The NZTA will provide financial support to Te Atatu Pony Club over the period of occupation of Construction Yard 1 for additional feed supplement required as a consequence of the area of lost grazing. Support will be paid on receipt of proof of purchase up to a maximum of \$12,000/yr and excluding any existing feed purchase that is required by the club (e.g. the amount of additional feed purchased in the 2010 and 2011 years, when the club had full use of the proposed construction yard 1).

Except this condition will be amended if additional grazing land becomes available or is provided by the Auckland Council (Areas A and B identified in the Henderson Massey Local Board Minutes, dated 7 April 2011). In this instance, providing the forage on that pasture is suitable for food for horses, the amount payable would be pro-rated based on the shortfall in area from the 'pre-construction' lease area only.

SO.9

The NZTA will provide annual financial support to Te Atatu Pony Club for monies lost from the 'One Day Events' held on the Harbourview - Orangihina Park, calculated on the basis of average annual funds derived from such events over the Feb 2008 to Feb 2011 years (up to a limit of \$8,000). This payment will be over the period from the contractor's occupation of Construction Yard 1 to the confirmation of the Open Space Restoration Plan (required by Condition OS.2 – OS.4). If the Open Space Restoration Plan for Harbourview - Orangihina Park confirms that the Pony Club will be reinstated on the site, then payment will continue up until restoration is completed to the satisfaction of Auckland Council.

SO.10 Subject to any necessary consent and landowner approvals, the NZTA will construct a raceway on the alignment shown on the Plan 'Te Atatu Interchange': Construction Yard 1, including annotations (see Schedule A, Row 34). The raceway shall be not less than five metres wide and enclosed on both sides by timber rail fencing.

SO.11

The NZTA shall form a level, grassed area having approximate dimensions of 90 metres by 170 metres suitable for the exercise of horses, within the general location shown on the Drawing 'Te Atatu Interchange': Construction Yard 1 (see Schedule A, Row 34). Except this condition will cease to have effect if other adjacent land becomes available or is provided by the Auckland Council to the Te Atatu Pony Club for the duration of the NZTA's occupation of the land for Construction Yard 1 (for example, if the Areas A and B identified in the Henderson Massey Local Board Minutes, dated 7 April 2011 are made available).

SO.12

The NZTA shall comply with the obligations offered by the NZTA in its letter to the Te Atatu Pony Club, 21 March 2011, including the following:

- (a) Development of a Construction Yard Plan in consultation with the Te Atatu Pony Club and the Auckland Council to minimise the impacts on ponies and horses which will address:
 - (i) The location, timing and monitoring of construction yard activities which could affect ponies and horses; and
 - (ii) Confirm the programme of key events in the Te Atatu Pony Club calendar so that, any construction yard activities with the potential to cause disruption can be rescheduled; and
 - (iii) Confirm communication protocols between the NZTA and its contractors and the TAPC;

Advice note:

The attention of NZTA and the club is drawn to the PI suite of conditions concerning communication, consultation, and liaison.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(b) Subject to any necessary consent and landowner approvals, undertake the following works (where relevant, these works are to be in accordance with the details identified on the plan Te Atatu Interchange: Construction Yard 1 (see Schedule A, Row 34)):

- (i) Relocate existing water troughs (and their supply lines), trees (in accordance with Condition CEMP.6(n) and CEMP.6(o)) and horse jumps located within the construction yard to elsewhere in the remaining area leased by the Te Atatu Pony Club;
- (ii) Provide surface water drainage for the south western paddock adjacent to the Motorway (SH16).

Vegetation Conditions

V.1

The NZTA shall finalise the ECOMP submitted with this application, prior to works commencing on site. The ECOMP shall be implemented through the CEMP. The ECOMP shall clearly identify the location and identity of:

- (a) All Significant Vegetation within the designation that is to be fully protected or relocated; and
- (b) All Valued Vegetation within the designation that is affected by the works (protected or removed).

Note: Significant and Valued Vegetation shall be as defined in the ECOMP.

V.2

The NZTA shall employ a suitably experienced botanist ('nominated botanist') for the duration of the works to monitor, supervise and direct all works affecting or otherwise in close proximity to the Significant Vegetation and Valued Vegetation identified in the ECOMP.

V.3

Prior to any site works commencing, a pre-commencement site meeting shall be held so that the conditions that pertain to the Significant Vegetation and Valued Vegetation and all vegetation in general (both native and exotic) are explained by the nominated botanist to all contractors or sub-contractors who will be working on site within the close vicinity of that vegetation.

V.4

The NZTA shall minimise the amount of vegetation (both native and exotic) which is to be cleared, with the exception of weeds (both woody and otherwise, unless agreed with the Major Infrastructure Team Manager, Auckland Council and the Community Liaison Group that the retention of these 'weeds' has other environmental or ecological benefits that warrant their retention). All vegetation clearance shall be undertaken in accordance with the measures set out in the ECOMP.

V.5

The NZTA shall install protective fencing around, or otherwise clearly demarcate, all of the Significant Vegetation identified in the ECOMP as requiring full protection, under the supervision of the nominated botanist.

V.6

The NZTA shall replace any terrestrial Valued Vegetation that is required to be removed as a result of construction activities, in accordance with the ECOMP and the Urban Design and Landscape Plans.

V.7

The nominated botanist shall supervise all trimming, pruning and relocation work associated with the Significant Vegetation and Valued Vegetation required as part of the works.

V.8

Immediately prior to planting, and for a period of 2 years following completion of construction, the NZTA shall undertake weed control and management of all invasive plant pests within the vegetated areas of the surface designation for the Project. Following this 2 year period, on-going control and management of all invasive plant pests within these areas will be the responsibility of the NZTA.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

V.9

The nominated botanist shall undertake a monitoring programme throughout the construction period, including monitoring of:

- (a) The condition, repair and location of the temporary protective fencing or other forms of demarcation used to identify the Significant Vegetation;
- (b) Any works within the vicinity of the Significant Vegetation and Valued Vegetation;
- (c) The general health of the Significant Vegetation and Valued Vegetation (including any Significant or Valued Vegetation that has been relocated away from the works area); and
- (d) Compliance with the vegetation conditions of designation by way of fortnightly inspections during the construction period.

V.10

Any planting utilising native plants shall use plants genetically sourced from the Tamaki Ecological District where possible or otherwise shall use plants that have been genetically sourced from within the Auckland Ecological Region.

Avian Conditions

A.1

The NZTA shall finalise, and implement through the CEMP, ECOMP submitted with this application to include the matters set out in Conditions A.2 to A.6.

A.3 The NZTA shall employ a suitably qualified ecologist to undertake monitoring of the roosting areas located at:

- (a) The existing high tide roost in Harbourview-Orangihina Park; and
- (b) The temporary construction roosting structure(s) pursuant to Condition A.2.

Monitoring shall be undertaken on a monthly basis, with a monitoring report prepared on a quarterly basis. The monitoring report shall be made available to the Major Infrastructure Team Manager, Auckland Council and Department of Conservation upon request.

A.4

Should the monitoring results indicate that the roosting sites have been abandoned, consultation shall be undertaken with the Department of Conservation and the Major Infrastructure Team Manager, Auckland Council to determine the need for and type of further management strategies (if any) required.

Herpetofauna Conditions

H.1

The NZTA shall finalise and implement through the CEMP, the ECOMP submitted with this application to include details of lizard management to be undertaken, including the following:

- (a) Lizard capture methodology, including timing;
- (b) Lizard release locations(s);
- (c) Lizard habitat enhancement at population release sites, including a detailed pest control programme for a minimum of one month prior to release and for a minimum of three consecutive years' duration after release;
- (d) Location(s), monitoring and maintenance of lizard protective fencing;
- (e) Post-release monitoring methodology; and
- (f) Lizard captive management methodology.

Lighting Conditions

Operation

L.1

Lighting shall be designed and screened to minimise the amount of lighting overspill and illumination of residential areas, in general accordance with the Waterview Connection Lighting Plan (Drawing Set F.11 (Refer

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Schedule A, Row 12):

- a) All motorway lighting shall be designed in accordance with "Roadlighting Standard AS/NZS1158";
 - b) All other lighting shall be designed in accordance with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
 - c) Fully cut off luminaries shall be used on SH20 from the Southern Tunnel Portal to the Maioro Street Interchange to minimised lighting overspill, as shown on Drawing Set F.11(Refer Schedule A, Row 12).
- Construction Zones and Construction Yards

L.2

A Temporary Construction Lighting Management Plan shall be prepared for all construction zones and construction yards prior to commencement of any night time works within the construction zones and construction yards. The Temporary Construction Lighting Management Plan shall be independently verified by a lighting specialist and provided to the Major Infrastructure Team Manager, Auckland Council for certification of compliance 10 working days prior to any night time work commencing.

The certification process shall ensure that the Plan includes (but is not be limited to):

- a) The layout and arrangement of all temporary lighting required for night time works, and shall show how this avoids the "Light Spill Restriction Zone" identified on the Construction Yard Plans (Refer Schedule A, Row 7) submitted with the application, and that the temporary lighting complies with relevant rules provided in Rule 14 of the Waitakere City District Plan or Part 13 of the Auckland City Bylaw (April 2008);
- b) Provision for a 10m buffer between the night time work and any residential boundary at all times to minimise potential for light spill; and
- c) General operating procedures outlined in the CEMP.

L.3

Asymmetrical floodlights with horizontal glass visors that are not raised more than 3 degrees above the horizontal plane shall be used for any temporary construction night time lighting requirements. Alternative temporary lighting arrangements may be used, subject to the prior approval of the Major Infrastructure Team Manager, Auckland Council, where it can be demonstrated that the proposed lighting is similar or better to asymmetrical floodlights with glass visors. Glare shall be kept below the recommendation given in AS 4282 – 1997 "Control of the Obtrusive Effects of Outdoor Lighting" Tables 2.1 and 2.2.

Archaeology Conditions

ARCH.1

The NZTA shall complete, and implement through the CEMP, the Archaeological Site Management Plan (ASMP) submitted with the notice of requirement, to include, but not be limited to:

- a) Identification of the Project archaeologist, their role and responsibility on the Project;
- b) Who reports to the Project archaeologist;
- c) Specific sites requiring supervision, and measures to be undertaken to protect and manage these sites;
- d) Whether NZHPT and/or Auckland Council heritage and/or iwi supervision is required for the specific site (the latter to be determined through consultation with the relevant iwi groups); and
- e) Accidental discovery protocols in the event that unknown archaeological sites are uncovered.

ARCH.2

The NZTA shall employ at its expense a qualified archaeologist (the Project archaeologist) who shall be on site to monitor all initial earthworks, including surface stripping of the site, for all specific areas identified in the ASMP to establish whether any sub-surface archaeological features are present. This includes, but is not limited to, the following areas:

- (a) All unmodified areas in the vicinity of Rosebank Road;
- (b) All works in the vicinity of the "Oakley Inlet Heritage Area", located adjacent to the Great North Road Interchange;
- (c) Works in the vicinity of two midden sites (recorded R11/2214 and R11/2215) within Great North Road

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Interchange, and all previously unmodified areas near the banks of the Oakley Inlet;

(d) Any ground disturbance works in Construction Yard 7 within Oakley Creek Reserve.

ARCH.3

If any archaeological sites, including human remains are exposed during site works, then the following procedures shall apply:

(a) Immediately it becomes apparent that a possible archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;

(b) The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched and notify the Project archaeologist;

(c) The Project archaeologist shall inspect the site to assess the relevance of the find, and then the Auckland Council shall be advised of the significance;

(d) If the site is confirmed to be an archaeological site by the Project archaeologist, the site supervisor shall then notify tangata whenua, the New Zealand Historic Places Trust, and the Auckland Council that an archaeological site has been exposed so that appropriate action can be taken;

(e) In the case of human remains, the NZ Police shall be notified.

ARCH.8

All contractors and subcontractors working on the Project shall be trained on the archaeological requirements set out in the ASMP.

Advice note:

Any archaeological sites within the area affected by the Project shall not be modified or disturbed in any way unless written authorisation has been obtained from the NZ Historic Places Trust.

Contaminated Land and Contaminated Discharges Conditions

CL.1

The NZTA shall finalise and implement through the CEMP, the Contaminated Soil Management Plan (CSMP) submitted with this application prior to commencement of any site works. The CSMP shall include, but not be limited to:

(a) Measures to be undertaken in the handling, storage and disposal of all material excavated during the construction works;

(b) Soil validation testing and groundwater testing;

(c) Soil verification testing to be undertaken to determine the nature of the excavated spoil and potential reuse or disposal options;

(d) Measures to be undertaken in the event of unexpected contamination being identified during construction activities; and

(e) Measures to be undertaken for the handling of asbestos containing material.

CL.4

All excavated soil shall be tested by the NZTA in general accordance with the CSMP, prior to either reuse on site or disposal off site. The testing regime shall be submitted for approval by the Major Infrastructure Team Manager, Auckland Council.

CL.5

The NZTA shall notify the Major Infrastructure Team Manager, Auckland Council within 5 working days of identification of any contamination at the site which was not identified in the reports submitted in support of this application, including contaminated soil, surface water or groundwater. The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.6

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The removal of any excavated contaminated soil shall be in accordance with the CSMP. The removal and disposal of any contaminated groundwater/ surface water from the site shall be in accordance with the GWMP and the ESCP.

CL.7

The NZTA shall engage a suitably qualified contaminated land specialist to supervise the works, excavation and removal of any contaminated soils from the site and undertake sampling (if required) of imported material.

CL.8

All testing / sampling techniques shall be carried out in accordance with the Ministry for the Environment Contaminated Land Management Guidelines or other equivalent standards approved in writing by the Major Infrastructure Team Manager, Auckland Council.

CL.11

The NZTA shall submit to the Major Infrastructure Team Manager, Auckland Council, a Site Closure Report no later than three (3) months after the completion of the earthworks. The Report shall be prepared in accordance with Schedule 13 (Schedules for Reporting on Contaminated Land) of the Proposed Auckland Regional Plan: Air Land and Water and include:

- (a) Results of any soil reuse and imported material testing carried out to ensure compliance with the CSMP;
- (b) Volumes of soil removed from site;
- (c) Copies of the waste disposal receipts; and
- (d) Reports of any non-compliance with the CSMP procedures or complaints received while undertaking the site works.

Freshwater Conditions

F.1

The NZTA shall finalise, and implement through the CEMP, the ECOMP submitted with this application. The ECOMP shall be updated to ensure compliance with the conditions of this consent and include changes to the details of construction processes prior to construction commencing. The ECOMP shall include, but not be limited to details of:

- (a) Monitoring of freshwater ecology;
- (b) Monitoring of freshwater and stream sediment quality;
- (c) Trigger event criteria for undertaking additional monitoring;
- (d) Procedures for responding to accidental discharges of contaminants to the freshwater environment; and
- (e) Contingency plans and/or remedial measures in the event monitoring results identify adverse effects.

F.2

The NZTA shall engage a suitably qualified ecologist and water quality scientist to undertake freshwater monitoring programme prior to, during and following construction to monitor the effect of the Project on the freshwater ecology. The freshwater monitoring shall be undertaken in Oakley Creek, Pixie Stream and Meola Creek. The freshwater monitoring programme shall be undertaken in accordance with the details set out in the ECOMP and include:

- (a) Cross sectional profiles;
- (b) Macro invertebrate sampling; and
- (c) Freshwater fish monitoring.

F.3

The freshwater monitoring programme shall, as a minimum, be undertaken in accordance with the following frequency:

- (a) Prior to construction – two baseline ecological surveys.
- (b) During construction – twice per year for fish and macro invertebrates and cross sectional profiles, within one month prior to the beginning of the earthworks season and within one month either side of the end of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

earthworks season.

(c) Post construction – on an annual basis for a maximum period of three years, or less if the Major Infrastructure Team Manager, Auckland Council is satisfied that no adverse effects have occurred or are likely to occur from the Project.

(d) Monthly water quality samples at the five existing Oakley Creek sample locations to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb) and nutrients.

(e) Four “event based” samples per annum from each of the current two Oakley Creek sites. The samples are to be analysed for pH, turbidity, suspended solids, metals (Zn, Cu and Pb), hydrocarbons (TPH) and nutrients.

(f) Two sediment quality samples per annum (January and July) at the five existing water quality Oakley Creek sites (if there is sufficient sediment to sample). The samples are to be analysed for metals (Zn, Cu and Pb), polycyclic aromatic hydrocarbons (PAH), hydrocarbons (TPH) and semi-volatile organic compounds.

Advice note: The sample collection and analysis required under sub-clauses (d) to (f) shall be undertaken following an IANZ accredited methodology by a suitably accredited laboratory (International Accreditation New Zealand).

F.4

The NZTA shall undertake additional freshwater monitoring in the event of a ‘trigger event’ for freshwater habitats. For the purposes of this consent, a ‘trigger event’ for freshwater habitats is defined in the ECOMP.

F.5

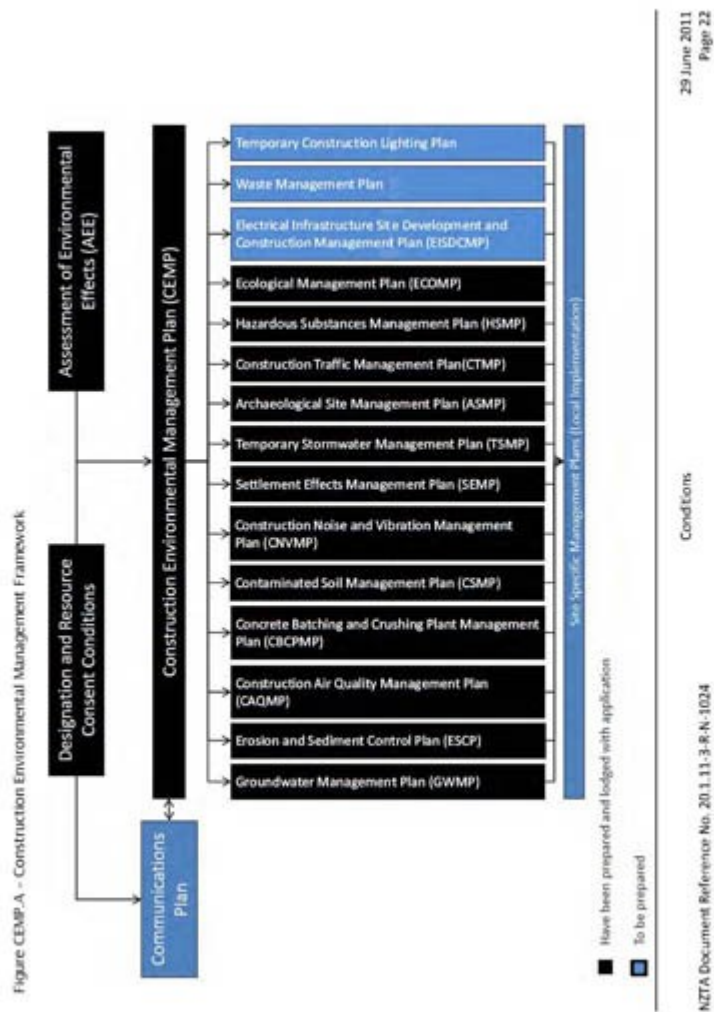

The NZTAs ecologist/hydrologist (required by condition F.2) shall review, every six months, the freshwater monitoring results, provided from Conditions F.2 to F.4, and results in monitoring detailed in earthworks Conditions E.9 and E.19 and Groundwater Condition G.10. In the event that potential adverse effects are identified, including through review of the Condition G.10 monitoring results by the hydrologist and freshwater ecologist required by Condition G.12, the NZTA shall develop and submit for the approval of the Major Infrastructure Team Manager, Auckland Council appropriate contingency plans and/or remedial measures in accordance with the measures set out in the ECOMP.

F.6

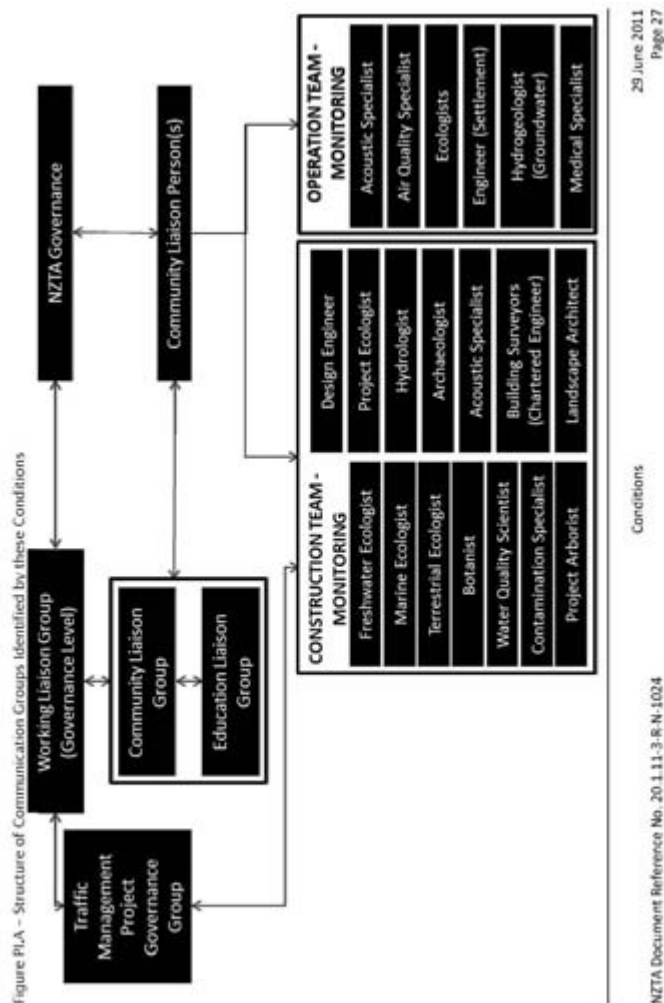

Freshwater monitoring reports shall be compiled from the monitoring undertaken pursuant to Conditions F.2 to F.4 and the review of Condition F.5, and a report provided to the Major Infrastructure Team Manager, Auckland Council every 6 months.

Attachment 1: Figure CEMP.A - Construction Environmental Management Framework

Attachment 2: Figure PI.A - Structure of Communication Groups

6740 State Highway 16 - Westgate to Whenuapai

Designation Number	6740
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from north end of Fred Taylor Drive to Brighams Creek, Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation NZTA3, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

N/A.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 1. Note that major earthworks may require a consent from the Auckland Council.

Attachments

No attachments.

6741 State Highway 16 and 18 - Westgate to Whenuapai and Hobsonville

Designation Number	6741
Requiring Authority	New Zealand Transport Agency
Location	State Highways 16 from Westgate interchange, Westgate to Brigham Creek Road intersection, Whenuapai and State Highway 18 from Westgate interchange, Westgate to Greenhithe Bridge, Hobsonville
Rollover Designation	Yes
Legacy Reference	Designation NZTA4, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

N/A.

Conditions

1. General

Modification of SH16B

i. That the proposed SH16B designation be modified by reducing its size so that it does not extend northward of the current SH16 intersection with Brigham Creek Road. This modification shall be as shown on Plan TNZ/03 attached to these conditions.

Maintenance of Land

ii. That any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

Access

iii. Where private access to private property is directly affected by the designation, Transit New Zealand, in consultation with each affected owner, shall provide suitable alternative vehicular access to those properties unless the affected landowner agrees otherwise. Such alternative access shall:

a. In those cases where the proposed access serves the same or lesser number of properties as the existing access or accesses, be of no lesser construction standard than the existing access.

b. In those cases where the proposed access serves a greater number of properties than an existing access or accesses, comply with the Waitakere City Council construction standards applicable at the time. In all cases works must be completed and maintained to ensure access to those properties at all times. For the purposes of this condition, the term "properties" shall include only those properties existing at the time of confirmation of the designation or once appeals have been determined (whichever is the later).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vehicular access

iv. At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, Transit New Zealand shall ensure that the property owner is consulted about the most suitable time for carrying out the work and shall minimise the period during which vehicular access is prevented.

Liaison person

v. That a permanent liaison person shall be immediately appointed by Transit New Zealand for the duration of the highway project to be the main and readily accessible point of contact for persons affected by the designation and construction works. The liaison person's name and contact details shall be advised to affected parties by Transit New Zealand. This person must be available for ongoing consultation on all matters of concern to affected persons.

Iwi protocols

vi. The iwi protocols submitted with the Notice of Requirement (Appendix 14, Volume 2 of the AEE) shall be followed.

Pegging properties

vii. That, where requested by owners, Transit New Zealand shall physically peg out the extent of the alignments on individually affected properties once the designation has been confirmed or once all appeals have been determined (whichever is the later).

Monterey Park Signage

viii. That appropriate signage shall be provided directing access to Monterey Park, in consultation with the owner of that site.

Specific properties

ix. In carrying out detailed design, Transit New Zealand shall consult with the owners of 143, 147 and 155 SH16, 21 Brigham Creek Road and 122 Hobsonville Road and shall to the greatest practicable extent minimise land take from those properties.

Definition of "practicable"

x. For the purpose of these conditions, in determining whether a proposed activity is "practicable" or "impracticable", Transit New Zealand shall have regard to:

- The nature of the proposed activity; and
- The sensitivity of the environment which will be affected by the proposed activity; and
- The financial implications of the proposed activity when compared with other options; and
- Relevant planning instrument; and
- The effects on the environment of the proposed activity when compared with other options; and
- The current state of technical knowledge and the likelihood that the proposed activity can be successfully carried out.

Outline Plans and Management Plans

xi.

a. Prior to the commencement of the works, Transit New Zealand shall submit to Council the relevant Management or Mitigation Plans required under Conditions 3.ii. and 6.i.

b. The Plans shall be submitted to Council as soon as reasonably practicable, and in any event, allowing sufficient time for review by Council and discussion with Transit.

c. Any Management, Mitigation or Outline Plans may be submitted in stages to reflect any proposed staging of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the physical works.

d. If Council and Transit agree on the terms of such Management or Mitigation Plans, that agreement shall be deemed to be a waiver pursuant to section 176A(2)(c) of the RMA of the requirement for an Outline Plan and under section 176A.

e. If Council and Transit do not agree on the terms of such Plan or Plans, the provision of section 176A of the RMA shall apply of any matter not agreed.

f. The works shall be undertaken in accordance with the relevant Management or Mitigation Plan or Outline Plan (as the case may be).

2. Road Design

Shoulder bus lanes

i. That a motorway cross-section shall be provided for that can accommodate future 3.5m shoulder bus lanes.

Hobsonville Road interchange

ii. That Transit shall incorporate facilities for pedestrians and cyclists at the Hobsonville Road interchange in general accordance with the attached plan entitled Figure 1 - Hobsonville Road Cyclist Facilities.

Cycle and pedestrian paths

iii. That Transit New Zealand shall reinstate or replace existing cycle or pedestrian paths affected by the designation to a similar standard as existing.

Cyclists and Pedestrians

iv. That adequate provision shall be made to ensure that cyclists and pedestrians can travel between the Upper Harbour Bridge and Hobsonville Road.

Utility Operators

v. Subject to the general powers and obligations as set out in section 54 of the Transit New Zealand Act 1989, during the detailed design processes and subsequent construction processes, Transit New Zealand and its agents shall liaise with all relevant utility operators prior to undertaking any work in reliance on the designation and shall ensure that all existing utility services located in or adjacent to the motorway designation are:

a. Either protected from any activity which may interfere with the proper functioning of the services, or relocated; and

b. If damaged, repaired; at Transit New Zealand's expense, to the reasonable satisfaction of the affected utility operator.

3. Noise Impact Mitigation

i. That the alignments be designed and constructed in accordance with Transit New Zealand's "Guidelines for the Management of Traffic Noise for State Highway Improvements", December 1999.

ii. That a detailed Noise Mitigation Plan shall be prepared by a suitably qualified noise consultant in consultation with the Director of Planning, Waitakere City Council. The Noise Mitigation Plan shall be submitted to the Director of Planning, Waitakere City Council, prior to construction. The purpose of the plan is to describe the method by which noise associated with traffic using the roading within the designation will be made to comply with specified noise limits. Where the ambient sound level is required to be monitored to determine design limits then this shall be done prior to construction commencing.

iii. Noise monitoring shall be undertaken in accordance with NZS6801:1991 Measurement of Sound. Transit New Zealand shall ensure that representative noise monitoring of the Highway route is undertaken at its expense by a suitably qualified and experienced acoustical consultant if so requested by Waitakere

The Proposed Auckland Unitary Plan (notified 30 September 2013)

City Council within nine months of the opening of the whole route if that occurs separately. Results of all noise monitoring shall be supplied to Council within six weeks of the monitoring being completed.

iv. That during construction, New Zealand noise standard NZS 6803P: 1984 The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Works be complied with.

v. Notwithstanding the generality of Condition 3.iii. above, at such time as the new Highway is operational, Transit shall:

a. Undertake specific noise monitoring on the properties at:

- 70 Trig Road owned by C & S Birch, legally described as Lot 8 DP 64470;
 - 72 Trig Road owned by Jon Winifred Boyle, legally described as Lot 7 DP 64470;
 - Kedgley Drive, legally described at Lot 3 DP 117530 owned by Annemarie de Vos,
- to ensure that the specified noise limits set out in Condition 3.i. are being complied with; and

b. If such limits are not being complied with, take such further action in consultation with each of those parties and/or their authorised representative as may be necessary to ensure compliance

4. Archaeological Remains

i. That, should construction work uncover any archaeological remains, Transit New Zealand immediately advise local Kaumatua and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained.

ii. That Transit New Zealand engage a recognised archaeologist:

- a. To undertake a scientific archaeological investigation of the Sinton Store site (R11/2000) and make the requisite applications to the New Zealand Historic Places Trust for authority to modify or destroy the site (on behalf of Transit New Zealand); and
- b. To be present during construction of the section of the new SH18 alignment between Upper Harbour Drive (Hobsonville Road) and Sinton Road and to determine whether any subsurface remains are present in this section of the alignment.

iii. That Transit New Zealand implement, where practicable, any recommendations made by the archaeologist in relation to conditions 4.i. and 4.ii. above.

5. Heritage

Relocation of Heritage Buildings

- i. With respect to the buildings at 1, 2 and 3 Clarks Lane, 1 Brigham Creek Road and 130 Hobsonville Road, Transit shall pay the reasonable costs (including the costs of any consents required) for each building of:
- a. relocating it appropriately to a new location within the wider Hobsonville area which recognises the historical significance of that building; then
- b. refurbishing to its “pre-removal” standard.

This Condition shall remain operative until such time as the construction of the SH16/18 realignment project requires that the building or buildings (as the case may be) need to be removed. Transit shall commence consultation with appropriate heritage authorities (including the Waitakere City Council) and landowners regarding relocation options not later than six months prior to the commencement of construction works. If no party has come forward who is willing to provide a suitable site for relocation, then Transit shall, subject to any necessary investigation and recording of heritage significance as required by the appropriate heritage authorities, be entitled to dismantle and/or dispose of the building or buildings at that time. It is noted that Historic Places Trust authorisations may also be required.

ii. 2-4 Sinton Road

- a. Subject to compliance with the mitigation requirements set out in this Condition, Transit is authorised under the designation to demolish the heritage building at 2-4 Sinton Road.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Demolition shall be undertaken under the supervision and instruction of a suitably qualified archaeological expert. Demolition shall be undertaken in a manner, and at a rate, that allows careful recording and appropriate sampling of materials to provide an archive of the historical evidence that is to be destroyed. The guiding principles that are to be followed in undertaking the demolition are those set out in the ICOMOS document 'Principles for the Recording of Monuments, Groups of Buildings and Sites (1996)'.
- c. In addition to the detailed recording set out in paragraph b. above, Transit shall use all reasonable endeavours to save parts of the building for display in a suitable archival institution. Assuming that suitable institution can be located that is interested in hosting such a display, Transit shall fully fund all steps necessary to prepare the display, including costs of transport, storage, and the preparation of explanatory materials showing the construction techniques and the materials utilised in construction.
- d. In addition to the foregoing, Transit shall fund the preparation of an illustrated booklet outlining the history, architecture and technology of the building (in the context of the history of experimentation with concrete structures and the relationship with the ceramics industry, particularly the Hobsonville ceramics industry). This study will also include information relating to the broader heritage context at the site, including its relationship with other historic houses in nearby Clarks Lane.
- e. In undertaking the mitigation works referred to in paragraphs (b) - (d) above, Transit shall not be required to expend more than a total of \$100,000.
- f. In addition to the mitigative works referred to above, Transit shall make a contribution to the Waitakere City Council of the sum of \$300,000 as offsetting mitigation for the loss of the heritage values associated with 2-4 Sinton Road. That sum is to be utilised by Waitakere City Council on such heritage projects within the broader Waitakere City area, and if possible the Hobsonville area, as the Council deems appropriate.

Hobsonville State Highway 16B and 18C: Mitigation Measures in Regard to Ecological Effects. Prepared by Boffa Miskell Limited March 1999

5.1 Wallace Inlet

It appears that SH18 C will pass close enough (i.e. the toe of the fill batter) to the Wallace Inlet that the native vegetation here will be affected through clearance, and that the existing riparian (buffer) vegetation will be disturbed. Adequate mitigation will involve the revegetation of an appropriate riparian buffer zone at the head of the Wallace Inlet (including road side batter slopes within the estuary area). It will also involve the promotion of natural regeneration of estuary inlet vegetation through weed control, monitoring and enhancing the establishment of mangroves either through using mangrove seed traps (which is as yet an experimental method and simply involves the installation of small stakes at strategic positions with which to encourage the settlement of mangrove seeds washed in by the full tide) or by direct planting of recently germinated seedlings thinned from the adjacent mangrove estuary. This should promote the re-establishment of estuary habitat with the eradication of the existing weed populations within the immediate area (including adjacent areas less affected by the roadway) and the revegetation of cleared or weeded areas. Because the batter toe appears to remove the small salt marsh at the inlet head, changing the topography as it does this vegetation type may not return to occupy its former position, however, with the proposed mitigation the system is highly likely to return to a native, natural, estuary condition.

The species used for revegetation should reflect the transition from estuary inlet to terrestrial and potentially be comprised species such as:

Canopy	Common Name	Spacing	Plant Size	% Composition
<i>Metrosideros excelsa</i>	Pohutakawa	7m	PB5	5
<i>Corynocarpus laevitagus</i>	Karaka	3m	PB5	10
<i>Sophora microphylla</i>	Kowphai	3m	PB5	10
Lower Tier				
<i>Pseudopanax lessonii</i>	Coastal Five Finger	0.5m	PB2	20
<i>Leptospermum scoparium</i>	Manuka	0.5m	PB2	25
<i>Phormium tenax</i>	Flax	1m	PB2	10
<i>Coprosma lucida</i>	Karamu	0.5m	PB2	10

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Cordyline australis	Cabbage Tree	0.5m	PB2	5
Pittosporum crassifolium	Karo	1m	PB2	5

5.2 SH16 B - SH18 C Intersection Wetland

Just north and immediately down stream of the proposed intersection of SH16 B and SH18 C is one of the better native wetland habitats through which the new highways pass (though it is nevertheless modified). A bridge for SH 18 C and a bridge like structure for SH 16 B in these areas may avoid adverse effects, but only if it retained habitat beneath its structure - this would be an expensive option and probably not warranted given the modified nature of the wetland. Suitable mitigation for the loss of some of this area could involve the following:

1. Plant the remainder of the alluvial flood plain north of SH 16 B beyond the earthworks (see Fig. 1, wetland corridor) with appropriate species to form a thin natural habitat corridor;
2. Begin the establishment of a swamp forest / flood plain forest habitat on the alluvial plain immediately adjacent to the designation in between SH 18 C and SH 16 B (Fig.1, swamp forest);
3. Recreate a new wetland of better (without the exotic tree components etc) quality than the existing one between SH 16 B and SH 18 C (Fig. 1, wetland) including an open water area;
4. Replace or create native riparian vegetation on the bank side-slopes and wetland edges and batter slopes (Fig. 1 riparian edges); and
5. Construct fish "friendly" culverts beneath the highways as these will be necessary in order to link the wetland with the wider freshwater ecosystem. For SH 16 B this may mean long lengths of culvert which are likely to need to have passage devices (such as baffles) to ensure no lamina flows (culverts over 20m and/or those that change the flow dynamics).

For establishment of a wetland this may involve some or all of the following:

- Creation of a shallow pond or ponds (minor earth works with associated sediment discharge precautions);
- A weir or weirs with suitable fish passage devices connecting the ponds and lower reaches and ensuring at least minimal water retention within the ponds;
- Planting of appropriate wetland vegetation.

This area could potentially also be used for stormwater treatment utilising the wetland vegetation to remove suspended solids and absorb and trap pollutants.

Wetland vegetation should be with species such as:

Inundated Area	Common Name	Spacing	Plant Size	% Composition
Phormium tenax	Flax	1m	PB5	50
Typa orientalis	Raupo	In clusters		Clusters in water
Carex secta	Carex	1m	PB2	20
Juncus articulartris	Jointed Rush	In clusters	PB2	20
Cordyline australis	Cabbage Tree	0.5m	PB2	10
Drier Areas				
Cordyline australis	Cabbage Tree	0.5m	PB2	20
Leptospermum scoparium	Manuka	0.5m	PB2	40
Cordaderia splendens	Toe-toe	1m	PB2	10
Coprosma lucida	Karamu	0.5m	PB2	10
Phormium tenax	Flax	1m	PB2	10

For establishment of the swamp forest / flood plain forest habitat vegetation should be with species suchas:

Canopy (later planting)	Common Name	Spacing	Plant Size	% Composition
Darcycarpus dacrydioides	Kahikatea	3m	PB8	30

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Podocarpus totara (drier areas)	Totara	5m	PB8	5
Agathus australis (drier areas)	Kauri	5m	PB8	5
Sophora microphylla (edges)	Kowphai	5m	PB8	5
Lower Tier (initial nursery planting)				
Cordyline australis	Cabbage Tree	0.5m	PB2	10
Leptospermum scoparium	Manuka	0.5m	PB2	30
Cordaderia splendens	Toe-toe	1m	PB2	5
Coprosma lucida	Karamu	0.5m	PB2	10

For terrestrial riparian vegetation (which maintains the terrestrial corridor connections beyond the wetland / swamp forest) (Fig. 1, riparian vegetation) the following species should be planted:

Canopy	Common Name	Spacing	Plant Size	% Composition
Sophora microphylla (edges)	Kowphai	5m	PB5	5
Cordyline australis	Cabbage Tree	0.5m	PB2	10
Phormium tenax	Flax	1m	PB2	10
Leptospermum scoparium	Manuka	0.5m	PB2	65
Coprosma lucida	Karamu	0.5m	PB2	10

For the corridor connection beyond the wetland / swamp forest area towards the lower existing flax swamp (Fig. 1, wetland corridor) the following species should be planted adjacent to the existing water channel to form a thin linear vegetation corridor:

Canopy	Common Name	Spacing	Plant Size	% Composition
Cordyline australis	Cabbage Tree	0.5m	PB2	20
Phormium tenax	Flax	1m	PB2	60
Carex secta	Carex	1m	PB2	10
Coprosma lucida	Karamu	0.5m	PB2	10

iv. Should the existing wetland located next to the intersection of SH16 and SH18 be used for the purposes of providing stormwater treatment, then it shall also continue to provide for wildlife habitats. This shall be achieved by ensuring that all stormwater is pre-treated prior to entering this wetland and all structures associated with pre-treatment are located, as far as practicable, adjacent to (rather than within) the wetland itself. In addition to this wetland being enhanced in accordance with condition 5.iii. above, all potential adverse effects on the existing water regime within this wetland, its stream and its adjacent flood plain shall be avoided if practicable or, if unavoidable, shall be minimised.

v. Where there is continuous water flow, Transit shall design and position culverts (with the assistance of a suitably qualified freshwater biologist) to facilitate the passage of fish species which are resident upstream at the following locations: Waiarohia Stream (chainages 2950 and 3950), Trig Stream (chainage 3050), Rawiri Stream (chainage 3300), Totara Creek (chainage 1500), Lower Totara Creek (chainage 2800), Upper Totara Creek (chainages 110-1350 and 1550) and Pikau Stream.

vi. Any realigning of existing perennial waterways shall be avoided or, if unavoidable, shall be minimised. Where streams are realigned, the design of any new channel shall be carried out with the advice of a fresh water biologist, and shall include the creation of appropriate habitat opportunities for aquatic fauna and the retention and establishment of riparian vegetation.

6. Ecological Impact Mitigation

i. Prior to the commencement of any works, an Ecological Mitigation Plan shall be prepared by a suitably qualified ecologist in consultation with the Waitakere City Council. This Plan shall address the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

matters raised in Conditions 6.ii. to 6.vii. below.

ii. That a revegetation programme be carried out for those parts of the Totara Stream within or adjoining the proposed SH16B designation footprint. This programme shall focus on revegetation with native species, eco-sourced and densely planted.

iii. The Wallace Inlet and wetland areas are to be rehabilitated in accordance with the Boffa Miskell Ecological Mitigation report Sections 5.1 and 5.2 (as below):

7. Visual Impact Mitigation

i. That Transit New Zealand engage a landscape architect to investigate and make recommendations with regard to the following conditions.

a. That all borrow and disposal areas for excess fill be designed and constructed to avoid significant impact, be in keeping with the general form of the surrounding landscape, and that all such areas be restored, in consultation with relevant land owners, upon completion of project construction.

b. That restoration measures include grassing and other planting for slope stability, together with landscape planting, using locally sourced native species where available.

c. That wherever possible embankment and slopes associated with the alignments be planted as soon as practicable, using locally sourced native species where available.

d. That in carrying out the detailed design for the alignment, Transit New Zealand shall take advice from a practising landscape architect and shall pay particular attention to:

i The attached plans entitled:

- Concept Landscape and Visual Mitigation (Plans 1 to 5) dated 2 March 1999;
- Landscape Mitigation for 70 & 72 Trig Road (Figure 1) dated 20 June 2001; and
- Kedgley Drive Replacement Planting Concept Plan (Figure 2) dated 12 February 2000.

ii. The angle and extent of cut and batter slopes;

iii. Oblique cuts through highly visible ridge lines:

- In order to achieve, as far as practicable, unity between the road and the surrounding landscape units; and
- Shall prepare, with advice from a practising landscape architect, and in due course implement, a planting plan that will integrate the alignments into the various landscape units through which it passes.

iv. Mitigation by appropriate replacement vegetation of any existing vegetation that must be removed within the designation.

e. That a landscape plan be finalised during the detailed design stage by an experienced landscape architect appointed by Transit New Zealand.

ii. That Transit New Zealand implement, to the greatest extent practicable, the recommendations of the landscape architect in relation to conditions 7.i.a to e. above.

8. Transpower New Zealand

a. All mobile plant operated in relation to the road alignment shall maintain a 6.5 metre clearance from Transpower New Zealand lines at all times and no temporary buildings or stationary plant shall be located within 8 metres of any line.

b. Any landscaping planting shall be selected and located to ensure that no part of any tree will be within or grow into an area closer than 4 metres vertical clearance within the 15 metre horizontal clearance from Transpower New Zealand lines.

c. All earthworks around the transmission lines of Transpower New Zealand shall maintain a ground level that provides a minimum 6.5 metre vertical clearance at all times.

d. Subject to the further condition 8.viii. below, no excavation works shall be undertaken within 12 metres of tower foundations, unless otherwise agreed to by Transpower New Zealand.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

e. Activities relating to the road alignment shall ensure that 4 wheel drive access to the existing support structures of Transpower New Zealand is possible at all times, provided that no access from the motorway lanes shall be permitted without the prior permission of Transit New Zealand.

f. Transit New Zealand shall inform Transpower New Zealand before any work is carried out within 30 metres of the existing transmission lines.

g. No excavation works shall be undertaken or structure built within 12 metres of the foundation of the pylon marked on the attached plan ("Transpower Plan") unless all necessary engineering calculations for the construction of the retaining wall have been submitted and approved by Transpower New Zealand.

9. Kedgley Road

a. Transit shall use its best endeavours to designate as "local access ancillary to State Highway purposes" the parts of Lots 1, 2, 3 and 4 DP 11750, Lots 3 and 4 DP 96884, and Lot 2 DP 127335 shown as "proposed road designation: on the plan entitled "Kedgley Drive - Proposed Designation" attached as Figure 3; and

b. In the event that the land referred to in Condition 1 above is designated and either acquired or rights of access secured by landowner agreement by 30 June 2003, then Transit will:

i. Build a replacement of the existing Kedgley Drive ("the new Kedgley Drive") in the location shown in Plan entitled "Kedgley Drive Replacement - Initial Development attached as Figure 4. The new Kedgley Drive will be constructed to Waitakere City Council standards with a 6m carriageway width with a design profile allowing for future widening to full road width and will be completed and operational before the existing Kedgley Drive is closed off.

ii. Undertake all legal steps necessary to establish a right of way over the new Kedgley Drive to the owners of land to be served by it. The right of way shall be established on terms which give those owners:

- Common and exclusive rights of occupation of the new private way; and
- Sole obligation for its maintenance and upkeep - subject to the Council choosing at some time in the future to acquire the relevant land and take over responsibility for the new Kedgley Drive as a public road;

iii. Form one vehicle crossing on to the new Kedgley Drive for each block of land served by it. Such vehicle crossings shall be constructed to the standards set out in the attached extract from Waitakere City Council's Engineering Standards Manual Issue 3.1, entitled "Heavy Commercial Vehicle Crossing - SD.3.11", November 1999 (Figure 5). The vehicle crossings shall be established in the location specified by each landowner (as far as that location is consistent with the Waitakere City Council standards);

iv. Form an additional residential standard crossing place onto Lot 3 DP 117530 at the location specified by the owner of that property; and

v. Form a "cul-de-sac" termination to the end of the new Kedgley Drive to Waitakere City Council standards in the general location shown on Plan SK8004/15 [Figure 4].

c. In the event that the land referred to in Condition 1 above is not designated by 30 June 2003 or the land cannot either be acquired or rights of access secured to it by that date, then Transit will:

i. Build a replacement of the existing Kedgley Drive ("the new private way") in the general location shown on Plan entitled "SH16/18 - Original Kedgley Drive" attached as Figure 6. The new private way will be constructed to the same specifications as the existing Kedgley Drive and will be completed and operational before the existing Kedgley Drive is closed off.

ii. Form a "cul-de-sac" termination to the end of the new private way to Waitakere City Council standards in the general location shown on Figure 6.

iii. Form one vehicle crossing on to the new private way for each of block of land served by it. Such vehicle crossings shall be constructed to the standards set out in the attached extract from Waitakere City Council's Engineering Standards Manual Issue 3.1, entitled "Heavy Commercial Vehicle Crossing - SD3.11", November 1999. The vehicle crossings shall be established in the location specified by each landowner (as far as that location is consistent with the Waitakere City Council standards); and

iv. Upon completion of the SH16/18 project:

- Undertake all legal steps necessary to establish a right of way over the new private way to the owners of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

land which will be served by it on terms which give those owners:

- Common and exclusive rights of occupation of the new private way; and
- Sole obligation for its maintenance and upkeep; and
- Vest the new private way with the landowners served by the new private way in the same proportions as those owners presently own the existing Kedgley Drive.

10. Duration of the Designation

In accordance with Section 184(1)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of fifteen years after the date on which it is included in the District Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority determines, on an application made within 3 months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

Advise Notes

1. Transit New Zealand is to take part as appropriate in investigations with the Waitakere City Council covering the following matters:

- a. Possible provision of linkages between SH18B and SH18C (including east-facing ramp arrangements for Trig Road);
- b. Possible provision of linkages between SH16B/SH18C, and Red Hills and Westgate; and
- c. Possible provision of an interchange at SH18C/Buckley Avenue/Monterey Park.

