title to the land so as to run with the land in perpetuity and bind successive owners. The encumbrance shall be prepared by the Council's solicitors and the reasonable expense thereof shall be met by the Requiring Authority.

The 'Bush Protection Area' to the south of the above parcel of land is covered by a similar condition applying to the Landfill designation and is identified as 'Bush Protection Area/Landfill Zone 2' on Figure 5.9 attached.

The boundaries of the Conservation Covenant shall be determined by survey and to the satisfaction of, the Manager Southern Resource Consents and Compliance and shall be finalised in general accordance with, but having no less an area than that depicted on Figure 5.9. Notwithstanding the Quarry designation over part of the area identified as 'Bush Protection Area' on Figure 5.9 attached to this designation, the Requiring Authority shall not damage or destroy any native bush contained within those areas.

On Figure 5.9, some 1.5 ha. of land is outlined as 'Back-Batter' area. When this area has been excavated and replanted in accordance with Condition (o), the Requiring Authority shall enter into a binding Conservation Covenant prepared in accordance with the provisions specified above in order to protect the bush.

e. Tonnage and Access

The Proposed Auckland Unitary Plan (notified 30 September 2013)

To mitigate the effects of traffic on the environment, the maximum quantity of rock transported from the Whitford Quarry onto Whitford–Maraetai Road shall be limited to 500,000 tonnes per year averaged over any five year period. Trucks operating from the Quarry shall be restricted to a maximum of two hundred (200) trucks per day and a 6 monthly average of one hundred (100) trucks per day. The Quarry operator shall maintain a register on site showing the daily tonnage and number of trucks with the register being open for inspection by Council officers during the hours of operation.

The access road shall be located within the Joint Landfill/Quarry Area outlined on Figure 5.9. The existing sealed access road shall be maintained at all times to minimise the potential of body rattle due to uneven road surfaces. The access road shall be inspected on a six monthly basis as part of the detailed quarry walkover with an engineer who shall report to the Quarry Community Committee on the works (if any) that maybe necessary to minimise the potential for body rattle. The works shall be undertaken by the Quarry Operator in an expeditious manner and to the satisfaction of the Manager Southern Resource Consents and Compliance.

f. Noise from Blasting

i. The noise created by the use of explosives shall not exceed either a peak overall sound pressure level of 128dB (i.e a peak pressure of 0.05 kPa above atmospheric pressure) or alternatively, a peak sound pressure level of 122 dBC. The measurement shall be taken in either case at or within the notional boundary of the nearest affected occupied building existing at the time of public notification of the former Manukau City District Plan in 1995 and excluding any building used and occupied as part of a minerals extraction operation.

ii. All blasting shall be restricted to between 7.00am and 5.00pm (0700–1700), Monday to Friday inclusive, and between 7.30am and 5.00pm (0730–1700) on Saturdays except in emergencies.

g. Vibration

Vibration levels within the notional boundary of any dwelling on land zoned Rural existing as at the date the designation is confirmed, other than those properties owned or used by Auckland Council, shall comply with the recommended criteria given in ISO 2631:1989 and DIN 4150, provided that these levels are not exceeded more than 5% of the total number of blasts over a period of 12 months and do not exceed 10 mm/s at any time.

The Quarry operator shall undertake vibration and air overpressure measurements as the Council may from time to time require and maintain and make available for inspection such records of measurements as may have been made to ascertain compliance with the above controls. The frequency of blast monitoring, monitoring location(s), monitoring equipment and records of information shall be undertaken in accordance with the Quarry Management Plan.

h. Noise

i. The following noise requirements shall apply to the quarrying activities at all times:

The noise level (L10) as measured within the notional boundary of any rural dwelling shall not exceed the following limits:

Monday to Friday between the hours of 0700–1800 and Saturday between the hours of 0730–1800	55 dBA
At all other times including Sundays and public holidays	45 dBA

- The noise levels shall be measured in accordance with the requirements of NZS 6801:1991 Methods of Measuring Noise and assessed in accordance with NZS 6802:1991 Assessment of Noise in the Environment.
- The noise shall be measured with a sound level meter complying with the International Standard IEC 651(1979): Sound Level Meters Type I.

Note:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The notional boundary is a line 20m from the facade of any rural dwelling, or the legal boundary where this is closer to the dwelling.

ii. The Quarry Operator shall implement the Noise Management Plan ("NMP") dated May 2003 for the purpose of minimising noise adversely affecting any rural dwellings which may arise from the day to day operation of the quarry in terms of section 16 of the Resource Management Act 1991. A copy of the NMP shall be retained at the quarry and the Manager Southern Resource Consents and Compliance and the chair of the Quarry Community Committee shall each be provided with a copy by the Quarry Operator.

iii. The NMP shall be reviewed by the Quarry Operator annually or when significant changes to the management of the quarry are proposed which warrant its review.

During any review the Quarry Operator shall consult with the Quarry Community Committee and the Manager Southern Resource Consents and Compliance about the review and any proposed consequential amendments to the NMP. Upon completion of any such review, the Manager Southern Resource Consents and Compliance and the chair of the Quarry Community Committee shall each be provided with an updated copy of the NMP by the Quarry Operator.

vi. The NMP shall record that:

- i. the NMP applies in respect of quarry activities authorised by Designation 620 in the Auckland Council Unitary Plan;
- ii. the parties to RMA 1566/98 acknowledge that the NMP and these conditions relating to the NMP should not be used as a precedent in respect of any other situation or land use authorisation.

v. The Quarry Operator shall maintain and keep a register of all complaints received about quarry noise. The register shall, where practical, record the following information:

- Time and date of complaint;
- Nature of complaint;
- If practical, resulting noise level;
- Action taken;
- Weather conditions at time of complaint; and
- If there was any follow up with person complaining.

The Quarry Operator shall provide copies of the entries in the register to the Manager Southern Resource Consents and Compliance forthwith upon request.

vi. Following receipt by the Council of any complaint, which in the opinion of the Manager Southern Resource Consents and Compliance may be justified, the Quarry Operator shall, if directed in writing by the Manager Southern Resource Consents and Compliance, commission a suitably trained person to undertake sufficient monitoring to demonstrate whether or not there is compliance with the above noise levels and/or the NMP; and outlining any reduction measures or remedial work that may be required to ensure compliance. Such a report shall be provided within 14 days of a request by the Council weather permitting, or within such further time as the Manager Southern Resource Consents and Compliance may approve in writing.

i. Hours of Operation

The hours of operation for the quarrying activity shall be as follows:

Hours of work:	0700–1800	Monday to Friday
	0700–1700	Saturday
	0730–1700	Sunday (emergencies only)
Hours of load-out:	0700–1800	Monday to Friday

The Proposed Auckland Unitary Plan (notified 30 September 2013)

	0700–1700	Saturday
	0730–1500	Sunday (emergencies only)

The quarry may load out to 21:00 hours Monday to Saturday up to 20 days per annum. Each such occurrence shall be reported to the Quarry Community Committee. Where it is intended to load out up to 21:00 hours every effort should be undertaken to advise representatives of the community, eg the Whitford Residents & Ratepayers Association of the extended hours of the load-out. Administrative functions and equipment maintenance may commence at 6.30am Monday to Saturday.

For the purpose of this condition "load-out" means the loading of trucks with quarried material and the subsequent departure of those trucks from the quarry.

j. Community Committee

The Quarry Operator shall:

- i. Consult with tangata whenua, representatives of local residents (Including the Whitford Residents and Ratepayers Association) and industry representative to facilitate the establishment of a Community Committee (or a Joint Committee for the Quarry and Whitford Landfill) as soon as practicable comprising up to five representatives of those groups, a representative of the Quarry Operator and up to two representatives of the Council.
- ii. Ensure, as far as practicable, that those living in close proximity to the landfill and those living in the broader Whitford Community are represented on the Committee.
- iii. Discuss matters relevant to the quarry including, but without limitation, concerns and complaints of residents and aspects of non compliance and ways of alleviating them.
- iv. Disseminate information to the Committee about the quarry and about any future proposals for the quarry.
- v. Ensure its representative attends meetings of the Committee which should be held on a quarterly basis or more frequently if requested by the Council's Manager Southern Resource Consents and Compliance.
- vi. Ensure its representative attend any mediation held at the request of the Councils representative in the event of disagreement between the Quarry Operator and members of the Committee over matters relating to the quarry.

k. Miscellaneous

The Quarry Operator must obtain all necessary permission from the appropriate controlling authorities for all works associated with the development not covered by the designation.

l. Topsoil

No topsoil shall be disposed of by sale or otherwise permanently removed from the site except as may be specified in the Quarry Management Plan and approved by the Council.

m. Discharges to Air

(Refer to ARC Consent No. 30897)

n. Depth of Quarrying

The quarrying activity within the designated area shall not extend below the RL45 level.

o. Ecological Mitigation of the Quarry Extension and the Back-Batter Area

Prior to the clearance of vegetation within the additional 3.6ha of land designated for quarrying area or within 6 months of the designation being confirmed, whichever occurs first, an ecological mitigation plan shall be prepared by suitably qualified and experienced ecologists and submitted by the Requiring Authority to the Manager Southern Resource Consents and Compliance. The approved plan, subject to any additions and alterations inserted by the Manager, shall be implemented by the Requiring Authority to the satisfaction of the Manager Southern Resource Consents and Compliance.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Measures addressed by the plan shall include, but not be limited to:

- i. A comprehensive survey of the wildlife in the habitat.
- ii. The preparation of a revegetation plan in order to establish adequate growing conditions for the replacement planting of suitable native species on the 1.5ha "back batter" area as illustrated on Figure 5.9. The revegetation of the back batter area is to include enrichment planting of a mix of taraire and puriri saplings numbering no less than 160 individual trees to partly mitigate for the loss of a similar number of mature food trees associated with the quarry expansion.
- iii. The preparation of a planting programme outlining the number and location of plants to be established on year by year basis and the implementation of a maintenance regime.
- iv. Undertake all vegetation alteration and clearance in accordance with accepted arboricultural practise and with suitable expert supervision. When undertaking the vegetation clearance, the stumps and leaf litter shall be left in situ. The cleared areas shall be covered with the mulched material sourced from the cleared tea-tree. Following this site preparation, specific areas can then be excavated of their overburden.
- v. Undertake the proposed vegetation clearance outside of the Kereru breeding season.
- vi. As far as practicable undertake excavation of the overburden outside of the kereru breeding season in order to reduce noise disturbance on nesting pairs.
- vii. A lizard salvage operation shall be undertaken, under the supervision of a suitably qualified herpetologist prior to the vegetation clearance with the release being into the adjoining forest area. Following the lizard rescue, the mature trees within the quarry extension footprint can be felled so that any uncaptured lizards can escape into the surrounding vegetation. The felled trees shall be left for at least two days prior to mulching or removal. A summary of the lizard salvage report, listing species numbers and locations, shall be forwarded to the Auckland Council and the Biodiversity team - Environmental Services.
- viii. Prior to any such overburden excavation, the top-soil (and composting mulch) in these areas shall be harvested and stored for subsequent use in the revegetation plantings.
- ix. Revegetate all newly created edges with a dense planting of hardy pioneer species. Use the existing shrubby edges as a guide regarding which species to use in this exercise. Maintain these edges for the duration of the quarry, including weed control and replacement of mortalities.
- x. Revegetate the completed back-batter slope with indigenous vegetation as soon as the finished slopes become available. Following establishment of a nursery crop of hardy pioneer species on this back-batter, undertake enrichment planting here, which shall include a mixture of taraire and puriri saplings numbering not less than 160 individual trees
- xi. Construct a low wind fence along the newly created bush edges in order to provide medium-term protection to the habitat interior. A fence with a minimum height of 1.5m shall be provided, reinforced by the planting of fast-growing native shrubs (such as kanuka, mapou and kohuhu) with a mixture of species such as totara to serve as long-term wind protection.
- xii. The Quarry Operator shall plant and the Requiring Authority shall maintain and use its best endeavours to ensure the growth of approximately 1.2 hectares of additional native bush within the area identified as 'Bush Protection Area/Landfill Zone 2' on Figure 5.9, for the purpose of providing an additional food source to the native wood pigeon/kereru (*Hemiphaga novaseelandiae novaseelandiae*). The selection of the plant species, the planting plan and maintenance arrangements will be developed in consultation with the Whitford Quarry Community Committee.

p. Weed and Pest Control Programme — Designated Land and Conservation Covenant

A weed and pest — animal control programme, for both the land designated 'Quarry' and the areas subject to the Conservation Covenant (refer to Condition (d)) shall be submitted by the Requiring Authority to the Manager Southern Resource Consents and Compliance for approval. The approved plan, subject to any additions and alterations inserted by the Manager, shall be implemented by the Requiring Authority to the satisfaction of the Manager Southern Resource Consents and Compliance.

The weed and pest control programme shall include:

- i. A programme that has targets aligned with the council's biosecurity targets This shall include weed control operations on the newly created margins of bush on at least four occasions per year, and an annual pest and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

predator control operation targeting possums, mustelids, rodents and feral cats.

ii. Controlling and maintaining possum levels to below 5% Residual Trap Catch (RTC) within the proposed covenants areas and liaise with the council's Biosecurity section, regarding the most effective methods of pest control,

iii. Eradicate pest plants, as defined and listed in the ARC's (2002) Auckland Regional Pest Management Strategy 2002–2007, including environmental weeds.

iv. Eradicating or excluding goats and stock from within the proposed covenant areas

v. Liaise with the other landowners of the Waikopua Bush (and DOC and Auckland Council bio-security) and attempt to include the entire Waikopua Bush in the weed, pest and predator control operations.

vi. The preparation and implementation of a monitoring programme by suitably qualified and experienced ecologists to assess the implementation of the mitigation works and of the effectiveness of the proposed treatments along the newly created forest margins in terms of minimising the intrusion of edge effects;

vii. Monitor the effectiveness of the weed and pest control programme, including:

- The success of the revegetation of the finished back-batter;
- The success of the weed control and pest-animal control programmes;
- Any effects of the quarry extension on the immediately adjacent bush blocks in terms of water-related stress;
- Any effects of the quarry extension on the immediately adjacent bush blocks in terms of dust-related stress;
- Any effects of the quarry extension on the biota and values of the streams in both the Claude Stream and Hog Hill catchments.

q. Stabilisation of Cultural Heritage Sites

Prior to any earthworks or construction activity within the zone of instability (a 100m radius from the crest of the pa site as delineated on Figure 5.9), or within 6 months of the designation being confirmed, whichever occurs first, the Requiring Authority shall undertake a geotechnical and archaeological investigation of the zone of instability. The investigation shall be undertaken in accordance with the letter from Riley Consultants dated 11 November 2005, in order to determine the remedial measures required to ensure the stabilisation of the pa site and the adjacent land (when used for its intended purpose). The required stabilisation works shall be implemented prior to any earthworks or construction activity commencing in the area identified as being within the zone of instability. The remedial works shall be undertaken to the satisfaction of the Manager — Resource Consents and Compliance,

r. Protection of Cultural Heritage Items

The Quarry Management Plan shall incorporate suitable measures for monitoring and avoiding adverse effects on cultural heritage items, including but not limited to the following:

- i. The protection of the pa site RI I/333 to the southwest of the quarry extension area in accordance with accepted archaeological practice and which is to be protected from damage by quarrying activities and any encroachment of heavy machinery.
- ii. The quarry expansion area shall be field checked for archaeological evidence after vegetation clearance and prior to earthworks.
- iii. The Involvement of Ngai Tai Umupuia in the identification and management of cultural heritage sites.
- iv. If subsurface archaeological evidence should be unearthed during construction (e.g. intact shell midden, hangi, storage pits relating to Māori occupation, or cobbled floors, brick or stone foundation, and rubbish pits relating to 19th century European occupation), work should cease in the immediate vicinity of the remains and the council, Historic Places Trust and tangata whenua should be contacted so that appropriate action can be taken. This includes such persons being given a reasonable time to record and recover archaeological features discovered before work may commence.
- v. If modification of an archaeological site is necessary, an Authority to Modify must be applied for under Section 11 of the Historic Places Act 1993 in addition to any required approval of the council.
- vi. In the event of human remains being uncovered, work shall cease in the immediate vicinity and the tangata whenua, Historic Places Trust and NZ Police should be contacted so that appropriate arrangements can be made.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

s. Annual Survey of Face and Batter Slope Stability

An annual review of face stability shall be undertaken by an engineering geologist to assess defect aspects, and the safety of geological conditions against the model used by Riley Consultants Ltd in their report dated 27 July 2005 and contained in Technical Appendix 2 of Volume Two of the Requirement.

t. Landscape Mitigation

i. Quarry activities shall not lower the height of the existing water tank ridge/saddle (that are to be defined by a survey of the land undertaken in consultation with the owners of the property at 382 Ara Kotinga Rd, Whitford), south of the new stockpile area.

ii. Additional screen planting shall be undertaken to the west of the new stockpile area. Planting shall be undertaken in consultation with the Whitford Quarry Committee within 24 months of this designation being confirmed.

u. Expert Advisory Fund

The Requiring Authority shall pay for the Whitford Quarry Community Committee to engage technical experts to review technical documents and report back to the Committee, to a maximum sum of \$10,000 (CPI adjusted) in any one calendar year.

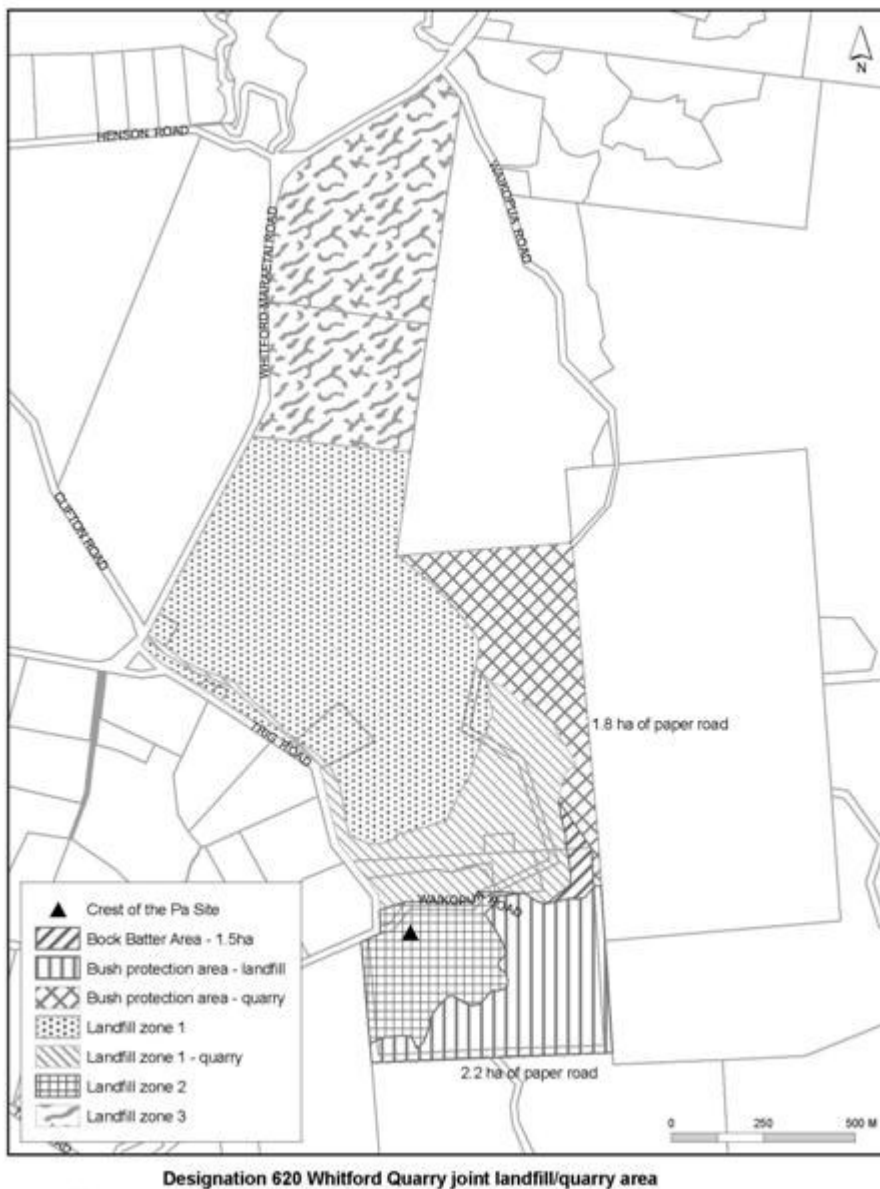

v. Supply of Cover Material

Wherever practicable, cover material shall be supplied to the Whitford Landfill by utilising empty quarry trucks. Details regarding volumes of cover material supplied to the landfill shall be reported to the Whitford Quarry Community Committee on a quarterly basis. For the avoidance of doubt, the truck movements referred to in this condition will be counted as quarry truck movements.

622 Popes Road Stormwater Pond

Designation Number	622
Requiring Authority	Auckland Council
Location	2 and 22 Popes Road, Takanini
Rollover Designation	Yes
Legacy Reference	Designation 47, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Construction, operation and maintenance of a stormwater pond to provide stormwater treatment and disposal.

Conditions

General

1. Any development or redevelopment authorised by this designation is subject to the Outline Plan of Works requirements in section 176A of the Resource Management Act 1991 and shall be carried out in accordance with the conditions of this designation and recommendations in the subsequent Outline Plan of Works.
2. The works to give effect to the designation shall be generally in accordance with the plans and information submitted by the Requiring Authority in support of the Notice of Requirement for construction, operation and maintenance of a stormwater management pond including:
 - a. Designation Plan "Proposed Designation Plan" prepared by Hosken Associates, dated 29/07/09;
 - b. Sub-catchment Plan "Plan of Sub-catchments and Existing Stormwater Drainage" prepared by Fraser Thomas, undated;
 - c. Infrastructure Report "Takanini Structure Plan Area 6 Limited, Infrastructure Report – Plan Change Copy, Private Plan Change Proposal for Takanini Areas 6A and 6B of the Papakura District Plan", prepared by Fraser Thomas, dated March 2009; and
 - d. Geotechnical Report "Proposed Stormwater Pond at Area 6A and 6B Takanini", prepared by Coffey Geotechnics, dated August 2008.
3. The spatial extent of the designation shall be in accordance with the area shown on the designation plan submitted with the Notice of Requirement entitled *Proposed Designation Plan* by Hosken Associates, dated 29/07/09 and shall be illustrated on the planning maps. Upon survey of the site for land purchase, the spatial extent of the designation shall be accurately defined. If the spatial extent of the designation differs, if necessary, the provisions of Section 181 of the Resource Management Act 1991 will apply.
4. In addition to the information required to be provided pursuant to Section 176A of the Resource Management Act 1991, the Requiring Authority shall provide detailed design of the stormwater management pond with the application for the Outline Plan of Works for the development that includes:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. The provision of extended detention and stormwater attenuation for the 50% AEP event, including the provision of peak flow control and discharge to the Papakura Stream for the full range of operating levels in the pond and the range of stream levels within the Papakura Stream to ensure that erosion effects on the Papakura Stream are eliminated or minimised;
- b. An assessment of the effects of discharge from the pond from high intensity storm events, where the base flow in the Papakura Stream is relatively low;
- c. Details of a mechanism or shut off valve system to be installed at the outlet that can be manually activated in the event of a spillage of contaminants within the contributing catchment;
- d. Design of the associated overland flow paths and stormwater network leading to the pond to establish any critical levels on incoming pipes that have a potential impact on pond operational levels;
- e. Details showing that the design of the pond outfall does not interfere with the proposed Watercare watermain to be constructed within the immediate stream banks of the Papakura Stream and that this shall not affect the operating levels of the pond;
- f. Details showing that the water level in the stormwater management pond allows drainage into the Papakura Stream without the need for pumping and allows stormwater from the contributing catchment to drain into the stormwater management pond without causing suspended materials to settle in the stormwater pipes; and
- g. An assessment demonstrating how the design incorporates the Ministry of the Environment guideline recommendations for climate change to year 2090.

5. At the completion of works for the construction of the stormwater management pond, the Requiring Authority shall provide as-built plans to the Auckland Council for approval by the Team Leader Resource Consents: Southern Resource Consenting and Compliance. The as-built plans shall include (but are not limited to):

- a. The surveyed location (to the nearest 0.1m) and level (to the nearest 0.01m) of the treatment devices, with co-ordinates expressed in terms of the New Zealand Map Grid and LINZ datum;
- b. Documentation of any discrepancies between the design plans and the as-built plans;
- c. The location, dimensions and levels (including cross sections and long sections) of the associated major overland flow paths; and
- d. Plans and cross sections of all stormwater management devices, including confirmation of the water quality volume, storage volumes and levels of any outflow control structure. The plans and cross sections shall provide sufficient details of the stormwater management devices to enable them to be compared to the design plans.

Earthworks

6. In addition to the information required to be provided pursuant to section 176A of the RMA, the Requiring Authority shall provide the following information with the application for the Outline Plan of Works for the development of the stormwater management pond to address earthworks:

- a. Confirmation of the location for stockpiling and disposal of excess fill and appropriate erosion and sediment controls to control runoff and mitigate and prevent soil erosion and sediment loss from stockpiling the excess fill;
- b. Conceptual erosion and sediment control plans and methodologies to control runoff, mitigate and prevent soil erosion and sediment loss; and
- c. A comprehensive dust management and mitigation plan to minimise dust generation and dispersal.

Noise

7. Noise from construction activity shall not exceed the limits recommended in, and shall be measured and assessed in accordance with, New Zealand Standard NZS 6803: "Acoustics- Construction Noise".

Traffic

8. The temporary vehicle access shall be constructed in accordance with the layout shown on the designation plan submitted with the Notice of Requirement entitled *Proposed Designation Plan* by Hosken Associates, dated 29/07/09, and the engineering and construction standards set out in the relevant Auckland Council District Plan and Development Code.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9. The temporary vehicle access shall be removed when the internal road network is constructed.

10. In addition to the information required to be provided pursuant to Section 176A of the Resource Management Act 1991, the Requiring Authority shall provide a Traffic Management Plan to the Auckland Council Team Leader Resource Consents: Southern Resource Consenting and Compliance for construction traffic associated with the development of the stormwater management pond. The Traffic Management Plan shall include (but is not limited to) methods for managing the effects of construction traffic to and within the site and shall include information regarding the frequency, number of movements and proposed routes.

Landscaping

11. Landscaping of the pond edges and requirement area shall be provided. A detailed landscape management plan showing details of plant species, spacing and planting program shall be submitted with the application for the Outline Plan of Works for the development of the stormwater management pond. The landscape management plan shall be to the satisfaction of the Auckland Council and shall:

- a. Be in general accordance with the Takanini Sub-precinct 1 - Landscape Concept Overlay Plan, Existing Vegetation Plan, Takanini Structure Plan Area 6 (or equivalent Unitary Plan provision);
- b. Be in general accordance with recommendations 6 and 12 of the Cultural Values Assessment, Prepared by Te Roopu Kaitiaki O Papakura, dated December 2007.
- c. Include provisions and methods to ensure landscaping works do not interfere with overland flow paths.

12. The Landscape Management Plan shall be implemented within the first planting season following the completion of works on the site, or the operation of the stormwater management pond, whichever is sooner.

Maintenance and Monitoring

13. An Operational Maintenance Manual shall be prepared for the designation area and shall be submitted with the application for the Outline Plan of Works for the development of the stormwater management pond. The Operational Maintenance Manual shall be to the satisfaction of the Auckland Council. All maintenance works shall be undertaken in accordance with this manual. The Operational Maintenance Manual shall address the following maintenance requirements:

- a. Removal of litter, debris or pollution affecting the pond and outlet structures or causing blockages;
- b. Removal of sediment from the forebay areas as required (approximately once every 3-5 years);
- c. Removal of sediment from the base of the pond on an infrequent basis (approximately once every 20-30 years);
- d. Drying and testing of removed sediment on site and transportation of sediment to an approved landfill;
- e. Aesthetic maintenance (for example landscaping, grass mowing, tree pruning, litter control, erosion monitoring); and
- f. The management of pests (for example Mosquitoes and Flies).

Heritage

14. Where evidence of an archaeological site, taonga, koiwi waahi tapu, or artefacts is discovered whilst undertaking site works, works shall cease immediately and the Council, Tangata Whenua and the New Zealand Historic Places Trust shall be notified.

Construction

15. Construction activity shall only occur between the hours of 8.00 am and 5.00pm Monday to Friday excluding public holidays.

Designation 622 - Proposed Designation Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Auckland International Airport Ltd

Designation Schedule - Auckland International Airport Ltd

Number	Purpose	Location
1100	Activities for the operation of Auckland International Airport ...	George Bolt Memorial Drive, Mangere
1101	Activities for the operation of Auckland International Airport ...	200 and 260 Ihumatao Road, Mangere
1102	Auckland International Airport, specification for obstacle limitation surfaces, runway end protection areas and restrictions non-aeronautical ground lights	Vicinity of Auckland International Airport

1100 Auckland International Airport

Designation Number	1100
Requiring Authority	Auckland International Airport Limited
Location	George Bolt Memorial Drive, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 231, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The land to which this designation applies ("the designated area") may be used for activities for the operation of Auckland International Airport ("the Airport") subject to the conditions set out below, including but not limited to:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- aircraft operations,
- runways,
- taxiways and other aircraft movement areas,
- aprons,
- terminals,
- rescue facilities,
- navigation and safety aids,
- maintenance and servicing facilities including the testing of aircraft engines (in situ or otherwise),
- catering facilities,
- freight facilities,
- quarantine and incineration facilities,
- fuelling facilities including Joint User Hydrant Installations,
- stormwater facilities,
- roads,
- monitoring activities,
- site investigation activities,
- vehicle parking and storage,
- rental vehicle activities,
- vehicle valet activities,
- public transport facilities,
- landscaping,
- flags,
- signs,
- the relocation of heritage buildings from elsewhere within this Designation and the subsequent restoration and use of those buildings for purposes compatible with their heritage values;
- offices associated with any of the foregoing activities; and
- all related construction and earthwork activities.

Conditions

1. For the purposes of this designation, unless the context otherwise requires:

“Activity Sensitive to Aircraft Noise” or “ASAN” means any dwelling, marae complex, papakāinga, retirement village, supported residential care, educational facilities, care centres, hospitals and healthcare facilities with an overnight stay facility.

“Aircraft Operations” means:

- the landing and take-off of any aircraft at the Airport;
- the taxiing of aircraft associated with landing and take-off and other surface movements of aircraft for the purpose of taking an aircraft from one part of the Airport to another;
- aircraft flying along any Flight Path (refer definition below).

“Aircraft Noise Notification Area” or “ANNA” is an area that is outside the HANA and MANA and that will have future noise levels between 55 dB L_{dn} and 60 dB L_{dn}; and is shown in green on Figure 3 (Aircraft Noise Areas) of this designation.

“Aircraft Noise Community Consultative Group” or “ANCCG” is that group referred to in Condition 9(a).

“Airport” means Auckland International Airport

“Air Shows” for the purpose of Condition 8 means a sequence of unscheduled Aircraft Operations of a maximum of three days duration, occurring at a frequency not exceeding one per year, which is organised to provide a spectacle for members of the public.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

“Annual Aircraft Noise Contour” or **“AANC”** means an Ldn contour published by AIAL annually as a prediction of noise from Aircraft Operations for the following 12 months (excluding noise excepted from the limit in Conditions 5 and 6, by virtue of Condition 8 of this designation). The prediction is based on monitoring undertaken in accordance with Condition 5(d).

“Auckland International Airport Limited” or **“AIAL”** is the requiring authority under this designation.

“Council” means the Auckland Council or any committee, sub-committee, or person to whom the relevant powers, duties and discretions of the Council have been delegated lawfully.

“Designated area” is the area shown as designated area on Figure 1 of this designation.

“Existing Building” means any building:

- that existed at 10 December 2001 and was being used for an ASAN at that time; or
- for which a resource consent for an ASAN was granted by 10 December 2001; or
- which was shown on an outline plan that was lodged with the Council under section 176A of the Resource Management Act 1991 (“RMA”) and was beyond challenge as at 10 December 2001.

“Flight Path” means the actual path of an aircraft in flight, following take-off from or prior to landing at the Airport, for so long as that aircraft is within the area of the Control Zone shown in Figure 2 of this designation.

“Future Aircraft Noise Contour” or **“FANC”** means each of the long term predicted noise contours shown on Figure 4 (Future Aircraft Noise Contours) of this designation.

“High Aircraft Noise Area” or **“HANA”** is the area outside the designated area that will have future noise levels greater than 65 dB L_{dn} and is shown in purple on Figure 3 (Aircraft Noise Areas) of this designation.

“INM” means United States of America Federal Aviation Authority Integrated Noise Model.

“Ldn Contour” means a line connecting points of equal day/night sound level (dB L_{dn}).

“Moderate Aircraft Noise Area” or **“MANA”** comprises two areas (one being around the HANA) that will have future noise levels between 60 dB L_{dn} and 65 dB L_{dn}. The two areas are shown in orange on Figure 3 (Aircraft Noise Areas) of this designation.

“Noise Management Plan” or **“NMP”** means the noise management plan described in Condition 9.

“Noise Minimisation Procedures” includes:

- procedures and measures adopted to ensure compliance with noise limits for:
 - Aircraft Operations in Condition 5; and
 - Engine Testing on Aircraft in Condition 13;
- Civil Aviation Authority (“CAA”) noise rules applicable to the Airport from time to time;
- voluntary or self imposed procedures or measures for the reduction of aircraft noise.

“Non-Jet Aircraft” means any aircraft that is not a turbo-jet or a turbo-fan powered aircraft. For the avoidance of doubt turbo-prop aircraft are non-jet aircraft.

“Operational Length” is the length of Runway available and suitable for the ground run of an aircraft taking off, in accordance with the Civil Aviation Advisory Circular 139-6 Revision 4 dated 4 July 2011 called the “Take-Off Run Available” or “TORA”.

“Principal Living Room” means the room which the owner identifies as the principal living room.

“Runway” means a defined rectangular area on a land aerodrome prepared for the landing and take-off of aircraft.

“Working Days” are those days defined by the RMA.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Runway System

2. The following limitations in this Condition apply to all runways:

- a. Subject to clause (c) of this Condition, the number of runways shall not exceed two.
- b. In addition to the existing runway ("Existing Runway"), a second runway ("Northern Runway") may be developed within the area marked "Northern Runway" shown on Figure 1 of this designation.
- c. Nothing in this Condition shall preclude the use of the taxiway of the Existing Runway for the take-off and landing of aircraft (i.e. as a runway) in substitution for the Existing Runway:
 - where the Existing Runway is under repair; or
 - in an emergency.

Note:

Use if the taxiway as a runway will be subject to approval under the Civil Aviation Act 1990.

3.

a. The provisions in this Condition apply to the Northern Runway:

- the Operational Length of the runway shall not exceed 2150 metres;
 - the runway shall be entirely located to the west of the alignment of George Bolt Memorial Drive (taking that alignment as it existed at 1 June 2000);
- b. The provisions of section 176A of the RMA shall apply to the construction, reconstruction, extension or replacement of the Northern Runway.

4. Non-Jet Aircraft using the Northern Runway between the hours of 11.00pm and 6.00am, and jet aircraft using the Northern Runway between the hours of 10.00pm and 6.00am, shall not depart to or arrive from the east except in cases of:

- a. aircraft landing or taking off in an emergency;
- b. emergency flights required to rescue persons from life-threatening situations or to transport patients, human vital organs or medical personnel in a medical emergency;
- c. the operation of unscheduled flights required to meet the needs of a national or civil defence emergency declared under the Civil Defence Act 2002;
- d. Aircraft Operations resulting from an emergency which necessitates the closure of the Existing Runway;
- e. Aircraft Operations resulting from the temporary closure of the Existing Runway for essential maintenance which necessitates the unrestricted use of the Northern Runway.

Explanatory Note for Condition 4 – Northern Runway:

Night-Time Restriction

i. Throughout the life of this unitary plan it is AIAL's clear intention to maximise the use of the Existing Runway at night and as a result, during the lifetime of this district plan, Non-Jet Aircraft using the Northern Runway between the hours of 11.00pm and 6.00am, and jet aircraft using the Northern Runway between the hours of 10.00pm and 6.00am, are not permitted to depart to or arrive from the east except within the limited exceptions provided for in this Condition.

ii. For the avoidance of doubt, the need or otherwise for a similar night time restriction on use of the Northern Runway in any subsequent district or unitary plan will be assessed at the relevant time, and the presence of this Condition on this designation is not intended as an indication that such a condition will or will not be appropriate in any future designation for the Airport.

Noise from Aircraft Operations

5. Subject to Conditions 6 and 7 below, noise from Aircraft Operations shall not exceed a noise limit of:

- a. A Day/Night Level (Ldn) of 65 dB anywhere outside the HANA. For the purpose of this control, aircraft noise shall be measured in accordance with NZS 6805:1992 and calculated as a 12 month rolling logarithmic average; and
- b. A Day/Night Level (Ldn) of 60 dB anywhere outside the HANA and the MANA. For the purpose of this control, aircraft noise shall be calculated as a 12 month rolling logarithmic average using the INM and records of actual Aircraft Operations.
- c. Clauses (a) and (b) of this Condition do not apply within the designated area or within the Coastal Marine Area..

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. In addition, AIAL shall:

- i. monitor noise from Aircraft Operations at a minimum of three locations associated with the Existing Runway which are as near as practicable to the boundary of the HANA to obtain an accurate reading so as to demonstrate compliance with (a) above;
 - ii. monitor noise from Aircraft Operations at a minimum of two locations associated with the Northern Runway so as to demonstrate compliance with (b) above. The required monitoring may be undertaken at points in the MANA and then by calculating the corresponding noise level at the MANA boundary;
 - iii. use the INM and noise monitoring data to calculate whether noise from Aircraft Operations complies with (b) above;
 - iv. calculate noise levels at every other location necessary to ensure compliance with this Condition and with Condition 10;
- and shall provide a detailed written report to the Council every 12 months describing and interpreting the results of the monitoring and describing and explaining the calculations and findings.

Interim Noise Control on Northern Runway

6.

a. For the first five years following the commencement of aircraft operations on the Northern Runway, noise from Aircraft operations associated with the Northern Runway shall not exceed 55 dB L_{dn} at the intersection of the Northern Runway centreline and State Highway 20. For the purpose of this control, compliance may be assessed by measuring aircraft noise at an alternative location (closer to the Airport) and calculating the corresponding noise level at the intersection of the Northern Runway centreline and State Highway 20. In addition, for the purpose of this control, aircraft noise shall be measured in accordance with NZS 6805:1992 and calculated as a 12 month rolling logarithmic average. The measurements and calculations for any such assessment shall be produced by AIAL if requested by the ANCCG and, if required by the ANCCG, shall be subject to independent review and verification.

b. Clause (a) of this Condition shall not apply from the date of receipt by the Council of a certificate from a suitably qualified independent person proposed by AIAL and approved by the Council, certifying that, either of the following circumstances apply:

- i. There is a need to establish new operations, or relocate existing operations, because there are insufficient apron areas or taxiway capacity alongside the Existing Runway, or a new or existing operation requires facilities or services not available at the Existing Runway but which are or can be provided at the Northern Runway.
- ii. Rehabilitation works on the Existing Runway require use of the Northern Runway to a level which would exceed the 55 dB L_{dn} at SH 20 control to maintain current and projected demand.

c. The suitably qualified independent person referred to in Condition 6(a) above shall include, when supplying any certificate to the Council, a report which contains:

- A summary of the information provided to the suitably qualified independent person by AIAL; and
- The Audit Group's reasons for the granting of the certificate.

d. The costs of the suitably qualified independent person shall be met by AIAL.

7. Exceedance by up to 1 dB L_{dn} of the noise limits in Conditions 5 and 6 is permitted, provided AIAL demonstrates at the request of, and to the satisfaction of, the Council that any such exceedance is due to atypical weather patterns (including wind speed and direction) during the measurement period, such as produced by the El Nino/La Nina climatic oscillation.

8. Aircraft operations described in clauses (a) to (g) of this Condition, below, are excluded from the calculation of the rolling logarithmic average in Conditions 5, 6 and 7 above:

- a. Aircraft landing or taking off in an emergency;
- b. Emergency flights required to rescue persons from life-threatening situations or to transport patients, human vital organs or medical personnel in a medical emergency;
- c. The operation of unscheduled flights required to meet the needs of a national or civil defence emergency declared under the Civil Defence Act 2002;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- d. Aircraft Operations resulting from an emergency which necessitates the closure of the Existing Runway;
- e. Aircraft Operations resulting from the temporary closure of the Existing Runway for essential maintenance which necessitates the unrestricted use of the Northern Runway;
- f. Aircraft using the Airport as a planned alternative to landing at a scheduled airport elsewhere;
- g. Air shows.

Noise Management Plan

Consultative Group

9.

a. AIAL shall maintain at its cost, the existing Aircraft Noise Community Consultative Group ("ANCCG") within the Terms of Reference which are contained in Attachment A (Aircraft Noise Community Consultative Group Terms of Reference) of this designation, or such other terms or amended terms of reference that are approved by the Council.

Noise Management Plan

b. Without in any way limiting its obligations to fully comply with the conditions attaching to this designation, AIAL has completed and will maintain and where necessary update a Noise Management Plan ("NMP") which describes in detail how AIAL proposes to manage the Airport in order to comply with those conditions. The NMP describes, in detail, the following matters:

- i. procedures for the ongoing maintenance and operation of the ANCCG;
- ii. the mechanisms for giving effect to a Noise Monitoring Programme to assess compliance with Conditions 5, 6 and 13. In particular, the following issues shall be addressed:
 - Location of any noise monitors;
 - Monitoring, recording and calculation of engine testing noise levels under Condition 13;
 - Management of the programme by a suitably qualified person; and
 - Presentation of information.
- iii. The relationship between the Trust which is to be established under Condition 11 and the ANCCG, including reporting procedures.
- iv. The ongoing investigations, methods, processes and resources that AIAL has put in place to provide for:
 - The reduction of noise levels from all aspects of Aircraft Operations and engine testing; and
 - Alternative methods of noise management to achieve the reduction of these noise levels.
- v. The Noise Minimisation Procedures.
- vi. The procedures for modifying and enhancing the Noise Minimisation Procedures to take into account:
 - Any findings made pursuant to any investigation undertaken in accord with (iv) above;
 - The need to ensure compliance with all of the requirements of this designation.
- vii. The procedures for reporting to the ANCCG any Aircraft Operations and engine testing activities which:
 - Contravene a condition of this designation;
 - Are at variance with AIAL's intentions recorded in the Explanatory Note to Condition 4 relating to the use of the Northern Runway.
- viii. The procedure for the annual preparation and publication of the 60 dB L_{dn} AANC and the 65 dB L_{dn} AANC by AIAL, as required by Condition 10B;
- ix. The procedure for the recording, responding and reporting of complaints received in respect of noise from Aircraft Operations, engine testing activities and any other activities generating noise at the Airport; and
- x. The dispute resolution procedures, to resolve disputes between AIAL and ANCCG about the contents and implementation of the NMP.

Specific Matters in NMP Subject to Council Approval

c. The dispute resolution procedures referred to in Condition 9(b)(x) shall be to the Council's satisfaction and any subsequent alteration to these procedures shall be subject to the Council's written approval.

Changes to NMP

d. If AIAL makes any changes to the procedures or other matters recorded in the NMP, it shall forthwith forward an amended copy of the NMP to the Council and the ANCCG.

Reporting of Exceptions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9A. AIAL shall maintain a register (electronic and hard copy) which is available for public inspection of all exceptions to the Noise Minimisation Procedures. The register shall list:

- The date and time of the exception:
- An explanation for the exception:
- Any actions undertaken to prevent a recurrence of the exception.

For the avoidance of doubt an exception includes:

- A breach of noise limits in Conditions 5, 6 and 13:
- A breach of the CAA noise rules applicable to the Airport which has been the subject of an investigation by AIAL into a related complaint:
- Any lapse in AIAL's voluntary or self imposed procedures for the reduction of aircraft noise.

Noise Mitigation Programme

10. The development or use of any runway is subject to compliance with clauses (a) to (r) of this Condition (called in this designation, the "Noise Mitigation Programme"):

a. For the purpose of determining compliance with clauses (b) to (r) of this condition, AIAL has supplied to the Council:

- i. A list identifying all sites wholly or partly within the HANA and the MANA ("affected sites");
- ii. A list of the legal descriptions and street addresses of all the affected sites; and
- iii. Details of any Existing Building located on the affected sites.

Proviso:

Where a site lies within a mixture of HANA and MANA, or is partly located within one of those noise areas, then for the purposes of clauses (b) to (r) of this Condition:

- If any Existing Building is located wholly or partly within the HANA, that Existing Building shall be deemed to be in the HANA;
- If any Existing Building is located wholly outside the HANA, but wholly or partly within the MANA, that Existing Building shall be deemed to be in the MANA.