It is expected that these investigations shall be conducted in the 2001/2002 financial year.

2. It is expected that Transit New Zealand will, as undertaken at the hearing, proceed immediately to initiate the formal procedures necessary to designate the land required for the Buckley Avenue interchange and altered SH18C alignment in that area.

3. It is noted that Transit New Zealand will meet the relevant minimum site size standards applying in the Proposed District Plan when arranging for the disposal of surplus land.

4. That, should an agreement be reached between land owners obtaining access from Kedgley Drive and the Waitakere City Council with regard to the position of Kedgley Drive which would best serve the future roading pattern for the area, then Transit shall give consideration to providing a financial contribution to the establishment of that road to the same level as it would otherwise contributed towards (and in lieu of) works to replace Kedgley Drive.

5. Waitakere City Council requests that Transit New Zealand take all necessary steps to resolve issues of land purchase as soon as reasonably practicable.

6742 State Highway 16 - Henderson to Massey

Designation Number	6742
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from Henderson Creek, Henderson to Huruheru Road Bridge, Massey
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation NZTA5, Auckland Council District Plan (Waitakere Section)2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Refer NOR-2010-1559.

Conditions

Description of Works

1. Except as modified by the conditions below, the works which give effect to this alteration to the designation for State Highway 16 from the eastern abutments of Henderson Creek (at approximately chainage 8080) as shown on the Schedule of Plans and Drawings shall be undertaken in general accordance with the Notice of Requirement for an alteration to designation and the Assessment of Environment Effects titled "SH16 Western Ring Route Henderson Creek to Huruwharu Road Bridge" dated October 2010, referenced by the Auckland Council as "NOR-2010-1559" and subject to the conditions which follows.

Construction Environment Management Plan ("CEMP")

2. Prior to commencement of construction activity within the designation boundaries, the Requiring Authority shall submit a CEMP to the Auckland Council in respect of that stage of works. The CEMP shall include specific details relating to the demolition, construction and management of all works associated with the project, including:

- Details of the site or project manager, including their contact details (phone, email, postal address, The location of large noticeboards that clearly identify the name and telephone number of the project manager
- Any means, such as a restriction on the size of construction vehicles and machinery, required to ensure that no damage occurs to street trees throughout the construction period
- Any means of protection of services such as pipes and water mains (including infrastructure operated by Watercare Services Limited) within the road reserve
- Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building/construction materials and similar construction activities
- Measures to be adopted to ensure that pedestrian and cycle access past the works is provided where practicable and that such access is safe
- Location of workers conveniences (e.g. portaloos)
- Ingress and egress to and from the works for vehicles during the construction period
- Proposed maximum numbers and timing of truck movements throughout each day and the proposed routes to be used
- Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days
- Location of vehicle and construction machinery access and storage areas/facilities during the construction period
- Hours of operation and days of the week for construction activities
- Means of ensuring the safety of the general public
- Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works
- Provision for the saltmarsh protection methods referred to in condition 19 of resource consent 35599
- The appendix required by condition 4, the CTMP required by condition 6, the measures to protect Vodafone infrastructure required by condition 5 and the various management plans required by conditions 10 to 14.

3. The approved CEMP shall be implemented and maintained throughout the relevant stage of works. Any

The Proposed Auckland Unitary Plan (notified 30 September 2013)

amendments are to receive the prior approval of the Council and are then to be incorporated into a single document.

Electrical Infrastructure

4. The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan ("EISDCMP"). The EISDCMP is to include:

i. Methods and measures to:

- a. Ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities;
- b. Appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines;
- c. Ensure that no activity is undertaken during construction that would result in ground vibrations or ground instability likely to cause material damage to the transmission lines, including the support structures;
- d. Section 5 with respect to minimum safe differences for the operation of mobile plant; and,

ii. Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including but not limited to, the provisions of the Schedule (Growth Limit Zones) to those Regulations.

iii. Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZCEP 34:2001), including but not limited to the provisions of:

- a. Clause 2.2 with respect to excavations near overhead support structures;
- b. Clause 2.4 with respect to buildings near overhead support structures;
- c. Section 3 with respect to minimum Section 5 with respect to minimum safe differences for the operation of mobile plant; and,
- d. separation between buildings and conductors;
- e. Table 4 with respect to minimum safe separation distances between the ground and overhead conductors.

Note:

With respect to clause c), specific consideration must be given to the height and location of temporary structures (such as project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers).

Vodafone Infrastructure

5. The CEMP prepared for the purpose of condition 2 shall include methods and measures:

- i. To ensure that the existing Vodafone infrastructure in the vicinity of the designation area can be accessed for maintenance at all reasonable times, or emergency works at all times, during construction activities;
- ii. To manage appropriately the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the tower and the equipment shelter and the equipment within it;
- iii. To ensure that no activity is undertaken during construction that would result in ground vibration and/or ground instability likely to cause material damage to the tower, including support structures and the equipment shelter together with the associated electrical equipment in the shelter. This clause also covers cables associated with the Vodafone infrastructure, including any running from the Vodafone site to the Concourse;
- iv. To ensure that no plant or equipment of 18m or higher is used in the immediate vicinity of the cell tower;
- v. If plant or equipment used for the project works is likely to intrude into the path from the existing microwave dish on the Vodafone mast (located at 18 metres above ground level with an azimuth of 301 degrees True), NZTA shall endeavour to provide advance warning prior to these works being undertaken;
- vi. NZTA, together with its invitees, employees and or contractors, acknowledge that the operation of the telecommunications facility relies on the transmission and reception of radiofrequency emissions 38Ghz licensed band Tx 37667.0 Hz 7 Rx 38927.0 Hz, GSM900: UL: 899.8 – 915 MHz_DL:945- 960MHz GSM1800: UL 1710-1725 MHzDL:1805 – 1820 MHz, UMTS2100: UL:1920-1935 MHz_DL:2110-2125 MHz and will use its best endeavours not to permit any act that causes interference with the telecommunications facility (as defined in section 2 of the Radio Communications Act 1989).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Traffic

6. Any CEMP prepared in terms of condition 2 shall include a Construction Traffic Management Plan ("CTMP") for the project which shall be prepared by a suitably qualified person.

7. In developing the CTMP the Requiring Authority shall:

- i. Use best practice to understand the effects of construction of the project or project stage on the affected road network better which may include the use of appropriate traffic modelling tools. Any such assessment should be undertaken in consultation with the Auckland Council, and have the ability to simulate lane restrictions and road closures; and
- ii. As far as practicable, undertake measures to avoid road closures and also the restriction of vehicle, cycle and pedestrian movements.

8. The CTMP shall describe the measures that will be undertaken to address the following, as far as practicable:

Methods of avoiding, remedying or mitigating the local and network wide effects of construction of the project. In particular, the CTMP shall describe:

- i. Traffic management measures to address and maintain, where practicable, traffic capacity at traffic peak hours during weekdays and weekends at the Lincoln Interchange and Lincoln Road;
- ii. Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- iii. Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (eg. intersections/overbridges) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- iv. Methods to manage the effects of the delivery of construction material, plant and machinery (including oversized trucks);
- v. The numbers, frequencies, routes and timing of construction traffic movements.

9. Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the designation at all times and not on surrounding streets.

Air Quality

10. The Requiring Authority shall ensure that the CEMP developed for the project includes a dust monitoring programme to control dust generated during the construction and earthworks phases of the project, in order to minimise dust deposition and nuisance beyond the designation boundaries.

Monitoring activities shall include:

- i. Monitoring of total suspended particulate using e-BAMs or equivalent adjacent to particularly sensitive receiving environments such as dwellings and ecological habitat areas;
- ii. Daily inspection of all unsealed surfaces (including earthworks sites) for dampness and to ensure that surface exposure is minimised;
- iii. Daily inspection of all sealed surfaces to ensure that they are clean and all spillages have been cleared;
- iv. Daily inspection of stockpiles to ensure enclosure, covering, stabilisation or a damp condition;
- v. Monitoring of dust generating activities and water application rate in winds over 5.5m/s at ground level;
- vi. Weekly inspection of watering systems to ensure equipment is maintained and functioning to effectively dampen all exposed areas;
- vii. Weekly inspection of wheel wash equipment to ensure effective operation;
- viii. Weekly checking that all site windbreak fences are intact.

Construction Noise and Vibration Management Plan ("CNVMP")

11. Any CEMP prepared in terms of condition 2 shall include a CNVMP for the project or relevant project stage, which shall be prepared by an appropriately qualified person.

12. The CNVMP shall include specific details relating to the control of noise and vibration associated with

The Proposed Auckland Unitary Plan (notified 30 September 2013)

demolition, construction and management of all works associated with the project.

13. The CNVMP be formulated to detail as far as practicable the manner in which construction noise will be managed to achieve compliance with the relevant construction noise limits. In summary this would address the following matters:

- i. the construction noise limits which apply to particular areas
- ii. construction techniques
- iii. machinery and equipment to be utilised
- iv. days and times when noisy construction work would occur
- v. the use of noise barriers
- vi. the design of noise mitigation measures
- vii. alternative mitigation measures
- viii. monitoring and reporting of noise levels at critical locations and methods for managing complaints.

14. As far as practicable the CNVMP shall be formulated to be in accordance with the vibration standards of German Standard DIN 4150 and shall address the following aspects:

- i. vibration limits
- ii. vibration monitoring measures
- iii. possible mitigation measures
- iv. complaint response
- v. reporting procedures.

15. The approved CNVMP shall be implemented and maintained throughout the entire demolition and construction periods. Any amendments must receive the prior approval of the Council and are then to be incorporated into a single document.

Landscape and Visual

16. The landscape planting shall be implemented in accordance with the Landscape Plan (Plan PD11901 to PD11903) and the Visual Assessment and Ecological Assessment (lodged with the Notice of Requirement) within the first planting season following the completion of the construction works provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained for the next 3 years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping may be implemented after the first planting season of each stage.

17. Where practicable, any planting utilising native species shall use plants genetically sourced from the ecological district.

18. Planting areas shall be mulched using suitable weed-free, granular organic mulch. The only exceptions to this shall be where the slopes are too steep to allow for its retention. In such cases a neutral or black coloured biodegradable or photodegradable geotextile is to be used.

Iwi Matters, Archaeology and Heritage

19. In the event of an accidental discovery of any unrecorded archaeological sites, including human remains, the following steps shall be taken:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease.
- ii. The site construction supervisor will notify the NZTA archaeological consultant who in turn will contact the project manager at NZTA. In the event of the project manager being unavailable the matter will be reported by the consultant to the Regional Manager of the NZTA.
- iii. NZTA will ensure that the matter is reported to the Regional Archaeologist at the NZHPT, the tangata whenua and to any required statutory agencies if that has not already occurred.
- iv. In the event that the accidental discovery material is confirmed as being archaeological, under the terms of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the Historic Places Act, the NZTA shall ensure that the archaeologist carries out an archaeological assessment, and if appropriate, an archaeological authority is obtained from the NZHPT before work resumes.

v. NZTA will ensure that representatives of the consultant and the contractor, as appropriate, shall be available to meet and guide representatives of the NZHPT and tangata whenua, and any other party with statutory responsibilities, to the discovery site.

vi. Works in the site area shall not recommence until authorised by NZTA after consultation with the NZHPT, tangata whenua, the NZ Police (and any other authority with statutory responsibility) to ensure that all statutory and cultural requirements have been met.

vii. Work may recommence in the shortest possible timeframe provided that any archaeological sites discovered are protected until as much information as practicable (in the opinion of the archaeological consultant) is gained and a decision regarding their appropriate management is made, including obtaining an archaeological authority if necessary. (Note: Appropriate management could include recording or removal of archaeological material.)

Replacement of Kauri Trees

20. The Requiring Authority shall replace the two kauri trees identified on Plan SKC700 with two trees (Size PB 100, species - *Agathis australis* (Kauri), or *Dacrycarpus dacrydioides* (Kahikatea), or *Weinmania silvicola* (Towai)) in a new location, known as "Sherwood Park", 460 metres due south from the current Kauri location, the exact position of each new tree to be as approved by the Auckland Council. The trees are to be eco-sourced from the Tamaki Ecological District and if possible planted by members of the local community.

Provisions for QTN infrastructure

21. The Requiring Authority shall not remove or reduce in capacity the bus shoulder lanes on the on-ramps, or on the mainline motorway at Lincoln Road, without first consulting with Auckland Transport.

Integration with the local road network

22. In collaboration with Auckland Transport, within 60 days of the alteration of NZTA1 becoming operative the Requiring Authority shall prepare a Network Integration Plan ("NIP") to demonstrate how the project integrates with the existing local road network and with future improvements planned by Auckland Transport. The NIP shall include details of proposed physical works at the interface between the State Highway and the local road network, and shall address such matters as pedestrian / cycleways, lane configuration, traffic signal coordination, signage and provision for buses. In addition the NIP is to consider and to identify:

- i. opportunities to progress bus priority measures on Lincoln Road;
- ii. opportunities to provide an off-road cycle way, or on-road cycle lanes on both sides of Lincoln Road;
- iii. integration of the works proposed on Lincoln Road to transition appropriately between the SH16 Western Ring Route Henderson Creek to Huruwharu Road Bridge Project and any projects proposed by Auckland Transport at the time the NIP is prepared;
- iv. integration of works proposed on the Huruwharu Road bridge with the local road network;
- v. opportunities to review traffic signal timings at the Lincoln Road Interchange with a view to minimising delays to all users, including cyclists on the SH16 cycleway;
- vi. opportunities to progress bus priority measures on the on- and off-ramps at the Lincoln Road Interchange and on the Selwood Road Bridge.

Operational Noise

23. The operational noise emissions from State Highway 16 shall be managed in accordance with the recommendations of the Noise and Vibration Technical Report submitted with the Notice of Requirement being Volume 3 of "Western Ring Route – SH16 Henderson Creek to Huruwharu Road Bridge". This management shall include the provision of noise mitigation for protected premises and facilities where necessary to comply with NZS6806:2010. Design details of operational noise mitigation barriers are to be designed in accordance with Plan PD11361 (Revision B), Plan PD11362 (Revision B), Plan PD11363 (Revision B), Plan PD11364 (Revision B), Plan PD11365 (Revision B), Plan PD11366 (Revision B), Plan PD11367 (Revision A) and Plan PD11372 (Revision B).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vehicle Crossing

24. Vehicle access through the existing vehicle crossings to properties off Selwood Road and The Concourse shall be retained.

Vibration

25. If construction work requiring any one of the following activities: piling, blasting, vibratory roller and/or rock breaking, is to take place within 30 metres of a residential dwelling, the following shall be undertaken:

a. At least one month prior to the commencement of construction activities, the Requiring Authority shall (with the permission of the landowner) commission an independent consultant with expertise in the building effects arising from vibration effects to undertake a preconstruction condition survey of all dwellings that are within 30 metres or less from the edges of the construction zone. The condition survey shall identify and measure all exterior cracks and other features that may be subject to movement and shall record these for the information of the landowner, the Council and the Requiring Authority. A copy of the preconstruction survey shall be provided to the relevant landowner, the Council and the Requiring Authority prior to the commencement of construction works.

b. No less than 3 months and no more than 6 months after the completion of the construction works within the vicinity of the residential properties in respect of which the condition survey was undertaken, the Requiring Authority shall commission an independent consultant with expertise in the building effects arising from vibration effects to undertake a post construction condition survey of all dwellings surveyed as a requirement of condition 25.a. The survey shall measure and record the exterior cracks and other features surveyed previously and shall make recommendations as to what works and/or remediation, if any, are required to return the building(s) to their pre construction condition. A copy of the post-construction survey report shall be provided to the landowner, the Council and the Requiring Authority within 1 month of the completion of the report.

c. Within one month of the receipt of the post-construction survey report, the Requiring Authority shall inform the Council in writing as to the actions it will undertake to respond to each of the report's recommendations. Any actions required to be carried out as a result of the post construction report shall be completed within 4 months of the receipt of the post-construction report, provided that the relevant landowner agrees to the undertaking of the work and enables the Requiring Authority to access the property for the purposes of undertaking that work. If agreement or access is not forthcoming within one month of the request being made, the Requiring Authority shall be deemed to have complied with this condition.

Lighting

26. All lighting will be designed to comply with AS/NZS 1158.1.1:2005.

27. Maximum light spill at the boundary of the designation will be 10 lux.

Advice Notes

1. Network infrastructure owned and operated by Watercare Services is located within the designation boundaries. Agreements are being developed by the NZTA and Watercare Services which will include appropriate relocation, notification and access protocols for the construction duration and for notification and access protocols and the replacement of existing and installation of new infrastructure in the operations phase.

6743 State Highway 16 - Massey to Westgate

Designation Number	6743
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 from west of Huruhuru Road bridge, Massey to Westgate interchange, Westgate
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation NZTA6, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Fifteen years from being included in the Auckland Council District Plan (Waitakere Section) 2003 unless given effect to prior

Purpose

Refer NOR-2010-1136.

Conditions

Description of Works

1. Except as modified by the conditions below, the works which give effect to this alteration to designation for State Highway 16 from west of Huruheru Road Bridge (at approximately chainage 8450) to Westgate (at approximately chainage 9725) as shown on the General Arrangement Plans C-GA-001 to C-GA-003 in Volume 4 (the Project) shall be undertaken in general accordance with the Notice of Requirement for an Alteration to Designation and Assessment of Environmental Effects titled "SH16 Western ring route Huruheru Road Bridge to Westgate" dated 2 September 2010, referenced by Auckland Council as NOR 2010 - 1136 and subject to the conditions which follow.

For the purposes of this condition, the works comprise the following (more specifically described in the NOR and AEE) –

- i. Between Chainage 8300 and Chainage 8450, the provision of one additional lane in each direction, a bus shoulder in each direction and a pedestrian/cycleway adjacent to the westbound shoulder.
- ii. Between Chainage 8300 and Chainage 9300, the realignment of the centre-line 2.7m north to align with the Henderson Creek to Huruheru Road Bridge Project.
- iii. Between Chainage 8450 and Chainage 9725 at Royal Road Interchange, the provision of one additional lane in each direction, a bus shoulder in each direction, a water quality wetland, a pedestrian/cycleway adjacent to the westbound shoulder and allowing for a centre-line shift.
- iv. At Chainage 9150 improvements and lengthening of the Royal Road Westbound Off-ramp.
- v. Between Chainage 9725 and 10100, the provision of one additional lane in each direction, a bus shoulder in each direction and a pedestrian/cycleway adjacent to the westbound shoulder.
- vi. Between Chainage 8300 and Chainage 10100, the treatment of stormwater.
- vii. Between Chainage 10100 and 10800, the provision of a pedestrian/cycle way.

Construction Environmental Management Plan

2. Prior to commencement of construction activity within the designation boundaries, the Requiring Authority shall submit a Construction Environmental Management Plan ("CEMP") to the Major Infrastructure Team Manager, Auckland Council, in respect of the project or relevant project stage. The CEMP shall include specific details relating to the demolition, construction and management of all works associated with this development or relevant stage of the development, including:

- i. Details of the site or project manager, including their contact details (phone, facsimile/email, postal address);
- ii. The location of large noticeboards that clearly identify the name and telephone number of the project manager;
- iii. An outline construction programme of the works;
- iv. Any means, such as a restriction on the size of construction vehicles and machinery, required to ensure that no damage occurs to street trees throughout the construction period;
- v. Any means of protection of services such as pipes and water mains (including infrastructure operated by Watercare Services Limited) within the designation boundaries. The CEMP is to be provided to Watercare Services Limited for review and comment prior to the commencement of construction activity;
- vi. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

storage and unloading of building materials and similar construction activities;

vii. Measures to be adopted to ensure that pedestrian access past the works is provided where practicable and that such access is safe;

viii. Location of workers' conveniences (e.g. portaloos);

ix. Ingress and egress to and from the works for vehicles during the construction period;

x. Proposed maximum numbers and timing of truck movements throughout each day and the proposed routes;

xi. Procedures for controlling sediment runoff, dust and the removal of soil, debris and demolition and construction materials from public roads or places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;

xii. Location of vehicle and construction machinery access during the construction period;

xiii. Hours of operation and days of the week for construction activities;

xiv. Means of ensuring the safety of the general public;

xv. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works;

xvi. A Construction Noise and Vibration Management Plan ("CNVMP") as required by condition 11;

xvii. A Construction Traffic Management Plan ("CTMP") as required by condition 6;

xviii. A dust monitoring programme as required by condition 10.

3. The approved CEMP required by condition 2 shall be implemented and maintained throughout the relevant stage of works.

Electrical Infrastructure

4. The CEMP shall include, as an appendix, an Electrical Infrastructure Site Development and Construction Management Plan ("EISDCMP"). The EISDCMP is to include:

i. Methods and measures to:

a. Ensure that the existing high voltage infrastructure can be accessed for maintenance at all reasonable times, or emergency works at all times, during and after construction activities;

b. Appropriately manage the effects of dust and any other material potentially resulting from construction activities and able to cause material damage, beyond normal wear and tear, to the overhead transmission lines;

c. Ensure that no activity is undertaken during construction that would result in ground vibrations or ground instability likely to cause material damage to the transmission lines, including support structures; and

d. Ensure that changes to drainage patterns and runoff characteristics do not result in adverse effects from stormwater on the foundations of any high voltage transmission line support structure;

i. Sufficient detail to confirm that new planting and maintenance of vegetation will comply with the New Zealand Electricity (Hazard from Trees) Regulations 2003, including but not limited to, the provisions of the Schedule (Growth Limit Zones) to those Regulations;

ii. Sufficient detail to confirm that the works will comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZCEP 34:2001), including but not limited to the provisions of:

a. Clause 2.2 with respect to excavations near overhead support structures;

b. Clause 2.4 with respect to buildings near overhead support structures;

c. Section 3 with respect to minimum separation between buildings and conductors;

d. Section 5 with respect to minimum safe differences for the operation of mobile plant; and

e. Table 4 with respect to minimum safe separation distances between the ground and overhead conductors.

Note: with respect to clause c), specific consideration must be given to the height and location of temporary structures (such as project offices and other construction site facilities) and permanent structures (such as lighting poles, signage, gantries and acoustic barriers). Watercare Infrastructure

5. Unless otherwise specified in an agreement between NZTA and Watercare, the CEMP shall include methods and measures to ensure that:

i. the existing Watercare Services Limited infrastructure can be accessed for maintenance at all reasonable times or emergency works at all times, during and after construction activities; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ii. written notice is provided to Watercare Services Limited of any works within 10 metres of Watercare Services Limited infrastructure prior to commencement of works.

Construction Infrastructure

6. The CEMP shall include a Construction Traffic Management Plan ("CTMP") for the project or relevant project stage which shall be prepared by an appropriately qualified person.

7. In developing the CTMP the Requiring Authority shall:

- i. use best practice to understand the effects of construction of the project or project stage on the affected road network better which may include the use of appropriate traffic modelling tools. Any such assessment should be undertaken in consultation with the Auckland Council, and have the ability to simulate lane restrictions and road closures; and
- ii. as far as practicable, undertake measures to avoid road closures and also the restriction of vehicle, cycle and pedestrian movements.

8. The CTMP shall describe the measures that will be undertaken to address the following, as far as practicable:

Methods of avoiding, remedying or mitigating the local and network wide effects of construction of the project or relevant project stage. In particular, the CTMP shall describe:

- i. Traffic management measures to address and maintain, where practicable, traffic capacity at traffic peak hours during weekdays and weekends at Royal Road Interchange, Royal Road and Makora Road;
- ii. Any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- iii. Methods to avoid, remedy or mitigate the local and network wide effects of the construction of individual elements of the project (e.g. intersections / overbridges) and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- iv. Methods to manage the effects of the delivery of construction material, plant and machinery (including oversized trucks);
- v. The numbers, frequencies, routes and timing of construction traffic movements.

9. Any commercial earthmoving equipment or similar shall be stored or parked within the boundaries of the designation at all times and not on surrounding streets.

Air Quality

10. The Requiring Authority shall ensure that the CEMP developed for the project or relevant project stage includes a dust monitoring programme to control dust generated during the construction and earthworks phases of the project, in order to minimise dust deposition and nuisance beyond the designation boundaries. Monitoring activities shall include:

- i. Monitoring of total suspended particulate using e-BAMs or equivalent adjacent to particularly sensitive receiving environments such as dwellings and ecological habitat areas;
- ii. Daily inspection of all unsealed surfaces (including earthworks sites) for dampness and to ensure that surface exposure is minimised;
- iii. Daily inspection of all sealed surfaces to ensure that they are clean and all spillages have been cleared;
- iv. Daily inspection of stockpiles to ensure enclosure, covering, stabilisation or a damp condition;
- v. Monitoring of dust generating activities and water application rate in winds over 5.5m/s at ground level;
- vi. Weekly inspection of watering systems to ensure equipment is maintained and functioning to effectively dampen all exposed areas;
- vii. Weekly inspection of wheel wash equipment to ensure effective operation;
- viii. Weekly checking that all site windbreak fences are intact;
- ix. Mitigation measures that will be implemented to remediate any neighbouring buildings / sites from dust build up as a result of construction e.g. house washing.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Noise and Vibration Management Plan (“CNVMP”)

11. The CEMP shall include a CNVMP for the project or relevant project stage, which shall be prepared by a professionally qualified person.

12. The CNVMP shall include specific details relating to the control of noise and vibration associated with demolition, construction and management of all works associated with the project or relevant project stage.

13. The CNVMP be formulated to detail as far as practicable the manner in which construction noise will be managed to achieve compliance with the relevant construction noise limits. In summary this would address the following matters:

- i. the construction noise limits which apply to particular areas
- ii. construction techniques
- iii. machinery and equipment to be utilised
- iv. days and times when noisy construction work would occur
- v. the use of noise barriers
- vi. the design of noise mitigation measures
- vii. alternative mitigation measures
- viii. monitoring and reporting of noise levels at critical locations and methods for managing complaints
- ix. areas where construction involving piling, vibrator rollers, or any other activity likely to generate high levels of vibration and buildings within 40m of those areas for the purpose of condition 16.a.

14. The CNVMP shall be formulated to be in accordance with the vibration standards of German Standard DIN 4150 and address the following aspects:

- i. vibration limits
- ii. vibration monitoring measures
- iii. possible mitigation measures
- iv. complaint response
- v. reporting procedures.

15. The approved CNVMP for the project or relevant project stage shall be implemented and maintained throughout the entire demolition and construction periods for the project or relevant project stage. Any amendments must receive the prior approval of the Major Infrastructure Team Manager, Auckland Council, and are then to be incorporated into a single document.

16. The following measures shall be undertaken with respect to all buildings identified in the approved CNVMP pursuant to condition 13.ix.:

- a. At least one month prior to the commencement of construction activities, the Requiring Authority shall (with the permission of the landowner and where necessary, the occupier) commission an independent consultant with expertise in the building effects arising from vibration effects to undertake a preconstruction condition survey of all buildings identified in the approved CNVMP. The condition survey shall identify and measure all exterior cracks and other features that may be subject to movement and shall record these for the information of the landowner, the Council and the Requiring Authority. A copy of the preconstruction survey shall be provided to each of the relevant landowner, the Council and the Requiring Authority prior to the commencement of construction works on site; and
- b. No less than three months and no more than six months after the completion of the construction works within the vicinity of the residential properties in respect of which the condition survey was undertaken, the Requiring Authority shall commission an independent consultant with expertise in the building effects arising from vibration effects to undertake a post construction condition survey of all dwellings surveyed as a requirement of condition 16.a above. The survey shall measure and record the exterior cracks and other features surveyed previously and shall make recommendations as to what works and/or remediation, if any, are required to return the building(s) to their preconstruction condition. A copy of the post-construction survey report shall be provided to each of the landowner, the Council and the Requiring Authority within one month of the completion of the report; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. Within one month of the receipt of the post-construction survey report, the Requiring Authority shall inform the Council in writing as to the actions it will undertake to respond to the report's recommendations. Any actions required to be carried out as a result of the post-construction report shall be completed within four months of the receipt of the post-construction report, provided that the relevant landowner agrees to the undertaking of the work and enables the Requiring Authority to access the property for the purposes of undertaking that work. If agreement or access is not forthcoming within one month of the request being made, the Requiring Authority shall be deemed to have complied with this condition.

Operational Noise

For the purposes of conditions 17-19 the following terms will have these meanings:

- i. "Building Modification Mitigation" – has the same meaning as in NZS 6806:2010
- ii. "Habitable room" – has the same meaning as in NZS 6806:2010
- iii. "NZS 6806:2010" – means NZS 6806:2010 Acoustics – Road-traffic Noise – New and altered roads
- iv. "PPFs" – means the protected premises and facilities identified in Appendix E of the Noise and Vibration Technical Report (see Volume 3 – Technical Appendix 6)
- v. "Structural mitigation" – has the same meaning as in NZS 6806:2010.

17. No later than 20 working days prior to the commencement of works on the project to or relevant project stage (excluding site investigations and enabling works), the Requiring Authority shall submit a Traffic Noise Mitigation Plan ("TNMP") to the Major Infrastructure Team Manager, Auckland Council. The TNMP shall be prepared by a qualified acoustics specialist in accordance with NZS 6806:2010 and shall describe the noise mitigation measures to be employed to ensure noise associated with road traffic within the designation boundaries will comply with the requirements of NZS 6806:2010 and shall include:

- i. The size, type, form and location of any noise barriers and bunds including height and lengths of the barriers;
- ii. The road surface type to be used; and
- iii. Specific measures to be employed for any PPFs where these are necessary in addition to the measures under 17(i) and 17(ii) above to achieve compliance with the requirements of NZS 6806:2010.

18. In the event that the TNMP identifies any PPFs where, following implementation of any structural mitigation measures, Building Modification Mitigation may be required to achieve 40 dB LAeq inside habitable rooms ("Category C Buildings") the following conditions will apply:

- i. Prior to commencement of construction of the project in the vicinity of a Category C building, the Requiring Authority shall write to the owner of each Category C building seeking access to their building for the purpose of measuring internal noise levels and assessing the existing building envelope in relation to noise reduction performance;
- ii. If the owners of the Category C building approve the Requiring Authority's access to the property, then no more than six months prior to commencement of construction of the project, the Requiring Authority shall instruct a suitably qualified acoustic specialist to visit the building to measure internal noise levels and assess the existing building envelope in relation to noise reduction performance;
- iii. Where a Category C building is identified, the Requiring Authority shall be deemed to have complied with condition 18.ii. above where:
 - a) The Requiring Authority (through its acoustics specialist) has visited the building; or
 - b) The owner of the Category C building did not approve the Requiring Authority's access to the property or secure appropriate access with the occupier; or
 - c) The owner of the Category C building cannot, after reasonable enquiry, be found prior to completion of the construction project. In such instances, a log of the attempts made to contact the owner shall be kept by the Requiring Authority.
- iv. At least six months from the assessment required under condition 18.ii., the Requiring Authority shall give written notice to the owner of each Category C building;
 - a) Advising of the options available for Building Modification Mitigation to the building; and
 - b) Advising that the owner has three months within which to decide whether to accept Building Modification

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Mitigation for the building, and if the Requiring Authority has advised the owner that options for Building Modification Mitigation are available, to advise which of those options the owner prefers.

v. Once an agreement on Building Modification Mitigation is reached between the Requiring Authority and the owner of a Category C building, the mitigation shall be implemented in a reasonable and practical timeframe agreed between the Requiring Authority and the owner.

vi. Where Building Modification Mitigation is required, the Requiring Authority shall be deemed to have complied with condition 18.v. above where:

a. The Requiring Authority has completed Building Modification Mitigation to the Category C building; or

b. The owner of the Category C building did not accept the Requiring Authority's offer to implement Building Modification Management prior to the expiry of the timeframe stated in condition 18.iv.b. above; or

c. The owner of the Category C building cannot, after reasonable enquiry, be found prior to completion of construction of the project.

19. Prior to opening for general traffic on any parts of the project, subject to condition 18.vi.b. and c., the appropriate noise mitigation measures that are identified for those parts in the TNMP shall be fully implemented with the exception of any low noise surfacing which shall be implemented within 12 months of practical completion.

Landscape and Visual

20. Prior to commencement of any works on any part of the land included in the designation, the Requiring Authority shall submit a Landscape Concept Plan to the Major Infrastructure Team Manager, Auckland Council, for approval. The Landscape Concept Plan shall include the following information:

i. plans at an appropriate scale showing finished ground levels and the location of plantings;

ii. the species of plants to be planted including but not limited to an appropriate number of larger framework trees;

iii. the nature of any built elements to the landscaping, e.g. patterned or textured surfaces, sculptures or other artwork;

iv. how the landscaping is integrated with the proposed cycle and walk way and stormwater wetland;

v. how the recommendations of the Landscape and Visual Assessment have been taken into account, including the provision of landscaping to mitigate any adverse visual effects associated with noise / retaining walls and the loss of existing vegetation screens;

vi. suitable replacement planting along the eastern boundary of 1/234 Triangle Road in the event that the existing jacaranda and pohutukawa trees located within the designation boundary require removal;

vii. suitable planting in Lowtherhurst Reserve to generally enhance the habitat values for native fauna, and in particular those of the copper skink or mokomoko.

21. The approved landscape planting shall be implemented in accordance with the Landscape Concept Plan within the first planting season following the completion of the construction works provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained at the Requiring Authority's cost for the next three years thereafter. Should the landscaping be implemented in stages (depending on construction phases), landscaping may be implemented after the first planting season of each stage.

22. Where practicable, any planting utilising native species shall use plants sourced from the ecological district.

23. Planting areas shall be mulched using suitable weed-free, granular organic mulch. The only exceptions to this shall be where the slopes are too steep to allow for its retention. In such cases a neutral or black coloured biodegradable or photodegradable geotextile is to be used.

Parks

24. In respect of the proposed Lowtherhurst wetland, the Requiring Authority shall submit to the Auckland Council for approval by the Major Infrastructure Team Manager prior to the construction of the Lowtherhurst

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Reserve wetland, a detailed Wetland Landscape Plan that clearly shows the following:

- i. plan and cross section drawings of the wetland, including the emergency spillway to be constructed;
- ii. plant species, location, pb size, numbers, spacing and overall square metres of planted area;
- iii. location and size and type of any proposed fence.

The plan should be designed with specific attention to the interface between the stormwater infrastructure and the open space area of the reserve having specific regard to amenity, usability and public safety. In addition the design principles of 'Crime Prevention through Environmental Design' and 'Injury Prevention through Environmental Design' should be clearly demonstrated. Plant species to the west and north-west of the Lowtherhurst Reserve wetland area shall include species that assist to screen views to the motorway corridor from the Reserve and surrounding residential properties.

25. The approved Wetland Landscape Plan shall be implemented in the first planting season following the completion of the construction works provided that climatic conditions are suitable, otherwise at the first practicable opportunity thereafter, and shall be maintained at the Requiring Authority's cost. Should the landscaping be implemented in stages (depending on construction phases), landscaping may be implemented after the first planting season of each stage.

26. The emergency spillway should be located and/or designed, in accordance with the Auckland Regional Council technical publication TP10, so that the stormwater overflow is directed efficiently to Rarawaru Stream so as to minimise the degradation of the open grassed area of Lowtherhurst Reserve.

Iwi Matters, Archaeology and Heritage

27. In the event of an accidental discovery of any unrecorded archaeological sites, including human remains, the following steps shall be taken:

- i. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease.
- ii. The site construction supervisor will notify the NZTA archaeological consultant who in turn will contact the project manager at NZTA. In the event of the project manager being unavailable the matter will be reported by the consultant to the Regional Manager of the NZTA.
- iii. NZTA will ensure that the matter is reported to the Regional Archaeologist at the NZHPT, the tangata whenua and to any required statutory agencies if that has not already occurred.
- iv. In the event that the accidental discovery material is confirmed as being archaeological, under the terms of the Historic Places Act, the NZTA shall ensure that the archaeologist carries out an archaeological assessment, and if appropriate, an archaeological authority is obtained from the NZHPT before work resumes.
- v. NZTA will ensure that representatives of the consultant and the contractor, as appropriate, shall be available to meet and guide representatives of the NZHPT and tangata whenua, and any other party with statutory responsibilities, to the discovery site.
- vi. Works in the site area shall not recommence until authorised by the NZTA after consultation with the NZHPT, tangata whenua, the NZ Police (and any other authority with statutory responsibility) to ensure that all statutory and cultural requirements have been met.
- vii. Work may recommence in the shortest possible timeframe provided that any archaeological sites discovered are protected until as much information as practicable (in the opinion of the archaeological consultant) is gained and a decision regarding their appropriate management is made, including obtaining an archaeological authority if necessary. (Note: Appropriate management could include recording or removal of archaeological material.)

28 NZTA shall consult with Te Kawerau a Maki and the consultation will be based on the following principles:

- i. Input and involvement in the detailed design process; and
- ii. Involvement in archaeological monitoring and recording throughout the duration of the Project, particularly within those areas of significance to Iwi.

Integration with the local network

29. The Requiring Authority shall not remove or reduce in capacity the bus shoulder lanes without first consulting with Auckland Transport.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

30. In collaboration with Auckland Transport, and prior to submission of the OPW for approval by the Council, the Requiring Authority shall prepare a Network Integration Plan ("NIP"), to demonstrate how the project integrates with the existing local road network (and in particular Moire Road) and with future improvements planned by Auckland Transport. The NIP shall include details of proposed physical works at the interface between the State Highway and the local road network, and shall address such matters as integration with any potential Rapid Transport Network ("RTN"), pedestrian / cycleways, lane configuration, traffic signal coordination, signage and provision for buses. The NIP will consider and identify:

- i. Opportunities to improve cycling / walking connections
- ii. Opportunities to progress bus priority measures on both on/off ramps at Royal Road and on the Royal Road bridge
- iii. Opportunities to future proof for RTN connections and a future bus-to-bus interchange in vicinity of Royal Road interchange.

Information Requirement for Outline of Plans of Works

31. The following information shall be supplied with any outline plan submitted under section 176A of the Act:

- i. The location and design details of operational noise barriers and/or bunds for protected premises and facilities. This shall include but is not limited to design details of the location, height, length, materials and visual appearance of the noise barriers. Evidence of consultation with adjoining landowners shall be submitted to ensure that the size and scale of the proposed wall is appropriate;
- ii. The design details of all bus shoulders and bus priority lanes. This shall include but is not limited to their location, length, width, markings and the priority rules that will apply;
- iii. The design details for all works on Royal Road and Makora Road. This shall include but is not limited to cross sections and elevations, design details of all vehicle lanes, any bus priority methods, cycle lanes, cycle ways, footpaths, pedestrian crossings, cycle crossings, traffic signals, vehicle crossings, road markings, signage, median barriers and any other barriers;
- iv. The design details of the shared cycle way and footpath;
- v. The design details of any retaining walls over 1.5 metres in height, including but not limited to the location, height, materials and visual appearance of the walls;
- vi. The details of planting and other landscaping in accordance with condition 20;
- vii. The design details of any motorway lighting adjacent to residential properties; and
- viii. The design details of any works relating to the Royal Road bridge, including but not limited to. all dimensions.

Lighting

32. All lighting will be designed to comply with AS/NZS 1158.1.1:2005.

33. The maximum light spill at the boundary of the designation will be 10 lux.

Lapse Date

34. Pursuant to Section 184 of the Act, this designation will lapse fifteen years after the date on which it is included in the District Plan, unless given effect to before that date, or an extension is given in terms of Section 184(1)(b) of the RMA.

Advice Notes

1. Network infrastructure owned and operated by Watercare Services is located within the designation boundaries. Agreements are being developed by the NZTA and Watercare Services which will include appropriate relocation, notification and access protocols for the construction duration and for notification and access protocols and the replacement of existing and installation of new infrastructure in the operations phase.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6744 State Highway 16 - Westgate

Designation Number	6744
Requiring Authority	New Zealand Transport Agency
Location	State Highway 16 south of Westgate interchange, Westgate
Rollover Designation	Yes
Legacy Reference	Designation NZTA7, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

N/A.

Conditions

1. Where an outline plan of works is submitted in accordance with s176A of the Act, prior to commencing the project of work, that plan shall be accompanied by:

- a. a statement detailing the degree to which the works described in the outline plan meet the relevant objectives, policies and rules of the Plan; and
- b. an assessment of the effects the works described in the outline plan will have on the environment.

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 2. Note that major earthworks may require a consent from the Regional Council.

6750 State Highway 1 - Auckland Harbour Bridge to Albany

Designation Number	6750
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from Auckland Harbour Bridge, Northcote to Greville Road interchange, Albany
Rollover Designation	Yes
Legacy Reference	Designation 110, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Auckland-Waiwera Motorway (State Highway 1), including planning, design, supervision, construction and maintenance in accordance with the Transit New Zealand Act 1989.

Conditions

These conditions apply to the section 181 alteration to the designation for widening of the motorway between Constellation Drive and Greville Road:

1. That prior to any development commencing on the extension to the motorway an outline plan of works shall be submitted to the Council showing the exact boundary of the designation, detailed design drawings and proposed landscape and noise mitigation measures and specifically providing details:
 - a. Ensuring the protection of native planting within the treatment plant site;
 - b. Ensuring that satisfactory treatment plant tunnel access can be provided under the motorway along with any protection of banks from erosion;
 - c. Ensuring that stormwater runoff from the motorway extensions is prevented from entering the Oxidation Ponds and grounds;
 - d. Ensuring that EnviroWaste's activities are not compromised in any way;
 - e. Ensuring that the Treatment Pond's activities are not compromised in any way.
2. That should Transit construct additional lanes on the state highway between Constellation Drive and Greville Road before construction of the busway priority lane provided for by this requirement the construction of the additional lane shall be undertaken in a manner which does not preclude subsequent construction of the priority lane.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6756 State Highway 18 - Upper Harbour Highway

Designation Number	6756
Requiring Authority	New Zealand Transport Agency
Location	State Highway 18 (Upper Harbour Highway) from west of Paul Matthews Road, Rosedale to Upper Harbour Bridge, Greenhithe
Rollover Designation	Yes
Legacy Reference	Designation 160, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

State Highway 18 - the control, management and improvement of the State Highway, including planning, design, research, construction, operation and maintenance relating to all land within the State Highway designation and in accordance with the Transit New Zealand Act 1989.

Conditions

1. General

- i. The scope and extent of the works envisaged within the designation shall be generally in accordance with the requirement, the plans contained in "Appendix C – Designation Drawings" accompanying the Notice of Requirement, and the relevant detailed plans in the Technical Documents in Appendix A, subject to the final design and the conditions set out below and modifications to the designation boundaries approved by the Environment Court.
- ii. Prior to any works being commenced Transit New Zealand shall obtain all requisite resource consents under the Resource Management Act 1991, including the Auckland Regional Council's relevant Regional Plans.
- iii. Transit New Zealand and its contractors, in addition to complying with any other construction-related conditions, shall take all reasonable steps to avoid, minimize or mitigate any nuisance or damage (including dust and ground vibration) to adjacent properties during construction.
- iv. Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.
- v. At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, Transit New Zealand shall ensure that the property owner is consulted about the most suitable time for carrying out the work and Transit New Zealand shall minimize the period during which vehicular access is prevented.
- vi. A permanent liaison person shall be immediately appointed for the duration of the Highway project to be the main and readily accessible point of contact for all persons affected by the designation and construction works. The liaison person's name and contact details shall be advised to affected parties by Transit New Zealand. This person must be available for ongoing consultation on all matters of concern to affected persons.
- vii. Transit New Zealand shall use its best endeavours to ensure that all existing network utility services are protected during construction phases of State Highway 18 and that adequate access (other than from the Highway itself) is provided to all such services for operational and maintenance purposes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

viii. All contract documentation for physical works shall include copies of the designation conditions, any other resource consents (including conditions) and any approved outline plan(s) held for the project.

ix. Transit New Zealand shall use its best endeavours to secure the requisite funding to enable it to complete the earthworks for the ultimate 4-lane width of the Highway at the time of initial construction.

x. For the purposes of these conditions, in determining whether a proposed activity is “practicable”, Transit New Zealand shall have regard to:

- a. The nature of the proposed activity; and
- b. The sensitivity of the environment which will be affected by the proposed activity; and
- c. The financial implications of the proposed activity when compared with other options; and
- d. The effects on the environment of the proposed activity when compared with other options; and
- e. The current state of technical knowledge and the likelihood that the proposed activity can be successfully carried out.

xi. The works which are the subject of conditions 2.i., 4.ii., 4.v., 5.i. and 6.i. below shall not be implemented until the relevant Management or Mitigation Plans are finalized:

- a. In the manner requested by the North Shore City Council, which requests must be made within a reasonable timeframe, or if Transit does not accept the Council’s requests for finalization of any part(s) of the Plan(s), then;
- b. In accordance with section 176A of the Resource Management Act 1991 as to any part of a Plan in respect of which Transit and the Council have been unable to reach agreement pursuant to subclause (a) above.

2. Dust and Ground Vibration Management Plan

i. Prior to the commencement of any construction activity authorised by the designation (excluding site investigations), Transit New Zealand shall ensure that a Dust and Ground Vibration Management Plan is prepared and submitted to the Team Leader, Planning Services, North Shore City Council (or equivalent officer if that position no longer exists).

ii. The purpose of the Dust and Ground Vibration Management Plan is to set out methods by which any dust nuisance from construction will, as far as practicable, be avoided or minimized and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Dust and Ground Vibration Management Plan shall identify:

- a. Specific methods by which dust will be managed, including cleaning vehicle wheels or tracks before vehicles enter public roads, wetting or covering surfaces and remediation of disturbed areas;
- b. Monitoring, auditing and reporting procedures;
- c. Contingency measures to ensure that, in the event of any dust nuisance arising, remedial measures are implemented (including cleaning out and refilling of roof-water tanks on properties adjoining the designation as necessary, if water in those roof-water tanks becomes unpotable);
- d. Procedures for prior notification to affected land owners and occupiers of the use of machinery likely to generate vibration effects beyond the area of the designation; and
- e. Procedures for handling any dust and ground vibration complaints.

iii. Transit New Zealand shall ensure that the Dust and Ground Vibration Management Plan is complied with at all times during construction work.

3. Social Impact Mitigation

i. Should construction work uncover any archaeological remains, Transit New Zealand will immediately advise local Kaumatua and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without the prior consent of the Historic Places Trust).

ii. Where requested by the owners, Transit New Zealand shall physically peg out the extent of the alignment on individually affected properties once the designation has been confirmed or all appeals have been determined,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

whichever is the later.

iii. If any or all of the properties at numbers 105, 175 and 177 Kyle Road affected by the alignment are in private ownership at the time of construction of the alignment then Transit New Zealand, in consultation with the affected owner(s), shall provide suitable alternative access to the said property or compensate the owner(s) in compliance with the Public Works Act 1981.

iv. Within 12 months of the date of the sealing of the Consent Order determining the UnitedNetworks appeal (RMA 1175/99), Transit New Zealand, in consultation with the UnitedNetworks Limited (or its successor), shall provide a suitable alternative substation site adjacent to the existing site. The new substation site shall be located fronting Kyle Road, shall be of the same land areas as the existing site and, subject to the relevant provision of the Resource Management Act 1991, shall be designated in the District Plan in accordance with the relevant provision of the Act.

v. Transit New Zealand shall provide footpaths on both sides of structures proposed to carry existing roads across the motorway at Albany Highway, Greenhithe Road and Tauhinu Road, and on one side of the structure proposed to carry the existing road across the motorway at Ashby Place.

vi. Transit New Zealand shall ensure that the design and construction methods for the Highway do not preclude the achievement of the required linkages in the Proposed North Shore District Plan and in the Greenhithe South Structure Plan.

vii. Transit New Zealand shall provide lighting along the entire route to Transit's normal urban arterial standards.

viii. The intersection of the Ashby Place extension with Upper Harbour Drive shall be designed to provide sufficient sight distance for a 60 km/hr design speed west-bound on Upper Harbour Drive and for a 70 km/hr design speed east-bound on Upper Harbour Drive.

ix. Transit New Zealand shall construct that section of State Highway 18 which is the subject of this designation as a route suitable for appropriate over-dimension vehicles.

x. In carrying out detailed design, Transit New Zealand shall consult with the owners of 30 Wicklam Lane and implement the following mitigation measures to minimise the adverse effects on that property:

- a. The minimisation of the land take from the property;
- b. The minimization of the size of the settlement pond on the property;
- c. Prior to opening of the motorway to traffic, noise mitigation measures shall be implemented so as to achieve compliance with noise conditions 4(i) to 4(vi) below, but in any event, a noise design level of 55dB(A) Leq (24 hours) shall apply and shall relocate or replace to a similar standard the affected vegetation on the property (including the Tasmanian Blackwood trees).

xi. In relation to the property at 38 Wicklam Lane, Greenhithe, being Lot 6, DP 102714 and Part Allotment 84 Parish of Paremoremo ("the property"), Transit New Zealand shall:

- a. Design and implement the works pursuant to this designation so as to avoid:
 - Any adverse geotechnical or structural effects on the tennis court, shed and adjacent carport (shown on the plan attached to this Order entitled "SH18 Requirement Plan 38 Wicklam Lane – E.J McEwan" (sic)) ("the Structures"); or
 - The drainage and soak holes situation on the Property;
- b. Remedy, at Transit New Zealand's cost, any damage to the Structures, drainage or soak holes on the Property resulting from the designation works if Transit is unable to comply with subclause (a) above;
- c. Construct retaining walls at Transit New Zealand's cost on the Crown's land to support the Structures if necessary;
- d. Consult with Ms McEwen (or the registered proprietor of the Property at the relevant time) during the process of completing detailed design of the works regarding the design of any fence and/or other noise mitigation measures

The Proposed Auckland Unitary Plan (notified 30 September 2013)

relating to the Property; and

e. Clean out the water tank at the property and pay for the tank to be refilled with potable water in the event that the tank and water become contaminated by dust or dirt from Transit New Zealand's works during the construction period on the designation, if reasonably requested to do so by Ms McEwen or the registered proprietor of the Property at the relevant time.

4. Noise Impact Mitigation

i. The alignment shall be designed and constructed in accordance with Transit New Zealand's Draft Guidelines for the Management of Traffic Noise for State Highway Improvements, November 1994.

ii. A detailed Noise Mitigation Plan shall be prepared by a suitably qualified noise consultant in consultation with the Team Leader, Planning Services, North Shore City Council (or equivalent officer if that position no longer exists). The Noise Mitigation Plan shall be submitted to the Team Leader, Planning Services, North Shore City Council, prior to construction. The purpose of the Plan is to describe the method by which noise associated with traffic using the roading within the designation will be made to comply with specified noise limits. Where the ambient sound level is required to be monitored to determine design limits then this shall be done prior to construction commencing.

iii. Noise monitoring shall be undertaken in accordance with S6801:1991 Measurement of Sound. Transit New Zealand shall ensure that representative noise monitoring of the Highway route is undertaken at its expense by a suitably qualified and experienced acoustical consultant within nine months of the opening of the Highway over any part of the route and subsequently within nine months of the opening of the whole route if that occurs separately. Results of all noise monitoring shall be supplied to Council within six weeks of the monitoring being completed.

iv. Transit New Zealand shall ensure that all construction works are carried out in accordance with S6803P:1984 The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work and that noise shall comply with the limits set down in Table 1 of S6803P:1984 including the appropriate adjustments included in Section 6.1 of that Standard.

v. Prior to commencement of any construction activity (excluding site investigations), Transit New Zealand shall prepare a Construction Noise Management Plan which shall be submitted to the Team Leader, Planning Services, North Shore City Council (or equivalent officer if that position no longer exists). The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 4(iv) above. In particular, the Construction Noise Management Plan shall identify:

- a. The matters referred to in paragraph 2.1.1(a) to (e) of S6803P:1984 The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency (by reference to S6803P:1984);
- d. Contingency measures in the event of any incidence of non-compliance; and
- e. Procedures for handling noise complaints.

vi. Transit New Zealand shall ensure that the Construction Noise Management Plan is complied with at all times during construction works.

5. Ecological Mitigation Impact

i. An Ecological Impact Mitigation Plan shall be prepared by a suitably qualified ecologist and submitted to the Team Leader, Planning Services, North Shore City Council (or equivalent officer if that position no longer exists). The Plan shall be included in all relevant Environmental Management Plan documentation. The Plan shall address the matters contained in conditions 5.ii.-xiii. below.

ii. Wherever practicable, any disturbance to areas of existing vegetation and those areas to be revegetated as specifically demarcated within red on the attached figure entitled "Sensitive Areas Within the Designation but Outside of the Alignment Footprint" shall be avoided. Where vegetation disturbance in these areas cannot be practicably avoided, Transit shall ensure that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

including, but is not limited to vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

iii. Prior to construction Transit New Zealand shall, in consultation with a suitably qualified freshwater ecologist:

a. Offer to the owner of that land containing an artificial pond adjacent to the North Shore City Council reserve near Wicklam Ave to carry out remedial works on the presently perched culvert downstream of the artificial pond shown on the attached figure entitled "Sensitive Areas Within the Designation but Outside of the Alignment Footprint". For the purposes of this condition, "remedial works" means the placement of rock/concrete aprons which will connect overhanging (or "perched") culvert outlets with the stream waters below, so as not to impede the movement of migratory native fish species.

iv. Transit New Zealand, in consultation with relevant landowners and a terrestrial ecologist shall investigate reasonable and practicable bush protection mechanisms and, if the landowners are amenable, shall implement these before the conclusion of the construction period. The mechanisms to be considered shall include fencing (where the bush and adjacent land is or could be grazed) and covenanting. Costs for this are to be met by Transit New Zealand. Bush blocks covered by this condition are those depicted in Figure 4 attached, as follows:

- a. The areas of native forest and regenerating native bush outside of the designation which adjoin the alignment;
- b. The swamp maire population located to the south of the NSCC reserve; and
- c. The Kahikatea and swamp maire forest in the vicinity of Black's Road.

v. Transit New Zealand shall transplant all saplings and seedlings of swamp maire found within the carriageway footprint of the Highway in Area A shown on Figure 1 attached, and replant them within an environment in the Greenhithe area that is appropriate to their habitat preferences.

vi. Transit New Zealand shall ensure that all specimens of swamp maire located within the area demarcated as the "Swamp Maire Non-Disturbance Zone" on the attached plan titled entitled "Sensitive Areas Within the Designation But Outside of the Alignment Footprint" are neither damaged nor destroyed as a result of Transit New Zealand's construction activities.

vii. A fauna salvage operation is to be undertaken where the new Highway within the proposed designation crosses the native bush areas shown as Area A and Area B in Figure 1 attached prior to work commencing in those areas. The fauna to be salvaged include native lizard species (i.e. geckos and skinks), and any native fish species in accordance with the advice of a suitably qualified freshwater biologist. The salvage operations are to take place directly prior to works beginning in the relevant habitats.

viii. In the case of perennial streams (i.e. those that flow all year round), culverts shall be designed and placed in a manner to facilitate the passage of fish and aquatic life through the natural stream system. These culverts shall be designed and placed with the assistance of a suitably qualified freshwater biologist.

ix. Revegetation of native bush shall be undertaken to the level of that which will be lost due to road construction, to the extent that such can be practicably accommodated within the areas demarcated for revegetation in Figures 3 and 5 attached.

x. In consultation with a suitably qualified ecologist, a revegetation programme is to be carried out upon those batter slopes demarcated in Figure 3 attached. This revegetation programme will focus upon the planting of hardy native edge species appropriate to the site (with manuka predominant) as soon as practicable after construction. These species are to be sourced from local genetic stock and be densely planted. Once this initial vegetation has established then native forest canopy trees appropriate to the local environment should be interplanted at suitable spacings to promote a future canopy of these trees.

xi. Any realigning of existing perennial waterways shall be minimised as far as is practicable. Where streams are realigned, the design of any new channel shall be carried out with the advice of a freshwater biologist, and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall include the creation of appropriate habitat opportunities for aquatic fauna and the retention and establishment of riparian vegetation.

xii. That placement of silt ponds within existing waterways be minimised as far as possible, but where such ponds must occur then fish passes are to be provided in those cases where the ponds will be permanent features. In the case of temporary ponds (i.e., those in place during the construction period only) no fish passes are necessary, but the stream areas affected will be reinstated to at least their previous condition (including provision for the unobstructed passage of aquatic fauna).

xiii. Transit New Zealand shall implement enrichment planting in that land within the designation not required for road construction which is situated adjacent to the North Shore City Council reserve to the south of Wicklam Lane. The objective of such planting is to reinforce the existing gully wetland bush type, by the use of appropriate and locally sourced species.

6. Visual Impact Mitigation

i. A Landscape Mitigation Plan shall be prepared by a suitably qualified landscape architect in consultation with the Team Leader, Planning Services, North Shore City Council (or equivalent officer if that position no longer exists) and the Director of Heritage, Auckland Regional Council or nominated representative. The landscape plan shall be submitted to the Team Leader, Planning Services, North Shore City Council, prior to construction and shall take into account, where practicable:

- a. The integration of the Highway alignment into the surrounding landscape;
- b. Mitigation of effects on properties in the vicinity of the alignment;
- c. Appropriate consideration of the angle and extent of batter slopes;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximize integration with the general form of the surrounding landscape;
- e. Noise mitigation measure (e.g. noise barriers) required in accordance with the Noise Impact Mitigation Conditions;
- f. Ecological mitigation measures (e.g. revegetation) required in accordance with the Ecological Impact Mitigation Conditions;
- g. Planting to screen horizontal edges and hard landscaping associated with the works (such as noise barriers), up to a height that is level with the height of those features (excluding lighting and bridges); and
- h. Planting in those areas identified for re-vegetation and planting in the attached figure titled "State Highway 18: Greenhithe: Proposed Mitigation Plan" April 1999 Sheet 95221/02/01 Figures a-d inclusive, including the planting of appropriate native species alongside streams in those areas demarcated as "Proposed Mass Planting (Exotic/Native Species)" on that figure.

ii. The Landscape Mitigation Plan shall include details of:

- a. All proposed planting (including species, species size, densities, areas and locations);
- b. The planting programme;
- c. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting failures;
- d. The sufficiency of the soil medium to sustain all planting proposed.

iii. The Landscape Mitigation Plan shall be implemented to the satisfaction of the landscape architect engaged by Transit New Zealand. All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works for the relevant section of the road. Following completion of planting, Transit shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

iv. The maintenance programme shall be implemented to the satisfaction of the landscape architect engaged by Transit New Zealand, for a minimum period of three years following planting. Three months prior to expiry of the maintenance period, Transit New Zealand shall submit to the North Shore City Council a report by the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

landscape architect on the implementation of the maintenance programme. Transit shall also submit one interim report during the maintenance period if required to do so in writing by the North Shore City Council.

v. Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

Duration of the designation

7.i. In accordance with Section 184(1)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of fifteen years after the date on which it is included in the District Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority determines, on an application made within three months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

Advice Notes

1. North Shore City Council requests that Transit New Zealand take all necessary steps to resolve issues of land purchase as soon as possible.

2. Prior to preparing an assessment of effects under section 88(4)(b) of the Resource Management Act 1991 for resource consents required from the Auckland Regional Council, Transit New Zealand (or its agents) is to prepare and submit a Scoping Report to the Auckland Regional Council. The report should include a comprehensive annotated table of contents which indicate what will be addressed in the assessment of effects.

3. In a consent order approved by the Environment Court in September 2000, Transit New Zealand agreed to amend its existing requirement for designation by removing that part of the requirement relating to land east of a point approximately 22 metres east of Unsworth Drive in accordance with a plan prepared by Beca Cater Hollings & Ferner Fig L1.9, Reference 2106485 (Rev. 3.4.00), File 6485L209 DWG. In agreeing to exclude the land east of Unsworth Drive from its requirement, Transit New Zealand also acknowledges that in any future relevant requirement or application which may be necessary as part of a subsequent motorway development, Transit will address:

- a. The issue of the potential for an extended highway to interfere with access between Unsworth Heights and North Harbour Industrial Estate; and
- b. Provision of any bus shoulder lanes between Unsworth Drive and State Highway 1.

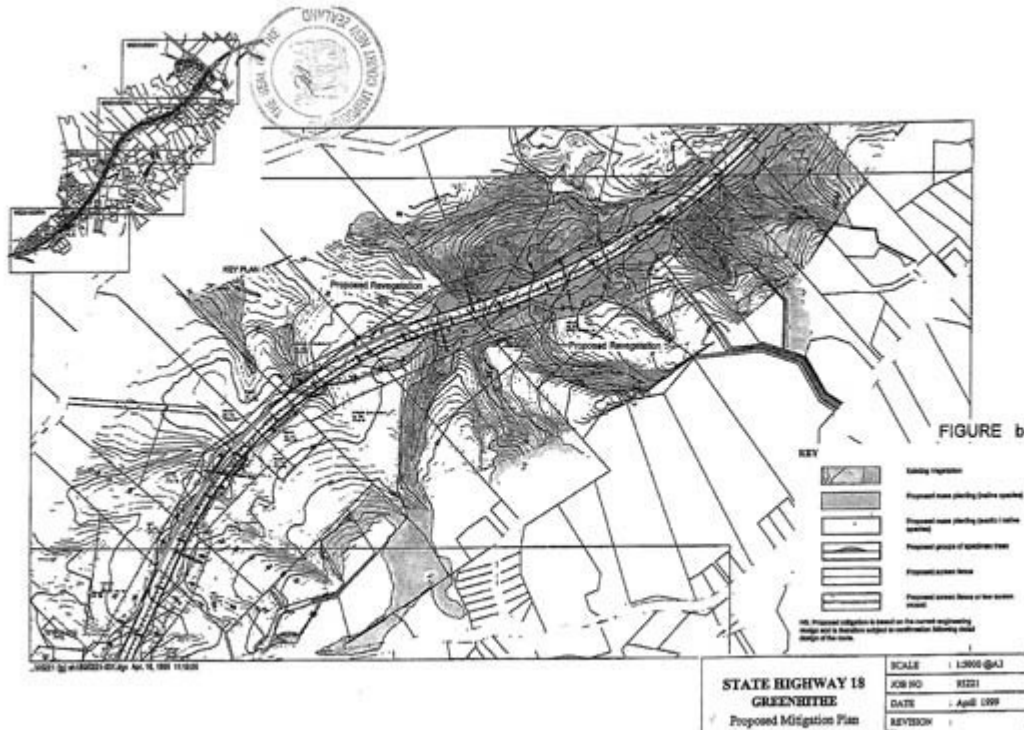

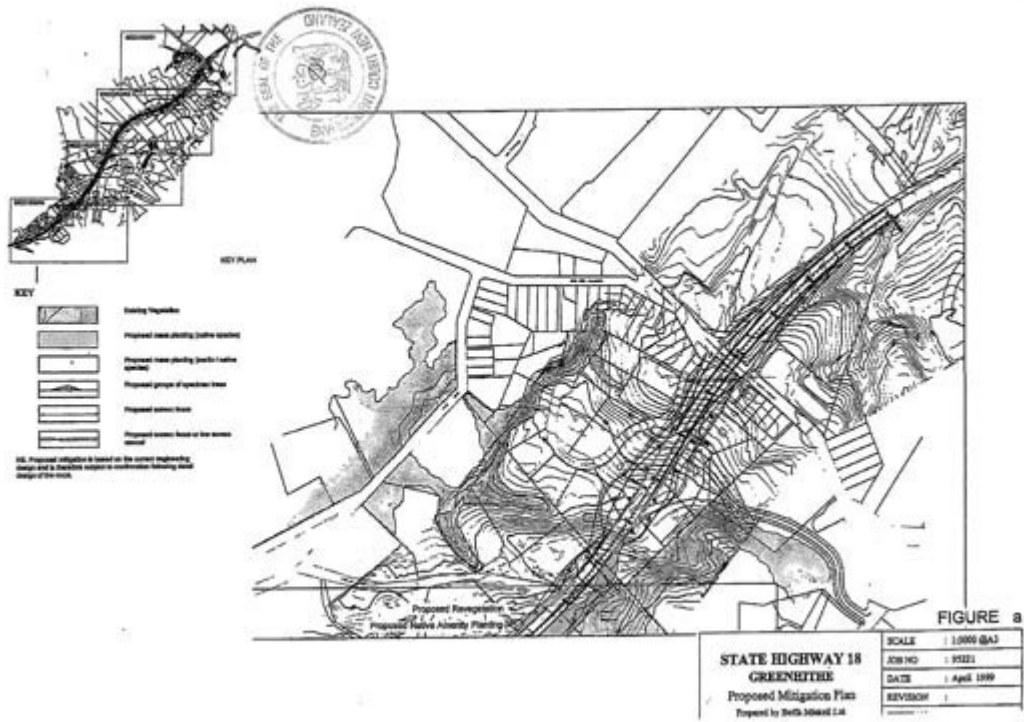

4. Where the "details" of the proposed works (as that term is defined in s176A Resource Management Act 1991) have not been incorporated into the designation or the works have not been otherwise approved under the Resource Management Act 1991 or the North Shore City Council does not waive the requirement for an outline plan, then an outline plan or plans shall be submitted by Transit New Zealand to the North Shore City Council under section 176A of the Resource Management Act 1991. Any outline plan or plans may be submitted in stages to reflect any proposed staging of the physical works.

5. Where agreement is reached between Transit New Zealand and the North Shore City Council pursuant to condition 1(xi) above in relation to any plan or part of a plan, that shall constitute waiver pursuant to section 176A(2)(c) of the Resource Management Act 1991 in relation to that plan or the relevant part of that plan.

State Highway 38: Greenhithe: Proposed Mitigation Plan" April 1999 Sheet 95221/02/01 Figures A-D

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6757 State Highway 1 - North Shore Busway

Designation Number	6757
Requiring Authority	New Zealand Transport Agency

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	North Shore Busway from south of Onewa Road interchange, Onewa to Constellation Drive interchange, Rosedale
Rollover Designation	Yes
Legacy Reference	Designation 169, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The North Shore Busway - for the construction, operation and maintenance of a State highway with provision for bus and high occupancy vehicle rapid transit facilities.

Conditions

1. General

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11.

3.2. No works shall be undertaken in any particular location(s) until:

- a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided for in condition 3.3; and
- b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3.

3.3 Approvals pursuant to condition 3.2.a. shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention

The Proposed Auckland Unitary Plan (notified 30 September 2013)

would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and
- e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal Intermediate School") prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 'Ventilation Requirements for acceptable indoor air quality' and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, attached);
- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the attached Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (attached as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the attached plan (titled "North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2") to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

6758 State Highway 1 - Constellation Drive Station

Designation Number	6758
Requiring Authority	New Zealand Transport Agency
Location	Southeast corner Constellation Drive and State Highway 1, Rosedale
Rollover Designation	Yes
Legacy Reference	Designation 170, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Constellation Drive Station - for the construction, operation and maintenance of roads, buildings, facilities and amenities and park and ride facilities (including a Busway control room and any ancillary structures, works and activities) for the purpose of providing a rapid transit facility for buses and high occupancy vehicles.

Conditions

Notice of Requirement 3 - Transit New Zealand – Constellation Drive

The conditions from Notice 1 listed below shall also apply to Notice 3 other than as varied below.

1. General Conditions (with appropriate amendments to refer to the separate assessments undertaken which specifically relate to the Constellation Drive Station).

1.10 A formal review of the adequacy of parking provision at the Station shall be carried out within twelve months of commencement operations at the Station and within a period of six months from any date if requested by the North Shore City Council. The review shall include preparation of a report by a suitably qualified and experienced traffic engineer analysing the on site car parking demand and supply situation based on surveys within and around the busway Station site and identifying any adverse effects and possible mitigation methods, which may form the basis for any further or amended conditions relating to car parking and parking management.

1.11 The Sunset Road access is to be limited to use by authorised busway users only, with appropriate signage being raised to this effect.

2. Duration Of Designation
3. PMP and Outline Plan
4. Archaeological Mitigation Conditions (other than 4.3 and 4.4)
5. Ecological Mitigation Conditions (other than 5.5, 5.6 and 5.7)
6. Landscape Mitigation Conditions
7. Noise Mitigation Conditions (other than 7.8)
8. Geotechnical Mitigation Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9. Vibration Mitigation Conditions
10. Traffic Mitigation Conditions (other than 10.1(ii), (iv) and (v), 10.2 and 10.3)
11. Construction Management Conditions

1. General Conditions

1.1 The scope and extent of the works envisaged within the designation shall be generally in accordance with the Notices of Requirement, the plans contained in "Volume 3 – A3 Plans" forming part of the documentation supporting the Notice of Requirement, and the relevant detailed plans in the Technical Reports in Volume 5, subject to the final design and the conditions set out below.

1.2 Prior to any works being commenced in particular location(s) of work, the Requiring Authority shall obtain all requisite resource consents for the location(s) affected under the Resource Management Act 1991.

1.3 Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.

1.4 At all times reasonable vehicular access shall be maintained to private properties not directly affected by construction and/or operation in the area affected. Where private properties are directly affected by construction and/or operations causing vehicular access to be temporarily prevented and no alternative can be utilised, the Requiring Authority shall ensure that the property owner is consulted with respect to the most suitable time for carrying out the work and the Requiring Authority shall minimise the period during which vehicular access is prevented.

1.5 A permanent liaison position from within the joint Project Governance Team of NSCC and the Requiring Authority will be appointed for the duration of the project. This person is to be available for ongoing consultation on all matters of concern to affected persons.

1.6 All contract documentation for physical works shall include reference to the designation conditions, any other resource consents (including conditions) and any approved mitigation or outline plan(s) held for the project.

1.7 Where requested by the owners, the Requiring Authority shall physically peg out the extent of the alignment in individually affected properties once the designation has been confirmed or all appeals have been determined, whichever is the later.

2. Duration of the Designation

2.1 In accordance with Section 184(1)(c) and Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of ten years, except for NOR 8 which will lapse on the expiry of five years, after the date on which it is included in the District Plan unless:

2.2 It is given effect to before the end of that period; or

2.3 The territorial authority determines, on an application made not later than three months before the expiry of that period; that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made and fixes a longer period to give effect to the designation.

3. Project Management Plans (PMP) and Outline Plans

3.1 The requiring authority shall prepare a PMP which shall include mitigation/management plans as referred to in conditions 5, 6, 7, 8, 9, 10 and 11. 3.2.

No works shall be undertaken in any particular location(s) until:

- a. The PMP, or such part(s) of the PMP as are relevant to the location(s) are approved in the manner provided

The Proposed Auckland Unitary Plan (notified 30 September 2013)

for in condition 3.3; and

b. Any outline plan(s) required by section 176A of the Resource Management Act 1991 (*RMA*) in relation to the works in the location(s), are approved in the manner provided in condition 3.3. 3.3

Approvals pursuant to condition 3.2(a) shall be obtained from the General Manager of Environmental Services, North Shore City Council, and a senior regulatory officer of the NSCC who is at the time of the approval a member of the Project Governance Team for the management of the works (*the approval officers*).

Advice Note:

Where an outline plan or plans are required by section 176A RMA for works in any particular location(s) and the approval officers agree that the PMP or relevant part(s) of the PMP contains adequate details to satisfy section 176 RMA, then the Council may waive the requirement for an Outline Plan.

3.4 The works shall only be undertaken in accordance with an approved PMP and outline plan (where required).

3.5 If for any reason the PMP is not approved, the outline plan procedure under s 176A shall apply. For the avoidance of any doubt, the mitigation/management plans prepared under conditions 5, 6, 7, 8, 9, 10 and 11 shall be included with any outline plan lodged for approval pursuant to s 176A.

4. Archaeological Mitigation Conditions

4.1 If construction work uncovers any archaeological remains, the Requiring Authority will immediately advise local iwi and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. (All archaeological sites are protected under the provisions of the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without prior consent of the Historic Places Trust).

4.2 That all recorded archaeological sites and other cultural heritage sites in the vicinity of the works shall be clearly marked on the construction plans.

4.3 Any significant native trees removed from Smiths bush as part of the works to construct the busway shall be offered as gifts to Te Hao o Ngati Whatua and/or Ngati Whatua o Orakei.

4.4 Preliminary earthworks in the vicinity of Onewa Road and Sylvan Ave realignment will be monitored by a suitably qualified and experienced archaeologist.

5. Ecological Mitigation Conditions

5.1 The PMP shall include an Ecological Mitigation Plan prepared by a suitably qualified and experienced ecologist who shall have regard to:

- i. The recommendations contained in the audit by Shona Myers – Natural Heritage Scientist, ARC as to planting and the implementation of mitigation measures;
- ii. The planting of appropriate plant species as identified in ARC Technical Publication 148: Riparian Zone Management: Strategy for the Auckland Region, June 2001.

5.2 The Plan shall provide for:

- i. Planting in riparian zones where consent of the landowner is obtained;
- ii. Mitigation of potential coastal effects.

5.3 Wherever practicable, any disturbance of existing vegetation shall be avoided.

5.4 Where riparian vegetation disturbance cannot be practicably avoided, the Requiring Authority shall take care that any necessary disturbance is minimised as far as practicable. For the avoidance of doubt, this condition is not intended to prohibit necessary disturbance, which is defined as including, but is not limited to, vegetation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

clearance, the construction and operation of all roads, depots, storage facilities and spoil disposal areas.

5.5 The PMP shall include a plan of the proposed works within the eastern remnant of Smiths Bush in sufficient detail to determine the impact on existing vegetation and the Requiring Authority shall undertake its best endeavours to minimise the removal of vegetation from Smiths Bush.

5.6 All works within the eastern remnant of Smiths Bush shall be supervised by a suitably qualified and experienced arboriculturist.

5.7 As a means of attempting to retain the overall ecological viability of Smiths Bush, any vegetation removed from the eastern remnant of the bush shall be replaced where practicable in accordance with a native tree planting and maintenance regime approved under condition 3.3. and following consultation with appropriate staff at the Auckland Regional Council.

6. Landscape Mitigation Conditions

6.1 The PMP shall include a Landscape Mitigation Plan prepared by a suitably qualified and experienced landscape architect who shall have regard to:

- a. The Landscape Mitigation Plan prepared by LA4 Landscape Architects and contained in the Esmonde Interchange Project: Assessment of Environmental Effects Volume 10c; and
- b. The recommendations contained in the audits by Melean Absolum and Chris Boucher.

6.2 The Landscape Mitigation Plan shall provide for:

- a. The integration of the proposed works into the surrounding landscape;
- b. Appropriate consideration of the angle and extent of batter slopes;
- c. Appropriate screening of existing land-uses along Fred Thomas Drive;
- d. Design of borrow and disposal areas for excess fill to avoid significant visual impact, and to maximise integration with the general form of the surrounding landscape;
- e. Ecological mitigation measures (eg revegetation) required in accordance with the Ecological Mitigation Condition;
- f. Mitigation of effects on properties in the vicinity of the busway;
- g. Noise mitigation measures (eg noise barriers) required in accordance with the Noise Mitigation Conditions and the screening of such measures with planting between barriers and the busway carriageway;
- h. Detailed designs of the acoustic barriers, retaining walls, and earth bunds in conjunction with the engineers where necessary; and
- i. The identification of existing trees and vegetation sited on the boundary of the Busway designation that ought to be retained for screening purposes.

6.3 The Landscape Mitigation Plan shall include details of:

- j. All proposed planting (including species, species size, densities, areas and locations);
- k. The planting programme;
- l. The maintenance programme. This programme shall include details of weed control, performance standards specifying allowable percentage survival rates, and replacement of any planting features;
- m. The sufficiency of the soil medium to sustain all planting proposed; and
- n. An appropriate maintenance regime.

6.4 All landscape mitigation planting shall be implemented during the first planting season following completion of the project construction works providing climatic conditions are suitable, otherwise at the first practicable opportunity thereafter. Following completion of planting, the Requiring Authority shall submit to the North Shore City Council a report by the landscape architect on the implementation of the landscape plan.

6.5 Where practicable, any planting utilising native plants shall use plants genetically sourced from the ecological district.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6.6 Exposed cut and fill batters and slopes shall be re-vegetated as soon as practicable after construction.

7. Noise Mitigation Conditions

7.1 The project shall, as a minimum standard, be designed and constructed to comply with the limits within the Transit NZ Guidelines for the Management of Traffic Noise for State Highway Improvements and with the acoustic report 'North Shore Busway Project, SH1 busway, Report No 97245B' by Marshall Day Acoustic Limited.

7.2 The PMP shall include a Noise Mitigation Plan prepared by a suitably qualified noise consultant. The purpose of the plan is to describe the methods by which noise associated with traffic using the roading and the bus stations within the designation will be made to comply with specified noise limits at all affected dwellings and schools in the vicinity of the area affected. Where the ambient sound level is required to determine design limits then this shall be done prior to construction commencing.

7.3 The Requiring Authority shall ensure that all construction works are carried out in accordance with NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

7.4 The PMP shall include a Construction Noise Management Plan. The purpose of the Plan is to describe the methods by which noise associated with the construction of the work will be managed to comply with condition 7.3 above. In particular, the Construction Noise Management Plan shall identify:

- a. The location of permanent acoustic fences to be installed prior to the commencement of the main construction works;
- b. Methods of managing noise;
- c. Noise monitoring methods, including details of methods, equipment, location and frequency;
- e. Contingency measures in the event of any incidence of non-compliance; and
- f. Procedures for handling noise complaints.

7.5 Where the requirements of condition 7.4 are unable to be met, the alternative strategies that have been developed following consultation with affected landowners will be implemented. Such alternatives may include, but not be limited to, temporary relocation of occupiers, compensation for occupiers and purchase of the affected properties.

7.6 Construction works shall at all times be undertaken in accordance with the Construction Noise Management Plan.

7.7 Where practicable, acoustic barriers required to meet Transit Noise Guidelines in particular locations, shall be erected prior to commencement of the construction works in those locations.

7.8 Where temporary acoustic barriers are proposed in the Marshall Day Report, and where their retention would result in effective traffic noise reduction for residents or educational facilities, they shall be built to a standard such that the barriers will be able to remain permanently in place at heights approved under condition 3.3, taking into consideration traffic noise reduction visual and landscaping factors and consultation with adjoining property owners.

7.9 Unless:

- a. Otherwise agreed between Ministry of Education (MOE) and the requiring authority; or
- b. MOE agrees to compensation with the Requiring Authority for the noise effects from the Busway and associated new works; where *additional* traffic noise resulting from the Busway or associated new works increases above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any classroom, then the requiring authority shall, immediately following commissioning of the Busway, implement mitigation measures which result in the noise level not *exceeding* 45 dBA Leq, or the ambient noise level *existing* prior to the establishment of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Busway, whichever is the higher. This noise level shall be achieved together with the ventilation requirements of The New Zealand Building Code, Clause C4.

8. Geotechnical Mitigation Condition

8.1 A Geotechnical Mitigation Plan shall be prepared by a suitably qualified Geotechnical Engineer in consultation with North Shore City Council. The plan shall be submitted to the North shore City Council prior to construction of any stage and shall take into account the recommendations of the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues' – November 2001.

9. Vibration Mitigation Conditions

9.1 The PMP shall include a Vibration Mitigation Plan having regard to the report prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001'. This Mitigation plan shall include details of how the works will comply with the requirement of German Standards DIN4150 "Structural Vibration in Buildings – Effects on Structures" during construction and shall take into account the recommendations.

9.2 A dilapidation survey of 'at risk' buildings, as per the recommendations of the audit prepared by Riley Consultants entitled 'Technical Review of Geotechnical and Civil Engineering Issues – November 2001', shall be undertaken prior to during and after completion of the construction works, provided the consent of any landowner and/or occupier can be obtained.

10 . Traffic Mitigation Conditions

10.1 The PMP shall include a Traffic Mitigation Plan based on its adopted design for the project. The Traffic Mitigation Plan shall include:

- a. Methods of mitigating the local and network wide effects of both the construction of individual elements of the project and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction;
- b. Methods of helping to accommodate the bus transport needs of pupils of Westlake Girls' High School through the development and operation of Westlake Station and the busway system, in the light of consultation with the School;
- c. Methods of limiting the use of the busway to emergency vehicles and no more than 350HOVs (excluding buses) per hour north of Esmonde Road, including a restriction on the access of HOVs through Constellation Drive Station to no more than 350HOVs;
- d. Details of a monitoring programme to be undertaken detailing the demand for car parking in the vicinity of the Sunnynook Station and Westlake Station prior to the opening of the Station and at regular intervals (a minimum of 2 per annum) for a minimum period of five years following the opening of the Station to the public and measures to manage any such demand. (This condition shall only apply to Notices of Requirement 8 and 9); and
- e. Details of pedestrian access to be provided within the Westlake Bus Station and along Shakespeare Road Extension. (This condition shall apply only to Notice of Requirement 8).

10.2 In order to prevent potentially significant traffic disruption during and after construction, the existing Onewa Interchange shall continue to be fully operational (that is in the manner in which it currently operates) until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

10.3 The public use of the Westlake Station shall not be allowed until such time as the works proposed as part of the Esmonde Interchange project have been completed and the Esmonde Interchange is fully operational.

11. Construction Management Conditions

11.1 The PMP shall include a Construction Management Plan which shall refer to all conditions imposed on any relevant resource consents granted by the Auckland Regional Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11.2 The purpose of the Construction Management Plan is to set out methods by which any dust nuisance from construction will be avoided or minimised and by which the possibility of ground vibration during construction can be notified to adjacent land owners and occupiers. In particular, the Management Plan shall identify amongst other things:

- a. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- b. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measures are implemented;
- c. Procedures for prior notification of the use of machinery likely to generate vibration effects beyond the area of the designation to properties where ground vibration may be felt;
- d. The means by which loss of vehicle access to be (sic) properties will minimise inconvenience to each property owner affected following consultation with affected property owners;
- e. Methods of ensuring pedestrian safety along public footpaths and particularly where works are proposed in close proximity to any school;
- f. Procedures for handling any dust and ground vibration complaints; and

In respect of Takapuna Normal Intermediate School the Management Plan shall include measures to address the following, in consultation with the School:

- i. Preventing students from gaining access to the construction site via the parking area off Northcote road or Smiths bush by the erection of such gates or fencing as may be agreed to by the School and the Requiring Authority;
- ii. Control of construction traffic moving between the construction site and Northcote Road so as to encourage the safe movement of students along Northcote Road; and
- iii. Minimising any adverse effects of construction on the playing field, in particular, dust nuisance.

11.3 The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction and that a copy is kept at all site offices.

11.4 The Requiring Authority and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

11.5 The Requiring Authority shall advise neighbouring owners and occupiers in the vicinity of the affected area of the date on which construction is to start, the expected duration of the work, and the telephone number of Site Liaison Officer who is able to respond to queries.

11.6 The location and extent of each stage of the site works will be identified and the North Shore City Council advised of the construction timetable.

11.7 The earthworks contractor shall be required to maintain the stability of the land and property at the boundary of the site by the best practicable method and to monitor that such works are and remain effective.

11.8 Control measures shall be in place to ensure that any vehicles leaving the designated site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up as soon as practicably possible at the Requiring Authority's expense.

11.9 Adequate provision shall be made during the earthworks construction for the protection of the existing public drains that traverse the designation. It is the Requiring Authority's responsibility to remedy any damages to the public drains that may occur during construction.

11.10 Protected vegetation areas and trees identified in the Landscape Mitigation Plan are to be retained and protected. Other sensitive areas of the site are to be identified and marked for protection prior to the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

commencement of works.

11.11 Spoil from earthworks, surplus to site requirements, shall be disposed of at an approved landfill site.

12. Exmouth Road Pedestrian Overbridge

12.1 The Requiring Authority will use its best endeavours to obtain all necessary resource consents to allow reinstatement of the existing Exmouth Road pedestrian overbridge in the same or a similar location but extended to provide access across the bus lane to the foreshore. If such consents are granted the Requiring Authority shall reinstate the overbridge prior to the consents lapsing.

13. Westlake Boys High School

13.1 The School accessway, adjoining the western boundaries of the Altona road properties and connecting the northern and southern playing fields, shall be constructed with a minimum width of 4m and designed so that service vehicles and pedestrians can obtain safe and convenient access.

13.2 The western embankment adjoining the southern playing fields of the School shall be planted with *Alnus incana* and *Alnus rubra* at a size and spacing to be detailed within the Landscape Mitigation Plan.

13.3 The Requiring Authority shall use its best endeavours to undertake construction of the works in the area adjoining the northern playing fields during the School Summer holidays (approximately 10 December – 31 January the following year).

14. Westlake Girls High School

14.1 The Requiring Authority shall use its best endeavours to ensure that the pin oak trees along the western boundary of the School are retained.

14.2 The Requiring Authority shall use its best endeavours to undertake construction of the works along the School boundary during the School Summer holidays (approximately 10 December – 31 January the following year).

15. Takapuna Normal Intermediate School

15.1 A permanent 1.8 metre close boarded and battened wooden fence shall be erected along the western boundary of the school (as identified in the **attached** plan titled "Building Locations Takapuna Normal Intermediate School") prior to commencement of construction of the Busway.

15.2 Where the operation of the Busway results in increases in traffic noise above 45 dBA Leq (0830 to 1530 hrs Monday to Friday) in any existing Takapuna Normal Intermediate School classroom with windows open (identified in the **attached** plan), then the requiring authority shall implement mitigation measures which result in the noise level not exceeding either 45 dBA Leq, or the ambient noise levels existing prior to the establishment of the Busway, whichever is higher. This noise level shall be achieved together with the ventilation requirements of the New Zealand Building Code, Clause G4 and New Zealand Standard 4303:1990 'Ventilation Requirements for acceptable indoor air quality' and in particular the requirements for educational institutions.

15.3 The Requiring Authority shall provide for:

- a. Replanting, or replacement where replanting is not practicable, of trees along the western boundary that are required to be removed for construction of the Busway; and
- b. Planting along the inside of the 1.8 metre fence (as described in condition 15.1) to mitigate the visual impact of the fence.

16. Smales Farm

16.1 The requiring authorities shall consult with a liaison person appointed by Shea Investments Limited and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Betty Leila Holdings Limited in respect of:

- a. The detailed landscape plan to be prepared for the Busway in the vicinity of Smales Farm, for the purpose of ensuring that the landscaping for the Busway is integrated with the landscape development of Smales Farm; and
- b. That part of the Traffic Mitigation Plan that relates to Shakespeare Road Extension and Westlake Bus Station.

17. T D Jane, L J & M F Bilton & A S & S J Church

17.1 Subject to access being granted by the landowners of the properties legally described as Lot 127, DP 56740 (CT 9C/703), Lot 128, DP 56740 (CT C/104) and Lot 129, DP 56740 ("the properties"), the Requiring Authority will implement the landscaping plan prepared by LA4 Landscape Architects for the properties (titled "Proposed Planting to Mitigate Busway" **attached**) and any amendments to the planting shown on the plan as reasonably agreed between the landowners and the Requiring Authority. Failing agreement within 12 months of completion of construction of the fence, the Requiring Authority shall implement the LA4 landscaping plan (or its equivalent in value).

17.2 The Requiring Authority shall construct a fence on the properties' western boundaries prior to construction of the Project commencing adjacent to the landowners properties. The fence shall have the following specifications:

- a. To be located along the properties' western legal boundaries at 2 metres above ground level (as at 16 May 2003) at 7 and 10 Altona Road, and at 2 metres and rising to 2.5 metres above ground level at the northern end at 9 Altona road, for the full length of the boundaries of those properties;
- b. To be constructed of exterior grade (marine) plywood having a thickness of 17.5 mm or more;
- c. Plywood panels to be bolted to a framework so as to ensure no gaps or cracks and to meet the surface of the ground at their lower edge;
- d. Fence posts and framework to be specified by engineering design;
- e. Transit shall construct gates in the fence if requested by the landowners of 7 and 9 Altona Road; and
- f. To be certified by an engineer as having a design life of 20 years (except that certification of the design life of the fence shall not apply to any gates requested to be constructed).

Advice note:

It is the Requiring Authority's intention to construct the fence as part of the enabling works during 2003 or by April 2004 at the latest.

17.3 Any construction activities exceeding the Construction Standard set out in condition 7.3 between chainage 13200 to 13000 shown on the designation plan "Harbour Bridge to Constellation Drive Designation Plans Westlake Boys High School, Drawing No. 7716C609" (the affected area") shall be undertaken between the hours of 8.00am – 6.00pm on weekdays only and shall exclude the two weeks following Christmas Eve. For the avoidance of any doubt, condition 7.5 relating to works exceeding the Construction Standard continues to apply to the landowners as affected parties.

17.4 The Requiring Authority shall undertake earthworks in the affected area in one stage.

17.5 The Requiring Authority shall consult with the landowners on the mitigation plans referred to in the conditions 5, 6, 7, 8, 9, 10 and 11 on the designation insofar as the mitigation plans affect the landowners' properties

18. Bateman Property

Stormwater

18.1 As part of the busway construction works, Transit and NSCC shall provide the following measures to address stormwater effects:

- a. Transit shall pipe the existing drain from chainage 15100 down to 14960 (see Figs 1a – 1c, **attached**);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Transit and NSCC shall widen by 4m the motorway side of the existing drain located on the eastern side of the motorway, from the level of the top of the present vertical concrete wall, from chainage 14960m to Sunnynook Road Culvert (as shown on the **attached** Figs 1a – 1c), such widening shall be at a grade as flat as possible from the existing concrete wall, consistent with efficient fall;
- c. NSCC shall use its best endeavours to reduce the volume of debris caught on the central wall of the Sunnynook Road Culvert by reshaping the leading edge of the central wall;
- e. Transit and NSCC shall undertake the following measures to avoid slope instability and scour:
 - i. Provide a batter toe restraint retaining wall to buttress the lower position of the batter;
 - ii. Construct a gabion wall or timber pole wall to support the toe restraint retaining wall; and
 - iii. To undertake grass seedling over the four metre widening of the berm.

Advice Note:

It is recorded that Mr Bateman has agreed to provide access to Transit and NSCC or their contractors to enable them to undertake any drainage improvement works required within or adjacent to the Bateman family property.

Noise

18.2 Transit shall construct a concrete 0.8 metre high barrier between the Busway and the property in compliance with the letter from Marshall Day Acoustics Limited dated 18 December 2002 (**attached** as Appendix 1). The detailed design of this barrier is to be finalized as part of the busway detailed design.

18.3 Transit shall construct a 0.8 metre high solid concrete New Jersey Barrier on top of the retaining wall between the motorway and the busway as also described in Appendix 1; the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.4 Transit shall construct a 1.8 metre high barrier at the rear of the Sunnynook Station between the proposed bus shelter and the end of the platform to mitigate any reflection of noise from the northbound bus shelter, the detailed design of this barrier is to be finalised as part of the busway detailed design.

18.5 Transit agrees that any retaining wall to be constructed for the purposes of the Sunnynook Station shall be constructed from non-reflective materials to mitigate any potential noise effects.

Landscaping

18.6 Transit shall undertake screen planting, consisting of native trees, shrubs and ground cover between Sunnynook Station, the busway and the property, as shown on the **attached** plan (titled “North Shore Busway Project: Amended Landscape Development for Sunnynook Bus Station, Figure 2”) to provide effective screening. The planting, including the planting shown on the embankment between the busway and the motorway, will be undertaken as soon as practicable following the construction works and within the first planting season to provide effective screening.

18.7 The landscaping and planting provided for under clause 18.6 shall be planted at Pb28 grade so that the plants are approximately 1.5 metres high when planted.

18.8 All planting shall be tended and maintained to ensure the full establishment and effectiveness of the landscaping including replacement planting where necessary.

6761 State Highway 1 - Silverdale to Puhoi

Designation Number	6761
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 from Bankside Road, Silverdale to Titfords Bridge, Puhoi
Rollover Designation	Yes
Legacy Reference	Designation 401, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Motorway and limited access highway and associated interchange structures.

Conditions

1. General

1.1 That the scope and extent of the works envisaged within the designation be generally in accordance with the plans contained in Appendix C accompanying the notice of requirement dated 9 May 1994 (held on Vol 1 of RDC file No. L18810), subject to final design and any modification required to comply with the conditions set out below.

1.2 That the Regional Manager of Transit New Zealand recommend to the Transit New Zealand Authority that the realignment of State Highway No. 1 from Albany to Puhoi be treated as one integrated and complete project for funding and construction purposes.

1.3 That, prior to any stage being commenced, Transit New Zealand shall obtain all requisite resource consents required under the Resource Management Act 1991 and the Operative Rodney District Plan, and any authority necessary to modify any archaeological sites likely to be affected, from the New Zealand Historic Places Trust. The application to the New Zealand Historic Places Trust shall be made at least six months prior to the commencement of construction of each stage.

1.4 That Transit New Zealand and its contractors shall take all reasonable steps to prevent or mitigate any nuisance to adjacent properties during construction.

1.5 That any land taken or held for the works be maintained to a reasonable standard until physical works commence.

1.6 That at all times reasonable access be maintained to private properties not directly affected by construction and operation.

1.7 That the extent of land required to be taken for the designation, and to be acquired for mitigation purposes, be provisionally identified on the land forthwith, and that this information be made available to the affected property owners and occupiers and the Rodney District Council as soon as possible after the designation is confirmed. Prior to this provisional identification of land taking place, the liaison person (required by condition 1.9) shall have discussions with all affected land owners and occupiers, in order that the final alignment and all associated works are located to best mitigate, as far as practicable, any adverse effects on each property physically affected.

1.8 That the design and construction of the motorway in the vicinity of Bankside Road shall not preclude the option of a full intersection being constructed at this location in the future, or of provision being made for parallel service roads between Bankside Road and the proposed Link Road.

1.9 That a liaison person be appointed by Transit New Zealand to be the main and readily accessible point of contact for persons affected by the designation and construction works.

2. Noise Mitigation Actions

2.1 The highway shall be designed in accordance with Transit New Zealand's Guidelines for the Management of Traffic Noise - State Highway Improvements, November 1994. Where the noise standards could be exceeded, the appropriate noise reduction options identified in the Draft document shall be implemented.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.2 Construction noise shall meet the limits in, and shall be measured and assessed in accordance with NZS 6803P:1984 - The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work.

3.1 Prior to the commencement of construction, a detailed archaeological study of the provisionally identified route shall be undertaken, including field survey, completion of archival searches and subsurface testing where appropriate.

3.2 Appropriate provision is to be made to protect historical/archaeological sites in situ during construction. This will include the fencing off of sites adjacent to the route.

3.3 Transit NZ shall ensure that roading contractors are briefed regarding the location and significance of archaeological sites on or close to the selected route.

3.4 An archaeologist shall be appointed by Transit NZ to monitor the roadworks, particularly in those areas which cannot be adequately surveyed owing to dense bush cover. The role of the archaeologist will be to record archaeological evidence from any sites not located during the survey.

3.5 Transit NZ shall use its best endeavours to consult with the Tangata Whenua to achieve the implementation of the recommendations of the cultural impact assessment (Section 8.4 of the EIA). The following recommendations were made by Iwi:

3.5.1 That Transit New Zealand continue ongoing dialogue and liaise with Tangata Whenua during the detailed design phase.

3.5.2 That Transit New Zealand take on board the concerns expressed by Tangata Whenua with respect to safeguarding the violation of Waahi Tapu and other sacred sites.