Further proviso:

For the avoidance of doubt, nothing in clauses (b) to (r) of this Condition shall be treated as requiring AIAL to fund acoustic treatment and ventilation measures in Existing Buildings that are located wholly outside the HANA and the MANA.

Existing Buildings Located within the HANA Being Subject to 65 dB Ldn Noise

b. Before any part of an affected site falls within the 65 dB Ldn AANC, AIAL shall, in respect of any Existing Building in the HANA on that site (other than any building used as educational facilities or as a registered pre-school) make an offer to the owner(s) to install, at AIAL's sole cost (and if the offer is accepted, install), acoustic treatment and related ventilation measures to achieve, in the manner provided for in clauses (p) and (q) of this Condition, an internal acoustic environment in the existing habitable rooms of the building(s) (with all external doors of the building and all windows of the habitable rooms closed), of 45 dB Ldn, together with related ventilation requirements. These measures shall include but not be limited to:

- A mechanical ventilation system or mechanical ventilation systems capable of:
 - Providing at least 15 air changes of outdoor air per hour in the principal living room of each building and 5 air changes of outdoor air per hour in the other habitable rooms of each building, in each case with all external doors and windows of the building closed with the exception of such windows in non habitable rooms that need to be ajar to provide air relief paths;
 - Enabling the rate of airflow to be controlled across the range, from the maximum airflow capacity down to 0.5 air changes (plus or minus 0.1) of outdoor air per hour in all habitable rooms;
 - Limiting internal air pressure to not more than 30 pascals above the ambient air pressure;
 - Being individually switched on and off by the building occupants, in the case of each system; and
 - Creating no more than 40 dBL_{Aeq} in the principal living room, no more than 30 dBL_{Aeq} in the other habitable rooms, and no more than 40 dBL_{Aeq} in any hallway, in each building. Noise levels from the mechanical system(s) shall be measured at least 1 metre away from any diffuser.
- Thermal grade (minimum R1.8) ceiling insulation to all habitable rooms where equivalent ceiling insulation is not already in place; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- A mechanical kitchen extractor fan ducted directly to the outside to serve any cooking hob, if such extractor fan is not already installed and in sound working order.

The above mentioned offer shall be made on the following basis:

- i. any structural or other changes required under the Building Act 1991 ("Building Act") or otherwise to enable the installation of the acoustic treatment and related ventilation measures shall be at AIAL's cost, except that nothing in this clause shall require AIAL to fund any measures required to bring a building up to the standard required in any building bylaws or any provisions of any statute that applied when the building or relevant part thereof was constructed; and
- ii. the owner(s) accepting an obligation to enter into a covenant in the terms set out in clause (r) of this Condition.

Proviso:

If requested by the owner, AIAL may, at its discretion, install or contribute to the cost of the installation of alternative ventilation measures to those described in clauses (b) and (c) of this Condition, subject to the owner being granted any necessary building or resource consents, the Council waiving AIAL's obligations in respect of the required ventilation measures in clauses (b) and (c) of this Condition, and the provisions of clauses (b), (c), and (n) to (r) applying with the necessary modifications.

c. At the same time, AIAL shall offer to install, (and if the offer is accepted, install), enhancements in addition to the above acoustic treatment and related ventilation measures to achieve, in the manner provided for in clauses (q) and (qq) of this Condition, an internal acoustic environment in the existing habitable rooms of the building(s) (with all external doors of the building and all windows of the habitable rooms closed), of 40 dB L_{dn}, together with related ventilation requirements. This offer shall be made on the following basis:

- i. AIAL shall contribute 75% of the cost;
- ii. The owner agreeing to contribute the balance of the cost; and
- iii. The enhancements are to be installed at the same time as the acoustic treatment and related ventilation measures referred to in clause (b) of this Condition, above.

d. Where an owner or previous owner has earlier accepted the offer set out in clause (e) of this Condition below, AIAL need only offer to install works or enhancements not already installed pursuant to clause (e) of this Condition.

Existing Buildings Located Within the HANA or the MANA Being Subject to 60 dB L_{dn}, Noise

e. Before any part of an affected site falls within the 60 dB L_{dn}, AANC, AIAL shall, in respect of any Existing Building in the HANA or MANA on that site (other than any building used as educational facilities or as a registered pre-school) make an offer to the owner(s) to install (and if the offer is accepted, install):

- i. A mechanical ventilation system or mechanical ventilation systems capable of:
 - Providing at least 15 air changes of outdoor air per hour in the principal living room of each building and 5 air changes of outdoor air per hour in the other habitable rooms of each building, in each case with all external doors and windows of the building closed with the exception of such windows in non-habitable rooms that need to be ajar to provide air relief paths;
 - Enabling the rate of airflow to be controlled across the range, from the maximum airflow capacity down to 0.5 air changes (plus or minus 0.1) of outdoor air per hour in all habitable rooms;
 - Limiting internal air pressure to not more than 30 pascals above the ambient air pressure;
 - Being individually switched on and off by the building occupants, in the case of each system; and
 - Creating no more than 40 dB L_{Aeq} in the principal living room, no more than 30 dB L_{Aeq} in the other habitable rooms, and no more than 40 dB L_{Aeq} in any hallway, in each building. Noise levels from the mechanical system(s) shall be measured at least 1 metre away from any diffuser.
- ii. Thermal grade (minimum R1.8) ceiling insulation to all habitable rooms where equivalent ceiling insulation is not already in place; and
- iii. A mechanical kitchen extractor fan ducted directly to the outside to serve any cooking hob, if such extractor fan is not already installed and in sound working order.

The abovementioned offer shall be made on the following basis:

- i. Any structural or other changes required under the Building Act or otherwise, to enable the installation of the acoustic treatment and related ventilation measures shall be at AIAL's cost, except that nothing in this clause shall require AIAL to fund any measures required to bring a building up to the standard required in any building

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- bylaws or any provisions of any statute that applied when the building or relevant part was constructed;
- ii. The owner(s) accepting an obligation to enter into a covenant in the terms set out in clause (r) of this Condition;
- iii. AIAL shall contribute 75% of the cost of the above works; and
- iv. The owner agrees to contribute the balance of the cost.

Proviso:

If requested by the owner, AIAL may, at its discretion, install or contribute to the cost of the installation of alternative ventilation measures to those described in this clause, subject to the owner being granted any necessary building or resource consents, the Council waiving AIAL's obligations in respect of the required ventilation measures in this clause, and the provisions of this clause and clauses (n) to (r) applying with the necessary modifications.

Existing Registered Pre-schools Located Within the HANA Being Subject to 65 dB L_{dn}Noise

f. Before any part of an affected site falls within the 65 dB L_{dn} AANC, AIAL shall, in respect of any Existing Building in the HANA on that site used as a registered pre-school, make an offer to the owner(s) to install at AIAL's sole cost (and if the offer is accepted, install), in all learning areas:

i. Acoustic treatment measures to achieve, in the manner provided for in clauses (p) and (q) of this Condition, an internal acoustic environment in each learning area (with all external doors and windows of the learning area closed) of 40dB L_{dn}; and

- Mechanical ventilation system or mechanical ventilation systems for each learning area:
 - Designed to achieve indoor air temperatures not less than 16 degrees celsius in winter at 5% ambient design conditions as published by the National Institute of Water & Atmospheric Research ("NIWA") (NIWA, Design Temperatures for Air Conditioning (degrees celsius), Data Period 1991–2000);
 - Capable of providing (when all external doors and windows of the learning area are closed) outdoor air ventilation at the rate of 15 litres of air per second per square metre for the first 50 square metres and 7.5 litres of air per second per square metre of remaining area;
 - Capable of enabling the rate of air flow to be controlled across the range, from the maximum air flow capacity down to 8 litres of air per second per person for the maximum number of people able to be accommodated in the learning area at one time;
 - Otherwise complying with the New Zealand Standard NZS 4303:1990 *Ventilation for Acceptable Indoor Air Quality*;
 - Each ventilation system shall be capable of being individually switched on and off by the building occupants; and
 - Capable of creating no more than 35 dB L_{Aeq} in each learning area, and no more than 40 dB L_{Aeq} in any hallway or corridor. Noise levels from the mechanical system(s) shall be measured at least 1 metre away from any diffuser.

The abovementioned offer shall be made on the following basis:

- i. any structural or other changes required under the Building Act or otherwise required to enable the installation of the acoustic treatment and related ventilation measures shall be at AIAL's cost, except that nothing in this clause shall require AIAL to fund any measures required to bring a building up to the standard required in any building bylaws or any provisions of any statute that applied when the building or relevant part thereof was constructed; and
- ii. the owner accepting an obligation to enter into a covenant in the terms set out in clause (r) of this Condition.

g. Where an owner or previous owner has earlier accepted the offer set out in clause (h) of this Condition below, AIAL need only offer the works not already installed pursuant to clause (h) of this Condition.

Existing Registered Pre-schools Located Within the HANA or the MANA being Subject to 60 dB L_{dn} Noise

h. Before any part of an affected site falls within the 60 dB L_{dn} AANC, AIAL shall in respect of any Existing Building in the HANA or the MANA on that site used as a registered pre-school, make an offer to the owner(s) to install (and if the offer is accepted, install) at AIAL's sole cost:

i. A mechanical ventilation system or mechanical ventilation systems for each learning area:

- Designed to achieve indoor air temperatures not less than 16 degrees celsius in winter at 5% ambient design conditions as published by the National Institute of Water & Atmospheric Research ("NIWA") (NIWA, Design Temperatures for Air Conditioning (degrees celsius), Data Period 1991–2000);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Capable of providing (when all external doors and windows of the learning area are closed) outdoor air ventilation at the rate of 15 litres of air per second per square metre for the first 50 square metres and 7.5 litres of air per second per square metre of remaining area;
- Capable of enabling the rate of air flow to be controlled across the range, from the maximum air flow capacity down to 8 litres of air per second per person for the maximum number of people able to be accommodated in the learning area at one time;
- Otherwise complying with the New Zealand Standard NZS 4303:1990 *Ventilation for Acceptable Indoor Air Quality*;
- Each ventilation system shall be capable of being individually switched on and off by the building occupants; and
- Capable of creating no more than 35 dB LAeq in each learning area, and no more than 40 dB LAeq in any hallway or corridor. Noise levels from the mechanical system(s) shall be measured at least 1 metre away from any diffuser.
- Thermal grade (minimum R1.8) ceiling insulation in all learning areas where equivalent ceiling insulation is not already in place.

Proviso:

If the owner wishes to install a ventilation system at greater cost, (e.g. an air conditioning system), then AIAL shall contribute the equivalent cost of the ventilation system(s) prescribed in clause (h) of this Condition.

The abovementioned offer shall be made on the following basis:

- any structural or other changes required under the Building Act or otherwise required to enable the installation of the acoustic treatment and ventilation measures shall be at AIAL's cost, except that nothing in this clause shall require AIAL to fund any measures required to bring a building up to the standard required in any building bylaws or any provisions of any statute that applied when the building or relevant part thereof was constructed; and
- the owner(s) accepting an obligation to enter into a covenant in the terms set out in clause (r) of this Condition.

Existing Educational Facilities Within the HANA or the MANA Being Subject to 60 dB L_{dn} Noise

- Before any part of an affected site falls within the 60 dB L_{dn} AANC, AIAL shall, in respect of any Existing Building in the HANA or MANA on that site used as an educational facility or facilities, make an offer to the owner(s) to install (and if the offer is accepted, install) acoustic treatment and related ventilation measures to achieve, in the manner provided for in clauses (p) and (q) of this Condition, an internal acoustic environment in all existing classrooms, libraries and halls (with all external doors and windows of the classrooms, libraries and halls closed) of 40 dB L_{dn}, together with related ventilation requirements. These measures shall include but not be limited to:
 - In the case of classrooms and libraries, air conditioning and/or a mechanical ventilation system or mechanical ventilation systems for each classroom and library, that are:
 - Designed to achieve indoor air temperatures not less than 16 degrees celsius in winter and not greater than 27 degrees celsius in summer at 5% ambient design conditions as published by the National Institute of Water & Atmospheric Research ("NIWA") (NIWA, Design Temperatures for Air Conditioning (degrees celsius), Data Period 1991–2000);
 - Capable of providing outdoor air ventilation at the rate of 8 litres of air per second per person for the maximum number of people able to be accommodated in any such room at one time ("the required airflow");
 - Capable of enabling, (in the case of classrooms or libraries in which only mechanical ventilation systems are used to satisfy the above temperature and outdoor air requirements), the outdoor airflow to be controlled across the range, from the maximum airflow capacity down to the required airflow when all external doors and windows of the classroom or library are closed;
 - Otherwise complying with the New Zealand Standard NZS 4303:1990 *Ventilation for Acceptable Indoor Air*; and
 - Capable of creating no more than 35 dB LAeq in each classroom, no more than 40 dB LAeq in each library, and no more than 40 dB LAeq in any hallway or corridor.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Noise levels from the mechanical system(s) shall be measured at least 1 metre away from any diffuser.
- ii. in the case of halls, a mechanical ventilation system or mechanical ventilation systems for each hall capable of:
 - Providing at least 12 litres of outdoor air per second per square metre with all external doors and windows of the hall closed;
 - Enabling the outdoor airflow to be controlled across the range, from the maximum airflow down to the rate of 8 litres of outdoor air per second per person for the maximum number of occupants able to be accommodated in the hall at one time;
 - Otherwise complying with the New Zealand Standard NZS 4303:1990 Ventilation for Acceptable Indoor Air Quality; and
 - Creating no more than 35 dB LAeq in each hall, and no more than 40 dB LAeq in any hallway or corridor.
- Noise levels from the mechanical system(s) shall be measured at least 1 metre away from any diffuser.
- Thermal grade (minimum R1.8) ceiling insulation shall be provided in the case of school halls where equivalent ceiling insulation is not already in place.

The abovementioned offer shall be made on the basis that any structural or other changes required under the Building Act or otherwise to enable the installation of the acoustic treatment and related ventilation measures shall be at AIAL's cost, except that nothing in this clause shall require AIAL to fund any measures required to bring a building up to the standard required in any building bylaws or any provisions of any statute that applied when the building or relevant part thereof was constructed.

j. AIAL's obligations under clause (i) of this Condition for acoustic treatment and related ventilation measures shall be "capped" at the maximum costs set out in Attachment B of this designation. For the avoidance of doubt, the costs in Attachment B are expressed as the maximum costs for which AIAL shall be responsible, and, in addition, AIAL shall not be required to expend the maximum costs where the acoustic treatment and related ventilation measures can be installed by AIAL more cost effectively to achieve the internal acoustic environment and related ventilation standards specified in this Condition (Condition 10). Any new windows installed as part of the acoustic treatment and related ventilation measures shall be made able to be opened or shall be fixed at the discretion of the owner(s) of the educational facilities at the time the work is undertaken.

For existing educational facilities, the maximum figures referred to in Attachment B are exclusive of GST and are in year 2012 dollars and they will therefore be adjusted to compensate for inflation and increased annually from the date of the inclusion of this designation in the Unitary Plan by the percentage increase in the Consumer Price Index (All Groups) or any substitute national measure of inflation adopted in lieu of the Consumer Price Index (All Groups).

New Buildings at Existing Educational Facilities Within the MANA

k. Where, in the case of educational facilities established within the MANA before 10 December 2001:

- i. A new classroom, library, or hall is to be established; or
- ii. An addition or alteration is to be made to any existing classroom, library or hall, and the new classroom, library or hall, or the addition or alteration, is not by definition, an Existing Building, then AIAL upon receiving advice of the proposed works, shall make an offer to the owner(s) of the relevant educational facilities to provide funding (and if the offer is accepted, provide funding) for acoustic treatment and related ventilation measures to achieve an internal acoustic environment (with all external doors and windows of the classrooms, libraries or halls closed) of 40 dB L_{dn} for all such new facilities along with ventilation to a standard consistent with clause (i) of this Condition, above, provided that this offer shall be conditional on:
 - The owner agreeing to contribute 25% of the costs of the acoustic treatment and ventilation measures;
 - Construction of the new or additional facilities otherwise complying with the relevant requirements of the Building Act and any relevant legislation,

and further provided that AIAL's obligations under clause (k) of this Condition shall only extend, in the case of additional classrooms, libraries or halls, to those which the Regional Network Manager — Auckland of the Ministry of Education or successor of that office certifies are required as a result of roll growth caused by underlying increases in population in the catchment in the immediate vicinity of the educational facility.

l. The offer referred to in clause (k) of this Condition may be made on the basis that if the new or additional facilities are removed from the affected site before the 60 dB L_{dn} AANC reaches the affected site, any cost incurred by AIAL in respect of that building shall be returned to AIAL.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

New Public Schools or Pre-schools Within the MANA

m. AIAL shall offer the owner(s) of any new public (i.e. non-private or integrated) school or preschool to be established on affected sites located within the MANA, funding (and if the offer is accepted, provide funding) for acoustic treatment and related ventilation measures to meet the requirements in, and to a standard consistent with, clause (k) of this Condition, above, provided that this offer shall be conditional on:

- The owner agreeing to contribute 50% of the costs of the acoustic treatment and ventilation measures;
- The Regional Network Manager — Auckland of the Ministry of Education or successor of that office certifying, following consultation on the issue of location with AIAL, that the proposed new school or preschool could not reasonably be located outside the MANA.

Building Act 2004

n. All work undertaken pursuant to the terms of this Condition (Condition 10) shall be in accordance with the Building Act and any other relevant legislation.

o. Nothing in this Condition (Condition 10) shall require AIAL to fund any measures required to bring a building up to the standard of the building regulations that applied when the building was constructed or the relevant part thereof was last modified.

Certified Standard Packages and Individual Packages

p. Where this Condition (Condition 10) requires AIAL to offer to provide acoustic treatment and ventilation measures, AIAL:

i. Has developed standard acoustic and ventilation treatment packages for as many types of building for each FANC, shown on Figure 4 (Future Aircraft Noise Contours) of this designation, as is practicable ("standard packages"). These standard packages may be updated or further developed at any time. Each standard package shall be:

- Sufficient to achieve the internal acoustic environment and ventilation requirements specified in this Condition (Condition 10) for the type of building within the FANC for which the package has been developed;
- Certified to that effect by a suitably qualified independent person (or persons) nominated by AIAL and approved by the Council ("an approved person") ("certified standard package"); and
- Developed in consultation with the Building Research Association of New Zealand.

For the avoidance of doubt the standard packages are intended to mitigate against aircraft noise, not against other sources which may have different characteristics and hence require different attenuation in respect to the treatment measures on offer;

ii. Shall offer to install (and if the offer is accepted, install) the relevant certified standard package, which has been certified by an approved person as being suitable to fulfil the requirements of this Condition (Condition 10) for the building and FANC within which the building is located; and in all other cases, shall offer a package certified by an approved person as suitable, at the time of the offer, to achieve the internal acoustic environment and ventilation requirements specified in this Condition (Condition 10) for the FANC within which the building is located ("certified individual package") and if that offer is accepted, shall install the certified individual package.

q. Where AIAL installs any acoustic treatment and or ventilation or air conditioning measures, AIAL:

i. Shall provide the Council with a certificate from a suitably qualified independent person (or persons) nominated by AIAL and approved by the Council, that the installation of any relevant certified standard package, or relevant certified individual package, has been properly undertaken in accordance with sound practice; and

ii. Shall not be in breach of this condition where the internal noise standards and related ventilation requirements are not met in each instance provided the relevant certificate required in sub-clause (q)(i) of this Condition, above, has been provided to the Council.

Covenants

r. AIAL shall not be obliged to undertake any work pursuant to clauses (b) to (h) of this Condition (Condition 10) unless the owner of the particular affected site agrees to enter into a covenant with AIAL (which shall be registered on the site's title) in the terms set out in Attachment C of this designation with such necessary changes, approved by the Council. The cost of preparation and registration of the covenant on the site's title shall be met by AIAL. AIAL shall meet the reasonable legal costs incurred by the owner for the perusal and approval of the covenant.

Monitoring of Noise Mitigation Programme

10A. AIAL is to monitor the implementation of the Noise Mitigation Programme as set out in Condition 10 and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

provide a written report setting out its findings in detail to the Council on an ongoing basis at six monthly intervals each year.

Preparation and Publication of the AANC's

10B. AIAL shall:

- a. Prepare annually the 60 dB L_{dn} AANC and 65 dB L_{dn} AANC.
- b. Publish a public notice in:
 - i. One or more daily newspapers circulating in the areas contained in the HANA, MANA and ANNA; or
 - ii. One or more other newspapers that have at least an equivalent circulation, advising the public that:
 - The AANCs have been prepared for the following twelve months;
 - Explaining what the AANCs are and who is potentially affected; and
 - That the AANCs are available for public inspection at such Council offices as determined by a designated Council officer approved by the Chief Executive of the Council.

Aircraft Noise Mitigation Fund

11. AIAL shall (at its cost and to the Council's satisfaction) maintain a Trust with two Trustees appointed by AIAL, two Trustees appointed from the community by the Council, and one Trustee appointed by the ANCCG.

12. AIAL shall contribute \$ 325,000 (in 2012 New Zealand dollar terms) per annum plus GST if any (adjusted thereafter to compensate for inflation and increased annually from December 2012 by the percentage increase in the Consumer Price Index (All Groups) as provided for in Condition 12A, below), to a Noise Mitigation Fund, to be administered by the Trustees for the benefit of the local community affected by aircraft noise and located or residing within the HANA, MANA and ANNA, for the purpose of:

- a. The mitigation of adverse effects associated with noise from Aircraft Operations which are not provided for under Condition 10 ("other adverse effects"); or
- b. Ensuring positive effects on the external environment to offset those other adverse effects; or
- c. In cases of significant financial hardship, assisting an owner or owners to meet their share of the costs of acoustic treatment measures or enhancements as set out in Conditions 10(c)(ii) and 10(e)(iv).

12A. On each anniversary of the Trust, AIAL will make a payment to the Trust of an amount sufficient to compensate for inflation over the immediately preceding annual period calculated in accordance with the following formula:

$\$325,000 \times A\%$, where A is the percentage increase in the Consumer Price Index (All Groups) (or any substitute national measure of inflation) for that 12 month period.

Explanatory Note, Aircraft Noise Mitigation Fund:

While there are various physical measures proposed by way of acoustic insulation and ventilation of buildings containing Activities Sensitive to Aircraft Noise, the Aircraft Noise Mitigation Fund is designed to ensure that adverse effects of aircraft noise on the external environment which cannot be mitigated by physical means can at least be partially offset by providing positive effects in the form of enhanced cultural, recreational and other opportunities and facilities to affected residents. Those opportunities and facilities may be provided outside the affected area but should be readily available to affected residents.

Engine Testing on Aircraft

13.

a. Any use of the designated area for the testing of engines which are in situ on an aircraft ("in situ aircraft engines") shall not exceed the following noise limits within the Identified Area shown on Figure 5 attached to this designation:

7 day rolling average	55 dB L _{dn}
10pm to 7am	75 dB L _{Amax}

For the purpose of this control, testing of in situ aircraft engines shall be measured in accordance with NZS 6801:2008 Acoustics- Measurement of Environmental Sound.

b. AIAL shall monitor and record all testing of in situ aircraft engines and provide a summary report of the tests undertaken and the calculated noise levels whenever requested in writing by the ANCCG.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. The testing of in situ aircraft engines is excluded from the calculation of the 7 day rolling average in clause (a) above where such testing is associated with work necessary to satisfy an airworthiness directive or other like safety requirement issued by the Minister of Transport, the Director of Civil Aviation or the Civil Aviation Authority, which requires within 7 days of the directive or requirement being issued, the ground running of the engines on:

- i. All aircraft with a specific engine type; or
- ii. aircraft of a specific make or model.

Prior to any testing excluded by this clause commencing, AIAL shall give written notice to the ANCCG and the Council explaining:

- The nature of and the reason for the testing;
- Its expected duration and noise effects; and
- Details of the directive or requirement received.

Other Noise

13A. Any use of the land for any purpose other than:

- a. Aircraft Operations (Conditions 5 and 6);
- b. testing of in situ aircraft engines (Condition 13); and
- c. the use of audible bird scaring devices for the discouragement of birds;

shall not exceed the following noise limits within the Identified Area shown on Figure 5 attached to this designation:

Average Maximum Levels			Maximum
dB LAeq			dB LAmax
Monday to Saturday 7am–6pm (0700–1800)	Monday to Saturday 6pm–10pm (1800–2200) AND Sunday and Public Holidays, 7am–10pm(0700–2200)	At all other times	10pm–7am (2200–0700)
55	50	45	70

For the purpose of this control, Other Noise shall be measured in accordance with NZS 6801:2008 Acoustics- Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.

Coastal Protection Yard

14. A coastal protection yard having a minimum depth of 20 metres shall be maintained where any part of the designated area abuts the Mean High Water Spring Tide Mark. No structure shall be erected in the coastal protection yard except essential Airport operational facilities (for example, security fences, navigational aids, rescue facilities and stormwater facilities) which require a location in the area of the coastal protection yard.

15. Subject to any waiver of this Condition, or any part of this Condition, prior to any land modification or development on any land within 200 metres of the northern boundary of the designated area east of Pukaki Creek (“northern boundary”), the requiring authority shall submit an outline plan to the Council for approval which, without limiting the requirements of Section 176A of the RMA, shall show:

- a. Provision for the landscaping in grass, trees and shrubs of a five metre wide strip along the northern boundary and a limitation on building height in relation to the northern boundary so that no part of any building shall project beyond a building envelope contained by a 55 degree recession plane from points 2.5 metres above the northern boundary (i.e. maximum height = 2.5 metres plus 1.428 x distance from boundary).
- b. Details of any land modification within:
 - i. 200 metres of the northern boundary which involves more than 500m³ of earthworks; or
 - ii. 30 metres of the northern boundary which involves more than 200m³.
- c. The timetable for completion of the abovementioned landscaping, earthworks and remedial work.
- d. The height, shape and bulk of any proposed structures.

16. For the purpose of 15(b) details shall be given of the following:

Alteration to Natural Landscape

- a. Whether any earthcut or fill will remove existing vegetation, alter the existing topography of the site, or affect

The Proposed Auckland Unitary Plan (notified 30 September 2013)

existing natural features including landforms, and the impacts on the area's amenity values.

Site Stability and Erosion

b. Whether the effects from natural hazards will be avoided, remedied or mitigated, and the extent to which earthworks affect the stability and erosion potential of the site and surrounding site.

Topography in Relation to Adjacent Land

c. Whether the site contours and final contours coordinate with the final levels of adjoining land.

Flooding

d. Whether the earthworks and final levels will adversely affect overland flowpaths or increase the potential for flooding within the site or surrounding area.

Utility Services

e. Whether the earthworks and final levels will adversely affect existing utility services.

Public Access to the Coastal Marine Area and Fossil Forest

17. AIAL shall provide road access for the public to the coastal marine area, through the designated area, to a point near the fossil forest (located in the coastal banks of Lot 2 DP 62092 and Allotment 164 Manurewa Parish) and shall provide pedestrian access from the end of that road down to Mean High Water Springs, so as to provide public access to the coastal marine area and the fossil forest.

Public Consultation

17A.

a. Construction of the Northern Runway to its maximum length, shall not take place until AIAL has completed a process of public notification and consultation. The process of public notification and consultation shall include the following:

- i. Written notice to the ANCCG (or its successor from time to time); and
- ii. A public notice published in a daily newspaper circulating in the Auckland Council area, and in each of the local newspapers circulating in those parts of the Auckland Council area subject to the ANNA, MANA and HANA. Such notice to be published in each case twice at an interval of approximately a fortnight.

b. Each of the abovementioned notices shall include a brief description of the proposal and shall advise:

- i. Where full details of the proposal can be inspected and copies of those details obtained;
- ii. Of the opportunity to forward comments to AIAL about the proposal;
- iii. The date by which comments about the proposal should be sent to AIAL, which date shall not be less than 20 working days from the date of the last of the public notices;
- iv. Details of any additional consultation proposed by AIAL.

c. The information available for inspection under this Condition shall include the following:

- i. Diagram(s) and description of the proposal including all associated work;
- ii. A description of the proposed operating scenario for the Northern Runway;
- iii. The reasons for the proposed operating scenario;
- iv. The reasons for the proposal including an explanation of the need for the Northern Runway to have the proposed Operational Length;
- v. Reference to any relevant reports; and
- vi. Any other information AIAL wishes to make available for the purpose of explaining the proposal or in respect of which it would like to invite comments.

d. AIAL shall consider any comments made to it pursuant to the notification and consultation process described above before deciding whether or not to proceed with the proposal. If AIAL decides to proceed, it shall provide as soon as possible to the Council copies of all comments received, together with written advice of:

- i. Details of the notification and consultation undertaken;
- ii. A summary of comments received;
- iii. A statement describing the actions planned, if any, in respect to the comments received; and
- iv. Statement explaining the reasons for the actions to be taken or the decision not to take any action.

e. AIAL shall regularly consult the ANCCG and seek its input and comment on community consultation that the latter may recommend to inform the public from time to time on any matter relating to the Northern Runway

Outline Plan

18. Where AIAL seeks to rely on the provisions of the designation for any works within its land, an outline plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of any work to be constructed on the designated area must be submitted to the Council pursuant to section 176A of the RMA unless the works have been otherwise approved under the RMA or the details of the work are incorporated in the designation or Council waives the requirement for an outline plan. For any proposed work to be constructed for taxiing of aircraft on the designated area north of the area shown as Northern Runway on Figure 1 of this designation, the outline plan shall include, in addition to the matters required under section 176A of the RMA, an analysis and prediction of the noise associated with the Aircraft Operations component of the proposal so as to demonstrate compliance with Condition 5.

Heritage Resources

19. Each of the following heritage resources shall be relocated by the requiring authority in a manner and to a site that will ensure the continued protection of the resource before any construction or work is commenced on the designated area that would damage or destroy the resource:

- a. the notable trees and stands of trees at 142 Westney Road (Lot 1 DP 386296) (refer Schedule of Notable Trees Item 1238), provided however that these trees need not be relocated and may be removed, if AIAL provides the Council with a report from a qualified arborist, approved by the Council, who certifies that it is not reasonably practical to relocate them;
- b. Abbeville Farm House and Barn, Part Lot 2, DP 12194 (refer Schedule of Significant Heritage Places, Item 1414);
- c. Westney Road Methodist Church, Part Lot 2, DP 12194 (refer Schedule of Significant Heritage Places, Item 1414); and
- d. Rennie Jones Homestead, Pt Allot 163, Manurewa Parish (refer Schedule of Significant Heritage Places, Item 1424).

Lapsing Date

20. As this designation has been given effect to, the designation cannot lapse pursuant to section 184(1) of the RMA.

Figure 5 - Identified Area

1101 Auckland International Airport - Renton Road Area

Designation Number	1101
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Auckland International Airport Ltd
Location	200 and 260 Ihumatao Road, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 231A, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Pursuant to section 184(1)(c) of the RMA this designation shall only lapse when this unitary plan ceases to be operative

Purpose

Activities within the designation are limited to:

- i. Runways, taxiways and other aircraft movement areas and aprons;
- ii. Aircraft Operations;
- iii. The repair, maintenance and servicing of aircraft;
- iv. Air freight operations which require airside frontage;
- v. Landscaped open space buffer areas (refer Figure 1A.1);
- vi. Activities that are ancillary to the above activities; and
- vii. Buildings and other Structures required for the above activities.

Conditions

1. The following conditions from Designation AIAL 1100 shall apply to Designation AIAL 1101:

- a. Condition 1 (Definitions)
- b. Condition 9 (Noise Management Plan)
- c. Condition 9A (Reporting of Exceptions)
- e. Condition 13(b) (Engine Testing on Aircraft)
- f. Condition 13(c) (Engine Testing on Aircraft)
- g. Condition 17 (Public Access to the Coastal Marine Area and Fossil Forest);

and pursuant to section 184(1)(c) of the RMA this designation shall only lapse when this unitary plan ceases to be operative. Note: in relation to this condition, references to the “designated area” in the conditions to Designation AIAL 1100 shall be read as references to the land to which Designation AIAL 1101 applies.

In addition, the following conditions also apply to this designation:

2. Auckland International Airport ("the Airport") activities within Designation AIAL 1101 shall be limited to:

- a. Runways, taxiways and other aircraft movement areas and aprons;
- b. Aircraft Operations;
- c. The repair, maintenance and servicing of aircraft;
- d. Air freight operations which require airside frontage;
- e. Landscaped open space buffer areas (refer Figure AIAL 1A.1);
- f. Activities that are ancillary to the above activities; and
- g. Buildings and other Structures required for the above activities.

3. An outline plan of any work in the designated area must be submitted to the Council pursuant to section 176A of the RMA, unless, in the case of minor works, the Council waives the requirement for an outline plan.

4. The outline plan shall include, in addition to the matters required under section 176A of the RMA:

- a. A report or reports covering the following matters, as relevant to the scale and location of the works proposed:

Site Layout

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. Whether the site layout is compatible with the site development (existing or potential) of adjoining sites and the streetscape;
- ii. Whether the building aligns with Oruarangi Road or realigned Renton Road (if relevant), to create a clear spatial system along the roads;
- iii. Whether buildings align with other buildings on the site or (existing or potential) on adjoining sites;

Design and External Appearance of Buildings and Structures

- i. Whether site levels and building form, colour and texture are used to reduce the apparent height and bulk of large buildings where viewed from Ihumatao Road, Oruarangi Road and realigned Renton Road;
- ii. Whether building platforms are designed in such a way that one building is not more dominant than neighbouring buildings;
- iii. Whether rooftop mechanical equipment is integrated into roof forms or otherwise concealed from adjacent roads and reserves;
- iv. Whether there will be a consistency of building materials and colours between buildings (including buildings on adjoining sites);
- v. Whether service areas and loading docks, car parks, loading docks are designed to face away from the front yard;
- vi. Whether any security fencing is integrated with planting and buildings so as to avoid any adverse visual effect on Ihumatao Road and realigned Renton Road;
- vii. Whether low glare, high cut-off exterior lighting is used, and integrated with the architectural and landscape design;
- viii. Whether signage is integrated with the architectural and landscape design.

Landscape Treatment

- i. Whether existing planting along the Ihumatao Road frontage is to be retained and/or enhanced and, in the area shown as “supplementary landscape planting” on Figure AIAL 1A.1, whether the landscape planting proposed will complement and be consistent with the planting approved under any Framework Plan for Policy Area F of the Auckland Airport Precinct.
- ii. Whether a continuity of planting along the realigned Renton Road frontage is to be achieved to enhance the streetscape;
- iii. Whether the proposed landscape design enables the site as a whole to relate positively to development on adjoining sites and the road, and neighbouring areas of open space;
- iv. Whether the landscape treatment is in scale with the proposed development, providing for the visual softening of large buildings and the screening of parking, loading and storage areas;
- v. Whether the form (including density, species, depth and height) of planting that is proposed to be undertaken within the site provides coherent design with existing trees and shelterbelts on and immediately adjacent to the site;
- vi. Whether the proposed plantings are to be placed so that they do not obstruct views of landscape or landmark features.

Land Modification

In relation to any land modification exceeding 200m³, details of the following:

- i. Alteration to Natural Landscape - Whether any earthcut or fill will remove existing vegetation, alter the existing topography of the site, or affect existing natural features including landforms, and the impacts on the area's amenity values and cultural values, including wahi tapu.
- ii. Site Stability and Erosion - Whether the effects from natural hazards will be avoided, remedied or mitigated, and the extent to which earthworks affect the stability and erosion potential of the site and surrounding site.
- iii. Topography in Relation to Adjacent Land - Whether the site contours and final contours co-ordinate with the final levels of adjoining land.
- iv. Flooding - Whether the earthworks and final levels will adversely affect overland flowpaths or increase the potential for flooding within the site or surrounding area.
- v. Utility Services - Whether the earthworks and final levels will adversely affect existing utility services.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. Evidence of consultation with an appropriately delegated representative/s of the Makaurau Marae and Te Kawarau Iwi Tribal Authority Incorporated, including confirmation whether the delegated representative/s has sighted the final version of the outline plan of works that is to be submitted to Council.

c. An analysis and prediction of the noise associated with the proposed works, so as to demonstrate compliance with Conditions 7-9 of this designation.

d. Details of traffic management proposals for the period of construction of the proposed works, and for the operation of the proposed activities once established.

e. The timetable for completion of works.

5. The land shown as "Landscape Buffer Area" in Figure AIAL 1A.1 shall be planted and developed in accordance with a Landscape Buffer Development and Landscape Treatment Plan 3 years prior to any building being erected in the Designation AIAL 1101 area or within 5 years of this designation being incorporated in the District Plan, whichever is the earlier date. The Landscape Buffer Development and Landscape Treatment Plan shall include provision for the following:

a. Maintaining Ellett House and its surrounds to an appropriate sustainable standards suitable for a productive use, and in accordance with recognised conservation principles.

b. Retaining the existing stone wall as a landscape and cultural heritage feature and ensuring that any planting will avoid archaeological site R11/2471 adjacent to the stone wall and the stone wall itself.

c. The establishment of appropriate native vegetation (eco-sourced where practical), "story board" signage and/or a tohu (monument) or plaque(s) to acknowledge archaeological sites, and Maori past presence, use and traditional relationship to the site.

d. Any security fencing is to be located on the airport side of the landscape buffer, i.e. to the east of the realigned Renton Road. No security fencing is to be located on or beside realigned Renton Road itself or on the western boundary of the designation.

e. Other than the signage required under c. or security signage, including in relation to .d above, no signage shall be visible from realigned Renton Road or Ihumatao Road.

6. In relation to Ihumatao and the realigned Renton Road boundaries of this designation, no part of any building within the designated area shall project beyond a building envelope contained by a 55 degree recession plane from points 2.5 metres above the edges of those roads (i.e. the maximum height = 2.5 metres plus 1.428 x distance from the edge of the road). For the purposes of this condition the edge of Ihumatao Road is defined by the south-western boundary of Ihumatao Road while the edge of realigned Renton Road boundary of the designation is defined by the south-eastern edge of the carriageway of the realigned Renton Road.

7. Noise from Aircraft Operations within the area of the Designation shall not exceed a Day/Night level (L_{dn}) of 55dB within the notional boundary of any dwelling within the Identified Area shown on Figure 5 attached to Designation AIAL 1100 (where the notional boundary is defined as a line 20m from any side of a dwelling or the legal boundary where this is closer to the dwelling). For the purpose of this control aircraft noise shall be measured in accordance with NZS6805:1992 and calculated as a 12 month rolling logarithmic average.

8. The noise from the testing of engines, which are in situ on an aircraft, within the designated area, combined, where relevant, with the noise from the testing of engines, which are in situ, on aircraft within the area of Designation 231, shall not exceed the following noise limits within the notional boundary of any dwelling within the Identified Area shown on Figure 5 attached to Designation AIAL 1100 (where the notional boundary is defined as a line 20m from any side of a dwelling or the legal boundary where this is closer to the dwelling):

7 day rolling average	55dB L _{dn}
10pm to 7am	75dB L _{Amax}

For the purpose of this control, the noise arising from testing of in situ aircraft engines shall be measured in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

accordance with NZS6801:2008 Acoustics: Measurement of Environmental Sound.

9. The noise from any use of the designated area for any purposes other than:

- a. Aircraft Operations;
- b. Testing of in situ aircraft engines; and
- c. The use of audible bird scaring devices for the discouragement of birds;

combined with, if relevant, the noise from any use of the area of Designation AIAL 1100 for the same purposes, shall not exceed the following noise limits within the notional boundary of any dwelling within the Identified Area shown on Figure 5 attached to designation AIAL 1100 (where the notional boundary is defined as a line 20m from any side of a dwelling or the legal boundary where this is closer to the dwelling).

Average Maximum Levels			Maximum
dB L _{Aeq} A			dB L _{Amax}
Monday to Saturday (0700-1800)	Monday to Saturday 6pm – 10pm (1800 – 2200) AND Sundays and Public Holidays, 7am – 10pm (0700 – 2200)	At all other times	10pm – 7am (2200 – 0700)
55	50	45	70

For the purpose of this control, other noise shall be measured in accordance with NZS 6801:2008 Acoustics - Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Environmental Noise.

10. Changes to the Noise Management Plan (NMP) required by the Conditions attaching to Designation AIAL 1100 to address the area covered by this designation are to be presented to the ANCCG within 6 months of this designation being confirmed. AIAL shall invite comments from the ANCCG before finalising the changes to the NMP.

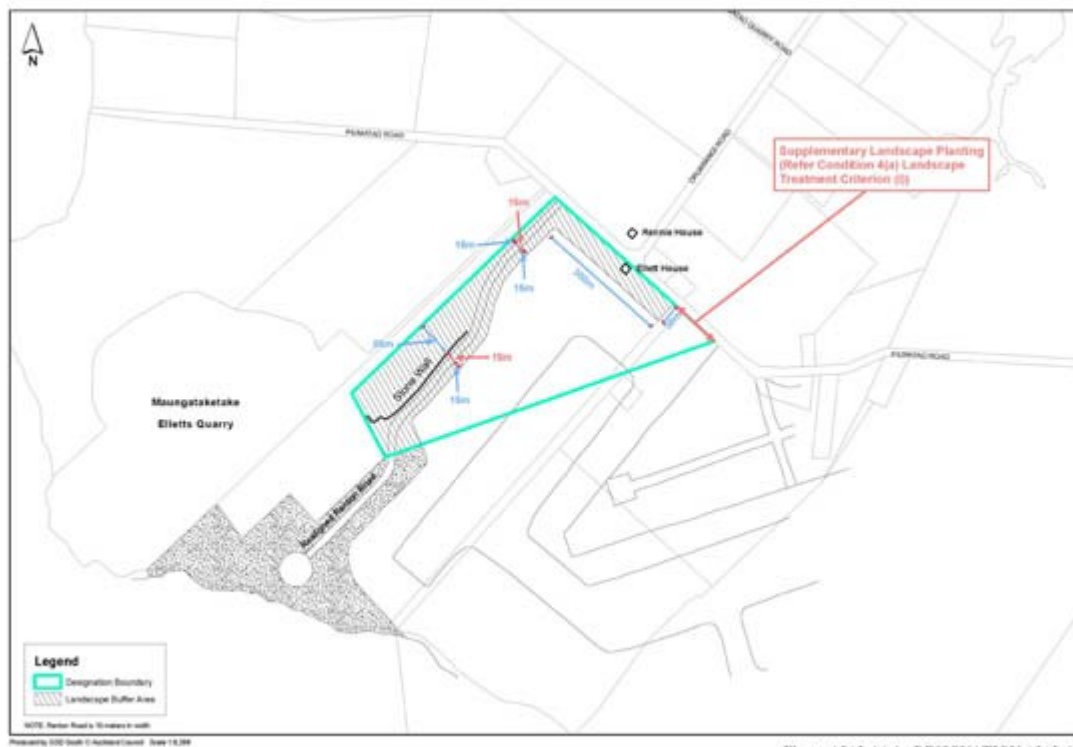

11. The existing portion of Renton Road shown on the attached diagram to be closed as part of the new designation be replaced by a new road over which public access is provided to the buried fossil forest located in the coastal banks of lot 2 DP 62092 and allotment 164 Manurewa parish. This condition complements condition 17 in Designation AIAL 1100.

12. In the event of archaeological features being uncovered during any works undertaken within the designation (e.g. shell midden, hangi, oven stones, pit depressions, defensive ditches, artefact material, koiwi tangata (human skeletal remains)), work shall cease within a 10 metre radius of the discovery and the Auckland Council, the New Zealand Historic Places Trust and the appropriate iwi authorities shall be contacted within 72 hours, so that appropriate action can be taken. Work should not recommence until the applicant has consulted with the iwi authorities and obtained New Zealand Historic Places Trust approval for the work to continue. Note: at the request of mana whenua, AIAL must make an area available for the reburial of any koiwi found within the designated area.

Attachments

Figure AIAL 1A.1 - Designation Area 1A

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1102 Obstacle Limitation, Runway Protection and Ground Light Restriction

Designation Number	1102
Requiring Authority	Auckland International Airport Ltd
Location	Vicinity of Auckland International Airport
Rollover Designation	Yes
Legacy Reference	Designation 232, Auckland Council District Plan (Manukau Section) 2002; Designation H05-04, Auckland Council District Plan (Isthmus Section) 1999; Designation 141 Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Part 1: Auckland International Airport, Specification for Obstacle Limitation Surfaces

1. Figure 1 to this designation together with this specification comprises the Auckland International Airport Specification for Obstacle Limitation Surfaces.

The Civil Aviation Act 1990 requires that hazards to aviation safety be controlled.

Obstacle Limitation Surfaces of an aerodrome are defined surfaces in the airspace above and adjacent to the aerodrome. These Obstacle Limitation Surfaces are necessary to enable aircraft to maintain a satisfactory level of safety while manoeuvring at low altitude in the vicinity of the aerodrome.