3.5.3 That Transit New Zealand employ representatives of Tangata Whenua at the construction stage to act as Kaitiaki during earthworks, to ensure that no Waahi Tapu are violated.

3.5.4 That Transit New Zealand give an undertaking that no Urupa will be disturbed.

3.5.5 That Transit New Zealand purchase land in the vicinity of the alignment in consultation with Tangata Whenua, for the reburial of remains accidentally unearthed, and that this process be carried out according to Maori ceremony and kaupapa.

3.5.6 That areas defined by Tangata Whenua as being places of Mauri adjacent to the final route be set aside as reserve, and treated appropriately in conjunction with Tangata Whenua.

3.5.7 That traditional Maori names for the area, including geographic features along the final route, be reused and expressed in plans, road signs and maps.

3.5.8 That the Maori history of the area as defined by Tangata Whenua be promoted in any newsletter, publications or periodicals to do with the works.

3.5.9 That Transit New Zealand ensure that Maori spiritual values, especially of water are recognised and catered for in the design of the final route of road water, discharge and seepage.

3.5.10 That Transit New Zealand ensure that no nett effects of the new roadway as a result of design, construction or utilisation, will detrimentally affect kaimoana or fishing grounds along the rivers, estuaries or foreshore of local waterways.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3.5.11 That Transit New Zealand allow for the substantial use of native plants and trees in its landscaping plans as buffer against adjoining landowners.

3.5.12 That Maori values be recognised as matters of national importance and that their concerns as expressed to Transit New Zealand be resolved in that light.

3.5.13 That Transit New Zealand undertaken to inform Tangata Whenua of any changes in policy, programme or design which may detrimentally affect them. A cultural consultant will be retained by Transit NZ to assist in this consultation.

3.6 Transit NZ shall pursue a proactive land purchase programme following confirmation of the designation and land surveys of the alignment.

4. Ecological Impact Actions

General

4.1 Transit New Zealand shall make use of bridges, as opposed to causeways or culverts, for the following river or estuary crossings: Orewa River, Otanerua Stream, and Waiwera River. Where possible construction of stream, estuary and river crossings shall minimise disturbance of the stream, estuary or river bed.

4.2 Appropriate sediment management techniques shall be implemented during construction. In areas that are particularly sensitive to sediment build up, consideration should be given to adopting the following methods:

- a. Minimisation of stock piling of loose soil where run-off into water courses could occur;
- b. Revegetation of any areas of exposed soil as quickly as possible;
- c. Control of run-off from working areas, ensuring that all such run-off passes through settling ponds before entering a water course;
- d. Retaining existing vegetation and wetlands to act as additional buffers between stormwater treatment areas and water courses;
- e. Careful storage and handling of construction material.

4.3 Transit NZ shall implement appropriate stormwater quality treatment systems as may be required by the Auckland Regional Council.

4.4 Transit NZ shall make provision for appropriate funding within the project estimate, for land purchase and fencing to protect the important ecosystems on the land identified as severance areas. If the project (inclusive of the said funding) is approved in the National Roding Programme, Transit NZ shall use its best endeavours to acquire this land by negotiation with the current owner, at a price advised to it by a registered valuer to represent market value, and failing such purchase, shall fund any purchase thereof by the Department of Conservation up to the sum approved as aforesaid. The land so acquired shall become reserve, which Transit NZ shall fence beside the State Highway on behalf of the Department.

4.5 Where the roadway passes through native bush areas careful detailed alignment and design of the roadway shall be undertaken to minimise habitat loss, wildlife isolation effects and construction impacts. Transit NZ shall consult with the Department of Conservation on these matters. Where, during the process of completing final design, it appears that minor alterations to the designation will:

- a. Better achieve the objectives of this condition without additional construction costs or adverse impacts on the efficiency of the proposed State Highway; or
- b. Reduce construction costs or improve traffic efficiency without adversely impacting on the achievement of the objectives of this condition then Transit NZ shall give full and proper consideration, in consultation with the Department of

Conservation and any owner or occupier of land directly affected by the proposed alteration, to the lodging of an

The Proposed Auckland Unitary Plan (notified 30 September 2013)

application to alter the designation pursuant to Section 181 Resource Management Act. For the avoidance of doubt, Transit shall be at liberty to withdraw the application to alter the designation, if the territorial authority declines to alter the designation pursuant to Section 181(3) Resource Management Act. The native cover through these areas must be kept as close as practicable to the carriageway, and the carriageway maintained at a minimum width having regard to operational and capacity requirements.

4.6 In ecologically sensitive areas, plants, seeds and cuttings used for restoration work programmes should, where available, be taken from the same ecological district as the area where restoration is to be carried out and preferably, from as close as possible to the restoration site.

4.7 In carrying out plant pest control programmes, techniques that avoid or mitigate adverse effects on nontarget species and the environment in general should be used. Wherever possible, these should be of low toxicity and low residue.

Straka's Wildlife Refuge (Pond)

4.8 Transit NZ shall make provision for appropriate funding within the project estimate, for the purchase of a buffer strip up to 100 m in width between the roadway and the Pond. If the project (inclusive of the said funding) is approved in the National Land Transport programme, Transit NZ shall use its best endeavours to acquire this buffer strip by negotiation with the current owners, at a price advised to it by a registered valuer to represent market value, and failing such purchase, shall fund any purchase thereof by the Department of Conservation, up to the sum approved as aforesaid. Any land so acquired shall become reserve and Transit NZ shall fence it off from stock.

4.9 There shall be a 50 m minimum distance between the zone of construction disturbance and the Pond edge. 4.10 In order to minimise any adverse effects of construction, Transit NZ shall consult with the Department of Conservation, Rodney District Council, a consultant ecologist and, if possible, the land owner, when preparing the detailed design of the works in the vicinity of this refuge. Consideration shall be given to the following:

- a. Construction disturbance zones;
- b. Extent of cut and batter slopes;
- c. The need for any artificial retention structures;
- d. Bridging and culverts;
- e. Stormwater runoff (construction and operation);
- f. Silt ponds;
- g. Wetland filtration.

4.11 In order to reduce siltation of Straka's Pond, Transit NZ shall construct a silt pond system in the upper catchment and establish appropriate riparian vegetation along the connecting creek boundary. This system shall be constructed prior to the commencement of the works in the upper catchment above the pond, and shall be retained as a complement to Straka's Pond.

4.12 Transit NZ shall endeavour to arrange with the land owner, Mr C Wech, (at its own cost) the covenanting of the main block of bush west of the roadway, and shall endeavour to arrange for the planting of a dense buffer of appropriately mixed native vegetation in this area.

Otanerua Bridge

4.13 If the highway is approved in the National Roding Programme, Transit NZ shall construct a viaduct across the Otanerua stream. The bridge shall be capable of achieving an ecological corridor beneath the bridge of not less than 173 metres, measured horizontally, including revegetation of the embankment on the northern side. Measurement of the ecological corridor shall not include any land that is less than 5 metres below the viaduct carriageway superstructure.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Protection of Willis Buffer Strip

4.14 If Transit NZ exercises the option it holds to acquire all of the Willis land on the eastern side of the highway, then if the highway is approved in the National Roding Programme, Transit NZ shall establish an ecological buffer strip beside the highway. The buffer strip shall be established by planting RAP type vegetation for habitat restoration on cleared areas, and by felling the pine trees within the buffer strip in the first summer season after acquisition, and revegetating that cleared land with RAP type vegetation in the autumn immediately following the felling of the pines.

4.15 Pending the exercise of the option and if Transit NZ decides not to exercise the option, Transit NZ shall use its best endeavours to acquire the buffer strip, and upon acquisition thereof if the highway is approved in the National Roding Programme, Transit NZ shall plant RAP type vegetation.

4.16 Transit NZ undertakes not to destroy or damage the existing vegetation within the buffer strip except in so far as it is within the batter slopes and/or the carriageway and/or it requires an access strip.

4.17 In the event of the sale by Transit NZ of the buffer strip, or any part thereof, Transit NZ undertakes to sell subject to a conservation covenant.

Median Strip

4.18 If Transit NZ does not acquire the buffer strip and if the highway is approved in the National Roding Programme, then it shall construct the highway to include a median strip, located south of Hillcrest Road and north of the Nukumea stream, of approximately 10 metres width and 250 metres in length to be planted with RAP type vegetation.

4.19 If the Eder severance land is acquired by Transit NZ and it is intended that access will be provided to the Haines House Haulage land over the Eder severance land, then Transit NZ shall transfer the balance of the Eder land to the Department of Conservation pursuant to the condition relating to severance land below.

Waiwera Bridge

4.20 If the highway is approved in the National Roding Programme, Transit NZ shall construct a bridge at Waiwera no less than 350 metres in length, and the abutment on the northern side of the bridge shall abut directly onto unfilled land.

4.21 Transit NZ shall consult with the Department of Conservation and the Auckland Conservation Board in the process of final design, with a view to maximising the ecological corridor on the northern bank of the Waiwera River.

Severances

4.22 If the highway is approved in the National Roding Programme, Transit NZ shall use its best endeavours to acquire severance lands, by negotiation with the current owners at prices advised to it by a registered valuer to represent market value, and failing such purchase, shall fund any purchase thereof by the Department of Conservation up to the sum aforesaid, should the Department of Conservation, wish to acquire the land. Any land so acquired shall become reserve, which Transit NZ shall fence beside the highway on behalf of the Department of Conservation, if required by the Department of Conservation.

Kett Land

4.23 If the highway is approved in the National Roding Programme, Transit NZ will use its best endeavours to acquire the Kett land at market value assessed in the manner referred to in the condition relating to severances above, and Transit NZ shall only sell the balance of the Kett land subject to a conservation covenant.

5. Visual Impact Mitigation Actions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.1 Restoration of the construction areas shall be an essential part of the project. The restoration shall include grassing and other planting for slope stability, together with landscape planting for the visual enhancement of the new road.

5.2 All borrow or disposal areas for excess fill shall be designed to avoid significant impact on the environment, be in keeping with the general form of the surrounding landscape and be restored, in consultation with the affected landowners, as described in Condition 5.1.

5.3 In carrying out the detailed design for the alignment, Transit NZ shall take advice from a practising landscape architect and shall pay particular attention to:

- a. The angle and extent of cut and batter slopes
- b. Possible purchase of additional land to achieve better slope integration
- c. Oblique cuts through highly visible ridge lines
 - i. In order to achieve, as far as practicable, unity between the road and the surrounding landscape
 - ii. And shall prepare, with advice from a practising landscape architect, and in due course implement, a planting plan which will integrate the road into the various landscape characters through which it passes.

This advice shall be taken in order to achieve, as far as practicable, unity between the road and the surrounding landscape, and shall prepare with advice from a practising landscape architect, and in due course implement, a planting plan which will integrate the road into the various landscape characters through which it passes.

6. Property Owned by Mr and Mrs Eder

6.1 For the purpose of assisting Mr and Mrs Eder to preserve a residential building site on their land, the plan contained in Appendix C accompanying the notice of requirement dated 9 May 1994, shall be modified so that the designation boundary is relocated in the position identified in the plan attached to these conditions. (Note: No plan attached. The designation boundary on Planning Map 21 includes this modification.)

6764 State Highway 1 Road Widening - Hudson Road, Warkworth

Designation Number	6764
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 intersection with Hudson Road, Warkworth
Rollover Designation	Yes
Legacy Reference	Designation 404A, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Road widening.

Conditions

1. General

1.1 Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority, being the New Zealand Transport Agency (NZTA), the Notice of Requirement and supporting documents, as follows:

- a. "State Highway 1 Warkworth — Hudson Road/State Highway 1 Intersection Upgrade — Alteration to Designation — "SH 1 Region RS 363, Warkworth Stage 1 Intersection Improvements RP 363/1/31/SH1 and Hudson Road," prepared for NZTA and RDC by Opus International Consultants Ltd, comprising of plans:
 - i. Plans titled "Concept Layout — Sheets 1-5," and referenced "Feature Identifier 1/21/40, Code 6104, Revision RO".

1.2 The period within which this alteration to designation shall lapse if not give effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act, 1991 as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

amended.

2. Outline Plans of Work and Management Plans

2.1 Prior to the commencement of works, the Requiring Authority shall submit to the Resource Consents Manager of Rodney District Council the relevant Management Plans required under Conditions 3 (Construction), 4 (Noise), 6 (Construction Traffic) and 8 (Urban Design and Landscape), below.

2.2 The approval in writing of all the above Management Plans referred to in condition 2.1 above may also, if considered appropriate by the Resource Consents Manager of Rodney District Council, be deemed to be a waiver, in whole or part, pursuant to Section 176A(2)(c) of the RMA of the requirement for an Outline Plan of Works under section 176A. If such a waiver is sought through the management plan approvals, this should be stated in writing when these management plans are submitted for approval.

2.3 The works shall be undertaken in accordance with the approved Management Plan or accepted Outline Plan of Works (as the case may be).

3. Construction

3.1 At least 10 working days prior to commencement of works on the project, the Requiring Authority shall prepare and submit for approval to the Resource Consents Manager of Rodney District Council, a Construction Management Plan (CMP). The purpose of the CMP is to set out the management procedures and construction methods to be undertaken in order to avoid, remedy or mitigate potential adverse effects arising from construction activities. The submission and approval of detailed engineering plans shall also be undertaken through the CMP approval.

3.2 The CMP shall be implemented and maintained throughout the entire construction period. The CMP shall include specific details relating to the construction and management of all works associated with the Project, including;

- a. Details of the site or project manager, including their contact details (phone, facsimile, postal address, e-mail address);
- b. The location of large notice boards that clearly identify the name, telephone number and address for service of the site or project manager;
- c. An outline construction programme of the works indicating in particular likely time periods for road closures and anticipated traffic diversion effects;
- d. A tree protection methodology with arboricultural input, which ensures no damage occurs to the trees along the Showgrounds boundary and the boundary of Lot 1 DP 150324 that are otherwise unaffected by the Project throughout the entire construction period;
- e. Any means of protection of services such as pipe and watermain within the legal road;
- f. Measures to be adopted to maintain the land in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of building materials and similar construction activities;
- g. Location of workers offices and conveniences (e.g. portaloos);
- h. Procedures for controlling sediment run-off, dust and the removal of soil, debris and demolition and construction materials from public roads and places. Dust mitigation measures should include use of water sprays to control dust nuisance on dry or windy days;
- i. Procedures for ensuring that residents in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration of the works; and
- j. Means of ensuring the safety of the general public.

3.3 Upon completion of the upgrade project, the Requiring Authority shall submit to the Resource Consents Manager of the Rodney District Council as-built plans in relation to all construction works undertaken as part of the intersection upgrade.

4. Noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Construction Noise

4.1 The CMP shall include a Construction Noise and Vibration Management Plan (CNVMP) describing the measures adopted to as far as practicable meet the requirements of the NZS6803:1999 Acoustics — Construction Noise. The CNVMP shall be submitted to and approved by Rodney District Council's Environmental Health Officer prior to any works commencing on the upgrade. The CNVMP shall refer to noise management measures set out in Appendix E of NZS6803:1999, and as a minimum shall address the following:

- a. Construction sequence;
- b. Machinery and equipment to be used;
- c. Hours of operation, including time and days when noisy construction work would occur;
- e. The design of noise mitigation measures such as temporary barriers or enclosures;
- f. Construction noise limits for specific areas;
- g. Development of alternative strategies where full compliance with NZS6803:1999 cannot be achieved, including consultation with residents and other occupiers to achieve acceptable outcomes.
- h. Methods for monitoring and reporting on construction noise.
- j. Onsite contact for local residents and operations;
- k. Where an activity is predicted to generate noise levels above the limits prescribed in NZS 6803:1999, the Requiring Authority shall provide a site specific construction noise and vibration management plan. This plan shall describe the noise mitigation and management measures which will be implemented by adopting the best practicable option in accordance with section 16 of the RMA.

4.2 Every reasonable effort shall be made to notify residents/ occupiers of properties situated within 50m of the construction site in writing at least 3 days prior to the commencement of the proposed works, including information of duration and type of noise activities. A contact telephone number shall be provided to these residents/ occupiers and a complaint monitoring procedure shall be established so that complaints relating to individual contractors are managed centrally.

Operational Noise

4.3 A Noise Management Plan (NMP) shall be prepared by a suitably qualified acoustic expert for the purposes of avoiding, mitigating or remedying adverse noise effects from the operation of the project following its construction.

4.4 The NMP shall include general measures, which shall include but not be limited to the installation of noise attenuation barriers or low noise road surface material, to the extent necessary to achieve at a minimum, compliance with the NZTA (Transit New Zealand) "Guidelines for the Management of Road Traffic Noise — State Highway Improvements" (December 1999).

Noise Monitoring

4.5 As required by the NZTA (Transit) Noise Guidelines, measurements of noise levels existing prior to construction shall be used to establish ambient noise levels. The result of 24 hour ambient noise measurements at one (1) position within 50m of the project, together with site maps detailing measurement positions and key data on measurement conditions shall be forwarded to the Council prior to the commencement of construction. Measurements shall be undertaken by a suitably qualified person and the results, together with the site maps and photographs detailing the measurement position and key data, shall be forwarded to the Rodney District Council.

Compliance Monitoring

4.6 Following completion of the work, the Requiring Authority shall arrange for an appropriately qualified person to undertake monitoring of the level of traffic noise at the above one (1) position for which ambient noise level data has been previously recorded, within a period between 2 and 3 years following completion of construction of the Work, but not post construction of the Western Collector Route. The Requiring Authority shall report the findings of monitoring to the Rodney District Council. If as a result of this, non-compliance with the NZTA Guidelines is identified, then specific measures shall be adopted to achieve compliance.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. Vibration

5.1 The CNMVP shall describe how the vibration standards of the German Standard DIN 4150 shall be met as far as practicable, and shall address the following aspects:

- a. Vibration monitoring measures;
- b. Criteria;
- c. Possible mitigation measures;
- d. Complaint response;
- e. Reporting procedures;
- f. Notification and information for the community of the proposed works;
- g. Vibration testing of equipment to conform that the vibration limits will not be exceeded;
- h. Location for vibration monitoring when construction activities are adjacent to critical buildings;
- i. Operational times;
- j. Preparation of dilapidation reports on critical dwellings prior to, during and after completion of works.
- k. Site specific CNVMPs where required to address potential exceedances of the vibration standards.

Operational Vibration

5.2 Vibration levels of the existing operations at the existing State Highway 1 operations shall be measured by a suitable qualified person at not more than one nominated critical location, and submitted to the Rodney District Council, prior to the commencement of works. These baseline measurements will provide levels for current use and for comparison with future levels.

6. Construction Traffic

6.1 The CMP shall include a Temporary Traffic Management Plan (TTMP), for the project, which shall be prepared by a suitably qualified expert(s). The TTMP shall be submitted to and be approved by the Rodney District Council prior to the commencement of works.

6.2 The TTMP shall be implemented and maintained throughout the entire construction period. The TTMP shall include details relating to:

- a. Methods of mitigating the local and network wide effects of both construction of individual elements of the Project, and the use of staging to allow sections of the project to be opened to traffic while other sections are still under construction.
- b. Methods to manage the effects if the delivery of construction material, plant and machinery.
- c. The numbers, frequencies and timing of construction traffic movements.
- d. Methods to manage the effects of traffic that is required to detour or be diverted during construction, in particular seeking to minimise effects on residential and commercial areas.
- e. Contingencies for traffic diversion.
- f. Consultation with Rodney District Council with regard to the most appropriate means for providing access on Council roads within and adjacent to the designation.
- g. Identification of any existing on-site parking and manoeuvring areas which are affected by the works. Then, as far as practicable, and in consultation with Rodney District Council and the affected land owner, identify how the affected areas will be relocated or reinstated to achieve compliance with the District Plan or to similar standard to that existing.
- h. Where necessary, provision of alternative access arrangements as far as practicable, and in consultation with Rodney District Council and the affected landowner.
- i. Details on the maintenance of pedestrian access and thoroughfare to be maintained on all roads and footpaths adjacent to the construction works where practicable. Such access shall be safe and clearly identifiable. Specific measures shall also be provided to mitigate the effects of construction works on pedestrians and cyclists.
- j. Consistency with the NZTA (Transit New Zealand) "Code of Practice for Temporary Traffic Management" (COPTTM).
- k. Provision of pedestrian access/egress to properties adjacent to the works at all times.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. Archaeological and Heritage

7.1 Subject to condition 7.2, if any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust and the Rodney District Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not commence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historical Trust is obtained.

7.2 Condition 7.1 shall not apply where the Requiring Authority holds all relevant approvals under the Historical Places Act 1993, apart from the requirement to contact the New Zealand Police in the event of discovery of human remains.

8. Urban Design and Landscape Mitigation

8.1 Prior to the commencement of works on the project, the Requiring Authority shall submit to the Rodney District Council and have approved in writing an "Urban Design and Landscape Mitigation Plan" (UDLMP).

This UDLMP shall be prepared by a suitably qualified expert(s) and shall take into account the following:

- a. NZTA's "Guidelines for Highway Landscaping" (September 2006); and
- b. NZTA's "Urban Design Implementation Principles" (2006).

8.2 The UDLMP shall in particular provide for:

- a. The integration of the permanent works into the surrounding landscape;
- b. Mitigation of effects on properties in the vicinity of the alignment;
- c. Pedestrian and cycle linkages proposed in respect of the project;
- d. Retention or relocation of existing trees where practicable;
- e. Replacement planting or mitigation for loss of trees that are protected by the general provisions of the District Plan; and
- f. The outcomes of any consultation undertaken with the Rodney District Council.

8.3 The UDLMP shall be prepared in general accordance with the "Landscape Mitigation Plans" prepared by Opus International Consultants Limited, referenced PA2847-SH1, dated June 2009, and shall include the following:

- a. An Urban Design Framework that depicts the overall urban design concept, the design intent, layout and mitigation proposals, and
- b. Landscape and Urban Design Details — these shall include:
 - i. Identification of vegetation to be retained and removed;
 - ii. Proposed planting, including plant species, mixes, spacing/densities, sizes (large specimen trees shall be used, of at least pb95 size at time of planting) and layout,
 - iii. Planting programme — the staging of planting in relation to the construction programme; and
 - vi. A maintenance programme providing specific measures as how the planting will be maintained following its establishment for 3 years thereafter for specimen trees and for 2 years thereafter for other planting.

8.4 The works as set out in the UDLMP shall be implemented as soon as practicable and works shall be completed no later than 12 months after the practical completion date of the Project.

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all

The Proposed Auckland Unitary Plan (notified 30 September 2013)

relevant Council bylaws.

2. Under the Historic Places Act 1993, an Authority is required from the NZ Historical Places Trust before any work commences which may destroy damage or modify the whole or any part of an archaeological site or sites.

3. Applications for resource consent to the Auckland Regional Council will be sought for the following activities:

- a. Earthworks; and
- b. Stormwater discharge.

4. The Requiring Authority (NZTA) proposes to undertake the works authorised by these designation conditions as a joint project with the Rodney District Council (RDC) which is the relevant Requiring Authority for the related local road improvements. The RDC has a separate (but nearly identical) set of designation conditions authorising the works for which it is responsible.

Attachments

No attachments.

6765 State Highway 1 - Wayby Valley Road, Wellsford

Designation Number	6765
Requiring Authority	New Zealand Transport Agency
Location	State Highway 1 intersection with Wayby Station Road and Wayby Valley Road, Wellsford
Rollover Designation	Yes
Legacy Reference	Designation 404B, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

State Highway 1 / Wayby Valley Road / Wayby Station Road intersection.

Conditions

General

1. Conditions 2 to 12 inclusive are applicable only to the alteration to the designation (404B) and not to the designation in its entirety (404) and shall only apply until such time that construction is completed.

2. That the scope and extent of the works within the designated area be generally in accordance with the Notice of an Alteration to a Designation, dated 14 April 2011, as shown in Attachment 1 — Land Designation Plan (Drawing No. 51-29153-SK001), and in accordance with the conditions set out below.

Construction

3. Any variation or changes to the engineering plans provided with the Notice of Requirement shall be submitted for approval to the Auckland Council's Development Engineer, Northern Resource Consenting and Compliance (Orewa Service Centre) as an Amendment and approval received thereto prior to construction of the varied works.

The term 'engineering works' includes, but is not limited to:

- a. The formation of roads, the laying of pipes and other ancillary equipment to be vested in the Council for water supply, drainage or sewage disposal;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Street lights, landscaping or structures on land vested, or to be vested, in the Council;
- c. The installation of gas, electrical or telecommunication reticulation including ancillary equipment; and
- d. Any other works required by conditions of this consent.

As built record plans to requirements of the Council's "Standards for Engineering Design and Construction" shall be submitted to the Consents Engineer on completion of the works. Note: Engineering Plan approvals, monitoring of construction and processing of As Built plans will be subject to charges in terms of the Schedule of Fees and Charges determined from time to time by the Council.

4. The Applicant's Representative shall give the Auckland Council's Consents Field Supervisor at least 5 working days notice of the on-site pre-construction site meeting (refer section 103.15 of the "Standards for Engineering Design and Construction"). Construction work shall not commence on the site until such meeting has been held and all necessary documentation presented.

Note: Attention is drawn to the requirements of section 103.15.3 "Standards for Engineering Design and Construction" for the following documentation to be presented at the preconstruction meeting:

- a. Approved engineering plans and copy of approval letter;
- b. Health and Safety Plan;
- c. The Signed Road Opening Notice;
- d. The relevant Resource or Subdivision Consent (and all conditions attached thereto); and
- e. Signed copies of all Consents to Enter for Construction for works on land (including Council land) not owned by the consent holder.

5. A detailed Health and Safety Plan to the requirements of the Health and Safety in Employment Act 1992, specifically addressing control of works on and adjacent to public land, and the protection of the public, shall be submitted to the Auckland Council's Consents Engineer prior to the commencement of any works on the site (refer s.109.1 of the "Standards for Engineering Design and Construction"). A copy of the Health and Safety Plan shall be kept on the site at all times. All measures for the protection of the public and other personnel set out in the Plan shall be maintained and complied with at all times until such time as the works are completed.

6. A detailed Traffic Management Plan in accordance with the Code of Practice for Temporary Traffic Management specifically addressing control of construction access to the site and traffic control adjacent to the site, and the protection of the public, shall be submitted to the Auckland Council Consents Engineer.

Verification that it meets the Council's requirements shall have been received in writing, prior to the commencement of any works on the site (refer s.109.2 of the "Standards for Engineering Design and Construction".) A copy of the Traffic Management Plan, together with the verification letter shall be kept on the site at all times. A copy of the Traffic Management Plan shall also be forwarded to the Auckland Transport Operations Team for information purposes. All measures for the protection of the public and other personnel set out in the verified Plan shall be maintained and complied with at all times until such time as the works are completed.

Construction Management Plan

7. Prior to the commencement of any earthworks or construction activity associated with the upgrade of the intersection (excluding site investigations), the NZTA shall submit a Construction Management Plan (CMP) to the Auckland Council's Northern Resource Consenting and Compliance Team (Orewa Service Centre) two weeks prior to construction commencing. Any amendments to the CMP required by the Auckland Council's Northern Resource Consenting and Compliance Team (Orewa Service Centre) shall be requested in writing prior within the two week period. The Construction Management Plan shall included the procedures, methods and measures to be applied to address the following:

- a. Notification to the Auckland Council, Auckland Transport, network utility operators, and the owners and occupier of all properties with direct access off that area of SH1 and Wayby Station Road affected by the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

proposed work of the likely commencement date for the works and expected timeframe of the construction programme;

- b. Provision of a single point of contact to field general enquiries and complaints from the public and maintenance of a complaints register. The liaison person's name and contact details shall be advised to Auckland Council and all owners and occupiers of properties with direct access off the proposed area of works;
- c. Management procedures to be implemented by the NZTA and its contractors to minimise dust emissions, including monitoring, auditing and reporting procedures;
- d. Parking and loading of construction related vehicles during the period of construction;
- e. Provision of access for emergency vehicles; and
- f. Hours of operation of trucks and service vehicles and methods to be employed to address the effects of construction traffic on local roads.

The Construction Management Plan may be submitted in stages in accordance with the construction programme. The NZTA and contractors shall implement the Construction Management Plan at all times.

Construction Noise

8. Noise generated by the construction works associated with the upgrade to the SH1, Wayby Valley Road and Wayby Station Road intersection shall, where practicable, comply with New Zealand NZS 6803:1999 "Acoustics — Construction Noise". Where compliance with this standard is not practicable, alternative methodologies that will minimise the adverse effects shall be developed in consultation with the owners and/or occupiers of the affected properties.

Management of Effects on Utilities, Continuity of Supply

9. During the design of the project the NZTA shall give reasonable notice and make all reasonable endeavours to:

- vii. Liaise with all relevant network utility operators in relation to any part of the works within the designation where infrastructure may be affected.
- viii. Make all reasonable changes requested by network utility operators to the relevant design plans and methodologies, to ensure that access to, maintenance and the operation of all network utility infrastructure within the designated area is not adversely affected.

Works on Public Land

10. Reinstatement of the surface(s) within or adjoining public land including legal road shall be completed as soon as possible on completion of the works affecting the said surface(s), and until such reinstatement is completed the requirements of the verified Traffic Management Plan and Health and Safety Plan shall be complied with in all respects.

Silt retention

11. Before commencement of any works, adequate silt retention structures as detailed in drawings submitted with the application (Drawing No. 51-29153-C109) shall be installed. These structures shall be maintained and cleaned out as necessary until such time as complete grass cover, or other non-erodible surfacing, has been re-established over the site.

Archaeological Remains

12. In the event that any archaeological sites, remains, artefacts, taonga are unearthed, dislodged, uncovered or otherwise found or discovered during the earthworks, NZTA shall:

- a. Advise the Heritage Specialist — Environmental Services of the Auckland Council;
- b. Cease works in any part of the site affected by the discovery;
- c. Contact NZ Police, Coroner, Tangata Whenua and Historic Places Trust as appropriate; and
- d. Not recommence works in any part(s) of the project site affected by the discovery until all necessary statutory authorisations or consents are obtained and protocols for undertaking earthworks have been observed.

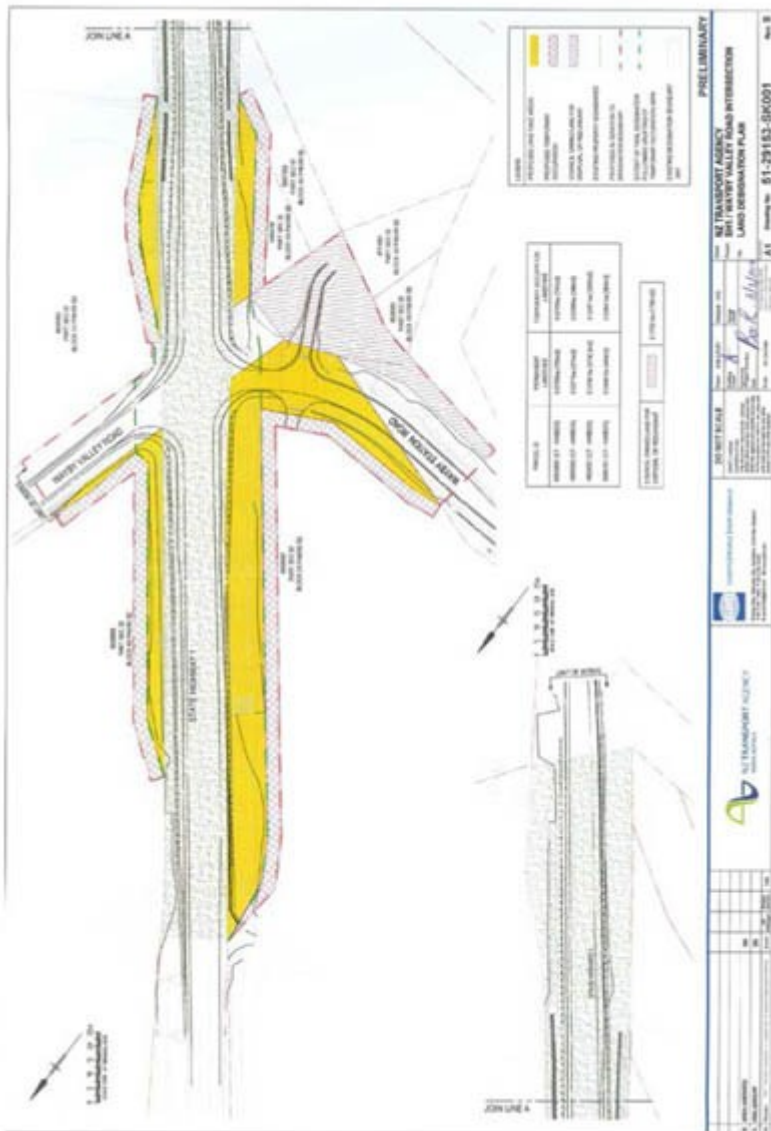

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes

1. The Requiring Authority needs to obtain all other necessary consents and permits and comply with all relevant Council bylaws.

Prime Minister

Designation Schedule - Prime Minister

Number	Purpose	Location
7100	Government House ...	119 Mountain Road, Epsom

7100 Government House

Designation Number	7100
Requiring Authority	Prime Minister
Location	119 Mountain Road, Epsom
Rollover Designation	Yes
Legacy Reference	Designation D08-24, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Government House is used for vice regal purposes, as the Auckland residence of the Governor General.

The following is a list of activities that fall within in the designation of Government House:

- a. Uses associated with the general functioning of the official residence of the Governor General and their household including staff;
- b. Official receptions, charity functions and garden parties;
- c. Accommodation and provision of facilities for official guests;
- d. Office accommodation of a sufficient nature and scale to ensure the operation of the office of Governor General;
- e. Garaging and parking of vehicles associated with the operational use of Government House; and
- f. The conservation of the amenities of the site and the maintenance of the concept of the garden.

Conditions

1. Any new buildings, activities or works that are not described in the original notice of requirement will need either:
 - a. A new notice of requirement; notified to the public under section 168 of the RMA; or
 - b. A notice to alter the designation, under section 181 of the RMA.
2. The rules within the Unitary Plan regarding scheduled trees will apply to this designation.
3. The rules within the Unitary Plan regarding significant ecological areas will apply to this designation.

Site Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radio New Zealand Ltd

Designation Schedule - Radio New Zealand Ltd

Number	Description	Location
7300	Telecommunication and radiocommunication facilities	2-12 Selwood Road (corner of Triangle Road), Henderson
7301	Telecommunication and radiocommunication facilities	2-12 Selwood Road (east of State Highway 16), Henderson

7300 Telecommunication and Radiocommunication Facilities

Designation Number	7300
Requiring Authority	Radio New Zealand Ltd
Location	2-12 Selwood Road (corner of Triangle Road) , Henderson
Rollover Designation	Yes
Legacy Reference	Designation RNZ2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication transmission facilities.

Conditions

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

For the purpose of the above, the following definitions shall apply:

- “Line” has the same meaning as in the Telecommunications Act 2001.
- “Radiocommunication” has the same meaning as in the Radiocommunications Act 1989.
- “Radiocommunication facility” means any mast, aerial, antenna or other structure, facility or apparatus intended for the purpose of facilitating radiocommunication.
- “Telecommunication” has the same meaning as in the Telecommunications Act 2001.
- “Telecommunication facility” means any line, mast, pole, aerial, tower, antenna dish, or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication.

7301 Telecommunication and Radiocommunication Facilities

Designation Number	7301
Requiring Authority	Radio New Zealand Ltd
Location	2-12 Selwood Road (east of State Highway 16), Henderson
Rollover Designation	Yes
Legacy Reference	Designation RNZ3, Auckland Council District Plan (Waitakere Section) 2003

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Telecommunication and radiocommunication transmission facilities.

Conditions

1. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

2. Work which affects the Radio New Zealand Transmitter Building, 2-12 Selwood Road, described in the Historic Heritage Schedule as 00056, shall be limited to:

- a. External repairs and maintenance;
 - b. Minor works to the exterior of the building for the purposes of providing security facilities; and
- Internal works which do not affect the 1930's transmitter equipment.

Such work may be carried out without an outline plan of works.

For the purpose of the above, the following definitions shall apply:

- "Line" has the same meaning as in the Telecommunications Act 2001.
- "Radiocommunication" has the same meaning as in the Radiocommunications Act 1989.
- "Radiocommunication facility" means any mast, aerial, antenna or other structure, facility or apparatus intended for the purpose of facilitating radiocommunication.
- "Telecommunication" has the same meaning as in the Telecommunications Act 2001.
- "Telecommunication facility" means any line, mast, pole, aerial, tower, antenna dish, or other structure, facility or apparatus intended for, associated with, or ancillary to, effecting telecommunication.

7500 Warkworth Satellite Earth Station

Designation Number	7500
Requiring Authority	Telecom New Zealand Ltd
Location	92 Satellite Station Road, Warkworth
Rollover Designation	Yes
Legacy Reference	Designation 808, Auckland Council District Plan (Rodney Section) 2011

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Satellite earth station and telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 35m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent residential zoned property: or
 - At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:
7am – 10pm on any day: Leq 55 dB(A)
10pm – 7am on any day: Leq 55 dB(A)
- At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:
7am – 10pm on any day: Leq 70 dB(A)
10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

7501 Warkworth Satellite Earth Station Restrictions

Designation Number	7501
Requiring Authority	Telecom New Zealand Ltd
Location	Satellite Station Road, Thompson Road, Hepburn Creek Road, Perry Road and Radiata Road, Warkworth
Rollover Designation	Yes
Legacy Reference	Designation 809, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Satellite earth station - surrounding land use and building restriction.

Conditions

General

1. The plans associated with the requirement (TP/8228/4 TP15616), together with this specification, comprise the "Warkworth Satellite Earth Station: (Building and Land Use Restrictions)".

2. The area affected by the restrictions is that area outlined in light stipple on TP/8228/4, TP15616 and the specification plan below. The boundary of the requirement corresponds to the Safe Contour Line. The Safe Contour Line is defined as "the locus points which are 10m below the level ridge line on the side of the ridge away from the Satellite Earth Station antennas. The ridge lines are the locus points on the brow of the ridge, which are on a grazing ray from the top of the antenna tangent to the ridge. If a ridge brow is within 1,200 mm of both antennas, then the ridge line associated with the antenna which gives the lower safe contour has been taken. The top heights of the antennas are 122m R.L. for the No: 1 antenna and 102m R.L. for the No: 2 antenna".

3. To ensure the safe and efficient functioning and operation of the Warkworth Satellite Earth Station, a restriction is necessary, to prevent the use of land (within the requirement area) in a manner which would cause interference with the electronic integrity of the station.

Therefore:

a. The proliferation of devices, or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. The excavation of land, or
 - c. The construction, reconstruction, alteration or addition to any building or other structure in a form of or by the use of reflecting or re-radiating materials
- which could cause interference to the efficient functioning of the Satellite Earth Station is prohibited, except with the consent of the Telecom New Zealand Ltd pursuant to Clause 4 hereof.

4. Any person who wishes to carry out any work in any manner prohibited by Clause 3 above may make an application to Telecom New Zealand International Limited, under Section 176 of the Resource Management Act 1991 by writing to:

Primary Contact:
International Operations Manager
Telecom NZ Ltd
Private Bag 92028
Auckland 1142

Secondary Contact:
International Property Manager
Telecom NZ Ltd
Private Bag 92028
Auckland 1142

A reply to any request will be made within one month of receiving the request. The granting of any consent will be made on the merits of each individual proposal as measured against the criteria for protecting the operation of the Satellite Earth Station.

The applicant may contest a refusal of consent or a consent granted subject to conditions, by lodging an appeal with the Environment Court. Such an appeal must be lodged within one month of receipt of the decision on an application for consent under Section 176 of the Resource Management Act 1991.

5. In considering applications under Section 176 the Company will apply the criteria as set out in Clause 6. These criteria not only state the objective behind the restrictions on the use of land, but as far as possible, detail the types of activities which are likely to be permitted in the area.

6. Criteria for Applications under Section 176

a. Need for the Restrictions

The control over the use of land as contained in Clause 3 is necessary for two broad and interacting reasons. Firstly, to restrict the proliferation of interference-producing devices, which singly may not produce sufficient interference to be detrimental to the operation of the Satellite Earth Station, but which in number will increase the risk. Secondly, to prevent the erection of buildings and structures within the area constructed of materials with reflecting or re-radiating properties which could affect the performance of the Satellite Earth Station. The Company must be satisfied that the proposed use of land will not produce unacceptable interference or reflections.

b. Administration of the Restrictions

- i. The restrictions relate only to the use of land in a manner which would cause interference with the electronic integrity of the station. A change in farming type, for example, from agriculture to horticulture or to forestry, would not need to be controlled unless it interfered with the functioning or operation of the Satellite Earth Station.
- ii. Subdivision of land will be controlled, in order to maintain the existing rural, low density development and land use character, and to minimise the occurrence of electrical interference sources.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. Over all that land within the boundary of the requirement the following shall apply:

- i. Any buildings or structures with metallic exterior or interior surfaces shall be oriented so as not to produce reflection from the satellite into the antennas.
- ii. Height: Any buildings and structures less than 5m in height are generally unlikely to present a problem, although some resiting may be necessary in specific cases.
- iii. Transmission and Reticulation: Aerial power transmission and reticulation will not be permitted. This restriction also applies to all aerial telephone reticulation. Should any new supply be required, this need shall be met by wiring an underground transmission and reticulation service. Where the effect of this provision is to require undergrounding of existing or future services which would otherwise not be required, the difference in cost shall be met by Telecom New Zealand Limited. Maintenance work on aerial services shall be deemed, excepting only in the case of emergency work, to be work within the meaning of Section 176 of the Act and shall be subject to an application in terms of Clause 4.
- iv. Earthworks: No earthworks will be permitted affecting the ridgeline determining the safe contour line.

Explanatory Note for c.i.:

Buildings or structures with metallic surfaces greater than 40m² in any one plane have the potential to cause unacceptable interference.

d. In the area shown cross-hatched on the attached Specification Plan, the following shall also apply:

- i. New buildings or structures potentially creating man-made electrical noise sources shall not be permitted in this area.

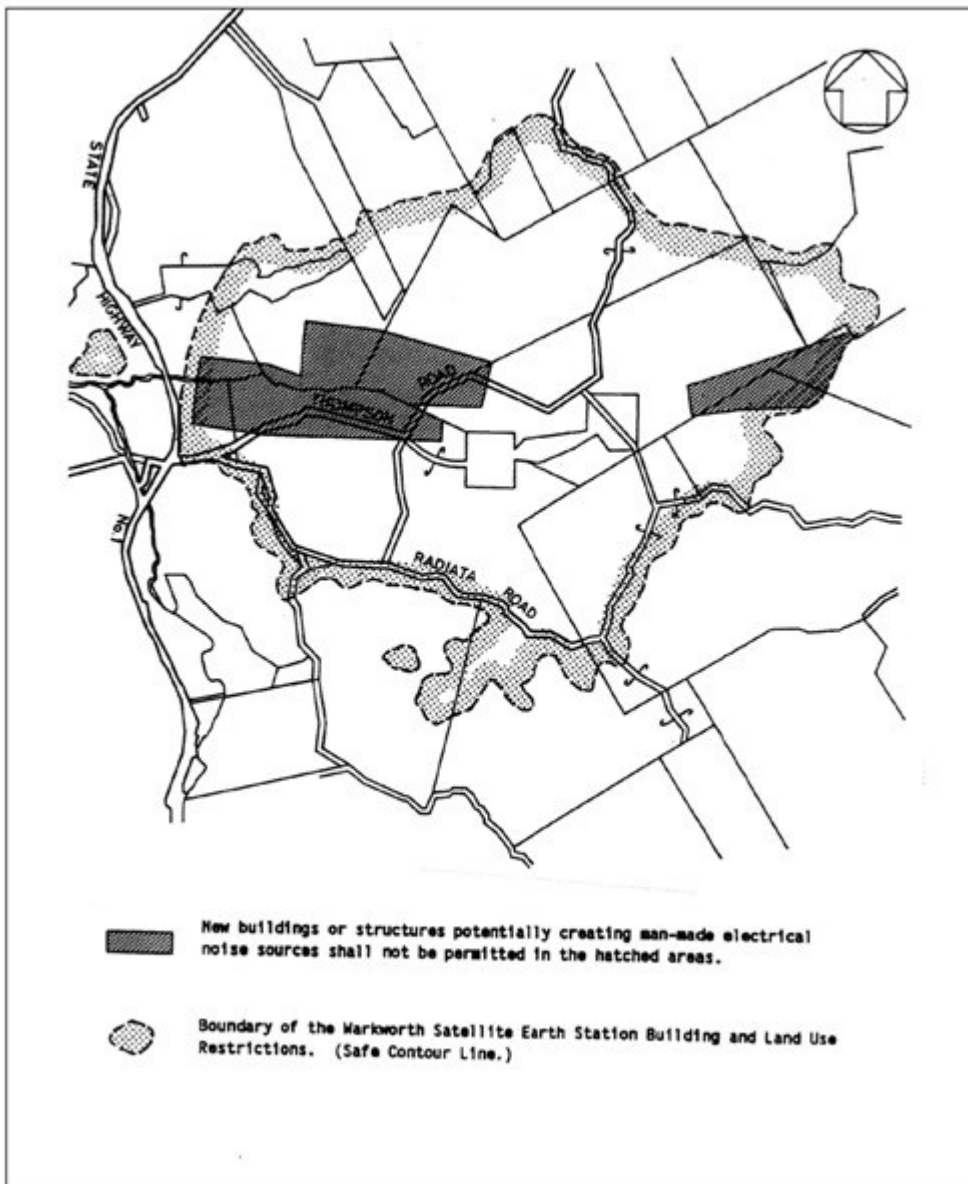

e. Unitary Plan Provisions

The provisions of the Auckland Unitary Plan for the area shall continue to apply but be subject to the restrictions contained in the requirement.

Warkworth Satellite Earth Station (Buildings and Landuse Restrictions) Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7502 Silverdale Telecommunications Site

Designation Number	7502
Requiring Authority	Telecom New Zealand Ltd
Location	66 Hibiscus Coast Highway, Silverdale
Rollover Designation	Yes
Legacy Reference	Designation 816, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 15m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a.

i. At the boundary of any adjacent residential zoned property; or

ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

b. At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:

7am – 10pm on any day: Leq 55 dB(A)

10pm – 7am on any day: Leq 55 dB(A)

c. At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:

7am – 10pm on any day: Leq 70 dB(A)

10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

7503 Henderson Telecommunications Site

Designation Number	7503
Requiring Authority	Telecom New Zealand Ltd
Location	6 Ratanui Street, Henderson
Rollover Designation	Yes
Legacy Reference	Designation PH12, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7504 Whenuapai Cable Station

Designation Number	7504
Requiring Authority	Telecom New Zealand Ltd
Location	153 Brigham Creek Road, Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation PH14, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the notional boundary 20m from the facade of any dwelling or at the site boundary, whichever is closest to the dwelling:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7505 Airedale Street Block 1A Telecommunications Site

Designation Number	7505
Requiring Authority	Telecom New Zealand Ltd
Location	39-43 Airedale Street, Auckland City
Rollover Designation	Yes
Legacy Reference	Designation 296, Auckland Council District Plan (Central Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Outline Plans

1. That an Outline Plan of works shall not be required for:

a. Any internal building works (excluding equipment generating external noise);

b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

subject to compliance with noise conditions set out below;

- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work.

Noise

2. For any changes or additions to the engine alternators or air conditioning plant on the site, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

3. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

4. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Designation Number	7509
Requiring Authority	Telecom New Zealand Ltd
Location	737 New North Road, St Lukes
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation D06-19, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new equipment shall not exceed the heights (9m - 15m depending on location) contained in the Volcanic Cone Height Restrictions Map in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 (excluding any lightening rod).
2. Notwithstanding Condition 1, the antennas on the existing mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.
3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
6. The total number of masts for use by the Requiring Authority shall not exceed 1 (one).
7. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve).