No obstacle shall penetrate the Obstacle Limitation Surfaces. An obstacle is defined as any object which is

The Proposed Auckland Unitary Plan (notified 30 September 2013)

connected directly or indirectly to the ground or water and includes trees. In addition, no chimney shall discharge effluent through the Approach Slopes shown on Figure 2 to this designation at a velocity in excess of 4.3 metres per second.

2. Runway Centreline

2a. Existing Runway

Point A: This is a position located at the eastern end of the centreline of the existing runway. The position of Point A is shown on the Department of Survey and Land Information plan number SO 44954. In metric terms, the co-ordinate value of Point A is:

685,729.76m N

303,667.43m E

Co-ordinate values and bearings are in terms of the Geodetic Datum 1949 and origin of co-ordinates is Mt Eden, 700,000mN 300,000mE.

The western end of the existing runway centreline is 3635 metres west on a bearing of 251° 00'01" from Point A on Figure 1 to this designation.

2b. Proposed Second Runway

The eastern end centreline of the proposed second runway is defined as Point C on Figure 1 to this designation with geodetic co-ordinates of:

687,048.03m N

301,506.40m E

The western end centreline proposed second runway is defined as Point D on Figure 1 to this designation with geodetic co-ordinates of:

686,348.07m N

299,473.53m E

3. Runway Strips

The runway strips are areas at ground level 300 metres wide symmetrical about the runway centreline. The ends of the runway strips are 60 metres beyond the eastern and western ends of the defined runway centrelines.

4. Approach Slopes - General

The surfaces known as Approach Slope Surfaces meet requirements for both approach and takeoff. The Approach Slopes (inner edge) start at the points as specified in clauses 4a and 4b below and are symmetrical about the extension of the runway centreline. The Approach Slopes rise at a gradient of 1.2% and terminate at a point 152 metres above mean sea level (AMSL). The sides of the approach slope diverge from the runway centreline at a rate of 15%.

4a. Approach Slopes - Existing Runway

Eastern Approach Slope

Starting point - end of the eastern clearway, i.e. 213.36 metres east of Point A.

Width of inner edge - 346 metres.

Starting Level - 9.66 metres above mean sea level.

Western Approach Slope

Starting point - western end of the runway strip.

Width of inner edge - 342 metres.

Starting level - 6.83 metres above mean sea level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4b. Approach Slopes - Proposed Second Runway

Eastern Approach Slope

Starting point - end of the eastern clearway, i.e. 400,00 metres east of Point C.

Width of inner edge - 402 metres.

Starting Level - 17.00 metres above mean sea level.

Western Approach Slope

Starting point - end of the western clearway, i.e. 235.5 metres west of point D.

Width of inner edge - 353 metres.

Starting level - 17.00 metres above mean sea level.

5. Inner Horizontal Surface

The Inner Horizontal Surface is a flat planar surface at an altitude of 52 metres above mean sea level. The outer limits are located 4000 metres from and parallel to the outer sides and ends of the runway strips as depicted on Figure 1 to this designation. The corners of the rectangle are formed by a radius of 1500 metres.

6. Transitional Surfaces

The Transitional Side Surface slopes upwards and outwards from the sides of the runway strips at a gradient of 1:7 extending until they meet the Inner Horizontal Surface and Approach Slopes.

7. Conical Surface

The Conical Surface slopes upward and outwards from the periphery of the Inner Horizontal Surface at a gradient of 1:40 until reaching an elevation of 152 metres above mean sea level.

8. Procedure Turning Area Surfaces

There are two Procedure Turning Areas located to the east and west and bounded by the Conical Surfaces. The surfaces for the Procedure Turning Areas are at 152 metres above mean sea level or 21 metres above terrain whichever is the higher. The northern limit of both Procedure Turning Areas is 4000 metres north of the northern side of the proposed second runway strip. The southern limit of both Procedure Turning Areas is 4000 metres south of the southern side of the existing runway strip. The western limit of the western Procedure Turning Area is 14,000 metres west of the Inner Horizontal Turning Surface. The eastern Procedure Turning Area extends 16,000 metres east of the Inner Horizontal Surface.

9. Controlling Surface

At any point where any two surfaces overlap and are at differing elevations, the lower of the two surfaces shall apply.

Part 2: Restrictions Relating to Runway End Protection Areas

The Runway End Protection Areas (REPAs) shown on Figure 3 to this designation, are areas off the ends of both the existing and proposed second runways which are required to be free of obstructions or activities which could interfere with aeronautical navigational aids. The areas of the REPAs as required for operational purposes are also areas in which, statistically, there are greater chances of aircraft related accidents. It is considered desirable that the public's exposure to such risks be reduced by limiting the range of activities permitted in the REPAs. The following requirements for REPAs are intended to achieve both objectives which, to a large extent, are compatible.

The requirements for REPAs detailed in this section are based on the Federal Aviation Administration (FAA) Office of Airport Standards (Washington, DC, USA) Advisory Circular 150/5300-13 Airport Design and the Civil Aviation Authority (CAA) of New Zealand Advisory Circular AC 139-06A Aerodrome Design - Aeroplanes Above 5700kg MCTOW.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The REPAs comprise fan-shaped areas plus a rectangular area which extends beyond the fan along the extended runway centre-line. The fan-shaped areas commence at the ends of the runway strips (defined in the Specification for Obstacle Limitation Surfaces) and extend equidistant about the extended runway centre-line to a point 750 metres from the end of the runway strips. The width of the fan at this point is 525 metres. The rectangular areas then extend beyond the fans and equidistant about the extended runway centre-lines, for a further 540 metres. The width of the rectangular areas is 120 metres.

All buildings, except those required for aviation purposes, are prohibited within the REPAs. For the purpose of this section, the word "building" shall have the meaning assigned to it in the Building Act 2004, except that the exclusions listed under Section 9(a), (ab), (ac), (b), (c), (f), (g), (h) (i) & (j) of that Act shall not apply and those objects shall be considered to be buildings. Any buildings erected in the REPA for the proposed second runway shall be removed unless the building has the written approval of Auckland International Airport Limited under section 176(b) of the Resource Management Act 1991.

In addition to buildings, all activities within the REPAs which generate or have the potential to generate any of the following effects are prohibited:

- a. Mass assembly of people;
- b. Release of any substance which would impair visibility or otherwise interfere with the operation of aircraft including the creation of smoke, dust and steam;
- c. Concentration of dangerous substances;
- d. Production of direct light beams or reflective glare which could interfere with the vision of a pilot;
- e. Production of radio or electrical interference which could affect aircraft communications or navigational equipment; and
- f. Attraction of birds.

Part 3: Requirements for Non-Aeronautical Ground Lights Adjacent to Extended Runway Centre Lines

CAA Advisory Circular AC 139-6 requires that any non-aeronautical ground light which, by reason of its intensity, configuration or colour, might cause confusion or prevent the clear interpretation of aeronautical ground lights, should be extinguished, screened or otherwise modified so as to eliminate such a possibility. For Auckland International Airport, this requirement currently applies to the Existing Runway only. In advance of the Northern Runway becoming operational a similar requirement will need to be introduced for that runway. The current requirement applies over a rectangular area, 1500 metres wide, extending equidistant either side of the extended runway centre-line for a distance of 4440 metres from the end of the runway strip (as defined in the Specification for Obstacle Limitation Surfaces). This area is shown in Figure 4 to this designation.

For ease of administration, Auckland International Airport Ltd requires that any light in the above area be prohibited from shining above the horizontal.

Designation Schedule - Auckland Transport (1/3)

North and West

Number	Purpose	Location
1400	Service lane and car park	Leal Place, Manly
1401	Road	Hauiti Drive to Blue Gum Drive, Warkworth
1402	Weiti Crossing	East Coast Road, Redvale (crossing Weiti River) to corner Whangaparaoa Road and Cedar Road, Whangaparaoa
1403	Road widening	55-67 and 76-90 Red Beach Road, Whangaparaoa
1404	Road widening	470-502, 473-475, 504-522A, 529-549, 540, 585-587, 593-601, 609-611, 616A, 618, 637, 640-644A, 663, 720-728, 736-752, 756-760 and 770A-776 Whangaparaoa Road, 2 Cedar Terrace, 1 and 4 Brightside Road, 1 Penton Road, 1 Tower Hill, 2 Homestead Road and 2 Ladies Mile, Whangaparaoa
R1405	Public off-street parking ...	8 Percy Street, Warkworth
1406	Car park	Wharf Street, Warkworth
1407	Road widening	Corner of Hudson Road and State Highway 1, Warkworth
1408	Public car park	7A Rawene Road and 204 Hinemoa Street, Birkenhead
1409	Public car park	21 Sunnyhaven Avenue, Beach Haven
1410	Public car park	29 Anzac Road, Browns Bays
1411	Public car park	5 Bute Road, Browns Bay
1412	Public car park	472 Beach Road, Murrays Bay
1413	Public car park	3 Montrose Terrace, Mairangi Bay
1414	Public car park	115 Lake Road and 49-51 Pearn Terrace, Northcote Commercial Centre
1415	Public car park	1A Jutland Road, Hauraki
1416	Public car park	14 Huron Street and 15 Northcroft Street, Takapuna
1417	Public car park	40 Anzac Street, Takapuna
1418	Public car park	139 Kitchener Street, Milford
1419	Public car park	3-5 Fleet Street, Devonport
1420	Constellation Bus Station	62 Parkway Drive, Albany
1421	Albany Bus Station	A250 Oteha Valley Road and 125 McClymonts Road, Albany
1422	Intersection upgrade to provide priority access to the North Shore Busway for buses/high occupancy vehicles	Onewa Road and Sylvan Avenue, Northcote
1423	Akoranga Station	20 Takapuna Landing, Takapuna
1424	Akoranga Station link road	Takapuna Landing, Takapuna

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1425	Akoranga Pedestrian Overbridge	20 Takapuna Landing (Akoranga Station), Takapuna (over State Highway 1) to 72 Akoranga Drive (Akoranga Campus), Northcote
1426	Westlake Station	Shakespeare Road (adjoins No. 78 Taharoto Road), Takapuna
1427	Sunnynook Station	168Z Sunnynook Road, Sunnynook
1428	Constellation Drive Station	62 Parkway Drive, Rosedale
1429	Wairau Road / Taharoto Road transport corridor widening and associated works	7-15 Wairau Road and 78Z Taharoto Road, Milford
R1430	Public off-street parking ...	23-27 Sir Peter Blake Parade, Bayswater
1431	Road widening	107 Chivalry Road, Glenfield
1432	Road widening	43, 47-51, 55, 59, 65, 69 and 106 Anzac Street, Takapuna
1433	Transport corridor	Fred Taylor Drive, Massey/Whenuapai
1434	Road widening purposes	125A Metcalfe Road to 46 Ranui Station Road, Ranui
1435	Road widening purposes	Waitemata Drive (over Birdwood Park) to Waitemata Drive West, Ranui
1436	Public car parking purposes	331 Great North Road, and 4-6 and 14-20 Edmonton Road, Henderson
1337	Transport corridor	Hobsonville Road, Hobsonville
1438	Public car parking purposes	16 Delta Avenue, New Lynn
1439	Road widening access purposes	7 Fairbanks Place, Glendene
1440	Road widening access purposes	16A Glynnbrook Street, Te Atatu South
1441	Road widening access purposes	35 Ranui Station Road, Ranui
1442	Service lane	342-344 Great North Road (Henderson Square A), Henderson
1443	Service lane	2 Rialside Avenue (Henderson Square B), Henderson
1444	Service lane	McNaughton Way to 11 High Brown Drive, New Lynn
1445	Service lane	60 James Laurie Street to 240C-D Great North Road, Henderson
1446	Road widening purposes	98 Birdwood Road and 39-59 Bradnor Meadows Drive, Ranui
1447	Road widening purposes	2-16, 24-26, 28-30 Clark Street, New Lynn
1448	Road widening purposes	1-3 Edmonton Road, Henderson

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1449	Road widening purposes	267-287, 290-300, 295-297A, 301-309, 304-318A, 311-325, 429-447, 450, 4004-4012, 4007-4035, 4018, 4022-4024, 4040-4048, 4052-4054, 4070, 4087-4131, 4092-4094, 4098 and 4104-4118A Great North Road, 1-3 West Coast Road, 1 and 2 Montel Avenue, 2 Blacklock Avenue and 1 Buscomb Avenue, Henderson to Te Atatu
1450	Road widening purposes	6-8, 14, 122-134, 211-221 Lincoln Road and 1-3 Swanson Road, Henderson
1451	Road widening purposes	47-55A, 52-54, 58, 78, 80A-82, 86-96, 651-659, 654-656, 676-682, 686, 703-709, 713-733, 708-720, 739A-747, 753-761, 760, 765, 780-786 and 849 Swanson Road, 2 Church Street, and 2 and 13 Knox Road, Swanson
1452	Road widening purposes	241-275, 272-294, 281-314, 300-326, 330-332, 338-342 and 354-358 Te Atatu Road South, 93 Royal View Road, 1, 82 and 85 Jaemont Avenue, 1A and 2A Covil Avenue and 2A Bridge Avenue, Te Atatu
1453	Road widening purposes	2-14, 9-11, 17-35, 30, 40, 44-54, 45-49, 53, 58, 58-64, 65-171A, 68-68A, 74-114 and 118-160 Titirangi Road, 2 Margan Avenue and 1 and 2 Northall Road, Titirangi
1454	Road widening purposes	1-23, 2, 24-34, 25-33, 37-47, 53-59, 63A-141, 64-186, 198-274, 273-347, 282-312, 318-320, 326-360, 351A-409, 370-386 and 390-400 West Coast Road, 69-71 Clayburn Road and 1 Pleasant Road, Glen Eden
1455	Road widening purposes	1-25, 12-40, 37, 47-55A, 52-54, 58, 78, 80A-82, 86-88, 92-94 Swanson Road, Henderson
1456	Pedestrian mall	Pearn Crescent, Northcote
R1457	Public off-street parking ...	32 College Road, Northcote
R1458	Public off-street parking ...	76 Swanson Road, Henderson
R1459	Public off-street parking ...	2 Fenwick Avenue, Milford
R1460	Public off-street parking ...	3 Harrison Street, Wellsford
R1461	Public off-street parking ...	12 Channel View Road, Takapuna
R1462	Public off-street parking ...	R78 Hurstmere Road, Takapuna
R1463	Public off-street parking ...	20 Clarence Street, Devonport
R1464	Public off-street parking ...	5 Trading Place, Henderson
R1465	Public off-street parking ...	85 Hurstmere Road, Takapuna
R1466	Public off-street parking ...	41 Glenmall Road, Glen Eden
1467	Road widening	Fred Taylor Drive, Massey/Whenuapai
1468	Road widening	Hobsonville Road, Hobsonville

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1400 Service Lane and Car Park - Leal Place

Designation Number	1400
Requiring Authority	Auckland Transport
Location	Leal Place, Manly
Rollover Designation	Yes
Legacy Reference	Designation 140, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Service lane and car park.

Conditions

No conditions.

Attachments

No attachments.

1401 Road - Hauiti Drive

Designation Number	1401
Requiring Authority	Auckland Transport
Location	Hauiti Drive to Blue Gum Drive, Warkworth
Rollover Designation	Yes
Legacy Reference	Designation 162, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 15 (fifteen) years after the date on which it is included in the Unitary Plan unless:

- It is given effect to before the end of that period; or
- The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

1402 Road - Weiti Crossing

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	1402
Requiring Authority	Auckland Transport
Location	East Coast Road, Redvale (crossing Weiti River) to corner Whangaparaoa Road and Cedar Road, Whangaparaoa
Rollover Designation	Yes
Legacy Reference	Designation 167, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	10 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Weiti crossing.

Conditions

1. General

1.1 The scope and extent of the works (including the horizontal and vertical alignment of the carriageway) within the designation shall be generally in accordance with the plans contained in the Notice of Requirement dated 14 April 1998 (Appendix D – Designation drawings) and referenced as Figures A1.0 to A1.3 (BCHF Cad File No. 6507C935.DWG to 6507C938.DWG Rev. E) and Figures B1.1 to B1.4 (BCHF Cad File No. 6507C931.DWG to 6507C934.DWG Rev.D.)

1.2 The designation and proposed works on the area of land subject to the designation shall not include any toll-booth type facilities or structures.

1.3 Before any construction is commenced an Outline Plan shall be submitted in terms of section 176A of the Resource Management Act 1991 to council. The outline plan may be submitted in stages to reflect any proposed staging of the physical works. This outline plan is to be submitted to council for assessment and recommendations to the council. The outline plan shall show those matters required to be included by section 176A(3) of the Act. It shall be prepared in consultation with directly affected property owners and occupiers with the record of such consultation being documented in the outline plan.

1.4 Prior to the start of physical works, the requiring authority (or its agent) shall obtain all resource consents required under the Resource Management Act 1991 and the Historic Places Act 1993.

2. Design Considerations

2.1 The requiring authority (or its agents) shall incorporate retaining walls into the detailed design to reduce the property effects at critical parts of the alignment, in general accordance with the details identified in Appendix C of the requiring authority's closing submissions.

2.2 As part of the upgrading works the requiring authority (or its agents) shall, subject to the proper performance of its statutory functions, provide suitable pedestrian crossing facilities at the following general localities along Whangaparaoa Road:

- a. Brightside Road;
- b. Weiti Crossing / Whangaparaoa Road intersection;
- c. Stanmore Bay Road;
- d. Ladies Mile;
- e. Pedestrian linkage of Duck Creek Road across the Weiti Crossing; and
- f. Such other places as may be identified in future analysis as necessary for safety purposes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.3 The requiring authority (or its agents) shall permit vehicle access from the Weiti Crossing road alignment to the following parcels of land in consultation with the landowners and in accordance with the provisions of the Local Government Act 1974:

- a. Lot 3 DP 95982 and Lot 1 DP 100141 being respectively the Kilmacrennan Farm and Kerrykeel Farm which are farmed as one unit known as Weiti Station (Green and McCahill Group submission); and
- b. Part Lot 1 DP 95984, Lot 1 DP 51255 and Lot 1 DP 49038 being land owned by Green and McCahill Holdings Ltd.

Explanation:

Given the size of the Green and McCahill Holdings Ltd landholding (908 hectares) two access points would be appropriate. The third access point sought by this company includes access to the Stillwater settlement which should be the subject of other considerations apart from this designation.

3. Noise Impact Mitigation

3.1 During construction, New Zealand Standard 6803P : 1984, The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work shall be complied with and the principles for managing noise set out within that document shall be formally adopted.

3.2 The road alignment shall be designed to achieve the following noise standards:

- a. For the properties identified in Table A – the relevant traffic noise design limit contained in Table A.
- b. For all other properties – the relevant noise standard contained in NZS6806:2010 Acoustics - Road Traffic Noise - New and altered roads.

Table A:

Location	Traffic Noise Design Limits Leq (24 hours)
Dwelling A (at the western end of the proposed road as indicated on the AEE document). This will require mitigation from the expected noise levels.	65 dBA
All other existing* dwellings west of the Weiti River Dwelling 1 on Lot 1 DP 138956 Dwelling 2 on Lot 4 DP 64380 Dwelling 3 on Lot 6 DP 64380 Dwelling 4 on Lot 7 DP 64380 This will require mitigation from the expected noise levels particularly for the properties at 173, 250, 301, 305 and 307 Duck Creek Road and that identified as Dwelling B in the AEE document along Weiti Station Road.	55 dBa
Dwellings at 7 to 37 Cedar Terrace inclusive.	62 dBa
All existing* dwellings on Whangaparaoa Rd.	65 dBa or ambient (whichever is greater)

*Existing at 14 April 1998

Note:

The assessment point for Table A is 1m in front of the most exposed point on the facades of the dwellings.

3.3 In addition to the standards in Table A above, the road alignment shall be designed with the appropriate noise mitigation measures to achieve compliance with a single event noise limit of 78 dBA Lmax at the façade of any residential building situated within 12 metres from the new road carriageway. This shall not apply to residential buildings currently located within 12 metres of the existing road carriageway.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Explanation:

This is in accordance with the NZS6806:2010 Acoustics - Road Traffic Noise - New and altered roads.

3.4 If it is impracticable to meet the Design Limits in the above Conditions 3.2 and 3.3, then prior to completion of the road widening, the requiring authority (or its agents) shall, with the agreement of the owner of the dwelling and if so required by them, provide insulation and, if required, mechanical ventilation to all living rooms (including kitchens) and bedrooms, to ensure that an internal criterion of 40 dBA Leq (24 hours) is not exceeded. If it is impracticable or uneconomic to design mitigation to achieve this internal criterion then the requiring authority (or its agents) shall, with the agreement of the owner, and at a price not exceeding market value, purchase the property.

3.5 Without limiting the requirements for consultation imposed under condition 3.4, the requiring authority shall consult with the owners of 236 Duck Creek Road, being Part Lot 3 DP 26549 and 266 Duck Creek Road, being Lot 2 DP 29403 ("the Webster properties") in relation to the location, nature and extent of any proposed noise mitigation measures.

3.6 In undertaking this consultation the requiring authority shall give special consideration to the need for additional or alternative noise mitigation measures which mitigate to the greatest extent practicable the acoustic and amenity effects of the designation upon the Webster properties within the noise limit set out in condition 3.2.

3.7 In undertaking consultation with the owners of the Webster properties the requiring authority shall:

- a. provide copies to the owners of all relevant reports and plans prepared by it in relation to the proposed noise mitigation measures;
- b. ensure that the owners have at least two weeks to peruse this material and respond to the requiring authority with their position; and
- c. the requiring authority shall obtain (at its reasonable cost) a peer review of the proposed mitigation measures and consequential effects on the Webster properties to identify other mitigation measures which may be cost effective and meet the noise limits set out in condition 3.2 and shall give special consideration to the findings of any peer review in deciding what noise mitigation measures it implements for the Webster properties.

4. Ecological Impact Mitigation

4.1 The requiring authority (or its agents) shall, in conjunction with the council and in consultation with directly affected property owners and occupiers, including the Queen Elizabeth II National Trust, produce the following programmes:

- a. An Ecological Mitigation Programme that outlines the methods and implementation and monitoring processes to be used to avoid, remedy or mitigate adverse effects on the environment, particularly in regard to indigenous vegetation, ecosystems and species, geological features and areas of wildlife habitats; and
- b. A Restoration Planting Programme that outlines the methods and implementation and monitoring processes to restore areas of indigenous vegetation, ecosystems or wildlife habitat likely to be affected by the proposed works.

The programmes shall be submitted as part of the outline plan.

4.2 Without limiting the requirements for consultation imposed under condition 4.1, the requiring authority shall consult with the owners of the Webster properties in relation to the location, nature and extent of any proposed ecological mitigation measures.

4.3 In undertaking this consultation the requiring authority shall give special consideration to the need for mitigation measures which mitigate to the greatest extent practicable adverse effects of the designation and related works have upon existing trees and vegetation on the Webster properties.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4.4 In undertaking consultation with the owners of the Webster properties the requiring authority shall:

- a. Provide copies to the owners of all relevant reports and plans prepared by it in relation to the proposed ecological mitigation measures; and
- b. Ensure that the owners have at least two weeks to peruse this material and respond to the requiring authority with their position; and
- c. The requiring authority shall obtain (at its reasonable cost) a peer review of the proposed ecological mitigation measures and consequential effects on the Webster properties and shall give special consideration to the findings of any peer review in deciding what ecological mitigation measures it implements for the Webster properties.

5. Visual Impact Mitigation

5.1 A Visual Mitigation Plan shall be prepared by the requiring authority (or its agents) in consultation with directly affected property owners and occupiers, including the Queen Elizabeth II National Trust. The plan shall incorporate, where relevant, the recommendations of the ecological mitigation programme and the restoration planting programme and be submitted as part of the outline plan.

The Visual Mitigation Plan shall include, but not be limited to, details of all proposed planting (including species, species sizes, densities and locations), the planting programme and the required maintenance programme. Existing trees and vegetation on the properties are to be included in any maintenance programme. Attention shall also be paid to the angle and extent of cut and batter slopes through highly visible ridgelines, for example where cut and batter slopes and the proposed roadway would be viewed from properties in Duck Creek Road. In the event that noise mitigation measures such as bunds or barriers are to be employed then these are also to be incorporated in to the visual mitigation plan.

5.2 Without limiting the requirements for consultation imposed under condition 5.1, the requiring authority shall consult with the owners of the Webster properties in relation to the location, nature and extent of any proposed visual mitigation measures proposed.

5.3 In undertaking this consultation the requiring authority shall give special consideration to the need for measures which mitigate to the greatest extent practicable adverse effects of the designation on the Webster properties. When undertaking consultation in respect of this issue any noise mitigation measures (such as bunds or barriers) that are employed to address the noise effects of the designation on the Websters properties are also to be considered by the requiring authority.

5.4 In undertaking consultation with the owners of the Webster properties the requiring authority shall:

- a. Provide copies to the owners of all relevant reports and plans prepared by it in relation to the proposed ecological mitigation measures;
- b. Ensure that the owners have at least two weeks to peruse this material and respond to the requiring authority with their position; and
- c. The requiring authority shall obtain (at its reasonable cost) a peer review of the proposed mitigation measures and consequential effects on the Webster properties and shall give special consideration to the findings of any peer review in deciding what visual mitigation measures it implements for the Webster properties.

6. Archaeological

6.1 Prior to construction and the obtaining of any necessary consents under the Historic Places Act 1993 the requiring authority (or its agents) shall undertake further investigation of archaeological sites R10/943 and R10/944 if these sites are affected by the proposed works or immediately adjoin the proposed works.

6.2 The archaeological sites recorded in the immediate vicinity of the proposed works shall be clearly marked on construction plans to be provided to the Council and pegged out/fenced off prior to, and during the period of, construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. Vibration

7.1 The road alignment shall be designed with due regard to the effects of vibration.

7.2 In the event that the requiring authority receives, in respect of any building existing as at 14 April 1998, a complaint of vibration induced by construction activities or by traffic on completion of the widened/realigned section of Whangaparaoa Road, then the requiring authority shall:

- a. Monitor traffic induced vibration at location(s) from which complaints have been received where considered appropriate by the Auckland Council; and
- b. Where construction vibration levels exceed the relevant standards of ISO 2631-2, then the requiring authority shall implement practicable mitigation measures.

8. Stormwater

8.1 The requiring authority (or its agents) shall, in consultation with the Council:

- a. Provide suitable detention of concentrated stormwater flows which arise from construction works and the completed roadway to avoid, as far as is practicable, stream erosion by the discharging of this stormwater;
- b. Design, install and operate sediment control ponds to remove, to the maximum extent practicable, sediment from all concentrated discharge from the earthworks;
- c. Arrange all stormwater treatment devices in accordance with the Auckland Council's Technical Publication No. 10 being the Design Guideline Manual : Stormwater Treatment Devices, dated 2003; and
- d. Take all practicable measures to ensure stormwater is not discharged into tributaries or overland flow paths which ultimately directly flow into the Okura River Estuary.

9. Physical Works Contract

9.1 All contract documentation for physical works shall include the designation conditions, the approved outline plan and any other resource consents (including conditions) held for the project.

9.2 Construction shall be limited to the following hours:

- a. Weekdays: 7.00 a.m. to 6.00 p.m.;
- b. Saturdays: 8.00 a.m. to 4.00 p.m.; and
- c. Sundays and Public Holidays: No work.

9.3 Construction can be extended to the hours of 7.00 a.m. to 6.00 p.m. every day (with the specific consent of the Auckland Council) between East Coast Road and the northern boundary of the Weiti Forest with the agreement of Green and McCahill Ltd and Green and McCahill Holdings Ltd or any successors in title.

9.4 At all times reasonable access shall be maintained to properties directly affected by the construction and operation of the Weiti Crossing and the Whangaparaoa Road widening unless agreement is reached with the property occupier that access can be temporarily stopped.

10. Public Notification

10.1 At six-monthly intervals from the date of this decision the requiring authority (or its agents) shall notify all property occupiers directly affected by the designation of the current status of the project and the estimated date of commencement of final design and construction. In addition, an advertisement is to be placed in the "Rodney Times" outlining the above information.

10.2 A Public Notification Plan shall be prepared and submitted for the approval of the Auckland Council prior to the start of physical works. The plan shall include, but not be limited to, the following:

- a. Dates for the release of newsletters to directly affected and adjoining property occupiers. These letters shall include details of the construction programme and a single point of contact for the requiring authority (or its agents) for any concerns or enquiries relating to the project, including a contact person name and a telephone and facsimile number; and
- b. Details of proposed signage to advise motorists of periods of likely traffic delays.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Duration of Designation

11.1 In accordance with s.184 of the Resource Management Act 1991, this designation will lapse on the expiry of 10 (ten) years after the date on which it is included in the Unitary Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

12. Other

12.1 Prior to preparing an assessment of effects upon the environment under s. 88 of the Act for the resource consents required from the council, the requiring authority (or its agents) shall prepare a Scoping Report for the consideration of the council. This shall indicate what is to be addressed in the assessment of effects and allow some agreement to be reached between the parties prior to the detailed analysis required for the assessment.

13. Costs

13.1 Pursuant to s.36 of the Resource Management Act 1991, the requiring authority shall be responsible for paying administrative charges relating to receiving, processing and making a decision in respect of the requirement. The total amount payable will be communicated to the requiring authority within two months of the process being completed.

14. Local access to Stillwater Community

14.1 Safe and efficient two-way access to the Stillwater community (on both sides of the designated route) shall be provided, including throughout the construction period. Such access shall include provision for public transport (including bus stops) and for the safe and efficient movement of school buses and boat trailers. The design of any such access shall be undertaken in full consultation with the Stillwater Ratepayers and Residents Association, the owners of the Webster properties and directly affected members of the Stillwater community.

14.2 Following such consultation, the requiring authority will submit the proposed access design to an independent auditor for a safety audit prior to construction. The cost of this audit is to be met by the requiring authority.

15. Water Supply

15.1 During each construction season (1 October – 30 April) the requiring authority shall periodically check and wash down any residences (including the roof) which are located along the designation route and which are affected by the construction of the bridge and its approaches. The cost of this cleaning will be met by the requiring authority.

15.2 The requiring authority will test the water quality of the bores at 165 Duck Creek Road, being the land described in 113B/679 (North Auckland Registry), and 236 Duck Creek Road, being the land described in certificates of title 682/218 and 1020/274 (North Auckland Registry), on a monthly basis.

15.3 In the event that either of the bores at 165 or 236 Duck Creek Road becomes contaminated, the requiring authority will provide an equivalent alternative free water supply.

15.4 The requiring authority will test the water quality of each domestic water tank located along the designation route, including the Webster properties, affected by construction of the bridge and its approaches on a monthly basis during the construction season and for one month following (1 October – 31 May) of each year of the construction period. If the water in any such tank is contaminated, the requiring authority will immediately, and at its cost entirely, have any such tank cleaned out and refilled.

16. Land Stabilisation

16.1 The requiring authority will conduct a “before and after” dilapidation survey of the properties (including the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

interiors of buildings) located along the designation route, including the Webster properties to assess any effects as a result of construction of the bridge and its approaches.

16.2 In any agreements entered into with any third party to carry out construction of the road and bridge, the requiring authority will require that party to accept liability for any damage or instability to land or buildings caused by construction and will also require that party to monitor slope stability throughout the duration of construction and for a period of 12 months following completion of the project. In the event that the requiring authority undertakes construction itself, it will accept such liability and conduct such monitoring.

17. Noise

17.1 Once the new road is operational, council will pass any bylaw required to enable a restriction on engine braking to be imposed on vehicles using the road in the vicinity of Stillwater, should such a restriction prove necessary.

17.2 The requiring authority will use asphalted concrete on the road surface on the Weiti Bridge and extend this surface along the road up to 307 Duck Creek Road, being the land described in certificate of title 16C/1432 (North Auckland Registry).

17.3 The requiring authority will use its best endeavours to provide a building (which is surplus to roading requirements) to be used as the Stillwater community hall. The requiring authority shall arrange for the transport at its cost of any such building to the agreed site.

18. Stock Underpass

18.1 The requiring authority shall enter into an agreement with the owners of the Webster properties to provide them with a stock underpass (under the new carriageway provided for by the designation) to agreed specifications and with agreed rights of access or tenure, to provide the owners of the properties access between the two parts of the property which will be bisected by the new carriageway.

18.2 During the period of construction of the Weiti Link, while the Webster properties are bisected by works, but before the stock underpass is completed, the requiring authority shall provide reasonable stock access across the carriageway so owners of the properties can utilise all parts of their property.

19. Duck Creek Intersection

19.1 No part of the realigned Duck Creek Road, including its intersection on the eastern side of the Weiti link will be positioned further north than indicated on the plan annexed as Appendix A.

20. Water Supply

20.1 The requiring authority shall ensure that during construction and operation of the Weiti Crossing Road, a water supply is maintained for the purpose of watering livestock located at 236 Duck Creek Road, being Part Lot 3, DP 26549 and 266 Duck Creek Road, being Lot 2 DP 29403.

1403 Road Widening - Red Beach Road

Designation Number	1403
Requiring Authority	Auckland Transport
Location	55-67 and 76-90 Red Beach Road, Whangaparoa
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Sheet 4 (First Drawing), Roads to be Widened and Stopped Section of the Planning Maps, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 5 (five) years after the date on which it is included in the Unitary Plan unless:

- It is given effect to before the end of that period; or
- The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

1404 Road Widening - Whangaparaoa Road

Designation Number	1404
Requiring Authority	Auckland Transport
Location	470-502, 473-475, 504-522A, 529-549, 540, 585-587, 593-601, 609-611, 616A, 618, 637, 640-644A, 663, 720-728, 736-752, 756-760 and 770A-776 Whangaparaoa Road, 2 Cedar Terrace, 1 and 4 Brightside Road, 1 Penton Road, 1 Tower Hill, 2 Homestead Road and 2 Ladies Mile, Whangaparaoa
Rollover Designation	Yes
Legacy Reference	Sheet 5 - Roads to be Widened and Stopped of the Planning Maps, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

Conditions

1. General

1.1 The scope and extent of the works (including the horizontal and vertical alignment of the carriageway) within the designation shall be generally in accordance with the plans contained in the Notice of Requirement dated 14 April 1998 (Appendix D – Designation drawings) and referenced as Figures A1.0 to A1.3 (BCHF Cad File No. 6507C935.DWG to 6507C938.DWG Rev. E) and Figures B1.1 to B1.4 (BCHF Cad File No. 6507C931.DWG to 6507C934.DWG Rev.D.)

1.2 The designation and proposed works on the area of land subject to the designation shall not include any toll-

The Proposed Auckland Unitary Plan (notified 30 September 2013)

booth type facilities or structures.

1.3 Before any construction is commenced an Outline Plan shall be submitted in terms of section 176A of the Resource Management Act 1991 to council. The outline plan may be submitted in stages to reflect any proposed staging of the physical works. This outline plan is to be submitted to council for assessment and recommendations to the council. The outline plan shall show those matters required to be included by section 176A(3) of the Act. It shall be prepared in consultation with directly affected property owners and occupiers with the record of such consultation being documented in the outline plan.

1.4 Prior to the start of physical works, the requiring authority (or its agent) shall obtain all resource consents required under the Resource Management Act 1991 and the Historic Places Act 1993.

2. Design Considerations

2.1 The requiring authority (or its agents) shall incorporate retaining walls into the detailed design to reduce the property effects at critical parts of the alignment, in general accordance with the details identified in Appendix C of the requiring authority's closing submissions.

2.2 As part of the upgrading works the requiring authority (or its agents) shall, subject to the proper performance of its statutory functions, provide suitable pedestrian crossing facilities at the following general localities along Whangaparaoa Road:

- a. Brightside Road;
- b. Weiti Crossing / Whangaparaoa Road intersection;
- c. Stanmore Bay Road;
- d. Ladies Mile;
- e. Pedestrian linkage of Duck Creek Road across the Weiti Crossing; and
- f. Such other places as may be identified in future analysis as necessary for safety purposes.

2.3 The requiring authority (or its agents) shall permit vehicle access from the Weiti Crossing road alignment to the following parcels of land in consultation with the landowners and in accordance with the provisions of the Local Government Act 1974:

- a. Lot 3 DP 95982 and Lot 1 DP 100141 being respectively the Kilmacrennan Farm and Kerrykeel Farm which are farmed as one unit known as Weiti Station (Green and McCahill Group submission); and
- b. Part Lot 1 DP 95984, Lot 1 DP 51255 and Lot 1 DP 49038 being land owned by Green and McCahill Holdings Ltd.

Explanation:

Given the size of the Green and McCahill Holdings Ltd landholding (908 hectares) two access points would be appropriate. The third access point sought by this company includes access to the Stillwater settlement which should be the subject of other considerations apart from this designation.

3. Noise Impact Mitigation

3.1 During construction, New Zealand Standard 6803P : 1984, The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work shall be complied with and the principles for managing noise set out within that document shall be formally adopted.

3.2 The road alignment shall be designed to achieve the following noise standards:

- a. For the properties identified in Table A – the relevant traffic noise design limit contained in Table A.
- b. For all other properties – the relevant noise standard contained in NZS6806:2010 Acoustics - Road Traffic Noise - New and altered roads.

Table A:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	Traffic Noise Design Limits Leq (24 hours)
Dwelling A (at the western end of the proposed road as indicated on the AEE document). This will require mitigation from the expected noise levels.	65 dBA
All other existing* dwellings west of the Weiti River Dwelling 1 on Lot 1 DP 138956 Dwelling 2 on Lot 4 DP 64380 Dwelling 3 on Lot 6 DP 64380 Dwelling 4 on Lot 7 DP 64380 This will require mitigation from the expected noise levels particularly for the properties at 173, 250, 301, 305 and 307 Duck Creek Road and that identified as Dwelling B in the AEE document along Weiti Station Road.	55 dBA
Dwellings at 7 to 37 Cedar Terrace inclusive.	62 dBA
All existing* dwellings on Whangaparaoa Rd.	65 dBA or ambient (whichever is greater)

*Existing at 14 April 1998

Note:

The assessment point for Table A is 1m in front of the most exposed point on the facades of the dwellings.

3.3 In addition to the standards in Table A above, the road alignment shall be designed with the appropriate noise mitigation measures to achieve compliance with a single event noise limit of 78 dBA L_{max} at the façade of any residential building situated within 12 metres from the new road carriageway. This shall not apply to residential buildings currently located within 12 metres of the existing road carriageway.

Explanation:

This is in accordance with the NZS6806:2010 Acoustics - Road Traffic Noise - New and altered roads.

3.4 If it is impracticable to meet the Design Limits in the above Conditions 3.2 and 3.3, then prior to completion of the road widening, the requiring authority (or its agents) shall, with the agreement of the owner of the dwelling and if so required by them, provide insulation and, if required, mechanical ventilation to all living rooms (including kitchens) and bedrooms, to ensure that an internal criterion of 40 dBA Leq (24 hours) is not exceeded. If it is impracticable or uneconomic to design mitigation to achieve this internal criterion then the requiring authority (or its agents) shall, with the agreement of the owner, and at a price not exceeding market value, purchase the property.

3.5 Without limiting the requirements for consultation imposed under condition 3.4, the requiring authority shall consult with the owners of 236 Duck Creek Road, being Part Lot 3 DP 26549 and 266 Duck Creek Road, being Lot 2 DP 29403 ("the Webster properties") in relation to the location, nature and extent of any proposed noise mitigation measures.

3.6 In undertaking this consultation the requiring authority shall give special consideration to the need for additional or alternative noise mitigation measures which mitigate to the greatest extent practicable the acoustic and amenity effects of the designation upon the Webster properties within the noise limit set out in condition 3.2.

3.7 In undertaking consultation with the owners of the Webster properties the requiring authority shall:

- provide copies to the owners of all relevant reports and plans prepared by it in relation to the proposed noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

mitigation measures;

b. ensure that the owners have at least two weeks to peruse this material and respond to the requiring authority with their position; and

c. the requiring authority shall obtain (at its reasonable cost) a peer review of the proposed mitigation measures and consequential effects on the Webster properties to identify other mitigation measures which may be cost effective and meet the noise limits set out in condition 3.2 and shall give special consideration to the findings of any peer review in deciding what noise mitigation measures it implements for the Webster properties.

4. Ecological Impact Mitigation

4.1 The requiring authority (or its agents) shall, in conjunction with the council and in consultation with directly affected property owners and occupiers, including the Queen Elizabeth II National Trust, produce the following programmes:

a. An Ecological Mitigation Programme that outlines the methods and implementation and monitoring processes to be used to avoid, remedy or mitigate adverse effects on the environment, particularly in regard to indigenous vegetation, ecosystems and species, geological features and areas of wildlife habitats; and

b. A Restoration Planting Programme that outlines the methods and implementation and monitoring processes to restore areas of indigenous vegetation, ecosystems or wildlife habitat likely to be affected by the proposed works.

The programmes shall be submitted as part of the outline plan.

4.2 Without limiting the requirements for consultation imposed under condition 4.1, the requiring authority shall consult with the owners of the Webster properties in relation to the location, nature and extent of any proposed ecological mitigation measures.

4.3 In undertaking this consultation the requiring authority shall give special consideration to the need for mitigation measures which mitigate to the greatest extent practicable adverse effects of the designation and related works have upon existing trees and vegetation on the Webster properties.

4.4 In undertaking consultation with the owners of the Webster properties the requiring authority shall:

a. Provide copies to the owners of all relevant reports and plans prepared by it in relation to the proposed ecological mitigation measures; and

b. Ensure that the owners have at least two weeks to peruse this material and respond to the requiring authority with their position; and

c. The requiring authority shall obtain (at its reasonable cost) a peer review of the proposed ecological mitigation measures and consequential effects on the Webster properties and shall give special consideration to the findings of any peer review in deciding what ecological mitigation measures it implements for the Webster properties.

5. Visual Impact Mitigation

5.1 A Visual Mitigation Plan shall be prepared by the requiring authority (or its agents) in consultation with directly affected property owners and occupiers, including the Queen Elizabeth II National Trust. The plan shall incorporate, where relevant, the recommendations of the ecological mitigation programme and the restoration planting programme and be submitted as part of the outline plan.

The Visual Mitigation Plan shall include, but not be limited to, details of all proposed planting (including species, species sizes, densities and locations), the planting programme and the required maintenance programme.

Existing trees and vegetation on the properties are to be included in any maintenance programme. Attention shall also be paid to the angle and extent of cut and batter slopes through highly visible ridgelines, for example where cut and batter slopes and the proposed roadway would be viewed from properties in Duck Creek Road. In the event that noise mitigation measures such as bunds or barriers are to be employed then these are also to be incorporated in to the visual mitigation plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.2 Without limiting the requirements for consultation imposed under condition 5.1, the requiring authority shall consult with the owners of the Webster properties in relation to the location, nature and extent of any proposed visual mitigation measures proposed.

5.3 In undertaking this consultation the requiring authority shall give special consideration to the need for measures which mitigate to the greatest extent practicable adverse effects of the designation on the Webster properties. When undertaking consultation in respect of this issue any noise mitigation measures (such as bunds or barriers) that are employed to address the noise effects of the designation on the Websters properties are also to be considered by the requiring authority.

5.4 In undertaking consultation with the owners of the Webster properties the requiring authority shall:

- a. Provide copies to the owners of all relevant reports and plans prepared by it in relation to the proposed ecological mitigation measures;
- b. Ensure that the owners have at least two weeks to peruse this material and respond to the requiring authority with their position; and
- c. The requiring authority shall obtain (at its reasonable cost) a peer review of the proposed mitigation measures and consequential effects on the Webster properties and shall give special consideration to the findings of any peer review in deciding what visual mitigation measures it implements for the Webster properties.

6. Archaeological

6.1 Prior to construction and the obtaining of any necessary consents under the Historic Places Act 1993 the requiring authority (or its agents) shall undertake further investigation of archaeological sites R10/943 and R10/944 if these sites are affected by the proposed works or immediately adjoin the proposed works.

6.2 The archaeological sites recorded in the immediate vicinity of the proposed works shall be clearly marked on construction plans to be provided to the Council and pegged out/fenced off prior to, and during the period of, construction.

7. Vibration

7.1 The road alignment shall be designed with due regard to the effects of vibration.

7.2 In the event that the requiring authority receives, in respect of any building existing as at 14 April 1998, a complaint of vibration induced by construction activities or by traffic on completion of the widened/realigned section of Whangaparaoa Road, then the requiring authority shall:

- a. Monitor traffic induced vibration at location(s) from which complaints have been received where considered appropriate by the Auckland Council; and
- b. Where construction vibration levels exceed the relevant standards of ISO 2631-2, then the requiring authority shall implement practicable mitigation measures.