Buildings

8. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height - 9 m;
 - b. Front yard - 2.5m;
 - c. Height in relation to boundary - shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009; and
 - d. Maximum building coverage:40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

average height of the periphery of the building, whichever is the greater.

Outline Plans

9. That an Outline Plan of Works shall not be required for
- any internal building works (excluding equipment generating external noise);
 - replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - the replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - general site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

- At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1: 1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

16. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

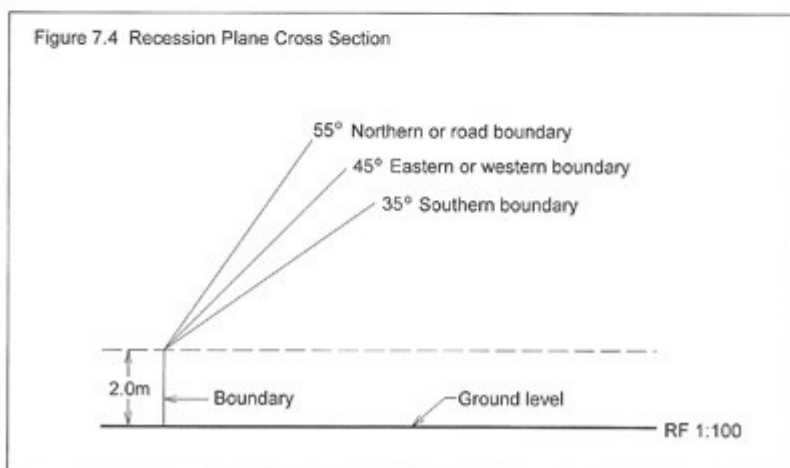

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.
2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7510 Remuera Telecommunications Site

Designation Number	7510
Requiring Authority	Telecom New Zealand Ltd
Location	2A Dilworth Avenue, Remuera
Rollover Designation	Yes
Legacy Reference	Designation D10-20, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Masts and Antennas

1. The height of any new equipment shall not exceed the Volcanic Cone Height Restrictions Map and limit of 9m above ground level (excluding any lightening rod) as contained in the Auckland Council District Plan - Isthmus Section 1999.
2. Notwithstanding Condition 1 above, antennas exceeding a height of 9 m above ground level can be mounted on the exchange building to a maximum height of 13.2 m (using average ground level method and excluding any lightening rod) where they shall also comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
3. Where the height of any new structures or equipment exceeds a height of 8 m above ground level, any outline plan shall specifically consider and assess the potential adverse effects of any such work on views of Mt Hobson from the Newmarket Viaduct in terms of the following criteria:
 - a. The nature, extent and form of the proposed built element;
 - b. The extent to which the built element obscures the views of Mt Hobson from the Viaduct; and
 - c. The extent to which the built environment constitutes a visually competing intrusion into the foreground or background of the unencumbered views of Mt Hobson.
4. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
5. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) 1999 as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
6. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
7. The total number of masts for use by the Requiring Authority shall not exceed 1 (one).
8. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve).

Buildings

9. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height - 8 m;
 - b. Front yard - 2.5 m;
 - c. Height in relation to boundary - shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009; and
 - d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

average height of the periphery of the building, whichever is the greater.

Outline Plans

10. That an Outline Plan of Works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section) 1999.

Noise

11. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

- b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

12. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 11 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

13. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 11 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

14. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

15. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

16. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1: 1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Maori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7511 Papatoetoe Telecommunications Site

Designation Number	7511
Requiring Authority	Telecom New Zealand Ltd
Location	15 Norfolk Place and 89 Rangitoto Road, Papatoetoe
Rollover Designation	Yes
Legacy Reference	Designation 107, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls in Attachment 1 from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls in Attachment 1 from any adjoining residential zoned boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

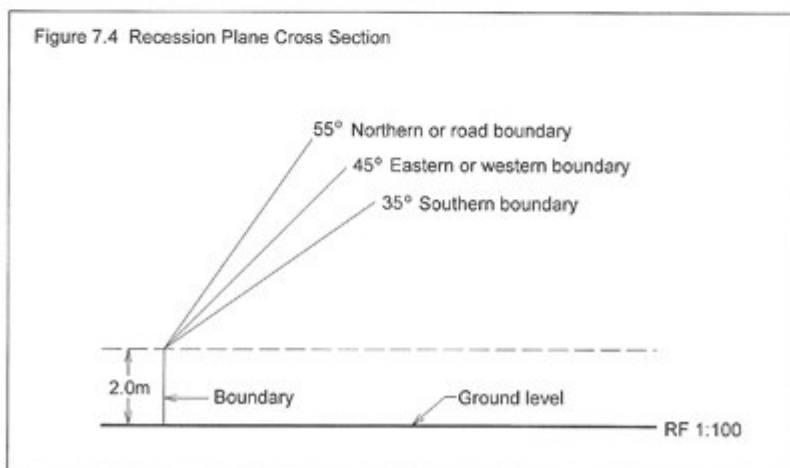

Radiofrequency Fields

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Attachments

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

7512 Howick Telecommunications Site

Designation Number	7512
Requiring Authority	Telecom New Zealand Ltd
Location	123 Ridge Road and 56 O'Halloran Road, Howick
Rollover Designation	Yes
Legacy Reference	Designation 111, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls in Attachment 1 from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls in Attachment 1 from any adjoining residential zoned boundaries.

Buildings (this condition shall not apply to 103 and 110)

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a

The Proposed Auckland Unitary Plan (notified 30 September 2013)

reasonable level.

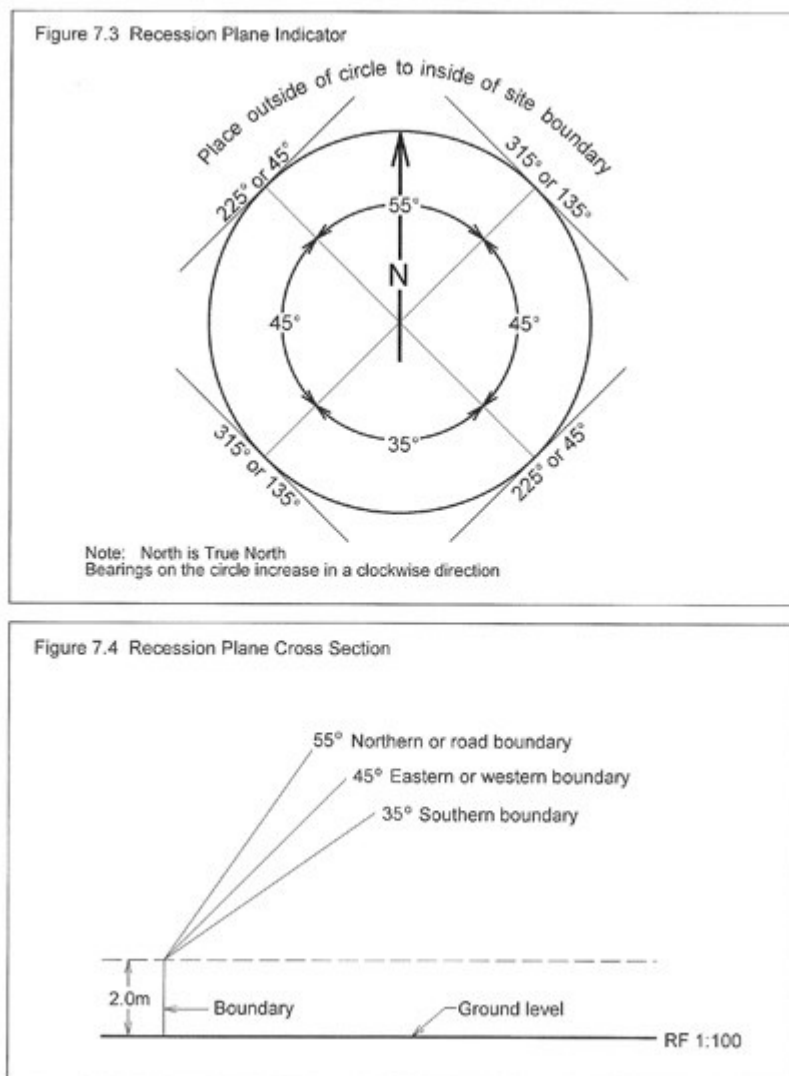

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Diagram 7.3 - Recession Plane Indicator and Diagram - 7.4 Recession Plane Cross Section

7513 Papakura Telecommunications Site

Designation Number	7513
Requiring Authority	Telecom New Zealand Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	40 Oshannessey Street, Papakura
Rollover Designation	Yes
Legacy Reference	Designation 43, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and any antennas (mounted on a mast or building) shall not exceed 25m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent residential zoned property; or
 - At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7514 Bombay Telecommunications Site

Designation Number	7514
Requiring Authority	Telecom New Zealand Ltd
Location	Corner Bombay Road and Paparata Road, Bombay
Rollover Designation	Yes
Legacy Reference	Designation 18, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits

a.

i. At the boundary of any adjacent residential zoned property; or

ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7515 Kraack Hill Telecommunications Site

Designation Number	7515*
Requiring Authority	Telecom New Zealand Ltd
Location	180 Kraack Road, Warkworth
Rollover Designation	Yes
Legacy Reference	Designation 805, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 35m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a.
 - i. At the boundary of any adjacent residential zoned property; or
 - ii. At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
- b. At the boundary of any adjacent property zoned [zone type to replace current Retail Service Zone]:
7am – 10pm on any day: Leq 55 dB(A)
10pm – 7am on any day: Leq 55 dB(A)
- c. At the boundary of any adjacent property zoned [zone type to replace current Mixed Business and Industrial Zone]:
7am – 10pm on any day: Leq 70 dB(A)
10pm – 7am on any day: Leq 70 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental

Legacy Reference	Designation 93, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed the greater of 20m or the height of any mast and attached antennas existing as at 1 June 2012 (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Land Disturbance

9. All unmodified areas disturbed as a result of future work(s) on the designated site shall be re-vegetated and reinstated, as far as practicable, to their original condition following completion of the work(s).

7522 Birkdale Telecommunications Site

Designation Number	7522*
Requiring Authority	Telecom New Zealand Ltd
Location	21 Birkdale Road, Birkdale
Rollover Designation	Yes
Legacy Reference	Designation 94, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential zoned boundaries and road boundaries.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7523 Devonport Telecommunications Site

Designation Number	7523*
Requiring Authority	Telecom New Zealand Ltd
Location	2 Mozeley Avenue, Devonport
Rollover Designation	Yes
Legacy Reference	Designation 95, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Attachment 1 to this Notice] from any adjoining residential zoned boundaries and road boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

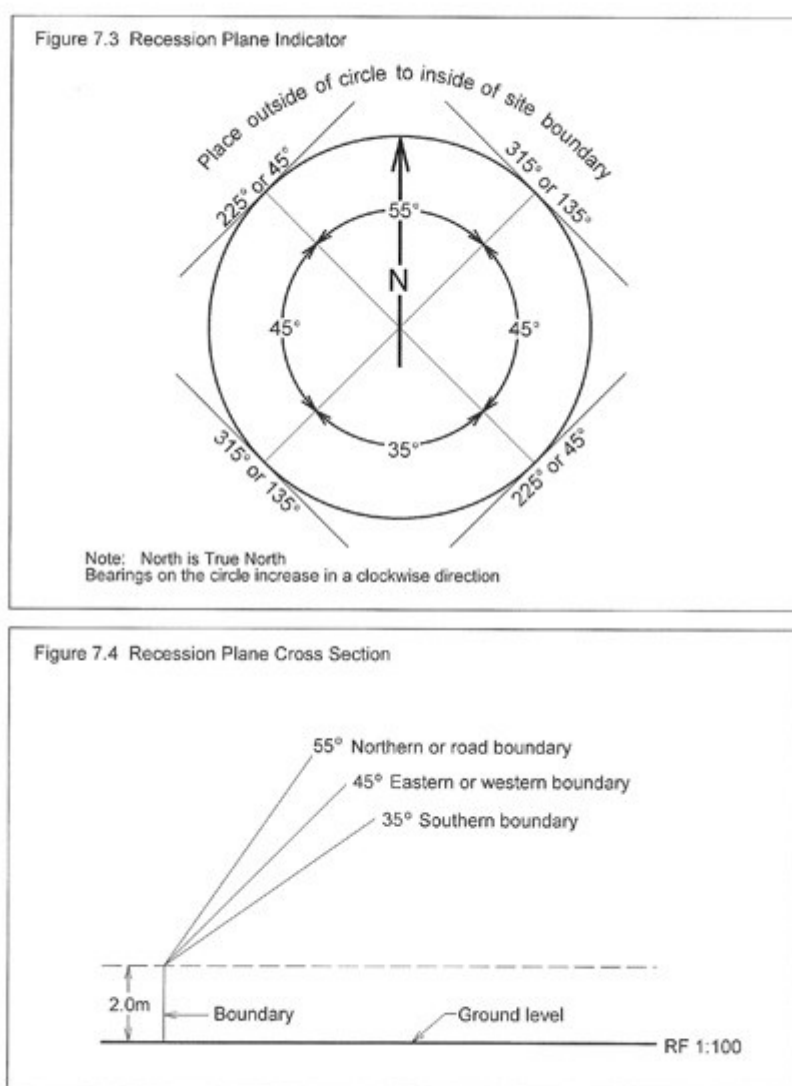

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7524 Glen Eden Telecommunications Site

Designation Number	7524*
Requiring Authority	Telecom New Zealand Ltd
Location	6 Clayburn Road, Glen Eden

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rollover Designation	Yes
Legacy Reference	Designation PH2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7525 Massey Telecommunications Site

Designation Number	7525*
Requiring Authority	Telecom New Zealand Ltd
Location	142-144 Don Buck Road, Massey
Rollover Designation	Yes
Legacy Reference	Designation PH4, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

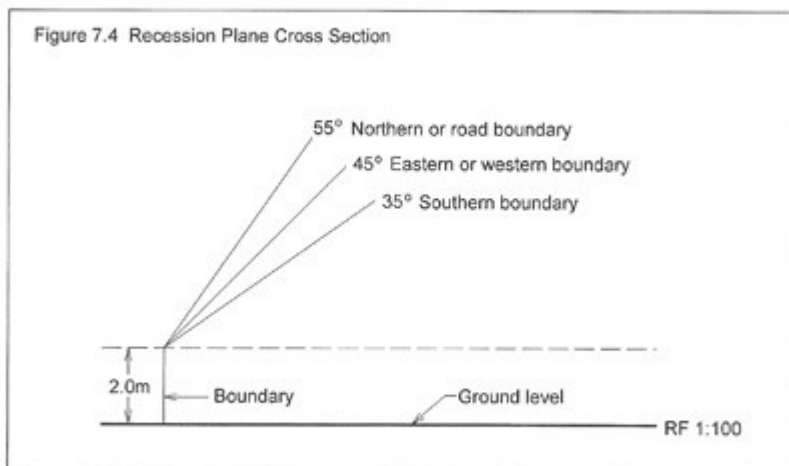

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Designation Number	7526*
Requiring Authority	Telecom New Zealand Ltd
Location	504 South Titirangi Road (Corner intersection with Park Road, Titirangi)
Rollover Designation	Yes
Legacy Reference	Designation PH8, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am – 10pm on any day: Leq 50 dB(A)

10pm – 7am on any day: Leq 40 dB(A)

9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7527 Waitakere Telecommunications Site

Designation Number	7527*
Requiring Authority	Telecom New Zealand Ltd
Location	10 McEntee Road, Waitakere
Rollover Designation	Yes
Legacy Reference	Designation PH10, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls [included in Appendix C to this Notice] from any adjoining residential and rural residential zoned boundaries and road boundaries.
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one). For the avoidance of doubt, for sites where both Chorus and Telecom have a designation, the total number of masts on the site for use by these requiring authorities shall not exceed 1 (one).

Buildings

6. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

7. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

8. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am – 10pm on any day: Leq 50 dB(A)
10pm – 7am on any day: Leq 40 dB(A)
9. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 8 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with this condition.

10. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 8, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

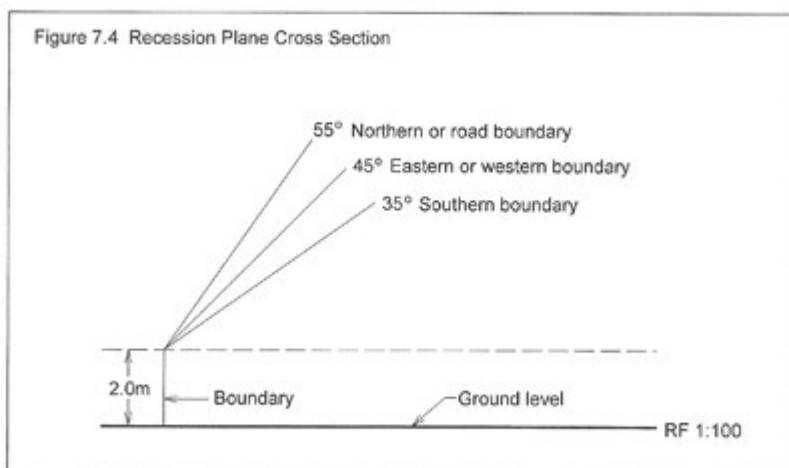

11. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

12. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7528 Ponsonby Telecommunications Site

Designation Number	7528*
Requiring Authority	Telecom New Zealand Ltd
Location	4 Summer Street, Ponsonby
Rollover Designation	Yes
Legacy Reference	Designation B07-92, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).
6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height - 8 m;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Front yard - 5 m;
- c. Height in relation to boundary - shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009; and
- d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

- 8. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.
- 9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent business zoned property:
 - 7am - 10pm on any day: Leq 55 dB(A)
 - 10pm - 7am on any day: Leq 45 dB(A)
 - b. At the boundary of any adjacent residentially zoned property:
 - 7am - 10pm on any day: Leq 50 dB(A)
 - 10pm - 7am on any day: Leq 40 dB(A)
- 10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
- 11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.
- 12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.
- 13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

- 14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

16. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

17. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Heritage Management

18. Any outline plan to remove, demolish, alter or replace the existing exchange building shall demonstrate that the works are necessary in order to meet the purpose of the designation, and shall be supported by a specific Heritage Assessment prepared by a suitably qualified person. As part of any outline plan to undertake external additions or alterations to the exchange building, the Heritage Assessment shall include an assessment of the following criteria:

- a. The form, mass, proportion and scale of the external additions and alterations shall be compatible with the prevailing architectural style of the existing building on the site.
- b. Alterations to expand the building within a roof space shall respect, and leave dominantly visible, the form and lines of the existing roof.
- c. Where decoration and architectural features are used, such features shall follow the characteristic form and detail of the existing building on the site.
- d. Changes to the frontage of the existing building shall not detract from the heritage character of the whole fabric, design or character of the original detailing of the facade.
- e. Materials shall be the same or similar as the existing materials of the building so that the new building work is consistent with the traditional character and material of the existing building on the site.
- f. For parts of the building highly visible to the street or public place, new windows or doors shall be consistent

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with the proportions and detail of the windows and doors of the existing facade.

As part of any outline plan to remove or demolish more than 30% of the exchange building, the Heritage Assessment shall include an assessment of the following criteria:

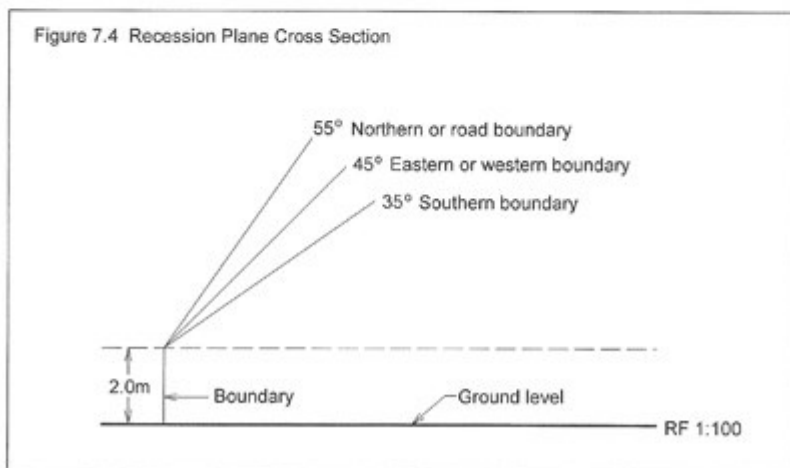

- a. Whether the building has retained its original (or repaired) visual design features relating to form, mass, proportion and materials so that restoration/ renovation of the building is practical and reasonable;
- b. Whether the demolition or removal of the building will detract from the continuity and special character of the streetscape as a whole; and
- c. Whether any historical qualities and original design features of the existing building are visible from a public place.

Notwithstanding the above, in the case of alterations involving external fixtures that remain similar in character and scale (e.g. upgrading/replacement of exhaust flues, air conditioning plant or equipment of a like nature), the Council (Resource Consents Team Manager) may at their discretion waive the need for a Heritage Assessment (excluding works to the front facade).

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7529 St Heliers Telecommunications Site

Designation Number	7529*
Requiring Authority	Telecom New Zealand Ltd
Location	402 St Johns Road, Meadowbank
Rollover Designation	Yes
Legacy Reference	Designation D14-11, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.
3. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1 and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan (Isthmus Section) as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
5. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).
6. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

7. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 10m;
 - b. Yards: 6m;
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009; and
 - d. Maximum building coverage: 40%.

This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures, except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

8. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise)'
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

9. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limit:

a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residential zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

10. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 9 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

11. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 9 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

12. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

13. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

14. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

15. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader, Compliance and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Flooding

16. The site is subject to potential flood hazards. Any new structures constructed within an overland flow path affecting this site shall be designed to avoid any increase in flood hazard risk including risk to neighbouring property. This shall be assessed in any outline plan of works. The foundations of structures housing equipment shall be designed so the finalised floor level is location above the minimum freeboard level for a 1 in 100 year flood. For the avoidance of doubt this shall exclude the base of any mast not containing water sensitive equipment.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours, parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday.

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7530 Mt Eden Telecommunications Site

Designation Number	7530*
Requiring Authority	Telecom New Zealand Ltd
Location	2B Poronui Street, Mt Eden
Rollover Designation	Yes
Legacy Reference	Designation E08-43, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new equipment shall not exceed the Mt Eden Volcanic Cone height limit of 9m above ground level using the rolling height method (excluding any lightning rod) as contained in the Auckland Council District Plan - Isthmus Section.
2. Notwithstanding Condition 1, the antennas on the existing mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to:
 - a. The constraints in condition 7;
 - b. There being no increase in the overall height of the mast and attached antennas;
 - c. The total width of the mast head (including antennas) shall be no more than 4.5m; and
 - d. All antennas shall be placed on mast head, with none attached directly to the mast pole.
3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009. Any mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
4. Antennas mounted on the roof of buildings shall not extend more than 3 m above the maximum height of the roof provided they comply with Condition 1, and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).
6. The total number of masts on site shall not exceed 1 (one).
7. The total number of antennas on the site shall not exceed 10 (ten) - being up to 9 (nine) on the existing mast and 1 (one) Global Positioning System (GPS) on the building.

Buildings

8. Any building, excluding masts, exhaust fumes, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 9m;
 - b. Front yard: 2.5m; and
 - c. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height shall be measured by a rolling height method.

Outline Plans

9. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

- b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 8am-5pm Monday to Friday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1: 1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

16. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit;
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling.

If evidence of contamination which has not been previously identified is discovered during works, the Requiring

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-6pm Monday to Friday and 8am to 1pm Saturday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7531 Avondale Telecommunications Site

Designation Number	7531*
Requiring Authority	Telecom New Zealand Ltd
Location	6 St Jude Street, Avondale
Rollover Designation	Yes
Legacy Reference	Designation F03-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 20m above ground level (excluding any lightning rod).
2. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

Buildings

3. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height: 12.5m; and
 - b. Height in relation to boundary: shall comply with the relevant height in relation to boundary controls from any adjacent residential zone boundaries as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 (road boundary height in relation to boundary doesn't apply in this case as it is zoned business).

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

4. That an Outline Plan of Works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

5. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent business zoned property:
7am - 10pm on any day: Leq 55 dB(A)
10pm - 7am on any day: Leq 45 dB(A)
 - b. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
6. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 5 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
7. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 5 an outline plan shall be required which demonstrates how the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

8. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

9. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

10. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 - Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7532 Mt Roskill Telecommunications Site

Designation Number	7532*
Requiring Authority	Telecom New Zealand Ltd
Location	2 Jasper Avenue, Mt Roskill
Rollover Designation	Yes
Legacy Reference	Designation F07-15, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 20m above ground level (excluding any lightning rod).
2. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

Buildings

3. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
Height: 12.5

For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

4. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

5. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent business zoned property:
7am - 10pm on any day: Leq 55 dB(A)
10pm - 7am on any day: Leq 45 dB(A)
 - b. At the boundary of any adjacent residentially zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
6. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 5 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels and predicted new noise levels to confirm compliance with this condition.
7. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 5, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (SPO) to ensure that noise levels do not exceed a reasonable level and must not exceed existing noise levels.
8. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radiofrequency

9. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in the New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.
2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

7533 Blockhouse Bay Telecommunications Site

Designation Number	7533*
Requiring Authority	Telecom New Zealand Ltd
Location	135 Boundary Road, Blockhouse Bay
Rollover Designation	Yes
Legacy Reference	Designation H04-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, the antennas on the mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1m for those parts of the equipment exceeding 8m in height above ground level.

4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1 and shall comply with the relevant height in relation to boundary controls from adjoining residential boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).

5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

6. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).

7. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

8. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:

- a. Height - 8 m;
- b. Front yard - 2.5 m;
- c. Height in relation to boundary - shall comply with the relevant height in relation to boundary; controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009; and
- d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

9. That an Outline Plan of Works shall not be required for

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (SPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1:1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Contaminated Site

16. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or

b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring.

The Requiring Authority shall ensure the excavated materials that require off site disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Operational Planning

17. A Communication Plan shall be prepared for the site and shall include:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

18. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday.

For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.
2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. Archaeological evidence, whether recorded or not, is protected by the Historic Places Act 1993 and an authority is required from the New Zealand Historic Places Trust (NZHPT) to modify, damage or destroy an archaeological site. The applicant is advised to contact the NZHPT if the presence of an archaeological site is known or suspected. Work affecting archaeological sites is subject to a consent process under the Historic Places Act 1993. The Historic Places Act 1993 contains penalties for unauthorised site damage.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7534 Onehunga Telecommunications Site

Designation Number	7534*
Requiring Authority	Telecom New Zealand Ltd
Location	58 Princes Street, Onehunga
Rollover Designation	Yes
Legacy Reference	Designation H10-55, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, the antennas on the existing mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.
3. Any new masts and associated antennas shall comply with the relevant building in relation to boundary controls from adjoining open space land as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009.
4. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:
 - a. Height - 12.5 m; and
 - b. Height in relation to boundary - shall comply with the relevant building in relation to boundary controls from the adjoining open space zone property and the daylight controls for any mixed use zone property as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

6. That an Outline Plan of Works shall not be required for
 - a. any internal building works (excluding equipment generating external noise);
 - b. replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

7. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent business zoned property:
7am - 10pm on any day: Leq 55 dB(A)
10pm - 7am on any day: Leq 45 dB(A)
 - b. At the boundary of any adjacent mixed use zoned property:
7am - 10pm on any day: Leq 60 dB(A)
10pm - 7am on any day: Leq 55 dB(A)
8. Any new noise generating equipment (excluding any electricity alternator required for emergency backup

The Proposed Auckland Unitary Plan (notified 30 September 2013)

power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 7 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels and predicted new noise levels to confirm compliance with this condition.

9. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and must not exceed existing noise levels.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in the New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Soil Instability/Unstable Ground

12. The site is subject to potential geotechnical hazards. The potential for earthworks or building construction to have adverse effects on the site or surrounding properties resulting from filled weak ground shall be assessed in any outline plan of works for any such activities.

Contaminated Site

13. Should an Outline Plan of Works involve earthworks and/or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit;
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Advice Notes

1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

2. It is possible that archaeological sites may be affected by earthworks at the site. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human

7535 Otahuhu Telecommunications Site

Designation Number	7535*
Requiring Authority	Telecom New Zealand Ltd
Location	12 Piki Thompson Way, Otahuhu
Rollover Designation	Yes
Legacy Reference	Designation J14-26, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and antennas (on a mast or a building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, the antennas on the mast existing 1 January 2009 may be upgraded, reconfigured or additional antennas installed subject to there being no increase in the overall height of the mast and attached antennas.
3. Any new masts and associated antennas shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009. Any new mast and associated antennas shall not exceed a diameter of 1 m for those parts of the equipment exceeding 8 m in height above ground level.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the roof provided they comply with Condition 1. and shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009 where antennas are mounted above the roofline (will not apply to antennas mounted against the building fascia and not extending above the roofline).
5. All antennas and support structures shall be painted or supplied in a recessive colour or supplied in a material that will weather to a dull finish (e.g. galvanised steel brackets and antenna components).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

6. The total number of masts for use by the Requiring Authority shall not exceed 1 (one) mast. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of masts on the site for use by these requiring authorities shall not exceed 1(one).

7. The total number of antennas on the site for use by the requiring authority shall not exceed 12 (twelve) antennas. For the avoidance of doubt, as both Chorus Ltd and Telecom Ltd have a designation on this site, the total number of antennas on the site for use by these requiring authorities shall not exceed 12 (twelve).

Buildings

8. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment shall be contained within the following building envelope:

- a. Height - 8 m;
- b. Front yard - 2.5 m;
- c. Height in relation to boundary - shall comply with the relevant height in relation to boundary controls from adjoining residential zone boundaries and the road boundary as included in the Auckland Council District Plan - Isthmus Section as at 1 January 2009; and
- d. Maximum building coverage: 40%. This condition shall exclude above ground diesel tanks and air conditioning plant including any associated fencing or screen enclosures.

Except the above shall not restrict the maintenance, upgrading and replacement of any existing building where it already infringes this condition provided there is no additional exceedence of the standards within this condition. For the avoidance of doubt, building height may be measured by either a rolling height method, or average height of the periphery of the building, whichever is the greater.

Outline Plans

9. That an Outline Plan of Works shall not be required for

- a. Any internal building works (excluding equipment generating external noise);
- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the Auckland Council District Plan (Isthmus Section).

Noise

10. Any new noise generating equipment (excluding any electricity alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent business zoned property:

7am - 10pm on any day: Leq 55 dB(A)

10pm - 7am on any day: Leq 45 dB(A)

- b. At the boundary of any adjacent residentially zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

11. Any new noise generating equipment (excluding any electricity alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 10 are exceeded. A noise assessment shall be submitted as part of any outline plan to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

12. For any changes or additions to the electricity alternators on the site, where the noise from all electricity alternators exceeds the noise limits in Condition 10 an outline plan shall be required which demonstrates how

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level and do not exceed existing noise levels.

13. The testing and routine maintenance of Electricity Alternators on site shall be restricted to the hours between 7am-10pm Monday to Sunday, with no testing or routine maintenance permitted outside these hours.

14. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

15. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in current New Zealand Standard NZS2772.1: 1999 as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Soil Instability/Unstable Ground

16. The site is subject to potential geotechnical hazards. The potential for earthworks or building construction to have adverse effects on the site or surrounding properties resulting from filled weak ground shall be assessed in any outline plan of works for any such activities.

Contaminated Site

17. Should an Outline Plan of Works involve earthworks and/ or excavation, the requiring authority shall undertake an Environmental Site Assessment (ESA) to be submitted with the outline plan of works. The ESA shall be comprised of a desktop study, a walkover of the proposed development area to identify potential contamination and soil sampling within the proposed development area. The results of the ESA shall demonstrate the level of contamination within the area of works and propose mitigation in the event that the contamination is above the regulatory guideline values for the protection of human health in the relevant zone.

Notwithstanding the above, in the case of:

- a. Removing any existing underground fuel tank, the ESA can be conducted following the removal of the tank and any material around the tank pit; or
- b. Very minor earthworks/excavations, the Council (Resource Consents Team Manager) may at their discretion waive the need to undertake an ESA and soil sampling;

If evidence of contamination which has not been previously identified is discovered during works, the Requiring Authority shall immediately cease works and notify the Team Leader: Compliance and Monitoring, and provide a detailed site contamination report and action plan to the satisfaction of the Team Leader: Compliance and Monitoring. The Requiring Authority shall ensure the excavated materials that require offsite disposal are disposed of in an appropriate landfill and provide evidence of the disposal to the Team Leader: Compliance and Monitoring.

Protected Trees

18. All excavations within the dripline of any scheduled tree shall be under the direct supervision of a competent arborist. An outline plan shall be submitted for any such works. This shall include a mitigation plan prepared by a competent arborist.

19. All work involving trimming of a scheduled tree shall be carried out by a competent arborist in accordance with accepted arboriculture practice.

20. There shall be no storage of product, materials, spoil or machinery within the dripline of any scheduled tree on site.

Operational Planning

The Proposed Auckland Unitary Plan (notified 30 September 2013)

21. A Communication Plan shall be prepared for the site and shall include:

- a. A procedure to ensure that all contractors and staff working at the site are aware of designation conditions;
- b. Instructions to all those entering the buildings regarding actions required to respect residential neighbours; parking, talking outside, music, avoiding doors banging etc; and
- c. A procedure to advise immediate neighbours of any proposed capital works that will generate external noise or require any external work outside normal working hours of 7am-6pm Monday to Friday (incl).

20. The hours of operation for routine external maintenance and upgrade works (excluding emergency and urgent works or internal works within the exchange building) shall be between the hours of 7am-10pm Monday to Sunday. For the avoidance of doubt, this condition shall not prevent the delivery and installation of large equipment items outside of these hours where transport of such items is subject to restrictions on time of travel on public roads or road closure or traffic management is required.

Advice Notes

- 1. Any new development, maintenance, upgrading or replacement works shall comply with the necessary requirements of the Hazardous Substances and New Organisms Act 1996.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 Recession Plane Cross Section

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7536 Pakuranga Telecommunications Site

Designation Number	7536*
Requiring Authority	Telecom New Zealand Ltd
Location	6 Grammar School Road, Pakuranga
Rollover Designation	Yes
Legacy Reference	Designation 104, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits
 - a. at the boundary of any adjacent residential zoned property:
7am-10pm on any day: Leq 50 dB(A)
10pm- 7am on any day: Leq 40 dB(A)
8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 6 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.
9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Diagram 7.3 - Recession Plane Indicator and Diagram 7.4 Recession Plane Cross Section

7537 Mangere Telecommunications Site

Designation Number	7537*
Requiring Authority	Telecom New Zealand Ltd
Location	63 Ashgrove Road (Corner Bader Drive), Mangere
Rollover Designation	Yes
Legacy Reference	Designation 109, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 15m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Buildings

5. Any building, excluding masts, exhaust flues, antennas and air conditioning equipment, shall not exceed 8m in height. This shall not restrict any maintenance and upgrading of any existing building already infringing this standard, provided there is no additional height infringement.

Outline Plans

6. That an Outline Plan of works shall not be required for
 - a. Any internal building works (excluding equipment generating external noise);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

7. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. at the boundary of any adjacent residential zoned property:

7am-10pm on any day: Leq 50 dB(A)

10pm- 7am on any day: Leq 40 dB(A)

8. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 6 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.

9. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 7, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

10. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

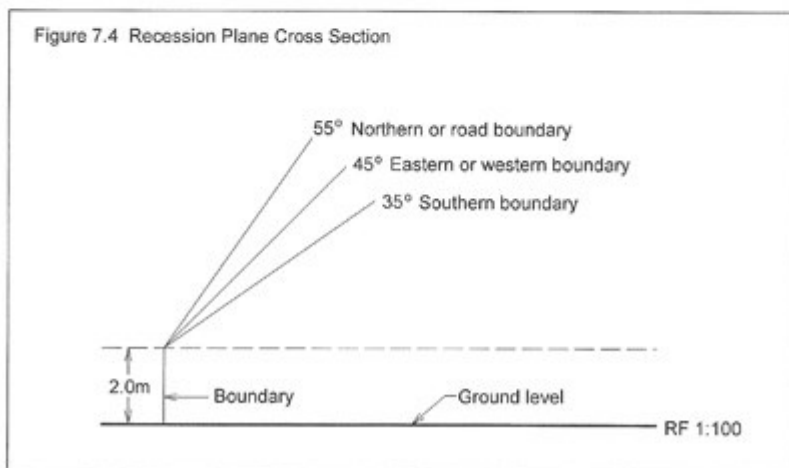

Radiofrequency Fields

11. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7538 Whitford Telecommunications Site

Designation Number	7538*
Requiring Authority	Telecom New Zealand Ltd
Location	7 Whitford Wharf Road, Whitford
Rollover Designation	Yes
Legacy Reference	Designation 110, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast of building) shall not exceed 15 m above ground level (excluding any lightning rod).
2. Any new mast and associated antennas shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries and road boundaries.
3. Notwithstanding Conditions 1 and 2, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Conditions 1 and 2 would otherwise not be met.
4. Antennas mounted on the roof of buildings shall not extend more than 3m above the maximum height of the highest part of the roof, provided that they comply with Condition 1, and shall comply with the height in relation to boundary controls from any adjoining residential zoned boundaries.

Outline Plans

5. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

6. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. at the boundary of any adjacent residential zoned property:
7am-10pm on any day: Leq 50 dB(A)
10pm- 7am on any day: Leq 40 dB(A)
7. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 6 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm compliance with this condition.
8. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 6, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
9. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

10. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7539 Otara Telecommunications Site

Designation Number	7539*
Requiring Authority	Telecom New Zealand Ltd
Location	176 Bairds Road, Otara
Rollover Designation	Yes
Legacy Reference	Designation 112, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7540 Manukau Telecommunications Site

Designation Number	7540*
Requiring Authority	Telecom New Zealand Ltd
Location	20 Lakewood Court, Manukau City
Rollover Designation	Yes
Legacy Reference	Designation 114, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the boundary of any adjacent residential zoned property:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7541 Manurewa Telecommunications Site

Designation Number	7541*
Requiring Authority	Telecom New Zealand Ltd
Location	175 Great South Road, Manurewa
Rollover Designation	Yes
Legacy Reference	Designation 115, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20m above ground level (excluding any lightning rod).

2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:

- Any internal building works (excluding equipment generating external noise);
- Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
- d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- a. At the boundary of any adjacent residential zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7542 Beachlands Telecommunications Site

Designation Number	7542*
Requiring Authority	Telecom New Zealand Ltd
Location	Whitford-Maraetai Road, Beachlands
Rollover Designation	Yes
Legacy Reference	Designation 117, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up generation) shall not exceed the following noise limits:
 - a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the sit, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7543 Runciman Telecommunications Site

Designation Number	7543*
Requiring Authority	Telecom New Zealand Ltd
Location	180 Flanagan Road, Drury
Rollover Designation	Yes
Legacy Reference	Designation 44, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any mast and any antennas (mounted on a mast or building) shall not exceed 25 m above ground level (excluding any lightning rod).

Outline Plans

2. That an Outline Plan of works shall not be required for:
- Any internal building works (excluding equipment generating external noise);
 - Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

3. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

- At the boundary of any adjacent residential zoned property: or
- At the notional boundary 20m from the facade of any dwelling in a rural zone, or at the site boundary, whichever is closest to the dwelling:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

4. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 3 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm with the existing noise levels and predicted new noise levels to confirm compliance with this condition.

5. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators

The Proposed Auckland Unitary Plan (notified 30 September 2013)

exceeds the noise limits in Condition 3, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

6. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

7. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7544 Pukekohe Telecommunications Site

Designation Number	7544*
Requiring Authority	Telecom New Zealand Ltd
Location	7B Hall Street, Pukekohe
Rollover Designation	Yes
Legacy Reference	Designation 20, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

Masts and Antennas

1. The height of any new mast and any antennas (mounted on a mast or building) shall not exceed 20 m above ground level (excluding any lightning rod).
2. Notwithstanding Condition 1, antennas attached to masts existing as at 1 June 2012 may be upgraded, reconfigured or additional antennas installed, provided that there is no overall increase in height where Condition 1 would otherwise not be met.

Outline Plans

3. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Noise

4. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:

a. At the boundary of any adjacent residential zoned property:

7am - 10pm on any day: Leq 50 dB(A)

10pm - 7am on any day: Leq 40 dB(A)

5. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 4 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.

6. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 4, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.

7. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

8. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

7545 Puketutu Telecommunications Site

Designation Number	7545*
Requiring Authority	Telecom New Zealand Ltd
Location	75 Main Road (near Puketutu Road), Bombay
Rollover Designation	Yes
Legacy Reference	Designation 36, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a secondary designation. Chorus New Zealand Ltd has the primary designation on the site pursuant to section 69XJ(3) of the Telecommunications Act 2001. See also: *New Zealand Gazette* No 180, 23 November 2011, pages 5223-5226.

Purpose

Telecommunication and radiocommunication and ancillary purposes.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Outline Plans

1. That an Outline Plan of works shall not be required for:
 - a. Any internal building works (excluding equipment generating external noise);
 - b. Replacement of equipment where the new equipment is of a similar size in height, breadth and depth and subject to compliance with noise conditions set out below;
 - c. The replacement of any antennas with antennas of similar size provided that there is no increase in the overall height of the facility;
 - d. General site maintenance and repair work, or boundary fencing otherwise permitted by the District Plan.

Noise

2. Any new noise generating equipment (excluding any engine alternator required for emergency back-up power generation) shall not exceed the following noise limits:
 - a. At the notional boundary 20m from the facade of any dwelling, or at the site boundary, whichever is closest to the dwelling:
7am - 10pm on any day: Leq 50 dB(A)
10pm - 7am on any day: Leq 40 dB(A)
3. Any new noise generating equipment (excluding any engine alternator required for emergency backup power generation) shall cumulatively in combination with any other noise generating equipment on the site not result in any increase in existing noise levels received at any other property boundary where the noise levels in Condition 2 are exceeded. A noise assessment may need to be submitted as part of any outline plan (depending on circumstances such as the nature of the noise generating equipment, remoteness of the site, and proximity to sensitive boundaries) to confirm the existing noise levels and predicted new noise levels to confirm compliance with this condition.
4. For any changes or additions to the engine alternators on the site, where the noise from all engine alternators exceeds the noise limits in Condition 2, an outline plan shall be required which demonstrates how the equipment and any mitigation is the best practicable option (BPO) to ensure that noise levels do not exceed a reasonable level.
5. The requiring authority shall adopt the best practicable option to ensure emission of noise from its designated site does not exceed a reasonable level.

Radiofrequency Fields

6. Any equipment transmitting radiofrequency energy shall comply with the exposure levels stated in New Zealand Standard NZS2772.1:1999 or any successor standard as required by the National Environmental Standards for Telecommunications Facilities at any place where the public has reasonable access.

Television New Zealand Ltd

Designation Schedule - Television New Zealand Ltd

Number	Purpose	Location
8300	Television broadcasting centre ...	100 Victoria Street, Auckland Central
8301	Microwave transmission corridor	100 Victoria Street, Auckland Central to 539 Scenic Drive, Waiatarua
8302	Satellite earth station transmission path - areas subject to height restrictions	100 Victoria Street, Auckland Central to airspace north and west

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8300 Television Broadcasting Centre

Designation Number	8300
Requiring Authority	Television New Zealand Ltd
Location	100 Victoria Street, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 300, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Television broadcasting centre including offices, studios, production facilities, technical services and facilities, transmission equipment, and associated storage and car parking.

Conditions

1. Maximum Height

The height of any building shall not exceed 50m except that a transmission tower not exceeding 25m² in plan area may be erected to a height not exceeding 72m above mean sea level.

2. Rooftop Control

a. Rooftop projections including towers, turrets, chimneys, lift towers, machinery rooms and water towers which exceed the height of all parts of a parapet surrounding the roof on which the projections are located, shall be enclosed in either a single structure or a maximum of three structures.

b. All floor space forming part of rooftop projections that meet the requirements of this rule is excluded from the calculation of gross floor area for the development.

3. Floor Area Ratio

The floor area ratio for the site shall not exceed 4:1 provided that it may be increased to a maximum total floor area ratio of 6:1 through the provision of bonuses in accordance with condition 4 below.

4. Bonus Floor Area

a. The amount of bonus floor area shall be calculated in accordance with Figure A and, where appropriate, conditions 4.1, 4.2 and 4.3 below.

b. The area of a feature for which a bonus is obtained cannot be claimed for twice.

Figure A:

Bonus Feature	Bonus Floor Area Available per Square Metre of Feature Provided	Maximum Floor Area Ratio Limit to Bonuses on a Site
Activities		
Accommodation (including Non Permanent Accommodation)	2m ²	2:1
Pre-school facility	3m ²	1:1
Rest room	3m ²	1:1

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Plaza	3m ²	1:1
Escalators	500m ² per pair	0.5:1
Light and outlook	See condition 4.1	
Through-site links	See condition 4.2	0.5:1
Works of art	See condition 4.3	1:1

4.1 Light and Outlook

A bonus will be awarded where that part of a building to which CFA relates is reduced in coverage as set out in Figure B.

Figure B:

Where:	Bonus FAR equals
a. $\frac{CFA}{SA} < 0.3$	1.5:1
b. $0.3 \leq \frac{CFA}{SA} \leq 0.8$	$\frac{2.4 - (3 \times CFA)}{SA} : 1$
c. $\frac{CFA}{SA} \geq 8.0$	Nil

SA = site area

4.2 Through-site links

a. The through-site link bonus applies to lanes, arcades and covered links which provide a separately defined, continuous and clearly identifiable public walkway taking the most direct route and providing a shorter and more convenient route than the existing alternative.

b. The bonus floor area achievable per square metre of through-site link provided shall be calculated in accordance with the ratio L1:L2 where: L1 = The shortest distance between points A and B measured along the road boundary. L2 = The shortest pedestrian route between points A and B.

c. Subject to the maximum FAR limited for a through-site link bonus set out in Figure A:

- i. the bonus floor area available per square metre of through-site link provided shall not exceed 10m² (ie where L1:L2 = 10:1); and
- ii. the bonus floor area available per square metre of through-site link provided shall be no less than 5m² (ie where L1:L2 = 5:1 or less) provided that through-site links that attain less than 2m² shall not be eligible for a bonus.

d. For the purpose of these measurements the following terms apply:

- i. Road boundary includes the shortest distance between points at either end of a pedestrian access which is protected by a registered easement or similar form of dedication;
- ii. No part of a through-site link is counted more than once for the measurement of L2;
- iii. Where escalator pairs are included in the through-site link they count as having zero distance except that the separate bonus available for escalator pairs still applies;
- iv. Where a single escalator is included in a through-site link, the calculation of L2 includes the plan distance of the escalator; and
- v. Where stairs are included in a through-site link their actual travel distance applies.

4.3 Works of Art

a. Bonus floor area is available at the ratio of 5% extra floor area for each 1% of total construction cost spent on

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the commission and execution of the work of art.

b. For the purpose of calculating the extra floor area which can be claimed, 5% shall be taken off the total floor area which has resulted from the addition of:

- i. The floor area permitted by the basic floor area ratio;
- ii. All bonus floor area claimed and awarded (apart from the extra floor area claimed for provision of a work of art);
- iii. Areas contained within a building occupied by pedestrian facilities for which consent has been granted; and
- iv. Areas in entrance foyer/lobby or part thereof being a primary means of access to a building which is open to the public, is accessed directly from a public place and has an overhead clearance of not less than 6m.

c. A certificate prepared and signed by a registered quantity surveyor or registered architect shall be supplied to the Council to verify the total construction cost, land cost and cost of the proposed work of art.

d. If a fraction of the 1% of total construction cost is spent on the commission and execution of the work, the amount of extra floor area granted shall be increased or reduced in the same proportion.