8. Stormwater

8.1 The requiring authority (or its agents) shall, in consultation with the Council:

- a. Provide suitable detention of concentrated stormwater flows which arise from construction works and the completed roadway to avoid, as far as is practicable, stream erosion by the discharging of this stormwater;
- b. Design, install and operate sediment control ponds to remove, to the maximum extent practicable, sediment from all concentrated discharge from the earthworks;
- c. Arrange all stormwater treatment devices in accordance with the Auckland Council's Technical Publication No. 10 being the Design Guideline Manual : Stormwater Treatment Devices, dated 2003; and
- d. Take all practicable measures to ensure stormwater is not discharged into tributaries or overland flow paths which ultimately directly flow into the Okura River Estuary.

9. Physical Works Contract

9.1 All contract documentation for physical works shall include the designation conditions, the approved outline

The Proposed Auckland Unitary Plan (notified 30 September 2013)

plan and any other resource consents (including conditions) held for the project.

9.2 Construction shall be limited to the following hours:

- a. Weekdays: 7.00 a.m. to 6.00 p.m.;
- b. Saturdays: 8.00 a.m. to 4.00 p.m.; and
- c. Sundays and Public Holidays: No work.

9.3 Construction can be extended to the hours of 7.00 a.m. to 6.00 p.m. every day (with the specific consent of the Auckland Council) between East Coast Road and the northern boundary of the Weiti Forest with the agreement of Green and McCahill Ltd and Green and McCahill Holdings Ltd or any successors in title.

9.4 At all times reasonable access shall be maintained to properties directly affected by the construction and operation of the Weiti Crossing and the Whangaparaoa Road widening unless agreement is reached with the property occupier that access can be temporarily stopped.

10. Public Notification

10.1 At six-monthly intervals from the date of this decision the requiring authority (or its agents) shall notify all property occupiers directly affected by the designation of the current status of the project and the estimated date of commencement of final design and construction. In addition, an advertisement is to be placed in the "Rodney Times" outlining the above information.

10.2 A Public Notification Plan shall be prepared and submitted for the approval of the Auckland Council prior to the start of physical works. The plan shall include, but not be limited to, the following:

- a. Dates for the release of newsletters to directly affected and adjoining property occupiers. These letters shall include details of the construction programme and a single point of contact for the requiring authority (or its agents) for any concerns or enquiries relating to the project, including a contact person name and a telephone and facsimile number; and
- b. Details of proposed signage to advise motorists of periods of likely traffic delays.

11. Duration of Designation

11.1 In accordance with s.184 of the Resource Management Act 1991, this designation will lapse on the expiry of 10 (ten) years after the date on which it is included in the Unitary Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

12. Other

12.1 Prior to preparing an assessment of effects upon the environment under s. 88 of the Act for the resource consents required from the council, the requiring authority (or its agents) shall prepare a Scoping Report for the consideration of the council. This shall indicate what is to be addressed in the assessment of effects and allow some agreement to be reached between the parties prior to the detailed analysis required for the assessment.

13. Costs

13.1 Pursuant to s.36 of the Resource Management Act 1991, the requiring authority shall be responsible for paying administrative charges relating to receiving, processing and making a decision in respect of the requirement. The total amount payable will be communicated to the requiring authority within two months of the process being completed.

14. Local access to Stillwater Community

14.1 Safe and efficient two-way access to the Stillwater community (on both sides of the designated route) shall be provided, including throughout the construction period. Such access shall include provision for public

The Proposed Auckland Unitary Plan (notified 30 September 2013)

transport (including bus stops) and for the safe and efficient movement of school buses and boat trailers. The design of any such access shall be undertaken in full consultation with the Stillwater Ratepayers and Residents Association, the owners of the Webster properties and directly affected members of the Stillwater community.

14.2 Following such consultation, the requiring authority will submit the proposed access design to an independent auditor for a safety audit prior to construction. The cost of this audit is to be met by the requiring authority.

15. Water Supply

15.1 During each construction season (1 October – 30 April) the requiring authority shall periodically check and wash down any residences (including the roof) which are located along the designation route and which are affected by the construction of the bridge and its approaches. The cost of this cleaning will be met by the requiring authority.

15.2 The requiring authority will test the water quality of the bores at 165 Duck Creek Road, being the land described in 113B/679 (North Auckland Registry), and 236 Duck Creek Road, being the land described in certificates of title 682/218 and 1020/274 (North Auckland Registry), on a monthly basis.

15.3 In the event that either of the bores at 165 or 236 Duck Creek Road becomes contaminated, the requiring authority will provide an equivalent alternative free water supply.

15.4 The requiring authority will test the water quality of each domestic water tank located along the designation route, including the Webster properties, affected by construction of the bridge and its approaches on a monthly basis during the construction season and for one month following (1 October – 31 May) of each year of the construction period. If the water in any such tank is contaminated, the requiring authority will immediately, and at its cost entirely, have any such tank cleaned out and refilled.

16. Land Stabilisation

16.1 The requiring authority will conduct a “before and after” dilapidation survey of the properties (including the interiors of buildings) located along the designation route, including the Webster properties to assess any effects as a result of construction of the bridge and its approaches.

16.2 In any agreements entered into with any third party to carry out construction of the road and bridge, the requiring authority will require that party to accept liability for any damage or instability to land or buildings caused by construction and will also require that party to monitor slope stability throughout the duration of construction and for a period of 12 months following completion of the project. In the event that the requiring authority undertakes construction itself, it will accept such liability and conduct such monitoring.

17. Noise

17.1 Once the new road is operational, council will pass any bylaw required to enable a restriction on engine braking to be imposed on vehicles using the road in the vicinity of Stillwater, should such a restriction prove necessary.

17.2 The requiring authority will use asphalted concrete on the road surface on the Weiti Bridge and extend this surface along the road up to 307 Duck Creek Road, being the land described in certificate of title 16C/1432 (North Auckland Registry).

17.3 The requiring authority will use its best endeavours to provide a building (which is surplus to roading requirements) to be used as the Stillwater community hall. The requiring authority shall arrange for the transport at its cost of any such building to the agreed site.

18. Stock Underpass

The Proposed Auckland Unitary Plan (notified 30 September 2013)

18.1 The requiring authority shall enter into an agreement with the owners of the Webster properties to provide them with a stock underpass (under the new carriageway provided for by the designation) to agreed specifications and with agreed rights of access or tenure, to provide the owners of the properties access between the two parts of the property which will be bisected by the new carriageway.

18.2 During the period of construction of the Weiti Link, while the Webster properties are bisected by works, but before the stock underpass is completed, the requiring authority shall provide reasonable stock access across the carriageway so owners of the properties can utilise all parts of their property.

19. Duck Creek Intersection

19.1 No part of the realigned Duck Creek Road, including its intersection on the eastern side of the Weiti link will be positioned further north than indicated on the plan annexed as Appendix A.

20. Water Supply

20.1 The requiring authority shall ensure that during construction and operation of the Weiti Crossing Road, a water supply is maintained for the purpose of watering livestock located at 236 Duck Creek Road, being Part Lot 3, DP 26549 and 266 Duck Creek Road, being Lot 2 DP 29403.

No attachments.

R1405 Car Park - Percy Street

Designation Number	R1405
Requiring Authority	Auckland Transport
Location	8 Percy Street, Warkworth
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

circulation areas within the designated site, provided that the total number of public parking bays is not increased;

- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings¹ and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

¹ For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective

The Proposed Auckland Unitary Plan (notified 30 September 2013)

fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties

The Proposed Auckland Unitary Plan (notified 30 September 2013)

during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

1407 Road Widening - Hudson Road

Designation Number	1407
Requiring Authority	Auckland Transport
Location	Corner of Hudson Road and State Highway 1, Warkworth
Rollover Designation	Yes
Legacy Reference	Designation 102, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	10 years from being operative in the Unitary Plan unless given effect to prior

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Road widening.

Conditions

1. General

1.1 Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority, being the council, the Notice of Requirement and supporting documents, as follows:

- a. "State Highway 1 Warkworth — Hudson Road/State Highway 1 Intersection Upgrade — Alteration to Designation — "SH 1 Region RS 363, Warkworth Stage 1 Intersection Improvements RP 363/1/31/SH1 and Hudson Road," prepared for NZTA and RDC by Opus International Consultants Ltd, comprising of plans:
 - i. Plans titled "Concept Layout — Sheets 1-5," and referenced "Feature Identifier 1/21/40, Code 6104, Revision RO"

1.2 The period within which this alteration to designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act, 1991 as amended.

2. Outline Plan of Works and Management Plans

2.1 Prior to the commencement of works, the Requiring Authority (Auckland Transport) shall submit to council the relevant Management Plans required under Conditions 3 (Construction), 4 (Noise), 6 (Construction Traffic) and 8 (Urban Design and Landscape), below.

2.2 The approval in writing of all the above Management Plans referred to in condition 2.1 above may also, if considered appropriate by council, be deemed to be a waiver, in whole or part, pursuant to s. 176A (2) (c) of the RMA of the requirement for an Outline Plan of Works under s. 176A. If such a waiver is sought through the management plan approvals, this should be stated in writing when these management plans are submitted for approval.

2.3 The works shall be undertaken in accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

3. Construction

3.1 At least 10 working days prior to commencement of works on the project, the Requiring Authority shall prepare and submit for approval by council, a Construction Management Plan (CMP). The purpose of the CMP is to set out the management procedures and construction methods to be undertaken in order to avoid, remedy or mitigate potential adverse effects arising from construction activities. The submission and approval of detailed engineering plans shall also be undertaken through the CMP approval.

3.2 The CMP shall be implemented and maintained throughout the entire construction period. The CMP shall include specific details relating to the construction and management of all works associated with the Project, including;

- a. Details of the site or project manager, including their contact details (phone, facsimile, postal address, e-mail address);
- b. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. An outline construction programme of the works indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- d. A tree protection methodology with arboricultural input, which ensures no damage occurs to the trees along the Showgrounds boundary and the boundary of Lot 1 DP 150324 that are otherwise unaffected by the Project throughout the entire construction period.
- e. Any means of protection of services such as pipe and watermain within the legal road;
- f. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

storage and unloading of building materials and similar construction activities;

g. Location of workers offices and conveniences (e.g. portaloos);

h. Procedures for controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads and places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days.

i. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works; and

j. Means of ensuring the safety of the general public.

3.3 Upon completion of the upgrade project, the Requiring Authority shall submit to council as-built plans in relation to all construction works undertaken as part of the intersection upgrade.

4. Noise

Construction Noise

4.1 The CMP shall include a Construction Noise and Vibration Management Plan (CNVMP) describing the measures adopted to as far as practicable meet the requirements of the NZS6803:1999 Acoustics — Construction Noise. The CNVMP shall be submitted to and approved by council's Environmental Health Officer prior to any works commencing on the upgrade. The CNVMP shall refer to noise management measures set out in Appendix E of NZS6803:1999, and as a minimum shall address the following:

a. Construction sequence;

b. Machinery and equipment to be used;

c. Hours of operation, including time and days when noisy construction work would occur;

d. The design of noise mitigation measures such as temporary barriers or enclosures;

e. Construction noise limits for specific areas;

f. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes;

g. Methods for monitoring and reporting on construction noise.

h. Onsite contact for local residents and operations; and

i. Where an activity is predicted to generate noise levels above the limits prescribed in NZS 6803:1999, the Requiring Authority shall provide a site specific construction noise and vibration management plan. This plan shall describe the noise mitigation and management measures which will be implemented by adopting the best practicable option in accordance with section 16 of the RMA.

4.2 Every reasonable effort shall be made to notify residents/ occupiers of properties situated within 50m of the construction site in writing at least 3 days prior to the commencement of the proposed works, including information of duration and type of noise activities. A contact telephone number shall be provided to these residents/ occupiers and a complaint monitoring procedure shall be established so that complaints relating to individual contractors are managed centrally.

Operational Noise

4.3 A Noise Management Plan (NMP) shall be prepared by a suitably qualified acoustic expert for the purposes of avoiding, mitigating or remedying adverse noise effects from the operation of the project following its construction.

4.4 The NMP shall include general measures, which shall include but not be limited to the installation of noise attenuation barriers or low noise road surface material, to the extent necessary to achieve at a minimum compliance with the NZS6806:2010 Acoustics - Road Traffic Noise - New and altered roads.

4.5 Noise Monitoring

As required by the NZS6806:2010 Acoustics - Road Traffic Noise - New and altered roads, measurements of noise levels existing prior to construction shall be used to establish ambient noise levels. The result of 24 hour ambient noise measurements at one (1) position within 50m of the project, together with site maps detailing

The Proposed Auckland Unitary Plan (notified 30 September 2013)

measurement positions and key data on measurement conditions shall be forwarded to the Council prior to the commencement of construction. Measurements shall be undertaken by a suitably qualified person and the results, together with the site maps and photographs detailing the measurement position and key data, shall be forwarded to council.

4.6 Compliance Monitoring

Following completion of the work, the Requiring Authority shall arrange for an appropriately qualified person to undertake monitoring of the level of traffic noise at the above one (1) position for which ambient noise level data has been previously recorded, within a period between 2 and 3 years following completion of construction of the Work, but not post construction of the Western Collector Route. The Requiring Authority shall report the findings of monitoring to Council. If as a result of this, non-compliance with the New Zealand Standard is identified, then specific measures shall be adopted to achieve compliance.

5. Vibration

5.1 The CNMVP shall describe how the vibration standards of the German Standard DIN 4150 shall be met as far as practicable, and shall address the following aspects:

- a. Vibration monitoring measures;
- b. Criteria;
- c. Possible mitigation measures;
- d. Complaint response;
- e. Reporting procedures;
- f. Notification and information for the community of the proposed works;
- g. Vibration testing of equipment to conform that the vibration limits will not be exceeded;
- h. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- i. Operational times;
- j. Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works; and
- k. Site specific CNVMPs where required to address potential exceedances of the vibration standards.

Operational Vibration

5.2 Vibration levels of the existing operations at the existing State Highway 1 operations shall be measured by a suitable qualified person at not more than one nominated critical location, and submitted to council, prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

6. Construction Traffic

6.1 The CMP shall include a Temporary Traffic Management Plan (TTMP), for the project, which shall be prepared by a suitably qualified expert(s). The TTMP shall be submitted to and be approved by council prior to the commencement of works.

6.2 The TTMP shall be implemented and maintained throughout the entire construction period. The TTMP shall include details relating to:

- a. Methods of mitigating the local and network wide effects of both construction of individual elements of the Project, and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods to manage the effects of the delivery of construction material, plant and machinery;
- c. The numbers, frequencies and timing of construction traffic movements;
- d. Methods to manage the effects of traffic that is required to detour or be diverted during construction, in particular seeking to minimise effects on residential and commercial areas;
- e. Contingencies for traffic diversion;
- f. Consultation with council with regard to the most appropriate means for providing access on council roads within and adjacent to the designation;
- g. Identification of any existing on-site parking and manoeuvring areas which are affected by the works. Then, as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- far as practicable, and in consultation with council and the affected land owner, identify how the affected areas will be relocated or reinstated to achieve compliance with the Unitary Plan or to similar standard to that existing;
- h. Where necessary, provision of alternative access arrangements as far as practicable, and in consultation with council and the affected landowner;
 - i. Details on the maintenance of pedestrian access and thoroughfare to be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable. Specific measures shall also be provided to mitigate the effects of construction works on pedestrians and cyclists;
 - j. Consistency with the NZTA (Transit New Zealand) "Code of Practice for Temporary Traffic Management" (COPTTM); and
 - k. Provision of pedestrian access/egress to properties adjacent to the works at all times.

7. Archaeological and Heritage

7.1 Subject to condition 7.2, if any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust and council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

7.2 Condition 7.1 shall not apply where the Requiring Authority holds all relevant approvals under the Historical Places Act (1993), apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

8. Urban Design and Landscape Mitigation

8.1 Prior to the commencement of works on the project, the Requiring Authority shall submit to council and have approved in writing an "Urban Design and Landscape Mitigation Plan" (UDLMP). This UDLMP shall be prepared by a suitably qualified expert(s) and shall take into account the following:

- a. NZTA's "Guidelines for Highway Landscaping" (December 2006);
- b. NZTA's "Urban Design principles: landscape design notes January 2011.

8.2 The UDLMP shall in particular provide for:

- a. The integration of the permanent works into the surrounding landscape;
- b. Mitigation of effects on properties in the vicinity of the alignment;
- c. Pedestrian and cycle linkages proposed in respect of the project;
- d. Retention or relocation of existing trees where practicable;
- e. Replacement planting or mitigation for loss of trees that are protected by the general provisions of the Unitary Plan; and
- f. The outcomes of any consultation undertaken with council.

8.3 The UDLMP shall be prepared in general accordance with the "Landscape Mitigation Plans" prepared by Opus International Consultants Limited, referenced PA2847-SH1, dated June 2009, and shall include the following:

- a. An Urban Design Framework that depicts the overall urban design concept, the design intent, layout and mitigation proposals, and
- b. Landscape and Urban Design Details — these shall include:
 - i. Identification of vegetation to be retained and removed;
 - ii. Proposed planting, including plant species, mixes, spacing/densities, sizes (large specimen trees shall be

The Proposed Auckland Unitary Plan (notified 30 September 2013)

used, of at least pb95 size at the time of planting) and layout;

iii. Planting programme — the staging of planting in relation to the construction programme, and

vi. A maintenance programme providing specific measures as how the planting will be maintained following its establishment for 3 years thereafter for specimen trees and for 2 years thereafter for other planting.

8.4 The works as set out in the UDLMP shall be implemented as soon as practicable and works shall be completed no later than 12 months after the practical completion date of the Project.

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all relevant council bylaws.

2. Under the Historic Places Act (1993), an Authority is required from the NZ Historical Places Trust before any work commences which may destroy damage or modify the whole or any part of an archaeological site or sites.

3. Applications for resource consent to the council will be sought for the following activities:

- a. Earthworks; and
- b. Stormwater discharge.

d. The Requiring Authority (AT) proposes to undertake the works authorised by these designation conditions as a joint project with NZTA which is the relevant Requiring Authority for the related State Highway 1 improvements. NZTA has a separate (but nearly identical) set of designation conditions authorising the works for which it is responsible.

1420 Constellation Bus Station

Designation Number	1420
Requiring Authority	Auckland Transport
Location	62 Parkway Drive, Rosedale
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 161, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Constellation Bus Station - to construct, operate and maintain a busway station and park-and-ride facility.

Conditions

General Conditions

1. The scope and extent of the works within the designated area shall be generally in accordance with the Notice of Requirement dated 19 March 1999; the plans contained in Appendices A to C accompanying the Notice of Requirement; subject to the approved Outline Plan(s); and in accordance with the conditions set out below.
2. Any land taken or held for the works shall be maintained to a reasonable standard until construction of the facilities commences, to the intent that no nuisance is created to properties in the vicinity.
3. That at all times reasonable physical access be maintained to other properties.
4. All contract documentation for physical works shall include the designation conditions, the approved outline plan(s) and any other resource consents (including conditions) held for the project.
5. Should construction work uncover any archaeological remains, the Requiring Authority should immediately advise local Kaumatua of iwi claiming tangata whenua status in the immediate area and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without the prior consent of the Historic Places Trust.
6. That a formal review of the adequacy of parking provision at the busway station be carried out within twelve months of commencement of operations at the station and between 1 January 2009 and 31 December 2010, or within a period of six months from any date if requested by the Auckland Council. The review shall include preparation of a report by a traffic engineer analysing the on site parking demand and supply situation based on surveys within and around the busway station site and identifying any adverse effects and possible mitigation methods, which may form the basis for any further or amended conditions relating to carparking and parking management.
7. That the Sunset Road access be limited to use by authorised busway users only, with appropriate signage provided to this effect.
8. All reference to the "control centre" shall be deleted from the requirement.

Outline Plan(s)

9. Before any construction is commenced an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act (1991) to the council. The outline plan may be submitted in stages to reflect any proposed staging of the physical works. This outline plan(s) is to be submitted to an independent party appointed by the Auckland Council for assessment and recommendations to the council. The outline plan(s) shall show those matters required to be included by s. 176A (3) of the Act and those matters specified in conditions 10 to 24 which follow.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. The Requiring Authority shall, during the preparation of the outline plan(s), take into account the location of existing infrastructure and utility services and have regard to the likely location of future infrastructure and utility services, and undertake consultation with the appropriate council departments and network utility operators as necessary to this intent.

11. Sanitary sewer plans shall be prepared as part of the outline plan(s) which shall:

- a. Be in compliance with the council's Corporate Design Manual (Wastewater) or any document in amendment or substitution;
- b. Identify the land in question and any existing sanitary sewers if appropriate, in relationship to the catchment in which it is situated;
- c. Include calculations to prove that the development will not adversely affect the existing catchment, upstream and downstream of the proposed development; and
- d. Include draft plans to show where the proposed sewer pipeline is to be located within the development, and where it is proposed to link into the existing Council's network of sanitary sewers.

12. The outline plan(s) shall include the details by which outdoor lighting and illuminated signage is provided and measures to mitigate any adverse effects on nearby properties.

13. Detailed entry and exit locations and layouts from the bus station to the busway shall be submitted as part of the outline plan(s).

14. The location of access points for High Occupancy Vehicles shall be submitted as part of the outline plan(s), to be accompanied by an assessment of safety, capacity and effects on the surrounding road network.

Construction Management Plan Conditions

15. Prior to the commencement of any earthworks or construction activity on the designation site (excluding site investigations), the requiring authority shall ensure that a Construction Management Plan is submitted as part of the outline plan(s), subject to conditions on any relevant resource consents.

16. The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction of the work will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular the Construction Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt; and
- d. Procedures for handling any dust and ground vibration complaints.

17. The requiring authority shall ensure that the Construction Management Plan is complied with at all times during construction work.

18. That the requiring authority and its contractors shall, in addition to complying with all other construction-related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

19. The requiring authority shall advise neighbouring owners and occupiers of the date on which construction is to start, the expected duration of the works, and the telephone number of a contact person who is able to respond to queries.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Visual Impact Mitigation Conditions

20. The Requiring Authority shall prepare a landscape mitigation plan as part of the outline plan(s) in general accordance with the plan in Appendix C of the Notice of Requirement.

21. This plan shall include all proposed planting (including species, specie sizes, densities, areas and locations), the planting programme and the maintenance programme. Such planting shall be implemented in the first planting season following commencement of operations at the station.

22. The landscape maintenance programme shall extend for a minimum of five years following implementation. It shall include performance standards specifying the minimum average growth rates and survival rates for planting, and shall include any practicable and reasonable maintenance measures including control of invasive weed species.

Noise Impact Mitigation Conditions

23. The noise levels generated by the activities on the site shall not exceed the following maximum noise levels, as measured at any business zone site boundary:

Table 1:

Mon-Sat inclusive 0700hrs - 2000hrs	Mon-Sat inclusive 2000hrs - 2300hrs	Sun & Public Holidays 0700hrs - 2400hrs	All Other Times
70 dBA L10	70 dBA L10	70 dBA L10	70 dBA L10

24. The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS6803P:1984 The Measurement and Assessment of Noise from Construction, Maintenance, and Demolition Work or any subsequent replacement Standard.

Advice Notes

1. Prior to any works being commenced, the Requiring Authority should obtain all requisite resource consents required under the Resource Management Act 1991

2. In the event that construction, completion and operation of the bus station precedes the establishment of the North Shore Busway project, interim access to the motorway system is subject to the approval of the Regional State Highway Manager, New Zealand Transport Agency.

3. It is recommended that the Requiring Authority liaise with council traffic engineers so that appropriate measures are identified and taken to improve line of sight at the intersection of Sycamore Road with Sunset Road and at the access point from 217 Sunset Road onto Sunset Road. It is suggested such measures may include removal of a tree and earth mound adjacent to Sycamore Road, and trimming of trees adjacent to 217 Sunset Road.

1421 Albany Bus Station

Designation Number	1421
Requiring Authority	Auckland Transport
Location	250 Oteha Valley Road and 125 McClymonts Road, Albany
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 162, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Albany Bus Station - the construction, operation and maintenance of a busway station, park and ride facility, public car-parking as a secondary purpose as long as it does not negatively affect the primary park and ride facility, and associated works.

Conditions

Outline Plan(s)

1. Before any construction is commenced an Outline Plan(s) shall be submitted in terms of s. 176A of the Resource Management Act (1991) to council. The outline plan may be submitted in stages to reflect any proposed staging of the physical works. The outline plan(s) shall show those matters required to be included by s. 176A (3) of the Act and those matters specified in conditions 2 to 22 which follow.

Traffic Management Plans

2. That the detailed entry and exit locations and layouts from the bus station to the Northern Motorway be submitted as part of the outline plans(s).

3. That the alignment of the roads referred to as Roads 1 and 4 in the amended plans submitted to the hearing on 26 October 2001 be submitted as part of the outline plans(s).

Construction Management Plan Conditions

4. Prior to the commencement of any earthworks or construction activity on the designation site (excluding site investigations), the Requiring Authority shall ensure that a Construction Management Plan is submitted as part of the outline plan(s) subject to conditions on Auckland Regional Council resource consents.

5. The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent landowners and occupiers. In particular the Management Plan shall identify amongst other things:

- Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt; and
- Procedures for handling any dust and ground vibration complaints.

6. The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept on site.

7. The requiring authority and its contractors shall, in addition to complying with all other construction-related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

8. The requiring authority shall advise neighbouring owners and occupiers of the date on which construction is to start, the expected duration of the works, and the telephone number of a contact person who is able to respond

The Proposed Auckland Unitary Plan (notified 30 September 2013)

to queries.

Services

9. The Requiring Authority shall, during the preparation of the outline plan(s), take into account the location of existing infrastructure and utility services and have regard to the likely location of future infrastructure and utility services, and undertake consultation with the appropriate council departments and network utility operators as necessary to this intent.

10. In developing the site with stormwater facilities, the Requiring Authority shall take into account the provisions in the Lucas Creek Catchment Management Plan.

Noise Impact Mitigation Conditions

11. The noise levels generated by the activities on the site shall not exceed the following maximum noise levels, as measured at any business zone site boundary.

Table 1:

Mon-Sat inclusive 0700hrs - 2000hrs	Mon-Sat inclusive 2000hrs - 2300hrs	Sun & Public Holidays 0700hrs - 2400hrs	All Other Times
65 dBA L10	65 dBA L10	65 dBA L10	65 dBA L10

12. That during construction, New Zealand Noise Standard NZS 6803: 1999 Acoustics – Construction Noise shall be complied with.

Visual Impact Mitigation Conditions

13. The Requiring Authority shall prepare a Landscape Mitigation Plan as part of the outline plan(s). The Plan shall take into account the recommendations contained in the report entitled 'Landscape and Visual Impact Assessment – October 2001' prepared by Melean Absolum Ltd. The Plan shall include all proposed planting (including species, specie sizes, densities, areas and location), the planting programme and the maintenance programme. The maintenance programme shall extend for a minimum of five years following implementation. It shall include performance standards specifying the minimum average growth rates and survival rates for planting, and shall include any practicable and reasonable maintenance measures including control of invasive weed species.

14. The outline plan(s) shall include the details of outdoor lighting and illuminated signage and the measures to mitigate any adverse effects on nearby properties.

Construction Document Condition

15. The Requiring Authority shall provide as part of the outline plan(s) the construction documents including plans and specifications showing the full extent of the Proposed work or part thereof.

General Conditions

16. The scope and extent of the works within the designated area shall be generally in accordance with the Notice of Requirement dated 15 June 2001 and the amended plan submitted to the hearing on 26 October 2001, subject to the conditions set out below.

17. That prior to any works being commenced, the Requiring Authority shall obtain all requisite resource consents required under the Resource Management Act 1991.

18. That at all times reasonable physical access be maintained to other properties.

19. All contract documentation for physical works shall include the designation conditions, the approved outline plans(s) and any other resource consents (including conditions) held for the project.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

20. Should construction work uncover any archaeological remains, the Requiring Authority should immediately advise local Kaumatua of iwi claiming tangata whenua status in the immediate area and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without the prior consent of the Historic Places Trust.

21. That any land taken or held for the works be maintained to a reasonable standard until physical works commence.

22. Subject to Section 184 of the Resource Management Act 1991, the designation shall lapse on the expiry of 15 years after the date on which it is included in the Unitary Plan.

Attachments

No attachments.

1422 North Shore Busway - Onewa Road

Designation Number	1422
Requiring Authority	Auckland Transport
Location	Onewa Road and Sylvan Avenue, Northcote
Rollover Designation	Yes
Legacy Reference	Designation 171, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

To enable modifications to be undertaken in the vicinity of the Onewa Road and Sylvan Avenue intersection to provide priority access to the North Shore Busway for buses/high occupancy vehicles, and improving the safety and efficiency of the intersection and the Onewa Interchange.

Conditions

The conditions below apply:

1. General Conditions
2. Duration Of Designation
3. PMP and Outline Plans
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6, and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions (other than 7.8)
8. Geotechnical Mitigation Conditions
9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions (other than 10.1(ii), (iv) and (v) and 10.3)
11. Construction Management Conditions

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to five effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and

b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and
- e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled “Building Locations Takapuna Normal Intermediate School”) prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 ‘Ventilation Requirements for acceptable indoor air quality’ and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

The Proposed Auckland Unitary Plan (notified 30 September 2013)

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
- iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled "North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2") to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

1423 Akoranga Station

Designation Number	1423
Requiring Authority	Auckland Transport
Location	20 Takapuna Landing, Takapuna
Rollover Designation	Yes
Legacy Reference	Designation 172, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Akoranga Station - for the construction, operation and maintenance of roads, buildings, facilities and amenities (including any ancillary structures, works, or activities) for the purpose of providing a rapid transit facility for buses and high occupancy vehicles.

Conditions

The conditions below apply:

1. General Conditions
2. Duration Of Designation
3. PMP and Outline Plans
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6 and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions
8. Geotechnical Mitigation Conditions
9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions except that:
 - Condition 10.2 shall not apply
 - Condition 10.1(ii) applies only to Notice 8 – Westlake
 - Condition 10.1(iv) applies only to Notices 8 and 9 – Westlake and Sunnynook
 - Condition 10.1(v) applies only to Notice 8 – Westlake
 - Condition 10.3 applies only to Notice 8 – Westlake
11. Construction Management Conditions
14. Westlake Girls High School applies only to Notice 8 – Westlake
18. Bateman: Stormwater Conditions applies only to Notice 9 – Sunnynook (other than Condition 18.1(i)).

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any

The Proposed Auckland Unitary Plan (notified 30 September 2013)

other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

- a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and
- b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School

The Proposed Auckland Unitary Plan (notified 30 September 2013)

through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;

c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;

d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and

e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal Intermediate School") prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 'Ventilation Requirements for acceptable indoor air quality' and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled "North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2") to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

1424 Akoranga Station Link Road - Takapuna Landing

Designation Number	1424
Requiring Authority	Auckland Transport
Location	Takapuna Landing, Takapuna
Rollover Designation	Yes
Legacy Reference	Designation 173, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Akoranga Station Link Road - for the construction, operation and maintenance of a road.

Conditions

The conditions below apply:

1. General Conditions
2. Duration Of Designation
3. PMP and Outline Plans
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6 and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions
9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions (other than 10.1(ii), (iv) and (v), 10.2 and 10.3)
11. Construction Management Conditions (including measures addressing the contaminated nature of Barrys Point Reserve and potential remediation measures.

1. General Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and

b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and
- e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal Intermediate School") prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 'Ventilation Requirements for acceptable indoor air quality' and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled "North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2") to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

1425 Akoranga Pedestrian Overbridge

Designation Number	1425
Requiring Authority	Auckland Transport
Location	20 Takapuna Landing (Akoranga Station), Takapuna (over State Highway 1) to 72 Akoranga Drive (Akoranga Campus), Northcote
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 174, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Akoranga Pedestrian Overbridge - for the construction, operation and maintenance of a pedestrian overbridge.

Conditions

The conditions below apply:

1. General Conditions

1.9 No works in relation to the proposed overbridge shall be undertaken until such time as works have commenced in relation to the Akoranga Station.

2. Duration Of Designation

3. PMP and Outline Plans

6. Landscape Mitigation Conditions

8. Geotechnical Mitigation Conditions

11. Construction Management Conditions

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

- a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and
- b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought

The Proposed Auckland Unitary Plan (notified 30 September 2013)

to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and

e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Intermediate School”) prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 ‘Ventilation Requirements for acceptable indoor air quality’ and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 (“the properties”), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled “Proposed Planting to Mitigate Busway” **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties’ western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties’ western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority’s intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan “Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609” (the affected area”) shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners’ properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled “North Shore Busway

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2”) to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

1426 Westlake Station

Designation Number	1426
Requiring Authority	Auckland Transport
Location	Shakespeare Road (adjoins 78 Taharoto Road), Takapuna
Rollover Designation	Yes
Legacy Reference	Designation 175, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Westlake Station - for the construction, operation and maintenance of roads, buildings, facilities and amenities (including any ancillary structures, works, or activities) for the purpose of providing a rapid transit facility for buses and high occupancy vehicles.

Conditions

The conditions below apply:

1. General Conditions
2. Duration Of Designation
3. PMP and Outline Plans
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6 and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions
8. Geotechnical Mitigation Conditions
9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions except that:
 - Condition 10.2 shall not apply
 - Condition 10.1(ii) applies only to Notice 8 – Westlake

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Condition 10.1(iv) applies only to Notices 8 and 9 – Westlake and Sunnynook
- Condition 10.1(v) applies only to Notice 8 – Westlake
- Condition 10.3 applies only to Notice 8 – Westlake

11. Construction Management Conditions

14. Westlake Girls High School applies only to Notice 8 – Westlake

18. Bateman: Stormwater Conditions applies only to Notice 9 – Sunnynook (other than Condition 18.1(i)).

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in “Volume 3 – A3 Plans” forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

No works shall be undertaken in any particular location(s) until:

- a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and
- b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care

The Proposed Auckland Unitary Plan (notified 30 September 2013)

that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works

The Proposed Auckland Unitary Plan (notified 30 September 2013)

increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and
- e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages

The Proposed Auckland Unitary Plan (notified 30 September 2013)

to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal Intermediate School") prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 'Ventilation Requirements for acceptable indoor air quality' and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled “North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2”) to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1427 Sunnynook Station

Designation Number	1427
Requiring Authority	Auckland Transport
Location	168Z Sunnynook Road, Sunnynook
Rollover Designation	Yes
Legacy Reference	Designation 176, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Sunnynook Station - for the construction, operation and maintenance of roads, buildings, facilities and amenities (including any ancillary structures, works, or activities) for the purpose of providing a rapid transit facility for buses and high occupancy vehicles.

Conditions

The conditions below apply:

1. General Conditions
2. Duration Of Designation
3. PMP and Outline Plans
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6 and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions
8. Geotechnical Mitigation Conditions
9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions except that:
 - Condition 10.2 shall not apply
 - Condition 10.1(ii) applies only to Notice 8 – Westlake
 - Condition 10.1(iv) applies only to Notices 8 and 9 – Westlake and Sunnynook
 - Condition 10.1(v) applies only to Notice 8 – Westlake
 - Condition 10.3 applies only to Notice 8 – Westlake
11. Construction Management Conditions
14. Westlake Girls High School applies only to Notice 8 – Westlake
18. Bateman: Stormwater Conditions applies only to Notice 9 – Sunnynook (other than Condition 18.1(i)).

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in “Volume 3 – A3 Plans” forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and

b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced

The Proposed Auckland Unitary Plan (notified 30 September 2013)

landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6803P:1984 “The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work”.

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled ‘Technical Review of Geotechnical and Civil Engineering Issues’ – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled ‘Technical Review of Geotechnical and Civil Engineering Issues – November 2001’. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 “Structural Vibration in Buildings – Effects on Structures” during construction and shall take into account the recommendations.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and
- e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled “Building Locations Takapuna Normal Intermediate School”) prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 ‘Ventilation Requirements for acceptable indoor air quality’ and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 (“the properties”), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled “Proposed Planting to Mitigate Busway” **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled “North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2”) to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

Attachments

No attachments.

1428 Constellation Drive Station

Designation Number	1428
Requiring Authority	Auckland Transport
Location	62 Parkway Drive, Rosedale
Rollover Designation	Yes
Legacy Reference	Designation 177, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Constellation Drive Station - for the construction, operation and maintenance of roads, buildings, facilities and amenities and park and ride facilities (including a Busway control room and any ancillary structures, works and activities) for the purpose of providing a rapid transit facility for buses and high occupancy vehicles.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The conditions below apply:

1. General Conditions (with appropriate amendments to refer to the separate assessments undertaken which specifically relate to the Constellation Drive Station).

1.10 A formal review of the adequacy of parking provision at the Station shall be carried out within twelve months of commencement operations at the Station and within a period of six months from any date if requested by the North Shore City Council. The review shall include preparation of a report by a suitably qualified and experienced traffic engineer analysing the on site car parking demand and supply situation based on surveys within and around the busway Station site and identifying any adverse effects and possible mitigation methods, which may form the basis for any further or amended conditions relating to car parking and parking management.

1.11 The Sunset Road access is to be limited to use by authorised busway users only, with appropriate signage being raised to this effect.

2. Duration Of Designation
3. PMP and Outline Plan
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6 and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions (other than 7.8)
8. Geotechnical Mitigation Conditions
9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions (other than 10.1(ii), (iv) and (v), 10.2 and 10.3)
11. Construction Management Conditions

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

- a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and
- b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a

The Proposed Auckland Unitary Plan (notified 30 September 2013)

suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers

The Proposed Auckland Unitary Plan (notified 30 September 2013)

where necessary; and

i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

j. All proposed planting (including species, species size, densities, areas and locations);

k. The planting programme;

l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;

m. The sufficiency of the soil medium to sustain all planting proposed; and

n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;

b. Methods of managing noise;

c. Noise monitoring methods, including details of methods, equipment, location and frequency;

e. Contingency measures in the event of any incidence of non-compliance; and

f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and

e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western

The Proposed Auckland Unitary Plan (notified 30 September 2013)

boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal Intermediate School") prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 'Ventilation Requirements for acceptable indoor air quality' and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by

The Proposed Auckland Unitary Plan (notified 30 September 2013)

April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

The Proposed Auckland Unitary Plan (notified 30 September 2013)

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled “North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2”) to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

1429 Road Widening - Wairau Road

Designation Number	1429
Requiring Authority	Auckland Transport
Location	7-15 Wairau Road and 78Z Taharoto Road, Milford
Rollover Designation	Yes
Legacy Reference	Designation 183, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Six years from being operative in the Unitary Plan unless given effect to prior

Purpose

Wairau Road and Taharoto Road transport corridor widening and associated works.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 6 (six) years after the date on which it is included in the Unitary Plan unless:

- It is given effect to before the end of that period; or
- The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

R1430 Car Park - Sir Peter Blake Parade

Designation Number	R1424
Requiring Authority	Auckland Transport
Location	23-27 Sir Peter Blake Parade, Bayswater

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- Communications, water supply and energy supply infrastructure;
- Stormwater drainage and other surface water management infrastructure;
- Earthworks;
- Pruning and removal of all non-scheduled vegetation within the site; and
- Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- Resurfacing of floors, at-grade, and metalled parking surfaces;
- Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- Bicycle stands, racks, cages and other forms of bicycle storage;
- Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- Customer service booths;
- Barrier arms;
- Parking sensors;
- Signage relating to parking information, management and enforcement;
- Lighting;
- CCTV cameras; and
- Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. In the case of parking buildings¹ and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

¹ For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

Attachments

1431 Road Widening - Chivalry Road

Designation Number	1431
Requiring Authority	Auckland Transport
Location	107 Chivalry Road, Glenfield
Rollover Designation	Yes
Legacy Reference	Designation 187, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Road widening.

Conditions

General

1. That the scope and extent of the works within the designated area be in accordance with the Notice of Alteration to a Designation dated 28 July 2010; and in accordance with the following approved Designation conditions:
2. The works shall be undertaken in a manner in general accordance with the plans submitted and that subject to this condition being met an Outline Plan of Works not be required.

Landscape

3. A pocket park shall be created on the eastern corner of the intersection of Chartwell Avenue and Chivalry Road, with associated planting and seating as specified on Sheets 1 and 2 of the LA 4 Landscape Plans in Attachment 1 and Attachment 2. Two rimu trees, in addition to those shown on this Plan shall also be planted adjacent to the boundary between the pocket reserve and 109 and 109A Chartwell Avenue.
4. A replacement specimen street tree approved by the Auckland Council shall be planted within the road reserve generally adjacent to 77 Chartwell Avenue, subject to a suitable location being established that meets safety, infrastructure and utilities requirements.
5. Protective fencing shall be installed around all trees that are to be retained. This fencing shall be installed in accordance with accepted arboricultural practice prior to any works taking place and shall remain in place until the completion of all works.
6. Where tree protection fences are to be constructed prior to works commencing, a pre- start memo is required to confirm the implementation of those measures. No further works are permitted until the Council's Arborist has received and approved this memo.
7. A planting maintenance plan shall be provided in accordance with Auckland Transport Code of Practice (ATCOP).

Traffic

8. The tracking (for buses and large vehicles) shall be reviewed for all turning movements, to ensure that there is sufficient lateral clearance from traffic lane and the kerb and the swept path does not encroach onto the berm/footpath, kerbside car parking areas (in front of the shops on Diana Drive) and pedestrian waiting areas.
9. The safety audit report shall be reviewed and the recommendations in the report shall be included in the intersection upgrade project.

Traffic Noise

10. A close-boarded 1.8m acoustic fence shall be erected on the boundary between the proposed pocket reserve and the property at 77 Chartwell Avenue and in addition at the road boundary of 77 Chartwell Avenue to replace the existing low timber fence.
11. A close-boarded acoustic fence 2.5 metres in height shall be installed along the western boundary of the property at 109 Chivalry Road adjacent to the proposed pocket reserve.
12. The acoustic fences detailed above shall be installed as soon as possible after demolition of the building on

The Proposed Auckland Unitary Plan (notified 30 September 2013)

107 Chartwell Avenue.

13. The surface of the realigned carriageway shall be finished in a smooth asphalt surface designed to reduce road noise to the maximum practicable extent or another surface which a suitably qualified noise consultant certifies is capable of achieving similar or greater reduction in vehicle noise.

Construction

14. The Requiring Authority shall ensure that all reasonable steps are taken to prevent any nuisance and damage to adjacent properties during construction. The Requiring Authority will reinstate any property damaged during construction or provide compensation to the affected owner if reinstatement is not possible.

15. Construction shall be limited to the following hours:

Weekdays 7.00am - 7.00pm;

Saturdays 8.00am - 4.00pm;

Sundays & Public Holidays No work

16. Noise generated by the construction works associated with the upgrading of the Diana Drive/Chivalry Road/Chartwell Avenue intersection shall comply with New Zealand Standard NZS 6803P:1999 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work", except that where compliance with this standard is not practicable, alternative methodologies that will minimise adverse effects shall be developed in consultation with the owners and/or occupiers of the affected properties to the satisfaction of Auckland Council.

17. Prior to construction commencing the Requiring Authority shall prepare a Construction Management Plan (CMP) for approval to the satisfaction of Auckland Council. The Construction Management Plan shall make provision for the following:

- a. Methods for the avoiding or minimising noise and vibration nuisance;
- b. Methods for avoiding or minimising any dust nuisance from construction;
- c. Methods for handling complaints on noise, vibration, dust or any other matter;
- d. Methods for protecting those trees that are to be retained and are potentially affected by construction works;
- e. Methods for implementing the recommendations of the Landscape Mitigation Plan and the Arborist Report;
- f. Methods for the demolition and/or removal of any building on properties required for the works;
- g. Methods for the site specific provision for erosion and sediment control to ARC TP 90 standards;
- h. Methods for liaising with schools to ensure safety of school pupils and that any major school events are planned for;
- i. Methods for liaising with network utility operators;
- j. Methods for ensuring that any vehicles leaving the site do not deposit soil or other debris on public roads;
- k. Details of the site manager, including their contact details (phone, fax and postal address);
- l. The location of a large notice board at each end of the works, which clearly identifies the name, telephone number, and address of the site manager;
- m. Methods for retaining access to all properties during the construction period;
- n. The location of the site office and workers' toilet;
- o. Proposed hours of work on the site;
- p. Locations at which construction equipment will be parked over night;
- q. The signage to be erected at the site during the construction period to advise motorists and pedestrians of the works, and of the routes they should follow; and
- r. A requirement to implement the Traffic Mitigation Plan required under Condition 26.

18. A Construction Noise Management Plan (CNMP) shall be prepared to the Auckland Council's satisfaction by a suitably qualified acoustic consultant prior to the commencement of any construction works. The Plan shall refer to noise management measures set out in Appendix E of NZS6803:1999 "Acoustics — Construction Noise" and as a minimum shall address the following:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Construction sequence;
- b. Machinery and equipment to be used;
- c. Hours of operation, including times and days when noisy construction would occur;
- e. The design of noise mitigation measures such as temporary barriers or enclosures;
- f. Construction noise limits for specific areas;
- g. Development of alternative strategies where full compliance with NZS6803P:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes; and
- h. Methods for monitoring and reporting on construction noise. The CNMP shall detail the construction methodologies that will be employed to, as far as practicable, comply with NZS6803P:1999. If this cannot be achieved, management and mitigation measures intended to minimise adverse noise effects shall be set out.

18. The Requiring Authority shall ensure that the Construction Management Plan and Construction Noise Management Plan are complied with at all times during construction and that a copy of each is kept at the site offices.

19. The Requiring Authority shall advise neighbouring owners and occupiers of the construction timetable, including the date on which construction is to start and the expected duration of the work.

20. The contractor shall be required to maintain the stability of the land at the boundary of the site, by whatever means necessary and to monitor that such works are and remain effective.

21. The Requiring Authority shall, during the preparation of Tender documents and the Construction Management Plan, take into account the location of existing infrastructure and utility services and the likely location of future infrastructure and utility services, and undertake consultation with the appropriate Auckland Council departments and Network Utility Operators.

22. The Requiring Authority shall liaise with public utility operators and use its best endeavours to ensure that all planned utility upgrading at the Chivalry Road/Chartwell Avenue/Diana Drive intersection is carried out during the construction period.

23. The requiring Authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators and Auckland Council's infrastructure is protected and public safety is ensured.

24. At all times, reasonable physical vehicular and pedestrian access shall be maintained to private properties not directly affected by construction works in the affected area. Where private properties are directly affected by construction causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner and occupier if relevant, is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which access is prevented. Particular regard shall be given to those properties where the Requiring Authority is aware of owners/occupiers with physical impairments.

25. Prior to the commencement of construction the Requiring Authority shall submit for approval to the satisfaction of the Auckland Council, a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall address methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging. The plan shall specify among other matters:

- i. How, where practicable, one lane of traffic in each direction shall be open at peak times;
- ii. Measures to be adopted to ensure that pedestrian access past the site is safe and, as practical as is possible, and is not obstructed during the construction works; and
- iii. Measures to be adopted to ensure access is maintained to all properties fronting the realigned road including the existing shops on the north western corner and the Church on the south western corner.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes

1. Consider the appropriateness of the service chamber lids at pram crossings with regards to pedestrian safety.
2. Investigate if curve advisory warning signs are warranted for the curve outside 78 Chartwell Avenue, south of the intersection on Chartwell Avenue with the proposed realignment. Similarly check the curve warning requirements for Diana Drive approach to the intersection.
3. That the proposed footpath be widened and set back with approximately 600-1000mm separation (grass verge) from the kerb where possible. It is recommended that the footpath be widened to 2.0-2.5m and gradually tie in with the existing footpath.
4. That directional arrow pavement markings are clearly marked out to warn motorists that the vehicle crossing on Chartwell Avenue associated with the church is an exit only access.
5. Consider the need for cycle facilities at the intersection as discussed under Section 4.5.
6. Consult with the appropriate Council department on the proposal and the timeline for the proposed cycleway or similar facilities on Chivalry Road or in the vicinity of the intersection.
7. That the lighting illumination levels are checked to ensure that they are in accordance with Auckland Council lighting requirements and standards for the intersection.
8. That the appropriate Council departments are consulted if any of the works can be coordinated and carried out simultaneously with this project as discussed in Section 4.7.
9. The details of the final design of the stormwater infrastructure will require liaison with the Council stormwater asset engineer and the retention of the straight alignment or the replacement of the lead with a 300 line may be required.
10. Consideration should be given to setting the new footpaths back from the kerb line to assist with the safety of pedestrians, especially school children. This would also simplify the ramp issues at the new pram crossings.

1432 Road Widening - Anzac Street

Designation Number	1432
Requiring Authority	Auckland Transport
Location	43, 47-51, 55, 59, 65, 69 and 106 Anzac Street, Takapuna
Rollover Designation	Yes
Legacy Reference	Designation (no number), Auckland Council District Plan (North Shore Section) 2002
Lapse Date	10 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

General

1. That the scope and extent of the works within the designated area be generally in accordance with the Notice of Requirement dated 14 December 2006; and in accordance with the conditions set out below.
2. Before any construction is commenced an Outline Plan(s) shall be submitted in terms of s. 176A of the Resource Management Act (1991) to the council. The outline plan may be submitted in stages to reflect any proposed staging of the physical works. The outline plan(s) shall show those matters required to be included by Section 176A of the Act and those matters specified in the following conditions.
3. That prior to any works being commenced the Requiring Authority obtain all requisite resource consents required under the Resource Management Act (1991) including any consents required from the council.
4. That the Requiring Authority and its contractors shall, in addition to complying with all other construction-related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.
5. That any land taken or held for the works be maintained to a reasonable standard until physical works commence.
6. That at all times reasonable access be maintained to private properties. As part of the consultation process, Council shall agree a construction period property access agreement with all property owners or occupiers.
7. That, should construction work uncover any archaeological remains, the Requiring Authority should immediately advise local Kaumatua and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without the prior consent of the Historic Places Trust.
8. The Requiring Authority is recommended to seek resource consent for any widening works on the southern side of Anzac St west of Barrys Point Rd referenced in 3.0 above when plans are available and agreement of affected landowners has been reached.

Road Traffic Noise

9. At the Outline Plan stage and prior to the commencement of the construction works, the Noise Management Plan prepared in accordance with the Unitary Plan, and presented as evidence, shall be reviewed by a suitably qualified acoustic consultant, to the council's satisfaction and any necessary changes made to the mitigation plan as now recommended. The report shall provide measured ambient noise levels at appropriate representative monitoring points for all properties and the following information for each affected property:
 - a. Predicted ambient noise level for the year of construction completion;
 - b. Average noise design level;
 - c. Predicted traffic noise level 10 years after completion of the road widening for friction course or other low noise surfacing - based on realistic vehicle speeds; and
 - d. Options for effective noise mitigation measures, either singly or in combination, including noise barriers and building insulation, for the chosen road surface options.
 - e. Council shall maintain, through regular resurfacing or other remediation, the effective noise reduction parameters of the surfacing.
10. Where a residence that is immediately adjacent to Anzac Street will be exposed to a predicted level of traffic noise greater than 65dBA Leq(24hour) in 2021 (As listed in Appendix A of the statement of evidence of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rhys Hegley dated April 2007 attached to this decision as Attachment 2) and that residence has not been designed to not exceed a daily noise exposure of Leq (6am-10pm) 40dBA in all habitable rooms with ventilating windows open, additional mitigation in the form of alternative glazing, raised road boundary walls to 1.8 m height, mechanical venting systems including air conditioning or methods similar in kind, shall be offered to that residence and incorporated into the Outline Plan and in any property transactions. This provision shall apply to all residential properties adjacent to the designation notwithstanding that property acquisition may have preceded this condition, but shall not apply where the residence has been required as a condition of resource consent to be designed to provide equivalent acoustic mitigation.

11. Where it is reasonably practicable, the mitigation plan, including the erection of the final fences and the installation of other measures, shall be implemented prior to the start of road construction activities to afford the residents the maximum possible protection from those activities.

12. Council shall conduct yearly monitoring surveys for a period of five years from the date of completion of the works to determine whether the design noise standards are being met for the adjacent properties. Council shall continue liaison with the residents over that period and address any deficiencies that may be established.

Construction Noise

13. Noise generated by the construction works associated with the Anzac Street Corridor upgrade shall, where practicable, comply with New Zealand Standard NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work":

14. A Construction Noise Management Plan shall be prepared to the Council's satisfaction by a suitably qualified acoustic consultant prior to the commencement of any construction works. The Plan shall take into account the pre-construction noise mitigation measures to be installed and detail the construction methodologies that will be employed to comply with NZS 6803P:1984 or, if this cannot be achieved, those methodologies that have been agreed with affected parties and property occupiers to minimise adverse effects.

15. Full consideration shall be given to the use of road construction materials that minimise the need for heavy compaction and associated vibration, that can be laid and finished in the shortest practicable time, and that shall have a long effective life and be able to be rehabilitated as necessary in the shortest possible time.

Landscaping and Streetscape

16. The Requiring Authority shall submit a comprehensive Landscape Plan ("The Plan"), based on the Landscape Proposal Plan (Drawing Nos 2097/L3 and 2097/L4) as part of the Outline Plan, to the satisfaction of the Auckland Council after referral to the Devonport-Takapuna Local Board.

17. The Plan shall show how measures have been taken to retain as many of the existing trees as practically possible, and in particular the Totara tree adjacent to 88 Anzac Street.

18. The detailed design of the Landscape Plan is to be reasonably consistent in its approach to provide a comprehensive urban design framework through treatment of boundaries and streetscape amenity. Mitigation measures for individual properties should be undertaken in collaboration with property owners and in accordance with the Council's Design of Streets Project, which aims to provide a comprehensive design framework for street projects in North Shore City.

19. The Plan shall include all proposed planting (including species, species sizes, densities, areas and locations), the planting programme and the maintenance programme.

20. The selected trees to be planted shall be of a type and form that will not adversely impact on the operations of buses in the kerbside lanes and the efficiency and safety of the corridor. Mature trees should provide a clear 3.5 m minimum height and preferably the minimum legal height for vehicles (4.25 m) from road level at the face

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of the kerb.

21. The Requiring authority shall retain an experienced arborist to prepare and monitor a mitigation plan to ensure that all remaining trees are adequately protected and do not suffer damage through the construction phase.

22. The landscape maintenance programme shall be undertaken for a minimum of five years following implementation. It shall include performance standards specifying the minimum average growth rates and survival rates for planting, and shall include any practicable and reasonable maintenance measures.

23. Bus stop and bus shelter locations shall be determined following community consultation and shall comply with the requirements of the Unitary Plan.

Social Impact

24. The Requiring Authority shall at all times during construction and immediately thereafter ensure that all affected residents are able to contact a delegated officer whose duty will be to liaise with all parties over concerns arising out of the construction and completion of the proposed works.

Construction Management

25. The Requiring Authority shall prepare a Construction Management Plan as part of the Outline Plan, based on the conditions included in the decision, for approval to the satisfaction of the council.

26. The Requiring Authority shall ensure that the Construction Management Plan provisions are included in all construction contracts and are complied with at all times during construction.

27. The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

Traffic Management

28. The Requiring Authority shall undertake regular monitoring of traffic conditions at the various road segments and intersections pertaining to works under this designation in order to address adverse traffic effects that may arise. Particular attention shall be given to both safety and efficiency (capacity) issues and cover the changes that may be indirectly impacted by the implementation of the designated works. In particular, the Council shall give due regard to and mitigate problems in Killarney Street, at the intersections on Taharoto Road to which some vehicles may divert (eg Ngaio Street and Rangitira Ave), the intersection of Anzac Street with Barrys Point Road and Pupuke Road and particularly to Pupuke Road South, to property access and the probable introduction of priority lanes on Fred Thomas Drive.

Advice Note:

The Requiring Authority may need to consider travel demand measures or the introduction of dynamic lane management in a relatively short time after initial commissioning. It is likely that traffic management will be required over broad corridors both north/south and east/west.

Public Utilities Conditions

29. The Requiring Authority shall, during the preparation of the outline plan(s), take into account the location of existing and future infrastructure and utility services, and undertake consultation with the appropriate council departments and Network Utility Operators as necessary.

30. The Requiring Authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators and council's infrastructure is protected and that public safety is ensured.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

31. The Requiring Authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work affecting Network Utility Operators and council's infrastructure.

1433 Road - Fred Taylor Drive Transport Corridor

Designation Number	1433
Requiring Authority	Auckland Transport
Location	Fred Taylor Drive, Massey/Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation NZTA3, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

State Highway 16.

Conditions

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 1.

Note:

That major earthworks may require a regional consent from the Auckland Council.

1434 Road - Marinich Drive Extension

Designation Number	1434
Requiring Authority	Auckland Transport
Location	125A Metcalfe Road to 46 Ranui Station Road, Ranui
Rollover Designation	Yes
Legacy Reference	Designation RP4, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Roading purposes.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 5 (five) years after the date on which it is included in the Unitary Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

1435 Road - Waitemata Drive

Designation Number	1435
Requiring Authority	Auckland Transport
Location	Waitemata Drive (over Birdwood Park) to Waitemata Drive West, Ranui
Rollover Designation	Yes
Legacy Reference	Designation RP8, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Roading purposes.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 15 (fifteen) years after the date on which it is included in the Unitary Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

1437 Road - Hobsonville Road Transport Corridor

Designation Number	1437
Requiring Authority	Auckland Transport
Location	Hobsonville Road, Hobsonville
Rollover Designation	Yes
Legacy Reference	Designation NZTA2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Transport corridor.

Conditions

1. Where an outline plan of works is submitted in accordance with s176A of the Act, prior to commencing the project of work, that plan shall be accompanied by:
 - a. a statement detailing the degree to which the works described in the outline plan meet the relevant objectives, policies and rules of the Plan; and
 - b. an assessment of the effects the works described in the outline plan will have on the environment.

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 2.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Note:

That major earthworks may require a regional consent from the Auckland Council.

Designation Number	1449
Requiring Authority	Auckland Transport
Location	267-287, 290-300, 295-297A, 301-309, 304-318A, 311-325, 429-447, 450, 4004-4012, 4007-4035, 4018, 4022-4024, 4040-4048, 4052-4054, 4070, 4087-4131, 4092-4094, 4098 and 4104-4118A Great North Road, 1-3 West Coast Road, 1 and 2 Montel Avenue, 2 Blacklock Avenue and 1 Buscomb Avenue, Henderson to Te Atatu

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rollover Designation	Yes
Legacy Reference	Designation WCCR4, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening purposes.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 5 (five) years after the date on which it is included in the Unitary Plan unless:

- It is given effect to before the end of that period; or
- The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

R1457 Car Park - College Road

Designation Number	R1467
Requiring Authority	Auckland Transport
Location	32 College Road, Northcote
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.
3. Any changes to the mix of the function of the parking (short / long term);
 4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
 6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
 7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
 8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
 9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
 10. Earthworks to implement any of the above; and
 11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective

The Proposed Auckland Unitary Plan (notified 30 September 2013)

fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties

The Proposed Auckland Unitary Plan (notified 30 September 2013)

during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1459 Car Park - Fenwick Avenue

Designation Number	R1459
Requiring Authority	Auckland Transport
Location	2 Fenwick Avenue, Milford
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

k. CCTV cameras; and

l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work
-----	-------------	------------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

The Proposed Auckland Unitary Plan (notified 30 September 2013)

14. That at all times reasonable physical access be maintained to other properties.

R1460 Car Park - Harrison Street

Designation Number	R1460
Requiring Authority	Auckland Transport
Location	3 Harrison Street, Wellsford
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
8. In the case of parking buildings¹ and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
10. Earthworks to implement any of the above; and
11. Temporary traffic management necessary to implement any of the above.

¹ For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

The Proposed Auckland Unitary Plan (notified 30 September 2013)

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1461 Car Park - Channel View Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	R1461
Requiring Authority	Auckland Transport
Location	12 Channel View Road, Takapuna
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- Communications, water supply and energy supply infrastructure;
- Stormwater drainage and other surface water management infrastructure;
- Earthworks;
- Pruning and removal of all non-scheduled vegetation within the site; and
- Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- Resurfacing of floors, at-grade, and metalled parking surfaces;
- Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- Bicycle stands, racks, cages and other forms of bicycle storage;
- Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- Customer service booths;
- Barrier arms;
- Parking sensors;
- Signage relating to parking information, management and enforcement;
- Lighting;
- CCTV cameras; and
- Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
10. Earthworks to implement any of the above; and
11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.

ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1462 Car Park - Hurstmere Road

Designation Number	R1462
Requiring Authority	Auckland Transport
Location	78 Hurstmere Road, Takapuna
Rollover Designation	No

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- Communications, water supply and energy supply infrastructure;
- Stormwater drainage and other surface water management infrastructure;
- Earthworks;
- Pruning and removal of all non-scheduled vegetation within the site; and
- Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- Resurfacing of floors, at-grade, and metalled parking surfaces;
- Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- Bicycle stands, racks, cages and other forms of bicycle storage;
- Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- Customer service booths;
- Barrier arms;
- Parking sensors;
- Signage relating to parking information, management and enforcement;
- Lighting;
- CCTV cameras; and
- Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1463 Car Park - Clarence Street

Designation Number	R1461
Requiring Authority	Auckland Transport
Location	20 Clarence Street, Devonport
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- b. Communications, water supply and energy supply infrastructure;
- c. Stormwater drainage and other surface water management infrastructure;
- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary

The Proposed Auckland Unitary Plan (notified 30 September 2013)

to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
------------------------------------	-------------	---

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1465 Car Park - Hurstmere Road

Designation Number	R1465
Requiring Authority	Auckland Transport
Location	85 Hurstmere Road, Takapuna
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. Stormwater drainage and other surface water management infrastructure;
- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays

The Proposed Auckland Unitary Plan (notified 30 September 2013)

within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1466 Car Park - Glenmall Place

Designation Number	R1466
Requiring Authority	Auckland Transport
Location	41 Glenmall Place, Glen Eden
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

1467 Road Widening - Hobsonville Road

Designation Number	1467
Requiring Authority	New Zealand Transport Agency
Location	Hobsonville Road from Brighams Creek Road to Upper Harbour Drive and Brighams Creek Road and Hobsonville Road intersection, Hobsonville
Rollover Designation	Yes
Legacy Reference	Designation NZTARW1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

1. Hobsonville Road from Brighams Creek Road to Upper Harbour Drive:

- 11.5m from centre line (both sides); and
- 1.44m from the existing boundary (both sides).

2. Hobsonville Road from a point adjacent to Pt 15 SO 2599, being approximately 500mm from the Brighams Creek- Hobsonville Road intersections to a second point at the corner opposite Pt 25 DP 41296:

- 13m from the centre line (west side only); and
- 2.88m from the existing boundary (west side only).

Conditions

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation: This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these

The Proposed Auckland Unitary Plan (notified 30 September 2013)

measures would generally satisfy condition 1. Note that major earthworks may require a consent from the Auckland Council.

1468 Road Widening - State Highway 16 (Westgate to Whenuapai)

Designation Number	1468
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from Westgate interchange, Westgate to Brighams Creek, Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation NZTARW2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

1. State Highway 16 from the end of the Motorway to Brighams Creek:
 - a. 15m from the centre line (both sides); and
 - b. 4.88m from the existing road boundary (both sides).
2. State Highway 16 from eastern side of Lot 1 DP 65765 to Taupaki Road:
 - a. 15m from the centre line (south side only); and
 - b. 4.88m from the existing road boundary (south side only).
3. State Highway 16 from Rodney District boundary to a point 50m east of the boundary:
 - a. 15m from the centre line (north side only); and
 - b. 4.88m from the existing road boundary (north side only).

Conditions

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 1. Note that major earthworks may require a consent from the Auckland Council.

1469 Albany Highway

Designation Number	1469
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	New Zealand Transport Agency
Location	Albany Highway, Albany
Rollover Designation	Yes
Legacy Reference	Designation (no number), Auckland Council District Plan (North Shore Section)
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening and improvement works.

Conditions

General

1. That the scope and extent of the works within the designated area be generally in accordance with the plans submitted as part of the Notice of Requirement dated 22 September 2011, as modified (with respect to access to 329 Albany Highway) by drawing no.51-30100-SK444 dated 15 December 2011) and as modified (with respect to access to 281 Albany Highway) by drawing no SK281A- 281 Albany Highway - Rev 8 - Agreed Access Arrangements; and in accordance with the conditions set out below.
2. In accordance with Section 184(1) of the Resource Management Act 1991, the alteration to the designation shall lapse on the expiry of 10 years from the date on which it is included in the Auckland Council District Plan (North Shore Section) if it has not been given effect to before the end of that period.
3. Before any construction is commenced an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the Auckland Council. The Outline Plan(s) shall show those matters required by Section 176A of the Act and those matters specified in the following conditions. All work shall be undertaken in accordance with the Outline Plan(s). In addition to the requirements of Section 176A, no works shall commence until the specific mitigation plans referred to below have been approved to the satisfaction of Auckland Council. All works shall also be in accordance with the details of these specific mitigation plans.
4. That prior to any works being commenced, the Requiring Authority shall obtain all resource consents required under the Resource Management Act.
5. The Requiring Authority shall ensure that all reasonable steps are taken to prevent any nuisance and damage to adjacent properties during construction. The Requiring Authority shall reinstate any property damaged during construction or provide compensation to the affected owner if reinstatement is not possible.
6. At all times, reasonable physical vehicular and pedestrian access shall be maintained to private properties not directly affected by construction works in the area affected. Where private properties are directly affected by construction causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner (and occupier if relevant), is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which access is prevented. Particular regard shall be given to those properties where the Requiring Authority is aware of owners/occupiers with physical impairments. Fences removed as a result of this project shall be reinstated at the Requiring Authority's expense unless alternative arrangements have been made with the landowner.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Heritage / Archaeological

8. Prior to submitting the Outline Plan of Works to the Council for approval in terms of Condition 3 above, the Requiring Authority shall request confirmation from the NZ Historic Places Trust whether an authority under the Historic Places Act 1993 is required to damage, modify or destroy any archaeological material, based on the archaeological assessment of the corridor by Russell Foster and Associates dated November 2011. If the archaeological assessment identifies any material of significant value, steps shall be undertaken by the Requiring Authority, where possible, to avoid damaging, modifying or destroying that material.

9. If any urupa, traditional sites, taonga (significant artefacts), or koiwi (human remains) are exposed during site works, then the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been exposed shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- c. The site supervisor shall notify representatives of relevant tangata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
- d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site. Should archaeological material be discovered, works shall not recommence until approval has been obtained from the New Zealand Historic Places Trust, under the Historic Places Act 1993.

10. Prior to the commencement of works, detailed protocols for the management of the exhuming and relocation of the unmarked graves in the Albany Cemetery identified as No. 7, protected as a Category A site, in the Auckland Council District Plan (North Shore Section-Appendix 11A Schedule of Buildings, Objects and Places of Heritage Significance) shall be developed in consultation with representatives of the relevant Tangata Whenua, the New Zealand Historic Places Trust, Presbyterian Church Trustees and Auckland Council.

Traffic Noise

11. The surface of the Albany Highway shall be constructed of a suitable and practicable medium such as asphalt, or a road surface with equivalent or greater acoustic performance. The same medium, or a medium with equivalent or greater acoustic performance, shall be used for all future re-laying of the road surface.

12. As a minimum standard, the Requiring Authority shall design and construct works to satisfy the requirements of NZS 6806:2010 Acoustics - Road Traffic Noise- New And Altered Roads.

13. At the outline plan stage and prior to the commencement of the construction works, a Noise Management Plan shall be provided to the Council's satisfaction from a suitably qualified acoustic consultant in accordance with section 14.9.1(b) of the Auckland District Plan (North Shore Section). The Plan shall provide measured ambient noise levels at appropriate representative monitoring points for all affected Properties And Facilities (PPF's) and the following information for each affected property

- a. The ambient sound levels to all PPF's prior to construction work commencing;
- b. The do-nothing traffic noise levels to all PPFs for the design year, a minimum of 10 years after the completion of the road widening;
- c. The do-minimum traffic noise levels to all PPFs for the design year, a minimum of 10 years after the completion of the road widening;
- d. Options for effective noise mitigation measures, either singly or in combination, including noise barriers and building insulation.
- e. Traffic noise levels for the design year to all PPFs with the proposed mitigation in place.

Construction Noise

14. Noise generated by the construction works associated with the Albany Highway Corridor Upgrade shall, where practicable, comply with the *New Zealand Standard NZS 6803:1999 "Acoustics - Construction Noise"* except that where compliance with the standard is not practicable or possible, alternative methodologies that

The Proposed Auckland Unitary Plan (notified 30 September 2013)

will minimise adverse effects shall be developed In consultation with the owners and/or occupiers of the affected properties, to the satisfaction of Auckland Council.

Construction Management Plan

15. At least one month before the commencement of any construction activities authorised by this designation and associated with the proposed widening and upgrade of Albany Highway, the Requiring Authority, shall submit a Construction Management Plan to the Team Leader Compliance Monitoring (The Manager) - Northern, Auckland Council. The manager's approval must not be unreasonably withheld and, if provided, will be provided within 10 working days (of all information being received by the council). Works will only be able to proceed once approval has been granted. The construction management plan shall make provision for the following:

- a. Methods for avoiding or minimising noise nuisance;
- b. Methods for avoiding or minimising any dust nuisance from construction, including, in particular, any dust nuisance which may cause damage to utilities;
- c. Methods of avoiding or minimising any vibration or ground Instability effects, including, in particular, any such effects which may cause damage to utilities;
- d. Methods for protecting those trees that are to be retained and potentially affected by construction works;
- e. Methods for implementing the recommendations of the Landscape Mitigation Plan and the Arborist report prepared by Arborlab Consultancy Services Ltd dated April 2011;
- f. Methods for the demolition and/or removal of any building on properties required for the works;
- g. Methods for liaising with network utility operators;
- h. Methods for ensuring that any vehicles leaving the site do not deposit soil or other debris on public roads
- i. Details of the site manager, including their contact details (phone, fax, email and postal address);
- j. The location of a large notice board at each end of the works, which clearly identifies the name, telephone number, and address of the site manager;
- k. Methods for retaining access to all properties during the construction period;
- l. Methods for ensuring the safety of cyclists and pedestrians during construction.
- m. The location of the site office and workers' toilet and proposed parking arrangements for workers;
- n. The location of all material storage areas and protection measures (if required);
- o. Proposed hours of work on site;
- p. Locations at which construction equipment will be parked over night;
- q. The signage to be erected at the site during the construction period to advise motorists, pedestrians and cyclists of the works, and of the routes they should follow;
- r. A requirement to implement the Traffic Mitigation Plan;
- s. Proposed construction methodology;
- t. Proposed method of risk management;
- u. Measures for silt control and treatment of stormwater during construction;
- v. Proposed programme;
- w. Measures to manage access for emergency vehicles;
- x. Measures to manage the effects of construction vehicles (delivery routes, times, parking etc.
- y. Measures to remediate any contaminated land (if any).

Communications Plan

16. The requiring authority shall prepare, and submit for the approval with the Construction Management Plan, a Communication Plan that sets out procedures for communicating with the public, the owners and occupiers in the immediate vicinity of the construction area, and all schools in the immediate vicinity (including Albany Junior High and Senior High Schools, Kristin School, Albany Primary School and Pinehurst School) throughout the construction period. The communications plan must include a copy of the Traffic Mitigation Plan prepared under Condition 23 as well as procedures for:

- a. Giving notice of the commencement of construction activities;
- b. Providing information about the expected duration of work, including a programme of works;
- c. Giving notice of any changes to the programme of works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. Handling complaints on noise, vibration, dust or any other matter.

17. The approved Communications Plan is to be implemented and maintained for the duration of the project.

18. The Requiring Authority must ensure that the Local Board, and the owners and occupiers of properties in the immediate vicinity of the construction area, are given notice of the commencement of construction activities and a programme of works at least 10 working days prior to construction commencing.

19. The Requiring Authority must, at all times, from the date the designation is confirmed until the works are complete, ensure that all affected persons are able to contact the delegated officer(s) or agents(s) whose duty it will be to liaise with all parties on the concerns arising out of the completion of the proposed works. This person shall be appointed after confirmation of the designation and affected owners/occupiers notified of the appointment in writing.

Construction Noise Management Plan

20. A Construction Noise Management Plan ('CNMP') shall be prepared by a suitably qualified acoustic consultant and submitted to the Team Leader Compliance Monitoring (the Manager) - Northern, Auckland Council. The Manager's approval must not be unreasonably withheld and, if provided, will be provided within 10 working days (of all information being received by the Council). The Plan shall refer to noise management measures set out in Appendix E of NZS6803:1999 "Acoustics - Construction Noise" and shall detail the construction methodologies that will be employed to, as far as practicable, comply with NZS 6803:1999. As a minimum, the CNMP shall address the following:

- a. Construction sequence;
- b. Machinery and equipment to be used;
- c. Hours of operation, including times and days when noisy construction would occur;
- d. The design of noise mitigation measures such as temporary barriers or enclosures;
- e. Construction noise limits for specific areas;
- f. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and occupiers to achieve acceptable outcomes;
- g. Methods for monitoring and responding to complaints about construction noise.

The Requiring Authority shall ensure that the Construction Management Plan and Construction Noise Management Plan are complied with at all times during construction and that a copy of each is kept at the site offices.

22. The Requiring Authority shall advise neighbouring owners and occupiers of the construction timetable, including the date on which construction is expected to start and the expected duration of the work.

Traffic Mitigation Plan

23. Prior to the commencement of construction, the Requiring Authority shall submit a Traffic Mitigation Plan ('TMP') to the Manager, Road Corridor Access, Auckland Transport (the manager). The Manager's approval must not be unreasonably withheld and, if provided, will be provided within 10 working days (of all information being provided to Auckland Transport). The Traffic Mitigation Plan shall:

- a. Address methods of mitigating the local and network wide effects of both the construction of individual elements of the project to be opened to traffic while other sections are under construction; and
- b. Provide details of how individual properties will be affected in terms of on site car parking and manoeuvring and what measures the Requiring Authority will be implementing to ensure that each property retains either the existing provision for on-site car parking or manoeuvring or compliance with District Plan requirements for on-site car parking and manoeuvring.
- c. Provide details of whether during construction the over dimension vehicle envelope of 9.5m by 6.5m is provided, or an alternative route is available.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Note:

In particular, the TMP should give consideration to the following:

- Whether school holiday periods can be used for critical construction works to minimise disruption and delays caused by school traffic (7- 9am, 3-4pm)
- Whether it is possible to keep open one lane of traffic in each direction at peak times.
- Whether road closures (for either direction) can be avoided for the following: 7am to 9am on school days - for the entire length of the corridor (Bush Road/Albany Highway to Albany Expressway/Albany Highway). 3pm to 4pm on School days - for the section from Rosedale Road/Albany Highway to Albany Expressway/Albany Highway. 4.30pm to 6pm - at the Rosedale Road/Albany Highway, on the south approach between Appleby Rd and Rosedale Rd and on the east approach from William Pickering Dr and Albany Highway. (The above being existing congested areas that have been identified from an on-site survey).

Public Utilities

General Conditions

24. The Requiring Authority shall, during the preparation of tender documents and the Construction Management Plan, take into account the location of the existing infrastructure and utility services and the likely location of future infrastructure and utility services, and undertake consultation with the appropriate Council departments and network utility operators as necessary.

25. The Requiring Authority shall adopt best practice techniques for construction to ensure that all network utility operators' and Council's infrastructure is protected and public safety is ensured. The Requiring Authority shall liaise with public utility operators and use its best endeavours to ensure that all planned utility upgrading along the Albany Highway is carried out during the construction period.

The following conditions apply to Vector Limited and Transpower NZ Limited Electricity Infrastructure:

26. The Requiring Authority shall consult with Vector Limited and Transpower NZ Limited at least 15 working days before carrying out any of the following activities on land that is subject of Designations 179 and 179A:

- a. Any activity where damage is caused, or is likely to be caused, to underground transmission lines assets through excavation or works;
- b. Any excavation in, or under, the road (including drilling, tunnelling, thrusting or similar); or
- c. Establishment, maintenance or replacement of street trees.

The conditions below apply only to Watercare Services Limited's Infrastructure

27. The Requiring Authority shall ensure that Watercare's ability to operate, maintain or upgrade its assets is not unduly restricted or prevented during construction and post construction.

28. The Requiring Authority shall consult with Watercare (or any other agent nominated from time to time) at least 15 working days prior to any works being carried out in close proximity to Watercare's assets and obtain any approvals required from Watercare.

29. The Requiring Authority shall, at the Outline Plan of Works stage, clearly show any actual and/or potential effects of the proposed works on Watercare's infrastructure.

Emergency works

30. Emergency works and urgent works, including provision for 24 hour access, can be undertaken by any other Network Utility Operator without the need for express written approval from the Requiring Authority. The party undertaking the emergency or urgent works must advise the Requiring Authority, within 2 working days, that the activity has been undertaken and seek written approval if the work is ongoing.

"Emergency works" means works defined under section 330(1) of the RMA or Section 6.22.1 of the Draft National Code of Practice for Utilities Access to the Transport Corridors (March 2009) of the Code of Practice of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Working in the Road (Auckland Region) or any replacement code.

"Urgent work" is defined in section 69 of the Local Government Act (Auckland Council) Act 2009 as work that is urgent and necessary as a result of any defective equipment or other emergency equipment or other emergency.

The above condition shall apply to land that is within the road designation, whether it is formed or not.

Written Approvals

31. In providing written approvals for works in roads under section 176 of the RMA, the Requiring Authority shall comply with the requirements, procedures and timeframes set out in the Code of Practice for Working in the Road (Auckland Region) or any replacement of the regional code by the Code of Practice of Utilities Access to the Transportation Corridors.

Advice Note:

The process implemented for providing requiring authority approvals above could be incorporated into the process for granting access to the road network such that a single process for both requiring authority approvals and road access approvals is implemented unless otherwise requested by the party seeking approval.

Vegetation and Corridor Mitigation

32. The Requiring Authority shall submit a comprehensive Landscape Mitigation Plan as part of the Outline Plan, in consultation with the Council's Urban Design - Built Environment (Environmental Strategy and Policy), Park Arborists and the Northern Ward Arborist for approval and to the satisfaction of Auckland Council. The Plan shall take account of:

- a. Mitigation measures as outlined in the 'Landscape Plans' and 'Landscape and Urban Design Framework' report prepared by Isthmus Landscape Architecture/Urban Design dated April 2011 (Appendix 2 and 3 of the Landscape, Visual and Urban Design Assessment Report).
- b. Modifications to the measures outlined in the Landscape Plans and Landscape and Urban Design Framework report required to give effect to detailed design safety audit recommendations, geometric design constraints and access arrangements for 329 Albany Highway shown on drawing no. 51-301OO-SK44 dated 15 December 2011.
- c. Where there is a conflict between tree location and utilities, alternatives are explored in order that trees are planted close to the locations shown on the 'Landscape Plans'. Such alternatives may include minor relocation of planting (which may entail changes in tree spacing or minor adjustments to footpath and cycle path alignment), changes to tree planting details (such as changes in tree planter detail), or minor realignment of the more flexible services where it is practicable and does not add significantly to cost. Where such alternatives are not practicable, such trees shown on the 'Landscape Plans' shall be planted elsewhere in the corridor.
- d. Consultation with individual property owners and Cycle Action Auckland (in regards to the design of the cycle pathways).
- e. The high sensitivity and potential complexity of the works associated with the reserve land along the Albany Highway Corridor, and in particular, the Albany Cemetery (R539) and Oteha Stream (R473).

33. The Plan shall provide for:

- a. The implementation of the design parameters detailed in the Landscape and Urban Design Framework (Appendix 3 of the Landscape, Visual and Urban Design Assessment report) that provides guidance on the detailed design of:
 - Pedestrian and cycle pathways
 - Medians
 - Intersections
 - Mid-block crossings
 - Pedestrian refuge islands

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- Driveways and shared accessways
- Retaining walls
- Street furniture (lights, signs, bush shelters)
- Boundary walls
- Existing vegetation
- Planting within the berm
- Planting within property boundaries
- Stormwater
- Days Bridge
- Utilities.

b. The identification of existing trees and vegetation affected by the proposed works which, where practicable, are to be retained. These trees shall be protected during the construction programme.

c. The identification of any existing trees and vegetation affected by the proposed works that are to be relocated.

d. A schedule of species to be planted, including their location, botanical name, average plant size at time of planting, with a minimum size of PB95 being used for all specimen street trees, and average mature height.

e. Detailed design of acoustic barriers (in consultation with a suitable qualified acoustic consultant) following consultation with individual property owners. A maintenance period for vegetation retention of no less than 2 years from the certified date of practical completion of all the planting.

f. A maintenance period for vegetation retention of no less than 2 years from the certified date of practical completion of all the planting. The maintenance shall include performance standards specifying survival rates for planting and strategies to address non optimal growth rates and measures including control of invasive root species. It shall also provide for replanting where unsatisfactory planting results have occurred and the timing of planting which could, in consultation with landowners, include opportunities for early planting.

g. Details of street tree planting within medians and berms along the corridor length.

h. Replacement fencing, walling and boundary planting including outcome of discussions with individual owners.

Advice Notes:

In the preparation of the Landscape Mitigation Plan consideration should also be given to the following matters:

1. Retaining Walls

- The use of stepped structures with planting to assist the visual mitigation where retaining walls are required to be higher than 1.2m.
- The use of pre cast panels between the slip road adjacent to 234a- 246 Albany Highway and the highway itself with consideration to a planting strip at the base of the wall to allow for shrub or climber planting to soften the retaining structure.
- The use of art to enliven this route used by adults and children - retaining walls offer a variety of opportunities, particularly near intersections and bus stops.

2. Boundary Treatment

- To the use of hedge, low shrub or climber planting on the highway side of timber fences where space between footpath and boundary permits, in order to create a 'greener' streetscape and reduce the potential for graffiti, so long as such planting does not compromise passive surveillance objectives. Consideration should be given to the adequacy of on-going maintenance of such planting. A decision on such planting should take into account the wishes of adjacent property owners.
- Fencing to be designed with some variations along the corridor in context with adjacent properties, but in a way that creates a coherent and uncluttered appearance as described in the Landscape and Urban Design Framework

3. Street Furniture and Lighting

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- The quality of fittings should be of similar standard to that implemented in the Albany Town Centre as a minimum.

4. Shrub and Groundcover Species

- The use of a limited number of consistent shrub and groundcover species within all three different native planting mixes to encourage a sense of continuity and cohesion throughout the highway corridor.

5. Street Tree Planting

- The use of a planting trench in the grassed berm between the pedestrian path and cycleway, where it is capable of being developed, such as between the footpath and cycle path between 265 Albany Highway and Appleby Road, in order to provide good growing conditions for street trees. Note that construction of such planting trenches shall take into account potential conflict with utilities.

6. Paving Materials

- The use of a coherent system of paving materials and signage to distinguish footpaths, cycle paths, and shared paths. Such materials should complement each other so that they contribute to visual amenity. Signage and graphics should similarly contribute to amenity,
- The use of paving for pedestrian refuge areas within the central median consistent with that use/ for shared paths on the adjacent berms. This approach could be extended to pedestrian crossover areas of roads feeding into the highway subject to traffic engineering recommendations.

7. Other Detailed Design Issues

- Impractical berm configuration that results in acute angles for planting or grassed areas that will not support successful plant establishment e.g. LP002 adjacent 221 Albany Highway and LP011 east side of corridor adjacent Lucas Creek tributary.
- Potential conflict between lighting standard and vehicular access points e.g. LP007 adjacent 427 Albany Highway.
- Potential conflict between bush shelter and vehicular access points LP007 adjacent 419 Albany Highway.
- Feasibility of retaining existing trees e.g. LPOOB adjacent 437b Albany Highway. (Note: the general approach of retaining existing significant trees/notable trees is supported in principle).
- Practicality of footpath layout e.g. LPOOB absence of paved link between bus stop and footpath near 460 Albany Highway.
- Comprehensive treatment of all berms e.g. LP012 adjacent R21 where no treatment is shown for the berm between the shared cycleway / footpath and the property boundary.
- Review of the intersection widths and radii to reduce pedestrian crossing distances and turning vehicle speeds down.

Parkhead Reserve RB

- Replacement planting within the Reserve to reinstate the existing well established leafy reserve character that prevails.
- Attention should also be paid to the sensitive design of any level changes between the highway and reserve to ensure an attractive and seamless transition between the two. Retaining, if required, should be detailed so as to avoid interfering with the open expansive feel between the carriageway and reserve and should be either formed in a high quality material that does not require screening or screened by low planting or a self clinging climber.

R323

- Replacement planting of two totara in the adjacent reserve.

Oteha Stream R473

- To encourage the use of clean and simple lines, and visually recessive colours and avoid the use of applied motifs for Days Bridge.

Albany Cemetery

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- It may be appropriate to consider the use of an alternative species to kanuka within the Albany Cemetery as replacement for the existing trees.
- Use of natural stone facing material on the retaining wall below the Cemetery.

34. All planting in the road reserve will be subject to normal Council maintenance after the specific period identified in the Landscape Mitigation Plan.

35. All landscape mitigation planting shall be implemented no later than in the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practical opportunity. Following completion of planting, the Requiring Authority shall submit to the Council a report by an independent and appropriately qualified landscape architect on the implementation of the Landscape and Urban Design Plan providing a quantitative and qualitative assessment of the performance criteria detailed in the plan. During the maintenance period, the landscape architect shall carry out a qualitative and quantitative inspection every three months during the first 12 months following planting (or more frequently if considered necessary), and then six monthly for a period up to 24 months from completion of each planting area or until the performance standards detailed in the maintenance contract are met.

Stormwater / Contaminants Prior to lodgement of the Outline Plan of Works, consultation shall be undertaken with the Auckland Council Stormwater Unit on the proposed treatment and discharge of stormwater.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes:

1. Consultation should be undertaken with the Auckland Council Stormwater Unit regarding the following bullet points relating to the stormwater management infrastructure catering for the proposed road design:

- Operation and maintenance of proposed stormwater management devices
- Maintenance access requirements for stormwater management ponds (or other such devices) located within private property
- Interim and long term responsibility for pond maintenance and other such devices
- Maintenance access requirements for stormwater management devices located within the road corridor
- Location of stormwater manholes within the road corridor
- Connection of existing stormwater infrastructure into any new roading stormwater network
- Any maintenance requirements for stormwater management devices immediately prior to any transfer of responsibility of those devices to Auckland Council, including but not limited to a full clean-out of proprietary devices including filter medium and cartridge replacement where required.

2. Stormwater pond(s) (or other such devices) located on private property that have been identified for the purpose of treating stormwater runoff from the proposed road corridor should, if possible, have an Easement in Gross over the private land to enable routine maintenance and operation of the stormwater management pond(s). The area comprising the stormwater pond(s) should, if practicable be defined as an Easement for Drainage Purposes, or become a Drainage Reserve vested in Auckland Council.

3. Operation and maintenance access to any stormwater pond should be provided to an 'all weather' standard as per the legacy Council requirements - NSCC-IDSM 2009 Issue 10.

4. Operation & Maintenance Manuals with Engineering Drawings should be provided to Auckland Council Stormwater Unit for all stormwater devices, including ponds. The manuals should include catchment plans, summary cafes, drawings, as built, etc - as per the legacy Council requirements - NSCC IDSM 2009 Issue 10.

5. The forebays of existing ponds should be jointly inspected before road works commence, assessed, and photos taken. Any road construction wash materials & debris identified that have accumulated during the construction phase of the project should be removed from the forebay(s) by the Requiring Authority upon completion of the activity, at no cost to Council and to Councils satisfaction. Liaison regarding any required stormwater pond forebay clean out is with Auckland Council's Stormwater Consents Engineer.