5. Screening

Where any outdoor storage, service or refuse disposal area adjoins or directly faces a road or other public open space or a residential precinct, such areas, excluding access ways to off street loading bays, shall be screened from the road, public open space or residential precinct by a solid wall or fence not less than 1.8m in height.

6. Parking and Loading

6.1 The maximum number of parking spaces shall not exceed one space per 200 sqm of GFA.

6.2 The following shall be the minimum number of loading spaces to be provided:

Gross Floor Area of Activity (sq m)	Number of Loading Spaces
0 - 20,000	1
20,001 - 50,000	2 (one on-street for courier services)
Over 50,000	3 + 1 per 37,160 sq m (one on-street for courier services)

6.3 The area of any required loading and permitted parking space(s), vehicular access drives and aisles provided within a building shall be excluded from the assessment of gross floor area of that building for the purpose of ascertaining the total number of spaces required.

6.4 Where an assessment of the permitted parking or required loading standards results in a fractional space, any fraction under one half shall be disregarded and any fraction of one half or more shall be counted as one space.

7. Formation of Parking and Loading Areas

7.1 Every permitted parking and/or required loading space shall:

- a. Have dimensions in accordance with Table A Manoeuvring & Parking Space Dimensions;
- b. Be provided with such access drives and aisles as necessary for vehicles travelling to and from the road, and for the manoeuvring of vehicles within the site; and
- c. Be located on the same site as the activity to which it relates, be available at all times and shall have adequate useable access to that activity or building. Each loading space shall be adjacent to an adequate area for goods handling and shall be convenient to any service area or service lift.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.2 In addition, every loading space shall be of useable shape and shall be of the following dimensions:

- a. Not less than 8m in depth;
- b. Notwithstanding anything to the contrary in paragraph a) above, for articulated vehicles, not less than 11m in depth; and
- c. For adequate manoeuvring, not less than 3.5m in width, or such greater width as is required) not less than 3.8m in height.

7.3 All parking and loading spaces, access drives, manoeuvring areas and aisles shall be formed, provided with an all-weather surface, drained, marked out or delineated, and maintained.

7.4 Required loading areas must be kept clear and available at all times, free of charge and impediment, for vehicles used in conjunction with the particular activity to which the loading spaces relate on the site, and shall not be used for the depositing or storage of any goods or materials or for any other purpose.

7.5 The maximum gradients for parking surfaces and floors shall be 1:16 transversely, and 1:20 longitudinally along the direction of the space. For service and manoeuvring areas the gradient shall not exceed 1:12.5 and shall be kept to a minimum.

7.6 Where a parking or manoeuvring area is adjacent to a road, a kerb or similar barrier, not less than 150mm high and at least 600mm from the road boundary, shall be provided on those parts of the frontage not used for vehicular access.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Table A - Manoeuvring and parking space dimensions:

Parking Angle	Width of Parking Space	Kerb Overhang	Depth of Parking Space	Manoeuvring Space	Total Depth One Row	Total Depth Two Rows
90° Regular Users*	2.3(a)	1.0	4.9	8.3	13.2	18.1
	2.4(b)			7.1	12.0	16.9
	2.5			6.7	11.6	16.5
	2.6			6.3	11.2	16.1
	2.7			5.9	10.8	15.7
	≥2.75			5.9	10.8	15.7
90° Casual Users*	2.5	1.0	4.9	8.1	13.0	17.9
	2.6			7.1	12.0	16.9
	2.7			6.7	11.6	16.5
	≥2.75			6.6	11.5	16.4
75°	2.3(a)	1.0	5.2	7.0	12.2	17.4
	2.4(b)			6.5	11.7	16.9
	2.5			6.0	11.2	16.4
	2.6			5.7	10.9	16.1
	2.7			5.0	10.2	15.4
	≥2.75			4.3	9.5	14.7
60° (3)	2.3(a)	1.0	5.2	5.0	10.2	15.4
	2.4(b)			4.6	9.8	15.0
	2.5			4.1	9.3	14.5
	2.6			3.5	8.7	13.9
	2.7			3.3	8.5	13.7
	≥2.75			3.2	8.4	13.6
45° (3)	2.3(a)	0.8	4.9	3.3	8.2	13.1
	2.4(b)			2.9	7.8	12.7
	2.5			2.7	7.6	12.5
	2.6			2.5	7.4	12.3

	≥2.75			2.3	7.2	12.1
30° (3)	2.3(a)	0.6	4.0	2.5	6.5	10.5
	2.4(b)			2.4	6.4	10.4
	2.5			2.4	6.4	10.4
	2.6			2.4	6.4	10.4
	2.7			2.3	6.3	10.3
	≥2.75			2.3	6.3	10.3
Parallel (3)	5.9	0.4	2.5	3.6	6.1	8.6
	6.1			3.3	5.8	8.3
	6.3			3.0	5.5	8.0

* Regular users are people whose regular use gives them a familiarity with the building that permits smaller safe clearances between vehicles and parts of buildings. Casual users are people (usually short-term visitors) who would not be familiar with the building layout.

Notes:

- a. Stall widths of 2.3m should only be used where users are familiar with the carpark, and parking is long term. This stall width does not meet the requirements of the Building Code.
- b. Stall widths of 2.4m should generally only be used where users are familiar with the carpark. This stall width does not meet the requirements of the Building Code for Casual Users.
- c. Minimum aisle widths are 3.5m for a one-way aisle, and 5.5m for a two-way aisle. Where an aisle serves

The Proposed Auckland Unitary Plan (notified 30 September 2013)

more than 50 spaces, it should be designed as a circulation route in which case the minimum width for a two-way aisle increases to 6.5m. Note that the Building Code requires an extra 0.8m width where pedestrians use a vehicle circulation route.

- d. Stall widths shall be increased by 0.3m where they abut obstructions such as columns or walls.
- e. All overhang areas shall be kept clear of objects greater than 150mm in height.
- f. Where parallel end spaces have direct access through the end of the stall the length of the stall may be reduced to 5.4m.
- g. One-way traffic is assumed for angle spaces.
- h. Carparks shall have a height of at least 2.3m over the full area of the space, except where special provision is made to divert 'over-height' vehicles, in which case the minimum height may be reduced to 2.1m.
- i. Linear interpolation is permitted for stall width, parking angle and aisle width.

8. Access

8.1 Access to Site

a. Every parking and loading space shall have access from a road, in accordance with the following standards:

- i. For carparks not providing access to loading, an unobstructed carriageway not less than 4.5m wide or entrance and exit carriageways, each not less than 2.4m wide.
- ii. For access to loading, an unobstructed carriageway not less than 6m wide or entrance and exit carriageways, each not less than 3m wide.
- b) All bends in the carriageway are to be designed in accordance with the appropriate design vehicle.
- c. The grade of access shall not be steeper than 1 in 4 for carparks not providing access to loading, and 1 in 8 for access to loading. For curved ramps and driveways, the gradient is measured along the inside radius. Ramps or driveways terminating on a grade steeper than 1 in 20 prior to the road reserve shall be provided with a platform not steeper than 1 in 20, located adjacent to the road boundary. For land not providing access to loading, the length of the platform shall not be less than 4m, and for land providing access to loading, not less than 6m. Where the driveway gradient is steeper than 1 in 8, a transition section will be required to avoid inadequate ground clearance.
- d. No building or building platform served by the access is to be more than 90m from a fire hydrant.
- e. Where the width of a carriageway is less than 3m it is to be contained within a corridor 4.5m high and clear of buildings or parts of buildings.

8.2 Vehicular access over footpaths

a. Vehicular crossing over footpaths shall comply with the following:

- i. No more than one crossing will be permitted. However, additional crossings may be approved as a restricted discretionary activity.
- ii. The maximum width of any crossing at the road frontage boundary of the site shall be 6m.
- iii. The total crossing width for any front or corner site shall not exceed 50% of the frontage to any road in which it is placed.
- iv. Any access shall be so graded as to abut the road boundary at the relative level of the existing footpath.
- b. Where entrance locations are altered, crossings no longer required shall be reinstated as verge and/or footpath and the kerbs replaced.

8.3 Reverse manoeuvring

Sufficient space shall be provided on the site so that no reverse manoeuvring on or off the road is necessary by the vehicles using the parking or loading space.

9. Definitions Average floor area

Average Floor Area (AFA) is the average of the horizontal areas measured at 1.5 metres above all floor levels from the external faces of the building, including all voids and the thickness of external and internal walls, provided that:

- a. Basement space as defined in this rule shall be exempt from the AFA calculation;
- b. Approved pedestrian amenities and facilities such as through-site links, footpaths widening and escalators

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall be exempt from the calculation;

c. For sites with a gross site area greater than 2,000 square metres, where the horizontal area at any floor level totals less than 400 square metres, then the horizontal area at that level shall be deemed to be 400 square metres for the purpose of calculating AFA;

d. A void forming an integral part of an entrance lobby - foyer (being a primary means of public access to a building) which is open to the public and accessed directly from a public place, shall be exempt from the AFA calculation. Basement means any building storey the greater part of the volume of which is below mean street level. Except that for the purpose of calculating average floor area (AFA) and gross floor area (GFA) for a building on a through-site basement means for AFA and GFA:

i) any space within any building storey where the greater part of the volume of that storey is below the mean street level of the lower frontage

ii) any space used for carparking (including manoeuvring areas, access aisles and access ramps) occupying any building storey the greater part of the volume of which is below mean street level of the upper frontage to the midpoint measured horizontally between the upper frontage and the lower frontage (see diagram below).

Calculated floor area (CFA) Average floor area calculated by averaging the area of that floor or part of the floor immediately below a horizontal plane 12.5 metres above mean street level and all floors above that plane. Floor area ratio Floor area ratio (FAR) means the relationship between building gross floor area and land area of the site, and is expressed by the formula:

$$\text{FAR} = \frac{\text{gross floor area}}{\text{land area of the site}}$$

For the purpose of computing FAR, land area of the site excludes:

a. Any part of adjoining roads and any portion of the site affected by building lines for the purpose of future road widening unless specifically provided for in this Plan.

b. Any part of the site which is made up of the an interest in any airspace above or subsoil below a road. Gross floor area Gross floor area (**GFA**) is the sum of the gross of the several floors of all buildings on a site measured from the exterior faces of the exterior walls, or from the centre lines of walls separating two buildings or, in the absence of walls, from the exterior edge of the floor. The measurement point shall be at 1.5 metres above floor level, except for terraces (open or roofed), external balconies and porches when the measurement point shall be at floor level. In particular gross floor area includes:

a. Voids except as otherwise provided, where vertical distance between storey levels exceeds 6.0 metres, the gross floor area of the building or part of the building so affected shall be taken as the volume of that airspace in cubic metres divided by 3.6.

b. Basement space except as specifically excluded by this definition.

c. Elevator shafts, stairwells and lobbies at each floor unless specifically excluded by this definition.

d. Interior roof space providing headroom of 2.0 metres or more whether or not a floor has been laid.

e. Floor spaces in interior balconies and mezzanines.

f. Floor space in terraces (open or roofed), external balconies, porches if more than 75% of the perimeter of these spaces is enclosed, except that a parapet not higher than 1.2 metres or a railing not higher than 1.4 metres shall not constitute an enclosure.

g. Car parking spaces permitted including driveways, aisles and manoeuvring aisles other than car parking in basement space.

h. All other floor space not specifically excluded. The gross floor area of the building shall not include:

i. Uncovered steps

ii. Interior roof space and storage areas having less than 2.0 metres headroom;

iii. Floor space in terraces (open or roofed), external balconies, or porches where not more than 75% of the perimeter of these spaces is enclosed and where a parapet not higher than 1.2 metres or a railing not higher than 1.4 metres does not constitute an enclosure;

iv. Pedestrian facilities approved by the Council and eligible for bonus floor space;

v. Pedestrian circulation space;

vi. Basement space for stairs, escalators and elevators essential to the operation of a through-site link whether or not such a link qualifies for bonus floor space, or servicing a floor used primarily for car parking or loading;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- vii. Other basement space to an equivalent maximum FAR of 1 except that the space excluded shall not be used in the calculation of permitted parking
- viii. Required off-street loading spaces;
- ix. Car parking in basement space (including manoeuvring areas, access aisles and access ramps) except that the space excluded shall not be used in the calculation of permitted parking;
- x. Non-habitable floor space in rooftop structures; and
- xi. any entrance foyer/lobby or part of it including the void forming an integral part of it (being a primary means of access to a building), which is open to the public, is accessed directly from a public place and has an overhead clearance of not less than 6.0 metres. Rooftop includes the roof of building podiums in addition to its ordinary meaning.

Rooftop projections do not include:

- i. Any part of a building included in the definition of gross floor area.
- ii. Any roof top ornamental projections including finials, turrets, towers, cupola, pediments and cornices integral to the design of the building; and
- iii. Telecommunications antennas and aerials. Total construction cost For the purposes of condition

4.3 Total Construction

Cost means the total cost of completing the development (or in the case of an existing development, the replacement cost of that development) for which extra floor area is claimed to be an initial tenantable condition, including all external and internal structural walls of the building to a finished standard (but excluding nonstructural partitioning and furnishings); all building services; floor coverings; and all site works but not including land cost or the cost of the proposed work of art.

8301 Microwave Transmission Corridor

Designation Number	8301*
Requiring Authority	Television New Zealand Ltd
Location	100 Victoria Street West, Auckland Central to Ponsonby Road, Ponsonby
Rollover Designation	Yes
Legacy Reference	Designation 301, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

* Indicates this is a joint Television New Zealand Ltd and Kordia Ltd (Designation 3300) designation from 100 Victoria Street West, Auckland Central to Ponsonby Road, Ponsonby. Kordia Ltd designation only from Ponsonby Road to 501 Scenic Drive, Waikarua.

Purpose

Microwave Transmission Corridor - a protection corridor of specified height (elevation above sea level) and width through which no building, structure or tree can pass to ensure continuity of a microwave linking / transmission path from the TVNZ Broadcasting Centre at 100 Victoria Street West, Central Auckland to the Waikarua Transmission Station at 539 Scenic Drive, Waikarua.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. All masts, antennas, aerials and other facilities must comply with New Zealand Standard NZS6609: 1990 or any amendments, at all times.

The following table shows, at specific points along the path of the corridor, the width of the corridor and the base-height of the corridor. Intermediate widths and heights shall be determined by extending straight lines between adjacent points.

Path Length (KM)	Corridor Width (m)	Maximum Obstruction Height above Mean Sea Level (m)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8302 Satellite Earth Station Transmission Path

Designation Number	8302
Requiring Authority	Television New Zealand Ltd
Location	100 Victoria Street West to airspace north and west, Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 302, Auckland Council District Plan (Central Area Section) 2005; and Designation B07-90, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Satellite earth station transmission path - areas subject to height restrictions.

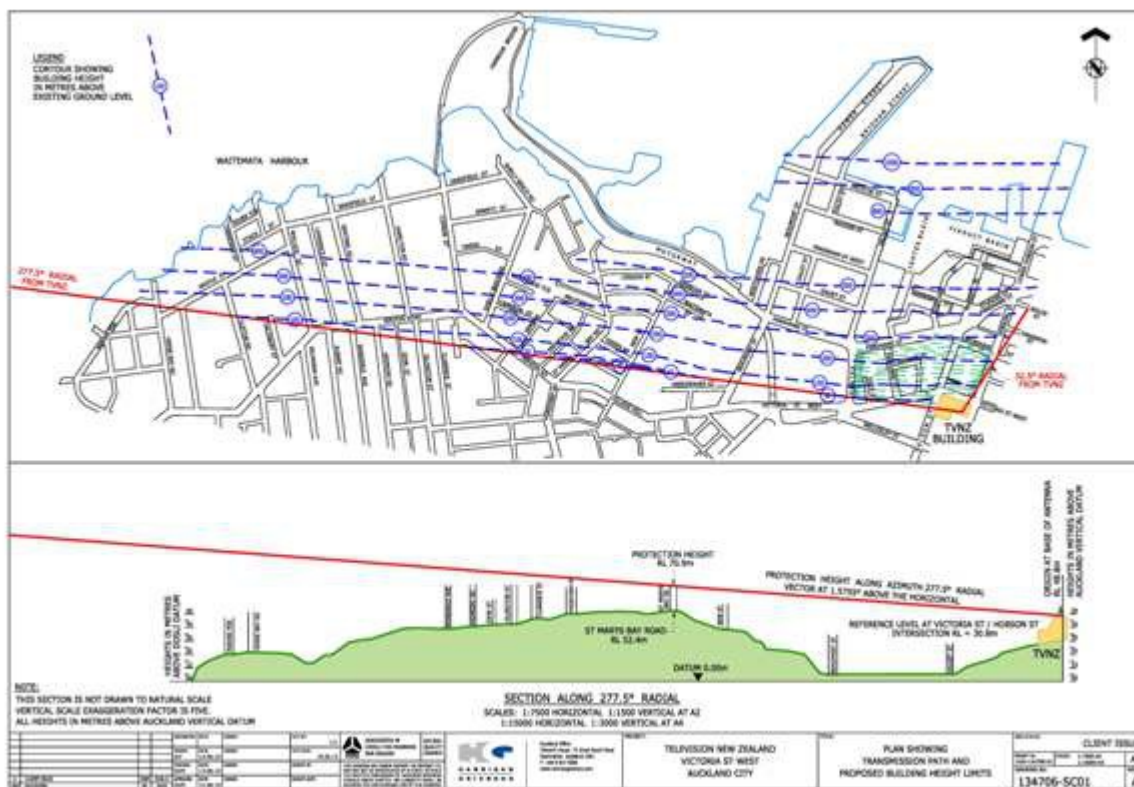

The areas subject to height restrictions are shown in diagram in Attachment 1.

Conditions

1. All masts, antennas, aerials and other radiocommunication facilities must comply with New Zealand Standard NZS2772.1:1999 or any amendments, at all times.

TVNZ Satellite Earth Station Transmission Path - Proposed Building Height Limits (Drawing 134706-SC01 RevA)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Transpower New Zealand Ltd

Designation Schedule - Transpower New Zealand Ltd

Number	Purpose	Location
8500	Electricity transmission - electricity transmission tower site and associated overhead transmission lines...	161 Ash Street, Avondale
8501	Electricity transmission - Penrose electricity substation	19 Gavin Street, Penrose
8502	Electricity transmission - overhead electricity transmission lines ...	Gavin Street (opposite No. 19), Ellerslie to Tamaki River (Panmure Bridge), Panmure
8503	Electricity transmission - Mount Roskill electricity substation	11-39 White Swan Road, Mount Roskill
8504	Electricity transmission - overhead electricity transmission lines ...	37 Boundary Road, Avondale
8505	Electricity transmission - tower site and associated overhead lines ...	39 Haycock Avenue, Mount Roskill
8506	Electricity transmission - tower site and associated overhead lines ...	135A, 137 and 137A Barrack Road, Mount Wellington
8507	Electricity transmission - the construction, operation and maintenance of underground transmission lines ...	19 Gavin Street to 109 Golfland Drive, Pakuranga
8508	Electricity transmission - tower site and associated overhead transmission lines ...	716 Richardson Road, Mount Roskill
8509	Electricity transmission - tower site (Tower 9) and associated overhead transmission lines ...	Luke Street (adjoins State Highway 1), Otahuhu
8510	Electricity transmission - Glenbrook electricity substation	Whitham Road, Glenbrook
8511	Electricity transmission - Bombay electricity substation	153 Barber Road, Bombay
8512	Electricity transmission - the construction, operation and maintenance of that part of a 400kV capable transmission line ...	231 Whitford Park Road, Whitford to the vicinity of Paparimu Road (Waikato District Council Boundary), Pokeno
8513	Electricity transmission - the operation, maintenance and upgrade of the existing Otahuhu Substation, the construction of a new 220kV substation, installation of 220kV underground cable circuits ...	1 Gridco Road and 2 Helabys Road, Otara
8514	Electricity transmission - the ongoing use, maintenance and operation of the Pakuranga Electricity Substation, the development of the substation site ...	109 Golfland Drive, Pakuranga
8515	Electricity Transmission - the construction, operation and maintenance of a transition station to connect the underground cable and overhead lines ...	16 Umbria Lane (near Brownhill Road), Whitford
8516	Electricity Transmission - the construction, operation and maintenance of a double circuit underground 220kV cable ...	143 Brownhill Road, Whitford to 109 Golfland Drive, Howick
8517	Electricity transmission - the construction, operation and maintenance of a double-circuit underground 220kV cable ...	143 Brownhill Road, Whitford to 26-28 Kaitawa Street, Otara

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8518	Electricity transmission - Albany electricity substation	29 Bass Road, Albany
8519	Electricity transmission - the installation, maintenance, repair, replacement, inspection and operation of two 220kV underground electricity transmission lines ...	410 Albany Highway to State Highway 1 (Constellation Drive), Rosedale
8520	Electricity transmission - Takanini electricity substation	65 Airfield Road, Takanini
8521	Electricity transmission - the construction, operation, maintenance, replacement, renewal and upgrading of a 220kV switchyard, transmission lines, and ancillary facilities	261 Quarry Road, Drury
8522	Electricity transmission - Wellsford electricity substation	69 School Road, Wellsford
8523	Electricity transmission - Silverdale electricity substation	83-91 Foundry Road, Silverdale
8524	Electricity transmission - Huapai electricity substation	108 Matua Road, Huapai
8525	Electricity transmission - Henderson electricity substation	1-12, 41-49 and 35 Lincoln Park Avenue, Massey
8526	Electricity transmission - Hepburn Road electricity substation	167-217 Hepburn Road, Glendene
8527	Electricity transmission - Rua o te Whenua telecommunications facility	600 Scenic Drive, Waikaraka
8528	Electricity transmission - the Massey North Underground Cable Project, comprising a 110kV underground transmission line ...	167-217 Hepburn Road, Glendene 13 Westgate Drive, Massey to 97D Fred Taylor Drive, Whenuapai
R8529	Electricity transmission - Mangere electricity substation	11, 14 and 16 Driver Road and 307 Massey Road, Mangere
R8530	Electricity transmission - Hobson Street electricity substation	13-21 Hobson Street, Auckland City
R8531	Electricity transmission - Wairau Road electricity substation	4A Wairau Road, Takapuna
R8532	Electricity Transmission - the operation, maintenance and upgrading of underground transmission lines comprising of two 110kV cable circuits and termination structures to convey electricity between Otahuhu and Penrose	Highbrook Business Park, Highbrook

8500 Ash Street Transmission Lines

Designation Number	8500
Requiring Authority	Transpower New Zealand Ltd
Location	161 Ash Street, Avondale
Rollover Designation	Yes
Legacy Reference	Designation F02-01, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - electricity transmission tower site (Tower 69) and associated overhead lines of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

220kV Henderson to Otahuhu-A transmission line.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. Any new works or equipment shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

3. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Vibration

4. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Construction and Maintenance Noise

5. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
6. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8501 Penrose Substation

Designation Number	8501
Requiring Authority	Transpower New Zealand Ltd
Location	19 Gavin Street, Penrose
Rollover Designation	Yes
Legacy Reference	Designation F12-14, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Penrose electricity substation.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

2. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
3. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).
4. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.
5. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

6. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Structures.

Hazardous Substances

7. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

8. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

9. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

10. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

11. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

12. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

13. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

Pt Lot 1 DP 14147	

8502 Pakuranga to Penrose Transmission Lines

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	8502
Requiring Authority	Transpower New Zealand Ltd
Location	Gavin Street (opposite No. 19), Ellerslie to Tamaki River (Panmure Bridge), Panmure
Rollover Designation	Yes
Legacy Reference	Designation F12-28, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - overhead electricity transmission lines in a corridor between Penrose Substation on Gavin Street and the Tamaki River.

Conditions

1. The Panmure Basin and publicly accessible shoreline is an Outstanding Natural Feature (Schedule 150, Panmure Basin volcano) which shall not be excavated, physically investigated, damaged or altered, other than in accordance with an outline plan of works submitted and processed in terms of section 176A of the Resource Management Act 1991. This condition shall not apply to:

- a. Routine maintenance and repair of existing structures;
- b. The carrying out of minor works which in the Council's opinion would not endanger, damage, destroy, or detract from the values for which the feature has been scheduled. In assessing the effect of the works proposed the Council may consult with the New Zealand Historic Places Trust, the Geological Society of New Zealand incorporated or other heritage authority with an interest in the feature.

Cultural / Spiritual

2. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
- a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

3. Any new works or equipment shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

4. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vibration

5. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Construction and Maintenance Noise

6. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

7. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. Any new works or equipment shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission

The Proposed Auckland Unitary Plan (notified 30 September 2013)

system).

Radio Frequency Interference

3. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Vibration

4. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Construction and Maintenance Noise

5. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

6. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

8506 Barrack Road Overhead Electricity Transmission Lines

Designation Number	8506
Requiring Authority	Transpower New Zealand Ltd
Location	135A, 137 and 137A Barrack Road, Mt Wellington
Rollover Designation	Yes
Legacy Reference	Designation G13-13, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission- tower site and associated overhead lines of the Otahuhu to Penrose-A and Penrose-B, and Pakuranga to Penrose A 110kV transmission lines.

Conditions

Cultural / Spiritual

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. Any new works or equipment shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

3. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Vibration

4. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Construction and Maintenance Noise

5. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
6. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

Advice Note

8507 Pakuranga to Penrose Underground Transmission Cables

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	8507
Requiring Authority	Transpower New Zealand Ltd
Location	19 Gavin Street to 109 Golfland Drive, Pakuranga
Rollover Designation	Yes
Legacy Reference	Designation G15-10, Auckland Council District Plan (Isthmus Section) 1999; and Designation 304, Auckland Council District Plan (Central Area Section) 2005
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - the construction, operation and maintenance of underground transmission lines comprising of a 220kV cable circuit to convey electricity between Pakuranga and Penrose substations.

Conditions

General

1. For the purpose of these conditions:

- a. "Council" means the Chief Executive Officer or nominee of the council.
- b. "Works" has the same meaning as in the Notice of Requirement by Transpower New Zealand Limited for a designation for "Underground Transmission Lines", dated March 2010 ("Notice of Requirement"). Subject to final design and any modification required to comply with the following conditions, the Works shall be conducted and maintained generally in accordance with the information provided by the Requiring Authority contained in:
 - i. The Notice of Requirement;
 - ii. The Land Requirement Plans; and
 - iii. Section 3 of the Assessment of Environmental Effects.

2. The designation shall lapse on the expiry of a period of 15 years after the date it is included in the District Plan in accordance with section 184(2) of the Resource Management Act 1991 ("the Act"), unless:

- a. It is given effect to before the end of that period; or
- b. The council determines, on an application made within 3 months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period for the purposes of this subsection.

Overarching Construction Management Plan

3. The Requiring Authority shall prepare an overarching Construction Management Plan ("CMP") and submit it to the Council for its review under condition 5 of this consent. The CMP shall outline the Requiring Authority's intended construction methodology for the Works and set out the framework for other management plans required for the Works or any particular part or stage of the Works to demonstrate compliance with Conditions 5 to 29, including the following matters:

- a. Storage and reuse of topsoil, including stockpiling areas;
- b. On and off site disposal of spoil;
- c. Silt and dust control during earthwork stages;
- d. Contaminated land management procedures;
- e. Land stability management;
- f. Vegetation disturbance/removal and replacement;
- g. Contractor training, including health and safety;
- h. The intended construction programme, including staging if appropriate;
- i. Temporary activities (including site offices and equipment storage areas, contractor car parking, security, and restrictions on access);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- j. Road and traffic management (noting that Site Specific Traffic Management Plans are required pursuant to conditions 17-20);
 - k. Construction noise and vibration management;
 - l. Consultation and liaison with key stakeholders and affected parties, including any mitigation works identified to address affected utility operators; and
 - m. Construction drawings showing the route alignment (including locations of the cable and joint bays) and any known alterations required to any existing services.
4. Prior to submitting the CMP (including construction drawings) required by condition 3, the Requiring Authority shall consult with Auckland Transport on the progress of the detailed design of the AMETI project.
5. The Requiring Authority shall submit the CMP to the Council at least 3 months prior to construction commencing (unless otherwise agreed by the Council), in order to allow the Council to:
- a. Provide an interim response to the Requiring Authority within 20 working days of receipt; and
 - b. Provide a final decision as to the acceptability of the CMP (for the purposes of condition 30) within 30 working days of receipt.
6. The Requiring Authority may submit, or if requested by the Council, shall submit a revised CMP, Construction Noise and Vibration Management Plan ("CNVMP"), Communications Plan ("CP"), or Site Specific Transport Management Plan ("SSTMP") to address any significant unanticipated adverse environmental effects.

Construction Noise and Vibration

7. The Requiring Authority shall prepare a Construction Noise and Vibration Management Plan ("CNVMP") describing the measures adopted, as far as practicable, to meet the requirements of both NZS6803:1999 Acoustics — Construction Noise and the applicable vibration standards in German Standard DIN 4150-3 (1999-02) — Structural Vibration - Effects of Vibration on Structures.
8. The Requiring Authority shall submit the CNVMP to the Council at least 3 months prior to construction commencing (unless otherwise agreed by the Council), in order to allow the Council to:
- a. Provide an interim response within 20 working days of receipt; and
 - b. Provide a final decision as to the acceptability of the CNVMP for the purposes of condition 30) within 30 working days of receipt.
9. The CNVMP shall refer to the noise management measures set out in Annexure E of NZS6803:1999, and as a minimum shall address:
- a. The construction sequence which outlines a work programme that will minimise construction duration;
 - b. Machinery and equipment to be used, including the use of non-percussive machinery where practicable;
 - c. Hours of operation, including times and days when noisy construction work would occur;
 - d. The identification of activities and locations that will require the design of noise mitigation measures, such as temporary barriers or enclosures, and the details of such measures, including the period/duration during which they are expected to be implemented;
 - e. Construction noise limits for specific areas where these differ from the Standard;
 - f. Alternative strategies where full compliance with NZS 6803:1999 cannot be achieved, including consultation with neighbouring owners and occupiers on outcomes acceptable to them;
 - g. Methods for monitoring and reporting on construction noise;
 - h. Methods for receiving and responding to complaints about construction noise.
10. The CNVMP shall also describe measures adopted, as far as practicable, to meet the vibration standards of DIN4150-3:1999 Structural Vibration – Part 3: Effects of Vibration on Structures, and shall address the following aspects:
- a. Vibration monitoring measures;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Criteria;
- c. Possible mitigation measures;
- d. Complaint response;
- e. Reporting procedures;
- f. Notification and information for those in the community likely to be affected by the proposed works;
- g. Vibration testing of equipment to confirm that the vibration limits will not be exceeded;
- h. Location for vibration monitoring when construction activities are adjacent to “at risk” buildings, where for the purposes of this condition an “at risk” building is one at which the levels in the German Standard DIN 4150-3:1999 Structural Vibration — Part 3: Effects of Vibration on Structures are likely to be exceeded;
- i. Operational times; and
- j. Preparation of building condition reports on “at risk” dwellings prior to, during and after completion of works – which reports may comprise a photographic or video record.

11. The noise limits in NZS6803:1999 Acoustics — Construction Noise shall not apply to emergency work required to re-establish continuity of electricity, communications or water supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects particularly at times when the stricter noise limits apply (e.g. at night time).

12. All generators or pumps that may be used overnight proximate to residential receivers shall be acoustically screened unless it can be demonstrated to the satisfaction of the Council that there is sufficient separation distance available, or that the generator or pump will comply with a reasonable noise limit (by reference to NZS6803:1999).

Community Information and Liaison

13. The Requiring Authority shall prepare a Communications Plan setting out:

- a. The method/s of consultation and liaison with key stakeholders and the owners/occupiers of neighbouring properties regarding the likely timing and duration of works, alternative routes, access to properties and any proposed alterations to public transport services; and
- b. Details of prior consultation or community liaison undertaken with the owners/occupiers of neighbouring properties, key stakeholders, schools, public transport providers, emergency services or representative groups regarding proposed road or lane closures, potential diversions and delays, including outlining any measures developed with such persons or groups to manage or to mitigate any adverse effects or inconvenience that may arise.
- c. Full contact details for the person appointed to manage the public information system and be the point of contact for related inquiries.

14. The Requiring Authority shall submit the CP to the Council at least 3 months prior to construction commencing (unless otherwise agreed by the Council), in order to allow the Council to:

- a. Provide an interim response within 20 working days of receipt; and
- b. Provide a final decision as to the acceptability of the CP (for the purposes of condition 30) within 30 working days of receipt.

Code of Practice for Working in the Road

15. During construction, the Requiring Authority shall comply with the Code of Practice for Working in the Road (SNZ HB 2002:2003) at all times.

Construction Hours

16. The construction hours shall be generally as follows, except where the Requiring Authority considers that work is necessary outside the specified days or hours for the purposes specified in (a) to (e) below:

Monday to Friday: 7am to 9pm;

Saturday: 8am to 1pm; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Sundays and public holidays: No Work.

The purposes for which work may occur outside of the specified days or hours are:

- a. Where work is required to be planned to be carried out at low traffic times (for example, excavation across busy intersections, along busy roads, or cable installation);
- b. For delivery of large equipment;
- c. In cases of emergency;
- d. For securing of the site or removing a traffic hazard;
- e. For cable jointing in self contained enclosures.

Roading and Traffic Management

17. The Requiring Authority shall:

- a. Undertake and submit a condition survey of the carriageway along the designated route to the Council. The condition survey shall consist of a photographic or video record; and
- b. Prepare Site Specific Traffic Management Plans ("SSTMP"s) for the Works or any part or stage of the Works which are generally consistent with the NZ Transport Agency's Code of Practice for Temporary Traffic Management 2004 ("COPTTM").

18. The SSTMP(s) shall be prepared following consultation with the following key stakeholders:

- a. Roding Authorities (territorial local authorities);
- b. Emergency services (police, fire and ambulance);
- c. Local business associations (including the Greater East Tamaki Business Association);
- d. Auckland Transport and any bus operators which operate scheduled services along the route; and
- e. Schools and childcare centres with frontage or access to roads where the Works are taking place.

19. The SSTMP(s) shall address and provide details of proposed works and/or mitigation measures relating to the following matters:

- a. The likely routes for heavy construction-related traffic;
- b. Details of any necessary road or lane closures, diversions, or deviations, including the likely date, time and duration of any such actions. As far as practicable, any necessary temporary road or lane closures should occur during off-peak periods. Where diversions or deviations are required, information and recommendations shall be provided by a qualified and experienced traffic engineer of the traffic volumes and capacities of alternative routes and the likely consequent effects in terms of safety and convenience, and any changes to bus routes if required following discussion with the relevant public transport operator(s);
- c. Details of the signs intended to advise of any road or lane closures, diversions and delays. Such signage shall be sufficiently clear to enable easy understanding and be installed at appropriate locations at least 7 days in advance of such road closures, diversions or delays; and
- d. Details of any measures for the mitigation of effects of construction traffic on cyclists, pedestrians, mobility impaired persons, and school children.

20. The SSTMP(s) shall be submitted to the Council at least 15 working days (unless otherwise agreed by the Council) prior to the commencement of any construction work on the road(s) to which the SSTMP relates (and/or works adjacent which will require closure of part or all of the road(s)).

21. During construction the Requiring Authority shall:

- a. At all times provide access to any property temporarily severed by construction at a level that will enable normal operations on the property to continue as far as practicable; and
- b. Inform any neighbouring property owners/occupiers along or adjacent to the cable route at least 5 working days prior to the commencement of planned work that is likely to temporarily prevent or hinder usual on-street parking.

22. As soon as practicable following completion of any stage of construction the Requiring Authority

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall:

- a. Repair any damage to public carriageways and footpaths (and associated road components such as individual road crossings) resulting from the impacts of construction. Such repair may involve short-term maintenance to allow for settling and consolidation of carriageways prior to final repair;
- b. Re-grass areas (including berms) that were previously grassed; and
- c. If requested by the Council, re-instate the planted median along Ti Rakau Drive.

23. Normal road opening procedures shall apply for maintenance, renewal or repair works within the road reserve for which the local authority may impose conditions. The construction of the Works shall be in accordance with the Council's Engineering Quality Standards.

Tree Management

24. Except for those trees that are to be removed as part of the Works, trees in the vicinity of the Works shall be managed as follows:

- a. All excavation work within the dripline or root zone of any tree in a Council street or Council Reserve, any scheduled tree or any tree that would otherwise be generally protected under the District Plan and is located on private land (and extends over or into the work site), shall be supervised by a Council approved arborist;
- b. Any root or limb severance required shall be undertaken by a qualified arborist in accordance with best practice as far as practicable to provide for the long-term health and vitality or stability of the subject tree(s);
- c. Any tree adjacent to a construction area shall be fenced off to minimise and/or avoid any damage to the rootplate area of the tree;
- d. Where a Council-owned tree is damaged by the Works and a Council arborist assesses that remedial work is necessary, the remedial work shall be undertaken by a Council-approved arborist and the Requiring Authority shall be directly liable for all such remedial costs. Should a Council-owned tree be damaged beyond repair or destroyed then the Requiring Authority shall be directly liable for all costs relating to tree removal and replacement planting; and
- e. Where replacement planting is required to remediate the loss of a Council-owned tree, the species, location and planting of the replacement tree shall be undertaken as approved by the Council.

25. Following the completion of construction, the Requiring Authority shall provide a monitoring report to the Council that lists all trees that would otherwise be identified as 'generally protected' or 'scheduled' in the District Plan that were subject to any cutting or damage of the roots, trunk, or canopy to an extent deemed more than minor by the Council approved arborist.

Archaeology and Cultural

26. If any urupa, traditional sites, taonga (significant artefacts) and/or koiwi (human remains) are discovered during the Works, the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been discovered shall be suspended pending completion of the steps at (b) to (d);
- b. The site supervisor shall secure the area in a way that ensures that any remains or artefacts are untouched;
- c. The site supervisor shall notify representatives of relevant tangata whenua, the New Zealand Historic Places Trust, the Council (or its successor) and, in the case of human remains, the New Zealand Police; and
- d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover any features discovered before work may recommence in the immediate vicinity of the discovery site.

Existing Utilities

27. The Requiring Authority shall consult and liaise with all utility operators whose activities or interests may be affected by the Works prior to undertaking any work pursuant to this designation to confirm that:

- a. The Requiring Authority is aware of the location of all utility services existing at the time of construction in, or adjacent to, the designation and to identify any necessary exploratory excavation and evaluations of potential effects on the proper functioning of the utility services (including potential for earth potential rise or induction hazards) that should be undertaken;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. As far as practicable, all utility services (existing at 5 March 2010) located in or adjacent to the designated route are protected from the Works and any associated activities that may interfere with the proper functioning of those services; and
- c. Reasonable access to existing utility services located in or adjacent to the designation is maintained during construction.

28. In addition to the requirements of condition 27, prior to the commencement of any Works the Requiring Authority shall:

- a. Seek the approval of Watercare for any works within 10 metres of Watercare facilities; and
- b. Lodge with the Council for its approval (as part of the condition 3(l) requirement for a Construction Management Plan) and serve on Watercare the detailed construction and contingency plans for any crossings of Watercare infrastructure by the Works.

29. If it is not practicable to avoid a reduction in the level of service in accordance with condition 27(b) above, or if services are otherwise damaged, all utility services existing at the time of lodgement located in or adjacent to the affected section of the designation route shall be repaired or relocated:

- a. As identified in conjunction with the affected utility operator;
- b. At the Requiring Authority's expense; and
- c. To the reasonable satisfaction of the affected utility operator.

Outline Plans

30. Where the Council and the Requiring Authority agree on the content and terms of the various Management Plans, that agreement shall be deemed to be a waiver in relation to that Plan or relevant part of that Plan pursuant to section 176A(2) of the Act of the requirement for an Outline Plan under section 176A.

31. If the Council and the Requiring Authority do not agree on the terms of any Management Plans or if the Requiring Authority otherwise elects, the Requiring Authority shall comply with conditions 3, 7, 13 and 17 by submitting an outline plan or plans of Works ("Outline Plan") to the Council pursuant to section 176A of the Act. This Outline Plan shall include such information as would otherwise be required under the above conditions relating to the Management Plans and must be submitted prior to the commencement of construction works.

32. The Requiring Authority shall submit an Outline Plan to the Council pursuant to section 176A of the Act prior to the commencement of any other construction works which are not:

- a. Otherwise approved by the conditions of this designation; or
- b. Set out in section 3.4 of the Assessment of Environmental Effects submitted with the Notice of Requirement.

33. The Works, or stages of Works, shall be undertaken in accordance with an approved Management Plan or Plans or accepted Outline Plan (as the case may be).

Designation Review

34. As soon as practicable following the completion of construction of the Works, the Requiring Authority shall, in consultation with the Council as the road controlling authority:

- a. Review the width of the area designated for the project;
- b. Identify:
 - i. any areas of designated land (including public reserve) that are no longer necessary for the ongoing operation, maintenance, renewal and protection of the underground cables and ancillary activities; and
 - ii. any areas of designated land within the legal road boundaries that are more than 2.5 metres from the centreline of the cables (excluding joint bays and associated link pits); and
- c. Remove the designation over the areas identified in (b) above in accordance with section 182 of the Act and provide a plan of the final designated areas to the Council for inclusion in the District Plan; and
- d. Provide as-built plans to the Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Operational Conditions

Magnetic Fields

35. The Works shall be designed and constructed to limit the magnetic field exposure to the reference levels International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time varying electric, magnetic and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494 — 522) (ICNIRP Guidelines) public exposure of 100µT for magnetic flux density when measured at 1 metre above ground level directly above any cable under normal operating conditions.

Earth Potential Rise / Induced Voltages

36. The Works shall be designed and constructed to comply with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997.

37. The Works shall be designed and constructed so as not to cause existing assets of other utilities to be non-compliant with AS/NZS 4853:2000 — Electrical Hazard on Metallic Pipelines.

Maintenance

38. The Requiring Authority shall:

- a. Meet its own costs associated with reviewing any proposal by the local authority to undertake roading works or activities over, or adjacent to, land designated for underground transmission lines;
- b. Meet any additional costs in respect of roading compaction, construction, renewal or maintenance that are incurred by the local authority where those additional costs are specifically caused due to the presence of the cables, or due to conditions imposed by the Requiring Authority; and
- c. Meet any additional costs where maintenance works undertaken by the Requiring Authority result in additional routine maintenance or remedial related roading costs for the local authority.

39. The Requiring Authority shall advise the Council at least 30 working days prior to commencing major programmed maintenance, renewal or replacement works (unless otherwise agreed in writing with the Road Corridor Access Team, Auckland Transport).

Advice Notes

1. The Requiring Authority is advised that all construction activities occurring within the road reserve are required to obtain Road Opening Notices from the Council prior to construction.

2. An Authority to modify an archaeological site must be obtained from the NZHPT prior to the start of any works that will affect site R11/1664.

3. For the avoidance of doubt the Requiring Authority is advised that nothing in condition 29 requires the Requiring Authority to:

- a. Provide compensation to any affected utility operator for indirect costs, such as for delays and inconvenience caused; and / or
- b. Put the owner of the utility services in a better position than if the Works had not been proposed or installed.

4. Where section 176 approvals are required by utility operators (other than the Requiring Authority) for their works within the designation the requiring authority will provide a timely response, in order to facilitate co-ordination of section 176 approvals sought by the utility operator and the Road Opening Notice process.

5. The requiring authority is reminded of its Agreement with Watercare dated 13 October 2008 in relation to existing and future pipes within the designation area.

Location	716 Richardson Road, Mount Roskill
Rollover Designation	Yes
Legacy Reference	Designation H07-01, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - tower site and associated overhead transmission lines of the Mangere to Mt Roskill A 110kV transmission line.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. Any new works or equipment shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

3. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Vibration

4. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Construction and Maintenance Noise

5. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

6. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

8509 Luke Street Overhead Electricity Transmission Lines

Designation Number	8509
Requiring Authority	Transpower New Zealand Ltd
Location	Luke Street (adjoins State Highway 1), Otahuhu
Rollover Designation	Yes
Legacy Reference	Designation I14-23, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - tower site (Tower 9) and associated overhead transmission lines of the Henderson to Otahuhu-A 220kV transmission line.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. Any new works or equipment shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

3. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Vibration

4. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Construction and Maintenance Noise

5. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

6. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

Lot 1 DP 133722	

8510 Glenbrook Electricity Substation

Designation Number	8510
Requiring Authority	Transpower New Zealand Ltd
Location	Whitham Road, Glenbrook
Rollover Designation	Yes
Legacy Reference	Designation 84, Auckland Council District Plan (Franklin Section) 2000

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Electricity transmission - Glenbrook electricity substation.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

2. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
3. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).
4. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.
5. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

6. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

7. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

8. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

(Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

9. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

10. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

11. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

12. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

13. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

Schedule of Legal Descriptions

Parcel ID	
Lot 3 DP 439460	

8512 Brownhill Road to Whakamaru Overhead Transmission Lines

Designation Number	8512
Requiring Authority	Transpower New Zealand Ltd
Location	231 Whitford Park Road, Whitford to the vicinity of Paparimu Road (Waikato District Council Boundary), Pokeno
Rollover Designation	Yes
Legacy Reference	Designation 302, Auckland Council District Plan (Manukau Section) 2002; and Designation 152, Auckland Council District Plan (Franklin Section) 2000
Lapse Date	Given effect to (i.e. no lapse date)

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Electricity transmission - the construction, operation and maintenance of that part of a 400kV capable transmission line which is within the Auckland area to convey electricity between the Brownhill Road Substation and the Whakamaru and Whakamaru North Substations in Taupo, and ancillary activities.

Conditions

This designation has two sets of conditions, one for those towers Towers 5 to 33 and one for Towers 33A to 65, as shown in the attached map.

Conditions relating to that part of the line between towers 5 and 33.

Documents

1. Subject to the conditions below, the initial works to give effect to the designation shall be generally in accordance with Maps 40–44 of Appendix V.

Tower Heights and Locations

2. Tower heights and locations shall be generally in accordance with the plans and profiles, except that:
- Subject to (b), (c), (d) and (e) below, tower height can exceed that shown on the plans and profiles by up to three metres;
 - Where tower locations are moved (as provided in (f) and (g) below), tower heights can exceed those in the plans and profiles by up to five metres;
 - Any increase in the height of tower 9 shall not cause it to exceed the height limitations of the Auckland International Airport Obstacle Limitation Surface;
 - Any increase in height of towers 14, 15, 16A and 16B shall not cause a tower to exceed the height limitations of the conical protection surface associated with Ardmore Airport;
 - No tower shall exceed 70 metres in height;
 - Tower sites may be moved up to five metres laterally; and
 - Tower sites may be moved up to 40 metres along the alignment.

Cultural / Spiritual

3. If any urupa, traditional sites, taonga (significant artefacts) or koiwi (human remains) are exposed during site works, then the following procedures shall apply:
- works in the immediate vicinity of the site that has been exposed shall cease;
 - the site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - the site supervisor shall notify representatives of relevant tangata whenua, the New Zealand Historic Places Trust, Auckland Council and, in the case of human remains, the New Zealand Police; and
 - the notification in (c) above shall allow such persons being given a reasonable time to record and resolve archaeological features discovered before work may recommence.