Central

Designation Schedule - Auckland Transport (2/3)

Central

Number	Description	Location
1550	Car park	73-83 Customs Street West, Auckland
1551	Car park	22-28 Beresford Square, Auckland Central
1552	Car park	24 Mercury Lane, Auckland Central
1553	Car park	20 Upper Queen Street, Auckland Central
1554	Car park	52-56 High Street, Auckland Central
1555	Car park	299 Queen Street, Auckland Central

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1556	Transport Centre (Britomart Station)	12 Queen Street to Britomart Place, Auckland Central
R1557	Public off-street parking ...	72 Fanshawe Street, Central Auckland
1558	Building line for road widening purposes	The Strand, Parnell
R1559	Public off-street parking ...	23 Graham Street, Central Auckland
1560	Building line for road widening purposes	110 Nelson Street, 217-223 Hobson Street and 54, 86-88 Cook Street, Auckland Central
1561	Building line for road widening purposes	5-7 Nicholas Street and 203 Hobson Street, Auckland Central
1562	Building line for road widening purposes	75 Queen Street (near Customs Street), Auckland Central
1563	Road widening	12-26 Wyndam Street and 155 Queen Street, Auckland Central
1564	Road widening	86 Federal Street, 68 Victoria Street West, and 99, 109-125 Albert Street, Auckland Central
1565	Proposed pedestrian mall	128-130 Hardinge Street, Central Auckland
1566	Proposed pedestrian access way	1-4/61-87 Cook Street, Central Auckland
1567	Proposed building line for road widening purposes	34-38 Greys Avenue, Central Auckland
R1568	Public off-street parking ...	109-111 Onehunga Mall, Onehunga
1571	Building line for road widening purpose	101-107 Beaumont Street, Auckland Central
1572	Public open space / road.	2 Westhaven Drive, Auckland Central
1573	Public open space / road.	109 Fanshawe Street, Auckland Central
1575	Road	164-188 Beaumont Street, Auckland Central
1576	Council car park and proposed reserve	11-15 Dedwood Terrace and 1 Jervois Road, St Marys Bay
1577	Council car park	16 Redmond Street, Ponsonby
1578	Council car park	5-7 Margaret Street. Ponsonby
1579	Council car park	2 Pompallier Terrace, Ponsonby
1580	Building line for road widening	2-4, 6-8 and 12-24 York Street, 46 Parnell Road and 8-10 Bath Street, Parnell
1581	Building line for road widening	1-11 Farnham Street and 106 St.Georges Bay Road, Parnell
1583	Building line for road widening	86-98 Patiki Road, Avondale
1584	Building line for road widening	37-41 and 55-91 Patiki Road, Avondale
1585	Building line for road widening	1-15 Meola Road, Pt Chevalier

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1587	Building line for road widening	21 Newton Road and 582 Karangahape Road, Newton
1588	Building line for road widening	204-234 Great North Road, Newton
1589	Building line for road widening	150 Great North Road, Newton
1590	Building line for road widening	12-18 Monmouth Street, Newton
1591	Building line for road widening	204-234 Great North Road, Newton
1592	Building line for road widening	1, 21-63, 81, 2-48, 60-74 New North Road and 1-13, 21-27A, 29-35 Mount Eden Road
1593	Building line for corner cut off	99-107 Khyber Pass Road, Newton
1594	Building line for road widening	46-50, 54 and 68 Upper Queen Street and 62 Randolph Street, Newton
1595	Council car park	226/228 Symonds Street, Newton
1596	Council car park	3 Burleigh Street
1597	Building line for road widening and amenity purposes	73-141, 157-171, 187-207 Parnell Road, Parnell
1598	Building line for road widening	1, 9, 13-27 Garfield Street, 100 Parnell Road and 96 St. Georges Bay Road, Parnell
1599	Building line for road widening	11-13 and 19-33 Falcon Street and 2 Akaroa Street, Parnell
1600	Building line for road widening	167-177 and 209-215 Parnell Road, Parnell
1601	Council car park	112 Parnell Road, 1 Bath Street, Garfield Street, Parnell
1602	Council car park	32 St. Heliers Bay Road, St Heliers
1603	Building line for road widening	9-19 and 29 Patiki Road and 257-315, 367-489, 533-563, 597-653, 667, 699-705, 713-767, 658-660, 670-718 Rosebank Road, and 2-6 Eastdale Road, Avondale
1604	Building line for road widening	1404 Great North Rd, Pt Chevalier
1605	Council car park	16 Huia Road, Pt Chevalier
1606	Council car park	1-9 Parr Road (North), Pt Chevalier
1607	Council car park	956-990 Great North Road
1608	Proposed regional road	Western side of St Lukes Road, St Lukes
1609	Building line for road widening	322-336, 388, 390-394, 400-432, 574-628, 756-764, 383-399, 445-455, 597-621, 869-911 New North Road, 2 New Bond Street and 2 Western Springs Road
1610	Council car park	820 Great North Road, Western Springs

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1611	Road widening	240-242, 250-256 Balmoral Road and 43, 87-89, 81-85 St Lukes Road and 107 Taylors Road, St Lukes
1612	Council car park	2 Walters Road, Mt Eden
1613	Council car park	430-432 New North Road, Kingsland
1614	Passenger transport route	135, 161, 174, 178, 191-217, 312-328, 336-346, 371, 389-409, 400-412, 422-458, 486, 494, 506, 635-641, 655, 666-672, 669-673, 692, 825, 863, 905, 913-917, 921, 926-946A, 929-931, 935-941, 968-972, 1037-1043, 1047, 1055, 1057A, 1059, 1067, 1079-1079A, 1087-1099, 1196-1198, 1202, 1208, 1212-1216, 1230, 1244, 1288, 1292-1300, 1302-1304, 1308-1308A, 1312, 1318-1326 and 1330-1340 Dominion Road, 33A-35 Brentwood Avenue, 386-388 Mount Albert Road, 2 Onslow Road, 1A Invermay Avenue, 14 Quest Terrace and 41 Denbigh Avenue
1615	Building line for road widening	60 and 64 Sandringham Road and 57-59 Walters Road, Sandringham
1616	Building line for road widening	14-18 22, 26, 44-56, 43-81, 90, 94-96 Mt Eden Road and 2,3 Enfield Street, Mt Eden
1617	Building line for road widening	1 Gillies Avenue, Newmarket
1618	Building line for road widening	Between Nos. 2 and 350 Great South Road (north side), Epsom
1619	Building line for road widening	1-21, 2-236, 69-105, 242-248, 254-262, 272-280, 286-294, 300-350, 421-485, 495-525, 535-555 and 575 Great South Road, 2-8 Manukau Road, 1,2 and 21 Otahuri Crescent, 1 Sunnyvale Road and 1 Mapau Road, Greenlane
1620	Proposed Eastern Transport Corridor	Starts at Orakei Point carries on to Meadowbank, Glen Innes and Panmure (some underground)
1621	Building line for road widening	2-4 Woodward Street and 1081 New North Road , Waterview
1622	Council car park	984 New North Road, Mt Albert
1623	Council car park	867c New North Road, Mt Albert
1624	Building line for road widening	756-764 New North Road
1625	Council car park	12 Kitchener Road, Sandringham
1626	Building line for road widening	34-36, 88-102, 104B, 108, 122-126, 132-138, 142-156, 218-230 Balmoral Road and 15 Douglas Road, Balmoral
1627	Building line for road widening	59 The Drive, Epsom
1628	Council car park	4-8 Essex Road, Mt Eden
1629	Council car park	132 Green Lane West
1630	Council car park	6 Clonbern Road, Remuera
1631	Council car park	539 Remuera Road, Remuera

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1633	Land required for regional road	1,3, 32-66 and 59-59A Mountain Road, 474, 480-482, 486-492 and 510 Ellerslie-Panmure Highway, 5 and 7 Fraser Road, 1-21A, 2 and 21B Morrin Road, 39A-39B Tainui Road and 71, 130 and 140 Jellicoe Road, Point England
1634	Council car park	Stratton Lane, Glen Innes
1636	Council car park	59 Rosebank Road, Avondale
1638	Building line for road widening	7 Tiverton Road, Blockhouse Bay
1639	Building line for road widening	2-14 Owairaka Avenue and 1-1A Tyburnia Avenue, Hillsborough
1640	Building line for road widening	210-220 Richardson and 192-220 Stoddard Road, Hillsborough
1641	Council car park	219 Stoddard Road, Mt Roskill
1642	Building line for road widening	179 Mt Albert Road, 167-169 Mt Albert Road and 3 Owiraka Avenue
1643	Building line for road widening	181-245, 251, 259-335, 334A-340A, 346-352, 349-357, 356-368, 371A-457, 386-446, 448-536, 459A-649, 546-560, 590-620, 636, 644-650, 653-663, 660A, 664-668, 669-673, 670-684, 679-681, 688-698, 693-699, 707-711 and 717-725 Mt Albert Road, 685 Sandringham Road Extension, 1-1A May Road, 8-12 Mount Roskill Road, 1001, 1288C Dominion Road, 30 Erson Avenue, 18-18A Jasper Avenue, 1 and 2 Scout Avenue, 944 Mount Eden Road, 282 St. Andrews Road, 111 Pah Road and 704-717 Manukau Road
1644	Building line for road widening	250-252, 256 Mt Albert Road and 692 Sandringham Road, Sandringham
1645	Council car park	360-366 Mt Albert Road, Mt Roskill
1646	Building line for road widening	955-981 Mt Eden Road, Three Kings
1647	Building line for road widening	682-710, 726-740 Great South Road, east side, Penrose
1648	Building line for road widening	1 Robert Street, Ellerslie
1649	Building line for corner cut off	41 Robert Street, Ellerslie
1650	Council car park	179- 181 Ladies Mile
1651	Council car park	132 Main Highway and 6 Arthur St Ellerslie
1652	Building line for corner cut off	141 Ladies Mile Ellerslie
1653	Building line for road widening	193-205 Main Highway south side and 2 Cawley Street, Ellerslie
1654	Building line for corner cut off	24 Wilkinson Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1655	Building line for road widening	341-357, 387-393, 406-424, 421-439, 456-470, 459 and 535 Ellerslie Panmure Highway, 1-1A Ferndale Road, 1 Barrack Road and 1 Harding Avenue
1656	Building line for road widening	7-27, 16-34 Lagoon Drive and 7-17 Queens Road, Panmure
1657	Building line for road widening	39-87, 80, 114-170, 153-155, 214-258, 261-279, 289-301, 570, 576-590, 660-684 and 645 Mt Wellington Highway, 56 Panorama Road, 459 Ellerslie-Panmure Highway, 2 Hamlin Road, 3 and 7 Triangle Road and 2A Ryburn Road, Mt Wellington
1658	Council car park	11-13 Lagoon Drive, Panmure
1660	Council car park	28-30 Pilkington Road, Panmure
1661	Council car park	32-34 Lagoon Drive, Panmure
1662	Council car park	7 Kings Road, Panmure
1663	Council car park	7-13 Pilkington Road, Panmure
1664	Building line for road widening	136-140, 144-148, 150-154, 158-160 Queens Road north side, Panmure
1665	Proposed service lane	144-160 Queens Road, Panmure
1666	Council car park	580 Richardson Road, Hillsborough
1667	Building line for corner cut off	143 and 145 Trafalgar Street, Onehunga
1668	Building line for road widening	722, 726-792 Manukau Road, Onehunga
1669	Building line for road widening	1-11 and 6-10 Campbell Road, Onehunga
1670	Council car park	760-770 Manukau Road
1671	Building line for road widening	1-5 Campbell Road and 802,810 Manakau Road, Onehunga
1672	Building line for road widening	118-126 Symonds Street, 725 Mount Albert Road and 17 Erson Avenue, Onehunga
1673	Building line for road widening	802-810, 822 Manukau Road south of Mt Smart Road intersection, Onehunga
1674	Building line for corner cut off	415 Onehunga Mall, Onehunga
1675	Building line for road widening	581-655, 862-880, 894 Great South Road, Penrose
1676	Building line for road widening	Off Mt Wellington Highway on south side, Mt Wellington

1712	Council car park	1 Victoria Street (cnr Park Avenue), Otahuhu

1550 Car Park - Custom Street West

Designation Number	1550
Requiring Authority	Auckland Transport
Location	73-83 Customs Street West, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 308, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Car park.

Conditions

1. Development of the site shall comply with the underlying development controls including the special height control plane for the site.
2. All activities, works and buildings not fully described in the Notice of Requirement shall be the subject of either:
 - a. A new notice of requirement, which shall be publicly notified pursuant section 168 of the Resource Management Act 1991; or
 - b. A notice to alter the designation pursuant to section 181 of the Act, which notice shall be publicly notified unless the alteration is minor and the affected persons agree in accordance with the provisions of section 181(3) of the Act.

1551 Car Park - Beresford Square

Designation Number	1551
Requiring Authority	Auckland Transport
Location	22-28 Beresford Square, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 309, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Car park.

Conditions

1. The upper height limit of the designation is RL 65.065.
2. Development of the site shall comply:
 - a. With the underlying development controls including the special height controls for the site; and
 - b. All activities, works and buildings not fully described in the Notice of Requirement shall be the subject of either:
 - i. A new notice of requirement, which shall be publicly notified pursuant section 168 of the Resource Management Act 1991; or
 - ii. A notice to alter the designation pursuant to section 181 of the Act, which notice shall be publicly notified unless the alteration is minor and the affected persons agree in accordance with the provisions of section 181(3) of the Act.

1554 Car Park - High Street

Designation Number	1554
Requiring Authority	Auckland Transport
Location	52-66 High Street, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 312, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Car park.

Conditions

1. Development of the site shall comply with the underlying development controls for the site;
2. All activities, works and buildings not fully described in the Notice of Requirement shall be the subject of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

either:

- a. A new notice of requirement, which shall be publicly notified pursuant section 168 of the Resource Management Act 1991; or
- b. A notice to alter the designation pursuant to section 181 of the Act, which notice shall be publicly notified unless the alteration is minor and the affected persons agree in accordance with the provisions of section 181(3) of the Act.

1555 Car park - Queen Street

Designation Number	1555
Requiring Authority	Auckland Transport
Location	299 Queen Street, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 313, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Car park, Civic Centre, Mayoral Drive and Greys Avenue: This designation provides for the operation, maintenance and development of the Civic Centre Carpark and ancillary activities. The principal activities of the Civic Centre Carpark comprise the provision of car parking for uses in and around the Civic Centre including the Civic Administration Building, West Bledisloe Building, Aotea Centre, Auckland Town Hall, Civic Theatre and Sky City Metro complex. The greater part of the roof of the designated car park facility supports Aotea Square and extends, in part, under the Aotea Centre and the Sky City Metro complex.

"Operation" involves the use of the largely underground structure for car parking and for ancillary facilities such as access to and from legal roads, vents and plant. For the avoidance of any doubt, the ticket office in the car park is an ancillary facility.

"Maintenance" involves replacement, repair, upgrading of the existing structure and the ancillary facilities within the designation boundary as required from time to time for the safe and efficient operation of the Civic Centre Carpark.

"Development" relates to provision of additional structures or facilities (within the designation boundary) for additional car parking.

Conditions

1. The provisions of the Unitary Plan (with respect to the protection of heritage buildings) shall be adhered to (and any necessary resource consents obtained) where any works affecting the Auckland Town Hall, or within its Site Surrounds occurs.

2. The provisions of the Unitary Plan (with respect to the Concept Plan for Aotea Square) shall be adhered to (and any necessary resource consents obtained) where any works affecting the Public Open Space zone occurs.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. The provisions of the Unitary Plan (with respect to the Arts, Civic and Entertainment Precinct) shall be adhered to (and any necessary resource consents obtained) where any works affecting the Precinct occurs.

4. All activities, works and buildings not fully described and in the Notice of Requirement shall be the subject of either:

a. A new notice of requirement, which shall be publicly notified, pursuant Section 168 of the Resource Management Act 1991; or

b. A notice to alter the designation, pursuant to Section 181 of the Act, which notice shall be publicly notified unless the alteration is minor and the affected persons agree in accordance with the provisions of Section 181(3) of the Act.

1556 Britomart Station

Designation Number	1556
Requiring Authority	Auckland Transport
Location	12 Queen Street to Britomart Place, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 314, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Transport Centre, Britomart Place and Queen Street: This designation provides for the operation and maintenance of a transport centre and the provision for a rapid rail system. The centre comprises an underground rail station, attendant facilities and public access to the station through the main portal of the former Chief Post Office and at other access points. Above ground features of the centre include the glazed annex to the Chief Post office building, a series of skylights, ventilation stacks and other servicing plant and equipment.

R1557 Car Park - Fanshawe Street

Designation Number	R1557
Requiring Authority	Auckland Transport
Location	72 Fanshaw Street, Manukau Central
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- b. Communications, water supply and energy supply infrastructure;
- c. Stormwater drainage and other surface water management infrastructure;
- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any

The Proposed Auckland Unitary Plan (notified 30 September 2013)

work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

1558 Road Widening - The Strand

Designation Number	1558
Requiring Authority	Auckland Transport
Location	The Strand, Parnell
Rollover Designation	Yes
Legacy Reference	Designation 319, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Building line for road widening purposes.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 12 (twelve) years after the date on which it is included in the Unitary Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

R1559 Car Park - Graham Street

Designation Number	R1559
Requiring Authority	Auckland Transport
Location	23 Graham Street, Auckland Central
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1568 Park & Ride - Onehunga Train Station

Designation Number	R1568
Requiring Authority	Auckland Transport
Location	109-111 Onehunga Mall, Onehunga
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including (1.) ongoing maintenance, repairs and like for like replacement works to the existing parking facility and (2.) minor operational improvements to the same.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements involving the installation of new 'parking infrastructure' including but not limited to the following:
 - a. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - b. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - c. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:
 - a. Weekdays: 7.00am - 7.00pm;
 - b. Saturdays: 8.00am - 4.00pm; and
 - c. Sundays & Public Holidays: No work.

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration	Long term duration
		Leq (dBA)	Leq (dBA)
Weekdays	7.00am - 7.00pm	80	70
Saturdays	8.00am - 4.00pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Vibrations

3. The vibrations from all construction activities must comply with the peak particle velocity limits in table 1 of German Standard DIN 4150–3:1999 Structural Vibration—Effects of Vibration on Structures.

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Regional Council Technical Publication 90.

Excess Soil or Waste Material

5. Where excess soil or waste material is to be removed from the site during or following works, it shall be deposited at an approved disposal site. Written evidence confirming this action, in the form of a receipt, producer statement or similar shall be retained and provided to Auckland Council upon request.

Tree Protection Measures

6. All trees shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

7. A complaints management system shall be developed and implemented for any works project on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Noise or Vibration

8. If any complaints are received regarding noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

9. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

10. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

11. Subject to condition 12, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- b. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

12. Condition 11 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

13. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

14. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

15. That at all times reasonable physical access be maintained to other properties.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior
------------	--

Purpose

Road.

Conditions

1. If any archaeological site is exposed during site works then the following procedures shall apply:
 - a. Immediately when it becomes apparent that an archaeological site has been exposed, all site works shall cease, except that works may continue to prevent the escape of any contaminants that would result in any further pollution of the environment;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts are untouched; and
 - c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation and the Manager Planning of the Auckland Council that an archaeological site has been exposed, so that appropriate action can be taken. This is to ensure that such persons are given reasonable time as determined by the Council to record the archaeological features, including a photographic record, before work recommences on the site.
2. The period within which this designation shall lapse if not given effect to in accordance with section 184 of the Resource Management Act 1991 shall be 5 years from the date on which it is confirmed.

Rollover Designation	Yes
Legacy Reference	Designation D07-30, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Passenger transport route.

Conditions

General

1. Except as modified by the conditions below, the works shall be undertaken in general accordance with all of the following:

- a. The information provided by the Requiring Authority at the 10-17 September 2001 hearing;
- b. The Notice of Requirement dated 31 July 2000, as modified by the decisions of the Hearings Panel;
- c. The accompanying drawings ACAD:4662A8A-SHT1-4, ACAD:4662A9A-SHT1-4 and D:4662A9B-SHT5; and
- d. The Proposed Designation of land for Dominion Road Enhanced Passenger Transport System: Assessment of Effects on the Environment (17 July 2000) prepared by Woodward-Clyde, Traffic Design Group, and Sinclair Knight Merz.

2. Any land taken or held for works by the Requiring Authority shall be maintained to a standard in keeping with the neighbourhood until physical works commence, to the satisfaction of the council.

3. That part of the proposed designation which includes the property located at 638 Dominion Road (known as "the Hollywood Dairy") is to be removed.

4. That part of the designation affecting the property located at 1047 Dominion Road is to be reduced to 0.55m.

4A. In respect of the property located at 244, 246, 248, 248a, 250 and 256 Dominion Road and 126 Valley Road.

4B. The part of the designation affecting the property located at 375 and 377 Dominion Road is to be removed as shown on the plan entitled ACAD:4662A8A and dated 5 July 2000.

4C. The part of the designation affecting the property located at 169 Dominion Road will be given effect to through the construction of a cantilevered structure as illustrated in the plan entitled D07-30 Condition 4C Dominion Road Footpath.

5. The delineation of any area of land affected by the designation which is to be acquired on individual properties shall be accurately marked out or pegged by the Requiring Authority upon request by the owner of any property so affected.

Construction

6. Prior to the commencement of any physical works on any part of the land included within the designation (and as part of an Outline Plan of Works as required by Section 176A of the RMA), the Requiring Authority shall submit a Construction Management Plan to the council for its approval. This Construction Management Plan shall include specific details relating to the demolition, construction, and management of all works associated with the project. The Construction Management Plan shall be implemented and maintained throughout the entire demolition and construction periods. This Plan shall include:

- a. Details relating to the demolition, construction, and management of all works;
- b. Contact details of management personnel responsible for the project;
- c. Provision for a 24 hour community "hotline";
- d. Measures for the protection of street trees as well as any trees covered by the tree protection rules of the Unitary Plan which may be affected by the works, and particular regard is to be paid to the protection if practicable of the Pohutukawa tree located at 1093 Dominion Road. The designation of extra land, as well as protected works, to preserve the Cedar trees at 488 Dominion Road should be reconsidered;
- e. Measures for the protection of, and continuing access to, all utility services infrastructure within or abutting the designated area;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- f. Provisions for the maintenance of all construction and reconstruction sites in a safe and tidy condition and for the safeguarding of surrounding areas;
- g. Provisions for public safety including safe pedestrian access past the construction and re-construction sites;
- h. The management of construction and other traffic (including parking and traffic safety measures and the matters required by condition 20 of these conditions);
- i. Measures to be implemented for the protection of adjacent buildings during the construction period;
- j. Measures for sedimentation and dust control;
- k. Details of the hours of operation and for the provision of advice to surrounding property owners, and the owners and operators of utility services infrastructure which may be affected by the works, of the commencement/duration of works and any blasting activities;
- l. The provision of safe and efficient emergency vehicle access to all properties adjoining the route during the construction period; and
- m. Measures to bring the content of the agreed Construction Management Plan to the attention of any contractors undertaking works on the route pursuant to the designation.

7. Pedestrian access and thoroughfare shall be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable.

8. During construction, the New Zealand Standard NZS 6803:1999 Acoustics – Construction Noise shall be complied with at all times.

9. During construction, any vibration generated beyond the existing road reserve shall comply with BS 7385: Part 2 – 1993 *Evaluation and Measurement of Vibration in Buildings* at all times.

Landscape and Visual Effects

10. Urban design guidelines and a detailed landscape plan for the length of the route of the designations shall be prepared by a qualified landscape architect in consultation with the council, and shall be submitted with the outline plan. The urban design guidelines and landscape plan shall include:

- a. The integration of Dominion Road and the land required (by this designation) for the enhanced passenger transport facilities so that the existing streetscape character is softened and an integrated and cohesive appearance is achieved along the full length of the route. Particular attention shall be paid to existing and likely future development adjacent to the off road deviations at the Valley Road and Balmoral Road centres;
- b. The mitigation of any adverse effects on properties fronting the route. including details of planting to be established on Ballantyne Square and the open space areas at the intersection of Balmoral and Dominion Roads, and Mount Albert and Dominion Roads, as required by condition 13 of these conditions;
- c. Provision for the staging of landscaping in conjunction with the staging of construction works; and
- d. Details of the plant sizes required at the time of planting and of intended species as well as proposed hard landscaping measures (such as paving, street furniture, lighting, signage).

11. The approved landscaping measures shall be implemented in accordance with the agreed urban design guidelines and landscaping plan/s (soft and hard) within the first planting season following the completion of each stage of the construction works.

12. Compensatory planting is to be provided in Ballantyne Square (located on the corner of Ewington Avenue and Dominion Road) in a manner that is consistent with the management plan for the reserve in order to mitigate the effect of the works proposed for the corner of the reserve. The areas of open space on the south eastern corners of both Balmoral/Dominion Roads and Mt Albert/Dominion Roads shall be reinstated and replanted when the works affecting each of those open space areas are completed. Additional compensatory hard and soft landscaping of at least 18m² is to be provided on the northern corner of Dominion Road and Prospect Terrace upon completion of the works and following acquisition and demolition of the buildings at 346 Dominion Road.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13. The decorative stone wall on the frontage of the Methodist Church at 426 Dominion Road (being legally described as Lot 1 DP 1699, Lot 9 & Pt Lot 10 DP 4293, CT 230/234) shall be reinstated by the Requiring Authority on completion of the works in the vicinity of that property, such reinstatement to occur in consultation with the Church and New Zealand Historic Places Trust. These works shall be carried out in accordance with Plan DOM 426100 offered by the Requiring Authority at the hearing.

Post Construction Noise and Vibration

14. The construction of the works shall be designed to achieve the following noise standards at the Greenstones Pictures Building (located at 330 Dominion Road, being legally described as Lot 1 DP46486, CT 1615/72); the Capitol Theatre (being legally described as Lot 1 DP 4365, CT 44C/591); and the Auckland Philharmonic Orchestra Building (being legally described as Lot 4 DP 6736, CT 181/254) for the duration of the current use (as at 12 September 2001) of these buildings:

- a. an internal noise objective of 33dBA from airborne noise and 33dBA from regenerated noise; and
- b. a vibration limit of 98 dB re 1m mm/s.

15. Vibration relating to the potential for structural damage shall be assessed in accordance with British Standard BS 7385: Part 2 – 1993 *Evaluation and Measurement of Vibration in Buildings*.

16. Dominion Road shall be re-surfaced with dense graded asphalt (or a similar surface with no lesser noise absorption characteristics) for noise purposes following the completion of the physical works included in stage PT2 of the designation.

Parking and Traffic

17. Prior to commencement of the physical works required by the designation, a traffic management plan shall be prepared for each phase of the work by a qualified traffic engineer and approved by the council.

18. In particular, prior to the commencement of any physical works on or for the Valley Road or Balmoral Road off-road deviations, Local Area Traffic Management Plans for each centre are to be prepared in consultation with the owners and occupiers of all properties abutting those deviations as part of the outline plan required by condition 6. Each Local Area Traffic Management Plan is to demonstrate how the works will be effectively and safely integrated with general traffic, parking, access, and is to include the form and location of any proposed passenger stations, and to provide for loading and pedestrian arrangements in each of the Valley Road and Balmoral Road centres. The Local Area Traffic Management Plans are to be independently assessed by a qualified traffic engineer prior to approval by the council.

19. Existing accesses, on-site parking and manoeuvring areas along the corridor which are directly affected by the works shall, as far as practicable, and in consultation with affected landowners, be reinstated or relocated by the Requiring Authority in accordance with Unitary Plan standards.

20. Access to properties on the western side of Dominion Road between Denbigh Avenue and the SH 20 motorway designation shall have legal access reinstated by the Requiring Authority by means of a suitably dimensioned and formed access way from Denbigh Avenue.

Structural Integrity

21. The structural integrity of buildings adjoining the PT 4 stage of the designation at 616 Dominion Road (being legally described as Lot 1 DP 59284, CT 14D/1376) shall not be compromised by the work in either of the construction or operational phases.

22. The structural integrity of buildings adjoining the PT 3 stage of the designation in the Eden Quarter at 296C Dominion Road (being legally described as Unit B7, UP 203741, CT 132B/399) shall not be compromised by the works in either of the construction or operational phases. This condition shall also apply to the building located at 256 Dominion Road. It shall further apply to the property known as the "Printers Building", located at 288 Dominion Road, in the event that the Requiring Authority determines that the "Printers Building" does not

The Proposed Auckland Unitary Plan (notified 30 September 2013)

require total demolition.

Railway Linkage

23. The Requiring Authority will co-operate with the landowner and infrastructure owner of the rail corridors to ensure the integration of passenger transport route causes minimal interruption to the efficient planning and operation of those corridors.

Other

24. The period within which the designation shall lapse if not given effect to shall be 12 years from the date on which it is confirmed in accordance with s. 184(1)(c) of the Resource Management Act (1991).

26. Prior to the commencement of any physical works, the Requiring Authority shall obtain all relevant consents.

Advice Notes

1. The Requiring Authority shall obtain all other necessary consents and permits, and shall comply with all relevant council bylaws.

2. The Requiring Authority shall implement suitable arrangements for sediment control and stormwater treatment and detention as necessary in accordance with relevant council guidelines.

3. Under the Historic Places Act (1993) an authority to damage, modify, or destroy an archaeological site may be required from the NZ Historic Places Trust before any work takes place that would affect an archaeological site.

4. The Requiring Authority shall use its best endeavours to persuade utility service providers to underground their utility services along the length of the designated route. The Landscape Plan required by condition 10 should be used wherever possible as a means of implementing any plans to underground equipment and overhead lines. The Requiring Authority shall undertake cost sharing with the appropriate network utility operator in accordance with any agreement previously reached.

5. The Requiring Authority is to undertake investigations at the earliest opportunity into the implementation of 'Park and Ride' facilities in the vicinity of Dominion Road and to attend to the lodgement of a Notice of Requirement for the establishment of these facilities.

6. The Requiring Authority should ensure that no network utility operator's overhead lines or cables are installed on any catenary system which may be provided within the passenger transport route.

7. It is the Panel's opinion that when fully redeveloped for an enhanced passenger transport system, Dominion Road may not be a suitable through route for cyclists. In conjunction with the council the Requiring Authority should continue to examine the feasibility of providing improved routes for cyclists on local roads parallel to Dominion Road.

8. The Panel has the opinion that no passenger transport stations are to be located so as to prevent traffic turning movements at any road intersections along Dominion Road.

1615 Road Widening - Sandringham Road

Designation Number	1615
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Auckland Transport
Location	60 and 64 Sandringham Road and 57-59 Walters Road, Sandringham
Rollover Designation	Yes
Legacy Reference	Designation D07-34, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Building line for road widening.

Conditions

1. General

1.1 Except as modified by the conditions below, the works shall be undertaken in general accordance within the Notice of Requirement and its supporting documents, as follows:

- a. 'Sandringham Road Transport Corridor Upgrade - Notice of Requirement by the Auckland City Council Pursuant to Section 168A of the Resource Management Act 1991 and Assessment of Environmental Effects'; prepared for the Auckland City Council by Boffa Miskell Ltd and dated February 2009;
- b. The 'Sandringham Road Transport Corridor Upgrade Designation Drawings', prepared for the Auckland City Council by Opus Consultants Limited, being:
 - i. Sandringham Road Transport Corridor Upgrade Designation Plan, Reference 1/1071/313, Sheet 8, Revision RO, Plot Date 17/02/09;
 - ii. Land Required for Road Widening Purposes 60 & 64 Sandringham Road, Reference 1/1071/313, Sheet 9, Revision RO, Plot Date 13/02/09; and
 - iii. Land Required for Road Widening Purposes 57 & 59 Walters Road, Reference 1/1071/313, Sheet 10, Revision RO, Plot Date 17/02/09.

1.2 Where requested by affected property owners, the Requiring Authority shall physically peg out the extent of the alignment on individually affected properties.

1.3 The lapse period of this designation is 12 years from the inclusion of the designation in the Unitary Plan, in accordance with Section 184(1) of the Resource Management Act 1991.

2. Construction

2.1 Prior to commencement of works, the Requiring Authority is to prepare a Construction Management Plan ("CMP") to the satisfaction of the Auckland Council.

2.2 The CMP shall include specific details relating to the demolition, construction and management of all works, including:

- a. Details of the project manager, including their contact details (phone, mobile, postal address, email address);
- b. A construction programme of the works indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- c. Measures agreed by the Requiring Authority with the Eden Park Trust Board and/or its head contractor to avoid conflicts and constraints with the construction activity being undertaken at the Eden Park site. In the event of any disagreement over any such measures, those advanced by each party are to be submitted to the Auckland Council along with the draft CMP and the decision of the Auckland Council on any such measure shall be final;
- d. Any means of protection of services such as pipes and water mains within the road reserve;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- e. Measures to be adopted to maintain all the land subject to the works in a tidy condition including disposal/storage of rubbish and storage and unloading of building materials;
- f. Procedures for controlling sediment run-off, in accordance with Auckland Council Technical Publication No 90, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days to ensure that there is no dust nuisance on any of the adjacent residential properties;
- g. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;
- h. Means for ensuring the safety of the general public;
- i. Construction noise management measures to be employed to ensure compliance with NZS6802:1999, specifically addressing the following:
 - i. The construction sequence;
 - ii. Machinery and equipment to be used, including the use of non percussive machinery where practicable,
 - iii. Hours of operation, including times and days when noisy construction work would occur.
- j) Methods of managing the local and network wide effects of the construction on traffic, and including details of:
 - i. Traffic management measures to address and to maintain traffic flows on Sandringham Road and Walters Road;
 - ii. Methods to manage the effects of the delivery of construction material, plant and machinery;
 - iii. The numbers, frequencies and timing of construction traffic movements;
 - iv. Means by which access to private properties will be maintained during construction, or where necessary, means by which occupiers of affected properties will be notified of times and durations of temporary removal of access as a result of the works.
- k. As far as practicable, the CMP is to ensure that the vibration standards of the German Standard DIN 4150 will be met.
- l. The CMP shall detail communication protocols between the lead contractors for each of the Eden Park redevelopment and the Kingsland Railway Station upgrade to ensure that construction projects in the immediate area are managed so as to minimise disruption to those developments, the local community and transportation network.

2.3 A suitably experienced, Council approved arborist ("nominated arborist") shall be employed by the Requiring Authority to monitor, supervise and direct all works within the drip line or in the vicinity of those protected trees to be retained, for the duration of the works.

3. Property Amenity

3.1 The Requiring Authority shall prepare a Property Reinstatement Plan ("PRP") to the satisfaction of the Auckland Council showing detail of the replacement or reinstatement of the existing property features (including planting, walls, fences and driveways) on the affected properties (as described individually below). The PRP must be prepared in consultation with the affected property owners. The PRP must be implemented within 3 months of the widening works being completed on the affected properties.

3.2 The PRP must include the following:

- a. 57 Walters Road: reinstate driveway and vehicle access to Sandringham Road. Install new concrete block retaining wall with small basalt rock fascia (or similar) to tie to existing ground levels; install picket fence (1.2 m) on road frontage to tie with existing gate (relocated) and adjacent properties.
- b. 59 Walters Road: replace boundary fence with 1.8m close boarded fence and replant on site. Fence to be installed on top of concrete block retaining wall (with small basalt rock fascia). Planting to be comprised of an evergreen hedge of native (pb 3 grade), non-deciduous species, with specimen trees (approximately 5 trees at 45 litre pb size).
- c. 60 Sandringham Road: replace boundary wall and fence and provide screening planting. New concrete block retaining wall with small basalt rock fascia (or similar) as required; install picket fence (1.2 m) on top of wall on Sandringham road frontage and extend along Walters Road boundary; plant new hedge along Sandringham road frontage. Planting to be comprised of an evergreen hedge of native (pb 3 grade), non-deciduous species, with

The Proposed Auckland Unitary Plan (notified 30 September 2013)

specimen trees (approximately 5 trees at 45 litre pb size).

d. 64 Sandringham Road: reinstate driveways, boundary fence and vehicle access to Sandringham Road and replant on site. New concrete block retaining wall with small basalt rock fascia (or similar) as required; install picket fence (1.2 m) on top of wall. Relocate existing vegetation onsite where appropriate. Planting behind new picket fence to be comprised of an evergreen hedge of native, non-deciduous species (pb 3 grade), with specimen trees (approximately 5 trees at 45 litre pb size).

e. The replacement of any plants or trees removed from the properties fronting Sandringham Road taking into account the following:

- i. Planting shall be predominantly indigenous species; and
- ii. Planting shall be designed and laid out, having regard to pedestrian safety, particularly in terms of visibility (particularly at night).

3.3 Notwithstanding condition 3.1, access to these properties (including vehicle access) shall be maintained at all times during the works.

3.4 Should the Requiring Authority in its discretion decide to relocate the villa at 60 Sandringham Road further back on its site, the extent of that relocation shall be limited to maintaining the same front yard area (the distance between the villa and the boundary of the site on Sandringham Road) that currently exists. The purpose of this is to maintain the heritage value of the relationship of the villa to the streetscape.

NB - For the purpose of clarity, condition 3.4 applies only if the Requiring Authority chooses to relocate the villa.

4. Consultation

4.1 The Requiring Authority shall invite the Eden Park Trust Board to discuss the timing of the designation works around major events held at Eden Park and to endeavour to undertake works adjacent to Eden Park in coordination with works occurring at Eden Park.

Advice Note

1. Traffic calming measures along Walters Road should be designed and located to ensure they do not create a trip hazard for people accessing and leaving Eden Park at the times of major events at the Park site.

1620 Eastern Transport Corridor

Designation Number	1620
Requiring Authority	Auckland Transport
Location	Orakei Point to Meadowbank, Glen Innes and Panmure
Rollover Designation	Yes
Legacy Reference	Designation D14-05, Auckland Council District Plan (Isthmus Section) 1999

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	15 years from being operative in the Unitary Plan unless given effect to prior
------------	--

Purpose

Eastern Transport Corridor.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 15 (fifteen) years after the date on which it is included in the Unitary Plan unless:
 - a. It is given effect to before the end of that period; or
 - b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
 - c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.
2. Prior to Auckland Transport undertaking any development on the Eastern Transport Corridor, Auckland Transport shall withdraw this designation and replace it with a new Notice of Requirement, which will provide full details of any proposal in accordance with section 168 of the Act. The Notice of Requirement will be publicly notified in accordance with the provisions of Part VIII of the Act.

1633 New Road - Tainui Road

Designation Number	1633
Requiring Authority	Auckland Transport
Location	1, 3, 32-66 and 59-59A Mountain Road, 474, 480-482, 486-492 and 510 Ellerslie-Panmure Highway, 5 and 7 Fraser Road, 1-21A, 2 and 21B Morrin Road, 39A-39B Tainui Road and 71, 130 and 140 Jellicoe Road, Point England
Rollover Designation	Yes
Legacy Reference	Designation E15-01, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Land required for regional road.

Conditions

1. That at the time of detailed design an assessment of environmental effects be undertaken to determine effects the work will have on the environment and the most appropriate means of mitigating these effects. (This assessment to include the protection of the geological and archaeological precinct surrounding Mt Wellington).
2. That as part of the future analysis of the eastern corridor the Council review this regional road designation with a view to avoiding or mitigating the potential effects on the Mt Wellington Domain and in recognition of concerns expressed by iwi.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. That consultation with iwi be undertaken as part of the review process at the time of detailed design.
4. That a landscape plan be submitted to the Council at the time of detailed design including fencing and planting which will be implemented at the boundary of the road effects and provide screening.
5. That vehicle access along Panmure Road, Mountain Road, Morrin Road, Tamaki Station Road and Tainui Road be maintained when construction is completed.
6. The short term construction effects including noise, visual effects and dust be reduced through appropriate construction methods.
7. The term for implementation of this designation shall be 12 years from the inclusion of the designation in the Unitary Plan.

1685 Road Widening - Neilson Street

Designation Number	1685
Requiring Authority	Auckland Transport
Location	31-33, 35, 3, 39, 41, 45, 167-171, 270-274, 327, 333 and 343 Neilson Street, 8 and 10 Gloucester Park Road, 10 O'Rorke Street, 6-10 Selwyn Street and 9 Alfred Street, Onehunga
Rollover Designation	Yes
Legacy Reference	Designation H09-29, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Road widening.

Conditions

1. The building lines shall be in accordance with the modified plans identified as H09-29.
2. That the scheduled Italian cypress (668) located at 270 Neilson Street is to be replaced by a mature specimen tree of at least 4m in height at the time of planting. Before commencement of construction of the road widening, a landscaping plan giving details of the tree (showing the species, its location, size at time of planting, soil or growing medium depth and drainage) and also outlining a maintenance programme for the tree shall be submitted to the satisfaction of council. Planting of this tree shall be undertaken in accordance with the approved landscape plan during the first planting season after construction of the road widening commences.
3. Any existing parking, manoeuvring and planting areas which are affected by the proposed land take shall be relocated or reinstated in so far as is practicable and to the satisfaction of council.
4. That detailed plans of the proposed works are to be provided to the satisfaction of council at least two months prior to the commencement of construction. These plans shall clearly indicate where existing parking, manoeuvring and planting will be affected by the land take. The plans will also give details of any proposed relocation or reinstatement of parking, manoeuvring and planting areas. Within ten days of receipt of the plans council may request any reasonable changes to achieve the purpose of the requirement and with regard to the agreed conditions.
5. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the stormwater system. The location and specification of the sediment control device(s) shall be in accordance with Annexure 14 of the Auckland Council District Plan (Isthmus Section) 1999.
6. The term for implementation of this designation shall be 12 years from the inclusion of the designation in the Unitary Plan.

Advice Note

1. The Tranz Rail freight terminal is subject to an existing designation, "Auckland Freight Centre, Neilson Street vicinity". As such the council designation is to be identified as the later designation in the Unitary Plan. The provisions of Section 177 of the Resource Management Act (1991) apply accordingly.

1695 Road Widening - Neilson Street

Designation Number	1695
Requiring Authority	Auckland Transport
Location	175-243 Neilson St (south side), Onehunga
Rollover Designation	Yes
Legacy Reference	Designation H10-50, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Building line for road widening.

Conditions

1. The building line shall be in accordance with the diagram.
2. Prior to construction of the road widening, a landscape plan shall be submitted for the written approval of the council. This will address in detail the mitigation required for the effects of the designation upon the pohutukawa tree on the north east corner of Waikaraka Park, the 21 trees on the playing fields and 10 smaller trees on the practice fields and the group of trees on the corner of the 249 Neilson Street property.
3. That detailed plans of the proposed demolition, reconstruction and supervision of the scheduled Neilson Street, Waikaraka Park historic wall, including the heritage impact upon the inner wall and the caretaker's house on the corner of Neilson Street and Captain Springs Road, are to be provided for the written approval of council prior to the commencement of works. Such plans and the construction methods shall ensure the general appearance and the scale of the historic walls are maintained.
4. That detailed plans of the proposed works are to be provided for the written approval of the council prior to the commencement of construction. These plans shall clearly indicate where existing parking, manoeuvring and planting will be affected by the land take. The plans will also give details of any proposed relocation or reinstatement of parking, manoeuvring and planting areas.
5. Any stormwater run-off arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the stormwater system. The location and specification of the sediment control device(s) shall be in accordance with the Unitary Plan.
6. The term for implementation of this designation shall be 12 years from the inclusion of the designation in the Unitary Plan.

Advice Note

1. The main trunk sewer runs adjacent and parallel to the area for road widening. Prior to undertaking works in the designated area, Watercare Services Limited shall be notified and the sewer protected from damage by the proposed works. This is required under s. 39 of the Auckland Metropolitan Drainage Act (1960).

1701 New Road - Manukau Esplanade

Designation Number	1701
Requiring Authority	Auckland Transport
Location	59 Miami Parade, Te Papapa
Rollover Designation	Yes
Legacy Reference	Designation H11-18, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Proposed Road.

Conditions

1. That construction of the road and the road as completed does not impact adversely on the Manukau Harbour or coastal environment.
2. That means of mitigating any adverse effects on the coastal environment be incorporated in to the final design of the road.
3. That a landscape plan incorporating planting to reduce visual effect of the road on the coastal environment be submitted to the council at the time of detailed design.
4. The term for implementation of the designation shall be 12 years from the inclusion of the designation in the Unitary Plan in accordance with section 184 of the Resource Management Act.
5. Prior to giving effect to the designation, a site investigation shall be undertaken to determine the extent, if any, of contaminated soils within the construction footprint of the road. Where this investigation identifies any contaminated soils, a contamination management plan shall be submitted to council for approval. The contamination management plan must contain details of the measures to be implemented during construction and operation of the road to avoid and mitigate adverse effects on the surrounding environment.

1702 Road Widening - Neilson Street and Angle Street

Designation Number	1702
Requiring Authority	Auckland Transport
Location	273, 287, 291-305 Neilson Street and 2 Angle Street, Te Papapa
Rollover Designation	Yes
Legacy Reference	Designation H11-19, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	12 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Building line for road widening and corner cut off - 2.45m from road boundary and 5m by 5m corner cut off on both corners of Angle Street.

Conditions

1. That Auckland Transport in designing the works will have regard to the implications in any scheduled or protected item under the Unitary Plan directly affected by this work.
2. That the term for implementation of this designation be 12 years from the inclusion of the designation in the Unitary Plan in accordance with section 184 of the Resource Management Act 1991.

R1832	Public off-street parking ...	Constable Road (corner King Street), Waiuku
1833	Road widening	Flat Bush School Road and Murphys Road, Flat Bush

1800 Road Widening - Ormiston Road

Designation Number	1800
Requiring Authority	Auckland Transport
Location	542 and 568 Ormiston Road, Flat Bush
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 238, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	5 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 5 (five) years after the date on which it is included in the Unitary Plan unless:

- It is given effect to before the end of that period; or
- The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

R1803 Road - Mahia Road

Designation Number	R1803
Requiring Authority	Auckland Transport
Location	Mahia Road, Manurewa
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	20 years from inclusion in the operative Unitary Plan unless given effect to prior

Purpose

AUCKLAND TRANSPORT (an Auckland Council Controlled Organisation) as Requiring Authority under section 167 of the Resource Management Act 1991 gives notice of a requirement for a designation in the Auckland Council Unitary Plan for works being the Mahia Road widening to be shown as 'Road Purposes' along Mahia Road, Manurewa.

The widening of Mahia Road is necessary to future proof this corridor of the transport network for additional traffic, public transport, freight, and walking and cycling movements.

This Notice of Requirement (NoR) relates to Mahia Road, between Great South Road and the Weymouth Road Roundabout, and requires the acquisition of privately owned frontage for future road construction.

The nature of the works proposed in to this NoR include the construction, operation and maintenance of Mahia Road and intersecting roads, ancillary works including vegetation removal, stormwater treatment, relocation of services, earthworks, environmental restoration (e.g. planting) temporary construction and storage areas and other ancillary activities associated with the road widening works.

Conditions

1. Prior to the commencement of the physical works, Auckland Transport as Requiring Authority shall prepare

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and submit to Auckland Council as consent authority an Outline Plan of Works pursuant to section 176A of the Resource Management Act 1991.

2. The scope and extent of the works envisaged within the designations shall be in accordance with the Notice of Requirement and the plans submitted with the Notice of Requirement for Mahia Road and subject to any modification required to comply with the conditions set out below.

3. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works.

4. At all times, reasonable access shall be maintained from the roading network to all private properties during normal business hours whether a property is directly affected or not by the construction and operation works occurring. This shall be a requirement clause in all contracts awarded for the works.

5. All traffic control measures shall conform to the current version, at the time of construction, of the Transit New Zealand manual entitled "Code of Practice for Temporary Traffic Control". A Traffic Management Plan shall be prepared by the Contractor covering traffic control within the affected areas and the maintaining of access to properties during normal business hours.

6. All necessary and practicable steps are to be taken to avoid damage to other utility services, the roading network, or private property.

7. Road construction works are to be undertaken in a manner which ensures that the land on adjoining properties remain stable at all times.

8. Control measures shall be in place to ensure that any trucks do not deposit soil or other debris on public roads or on private land. Any such material deposited on any public road or private property shall be cleaned up immediately at the Requiring Authority's expense.

9. All earthworks on the designated land are to be undertaken in a manner so as to minimise 'dust' or 'soil erosion/siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

10. The Requiring Authority shall submit a Construction Noise and Vibration Management Plan (CNVMP) as part of the OPW.

a. The CNVP must address:

- i. Construction sequence;
- ii. Machinery and equipment to be used, including the use of non-percussive machinery where practicable;
- iii. Hours of operation, including times and days when noisy construction work will occur;
- iv. The design of noise mitigation measures such as temporary barriers or enclosures;
- v. Construction noise limits for specific areas;
- vi. Methods for monitoring and reporting on construction noise; and
- vii. Methods for receiving and responding to complaints about construction noise.

b. The CNVMP must refer to vibration management measures and must address the following aspects:

- i. Vibration monitoring measures;
- ii. Vibration criteria;
- iii. Possible mitigation measures;
- iv. Complaint response;
- v. Reporting procedures;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- vi. Vibration testing of equipment to confirm vibration predictions;
- vii. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- viii. Operational times; and
- viii. Preparation of building condition reports on critical buildings that maybe required prior to, during and after completion of works.

11. The Requiring Authority shall liaise with affected Utility Operators with respect to the relocation and upgrading of existing services within the area affected by the NoR.

12. All road stormwater drainage systems shall be designed in accordance with Auckland Councils Engineering Quality Standards.

13. Any required bus stops affected by the proposed work shall be provided in accordance with Auckland Council's Bus Stop, Bus Shelter Policy and Guidelines. Bus stops shall be constructed to comply with Auckland Council Engineering Quality Standards. Locations shall be shown on the OPW.

14. Street lighting shall be provided in compliance with the Auckland Council Public Lighting Design Standard.

15. The Requiring Authority shall submit a Landscape Mitigation Plan as part of the OPW. The Plan will provide for the identification of existing trees and vegetation affected by the proposed works which, where practicable, are to be retained. These trees will be protected during the construction programme.

- a. Where existing landscaping is impacted by the proposed road works a detailed landscaping plan will be prepared for each property along the route in consultation with each property owner. The Plan will have regard to the quality and quantity of any existing landscaping and will provide for:
- i. A schedule of species to be planted, including botanical name, average plant size at time of planting and average mature height;
 - ii. The timing of planting which could, in consultation with landowners, include opportunities for early planting;
 - iii. Replacement fencing, walling and boundary planting, which should be appropriately determined after discussion with individual landowners.

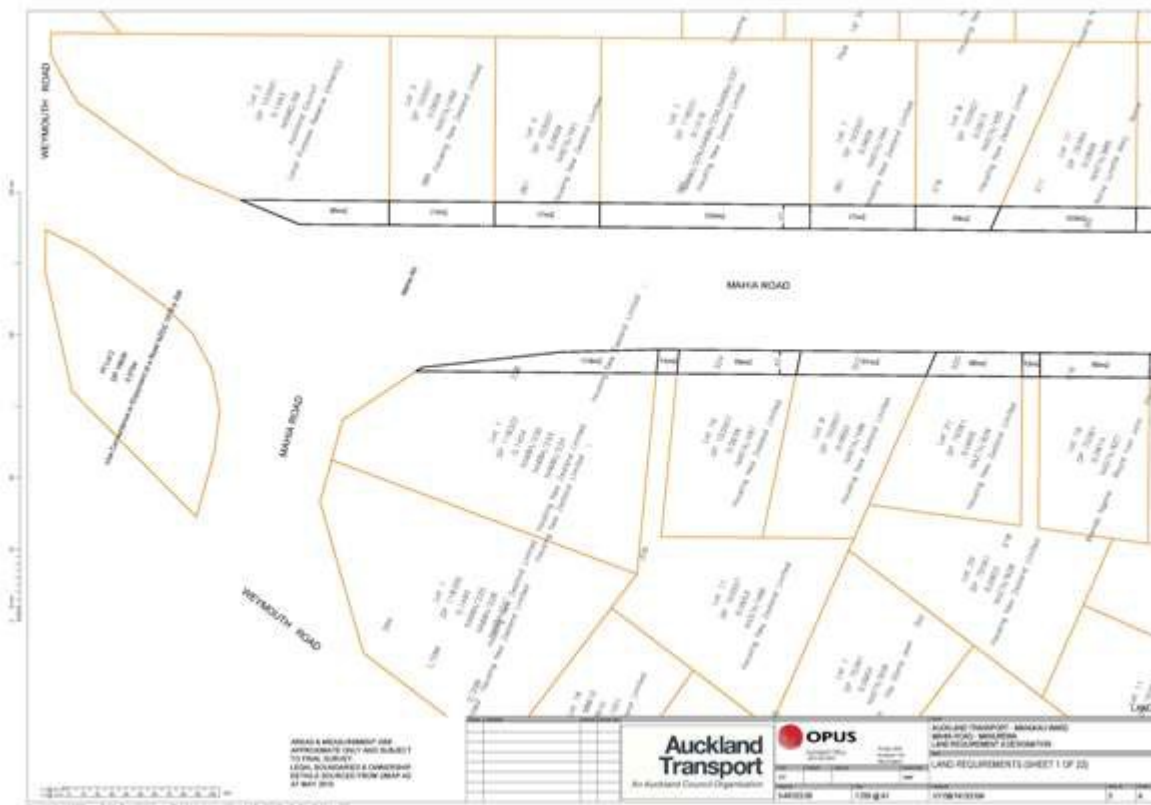

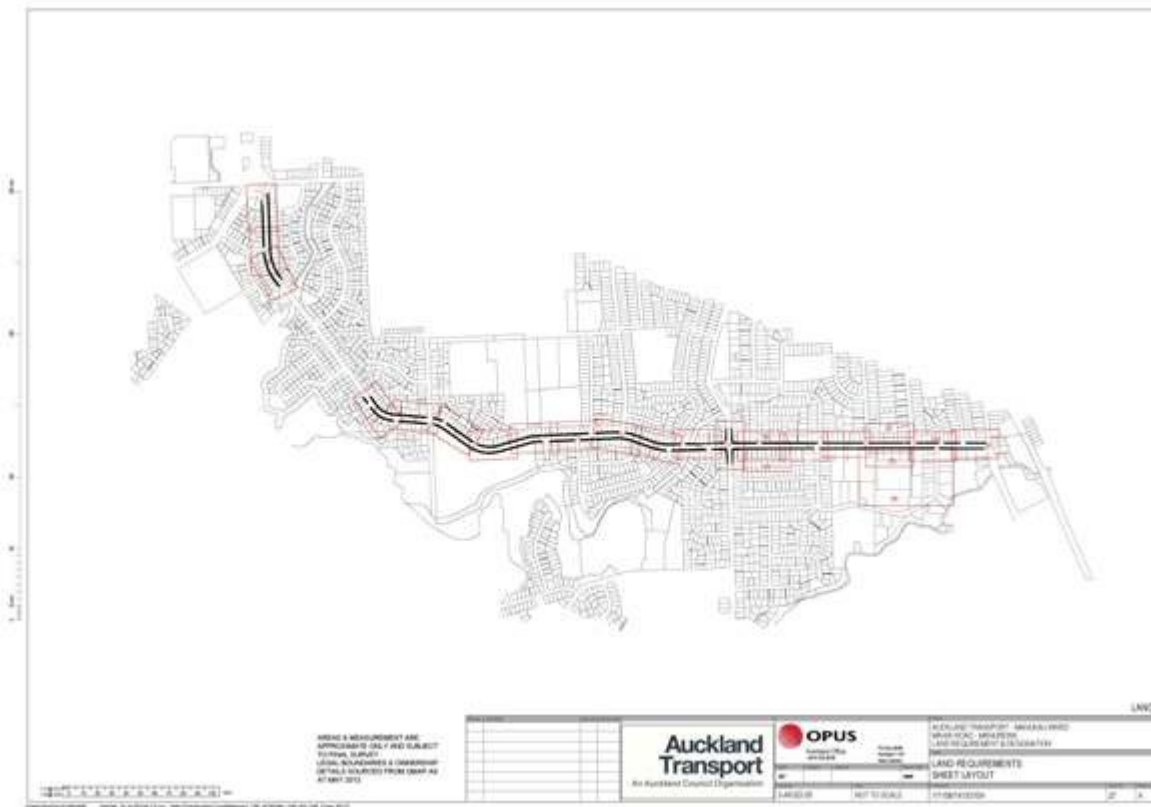

b. All landscape mitigation planting shall be implemented no later than in the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity.

16. Before any physical work is commenced the requiring authority and the contractor working in that area shall ensure that the owners of all affected properties are notified in writing advising them of the development in general, its expected duration, the times at which it will be undertaken, and the name of a responsible person with whom the owners or occupiers can liaise if the need arises.

R1804 Car Park - Brampton Court Car Park

Designation Number	R1804
Requiring Authority	Auckland Transport
Location	143 Pakuranga Road, Pakuranga
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

1806 Road Widening - Beachlands Road

Designation Number	1806
Requiring Authority	Auckland Transport
Location	109 and 129 Beachlands Road, 373, 460, 465, 469, 482, 492, 509, 529, 533, 600, 601-605, 639, 645-651, 650, 691, 702, 712, 722, 732, 746, 751, 758, 770, 781, 824, 830, 855, 865-867 and 897 Whitford-Maraetai Road and 49 and 110A Jack Lachlan Drive, Whitford (Stages 5, 6 and 7)
Rollover Designation	Yes
Legacy Reference	Designation 291, Auckland Council District Plan (Manukau Section) 2002

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	30 years from being operative in the Unitary Plan unless given effect to prior
------------	--

Purpose

Road widening.

Conditions

General

1. The scope and extent of the works envisaged within the designations shall be generally in accordance with the requirement and the plans submitted with the Notice of Requirements, and subject to any modification required to comply with the conditions set out below.
2. The provisions of the Notices of Requirement shall be inserted into the Auckland Unitary Plan to reflect the nature and extent of the requirements.
3. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works
4. At all times, reasonable access shall be maintained from the roading network to private properties not directly affected by the construction and operation works.
5. During and following the construction period, safety barriers and security fencing shall be provided to ensure neighbouring site safety and security fencing to a standard at least as currently provided on the property boundary.

Outline Plans

6. Council shall not waive its requirement for an Outline Plan.
7. Prior to the commencement of the physical works, Auckland Transport as requiring authority shall prepare and submit to council as consent authority an Outline Plan of Works pursuant to section 176A of the Resource Management Act 1991.
8. The Outline Plan(s) required by condition 7 shall include:
 - a. A record of consultation regarding the design of access to and egress from the directly affected property owners along the corridor within each Notice of Requirement;
 - b. The means by which stormwater shall be managed; and
 - c. The manner in which any landscape mitigation planting is located and implemented.

Archaeological and Heritage Mitigation Conditions

9. That in the event of koiwi (skeletal remains) or archaeological evidence being uncovered work shall immediately cease in the vicinity of the discovery and the New Zealand Historic Places Trust archaeologist shall be contacted so that the appropriate action can be taken before work may recommence there. The relevant iwi representatives will also be contacted.
10. Detailed protocols for the management of any archaeological and waahi tapu discoveries shall be specifically discussed with tangata whenua prior to construction and submitted to the Auckland Council for information.
11. The owners and occupiers of the properties affected by the designation and the relevant iwi representatives shall be notified of construction commencing and shall be kept informed of the project developments

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12. Any recorded archaeological site shall be screened by a fence at least 1.0 metre in height. The fencing shall be supervised by a suitably qualified archaeologist to determine the appropriate location for fencing. No construction material or equipment shall be stored within the fenced area.

Property Access Mitigation Conditions

13. Prior to the commencement of construction of the roading link and the widening of the existing roads, the Auckland Council is to be provided with plans showing details of how access is to be provided to properties directly affected by the road widening and construction of the link.

14. All traffic control measures shall conform to the current version, at the time of construction, of the New Zealand Transport Agency manual entitled "Code of Practice for Temporary Traffic Control".

15. All necessary and practicable steps are to be taken to avoid damage to other utility services, the roading network, or private property."

16. All reinstatement within the road reserve is to be carried out in accordance with Auckland Transport's Code of Practice.

17. The road construction works proposed are to be undertaken in a manner which ensures that the land on adjoining properties remain stable at all times. In this regard:

- a. The required retaining walls and/or any temporary stabilising works required shall be constructed in a timely manner under engineering design and supervision; and
- b. A geotechnical certification is to be submitted to the Auckland Council to confirm the suitability of the completed works.

18. Control measures shall be in place to ensure that any trucks do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.

19. All earthworks on the site are to be undertaken in a manner so as to minimise 'dust' or 'soil erosion/siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

20. Any surplus excavated soil is to be taken to an approved fill site and disposed of in accordance with the relevant Unitary Plan requirements.

21. Exposed cut and fill batters/slopes and other bare land resulting from the works shall be revegetated as soon as practicable and in a progressive manner as works are finished over various areas of the project.

22. During construction, New Zealand noise standard "NZS 6803:1999 Acoustics — Construction Noise" shall apply and that noise shall comply with the limits set down in Table 2 of NZS6803:1999 or where that is impractical alternative strategies shall be implemented to ensure that construction noise does not exceed agreed levels with affected persons.

23. During construction, the generation of dust is to be managed in such a way it does not create a nuisance beyond the boundary of the works. A nuisance will be deemed to have occurred if:

- a. There is visible evidence of suspended solids/particulate matter in the air beyond the site boundary; and/or
- b. There is visible evidence of deposited particulate matter traceable from a dust source, settling on the ground, building or structure on an adjoining site or waterbody.

24. The hours of work shall be restricted to between 7.30am and 6.00pm, Monday to Saturday inclusive, with

The Proposed Auckland Unitary Plan (notified 30 September 2013)

any variation subject to approval of the Council. Sunday and Public Holiday work is generally not permitted, any works on these days are also to be agreed by specific approval of the Auckland Council.

25. The final engineering design is to incorporate water quality measures to adequately treat the road runoff.

26. In accordance with Section 184(1)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of 30 years after the date on which it is included in the District Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority determines, on an application made within three months before the expiry of that period, that substantial progress of effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period to give effect to the designation.

27. Management Plans and Outline Plans: General

a. Prior to the commencement of the works, any relevant Management Plans required under conditions to this designation shall be submitted to the Auckland Council.

b. Any Management or Outline Plans may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted in stages must clearly show integration with adjacent stages and interrelated activities.

c. If Council agrees on the content and terms of such Management Plans, that agreement shall be deemed to be a waiver in relation to that Plan or relevant part of the Plan pursuant to section 176A(2)(c) of the Resource Management Act of the requirement for an Outline Plan under section 176A.

d. If Council does not agree on the terms of such Plan or Plans, the relevant provisions of section 176A of the Resource Management Act shall apply in respect of any part not agreed.

e. The works shall be undertaken in general accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

28. Additional conditions to be imposed on Notice of Requirement 2 (Whitford Bypass)

a. A mitigation plan shall be prepared in consultation with the Whitford Play Centre to address the relocation of the building and associated facilities. The mitigation plan shall include the location of the playcentre building, playground equipment, landscape planting, parking provision. The plan shall include indicative timeframes to enable landscape planting to be established ahead of the relocation of any buildings and shall also address overall timeframes ahead of the commencement of construction.

b. A Redevelopment plan shall be prepared for the Whitford War Memorial Reserve in consultation with the community and council's Parks Department to address the impact of the proposed road alignment on the reserve. The redevelopment plan shall address (but not be limited to) the following matters: Loss of facilities, relocation of the tennis courts, screen planting, relocation of the public play ground, protection of the War Memorial Gates, utilisation of the additional land purchased adjacent to the existing reserve, the mitigation plan prepared in accordance with condition a) above for the relocation of the Whitford Playcentre.

c. A mitigation plan shall be prepared in consultation with the Whitford Pony Club to this Notice of Requirement to address the potential impacts of the designation on the land owned by the Club including any noise mitigation, provision for direct access from the adjacent roundabout, mitigation landscape planting where appropriate and the potential use of excess fill to re-contour appropriate areas of the Pony Club land.

d. The Outline Plan of Works submitted under general condition 7 of this Notice of Requirement shall include the recommended noise mitigation measures detailed in the report entitled "Proposed Whitford Bypass — Assessment of Noise Effects" prepared by Hegley Acoustic Consultants and dated 24 February 2005.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

29. Additional conditions to be imposed on Notices of Requirement 3 and 4

a. The Outline Plan of Works submitted under general condition 7 of this Notice of Requirement shall include design measures to ensure the roundabout at the intersection of Trig Road, Whitford Maraetai Road and Clifton Road is appropriately located and suitable for the access and egress of quarry and landfill vehicles.

b. The Outline Plan of Works submitted under general condition 7 of this Notice of Requirement shall include design measures to ensure that stormwater runoff from the completed road surface is managed to ensure that any existing stormwater and groundwater monitoring undertaken by the landfill operator is not compromised.

c. The Outline Plan of Works shall also address the protection of Landfill monitoring Site 6 adjacent to Henson Road and the protection of all other boreholes servicing the landfill site.

d. The Outline Plan of Works shall also address the protection and or replacement of the existing landfill screen planting. Should any of the existing screen planting be required to be removed or adversely affected by the works, it shall be replaced as soon as practicable. Replacement planting shall be undertaken in close consultation with the Landfill operator to ensure it is consistent with the ongoing planting programme undertaken by them. The planting shall be of a high quality and large specimen trees shall be used in order to replicate the size of the vegetation removed. The planting shall be maintained at no expense to the Landfill operator for not less than two years after planting, and any trees that die within that period shall be replaced, at no expense to the Landfill.

e. A record of consultation undertaken with the owners and operators of the Whitford Quarry and Landfill on issues outline within Clauses (a) to (d) above shall be submitted in conjunction with the relevant sections of the outline plan of works.

1807 New Road - Whitford Bypass

Designation Number	1807
Requiring Authority	Auckland Transport
Location	40, 51, 54, 58, 83, 133, 172, 173, 201, 227, 231, 230, 232, 238, 250, 257, 284, 330, 371, 374, 376 and 385 Whitford Park Road, 2, 21, 35, 91, 97, 101 and 401 Trig Road, 18, 24 and 30 Saleyard Road, 500 Brookby Road, 53 Polo Lane, 1 and 2 Turanga Road, 49 Clifton Road and 46, 53R, 104R, 109, 130, 150, 186, 299, 373 and 404 Whitford-Maraetai Road (Stages 1, 2, 3 and 4)
Rollover Designation	Yes
Legacy Reference	Not yet included in the Auckland Council District Plan (Manukau Section) 2002
Lapse Date	30 years from being operative in the Unitary Plan unless given effect to prior

Purpose

New road.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

General

1. The scope and extent of the works envisaged within the designations shall be generally in accordance with the requirement and the plans submitted with the Notice of Requirements, and subject to any modification required to comply with the conditions set out below.
2. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works
3. At all times, reasonable access shall be maintained from the roading network to private properties not directly affected by the construction and operation works.
4. During and following the construction period, safety barriers and security fencing shall be provided to ensure neighbouring site safety and security fencing to a standard at least as currently provided on the property boundary.

Outline Plans

5. Auckland Council shall not waive its requirement for an Outline Plan.
6. Prior to the commencement of the physical works, Auckland Transport as requiring authority shall prepare and submit to Auckland Council as consent authority an Outline Plan of Works pursuant to section 176A of the Resource Management Act 1991.
7. The Outline Plan(s) required by condition 7 shall include:
 - a. A record of consultation regarding the design of access to and egress from the directly affected property owners along the corridor within each Notice of Requirement;
 - b. The means by which stormwater shall be managed in accordance with Auckland Council publications TP 10 and TP 90; and
 - c. The manner in which any landscape mitigation planting is located and implemented.

Archaeological and Heritage Mitigation Conditions

8. That in the event of koiwi (skeletal remains) or archaeological evidence being uncovered work shall immediately cease in the vicinity of the discovery and the New Zealand Historic Places Trust archaeologist shall be contacted so that the appropriate action can be taken before work may recommence there. The relevant iwi representatives will also be contacted.
9. Detailed protocols for the management of any archaeological and waahi tapu discoveries shall be specifically discussed with tangata whenua prior to construction and submitted to Auckland Council for information.
10. The owners and occupiers of the properties affected by the designation and the relevant iwi representatives shall be notified of construction commencing and shall be kept informed of the project developments
11. Any recorded archaeological site shall be screened by a fence at least 1.0 metre in height. The fencing shall be supervised by a suitably qualified archaeologist to determine the appropriate location for fencing. No construction material or equipment shall be stored within the fenced area.

Property Access Mitigation Conditions

12. Prior to the commencement of construction of the roading link and the widening of the existing roads, the Auckland Council is to be provided with plans showing details of how access is to be provided to properties directly affected by the road widening and construction of the link.
13. All traffic control measures shall conform to the current version, at the time of construction, of the Transit New Zealand manual entitled "Code of Practice for Temporary Traffic Control".

The Proposed Auckland Unitary Plan (notified 30 September 2013)

14. All necessary and practicable steps are to be taken to avoid damage to other utility services, the roading network, or private property."

15. All reinstatement within the road reserve is to be carried out in accordance with Auckland Transport's Code of Practice.

16. The road construction works proposed are to be undertaken in a manner which ensures that the land on adjoining properties remain stable at all times. In this regard:

- a. The required retaining walls and/or any temporary stabilising works required shall be constructed in a timely manner under engineering design and supervision; and
- b. A geotechnical certification is to be submitted to the Auckland Council to confirm the suitability of the completed works.

17. Control measures shall be in place to ensure that any trucks do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.

18. All earthworks on the site are to be undertaken in a manner so as to minimise 'dust' or 'soil erosion/siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

19. Any surplus excavated soil is to be taken to an approved fill site and disposed of in accordance with the relevant Unitary Plan requirements.

20. Exposed cut and fill batters/slopes and other bare land resulting from the works shall be revegetated as soon as practicable and in a progressive manner as works are finished over various areas of the project.

21. During construction, New Zealand noise standard "NZS 6803:1999 Acoustics - Construction Noise" shall apply and that noise shall comply with the limits set down in Table 2 of NZS6803:1999 or where that is impractical alternative strategies shall be implemented to ensure that construction noise does not exceed agreed levels with affected persons.

22. During construction, the generation of dust is to be managed in such as way it does not create a nuisance beyond the boundary of the works. A nuisance will be deemed to have occurred if:

- a. There is visible evidence of suspended solids/particulate matter in the air beyond the site boundary; and/or
- b. There is visible evidence of deposited particulate matter traceable from a dust source, settling on the ground, building or structure on an adjoining site or waterbody.

23. The hours of work shall be restricted to between 7.30am and 6.00pm, Monday to Saturday inclusive, with any variation subject to approval of the Council. Sunday and Public Holiday work is generally not permitted, any works on these days are also to be agreed by specific approval of the Manager Resource Consents.

24. The final engineering design is to incorporate water quality measures to adequately treat the road runoff.

25. In accordance with Section 184(1)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of thirty years after the date on which it is included in the District Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority determines, on an application made within three months before the expiry of that period, that substantial progress of effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period to give effect to the designation.

26. Management Plans and Outline Plans: General

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Prior to the commencement of the works, any relevant Management Plans required under conditions to this designation shall be submitted to the Auckland Council.
- b. Any Management or Outline Plans may be submitted in stages to reflect any proposed staging of the physical works. Plans submitted in stages must clearly show integration with adjacent stages and interrelated activities.
- c. If Council agrees on the content and terms of such Management Plans, that agreement shall be deemed to be a waiver in relation to that Plan or relevant part of the Plan pursuant to section 176A(2)(c) of the Resource Management Act of the requirement for an Outline Plan under section 176A.
- d. If Council does not agree on the terms of such Plan or Plans, the relevant provisions of section 176A of the Resource Management Act shall apply in respect of any part not agreed.
- e. The works shall be undertaken in general accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

28. Additional conditions to be imposed on Notice of Requirement 2 (Whitford Bypass)

- a. A mitigation plan shall be prepared in consultation with the Whitford Play Centre to address the relocation of the building and associated facilities. The mitigation plan shall include the location of the playcentre building, playground equipment, landscape planting, parking provision. The plan shall include indicative timeframes to enable landscape planting to be established ahead of the relocation of any buildings and shall also address overall timeframes ahead of the commencement of construction.
- b. A Redevelopment plan shall be prepared for the Whitford War Memorial Reserve in consultation with the community and the Council's Parks Department to address the impact of the proposed road alignment on the reserve. The redevelopment plan shall address (but not be limited to) the following matters: Loss of facilities, relocation of the tennis courts, screen planting, relocation of the public play ground, protection of the War Memorial Gates, utilisation of the additional land purchased adjacent to the existing reserve, the mitigation plan prepared in accordance with condition a) above for the relocation of the Whitford Playcentre.
- c. A mitigation plan shall be prepared in consultation with the Whitford Pony Club to this Notice of Requirement to address the potential impacts of the designation on the land owned by the Club including any noise mitigation, provision for direct access from the adjacent roundabout, mitigation landscape planting where appropriate and the potential use of excess fill to re-contour appropriate areas of the Pony Club land.
- d. The Outline Plan of Works submitted under general condition 7 of this Notice of Requirement shall include the recommended noise mitigation measures detailed in the report entitled "Proposed Whitford Bypass – Assessment of Noise Effects" prepared by Hegley Acoustic Consultants and dated 24 February 2005.

29. Additional conditions to be imposed on Notices of Requirement 3 and 4

- a. The Outline Plan of Works submitted under general condition 7 of this Notice of Requirement shall include design measures to ensure the roundabout at the intersection of Trig Road, Whitford Maraetai Road and Clifton Road is appropriately located and suitable for the access and egress of quarry and landfill vehicles.
- b. The Outline Plan of Works submitted under general condition 7 of this Notice of Requirement shall include design measures to ensure that stormwater runoff from the completed road surface is managed to ensure that any existing stormwater and groundwater monitoring undertaken by the landfill operator is not compromised.
- c. The Outline Plan of Works shall also address the protection of Landfill monitoring Site 6 adjacent to Henson Road and the protection of all other boreholes servicing the landfill site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. The Outline Plan of Works shall also address the protection and or replacement of the existing landfill screen planting. Should any of the existing screen planting be required to be removed or adversely affected by the works, it shall be replaced as soon as practicable. Replacement planting shall be undertaken in close consultation with the Landfill operator to ensure it is consistent with the ongoing planting programme undertaken by them. The planting shall be of a high quality and large specimen trees shall be used in order to replicate the size of the vegetation removed. The planting shall be maintained at no expense to the Landfill operator for not less than two years after planting, and any trees that die within that period shall be replaced, at no expense to the Landfill.

e. A record of consultation undertaken with the owners and operators of the Whitford Quarry and Landfill on issues outline within Clauses (a) to (d) above shall be submitted in conjunction with the relevant sections of the outline plan of works.

Advice Note: Any removal of screen planting required by these works shall be undertaken on the understanding that the Landfill/Quarry will not be considered to be in breach of its own designation and resource consent conditions.

Advice Notes:

1. It is noted that regional consents will be required to be obtained from the Auckland Regional Council prior to the commencement of the works.

2. Property Owner Rights

Landowners directly affected by the designation are advised that the Public Works Act 1981 makes provision for the following (among other things):

- a. For those landowners whose property is required to be taken (either in whole or in part) for the purpose of the project works they will have a basic entitlement to compensation under Section 60 of the Public Works Act, irrespective of whether the land is acquired compulsorily or on a willing-buyer, willing-seller basis.
- b. Disturbance payments, compensation for loss on repayment of mortgage, and compensation for business loss may in some cases also be claimed under sections 66 to 68 of the Public Works Act.
- c. Compensation for injurious affection can be claimed under Section 63 of the Public Works Act.

3. The booklet titled "A Guide to Landowners Rights: When the Crown Wishes to Acquire Your Land for a Public Work" published by Land Information New Zealand provides useful information on the entitlements under the Public Works Act.

4. Any landowners/tenants potentially or actually affected by the designation are encouraged to seek their own legal advice in terms of their entitlement."

1808 Road Widening - Ormiston Road and Chapel Place

Designation Number	1808
Requiring Authority	Auckland Transport
Location	Ormiston Road and Chapel Road, Flat Bush
Rollover Designation	Yes
Legacy Reference	Designation 305, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	2020

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Road widening.

Conditions

1. The Council's administrative charges for receiving and determining of this Notice of Requirement or for any specified or additional matter in accordance with section 36 of the Act or any regulation under the Act, or as necessary to enable Council to recover its actual and reasonable costs in respect of this application, must be paid in full within 20 days of receipt of the invoice for this decision and this consent shall not be exercised prior to such payment.

2.

- a. For the purpose of these conditions, "Works" has the same meaning as in the Notice of Requirement by Manukau City Council (Transportation Planning and Environmental Sustainability and Infrastructure) for a designation for road widening and stormwater management at 128 Ormiston Road, Flat Bush, dated May 2010.
- b. That the works to give effect to the Designation, subject to final design and any modification required to comply with the conditions set out below, shall be generally in accordance with the plans and information submitted by Manukau City Council (Transportation Planning and Environmental Sustainability and Infrastructure) in support of this Notice of Requirement in the documents referenced Proposal 37431 by Council.
- c. For the purpose of these conditions the "Council" shall mean the "Auckland Council".

3. The scope and extent of the works envisaged within the designation shall be in accordance with the Notice of Requirement and the plans submitted with the Notice of Requirement (identified as Council reference Proposal 37431) and subject to any modification required to comply with the conditions set out below.

4. The provisions of the Notice of Requirement shall be inserted into the Unitary Plan to reflect the nature and extent of the requirement, and the designation shall lapse on the expiry of 2020 unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

5. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works.

6. Prior to the commencement of the physical works, Auckland Transport as requiring authority shall prepare and submit to council as consent authority an Outline Plan of Works pursuant to s. 176A of the Resource Management Act (1991). The Outline Plan of Works will allow the Requiring Authority and the property owner, and council (as consenting authority) to plan, design and construct each section of the works to minimise adverse effects and provide certainty on the works scheduled.

7. At Outline Plan of Works stage, the Requiring Authority shall submit engineering plans for all the proposed works designed in accordance with the rules of the Unitary Plan and Auckland Council Engineering Quality Standards including in particular the following drawings:

- a. Earthworks plans showing:
 - i. Cut and fill areas with depth of cut and fill;
 - ii. Existing and proposed contours; and
 - iii. Proposed silt control measures.
- b. Roding plans showing:
 - i. Typical cross sections with road construction details, position of proposed services etc;
 - ii. Road long-sections;
 - iii. Road markings, kerb and channel layout, street lighting; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

iv. Stormwater control.

c. Riparian footpath plans showing:

i. Typical cross sections; and

ii. Footpath long-sections.

d. Services plans showing proposed services to be installed to provide continuity of services past the intersection of Chapel Road and Ormiston Road.

e. Design details and reports to support the plans provided.

8. Cycleways shall be continuous along the northern side of Ormiston Road and the western side of Chapel Road.

9. All catchpits shall be located clear of vehicle crossings, where practical.

10. All necessary and practicable steps are to be taken to avoid damage to other utility services, the roading network, or private property.

11. Before any physical work is commenced the requiring authority and the contractor working in that area shall ensure that the owners of the affected property are notified in writing advising them of the development in general, its expected duration, the times at which it will be undertaken and the name of a responsible person with whom the owners and occupiers can liaise if the need arises. The general public, businesses in the area and road users shall also be made aware of the intended construction and the times when they may also be affected by the works.

12. The Requiring Authority shall liaise with affected Public Utility Service Providers with respect to the relocation and upgrading of existing services within the area affected by the Notice of Requirement. Any public utility service cabinets or transformers shall be located clear of the normal road reserve.

13. At all times, reasonable access shall be maintained from the roading network to 128 Ormiston Road. This shall be a requirement clause in all contracts awarded for the works. If necessary temporary access or ramps shall be provided to achieve this.

14. All traffic control measures shall conform to the current version, at the time of construction, of the New Zealand Transport Agency manual entitled "Code of Practice for Temporary Traffic Control".

15. All reinstatement within the road reserve is to be carried out in accordance with the current version of Auckland Transport Code of Practice.

16. The road construction works proposed are to be undertaken in a manner which ensures that the land on the adjoining property remains stable at all times.

17. Control measures shall be in place to ensure that any trucks do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.

18. All earthworks on the designated land are to be undertaken in a manner so as to minimise 'dust' or 'soil erosion / siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

19. During construction, New Zealand noise standard "NZS 6803:1999 Acoustics – Construction Noise" shall apply and that noise shall comply with the limits set down in Table 2 of NZS6803:1999 or where that is impractical alternative strategies shall be implemented to ensure that construction noise does not exceed

The Proposed Auckland Unitary Plan (notified 30 September 2013)

agreed levels with affected persons.

20. The hours of work shall generally be between 7.30am and 6.00pm, Monday to Saturday inclusive. However it is recognised that there will be occasions when, for the sake of maintaining access to the property and minimising disruption to the property owner and to business operations in the area, that working outside those hours will be of benefit to those people and to progress of the construction. Such occasions shall be part of the consultation process with those affected and shall also be agreed by specific approval of the Auckland Council.

21. Any required bus stops affected by the proposed work shall be provided in accordance with the Auckland Transport Code of Practice. Bus stop locations shall be shown on the Outline Plan of Works.

22. The Requiring Authority shall submit a Landscape Mitigation Plan as part of the Outline Plan of Works. The Plan will provide for the identification of existing trees and vegetation affected by the proposed works which, where practicable, shall be retained. These trees will be protected during the construction programme. Where existing landscaping is impacted by the proposed road works a detailed plan shall be prepared along the route in consultation with the property owner(s). The Plan shall have regard to the quality and quantity of any existing landscaping and shall provide for:

- a. A schedule of species to be planted in mitigation, including botanical name, average plant size at time of planting and average mature height;
- b. The timing of planting which could, in consultation with the landowner, include opportunities for early planting;
- c. Replacement fencing and boundary planting, which should be appropriately determined after discussion with the landowner.

All landscape mitigation planting shall be implemented no later than in the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity.

1809 Road Widening - Allens Road and Smales Road

Designation Number	1809
Requiring Authority	Auckland Transport
Location	2, 5, 17, 22-38, 47-59, 56-60 and 67 Allens Road, 3-9 Smales Road, 1,2 Harris Road, 2 Ross Reid Place and 61 Sir William Avenue, East Tamaki
Rollover Designation	Yes
Legacy Reference	Designation 308, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	5 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

Conditions

1. In accordance with section 184 of the Resource Management Act 1991, this designation will lapse on the expiry of 5 (five) years after the date on which it is included in the Unitary Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort

The Proposed Auckland Unitary Plan (notified 30 September 2013)

towards giving effect to the designation and fixes a longer period to give effect to the designation; or
c. The designation lapses earlier by virtue of the Unitary Plan ceasing to be operative.

1810 Car Park - Hall Street

Designation Number	1810
Requiring Authority	Auckland Transport
Location	24 Hall Street, Pukekohe
Rollover Designation	Yes
Legacy Reference	Designation 102, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Car parking assets.

Conditions

No conditions.

R1811 Car Park - Moore Street

Designation Number	R1811
Requiring Authority	Auckland Transport
Location	27 Moore Street, Howick
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment

The Proposed Auckland Unitary Plan (notified 30 September 2013)

control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1812 Car Park - Tobin Street

Designation Number	R1812
Requiring Authority	Auckland Transport
Location	4 Tobin Street, Pukekohe
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure'

The Proposed Auckland Unitary Plan (notified 30 September 2013)

including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;

- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related

The Proposed Auckland Unitary Plan (notified 30 September 2013)

conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1813 Car Park - Wallace Road

Designation Number	R1813
Requiring Authority	Auckland Transport
Location	21 Wallace Road, Papatoetoe
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be

The Proposed Auckland Unitary Plan (notified 30 September 2013)

installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

Attachments

No attachments.

R1814 Car Park - Osterley Way (AMI)

Designation Number	R1814
Requiring Authority	Auckland Transport
Location	9 Osterley Way, Manukau Central
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);
4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
10. Earthworks to implement any of the above; and
11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Access

14. That at all times reasonable physical access be maintained to other properties.

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

R1816 Car Park - Charles Street

Designation Number	R1816
Requiring Authority	Auckland Transport
Location	27 Charles Street, Papatoetoe
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.
3. Any changes to the mix of the function of the parking (short / long term);
4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface

The Proposed Auckland Unitary Plan (notified 30 September 2013)

water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1817 Car Park - Davies Avenue

Designation Number	R1817
Requiring Authority	Auckland Transport
Location	2 Davies Avenue, Manukau

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.
3. Any changes to the mix of the function of the parking (short / long term);
4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1819 Car Park - Moore Street

Designation Number	R1819
Requiring Authority	Auckland Transport
Location	41 Moore Street (Fencible Drive), Howick
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- b. Communications, water supply and energy supply infrastructure;
- c. Stormwater drainage and other surface water management infrastructure;
- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

No attachments.

R1820 Car Park - Maich Road

Designation Number	R1820
Requiring Authority	Auckland Transport
Location	1-13 Maich Road, Manurewa
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment

The Proposed Auckland Unitary Plan (notified 30 September 2013)

control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1822 Car Park - Davies Avenue

Designation Number	R1822
Requiring Authority	Auckland Transport
Location	8 Davies Avenue, Manukau
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be

The Proposed Auckland Unitary Plan (notified 30 September 2013)

installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1823 Car Park - Coles Crescent

Designation Number	R1823
Requiring Authority	Auckland Transport
Location	36 Coles Crescent, Papakura
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	N/A

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);
4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
10. Earthworks to implement any of the above; and
11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Access

14. That at all times reasonable physical access be maintained to other properties.

R1824 Car Park - Eric Baker Place

Designation Number	R1824
Requiring Authority	Auckland Transport
Location	15 Eric Baker Place, Paptoetoe
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	N/A

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
10. Earthworks to implement any of the above; and
11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Saturdays	8am - 5pm	75	70
-----------	-----------	----	----

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. The Proposed Auckland Unitary Plan (notified 30 September 2013)

R1826 Car Park - Newbury Street

Designation Number	R1826
Requiring Authority	Auckland Transport
Location	1R Newbury Street, Otara
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	N/A

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- Communications, water supply and energy supply infrastructure;
- Stormwater drainage and other surface water management infrastructure;
- Earthworks;
- Pruning and removal of all non-scheduled vegetation within the site; and
- Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- Resurfacing of floors, at-grade, and metalled parking surfaces;
- Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- Bicycle stands, racks, cages and other forms of bicycle storage;
- Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- Customer service booths;
- Barrier arms;
- Parking sensors;
- Signage relating to parking information, management and enforcement;
- Lighting;
- CCTV cameras; and
- Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface

The Proposed Auckland Unitary Plan (notified 30 September 2013)

water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1825 Car Park - Kew Lane

Designation Number	R1825
Requiring Authority	Auckland Transport
Location	129 Kew Lane, Otara
Rollover Designation	No

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- b. Communications, water supply and energy supply infrastructure;
- c. Stormwater drainage and other surface water management infrastructure;
- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring

The Proposed Auckland Unitary Plan (notified 30 September 2013)

authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1827 Car Park - Shirley Road

Designation Number	R1827
Requiring Authority	Auckland Transport
Location	21 Shirley Road, Papatoetoe
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:

- a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
- b. Communications, water supply and energy supply infrastructure;
- c. Stormwater drainage and other surface water management infrastructure;
- d. Earthworks;
- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.

ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

 9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
 10. Earthworks to implement any of the above; and
 11. Temporary traffic management necessary to implement any of the above.
- 1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Surgery rooms of health care facilities	All	0.10
---	-----	------

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an

The Proposed Auckland Unitary Plan (notified 30 September 2013)

archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1829 Car Park - Massey Avenue

Designation Number	R1829
Requiring Authority	Auckland Transport
Location	7 Massey Avenue, Pukekohe
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- e. Pruning and removal of all non-scheduled vegetation within the site; and
- f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
- b. Resurfacing of floors, at-grade, and metalled parking surfaces;
- c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
- d. Bicycle stands, racks, cages and other forms of bicycle storage;
- e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
- f. Customer service booths;
- g. Barrier arms;
- h. Parking sensors;
- i. Signage relating to parking information, management and enforcement;
- j. Lighting;
- k. CCTV cameras; and
- l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building.

For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this

The Proposed Auckland Unitary Plan (notified 30 September 2013)

designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The

The Proposed Auckland Unitary Plan (notified 30 September 2013)

location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1830 Car Park - Wellington Street

Designation Number	R1830
Requiring Authority	Auckland Transport
Location	4 Wellington Street, Howick
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.

2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;
 - k. CCTV cameras; and
 - l. Toilet facilities.
3. Any changes to the mix of the function of the parking (short / long term);
 4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;
 6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;
 7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;
 8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);
 9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;
 10. Earthworks to implement any of the above; and
 11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work	
		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective

The Proposed Auckland Unitary Plan (notified 30 September 2013)

fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties

The Proposed Auckland Unitary Plan (notified 30 September 2013)

during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

14. That at all times reasonable physical access be maintained to other properties.

R1832 Car Park - Constable Road

Designation Number	R1831
Requiring Authority	Auckland Transport
Location	Constable Road (corner King Street), Waiuku
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Public off-street parking, including ongoing maintenance, repairs and like for like replacement works to the existing parking facility and minor operational improvements to the same.

Works exempt from providing an Outline Plan of Works

Auckland Transport shall be exempt from providing an Outline Plan of Works for the following works, subject to the conditions of this designation.

1. Maintenance, repairs and like for like replacement including the following elements:
 - a. Vehicle access related assets and facilities (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);
 - b. Communications, water supply and energy supply infrastructure;
 - c. Stormwater drainage and other surface water management infrastructure;
 - d. Earthworks;
 - e. Pruning and removal of all non-scheduled vegetation within the site; and
 - f. Temporary traffic management necessary to implement works.
2. Minor operational improvements including those involving the installation of new 'parking infrastructure' including the following elements:
 - a. Changes to the parking layout, including the location and configuration of parking bays, access and circulation areas within the designated site, provided that the total number of public parking bays is not increased;
 - b. Resurfacing of floors, at-grade, and metalled parking surfaces;
 - c. Re-marking of parking bays, access ways, and other painted markings on the parking surfaces;
 - d. Bicycle stands, racks, cages and other forms of bicycle storage;
 - e. Pay and display machines, kiosks, and other types of ticket dispensers and ticket booths;
 - f. Customer service booths;
 - g. Barrier arms;
 - h. Parking sensors;
 - i. Signage relating to parking information, management and enforcement;
 - j. Lighting;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

k. CCTV cameras; and

l. Toilet facilities.

3. Any changes to the mix of the function of the parking (short / long term);

4. Maintenance, repairs and like for like replacement of all vehicle access related assets and facilities within the designated site (including but not limited to markings, ramps, speed humps, kerbs, berms, bollards, barriers, traffic separators and islands);

5. Maintenance, repairs and like for like replacement of all stormwater drainage and other surface water management infrastructure within the site, including any treatment devices utilising planting;

6. Installation of new stormwater management infrastructure (including treatment devices) to avoid, remedy or mitigate localised flooding or surface water problems on the site;

7. Maintenance, pruning and removal of all non-scheduled vegetation within the site;

8. In the case of parking buildings and structures, maintenance, repairs and like for like replacement of parts of the building / structure (including but not limited to a building's interior and exterior cladding, cavities, roofs, doors, windows, lifts, stairwells and lighting, electrical and electronic systems);

9. Maintenance and replacement of communications, water supply and energy supply infrastructure necessary to support the above;

10. Earthworks to implement any of the above; and

11. Temporary traffic management necessary to implement any of the above.

1 For the avoidance of doubt, in the case of mixed use buildings, the specified works provided for by the designation only applies to the proportion of the building/structure dedicated to non ancillary public parking.