Social

4. Transpower shall prepare a counselling/stress relief plan, after consultation with the territorial authority. The plan shall include:
- An offer of counselling to those persons directly affected by the designation crossing their property to manage undue stress related to implementing the Upper North Island Grid Upgrade Project;
 - An 0800 number for the service;
 - No requirement for contact with Transpower personnel to access the service;
 - Such offer remaining open for acceptance for the period ending six months after confirmation of the designation; and
 - Such offer extending to a maximum of four counselling sessions, which may occur beyond the period referred to in (d) above, but which must be completed within 12 months of confirmation of the designation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. The implementation of the counselling/stress relief plan, and any counselling of directly affected persons, shall be at Transpower's cost.

6. Transpower shall not be in breach of the condition 4 if the offer of counselling is not taken up by any directly affected persons.

Electric and Magnetic Fields (EMF)

7. The works shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time varying electric, magnetic, and electromagnetic fields (up to 300GHz) (Health Physics, 1998 74(4): 494–552) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground under maximum normal operating conditions (ie, when there are no faults in the transmission system).

8. In order to reduce long term public exposure to EMFs no habitable building shall be constructed within the designated corridor for the 400-kV capable transmission line.

Earth Potential Rise / Induced Currents

9. In designing and constructing the line, Transpower shall give consideration to third-party conductive structures and services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

10. The works shall be designed and constructed to comply with AS/NZS4852:2000 Electrical Hazards on Metallic Pipelines.

11. Prior to commissioning, Transpower shall have an appropriately qualified person assess all conductive structures in the vicinity of the transmission line. Any hazards shall undergo a risk assessment in accordance with the Electricity Engineers' Association Guide to Risk-Based Earthing System Design. Transpower will carry associated with the line.

Radio Frequency Interference

12. All works shall be designed to comply with NZS 6869:2004 Limits & Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Operational Noise

13. The operation of the transmission line shall not emanate noise that exceeds 40 dBA Leq beyond the boundaries of the designation. Measurements shall not be undertaken during heavy rain.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1991 Measurement of Sound and NZS6802:1991 Assessment of Environmental Sound.

Landscape Mitigation

15. Within two months of confirmation of the designation, Transpower shall appoint a suitably qualified and experienced landscape architect for the role of certifying that any of the thresholds in conditions 22 and 24 have been reasonably met (the landscape certifier). The person appointed shall be endorsed by the NZ Institute of Landscape Architects in writing as suitable for the role, having been advised of the role and responsibilities.

16. Any decision made by the landscape certifier in relation to the matters addressed in condition 22(b) and 24 shall be in writing (including reasons).

17. Any landowner may ask the landscape certifier to certify that any decision under condition 22(b) and 24 is reasonable given the thresholds in those conditions. The landscape certifier shall set his or her own procedure for any such certification.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Landscape mitigation: private land

18. Within two months of confirmation of the designation, Transpower shall write to the owners of properties having an occupied house, existing at the date of the Board's draft decision on the Notices of Requirement, within one kilometre of the centre line of the designation.

19. The letter shall inform the landowner/s of the properties referred to in condition 18 of their possible entitlement to a landscape mitigation assessment in accordance with condition 22 (including where relevant, ecological planting). This condition shall not apply to any property where an agreement relating to landscape mitigation has already been reached between Transpower and the landowner.

20. The written offer required by condition 18 shall inform the landowner that he/she may request Transpower to consider landscape mitigation (including where relevant, ecological planting) at his/her option prior to, or after, construction of the overhead line, and outline the process established by these conditions (including the role of the landscape certifier).

21. Within two months of commissioning of the line, Transpower shall repeat the offer required by condition 18 to all landowners who have not already indicated preliminary acceptance of Transpower's offer. Transpower shall expressly state that the offer shall remain valid for 12 months following commissioning of the overhead line.

22. In the case of each landowner who has indicated acceptance of the offer of landscape mitigation assessment (including where relevant ecological planting), the following process shall be adhered to:

- a. An onsite meeting shall be arranged between the landowner and a qualified landscape architect (the landscape architect), and where relevant an ecologist, appointed by Transpower.
- b. The landscape architect shall determine whether mitigation is appropriate in terms of the criteria in Table 1. If the determination is that no mitigation is appropriate, the landscape architect shall advise Transpower with reasons, and Transpower shall advise the landowner in writing.
- c. Subject to (d), if the landscape architect identifies that mitigation is appropriate in terms of the criteria in Table 1, he/she shall prepare a plan (the concept plan) to mitigate the adverse visual effects of the overhead line when viewed from the dwelling and the immediate curtilage of the dwelling. The mitigation techniques shall take into account the factors and criteria in Table 1.
- d. For properties where ecological planting has been identified in Table 2, the concept plan required by (c) shall be prepared by the landscape architect, in consultation with the ecologist, taking into account the criteria in Table 2.

Table 1:

Factors	Criteria
Degree of Likely Visual Amenity Effect	- Moderate to very high degree of effect
Basis for Assessment of Degree of Effect	<ul style="list-style-type: none"> - Distance from the line and towers - Orientation of the house and outdoor living areas - Existing screening and nature of intervening landscape - Relative elevation
Mitigation Technique	<ul style="list-style-type: none"> - Planting that may screen or partially screen towers - Planting that may create an alternative foreground focus - Planting that may focus the outlook on an alternative view - Planting that may increase the sense of depth in a view towards the line

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Practicality	<ul style="list-style-type: none"> - Land available in the resident's ownership for - landscape mitigation - Existing garden design or landscape constraints - Farm management constraints
Owner's Preference	- Preferences identified during the consultation and design process

Table 2:

Relevant Towers	Proposed Replacement Planting and Purpose
Span 12 and 13 (Beale, evidence in chief para 28(a))	Establish kahikatea plantings (saplings) in the gully on the downstream or southern side of the designation between towers 12 and 13, so as to extend the riparian cover and offset the loss of the tallest specimens from within the forest remnant.

23. The concept plan shall be prepared in draft and following review by Transpower, shall be submitted to the landowner for comment.

24. The concept plan shall be reviewed by the landscape architect, in consultation with the ecologist (where relevant), following the receipt of comments, and following such further consideration, investigation and discussion with the landowner and Transpower as the landscape architect considers necessary, taking into account the criteria in Table 1 and the cost and practicality of implementing any specific request. The revised plan (the final plan) will be provided to the landowner as soon as reasonably practicable.

25. On receipt of written acceptance of the final plan, Transpower shall implement it within the first planting season following that acceptance, unless otherwise agreed with the landowner.

26. Transpower shall maintain the planting for 12 months after completion of planting.

27. In the event that a landowner advises Transpower that the landowner wishes to implement the final plan themselves, within 30 days following completion of all work specified in the final plan to the reasonable satisfaction of the landscape architect, Transpower shall pay the landowner the sum of money allocated in the approved concept plan. Where this occurs, condition 25 shall not apply.

28. In the event that a landowner advises Transpower that the landowner wishes to maintain the planting themselves, within 30 days following completion of all works specified in the final plan, Transpower shall pay the landowner the sum of money allocated in the approved concept plan for maintenance. Where this occurs, condition 26 shall not apply.

Landscape itigation: Public Land

29. Within 12 months of confirmation of the designation, Transpower shall write to the Auckland Council, and where relevant NZTA, informing it or them of its proposal to provide for landscape mitigation along specific sections or locations of roads and State highways in the Council's district, as shown on Maps 32–39 of Appendix V, and seeking the Auckland Council's involvement in implementing the mitigation. The offer shall be for the purpose of mitigation of adverse visual effects of the overhead line when viewed from the public roads or other viewpoints shown in the plan.

30. On receiving a positive response from the Council and/or NZTA (as applicable), Transpower shall provide a draft development plan, specifications, and costing prepared by a qualified landscape architect as an offer to the Council and/or NZTA. The offer shall remain open for 12 months following commissioning of the line.

31. Transpower shall review any comments provided by the Council and/or NZTA and shall issue a final plan. The final plan shall be provided as soon as practicable to the Council and/or Transit.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

32. On the Council's and/or NZTA's written acceptance of the plan (where relevant) and agreement to implement the mitigation, Transpower shall, within 30 days, pay to the Council and/or NZTA the cost specified in the accepted plan (which shall include an estimate for a year of maintenance).

33. Transpower shall not be in breach of condition 29 in the event the Council and/or NZTA do not undertake the planting as provided in the final plan.

Pre-construction Activities

34. Prior to construction commencing, Transpower shall appoint a Landowner Liaison Officer, who will:

- a. Be responsible for maintaining contact with landowners and occupiers of each property prior to, and during construction; and
- b. Have a contact role with the landowner during the development of the Site Works Plan (SWP) for individual properties.

35. Transpower shall make copies of individual SWPs available to Auckland Council for information purposes, upon request.

Construction Management Plan (CMP)

36. Prior to commencement of any construction activity authorised by the designation, Transpower shall submit a construction management plan to the Council's Consents Officer for approval. The Council's Consents Officer shall respond within 20 working days. Approval shall not be unreasonably withheld. The construction management plan shall outline Transpower's intended approach to:

- a. Land stability management and sediment controls;
- b. Storage and reuse of topsoil;
- c. Management and disposal of spoil;
- d. Groundwater and stormwater management, treatment and disposal;
- e. Silt and dust control, during earthwork stages;
- f. Traffic/access management;
- g. Temporary activities and equipment storage in specified areas;
- h. security and lighting during construction;
- i. Contaminated land management procedures;
- j. Construction noise (as set out in conditions 37–40), dust and vibration;
- k. Hours of work;
- l. Existing network utilities' protocols and guidelines;
- m. Subject to other specific conditions, cultural protocols and archaeological requirements;
- n. Vegetation clearance, disposal and restoration;
- o. The intended construction programme (including staging if appropriate);
- p. Protocols and procedures for road controlling authorities and rail operators, where the line crosses that infrastructure;
- q. Community information and liaison;
- r. Contractor training; and
- s. Generic contents of Site Works Plans (SWPs).

Nothing in this condition allows the Council, or any other party, to require more onerous controls than contained in the designation conditions.

Construction and Maintenance Noise

37. All construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the designated area does not exceed the limits in NZS6803:1999 Acoustics– Construction Noise at locations set out in section 6.2 of that standard.

38. The noise limits required by condition 37 shall not apply to emergency work required to re-establish continuity of supply, urgently required to prevent loss of life or other personal injury or commissioning works, but

The Proposed Auckland Unitary Plan (notified 30 September 2013)

all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night time).

39. Prior to any significant construction work taking place, including any earthworks, a noise management plan applicable to the construction and commissioning stages shall be prepared for the whole of the line, with the assistance of a suitably qualified and experienced person. The plan shall set out the management procedures in terms of section 8 and Annex E of NZS6803:1999, and the works shall be undertaken in accordance with that noise management plan.

40. The noise management plan required by condition 39 shall be submitted to the Council's Consents Manager, at least 20 working days prior to the works commencing.

Vibration

41. Vibration from all construction activities shall not exceed the limits of, and shall be measured in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Aviation

42. Transpower shall, on a monthly basis during the construction of the line, inform the New Zealand Agricultural Aviation Authority, the Civil Aviation Authority and Ardmore Airport Limited (in relation to the towers within the conical surface only, as set out in the Ardmore Aerodrome Protection Measures under Designation 200 in the Auckland Unitary Plan) of the construction activities completed in the previous month, and intended to be undertaken in the following month including:

- a. Erection of specific towers (with locations and heights); and
- b. Stringing of conductor and earthwires between specified towers.

For the avoidance of doubt, the requirement in condition 42 applies to each tower and conductoring of each tower, not merely the commencement of tower erection or conductoring.

Traffic Management Plan (TMP) for Road Crossings and Local Roads

43. Transpower shall prepare a series of traffic management plans for road crossings and local roads used by heavy traffic (TMPs) in accordance with Transit New Zealand's Code of Practice for Temporary Traffic Management (COPTTM), after consultation with (as relevant):

- a. Auckland Transport (Road Controlling Authority);
- b. The following key stakeholders:
 - i. Emergency services (including police);
 - ii. Bus operators;
 - iii. Schools;
 - iv. Housing New Zealand Corporation; and
- c. Any additional key stakeholders identified by Council.

44. A TMP shall be submitted to the Council and NZTA (where relevant) at least 20 working days prior to the commencement of construction of the relevant road crossing works, or works affecting local roads. The plans may be submitted in stages, with each stage being submitted at least 20 working days prior to the commencement of the work the subject of that stage.

45. The Council shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

46. The TMP prepared by Transpower shall recognise that the paramount purpose of roads is the free passage of the public and its vehicles.

47. The TMPs shall address and provide details of proposed road crossing works and general use of local roads

The Proposed Auckland Unitary Plan (notified 30 September 2013)

by heavy vehicles and/or mitigation measures relating to the following matters:

- a. The likely routes for heavy construction-related traffic;
- b. Details of the installation of any protection measures including, but not limited to, hurdles for subsequent line construction purposes;
- c. Details of any necessary temporary road closures, diversions, or deviations which are likely to be required during road crossing activities, including the likely date, time, and duration of such matters (any necessary temporary road closures should be effected during off-peak periods unless this is impracticable or would have adverse impacts on adjacent properties);
- d. Where diversions or deviations are required, information shall be provided by a suitably qualified and experienced traffic engineer of the traffic volumes and capacities of alternative routes, to ensure that such routes are both convenient and capable of safely accommodating any such diverted or deviated traffic;
- e. Details of the proposed signage to advise motorists, residents, stakeholders, and other road users of any road closures, diversions and delays, such signage to be sufficiently clear to be capable of ready understanding by the general public and installed at appropriate locations at least seven days in advance of such road closures, diversions and delays;
- f. Details of methods of proposed information dissemination regarding construction activities and associated traffic effects, including but not limited to public notices in newspapers, radio announcements, information packages and direct contact with affected persons. (Such information dissemination, and the chosen method of dissemination is to be proportional to the impact);
- g. Details of prior consultation or community liaison undertaken with affected residents, stakeholders, public transport providers, emergency services or representative groups regarding proposed road closures, diversions and delays, and any measures agreed with such groups to address any adverse effects or inconvenience that may arise; and
- h. identification of any measures for the purposes of mitigating adverse traffic effects of construction traffic, including safety matters (such speed restrictions and signage), relating to cyclists, pedestrians, disabled persons, and schoolchildren.

Construction Entrance-ways off Public Roads

48. Prior to the commencement of construction, Transpower shall undertake a survey of the condition of the roads in the immediate vicinity of construction entranceways off public roads (consisting of a photographic record). A copy of the survey will be retained and provided to the council upon request.

49. Transpower shall repair any damage to entranceways and public roads in the vicinity of those entranceways resulting from impacts of its construction traffic within 10 working days of the damage occurring, recognising that temporary repairs may be appropriate where work has not been completed.

General advice note:

1. In relation to the ARI-PAK A towers outside of the designated area, Transpower shall use its best endeavours to establish and follow the procedures in the conditions in relation to cultural/ spiritual matters, construction noise, the preparation of the construction management plan, and pre-construction activities. Conditions relating to that part of the line which falls in Franklin, between towers 33A and 65.

Conditions relating to that part of the line between towers 33A and 65

Documents

1. Subject to the conditions below, the initial works to give effect to the designation shall be generally in accordance with Maps 44–52 of Appendix V.

Tower Heights and Locations

2. Tower heights and locations shall be generally in accordance with the plans and profiles, except that:

- a. Tower height can exceed that shown on the plans and profiles by up to three metres;
- b. Where tower locations are moved in accordance with (d) and (e) below, tower heights can exceed those in

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the plans and profiles by up to five metres;

- c. No tower shall exceed 70 metres in height;
- d. Tower sites may be moved up to five metres laterally; and
- e. Tower sites may be moved up to 40 metres along the alignment.

Cultural / Spiritual

3. If any urupā, traditional sites, taonga (significant artefacts) or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been exposed shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, Auckland Council and, in the case of human remains, the New Zealand Police; and
- d. The notification in (c) above shall allow such persons being given a reasonable time to record and resolve archaeological features discovered before work may recommence.

Archaeological Sites: Route Section 4, Towers 33A–45

4. The locations of all towers shall be subject to archaeological survey by a suitably qualified and experienced archaeologist (project archaeologist) prior to finalisation of the relevant Site Works Plans required by conditions 36 and 37, other than the proposed locations for towers 33A to 37, 40, 43 and 44.

Archaeological Sites: Route Section 5

5. Before any works associated with the Upper North Island Grid Upgrade Project are carried out within designated area of route section 5, Transpower shall undertake:

- a. The project archaeologist shall monitor the earthworks at tower 56 to determine whether archaeological evidence is present.
- b. All of the proposed access routes, and tower locations for towers 63A–69 65 shall be archaeologically surveyed prior to the relevant Site Works Plans required by conditions 36 and 37 being finalised. The Site Works Plans, where practicable, shall accommodate any archaeological findings.

Advice note:

Conditions 4 and 5 are subject to any conditions of any archaeological authority granted under the Historic Places Act 1993.

Social

6. Transpower shall prepare a counselling/stress relief plan, after consultation with the territorial authority. The plan shall include:

- a. An offer of counselling to those persons directly affected by the designation crossing their property to manage undue stress related to implementing the Upper North Island Grid Upgrade Project;
- b. An 0800 number for the service;
- c. No requirement for contact with Transpower personnel to access the service;
- d. Such offer remaining open for acceptance for the period ending six months after confirmation of the designation; and
- e. Such offer extending to a maximum of four counselling sessions, which may occur beyond the period referred to in (d) above, but which must be completed within 12 months of confirmation of the designation.

7. The implementation of the counselling/stress relief plan, and any counselling of directly affected persons, shall be at Transpower's cost.

8. Transpower shall not be in breach of the condition 6 if the offer of counselling is not taken up by any directly affected persons.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Electric and Magnetic Fields (EMF)

9. The works shall be designed and constructed to limit the EMF exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time varying electric, magnetic, and electromagnetic fields (up to 300GHz) (Health Physics, 1998 74(4): 494–552) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground under maximum normal operating conditions (ie, when there are no faults in the transmission system).

10. In order to reduce long-term public exposure to EMFs no habitable building shall be constructed within the designated corridor for the 400-kV capable transmission line.

Earth Potential Rise / Induced Currents

11. In designing and constructing the line, Transpower shall give consideration to third-party conductive structures and services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

12. The works shall be designed and constructed to comply with AS/NZS4852:2000 Electrical Hazards on Metallic Pipelines.

13. Prior to commissioning, Transpower shall have an appropriately qualified person assess all conductive structures in the vicinity of the transmission line. Any hazard shall undergo a risk assessment in accordance with the Electricity Engineers' Association Guide to Risk-Based Earthing System Design. Transpower will carry out mitigation measures to address significant risks relating to earth potential rise and induction effects associated with the line.

Radio Frequency Interference

14. All works shall be designed to comply with NZS 6869:2004 Limits & Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Operational Noise

15. The operation of the transmission line shall not emanate noise that exceeds a limit of 40 dBA Leq beyond the boundaries of the designation. Measurements shall not be undertaken during heavy rain.

16. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Environmental Sound and NZS6802:2008 Assessment of Environmental Sound.

Landscape Mitigation

17. Within two months of confirmation of the designation, Transpower shall appoint a suitably qualified and experienced landscape architect for the role of certifying that any of the thresholds in conditions 24 and 26 have been reasonably met (the landscape certifier). The person appointed shall be endorsed by the NZ Institute of Landscape Architects in writing as suitable for the role, having been advised of the role and responsibilities.

18. Any decision made by the landscape certifier in relation to the matters addressed in condition 24(b) and 26 shall be in writing (including reasons).

19. Any landowner may ask the landscape certifier to certify that any decision under condition 24(b) and 26 is reasonable given the thresholds in those conditions. The landscape certifier shall set his or her own procedure for any such certification.

Landscape Mitigation: Private Land

20. Within two months of confirmation of the designation, Transpower shall write to the owners of properties having an occupied house, existing at the date of the Board's draft decision on the Notices of Requirement, within one kilometre of the centre line of the designation.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

21. The letter shall inform the landowner/s of the properties referred to in condition 20 of their possible entitlement to a landscape mitigation assessment in accordance with condition 24 (including where relevant, ecological planting). This condition shall not apply to any property where an agreement relating to landscape mitigation has already been reached between Transpower and the landowner.

22. The written offer required by condition 20 shall inform the landowner that he/she may request Transpower to consider landscape mitigation (including where relevant, ecological planting) at his/her option prior to, or after, construction of the overhead line, and outline the process established by these conditions (including the role of the landscape certifier).

23. Within two months of commissioning of the line, Transpower shall repeat the offer required by condition 20 to all landowners who have not already indicated preliminary acceptance of Transpower's offer. Transpower shall expressly state that the offer shall remain valid for 12 months following commissioning of the overhead line.

24. In the case of each landowner who has indicated acceptance of the offer of landscape mitigation assessment (including where relevant ecological planting), the following process shall be adhered to:

- a. An onsite meeting shall be arranged between the landowner and a qualified landscape architect (the landscape architect) and where relevant an ecologist, appointed by Transpower.
- b. The landscape architect shall determine whether mitigation is appropriate in terms of the criteria in Table 1. If the determination is that no mitigation is appropriate, the landscape architect shall advise Transpower with reasons, and Transpower shall advise the landowner in writing.
- c. Subject to (d), if the landscape architect identifies that mitigation is appropriate in terms of the criteria in Table 1 he/she shall prepare a plan (the concept plan) to mitigate the adverse visual effects of the overhead line when viewed from the dwelling and the immediate curtilage of the dwelling. The mitigation techniques shall take into account the factors and criteria in Table 1.
- d. For properties where ecological planting has been identified in Table 2, the concept plan required by the concept plan required by (c) shall be prepared by the landscape architect, in consultation with the ecologist, taking into account the criteria in Table 2.

Table 2:

Factors	Criteria
Degree of Likely Visual Amenity Effect	- Moderate to very high degree of effect
Basis for Assessment of Degree of Effect	- Distance from the line and towers Orientation of the house and outdoor living areas - Existing screening and nature of intervening landscape - Relative elevation
Mitigation Technique	- Planting that may screen or partially screen towers - Planting that may create an alternative foreground focus - Planting that may focus the outlook on an alternative view - Planting that may increase the sense of depth in a view towards the line
Practicality	- Land available in the resident's ownership for landscape mitigation - Existing garden design or landscape constraints - Farm management constraints
Owner's Preference	- Preferences identified during the consultation and design process

Table 2:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Relevant Towers	Proposed Replacement Planting and Purpose
Span 54A-55 (Beale, evidence in chief para 28(b))	<ul style="list-style-type: none"> - Replacement plantings of kahikatea to offset removal of kahikatea stands. Wherever possible, these plantings should be located so as to enlarge existing stands. - Largest kahikatea stands near Ararimu Road, plant out an area between two existing kahikatea fragments situated immediately to the west of the affected stand so as to eventually form one stand.
Span 65-66 (Beale, evidence in chief para 28(c))	<ul style="list-style-type: none"> - Planting of kauri and podocarps within the forest beyond the designation, to replace trees selectively removed in the vicinity of tower 65. - Establish plantings of kauri, rimu and tānekaha beneath canopy gaps in the forest adjoining the lay-by area, next to the access road off Paparimu Road. The canopy gaps provide suitable conditions for the plantings of kauri, rimu and tānekaha that are dependent on a favourable degree of light penetration for growth - Planting along bank of Mangatāwhiri River and on either side of the designation of pioneer tree species, that attain a height of no greater than 14 metres within the designation to maintain connectivity within this riparian stand and linkage with the forested area to the south.

25. The concept plan shall be prepared in draft and following review by Transpower shall be submitted to the landowner for comment.

26. The concept plan shall be reviewed by the landscape architect, in consultation with the ecologist (where relevant), following the receipt of comments, and following such further consideration, investigation and discussion with the landowner and Transpower as the landscape architect considers necessary, taking into account the criteria in Table 1 and the cost and practicality of implementing any specific request. The revised plan (the final plan) will be provided to the landowner as soon as reasonably practicable.

27. On receipt of written acceptance of the final plan, Transpower shall implement it within the first planting season following that acceptance, unless otherwise agreed with the landowner.

28. Transpower shall maintain the planting for 12 months after completion of planting.

29. In the event that a landowner advises Transpower that the landowner wishes to implement the final plan themselves, within 30 days following completion of all work specified in the final plan to the reasonable satisfaction of the landscape architect, Transpower shall pay the landowner the sum of money allocated in the approved concept plan. Where this occurs, condition 27 shall not apply.

30. In the event that a landowner advises Transpower that the landowner wishes to maintain the planting themselves, within 30 days following completion of all works specified in the final plan, Transpower shall pay the landowner the sum of money allocated in the approved concept plan for maintenance. Where this occurs, condition 28 shall not apply.

Landscape Mitigation: Public Land

31. Within 12 months of confirmation of the designation, Transpower shall write to the council, and where relevant NZTA, informing it or them of its proposal to carry out landscape mitigation along specific sections or locations of roads and State highways in the Council's district, as shown on Maps 32–39 of Appendix V and seeking the council's involvement in implementing the mitigation. The offer shall be for the purpose of mitigation of adverse visual effects of the overhead line when viewed from the public roads or other viewpoints shown in Maps 32-39 of Appendix V.

32. On receiving a positive response from the council and/or NZTA (as applicable), Transpower shall provide a draft development plan, specifications, and costing prepared by a qualified landscape architect as an offer to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the council and/or NZTA. The offer shall remain open for 12 months following commissioning of the line.

33. Transpower shall review any comments provided by the Council and/or NZTA and shall issue a final plan. The final plan shall be provided as soon as practicable to the Council and/or NZTA.

34. On the Council's and/or NZTA's written acceptance of the plan (where relevant) and agreement to implement the mitigation, Transpower shall, within 30 days, pay to the Council and/or NZTA the cost specified in the accepted plan (which shall include an estimate for a year of maintenance).

35. Transpower shall not be in breach of condition 31 to 34 in the event the Council and/or NZTA do not undertake the planting as provided in the final plan.

Pre-construction Activities

36. Prior to construction commencing, Transpower shall appoint a Landowner Liaison Officer, who will:

- a. Be responsible for maintaining contact with landowners and occupiers of each property prior to, and during construction; and
- b. Have a contact role with the landowner during the development of the Site Works Plan for individual properties.

37. Transpower shall make copies of individual SWPs available to council (formerly Franklin District Council) for information purposes, upon request.

Construction Management Plan (CMP)

38. Prior to commencement of any construction activity authorised by the designation, Transpower shall submit a construction management plan to the Group Manager: Environmental Services for approval. The Group Manager: Environmental Services shall respond within 20 working days. Approval shall not be unreasonably withheld. The construction management plan shall outline Transpower's intended approach to:

- a. Land stability management and sediment controls;
- b. Storage and reuse of topsoil;
- c. Management and disposal of spoil;
- d. Groundwater and stormwater management, treatment and disposal;
- e. Silt and dust control, during earthwork stages;
- f. Traffic/access management;
- g. Temporary activities and equipment storage in specified areas;
- h. Security and lighting during construction;
- i. Contaminated land management procedures;
- j. Construction noise (as set out in conditions 39-42), dust and vibration;
- k. Hours of work;
- l. Existing network utilities' protocols and guidelines;
- m. Subject to other specific conditions, cultural protocols and archaeological requirements;
- n. Vegetation clearance, disposal and restoration;
- o. The intended construction programme (including staging if appropriate);
- p. Protocols and procedures for road controlling authorities and rail operators, where the line crosses that infrastructure;
- q. Community information and liaison;
- r. Contractor training; and
- s. Generic contents of Site Works Plans (SWPs).

Nothing in this condition allows the Council, or any other party, to require more onerous controls than contained in the designation conditions.

Construction and Maintenance Noise

39. All construction and maintenance work shall be designed, managed and conducted to ensure that

The Proposed Auckland Unitary Plan (notified 30 September 2013)

construction and maintenance noise from the designated area does not exceed the limits in NZS6803:1999 Acoustics– Construction Noise at locations set out in section 6.2 of that standard.

40. The noise limits required by condition 39 shall not apply to emergency work required to re-establish continuity of supply, urgently required to prevent loss of life or other personal injury or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects particularly at times when the stricter noise limits apply (eg, at night time).

41. Prior to any significant construction work taking place, including any earthworks, a noise management plan applicable to the construction and commissioning stages shall be prepared for the whole of the line, with the assistance of a suitably qualified and experienced person. The plan shall set out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.

42. The noise management plan required by condition 41 shall be submitted to the Group Manager: Environmental Services at least 20 working days prior to the works commencing.

Vibration

43. Vibration from all construction activities shall not exceed the limits of, and shall be measured in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Aviation

44. Transpower shall, on a monthly basis during the construction of the line, inform the New Zealand Agricultural Aviation Authority, the Civil Aviation Authority and Ardmore Airport Limited (in relation to the towers within the conical surface only, as set out in the Ardmore Aerodrome Protection Measures under Designation 200 in the Auckland Unitary Plan) of the construction activities completed in the previous month, and intended to be undertaken in the following month including:

- a. Erection of specific towers (with locations and heights); and
- b. Stringing of conductor and earthwires between specified towers.

For the avoidance of doubt, the requirement in condition 44 applies to each tower and conductoring of each tower, not merely the commencement of tower erection or conductoring.

Traffic Management Plan (TMP) for Road Crossings and Local Roads

45. Transpower shall prepare a series of traffic management plans for road crossings and local roads used by heavy traffic in accordance with Transit New Zealand's Code of Practice for Temporary Traffic Management (COPTTM), after consultation with (as relevant):

- a. The Road Controlling Authority;
- b. New Zealand Transport Agency (NZTA); and
- c. The following key stakeholders:
 - i. Emergency services (including police);
 - ii. Bus operators;
 - iii. Schools;
 - iv. Housing New Zealand Corporation;
- d. Any additional key stakeholders identified by Auckland Council.

46. A TMP shall be submitted to the council and NZTA (where relevant) at least 20 working days prior to the commencement of construction of the relevant road crossing works, or works affecting local roads. The plans may be submitted in stages, with each stage being submitted at least 20 working days prior to the commencement of the work the subject of that stage.

47. The council shall respond within 20 working days indicating whether approval is given or refused.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Approval shall not be unreasonably withheld.

48. The TMP prepared by Transpower shall recognise that the paramount purpose of roads is the free passage of the public and its vehicles.

49. The TMPs shall address and provide details of proposed road crossing works and general use of local roads by heavy vehicles and/or mitigation measures relating to the following matters:

- a. details of the installation of any protection measures including, but not limited to, hurdles for subsequent line construction purposes;
- b. details of any necessary temporary road closures, diversions, or deviations which are likely to be required during road crossing activities, including the likely date, time, and duration of such matters (any necessary temporary road closures should be effected during off-peak periods unless this is impracticable or would have adverse impacts on adjacent properties);
- c. where diversions or deviations are required, information shall be provided by a suitably qualified and experienced traffic engineer of the traffic volumes and capacities of alternative routes, to ensure that such routes are both convenient and capable of safely accommodating any such diverted or deviated traffic;
- d. Details of the proposed signage to advise motorists, residents, stakeholders, and other road users of any road closures, diversions and delays, such signage to be sufficiently clear to be capable of ready understanding by the general public and installed at appropriate locations at least 7 days in advance of such road closures, diversions and delays;
- e. Details of methods of proposed information dissemination regarding construction activities and associated traffic effects, including but not limited to public notices in newspapers, radio announcements, information packages and direct contact with affected persons. (Such information dissemination, and the chosen method of dissemination is to be proportional to the impact);
- f. Details of prior consultation or community liaison undertaken with affected residents, stakeholders, public transport providers, emergency services or representative groups regarding proposed road closures, diversions and delays, and any measures agreed with such groups to address any adverse effects or inconvenience that may arise; and
- g. identification of any measures for the purposes of mitigating adverse traffic effects of construction traffic, including safety matters (such speed restrictions and signage), relating to cyclists, pedestrians, disabled persons, and schoolchildren.

Advice note:

1. If temporary road closure is required, additional time may be necessary to allow the Road Controlling Authority to complete the consultation and give the public notices required under section 342 and schedule 10 of the Local Government Act 1974.

Construction Entrance-ways Off Public Roads

50. Prior to the commencement of construction, Transpower shall undertake a survey of the condition of the roads in the immediate vicinity of construction entranceways off public roads (consisting of a photographic survey).

51. Transpower shall repair any damage to entranceways and public roads in the vicinity of those entranceways resulting from impacts of its construction traffic.

General Advice Note

1. In relation to the ARI-PAK A towers outside of the designated area, Transpower shall use its best endeavours to establish and follow the procedures in the conditions in relation to cultural/spiritual matters, construction noise, the preparation of the construction management plan and pre-construction activities.

8513 Otahuhu Electricity Substation

Designation Number	8513
Requiring Authority	Transpower New Zealand Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	1 Gridco Road and 2 Helabys Road, Otara
Rollover Designation	Yes
Legacy Reference	Manukau 297, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Description

Electricity transmission - the operation, maintenance and upgrade of the existing Otahuhu Substation, the construction of a new 220kV substation, installation of 220kV underground cable circuits, and associated works as part of the upper North Island Grid Upgrade Project, works associated with other upgrade projects, and ancillary activities.

The nature of the works is described more particularly in Part IV (excluding section 12 in relation to suggested conditions), and also in Parts II and X of the Notices of Requirement Documentation (dated April 2007).

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. works in the immediate vicinity of the site that has been exposed shall cease;
 - b. the site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. the site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. The works shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (i.e. when there are no faults in the transmission system).

Radio Frequency Interference

3. All works shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

4. In designing and constructing the work, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

5. Substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

6. All exterior lighting shall be designed to comply with:
 - a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

7. Any new equipment (such as transformers, fans and circuit breakers) required as part of the Upper North Island Grid Upgrade Project shall be designed and operated to ensure that the following noise limits shall not be exceeded:

- a. Within the boundary of any Business Zone site or any Open Space Zone outside of the designation:

All times 55 dBA L₁₀; and

- b. At or within the boundary of any residentially zoned site outside of the designated area:

- i. All days 7 am to 10 pm 50 dBA L₁₀;

- ii. All nights 10 pm to 7 am 40 dBA L₁₀; and

- iii. All nights 10 pm to 7 am 70 dBA L_{max}

8. Sound levels shall be assessed in accordance with NZS6802:1991 Assessment of Environmental Sound.

9. A design report shall be provided to the satisfaction of the council prior to the installation of any new noise generating substation equipment that demonstrates compliance with these limits.

10. Within one month of installation, the new equipment shall be assessed at source for its sound power level using EN60076-10:2001-05 Power Transformers Part 10 Determination of Sound Levels. Sound levels shall then be predicted at the designation boundary. Monitoring and prediction shall be undertaken by a suitably qualified and experienced person within one month of the commissioning of any new equipment. The results of the noise monitoring shall be made available to the Council upon request.

11. Transpower shall review the noise levels and report to council at the time of each designation roll-over on progress that has been made to reduce noise levels progressively as a result of any necessary replacement of transformers.

Advice note:

1. The existing noise levels at the Otahuhu Substation (except for construction and maintenance works) have been predicted as 52 dBA L₁₀ at Nos 8, 12 and 16 Waipapa Crescent. These sound levels contain special audible characteristics and an assessment using NZS6802:1998 would cause any performance standard to be reduced by 5 dB.

Vibration

12. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

13. Any part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Construction Management Plan (CMP)

14. At least 30 days prior to commencement of any construction activity on the site, Transpower shall submit a construction management plan to the Council's Consents Officer. The Council's Consents Officer shall respond within 20 working days indicating whether approval is given or refused.

Approval shall not be unreasonably withheld. The construction management plan shall detail:

- a. The proposed earthworks methodology;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. Storage and reuse of topsoil;
- c. On-site and off-site disposal of soil;
- d. Silt and dust control;
- e. Traffic management for delivery of substation equipment and materials (excluding transformers) and general construction activities;
- f. Temporary equipment storage;
- g. Site security and lighting;
- h. Procedures for temporary storage and handling of hazardous substances, including insulation oil;
- i. Compliance with designation conditions, including (where applicable) for:
 - i. Noise;
 - ii. Hours of operation;
 - iii. Accidental discovery protocol;
 - iv. Protection of known archaeological sites;
- j. Community information and liaison (including local marae); and
- k. Procedure for managing the accidental discovery of archaeological sites or sites of significance to Māori, including contractor training prior to commencement of work.

Construction and Maintenance Noise

15. Subject to condition 16, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics—Construction Noise at locations set out in section 6.2 of that standard.

16. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).

17. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.

18. The noise management plan required by condition 17 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Schedule of Legal Descriptions

Parcel ID	
Lot 1 DP 204791	Lot 1 DP 201385

8514 Pakuranga Electricity Substation

Designation Number	8514
Requiring Authority	Transpower New Zealand Ltd
Location	109 Golfland Drive, Pakuranga
Rollover Designation	Yes
Legacy Reference	Designation 298, Auckland Council District Plan (Manukau Section) 2002

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Electricity transmission - the ongoing use, maintenance and operation of the Pakuranga Electricity Substation, the development of the substation site as part of the upper North Island Grid Upgrade Project and associated works, and works associated with other upgrade projects, and ancillary activities.

The nature of the works is described more particularly in Part III (excluding section 12 in relation to suggested conditions), and also in Parts II and X of the Notices of Requirement Documentation (dated April 2007).

Conditions

Documents

1. The initial construction works associated with the North Island Grid Upgrade Project shall be generally in accordance with the plan entitled Pakuranga Substation NIGUP–Stage 2 Layout–Isometric, NTS 16/03/2007 PAKSKE1002-1, being page 10 of Part III of the Notices of Requirement Documentation (dated April 2007).

Cultural / Spiritual

2. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:

- Works in the immediate vicinity of the site that has been exposed shall cease;
- The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the council and, in the case of human remains, the New Zealand Police; and
- The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Landscaping

3. A visual mitigation and ecological planting plan shall be prepared for the site and submitted at least two months prior to construction of works associated with the Upper North Island Grid Upgrade Project to Council's Manager-Resource Consents and Compliance, for approval/certification. The Manager-Resource Consents and Compliance shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld. The plan shall be in general accordance with the landscape mitigation concept plan being Map 1 of Appendix V and (subject to archaeological condition 6(d)) shall consist of:

- Planting around the south and west sides of the substation site;
- Planting native plants indigenous to the locality on the terrace on the south and west sides of the substation site adjacent to the substation platform, to connect with and extend restoration of the headwaters of the Pakuranga Creek, and including species such as kahikatea, tōtara, kānuka and cabbage trees, and such other species as are common to the locality;
- A description of the name (including botanical), numbers, location, spacing and size of the plant species to be used in mitigation and ecological planting;
- Provided that suitable sources are available, all indigenous plants shall be propagated from a local, naturally occurring, source.

4. Once approved, the visual mitigation and ecological planting plan required under condition 3 may be altered or updated at any time with the approval of the Manager–Resource Consents and Compliance. The Manager shall not unreasonably withhold his or her approval, in particular for any changes to the plan required as a result of expansion of facilities within the substation site, irrespective of whether the extent of landscaping is reduced as a result of that expansion.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. Transpower shall implement the visual mitigation and ecological planting plan within the first planting season following completion of bulk earthworks on the site; and shall thereafter maintain the planting to the satisfaction of the Council's Manager—Resource Consents and Compliance.

Archaeology: known archaeological sites R11/2381, R11/2382 and R11/2398

6. Before any works are carried out associated with the underground cable installation within the substation site for the Upper North Island Grid Upgrade Project, Transpower shall undertake the following:

- a. Sites R11/2381 and R11/2382 shall be subject to cadastral survey prior to Site Works Plans being finalised.
- b. Should it be practicable to avoid either or both of the sites, the site or sites should be marked on all construction plans and have temporary fencing or barriers around their extent during construction to avoid accidental damage.
- c. All works in the stormwater management area south-east and adjacent to the Pakuranga Substation, where significant earthworks have not occurred in the past and, involving the stripping of topsoil, should be monitored by an archaeologist.
- d. Any planting plan developed in accordance with condition 3 should either avoid the midden sites, should it be determined that parts of them will remain after construction, or involve replanting with shallow-rooted species.

Advice notes:

1. *Maintaining the archaeological sites in mown grass would be the most desirable outcome.*
2. *This condition is subject to any conditions of any archaeological authority granted under the Historic Places Act 1993.*

Electric and Magnetic Fields (EMF)

7. The works shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

8. All works shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

9. In designing and constructing the work, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

10. Substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

11. All exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy TP GS41.01, Issue 3, April 2006.

Operational Noise

12. All activities within the designation (except for construction and maintenance) shall be designed and operated to ensure that the following noise limits shall not be exceeded at or within the boundary of any residentially zoned site:

- a. All days 7.00 am to 10 pm 45 dBA L10;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. All nights 10 pm to 7 am 35 dBA L10; and
- c. All nights 10 pm to 7 am 70 dBA Lmax.

13. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Environmental Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

14. Sound monitoring shall be undertaken by a suitably qualified and experienced person within one month of the commissioning of any new transformer. The results of the noise monitoring shall be made available to the Council upon request.

Vibration

15. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

16. Any part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Construction Management Plan (CMP)

17. At least 30 days prior to commencement of any construction activity on the site, Transpower shall submit a construction management plan to the Council's Consents Officer. The Council's Consents Officer shall respond within 20 working days indicating whether approval is given or refused.

Approval shall not be unreasonably withheld. The construction management plan shall detail:

- a. The proposed earthworks methodology;
- b. Storage and reuse of topsoil;
- c. On-site and off-site disposal of soil;
- d. Silt and dust control;
- e. Traffic management for delivery of substation equipment and materials (excluding transformers) and general construction activities;
- f. Temporary equipment storage;
- g. Site security and lighting;
- h. Procedures for temporary storage and handling of hazardous substances, including insulation oil;
- i. Compliance with designation conditions, including (where applicable) for:
 - i. Noise;
 - ii. Hours of operation;
 - iii. Accidental discovery protocol;
 - iv. Protection of known archaeological sites;
- j. Community information and liaison (including local marae); and
- k. Procedure for managing the accidental discovery of archaeological sites or sites of significance to Māori, including contractor training prior to commencement of work.

Construction and Maintenance Noise

18. Subject to condition 19, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

19. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

20. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999; and the works shall be undertaken in accordance with that noise management plan.

21. The noise management plan required by condition 20 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Traffic Management Plan (TMP)

22. A traffic management plan (TMP) shall be prepared in relation to the transformer transportation from the port of arrival to the substation, after consultation with the following:

- a. The relevant road-controlling authorities;
- b. New Zealand Transport Agency (NZTA);
- c. New Zealand Police; and
- d. Key stakeholders identified by the organisations listed above in (a)–(c).

23. The TMP shall be submitted to the Council and NZTA for approval at least one month prior to transformer transportation to the substation site. The Council and NZTA shall respond within 20 working days indicating whether approval is given or refused (such approval shall not be unreasonably withheld). The TMP shall contain a methodology statement specifying the route and providing full details of:

- a. Deviations to avoid low over-bridges;
- b. Temporary bridge strengthening (where required);
- c. Road closures or other temporary traffic control measures required; and
- d. Contingency plans, should the transporter have mechanical problems.

Construction Traffic

24. During construction associated with the 220-kV switchyard, all access to the substation site associated with construction of the substation equipment shall be via the southern connection of Golfland Drive and Botany Downs Road.

25. All parking associated with construction activities shall be provided within the substation site.

8515 Brownhill Road Electricity Substation

Designation Number	8515
Requiring Authority	Transpower New Zealand Ltd
Location	16 Umbria Lane (near Brownhill Road), Whitford
Rollover Designation	Yes
Legacy Reference	Designation 299, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission- the construction, operation and maintenance of a transition station to connect the underground cable and overhead lines section of the upper North Island Grid Upgrade Project, including Tower 5 of the overhead line and additional support structures, and parts of the underground cables connecting with Pakuranga and Otahuhu Substations. Other works included in the designation on a staged basis are a 220 kV Gas-Insulated Switchgear (GIS) switching station and a 400kV GIS substation and associated works as part of the upper North Island Grid Upgrade Project, and ancillary activities.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The nature of the works is described more particularly in Part V (excluding section 13 in relation to suggested conditions), and also in Parts II and X, of the Notices of Requirement Documentation (dated April 2007).

Conditions

Documents

1. The initial works to give effect to the designation of the Brownhill Transition Station/Substation shall be generally in accordance with Map 2 of Appendix V.

2. Tower 5 shall be a single-pole structure (monopole) and tower 4 shall be a six-pole termination structure.

Cultural / Spiritual

3. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been exposed shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Council and, in the case of human remains, the New Zealand Police; and
- d. The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

4. The works shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

5. All works shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

6. In designing and constructing the work, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

7. Substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

8. All exterior lighting shall comply with Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006.

Operational noise

9. All activities within the site (except for construction and maintenance) shall be designed and operated to ensure that the following noise limits shall not be exceeded beyond the boundary of the designation:

- a. All days 7 am to 10 pm 55 dBA L₁₀;
- b. All nights 10 pm to 7 am 45 dBA L₁₀; and
- c. All nights 10 pm to 7 am 75 dBA L_{max};

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Except that any standby generators may operate at a noise level not exceeding 55 dBA L₁₀ at all times, measured within the notional boundary of any dwelling. Reliance on this limit should not exceed more than one successive night time period (10 pm to 7 am). Standby generators shall only be operated for maintenance purposes between the hours of 7 am to 10 pm.

10. All activities within the site (except for construction and maintenance) shall be designed and operated to ensure that the following noise limits shall not be exceeded within the notional boundary of any dwelling existing at the date of lodgement of the Notice of Requirement:

- a. All days 7 am to 10 pm 45 dBA L₁₀;
- b. All nights 10 pm to 7 am 35 dBA L₁₀; and
- c. All nights 10 pm to 7 am 65 dBA L_{max}.

11. Sound levels shall be measured and assessed in accordance with NZS6801:1991 Measurement of Sound and NZS6802:1991 Assessment of Environmental Sound.

12. Sound monitoring shall be undertaken by a suitably qualified and experienced person within one month of the commissioning of any new transformer. The results of the noise monitoring shall be made available to the council upon request.

Vibration

13. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

14. Any part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Visual Mitigation and Revegetation Plan

15. A visual mitigation and revegetation planting plan shall be prepared for the site and submitted at least two months prior to the commencement of initial construction on-site to Council's Manager–Resource Consents and Compliance for approval/certification. The Manager, Resource Consents and Compliance shall respond within 20 working days indicating whether approval is given or refused. Such approval shall not be unreasonably withheld. The plan shall be in general accordance with the landscape mitigation concept plan (Map 3 of Appendix V) and shall consist of:

- a. Excess cut and topsoil from the construction site shall be contoured to increase the height of the spur east of the substation platform and improve the growing conditions for screen planting proposed for this spur;
- b. Fast-growing trees typical of rural landscapes shall be planted on the spur, with the intention of reducing visibility of the substation site from the east;
- c. Native revegetation planting shall be carried out on lower slopes of the spur. This planting shall be similar in type to that undertaken in the rural residential subdivision on the opposite side of Brownhill Road. It shall be planted to the property boundary adjacent to the Turanga Creek. The intention of this planting is to provide longer-term screening and ecological and amenity benefit;
- d. Native revegetation planting will be carried out on the spur north-west of the substation platform to provide partial screening from the Regis Park area. Species shall include kānuka, tōtara and rewarewa;
- e. Native revegetation planting shall be carried out in the valley south-west of the substation site. The intention of this planting is to provide ecological and amenity benefits;
- f. A description of the name (including botanical), numbers, location, spacing and size of the plant species to be used in mitigation and ecological planting; and
- g. As far as practicable, all indigenous plants shall be propagated from a local, naturally occurring source.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

16. Once approved, the visual mitigation and revegetation planting plan required under condition 15 may be altered or updated at any time with the approval of the Manager–Resource Consents and Compliance. The Manager shall not unreasonably withhold his or her approval, and in particular for any changes to the plan required as a result of expansion of facilities within the substation site, irrespective of whether the extent of landscaping is reduced as a result of that expansion.