Works requiring an Outline Plan of Works

Auckland Transport shall prepare an Outline Plan of Works for any increase in the total number of public parking bays within the designated site, provided that this does not involve any new or extended parking structure or building. For the avoidance of doubt, any new or extended parking structure or building falls outside the scope of this designation.

Conditions

Construction Hours

1. Construction (including all works) shall be limited to the following hours, with the exception of emergency works pursuant to Sections 330 and 330B of the RMA:

Weekdays 7am - 10pm;

Saturdays 8am - 5pm;

Sundays & Public Holidays No work

Construction Noise Limits and Mitigation

2. Any construction works and related activities on the site shall be conducted so as to ensure that the resultant noise, as measured in accordance with the requirements of NZS 6803:1999 Acoustics – Construction Noise, meets the following noise limits all days of the year.

Day	Time period	Duration of work
-----	-------------	------------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

		Short term duration (less than 15 consecutive calendar days)	Long term duration
		Leq (dBA) (30 min)	Leq (dBA)
Weekdays	7am - 10pm	80	70
Saturdays	8am - 5pm	75	70

During construction, the principles for managing construction noise set out within New Zealand Standard 6803: 1999, Acoustics - Construction Noise shall be formally adopted.

Construction Vibrations

3. Any vibrations from construction activities shall comply with the following:

- i. Blasting and pile driving activities must be controlled to ensure any resulting ground vibration does not exceed the limits set out in Table 1 of DIN 41503 (1999): Structural vibration – Part 3 Effects of vibration on structures when measure on the foundation or the horizontal plane of the highest floor of an affected building.
- ii. Stationary vibrating, reciprocating and rotating machinery and all piping, ducting and other equipment attached to such machinery must be installed and maintained so that any resulting vibration does not exceed the limits of the following table when measured in adjacent buildings or areas of buildings under different ownership from the source of the vibration:

Affected occupied building or area	Time of day	Maximum vibration level in rms velocity (mm/s) between 8 and 80Hz
Buildings in a heavy industry or light industry zone	All	0.80
Buildings for commercial activities	All	0.40
Habitable rooms of buildings designed for residential use	7am-10pm	0.20
Sleeping areas of buildings designed for residential use	10pm-7am	0.14
Surgery rooms of health care facilities	All	0.10

Sediment Control during Earthworks

4. Any stormwater runoff arising from earthworks shall be contained and treated via an appropriate sediment control device to avoid additional sedimentation load being discharged into the public stormwater system. The location and specification of the erosion and sediment control device(s) shall be in accordance with Auckland Council Technical Publication 90 *Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region* or similar design.

Tree Protection Measures

5. Any trees on site shall be retained wherever possible. Prior to any site works, temporary tree protective fencing shall be erected around the base of trees to be retained. The temporary tree protection fences can be constructed using orange plastic mesh (or equivalent), but this must be supported by waratahs (or equivalent) placed firmly into the ground. The waratahs will have two stands of wire attached to them (top and bottom) and the orange plastic mesh must be fastened to the wires at 1 metre intervals (top and bottom). Any sediment control measures can be fixed to the lower of the temporary tree protection fence, but must be otherwise be installed to the manufacturer's standards. No works, storage of materials, cement/concrete washings and leaching of chemicals, tracking of any machinery, stockpiling of spoil, trenching or alteration of soil grade, or other contamination shall occur within those areas demarcated by a temporary protective fence. All temporary protective fences shall remain in place throughout the duration of the construction works.

Complaints Management

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. A complaints management system shall be developed and implemented for construction works on the site. It must specify the responsible persons for maintaining the complaints register, procedures to be followed in investigating and resolving complaints and procedures for reporting complaints to Auckland Transport and Auckland Council.

Complaints Received: Construction Noise or Vibration

7. If any complaints are received regarding construction noise and/or vibration, monitoring and reporting shall be undertaken as required by Auckland Council to establish whether the activities are complying with the above requirements, and what action is required to ensure compliance.

Prior notice of construction activities

8. Neighbouring properties in the immediate vicinity of construction areas shall be given prior notice in writing of the commencement of construction activities no less than 5 working days before, and shall be informed about the expected duration of the works.

Network Utilities

9. The Requiring authority shall adopt best practice techniques for construction to ensure that all Network Utility Operators' infrastructure located on the site is protected and that public safety is ensured. The Requiring authority shall advise all Network Utility Operators at least 10 working days prior to the commencement of any work potentially affecting Network Utility Operators' infrastructure.

Archaeological and Heritage

10. Subject to condition 11, if any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease; and
- ii. The Requiring authority shall immediately secure the area so that any artefacts or remains are untouched; and
- iii. The Requiring authority shall notify tangata whenua, the New Zealand Historic Places Trust and Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

11. Condition 10 shall not apply where the Requiring authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

Damage to Adjacent Properties

12. The Requiring authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction. The Requiring authority will reinstate any property damaged during construction, including any instability or collapse of land or boundary treatments, or provide compensation to the affected owner if reinstatement is not possible.

As-Built Plans

13. The Requiring authority shall provide one set in hard copy and one set in electronic data file (via CD or email) of as-built plans for the Council's property files. The as-built plans shall be prepared in accordance with the requirements of the Auckland Council Development Code, detailing all engineering works completed.

Access

The Proposed Auckland Unitary Plan (notified 30 September 2013)

14. That at all times reasonable physical access be maintained to other properties.

1833 Road Widening - Murphy's Road and Flat Bush School Road

Designation Number	1833
Requiring Authority	Auckland Transport
Location	Flat Bush School Road and Murphys Road, Flat Bush
Rollover Designation	Yes
Legacy Reference	No number, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

Conditions

1. The Council's administrative charges for receiving and determining of this Notice of Requirement or for any specified or additional matter in accordance with section 36 of the Act or any regulation under the Act, or as necessary to enable Council to recover its actual and reasonable costs in respect of this application, must be paid in full within 20 days of receipt of the invoice for this decision and this decision shall not be exercised prior to such payment.

2.

a. For the purpose of these conditions, "Works" has the same meaning as in the Notices of Requirement by Auckland Council (Transportation Planning) for a designation to upgrade Murphys Road and Flat Bush School Roads (MCC 1) and for - a designation to upgrade Murphys Road, Flat Bush (MCC2), dated March 2010.

b. That the works to give effect to the Designation, subject to final design and any modification required to comply with the conditions set out below, shall be generally in accordance with the plans and information submitted by Auckland Council (Transportation Planning) in support of these Notices of Requirement in the documents referenced Proposal 37139 (sheets 1-2) by Council.

c. For the purpose of these conditions the "Council" shall mean the "Auckland Council".

3. The scope and extent of the works envisaged within the designations shall be in accordance with the Notices of Requirement and the plans submitted with the Notice of Requirements (identified as Council reference Notices of Requirement MCC1 and MCC2) and subject to any modification required to comply with the conditions set out below.

4. The provisions of the Notices of Requirement shall be inserted into the Auckland Council Operative District Plan to reflect the nature and extent of the requirements.

5. The proposed works shall be undertaken in accordance with Auckland Council Engineering Quality Standards.

6. The stormwater reticulation provided as part of the proposed works -shall comply with the following

The Proposed Auckland Unitary Plan (notified 30 September 2013)

requirements:

- a. The reticulation shall be designed for the 20% AEP storm flow.
 - b. The outlets from the reticulation shall in a suitable position to be included in the future piped reticulation of the downstream property.
7. The proposed temporary stormwater outlets shall be replaced with a permanent outlet by the Requiring Authority when the downstream land is developed and a suitable inlet to the piped reticulation within that land is provided.
8. The earthwork construction shall be undertaken in accordance with:
- a. The erosion and sediment control plan as detailed in the plans provided as part of the Requirement.
 - b. Auckland Regional Council Technical Publication 90 - TP90 Erosion and Sediment Control.
9. The works shall be undertaken in such a manner as to ensure that beyond the boundary of the site there should be no 'dust' or 'soil erosion/siltation', which in the opinion of the Team Leader - Resource Compliance, is objectionable, offensive or has the potential to create an adverse effect on the receiving environment.
10. The proposed sediment control measures shall be put in place before any other earthworks are undertaken on the site.
11. Control measures shall be in place to ensure that any trucks leaving the site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.
12. Adequate access shall be maintained to each affected property in consultation with the occupier of the property, with a temporary access provided as necessary to allow the occupant convenient access.
13. Prior to development commencing, the Requiring Authority shall ensure that the owners and occupiers of all adjoining properties are notified in writing of the development in general, its expected duration, the times at which it will be undertaken, and the name of a responsible person with whom they can liaise if the need arises.
14. Land taken or held for the works shall be maintained to a reasonable standard until the physical works commence and for the duration of the construction works.
15. All traffic control measures shall conform to the current version, at the time of construction, of the Transit New Zealand manual entitled "Code of Practice for Temporary Traffic Control".
16. All necessary and practicable steps are to be taken to avoid damage to other utility services, the reading network, or private property.
17. All reinstatement within the road reserve is to be carried out in accordance with the current version of Council's "Code of Practice for Working in the Road".
18. The road construction works proposed are to be undertaken in a manner which ensures that the land on adjoining properties remain stable at all times.
19. During construction, New Zealand noise standard "NZS 6803:1999 Acoustics - Construction Noise" shall apply and that noise shall comply with the limits set down in Table 2 of NZS6803:1999 or where that is impractical alternative strategies shall be implemented to ensure that construction noise does not exceed agreed levels with affected persons.
20. All earthworks on the designated land are to be undertaken in a manner so as to minimise 'dust' or 'soil

The Proposed Auckland Unitary Plan (notified 30 September 2013)

erosion/siltation' beyond the boundary of the site, which in the opinion of an enforcement officer who is employed by the Council, might be objectionable, offensive or have the potential to create an adverse effect on the receiving environment.

21. The hours of work shall generally be between 7.30am and 6.00pm, Monday to Saturday inclusive. However it is recognised that there will be occasions when, for the sake of maintaining access to properties and minimising disruption to traffic and property owners in the area, that working outside those hours will be of benefit to those people and to progress of the construction. Such occasions shall be part of the consultation process with those affected and shall also be agreed by specific approval of the Team Leader- Resource Compliance.

22. A protective fence of Day-Glo mesh attached to closely spaced Waratah standards should be erected at the driplines of the protected trees to be retained. The fences shall remain in place for the duration of all works in the vicinity of the particular tree/s. The area of ground enclosed by the protective fence shall be treated as a total exclusion zone. No storage of materials or equipment, or passage of vehicles or machinery, shall occur in that area.

23. An arborist shall be present when the excavations are being undertaken within the root zone of any of the protected trees identified for retention within the project area. Any roots encountered shall be cleanly severed under observation of the arborist in order to prevent unnecessary tearing.

24. Any contouring carried out in the vicinity of any retained tree should avoid the severance of roots of significant size or function. Any roots that may be encountered during the definition of the edge of the new road, where within the root zone of any protected tree, shall be severed cleanly at the excavation face under observation of the arborist required in Condition 23. This section of the edge of the road shall be defined by hand (spade) to the depth required prior to any scrape by machine.

1834 Road Widening - Flat Bush School Road

Designation Number	1834
Requiring Authority	Auckland Transport
Location	21 and 39 Flat Bush School Road and 66 Thomas Road, Flat Bush
Rollover Designation	Yes
Legacy Reference	Designation 310, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Road widening.

Conditions

1. The period which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184 (1) of the RMA.

2. The proposed works shall be undertaken in general accordance with the Requirement Plans referenced as 60370-STG2&3 –SU-81 and 82 Rev 1.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. The proposed works shall be undertaken in accordance with the relevant Engineering Quality Standards.
4. The works shall be undertaken in such a manner as to ensure that beyond the boundary of the site there should be no 'dust' or 'soil erosion / siltation'.
5. Control measures shall be in place to ensure that any trucks leaving the site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the Requiring Authority's expense.
6. Adequate access shall be maintained to each affected property in consultation with the occupier of the property, with a temporary access provided as necessary to allow the occupant convenient access.
7. Prior to development commencing, the Requiring Authority shall ensure that the owners and occupiers of all adjoining properties are notified in writing of the development in general, its expected duration, the times at which it will be undertaken, and the name of a responsible person with whom they can liaise if the need arises.
8. All traffic control measures shall conform to the current version, at the time of construction, of the Transit New Zealand manual entitled "Code of Practice for Temporary Traffic Control".
9. All necessary and practicable steps are to be taken to avoid damage to other utility services, the roading network, or private property.
10. All reinstatement within the road reserve is to be carried out in accordance with the current version of Council's "Code of Practice for Working in the Road".
11. The road construction works proposed are to be undertaken in a manner which ensures that the land on adjoining properties remain stable at all times.
12. During construction, New Zealand noise standard "NZS 6803:1999 Acoustics - Construction Noise" shall apply and that noise shall comply with the limits set down in Table 2 of NZS6803:1999 or where that is impractical alternative strategies shall be implemented to ensure that construction noise does not exceed agreed levels with affected persons.
13. The hours of work shall be restricted to between 7.30am and 6.00pm, Monday to Saturday inclusive, with any variation subject to approval of the Council.
14. That the maximum batters and minimum berm cross falls be in accordance with the submitted typical cross sections depicted on drawing no 60370-S2P2-RD-211 dated 15 February 2011 and prepared by Woods.

Advice Notes

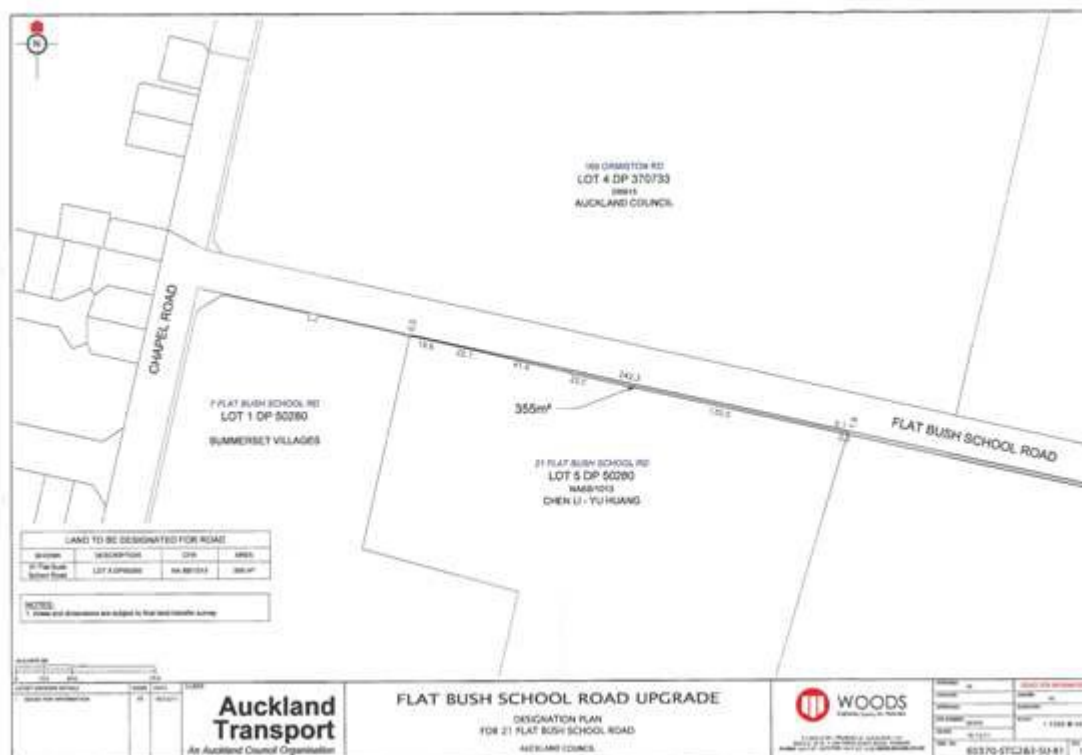

1. That advice has been provided that the proposed road boundary and the non-standard berm widths are those which are ultimately required and no further general widening will be required at the time of subdivision or development of the adjoining land.
2. It is noted that the designation does not provide for the southern leg of the Flat Bush School Road and Brookview Drive intersection, which is intended, will be provided in conjunction with future development and subdivision.
3. Although the designated area does not contain any known archaeological sites, it is possible that unrecorded sites may exist. Under the Historic Places Act 1993, it is unlawful for any person to destroy, damage or modify an archaeological site unless the relevant consents have been obtained from the New Zealand Historic Places Trust. In the event of archaeological features being uncovered (e.g. shell midden, hangi or oven stones,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

pit depressions, defensive ditches, artifact material or human bones) work is to cease in the vicinity of the discovery and the New Zealand Historic Places Trust and appropriate iwi authorities shall be contacted so that the appropriate action can be taken. This includes such persons being given reasonable time to record and recover archaeological features discovered before work may recommence.

2619	Telecommunication and radiocommunication and ancillary purposes	22A Mokoia Road, Birkenhead
2620	Telecommunication and radiocommunication and ancillary purposes	21 Birkdale Road, Birkdale
2621	Telecommunication and radiocommunication and ancillary purposes	2 Mozeley Avenue, Devonport
2622	Telecommunication and radiocommunication and ancillary purposes	Quinns Road (Lot 1 DP 139432), Waiatarua
2623	Telecommunication and radiocommunication and ancillary purposes	6 Clayburn Road, Glen Eden
2624	Telecommunication and radiocommunication and ancillary purposes	1198A Huia Road, Huia
2625	Telecommunication and radiocommunication and ancillary purposes	142-144 Don Buck Road, Massey
2626	Telecommunication and radiocommunication and ancillary purposes	3125 Great North Road, New Lynn
2627	Telecommunication and radiocommunication and ancillary purposes	410 Old Te Atatu Road, Te Atatu
2628	Telecommunication and radiocommunication and ancillary purposes	504 South Titirangi Road, Titirangi
2629	Telecommunication and radiocommunication and ancillary purposes	462A Scenic Drive, Waiatarua
2630	Telecommunication and radiocommunication and ancillary purposes	10 McEntee Road, Waitakere

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2631	Telecommunication and radiocommunication and ancillary purposes	49 Kauri Road, Whenuapai
2632	Telecommunication and radiocommunication and ancillary purposes	4 Summer Street, Ponsonby
2633	Telecommunication and radiocommunication and ancillary purposes	168B St Heliers Bay Road, St Heliers
2634	Telecommunication and radiocommunication and ancillary purposes	402 St Johns Road, Meadowbank
2635	Telecommunication and radiocommunication and ancillary purposes	2B Poronui Street, Mt Eden
2636	Telecommunication and radiocommunication and ancillary purposes	6 St Jude Street, Avondale
2637	Telecommunication and radiocommunication and ancillary purposes	2 Jasper Avenue, Mt Roskill
2638	Telecommunication and radiocommunication and ancillary purposes	1 Kalmia Street, Ellerslie
2639	Telecommunication and radiocommunication and ancillary purposes	6 Stewart Avenue, Panmure
2640	Telecommunication and radiocommunication and ancillary purposes	589 Mount Albert Road, Royal Oak
2641	Telecommunication and radiocommunication and ancillary purposes	135 Boundary Road, Blockhouse Bay
2642	Telecommunication and radiocommunication and ancillary purposes	58 Princes Street, Onehunga
2643	Telecommunication and radiocommunication and ancillary purposes	12 Piki Thompson Way, Otahuhu
2644	Telecommunication and radiocommunication and ancillary purposes	1 Clevedon Kawakawa Road, Clevedon
2645	Telecommunication and radiocommunication and ancillary purposes	6 Grammar School Road, Pakuranga Heights
2646	Telecommunication and radiocommunication and ancillary purposes	477C Redoubt Road, Manukau Central
2647	Telecommunication and radiocommunication and ancillary purposes	2 Bertram Road, Kawakawa Bay
2648	Telecommunication and radiocommunication and ancillary purposes	135 Harris Road, East Tamaki
2649	Telecommunication and radiocommunication and ancillary purposes	63 Ashgrove Road, Mangere
2650	Telecommunication and radiocommunication and ancillary purposes	7 Whitford Wharf Road, Whitford
2651	Telecommunication and radiocommunication and ancillary purposes	176 Bairds Road, Otara
2652	Telecommunication and radiocommunication and ancillary purposes	20 Lakewood Court, Manukau City

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2653	Telecommunication and radiocommunication and ancillary purposes	175 Great South Road, Manurewa
2654	Telecommunication and radiocommunication and ancillary purposes	Whitford-Maraetai Road (Section 2 SO 433361 and Section 4 SO 433361), Beachlands
2655	Telecommunication and radiocommunication and ancillary purposes	180 Flanagan Road, Drury
2656	Telecommunication and radiocommunication and ancillary purposes	McKenzie Road (Lot 13 DP 37599), Waiau Pa
2657	Telecommunication and radiocommunication and ancillary purposes	7B Hall Street, Pukekohe
2658	Telecommunication and radiocommunication and ancillary purposes	Brookside Road (Pt Allotment 318 PSH of Waiuku East), Waiuku
2659	Telecommunication and radiocommunication and ancillary purposes	Charles Road (Lot 2 DP 23793), Karaka
2660	Telecommunication and radiocommunication and ancillary purposes	11 Mauku Road, Puni
2661	Telecommunication and radiocommunication and ancillary purposes	Awhitu Road (Pt Allotment 18 PSH of Waitara), Waiuku
2662	Telecommunication and radiocommunication and ancillary purposes	Hunua Road (Pt Allotment 24 PSH of Hunua and Pt Allotment 24B PSH of Hunua), Hunua
2663	Telecommunication and radiocommunication and ancillary purposes	Paparimu Road (Lot 1 DP 139880), Hunua
2664	Telecommunication and radiocommunication and ancillary purposes	75 Main Road (near Puketutu Road), Bombay

2600 Wellsford Telecommunications Site

Designation Number	2600
Requiring Authority	Chorus New Zealand Ltd
Location	102 Rodney Street (State Highway 1), Wellsford
Rollover Designation	Yes
Legacy Reference	Designation 801, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 15m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a.
 - i. At the boundary of any adjacent residential zoned property; or
 - ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
- b. At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:
7am – 10pm on any day: Leq 55 dB(A)
10pm – 7am on any day: Leq 55 dB(A)
- c. At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:
7am – 10pm on any day: Leq 70 dB(A)
10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

overall height of the facility; or

d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a.

i. At the boundary of any adjacent residential zoned property; or

ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

b. At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:

7am – 10pm on any day: Leq 55 dB(A)

10pm – 7am on any day: Leq 55 dB(A)

c. At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:

7am – 10pm on any day: Leq 70 dB(A)

10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

2603 Matakana Telecommunications Site

Designation Number	2603
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Chorus New Zealand Ltd
Location	Leigh Road (Pt Lot 1 DP 55418), Matakana
Rollover Designation	Yes
Legacy Reference	Designation 804, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 15m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent residential zoned property; or
 - At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:
7am – 10pm on any day: Leq 55 dB(A)
10pm – 7am on any day: Leq 55 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:
7am – 10pm on any day: Leq 70 dB(A)
10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

Rollover Designation	Yes
Legacy Reference	Designation 814, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 15m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Outline Plans

2. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a.

- i. At the boundary of any adjacent residential zoned property; or
- ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

b. At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:

7am – 10pm on any day: Leq 55 dB(A)

10pm – 7am on any day: Leq 55 dB(A)

c. At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:

7am – 10pm on any day: Leq 70 dB(A)

10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

2612 Kaukapakapa Telecommunications Site

Designation Number	2612
Requiring Authority	Chorus New Zealand Ltd
Location	State Highway 16 (Pt Allot 12 SO55728), Kaukapakapa
Rollover Designation	Yes
Legacy Reference	Designation 815, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 15m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent residential zoned property; or
 - At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:
7am – 10pm on any day: Leq 55 dB(A)
10pm – 7am on any day: Leq 55 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:
7am – 10pm on any day: Leq 70 dB(A)
10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. 2618 Kumeu Telecommunications Site

Designation Number	2618
Requiring Authority	Chorus New Zealand Ltd
Location	56 Main Road, Kumeu
Rollover Designation	Yes
Legacy Reference	Designation 822, Auckland Council District Plan (Rodney Section) 2011

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 25m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent residential zoned property; or
 - At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:
7am – 10pm on any day: Leq 55 dB(A)
10pm – 7am on any day: Leq 55 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:
7am – 10pm on any day: Leq 70 dB(A)
10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

2619 Birkenhead Telecommunications Site

Designation Number	2619
Requiring Authority	Chorus New Zealand Ltd
Location	22A Mokoia Road, Birkenhead
Rollover Designation	Yes
Legacy Reference	Designation 93, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 20m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:

- Any internal building works (excluding equipment generating external noise);
- Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

9. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

2620 Birkdale Telecommunications Site

Designation Number	2620
Requiring Authority	Chorus New Zealand Ltd
Location	21 Birkdale Road, Birkdale
Rollover Designation	Yes
Legacy Reference	Designation 94, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Legacy Reference	Designation 95, Auckland Council District Plan (North Shore Section) 2002

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

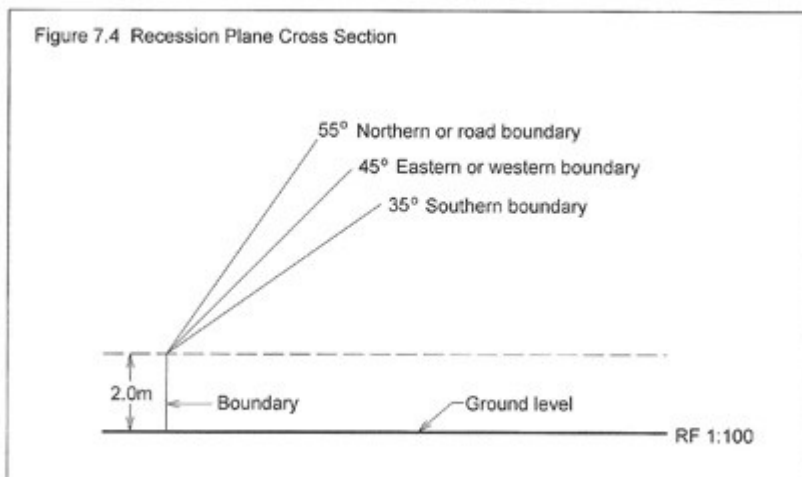

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	2622
Requiring Authority	Chorus New Zealand Ltd
Location	Quinns Road (Lot 1 DP 139342), Waiatarua
Rollover Designation	Yes
Legacy Reference	Designation PH1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Outline Plans

1. That an outline plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

2. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

3. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 2 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

4. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 2, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

5. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

6. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vegetation Removal

7. Any removal or pruning of indigenous vegetation shall be limited to that reasonably necessary to maintain and operate telecommunication and radiocommunication equipment on the site.

2623 Glen Eden Telecommunications Site

Designation Number	2623
Requiring Authority	Chorus New Zealand Ltd
Location	6 Clayburn Road, Glen Eden
Rollover Designation	Yes
Legacy Reference	Designation PH2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Outline Plans

7. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Requiring Authority	Chorus New Zealand Ltd
Location	142-144 Don Buck Road, Massey
Rollover Designation	Yes
Legacy Reference	Designation PH4, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2626 New Lynn Telecommunications Site

Designation Number	2626
Requiring Authority	Chorus New Zealand Ltd
Location	3125 Great North Road, New Lynn
Rollover Designation	Yes
Legacy Reference	Designation PH5, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation PH7, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10pm – 7am on any day: Leq 40 dB(A)

9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
10. For any changes or additions to the engine alternators on the site, where the noise from all engine

The Proposed Auckland Unitary Plan (notified 30 September 2013)

alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2629 Waiatarua Telecommunications Site

Designation Number	2629
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Chorus New Zealand Ltd
Location	462A Scenic Drive, Waikarua
Rollover Designation	Yes
Legacy Reference	Designation PH9, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2630 Waitakere Telecommunications Site

Designation Number	2630
Requiring Authority	Chorus New Zealand Ltd
Location	10 McEntee Road, Waitakere
Rollover Designation	Yes
Legacy Reference	Designation PH10, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
10. For any changes or additions to the engine alternators on the site, where the noise from all engine

The Proposed Auckland Unitary Plan (notified 30 September 2013)

alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

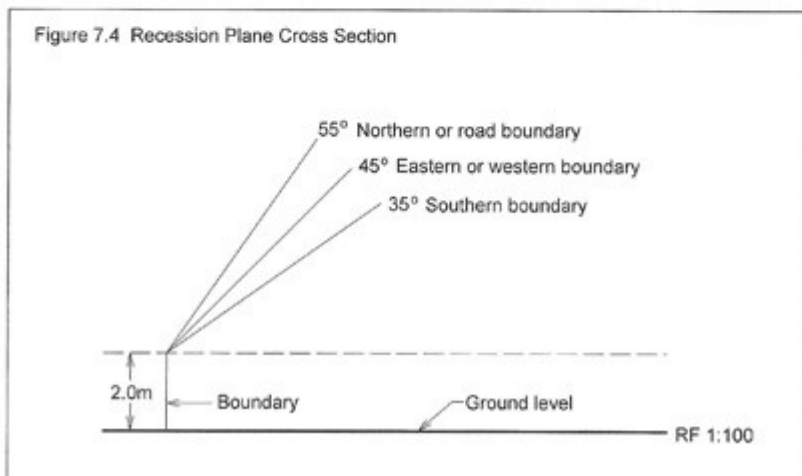

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2631 Whenuapai Telecommunications Site

Designation Number	2631
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Chorus New Zealand Ltd
Location	49 Kauri Road, Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation PH11, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

2632 Ponsonby Telecommunications Site

Designation Number	2632
Requiring Authority	Chorus New Zealand Ltd
Location	4 Summer Street, Ponsonby
Rollover Designation	Yes
Legacy Reference	Designation B07-92, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15 m above ground level (excluding any lightning rod).

2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.

3. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).

4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).

6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:

- a. Height: 8 m;
- b. Front yard: 5 m;
- c. Height in relation to boundary - shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
- d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

8. That an Outline Plan of Works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility; or
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

- b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

16. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

17. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday.

For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Heritage Management

18. Any outline plan to remove, demolish, alter or replace the existing exchange building shall demonstrate that the works are necessary in order to meet the purpose of the designation, and shall be supported by a specific Heritage Assessment prepared by a suitably qualified person. As part of any outline plan to undertake external additions or alterations to the exchange building, the Heritage Assessment shall include an assessment of the following criteria:

- a. The form, mass, proportion and scale of the external additions and alterations shall be compatible with the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

prevailing architectural style of the existing building on the site;

- b. Alterations to expand the building within a roof space shall respect, and leave dominantly visible, the form and lines of the existing roof;
- c. Where decoration and architectural features are used, such features shall follow the characteristic form and detail of the existing building on the site;
- d. Changes to the frontage of the existing building shall not detract from the heritage character of the whole fabric, design or character of the original detailing of the facade;
- e. Materials shall be the same or similar as the existing materials of the building so that the new building work is consistent with the traditional character and material of the existing building on the site; and
- f. For parts of the building highly visible to the street or public place, new windows or doors shall be consistent with the proportions and detail of the windows and doors of the existing facade.

As part of any outline plan to remove or demolish more than 30% of the exchange building, the Heritage Assessment shall include an assessment of the following criteria:

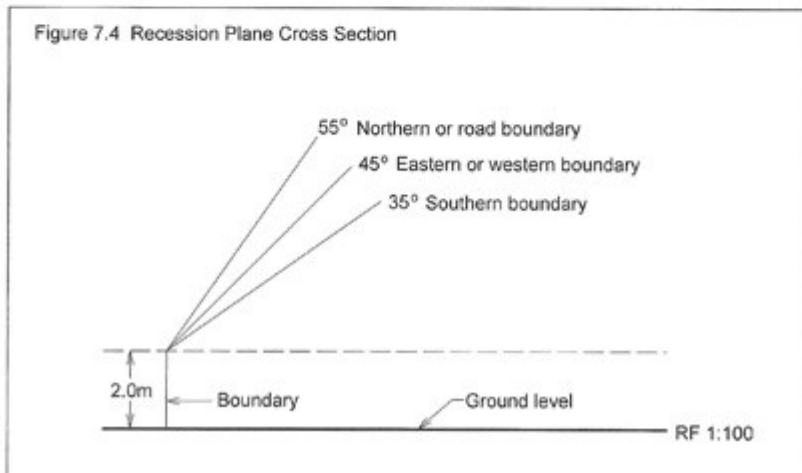

- i. Whether the building has retained its original (or repaired) visual design features relating to form, mass, proportion and materials so that restoration/ renovation of the building is practical and reasonable.
- ii. Whether the demolition or removal of the building will detract from the continuity and special character of the streetscape as a whole.
- iii. Whether any historical qualities and original design features of the existing building are visible from a public place.

Notwithstanding the above, in the case of alterations involving external fixtures that remain similar in character and scale (e.g. upgrading/replacement of exhaust flues, air conditioning plant or equipment of a like nature), the Council (Resource Consents Team Manager) may at their discretion waive the need for a Heritage Assessment (excluding works to the front facade).

Diagram 7.3 Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2633 Glendowie Telecommunications Site

Designation Number	2633
Requiring Authority	Chorus New Zealand Ltd
Location	168B St Heliers Bay Road, St Heliers
Rollover Designation	Yes
Legacy Reference	Designation C15-17, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 11m above ground level (excluding any lightning rod).
2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1 and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast.
6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas.

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 8m;
 - b. Yards: 1.5m;
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
 - d. Maximum building coverage: 40%.

This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures, except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

8. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limit:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residential zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Flooding

16. The site is subject to potential flood hazards. Any new structures constructed within an overland flow path

The Proposed Auckland Unitary Plan (notified 30 September 2013)

affecting this site shall be designed to avoid any increase in flood hazard risk including risk to neighbouring property. This shall be assessed in any outline plan of works. The foundations of structures housing equipment shall be designed so the finalised floor level is location above the minimum freeboard level for a 1 in 100 year flood. For the avoidance of doubt this shall exclude the base of any mast not containing water sensitive equipment.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday.

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday.

For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2634 St Heliers Telecommunications Site

Designation Number	2634
Requiring Authority	Chorus New Zealand Ltd
Location	402 St Johns Road, Meadowbank
Rollover Designation	Yes
Legacy Reference	Designation D14-11, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1 and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).
6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 10m;
 - b. Yards: 6m;
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
 - d. Maximum building coverage: 40%.

This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures, except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

8. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility; or
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise

9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limit:

a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residential zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Flooding

16. The site is subject to potential flood hazards. Any new structures constructed within an overland flow path affecting this site shall be designed to avoid any increase in flood hazard risk including risk to neighbouring property. This shall be assessed in any outline plan of works. The foundations of structures housing equipment shall be designed so the finalised floor level is location above the minimum freeboard level for a 1 in 100 year flood. For the avoidance of doubt this shall exclude the base of any mast not containing water sensitive equipment.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday.

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2635 Mt Eden Telecommunications Site

Designation Number	2635
Requiring Authority	Chorus New Zealand Ltd
Location	2B Poronui Street, Mt Eden
Rollover Designation	Yes
Legacy Reference	Designation E08-43, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any new equipment shall not exceed the Mt Eden Volcanic Cone height limit of 9m above ground level using the rolling height method (excluding any lightening rod) as contained in the Auckland Council District Plan (Isthmus Section) 1999.
2. Notwithstanding Condition 1, the antennas on the existing mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to:
 - a. The constraints in condition 7;
 - b. There being no increase in the overall height of the mast and attached antennas;
 - c. The total width of the mast head (including antennas) shall be no more than 4.5m; and
 - d. All antennas shall be placed on mast head, with none attached directly to the mast pole.
3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the roof provided they comply with Condition 1, and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
6. The total number of masts on site shall not exceed 1 (one).
7. The total number of antennas on the site shall not exceed 10 (ten) - being up to 9 (nine) on the existing mast and 1 (one) Global Positioning System (GPS) on the building.

Buildings

8. Any building, excluding masts, exhaust fumes, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 9 m;
 - b. Front yard: 2.5m; and
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height shall be measured by a rolling height method.

Outline Plans

9. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council

The Proposed Auckland Unitary Plan (notified 30 September 2013)

District Plan (Isthmus Section) 1999.

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 8am-5pm Monday to Friday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1: 1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

16. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling.

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are

The Proposed Auckland Unitary Plan (notified 30 September 2013)

disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

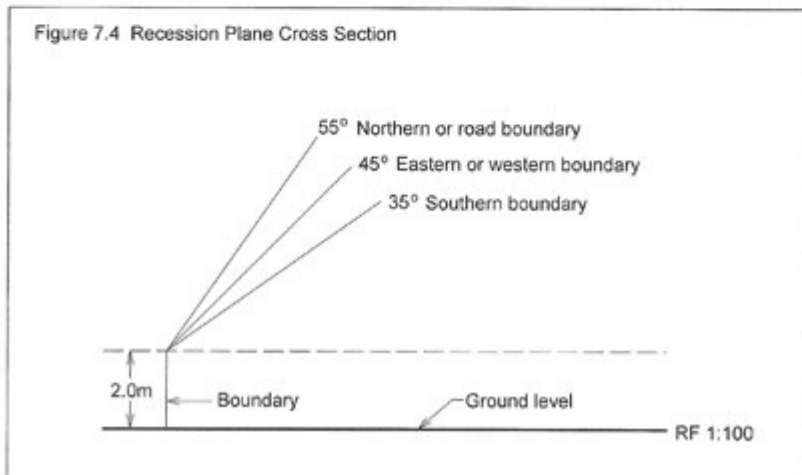

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-6pm Monday to Friday and 8am to 1pm Saturday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2636 Avondale Telecommunications Site

Designation Number	2636
Requiring Authority	Chorus New Zealand Ltd
Location	6 St Jude Street, Avondale
Rollover Designation	Yes
Legacy Reference	Designation F03-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 20m above ground level (excluding any lightning rod).
2. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

Buildings

3. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 12.5m; and
 - b. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from any adjacent residential zone boundaries as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 1999 (road boundary height in relation to boundary doesn't apply in this case as it is zoned business).

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

4. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

5. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent business zoned property:
7am - 10pm on any day: Leq 55 dB(A)
10pm - 7am on any day: Leq 45 dB(A)
 - b. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
6. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 5 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
7. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 5 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

9. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

10. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996. Archaeology

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

2638 Ellerslie Telecommunications Site

Designation Number	2638
Requiring Authority	Chorus New Zealand Ltd
Location	1 Kalmia Street, Ellerslie
Rollover Designation	Yes
Legacy Reference	Designation F11-52, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

Buildings

3. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 15m; and
 - b. Front yard: 3m.

For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Outline Plans

4. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

5. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

6. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 5 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

7. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 5, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (SPO) to ensure that noise levels do not exceed a reasonable level and must not exceed existing noise levels.

8. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

9. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1: 1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contamination

10. Should an Outline Plan of Works involve earthworks and/or excavation, the Requiring Authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a

The Proposed Auckland Unitary Plan (notified 30 September 2013)

detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Soil Instability/Unstable Ground

11. The site is subject to potential geotechnical hazards. The potential for earthworks or building construction to have adverse effects on the site or surrounding properties resulting from filled weak ground shall be assessed in any Outline Plan of Works for any such activities.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

2639 Panmure Telecommunications Site

Designation Number	2639
Requiring Authority	Chorus New Zealand Ltd
Location	6 Stewart Avenue, Panmure
Rollover Designation	Yes
Legacy Reference	Designation F15-53, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new equipment shall not exceed the Volcanic Cone Height Restrictions Map and limit of 9 m above ground level (excluding any lightening rod) as contained in the Auckland Council District Plan (Isthmus Section) 1999.

2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any new mast and associated antennas shall not

The Proposed Auckland Unitary Plan (notified 30 September 2013)

exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.

3. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).

4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast.

6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas.

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:

- a. Height: 8m;
- b. Front yard: 2.5m;
- c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
- d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

8. That an Outline Plan of Works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:
 - 7am - 10pm on any day: Leq 55 dB(A)
 - 10pm - 7am on any day: Leq 45 dB(A)
- b. At the boundary of any adjacent residentially zoned property:
 - 7am - 10pm on any day: Leq 50 dB(A)
 - 10pm - 7am on any day: Leq 40 dB(A)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

16. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday.

17. The hours of operation for routine external maintenance and upgrade works (excluding emergency and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

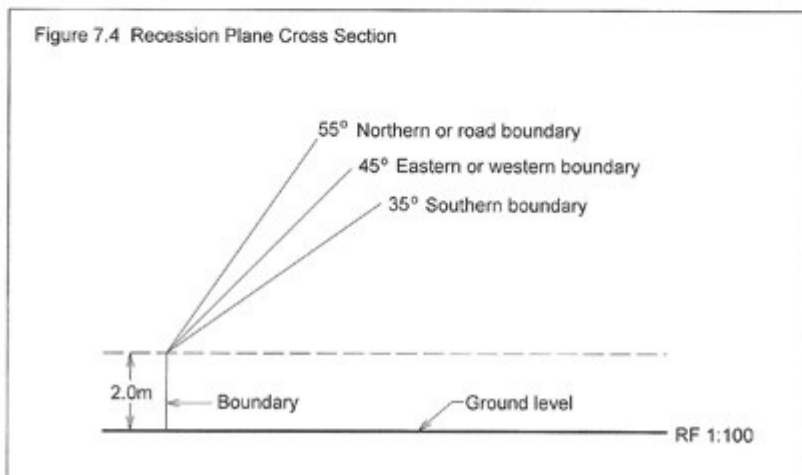

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and Are cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2640 Three Kings Telecommunications Site

Designation Number	2640
Requiring Authority	Chorus New Zealand Ltd
Location	589 Mount Albert Road, Royal Oak
Rollover Designation	Yes
Legacy Reference	Designation G08-16, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
3. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast.
6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas.

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 8m;
 - b. Front yard: 2.5m;
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
 - d. Maximum building coverage: 40%.

This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures. Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

8. That an Outline Plan of Works shall not be required for noise:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Flooding

16. The site is subject to potential flood hazards. Any new structures constructed within an overland flow path

The Proposed Auckland Unitary Plan (notified 30 September 2013)

affecting this site shall be designed to avoid any increase in flood hazard risk including risk to neighbouring property. This shall be assessed in any outline plan of works. The foundations of structures housing equipment shall be designed so the finalised floor level is location above the minimum freeboard level for a 1 in 100 year flood. For the avoidance of doubt this shall exclude the base of any mast not containing water sensitive equipment.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

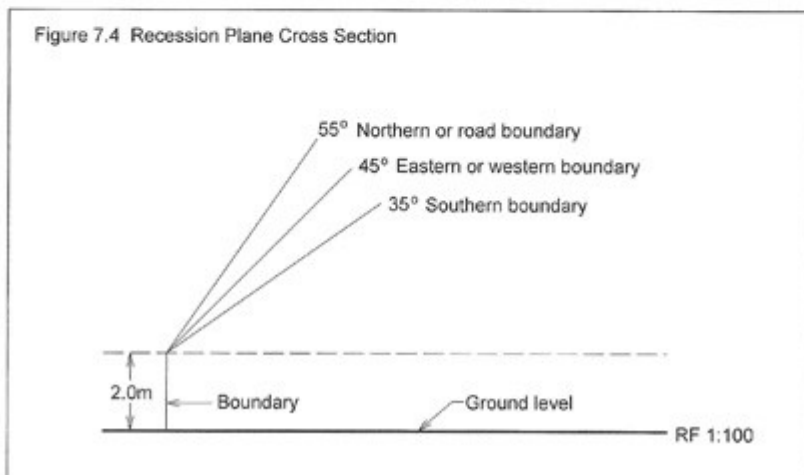

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

3. Any new building or permanent structure located within the Building Line Restriction referenced F06-04 will be required to follow the relevant process under the RMA, including obtaining approval from the Council as Requiring Authority for the Building Line Restriction. This restriction shall not apply if the road widening is uplifted or taken.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2641 Blockhouse Bay Telecommunications Site

Designation Number	2641
Requiring Authority	Chorus New Zealand Ltd
Location	135 Boundary Road, Blockhouse Bay
Rollover Designation	Yes
Legacy Reference	Designation H04-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, the antennas on the mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.
3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1 and shall comply with the relevant height in relation to boundary controls from adjoining residential boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
6. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).
7. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

8. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 8m;
 - b. Front yard: 2.5m;
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009; and
 - d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition.

For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

9. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

subject to compliance with noise conditions set out below;

c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;

d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (SPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

16. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require off site disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday.

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2642 Onehunga Telecommunications Site

Designation Number	2642
Requiring Authority	Chorus New Zealand Ltd
Location	58 Princes Street, Onehunga
Rollover Designation	Yes
Legacy Reference	Designation H10-55, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, the antennas on the existing mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.
3. Any new masts and associated antennas shall comply with the relevant building in relation to boundary controls from adjoining open space land as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009.
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 12.5m; and
 - b. Height in relation to boundary - shall comply with the relevant building in relation to boundary controls from the adjoining open space zone property and the daylight controls for any mixed use zone property as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009.