17. Transpower shall implement the visual mitigation and revegetation planting plan within the first planting season following completion of bulk earthworks and shall thereafter maintain the planting to the satisfaction of Council's Manager–Resource Consents and Compliance.

Construction Management Plan (CMP)

18. At least 30 days prior to commencement of any construction activity on the site, Transpower shall submit a construction management plan to the Council's Consents Officer. The Council's Consents Officer shall respond within 20 working days indicating whether approval is given or refused.

Approval shall not be unreasonably withheld. The construction management plan shall detail:

- a. The proposed earthworks methodology;
- b. Storage and reuse of topsoil;
- c. On-site and off-site disposal of soil;
- d. Silt and dust control;
- e. Traffic management for delivery of substation equipment and materials (excluding transformers) and general construction activities;
- f. Temporary equipment storage;
- g. Site security and lighting;
- h. Procedures for temporary storage and handling of hazardous substances, including insulation oil;
- i. Compliance with designation conditions, including (where applicable) for:
 - i. Noise;
 - ii. Hours of operation;
 - iii. Accidental discovery protocol;
 - iv. Protection of known archaeological sites;
- j. Community information and liaison (including local marae); and
- k. Procedure for managing the accidental discovery of archaeological sites or sites of significance to Māori, including contractor training prior to commencement of work.

Construction and Maintenance Noise

19. Subject to condition 20, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

20. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects particularly at times when the stricter noise limits apply (eg, at night-time).

21. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999; and the works shall be undertaken in accordance with that noise management plan.

22. The noise management plan required by condition 21 shall be submitted to Council's Consents Officer for approval, at least 20 working days prior to the works commencing. The Council's Consents Officer shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably

The Proposed Auckland Unitary Plan (notified 30 September 2013)

withheld.

Traffic Management Plan (TMP)

23. A traffic management plan (TMP) shall be prepared in relation to the transformer transportation from the port of arrival to the substation site, after consultation with:

- a. The relevant road-controlling authorities;
- b. New Zealand Transport Agency (NZTA);
- c. New Zealand Police; and
- d. key stakeholders identified by the organisations listed above in (a)–(c).

24. The TMP shall be submitted to the Council and NZTA for approval at least one month prior to transformer transportation to the substation site. The Council and NZTA shall respond within 20 working days indicating whether approval is given or refused (such approval shall not be unreasonably withheld). The TMP shall contain a method statement specifying the route and providing full details of:

- a. Deviations to avoid low over-bridges;
- b. Temporary bridge strengthening (where required);
- c. Road closures or other temporary traffic control measures required; and
- d. Contingency plans, should the transporter have mechanical problems.

Brownhill Road Upgrade

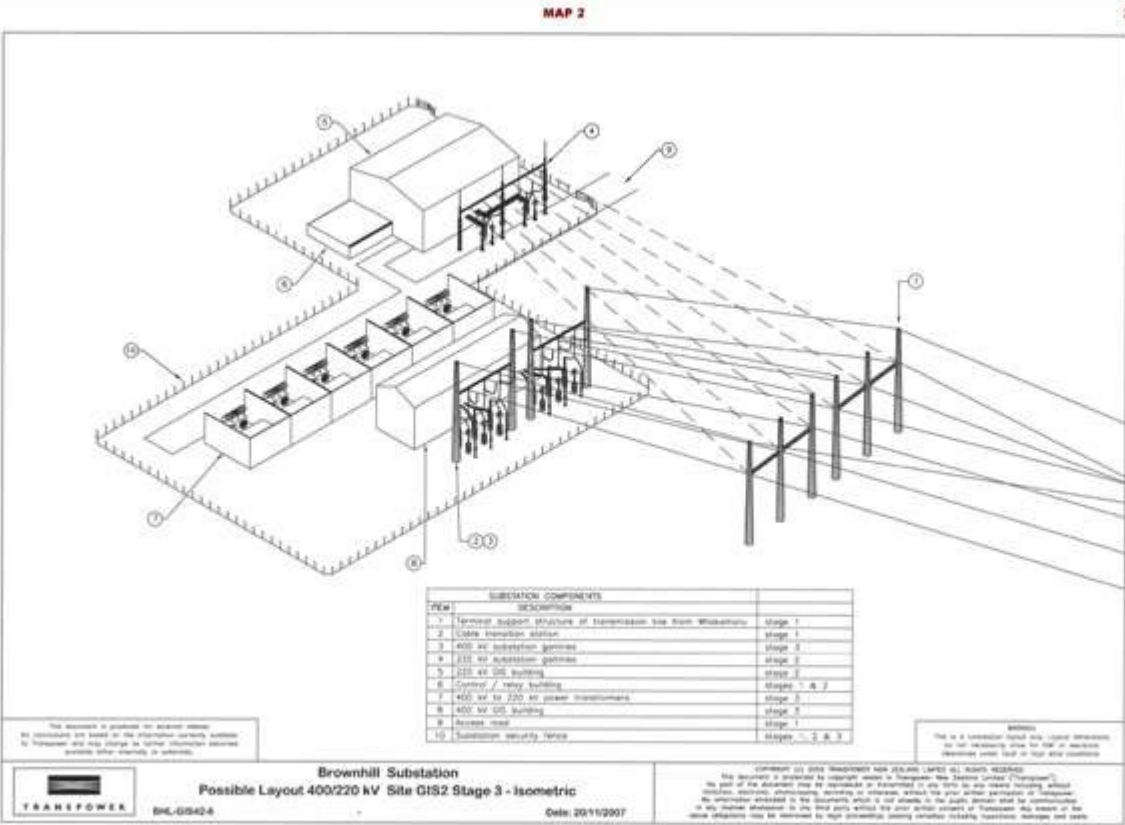

25. After installation of the cables, Transpower shall after consultation with council upgrade the surface of Brownhill Road to the entrance to the substation site to meet council's minimum design standards for rural roads as defined in their Engineering Quality Standard R16–Rural Road “Minimum Standard”.

Lot 1 DP 209513	Lot 3 DP 325254

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8516 Brownhill Road to Pakuranga Underground Electricity Transmission Cables

Designation Number	8516
Requiring Authority	Transpower New Zealand Ltd
Location	143 Brownhill Road, Whitford to 109 Golfland Drive, Howick
Rollover Designation	Yes
Legacy Reference	Designation 300, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission- the construction, operation and maintenance of a double circuit underground 220kV cable as part of the upper North Island Grid Upgrade Project, to convey electricity between the Pakuranga Substation and the substation site at Brownhill Road, and ancillary activities.

The nature of the work is described more particularly in Part VI (excluding section 12 in relation to suggested conditions), and also in Parts II and X of the Notices of Requirement Documentation (dated April 2007).

Conditions

Documents

1. The initial works to give effect to the designation of the Pakuranga to Brownhill underground cable shall be generally in accordance with Maps 8-12 of Appendix V.

Cultural / Spiritual

2. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:

- Works in the immediate vicinity of the site that has been exposed shall cease;
- The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Council and, in the case of human remains, the New Zealand Police; and
- The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Magnetic Fields (MF)

3. The works shall be designed and constructed to limit the magnetic field exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time varying electric, magnetic and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 100 µT for magnetic flux density when measured at one metre above ground level directly above any cable under normal operating conditions (ie, when there are no faults in the transmission system).

4. In order to reduce long-term public exposure to MFs no habitable buildings shall be constructed within the designation corridor for the underground cable.

Radio Frequency Interference

5. All works shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Earth Potential Rise / Induced Voltages

6. The works shall be designed and constructed to comply with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

7. The works shall be designed and constructed so as not to cause existing assets of other utilities to be non-compliant with AS/NZS 4852:2000 Electrical Hazard on Metallic Pipelines.

Existing Utilities

8. Transpower shall liaise with all relevant utility operators during the detailed design and subsequent construction processes prior to undertaking any work pursuant to this designation and shall ensure that:

- a. It is aware of the location of all utility services existing at the time of construction in or adjacent to the designation; if necessary, exploratory excavation shall be undertaken;
- b. To the greatest extent practicable, all utility services existing at 28 May 2007 (being the date the Notice of Requirement was lodged) located in or adjacent to the designation are protected from any activity associated with the Upper North Island Grid Upgrade Project which may interfere with the proper functioning of the services;
- c. if it is not practicable to avoid a reduction in the level of service in accordance with (b) above, or if services are otherwise damaged, all utility services existing at 28 May 2007 located in or adjacent to the designation are repaired or relocated at Transpower's expense, to the reasonable satisfaction of the affected utility operator; and
- d. Reasonable access to existing utility services located in or adjacent to the designation are able to be accessed during construction.

9. Nothing in condition 8 (c) requires Transpower to:

- a. Provide compensation to any affected utility operator for indirect costs, such as for delays and inconvenience caused; and
- b. Put the owner of the utility services in a better position than if the Upper North Island Grid Upgrade Project had not been proposed or installed.

Construction Management Plan (CMP)

10. At least 30 working days prior to commencing any construction activity along the designated underground cable route, Transpower shall submit a Construction Management Plan (CMP) to council for approval. The Council shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

The construction management plan shall outline Transpower's intended approach to:

- a. The proposed construction methodology;
- b. Storage and reuse of top soil, including stockpiling areas;
- c. On-site and off-site disposal of spoil;
- d. Silt and dust control, during earthwork stages;
- e. Groundwater and stormwater management, treatment and disposal;
- f. Traffic/property access management;
- g. Contaminated land management procedures;
- h. Construction hours;
- i. Existing network utilities protocols and guidelines;
- j. Access and utilities management;
- k. Subject to other specific conditions, cultural protocols and archaeological requirements;
- l. Land stability management and water quality and sediment controls;
- m. Vegetation disturbance/removal and replacement;
- n. Management of construction activities;
- o. Contractor training, including health and safety;
- p. The intended construction programme, including staging if appropriate;
- q. Management of construction noise;
- r. Community information and liaison;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- s. Temporary activities and equipment storage in specified areas;
- t. Contractor car parking in specified areas;
- u. Security and lighting during construction; and
- v. Situations where the proposed cable depth could differ from the 1500 mm shown on Maps 6 or 7 of Appendix V, including likely reasons for differing depth and means of resolving any issues arising from that depth.

11. In preparing the CMP in accordance with condition 10, the following minimum requirements shall be met:

- a. Quality soil shall be reused, where appropriate, and suitable stockpiling areas shall be identified;
- b. Spoil which is not reused in construction shall be disposed of at appropriate facilities;
- c. Dust on-site shall be minimised to ensure that there is no dust nuisance off-site as a result of the works. Such minimisation could include spraying with water or covering of areas;
- d. Clean stormwater shall be directed away from bare or earthworked areas and sediment laden runoff shall be properly controlled and managed to minimise any discharge of sediments into watercourses;
- e. As far as practicable, disturbance to riparian areas and stream banks and beds shall be minimised during construction;
- f. Measures for testing and removing any contaminated land along the route shall be developed;
- g. Liaison with existing utility providers with underground services within the designated route shall be undertaken;
- h. adequate measures shall be implemented so as to avoid land slope failure;
- i. When construction is taking place within the dripline of any tree over two metres in height to be retained on a public road or other public or private land, a qualified arborist shall be engaged to advise on the best method of root pruning and for continuing long-term avoidance of root interference with the cable;
- j. Site contractors shall have available at all working times, at an accessible place along the cable route, copies of all designation and consent conditions, the approved Construction Management Plan and the Draft Protocols entitled Transpower Grid Upgrade Project Protocol for Dealing with Kōiwi or Taonga Unearthed During Construction and the Discovery of Sites of Significance, Wāhi Tapu, Heritage Sites and Archaeological Sites (or updated document). Transpower shall ensure that the contractors understand the designation conditions and consent conditions;
- k. Transpower shall notify the Council in writing at least 10 working days before commencing works (including a separate notification for works commencing in Turanga Creek, Mangemangeroa Stream and Otara Creek), and shall notify the Councils that works have been completed within 10 working days following completion of the works;
- l. Parties adjacent to the route shall be notified prior to commencement of works and shall be regularly updated;
- m. Temporary activities, such as equipment storage shall be undertaken in suitably located areas (ie, not within 20 metres of a watercourse);
- n. Contractor car parking shall be suitably located, so as to not prevent property access; and
- o. Work sites shall be secure and illuminated to restrict access as appropriate.

Advice note:

- 1. Where the CMP requires Transpower to give notice to the Council, that notice can be given progressively, as stages of the work are complete.

Construction hours

12. Construction hours shall be as follows:

- a. Monday to Friday: 7 am to 6 pm;
- b. Saturday: 8 am to 1 pm; and
- c. Sundays and public holidays: No work.

Except where work is necessary outside the specified days or hours for the following purposes:

- i. Where work is required to be planned to be carried out at low-traffic times, for example, excavation across busy roads, or cable installation;
- ii. Delivery of large equipment;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- iii. Emergencies;
- iv. Securing of the site or removing a traffic hazard;
- v. Cable jointing in self-contained enclosures; and
- vi. Where the distance between the work and the nearest residence is 100 metres or more and all other conditions are met.

Construction and maintenance noise

13. Subject to condition 14, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise along the underground cable route does not exceed the limits in NZS6803:1999 Acoustics—Construction Noise at locations set out in section 6.2 of that standard.

14. The noise limits shall not apply to emergency work required to re-establish continuity of electricity, communications or water supply, work urgently required to prevent loss of life or other personal injury, or commissioning works; but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night time).

15. Prior to any significant construction work taking place, a noise management plan shall be prepared with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999; and the works shall be undertaken in accordance with that noise management plan (other than emergency works).

16. The noise management plan required by condition 15 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Advice note:

1. The noise management plan required by condition 15 can be incorporated into, and be part of the construction management plan required by condition 10.

Vibration

17. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Traffic / Roading

18. Transpower shall prepare a Traffic Management Plan (TMP) which is generally consistent with NZTA's Code of Practice for Temporary Traffic Management (COPTTM).

19. The TMP shall be submitted to the Council's Consents Manager for approval at least 20 working days prior to commencement of underground cable construction after consultation with:

- a. The Council;
- b. The following key stakeholders:
 - i. Emergency services (including police);
 - ii. Bus operators;
 - iii. Schools; and
 - iv. Housing New Zealand Corporation; and
- c. Any additional key stakeholders identified by council.

20. The Council shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

21. The TMP prepared by Transpower shall recognise that the paramount purpose of roads is the free passage of the public and its vehicles.

22. The TMP prepared by Transpower shall address and provide details of proposed works and/or mitigation measures relating to the following matters:

- a. The likely routes for heavy construction-related traffic;
- b. Details of any necessary road closures, diversions, or deviations which are likely to be required during construction activities, including the likely date, time and duration of such actions. As far as practicable, any necessary temporary road closures should be effected during off-peak periods;
- c. Where diversions or deviations are required, information and recommendations shall be provided by a suitably qualified and experienced traffic engineer of the traffic volumes and capacities of alternative routes, and the likely consequent effects in terms of safety and convenience. The traffic engineer shall ensure that recommended alternative routes are reasonably convenient and capable of safely accommodating diverted or deviated traffic. Transpower shall act on the recommendations of the traffic engineer in relation to alternative routes. Where traffic modelling related to specific intersections is required, the results of the modelling shall be included (see condition 23);
- d. Details of the signage intended to advise motorists, residents, stakeholders, and other road users of any road closures, diversions and delays, including examples of signage for diversion routes. Such signage shall be sufficiently clear to enable easy understanding by the general public, and installed at appropriate locations at least seven days in advance of such road closures, diversions and delays. Such signage shall include the use of trailer-mounted electronic signs near the most affected roads;
- e. Details of methods of proposed information dissemination regarding construction activities and associated traffic effects. These details shall include information regarding likely timing and duration of works, alternative routes, access to properties, and any alterations to public transport services. Methods of information dissemination shall include, but not be limited to, public notices in newspapers, radio announcements, signage, information packages, and direct contact with affected properties along those routes;
- f. Inclusion of a communications plan setting out the method of consultation and liaison with key stakeholders and affected parties regarding likely timing and duration of works, alternative routes, access to properties and any alterations to public transport services;
- g. Details of prior consultation or community liaison undertaken with affected residents, key stakeholders, schools, public transport providers, emergency services or representative groups regarding proposed road closures, diversions and delays, and any measures agreed with such groups to address any adverse effects or inconvenience that may arise;
- h. Details of any measures for the purposes of mitigating adverse traffic effects of construction traffic, including safety matters, relating to cyclists, pedestrians, mobility impaired persons, and school children;
- i. Where the cable is proposed to be installed across major intersections and/or arterial roads carrying higher traffic volumes (such as Ti Rakau Drive, Te Irirangi Drive, Chapel Road, Springs Road, East Tamaki Road), three months prior to the commencement of construction an assessment shall be carried out by a suitably qualified and experienced traffic engineer of:
 - i. The traffic volumes using such intersections or roads;
 - ii. The likely levels of delays and disruptions which may be experienced as a result of cable construction; and
 - iii. Identification of locations where such installation works must be carried out in the most timely manner practicable (including where reasonably practicable, the use of alternative methods of installation other than trenching), so as to minimise delays or inconvenience to road users; and
- j. Following consultation with public transport providers, details of proposed alternative temporary changes to public transport services during the construction period including but not limited to any route diversions, timetable adjustments, temporary bus stops, and methods of communicating such matters to public transport users.

23. Transpower shall carry out traffic modelling at the intersections of Chapel Road/Maghera Drive/Armoy Drive and Haven Drive, and the crossings of Te Irirangi and Ti Rakau to assess the impact of the construction works on intersection capacity prior to completing the Construction Management Plan (CMP) and the Traffic

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Management Plan as required by condition 18, and incorporate any necessary specific provisions in the CMP.

Advice note:

1. The traffic management plan required by condition 18 can be incorporated into, and be part of the construction management plan required by condition 10.

Continuation of Access

24. Transpower shall at all times ensure that access to any property temporarily severed by construction is maintained at a level that will enable, as far as practicable, normal operations on the property to continue.

Parking

25. Following consultation with residents, businesses and other directly affected persons, Transpower shall ensure that adequate temporary alternative car parking is provided for residents, businesses and other directly affected persons along or adjacent to the cable route, in the event that construction activity prevents or hinders usual parking. Such arrangements are to be made and advised to affected parties at least five working days prior to the commencement of the work that causes the effect.

Remediation of Property, Roads and Footpaths

26. Other than as provided in conditions 27 and 28, Transpower shall:

- a. Within 10 working days of completion of construction on any land, reinstate any private or public land and property (excluding works in road reserves) as far as practicable to its pre-existing state. Such remediation shall include fences, gardens (excluding trees and grass) and other surface equipment or materials; and
- b. As soon as practicable after the completion of construction re-grass areas that were previously grassed.

27. Prior to commencing construction, Transpower shall undertake a carriageway condition survey of the road network along the designated route, and shall invite appropriate representatives of the Council to attend. The condition survey shall consist of a photographic or video record of the carriageway along the designated route. A copy of the record will be retained and provided to the Council upon request.

28. As soon as practicable after the completion of construction, Transpower shall repair any damage to public carriageways and footpaths (and associated road components) resulting from the impacts of construction. Such repair may involve short-term maintenance to allow for settling and consolidation of carriageways prior to final repair.

Sandstone / Caldwell's Road Intersection Sight Line Protection

29. Transpower shall construct and install the cable in the vicinity of the Sandstone / Caldwell's Road intersection in general accordance with Map 13 of Appendix V, in order to maintain the sight lines for any intersection installed in accordance with Map 14 of Appendix V.

30. Transpower shall ensure that the cable is placed in the Sandstone/Caldwell's Road intersection in general accordance with Map 6 or 7 of Appendix V to a minimum depth of 1500 mm from the surface levels shown on Map 13 of Appendix V.

Brownhill Road Upgrade

31. After installation of the cables, Transpower shall after consultation with Manukau City Council upgrade the surface of Brownhill Road to the entrance to the substation site to meet Manukau City Council's minimum design standards for rural roads as defined in their Engineering Quality Standard R16–Rural Roading "Minimum Standard".

Road widening of Whitford Park Road

32. Transpower shall ensure that the cable is placed in Whitford Park Road at such depth as will not compromise the Council's plans to widen the road and alter its vertical alignment as shown on Maps 15–23

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8517 Brownhill Road to Otahuhu Underground Electricity Transmission Cables

Designation Number	8517
Requiring Authority	Transpower New Zealand Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	143 Brownhill Road, Whitford to 26-28 Kaitawa Street, Otara
Rollover Designation	Yes
Legacy Reference	Designation 301, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - the construction, operation and maintenance of a double-circuit underground 220kV cable as part of the upper North Island Grid Upgrade Project, to convey electricity between the Otahuhu Substation and the substation site at Brownhill Road, and ancillary activities.

The nature of the work is described more particularly in Part VII (excluding section 12 in relation to suggested conditions), and also in Parts II and X of the Notices of Requirement Documentation (dated April 2007).

Conditions

Documents

1. The initial works to give effect to the designation of the Brownhill to Otahuhu underground cable shall be generally in accordance with Maps 24–30 of Appendix V.

Cultural / spiritual

2. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
- Works in the immediate vicinity of the site that has been exposed shall cease;
 - The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Council and, in the case of human remains, the New Zealand Police; and
 - The notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Magnetic Fields (MF)

3. The works shall be designed and constructed to limit the magnetic field exposure to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time varying electric, magnetic and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 100 µT for magnetic flux density when measured at one metre above ground level directly above any cable under normal operating conditions (ie, when there are no faults in the transmission system).

4. In order to reduce long-term public exposure to MFs, no habitable buildings shall be constructed within the designated corridor for the underground cable.

Radio frequency interference

5. All works shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth potential rise / induced voltages

6. The works shall be designed and constructed to comply with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

7. The works shall be designed and constructed so as not to cause existing assets of other utilities to be

The Proposed Auckland Unitary Plan (notified 30 September 2013)

noncompliant with AS/NZS 4852:2012 Electrical Hazard on Metallic Pipelines.

Existing utilities

8. Transpower shall liaise with all relevant utility operators during the detailed design and subsequent construction

processes prior to undertaking any work pursuant to this designation and shall ensure that:

- a. it is aware of the location of all utility services existing at the time of construction in or adjacent to the designation; if necessary, exploratory excavation shall be undertaken;
- b. to the greatest extent practicable, all utility services existing at 28 May 2007 (being the date the Notice of Requirement was lodged) located in or adjacent to the designation are protected from any activity associated with the Upper North Island Grid Upgrade Project which may interfere with the proper functioning of the services;
- c. if it is not practicable to avoid a reduction in the level of service in accordance with (b) above, or if services are otherwise damaged, all utility services existing at 28 May 2007 located in or adjacent to the designation are repaired or relocated at Transpower's expense, to the reasonable satisfaction of the affected utility operator; and
- d. reasonable access to existing utility services located in or adjacent to the designation are able to be accessed during construction.

9. Nothing in condition 8(c) requires Transpower to:

- a. provide compensation to any affected utility operator for indirect costs, such as for delays and inconvenience caused; and
- b. put the owner of the utility services in a better position than if the Upper North Island Grid Upgrade Project had not been proposed or installed.

Archaeology: known sites R11/2333 and R11/2384

10. Before any works are carried out associated with the Upper North Island Grid Upgrade Project, Transpower shall make any minor adjustments to the location of the cable trench within the corridor to ensure that the sites R11/2333 and R11/2384 are not damaged by construction of the cable trench.

Advice note:

This condition is subject to any conditions of any archaeological authority granted under the Historic Places Act 1993.

Construction Management Plan (CMP)

11. At least 30 working days prior to commencing any construction activity along the designated underground cable route, Transpower shall submit a Construction Management Plan (CMP) to the Council for approval. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or Transpower's intended approach to:

- a. The proposed construction methodology;
- b. Storage and reuse of top soil, including stockpiling areas;
- c. On-site and off-site disposal of spoil;
- d. Silt and dust control, during earthwork stages;
- e. Groundwater and stormwater management, treatment and disposal;
- f. Traffic/property access management;
- g. Contaminated land management procedures;
- h. Construction hours;
- i. Existing network utilities protocols and guidelines;
- j. Access and utilities management;
- k. Subject to other specific conditions, cultural protocols and archaeological requirements;
- l. Land stability management and water quality and sediment controls;
- m. Vegetation disturbance/removal and replacement;
- n. Management of construction activities;
- o. Contractor training, including health and safety;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- p) The intended construction programme, including staging if appropriate;
- q. Management of construction noise;
- r. Community information and liaison;
- s. Temporary activities and equipment storage in specified areas;
- t. Contractor car parking in specified areas;
- u. Security and lighting during construction; and
- v. Situations where the proposed cable depth could differ from the 1500 mm shown on Map 6 or 7 of Appendix V, including likely reasons for differing depth and means of resolving any issues arising from that depth.

12. In preparing the CMP in accordance with condition 11, the following minimum requirements shall be met:

- a. Quality soil shall be reused, where appropriate, and suitable stockpiling areas shall be identified;
- b. Spoil which is not reused in construction shall be disposed of at appropriate facilities;
- c. Dust on-site shall be minimised to ensure that there is no dust nuisance off-site as a result of the works. Such minimisation could include spraying with water or covering of areas;
- d. Clean stormwater shall be directed away from bare or earthworked areas and sediment laden runoff shall be properly controlled and managed to minimise any discharge of sediments into watercourses;
- e. As far as practicable, disturbance to riparian areas and stream banks and beds shall be minimised during construction;
- f. Measures for testing and removing any contaminated land along the route shall be developed;
- g. Liaison with existing utility providers with underground services within the designated route shall be undertaken;
- h. Adequate measures shall be implemented so as to avoid land slope failure;
- i. When construction is taking place within the dripline of any tree over two metres in height to be retained on a public road or other public or private land, a qualified arborist shall be engaged to advise on the best method of root pruning and for continuing long-term avoidance of root interference with the cable;
- j. Site contractors shall have available at all working times, at an accessible place along the cable route, copies of all designation and consent conditions, the approved Construction Management Plan and the Draft Protocols entitled Transpower Grid Upgrade Project Protocol for Dealing with Kōiwi or Taonga Unearthed During Construction and the Discovery of Sites of Significance, Wāhi Tapu, Heritage Sites and Archaeological Sites (or updated document). Transpower shall ensure that the contractors understand the designation conditions and consent conditions;
- k. Transpower shall notify the Council in writing at least 10 working days before commencing works (including a separate notification for works commencing in Turanga Creek, Mangemangeroa Stream and Otara Creek), and shall notify the Councils that works have been completed within 10 working days following completion of the works;
- l. Parties adjacent to the route shall be notified prior to commencement of works and shall be regularly updated;
- m. Temporary activities, such as equipment storage shall be undertaken in suitably located areas (ie, not within 20 metres of a watercourse);
- n. Contractor car parking shall be suitably located, so as to not prevent property access; and
- o. Work sites shall be secure and illuminated to restrict access as appropriate.

13. In preparing the CMP in accordance with condition 11, Housing New Zealand Corporation shall be consulted.

Advice note:

Where the CMP requires Transpower to give notice to the Council, that notice can be given progressively, as stages of the work are complete.

Construction hours

14. Construction hours shall be as follows:

- a. Monday to Friday: 7 am to 6 pm;
- b. Saturday: 8 am to 1 pm; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. Sundays and public holidays: No work.

Except where work is necessary outside the specified days or hours for the following purposes:

- i. Where work is required to be planned to be carried out at low-traffic times, for example, excavation across busy roads, or cable installation;
- ii. Delivery of large equipment;
- iii. Emergencies;
- iv. Securing of the site or removing a traffic hazard;
- v. Cable jointing in self-contained enclosures; or
- vi. Where the distance between the work and the nearest residence is 100 metres or more and all other conditions are met.

Construction and maintenance noise

15. Subject to condition 16, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise along the underground cable route does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.

16. The noise limits shall not apply to emergency work required to re-establish continuity of electricity, communications or water supply, work urgently required to prevent loss of life or other personal injury, or commissioning works, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects particularly at times when the stricter noise limits apply (eg, at night time).

17. Prior to any significant construction work taking place, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999, and the works shall be undertaken in accordance with that noise management plan (other than emergency works).

18. The noise management plan required by condition 17 shall be submitted to the Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Advice note:

The noise management plan required by condition 17 can be incorporated into, and be part of the construction management plan required by condition 11.

Vibration

19. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Traffic / roading

20. Transpower shall prepare a Traffic Management Plan (TMP) which is generally consistent with NZTA's Code of Practice for Temporary Traffic Management (COPTTM).

21. The TMP shall be submitted to the Council's Consents Manager for approval at least 20 working days prior to commencement of underground cable construction after consultation with:

- a. The Council;
- b. The following key stakeholders:
 - i. Emergency services (including police);
 - ii. Bus operators;
 - iii. Schools;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

iv. Housing New Zealand Corporation;

c. Any additional key stakeholders identified by the Council.

22. The council shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

23. The TMP prepared by Transpower shall recognise that the paramount purpose of roads is the free passage of the public and its vehicles.

24. The TMP prepared by Transpower shall address and provide details of proposed works and/or mitigation measures relating to the following matters:

a. The likely routes for heavy construction-related traffic;

b. Details of any necessary road closures, diversions, or deviations which are likely to be required during construction activities, including the likely date, time and duration of such actions. As far as practicable, any necessary temporary road closures should be effected during off-peak periods;

c. Where diversions or deviations are required, information and recommendations shall be provided by a suitably qualified and experienced traffic engineer of the traffic volumes and capacities of alternative routes, and the likely consequent effects in terms of safety and convenience. The traffic engineer shall ensure that recommended alternative routes are reasonably convenient and capable of safely accommodating diverted or deviated traffic.

Transpower shall act on the recommendations of the traffic engineer in relation to alternative routes. Where traffic modelling related to specific intersections is required, the results of the modelling shall be included (see conditions 25 to 27);

d. Details of the signage intended to advise motorists, residents, stakeholders, and other road users of any road closures, diversions and delays, including examples of signage for diversion routes. Such signage shall be sufficiently clear to enable easy understanding by the general public, and installed at appropriate locations at least seven days in advance of such road closures, diversions and delays. Such signage shall include the use of trailer-mounted electronic signs near the most affected roads;

e. Details of methods of proposed information dissemination regarding construction activities and associated traffic effects. These details shall include information regarding likely timing and duration of works, alternative routes, access to properties, and any alterations to public transport services. Methods of information dissemination shall include, but not be limited to, public notices in newspapers, radio announcements, signage, information packages, and direct contact with affected properties along those routes;

f. Inclusion of a communications plan setting out the method of consultation and liaison with key stakeholders and affected parties regarding likely timing and duration of works, alternative routes, access to properties and any alterations to public transport services;

g. Details of prior consultation or community liaison undertaken with affected residents, key stakeholders, schools, public transport providers, emergency services or representative groups regarding proposed road closures, diversions and delays, and any measures agreed with such groups to address any adverse effects or inconvenience that may arise;

h. Details of any measures for the purposes of mitigating adverse traffic effects of construction traffic, including safety matters, relating to cyclists, pedestrians, mobility impaired persons, and school children;

i. Where the cable is proposed to be installed across major intersections and/or arterial roads carrying higher traffic volumes (such as Ti Rakau Drive, Te Irirangi Drive, Chapel Road, Springs Road, East Tamaki Road), three months prior to the commencement of construction an assessment shall be carried out by a suitably qualified and experienced traffic engineer of:

i. The traffic volumes using such intersections or roads;

ii. The likely levels of delays and disruptions which may be experienced as a result of cable construction; and

iii. Identification of locations where such installation works must be carried out in the most timely manner practicable (including where reasonably practicable, the use of alternative methods of installation other than trenching), so as to minimise delays or inconvenience to road users;

j. Following consultation with public transport providers, details of proposed alternative temporary changes to public transport services during the construction period including but not limited to any route diversions,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

timetable adjustments, temporary bus stops, and methods of communicating such matters to public transport users.

25. Following consultation with the Boards and/or principals of Sir Edmund Hillary College and Sancta Maria College (and any schools subsequently established with accesses and/or egresses adjacent to the underground cable route), Transpower shall ensure, as far as practicable, that works avoid school terms so as to minimise disruption to normal school activities. Details of relevant periods shall be included in the TMP.

26. Following consultation with the New Zealand Fire Service, details shall be provided in the TMP of proposed alternative access to and egress from the fire station located at 341 East Tamaki Road.

27. Transpower shall carry out traffic modelling at the intersections of Johnstones Road/Springs Road/East Tamaki Road and Chapel Road/Accent Drive/Stancombe Road to assess the impact of the construction works on intersection capacity prior to completing the Construction Management Plan and the Traffic Management Plan as required by condition 20, and incorporate any necessary specific provisions in the CMP.

Advice note:

The traffic management plan required by condition 20 can be incorporated into, and be part of, the construction management plan required by condition 11.

Continuation of access

28. Transpower shall at all times ensure that access to any property temporarily severed by construction is maintained at a level that will enable, as far as practicable, normal operations on the property to continue.

Parking

29. Following consultation with residents, businesses and other directly affected persons, Transpower shall ensure that adequate temporary alternative car parking is provided for residents, businesses and other directly affected persons along or adjacent to the cable route, in the event that construction activity prevents or hinders usual parking. Such arrangements are to be made and advised to affected parties at least five working days prior to the commencement of the work that causes the effect.

Remediation of property, roads and footpaths

30. Other than as provided in conditions 31 and 32, Transpower shall:

- a. within 10 working days of completion of construction on any land, reinstate any private or public land and property (excluding works in road reserves) as far as practicable to its pre-existing state. Such remediation shall include fences, gardens (excluding trees and grass) and other surface equipment or materials; and
- b. as soon as practicable after the completion of construction, re-grass areas that were previously grassed.

31. Prior to commencing construction, Transpower shall undertake a carriageway condition survey of the road network along the designated route, and shall invite appropriate representatives of the Council to attend. The condition survey shall consist of a photographic or video record of the carriageway along the designated route. A copy of the record will be retained and provided to the council upon request.

32. As soon as practicable after the completion of construction, Transpower shall repair any damage to public carriageways and footpaths (and associated road components) resulting from the impacts of construction. Such repair may involve short-term maintenance to allow for settling and consolidation of carriageways prior to final repair.

Future roading

33. Cable installed in the vicinity of:

- a. The Redoubt Road extension between Regis Lane and Ormiston Road (as shown on maps 49-50, Manukau City Council Operative District Plan 2002; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. The possible future road connection between the Scenic Drive and Brownhill Road (as shown on Map 31 of Appendix V); shall be buried to a depth that does not prevent construction of those roads due to the presence of the cables, in the locations shown on those plans, in the future.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8518 Albany Substation

Designation Number	8518
Requiring Authority	Transpower New Zealand Ltd
Location	29 Bass Road, Albany
Rollover Designation	Yes
Legacy Reference	Designation 85, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Albany electricity substation.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

2. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
3. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).
4. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.
5. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

6. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Structures.

Hazardous Substances

7. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

8. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

9. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

10. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

11. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

12. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

13. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

Lot 3 DP 135027	

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8519 North Shore Underground Electricity Transmission Cables

Designation Number	8519
Requiring Authority	Transpower New Zealand Ltd
Location	410 Albany Highway to State Highway 1 (Constellation Drive), Rosedale
Rollover Designation	Yes
Legacy Reference	Designation 179A, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - the installation, maintenance, repair, replacement, inspection and operation of two 220kV underground electricity transmission lines (two cable circuits comprising six single core cables) and associated telecommunication cables and the minor above ground structures associated therewith.

Conditions

General Conditions

1. The alignment and width of the North Shore Transmission Corridor shall be generally in accordance with that described in the 2009 Notice of Requirement and the 2012 Alteration to the Designation and shall be demarcated on the District Plan Maps accordingly.
2. That prior to any works being commenced, Transpower New Zealand Ltd shall obtain all requisite resource consents required by the Auckland Council under the Resource Management Act 1991.
3. Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.
4. The cables and associated equipment shall be designed, installed and operated so as to meet the NZ National Radiation Laboratory guidelines (as confirmed by the International Commission on Non-Ionizing Radiation Protection, ICNIRP) for general public 24hrs/day exposure.
5. In the event that electricity supply will need to be shut down for planned periods during construction, Transpower New Zealand Ltd shall advise the Council of the time and duration of the intended shut down at least 48 hours in advance.
6. Transpower New Zealand Ltd Limited shall submit an Outline Plan of Works to the Auckland Council in accordance with section 176A of the Resource Management Act 1991. In addition to the matters listed in section 176A(3), the outline plan shall describe and include details on the following:
 - a. The alignment of the cable(s) within the corridor and the width of the corridor.
 - b. The distance that any trench will be located from residential zoned properties and the depth of that trench and any measures to prevent the movement of earth on adjoining properties.
 - c. The location, size, function and effects (including noise) of all above-ground structures.
 - d. Measures to avoid, remedy or mitigate the potential effects of construction and maintenance activities on existing water, stormwater and wastewater services;
 - e. Measures to avoid, remedy or mitigate the potential effects arising from the physical presence of the cables on the operation of water, stormwater and wastewater services;
 - f. Measures to avoid, remedy or mitigate the potential effects arising from the physical presence of the cables on the future construction of water, stormwater and wastewater services;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- g. The minor extension to the Wairau Road substation; and
- h. Such other matters as required to satisfy the conditions of this designation.

Services

7. During the detailed design and subsequent construction activities, Transpower New Zealand Ltd and its agents shall liaise with Water Services prior to undertaking any work in relation to the designation and shall ensure that all existing utility services located in or adjacent to the designation are:

- a. Protected from any activity which may interfere with the proper functioning of the services; and
- b. If damaged, repaired or replaced in accordance with the Council's Infrastructure Design Standards;

Any costs associated with the protection, repair or replacement of existing services maintained by the Council shall be at Transpower New Zealand Ltd's expense, to the reasonable satisfaction of the General Manager, Water Services.

8. All cables shall be installed in accordance with the relevant New Zealand Codes of Practice, including NZECP 34 and 35.

9. When laying the cables close to existing metallic pipelines Vector Limited shall ensure the associated service does not breach the requirements of AS/NZS 4653:2000.

10. Transpower New Zealand Ltd shall undertake a safety study, as part of the detailed design process, to demonstrate that induced and transferred potentials to other services would not be hazardous to personnel working on those services. An appropriate independent body shall review the study and recommend any relevant design modifications.

11. Transpower New Zealand Ltd shall review the possible effects that electric and magnetic fields may have on other existing underground services within the corridor, ensuring that all practicable measures are taken to minimise those effects.

12. All activities associated with the design and construction of the cables shall comply with Council's Infrastructure Design Standards and the 'as-built' plans (in accordance with the Council's Asset Data Standards manual) shall be submitted to the Council immediately after the completion of all construction.

Property Access

13. Vehicular and pedestrian access shall be maintained to the Wastewater Treatment Plant, Rosedale Park and Rosedale Park South at all times during construction.

14. In the event that Transpower New Zealand Ltd requires access to the North Shore Transmission Corridor via the Wastewater Treatment Plant site for construction and maintenance activities, all personnel and contractors of Transpower New Zealand Ltd are to comply with access controls and health and safety requirements applying to the Wastewater Treatment Plant site.

Trees

15. A Vegetation Mitigation Plan shall be prepared prior to the commencement of construction works within the corridor and shall be subject to the prior approval of the Council. The purpose of the Vegetation Mitigation Plan is to set out the measures for works around any protected trees and shall contain appropriate measures:

- a. To minimise the impact on protected trees, wherever possible;
- b. To develop a staged landscape plan for the remnant orchard trees in the George Pannill Reserve which includes suitable consultation with the Council and with local residents. The purpose of this landscape plan is to retain the general character of the orchard remnant and improve the overall amenity of the area;
- c. To indicate that where trees are required to be removed, these be replaced or replaced in close proximity, on a tree for tree basis, unless otherwise directed by the Council and that the replacement planting is maintained

The Proposed Auckland Unitary Plan (notified 30 September 2013)

in accordance with the design infrastructure manual for a period of 18 months following planting; and
d. To reasonably minimise the need for removal of large trees and other vegetation which provide visual screening of the Wastewater Treatment Plant site from residential areas, Rosedale Park and Rosedale Park South.

The landscape plan for the George Pannill Reserve shall be prepared well in advance of construction to enable discussion with the Parks and Environments Department and reflect suitable consultation with local residents. For the purposes of this condition, the monetary limit of any Transpower New Zealand Ltd contribution under both Designation 179 and this Designation 179A to fruit tree replacement in the George Pannill Reserve shall be \$2500 (plus GST). As part of the Vegetation Mitigation Plan, Transpower New Zealand Ltd shall provide suitable planting within that part of the corridor that adjoins the rear boundary of 16 Jade Court, Albany.

16. In the event that trees providing visual screening to the Wastewater Treatment Plant Site need to be removed as a result of the installation of proposed underground cables, Transpower New Zealand Ltd, in consultation with Council, shall, where practicable, plant suitable replacement trees to provide a similar level of visual screening from residential areas, Rosedale Park and Rosedale Park South as existed prior to the removal of the trees.

Watercourses / Open Channels

17. Crossings over open channels and watercourses will need to be above the 1% AEP flood plain level with an adequate freeboard provided. Alternatively if a cable crossing is proposed to go under a watercourse, then adequate cover and protection will need to be provided to allow for possible future channel erosion and for channel maintenance activities. Adequate cover and protection will also be required where the cables cross pipes and other stormwater assets.

Details of the channel and watercourse crossings shall be submitted to the Stormwater Department for approval. In particular the following crossings need to be fully assessed:

- a. The Oteha Stream tributary between Albany Highway and Vanderbilt Parade;
- b. The Oteha Stream tributary between Vanderbilt Parade and Northwood Avenue;
- c. The Alexandra Stream near Bush Road;
- d. The concrete lined channels between Sunnynook Road and Porana Road; and
- e. The Wairau channel near the substation.

Traffic Disturbance

18. A Traffic Management Plan shall be submitted to the Council for approval, at least 20 working days prior to the commencement of construction of each cable length. Construction activity shall be undertaken in accordance with the Traffic Management Plan approved by the Council. The primary purpose of the Traffic Management Plan is to set out the mitigation measures that will be put in place for that phase of the project to ensure that traffic disruption associated with construction activities is minimised as far as it is practicable.

Dust

19. Best practicable measures shall be employed (e.g. watering of the construction area) to ensure any dust nuisance beyond the boundary of the corridor is minimised.

20. All spoil shall be removed from the site so that no spoil or construction materials likely to generate dust are stored or stockpiled on site.

Water Quality

21. Best practicable measures shall be employed to ensure that the discharge of sediment into any water body is avoided or minimised.

22. Excess material shall be placed directly into trucks or bins for removal off site thereby minimising the amount of loose sediment bearing materials on the site.

23. Cesspit filters shall be installed prior to the excavations commencing where there is a risk of runoff to an

The Proposed Auckland Unitary Plan (notified 30 September 2013)

existing drainage network. This is to be augmented by the use of silt fences where these are able to be installed or are necessary. It is anticipated that silt fences will be primarily used in areas where the works pass close to an open watercourse.

24. Should the excavation require dewatering, then the contractor shall be expected to either discharge the liquids into another part of the trench (e.g. with scoria backfilling) via a portable settling tank, or across a grassed strip (provided the grass was long and a silt fence or cesspit filter was in place down gradient).

25. Backfilling, compaction and grading shall be undertaken as soon as possible after the laying of trenches, followed by re-sowing to re-instate surfaces to a condition which existed before the trenching.

Distance from Residential Boundaries

26. The trenches for laying underground cables shall be located a minimum distance of 1.5m from any residentially zoned property.

Hours of Work

27. The hours of work shall be restricted to 7 am to 6 pm Monday to Friday, 8 am to 6 pm Saturday, with no construction work undertaken on Sundays and Public Holidays.

Property Access

28. Construction of the cables shall be undertaken in such a manner as to ensure that reasonable access to properties on the cable route shall be maintained at all times.

Construction Noise

29. During construction, New Zealand Noise Standard 6803 NZS: 1999 Acoustics -Construction Noise shall be complied with.

30. Transpower New Zealand Ltd and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

Archaeological

31. If any archaeological remains are uncovered during construction, Transpower New Zealand Ltd shall immediately notify the Council and engage an archaeologist (to be approved by Council) to investigate and report on the importance of the remains.

32. Transpower New Zealand Ltd shall immediately advise local kaumatua and the New Zealand Historic Places Trust and cease working in the affected area until all necessary authority required by the New Zealand Historic Places Trust is obtained.

Completion of Construction

33. On completion of construction, all carriageways, road markings, signs, property access ways, drainage systems and other structures shall be restored to a standard at least comparable to their condition before the commencement of construction and shall be made good as soon as practicable.

Monitoring

34. Within six (6) months of the commencement of operation of any 220kV underground line, Transpower New Zealand Ltd shall supply to Council the results of a magnetic field survey that measures and appropriately illustrates the combined effect of the existing overhead and new underground lines, such field strength measurements to be taken at one metre above ground level and at intervals of not less than 400m or more than 800m along the length of the corridor (excluding roads). The Council may, depending on the significance of the results compared with recognised acceptable thresholds (see e.g., condition 5), require a repeat of the survey at a future date to be agreed by the parties.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

35. That provision be made for the removal of existing trees located in the corridor directly affected by the proposed location of the cable trenches, and that any replacement planting that may be required be determined by consultation and agreement between Transpower New Zealand Ltd and Council.

Advice Note

1. To assist Council with any telephone inquiries the Requiring Authority should advise the Council's Call-Centre before any work is commenced. The call centre may be contacted on phone number (09) 301 0101.

8520 Takanini Electricity Substation

Designation Number	8520
Requiring Authority	Transpower New Zealand Ltd
Location	65 Airfield Road, Takanini
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 40, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Takanini electricity substation.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

2. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
3. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).
4. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.
5. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

6. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

7. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

8. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

9. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

10. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

11. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

12. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

13. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

Schedule of Legal Descriptions

Parcel ID	
Lot 1 DP 135030	Lot 2 DP 135030

8521 Drury Switching Station

Designation Number	8521
Requiring Authority	Transpower New Zealand Ltd
Location	261 Quarry Road, Drury
Rollover Designation	Yes
Legacy Reference	Designation 45, Auckland Council District Plan (Papakura Rural Section) 1999

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Electricity transmission - the construction, operation, maintenance, replacement, renewal and upgrading of a 220kV switchyard, transmission lines, and ancillary facilities.

Conditions

General

1. The works to give effect to the designation shall be in general accordance with the plans and information submitted by Beca Carter Hollings and Ferner Ltd on behalf of Transpower New Zealand Ltd [the Requiring Authority] in support of the Notice of Requirement contained in the document 'Notice of Requirement for a Designation' ref. 4260430 dated 9 October 2008, and all being Council approved reference 9410, and as may be modified by specific conditions hereunder.
2. Any upgrading of the switchyard shall include all activities and effects relating to an increase in the carrying capacity, efficiency or security of supply through equipment within the designated site, but excludes an increase in voltage above 220kV.

Electric and Magnetic Fields

3. The electric and magnetic fields shall comply with the guidelines for public exposure to electric and magnetic fields as published in 1998 by the International Commission on Non-Ionizing Radiation Protection (ICNIRP).
4. Within 3 months of the commissioning of the switchyard the requiring authority shall demonstrate compliance with the ICNIRP reference levels by providing to the council written confirmation from a suitably qualified person. Electric field strength and magnetic flux density are to be measured 1 metre above ground level at the switchyard fence and site boundary.
5. The site shall be designed and operated to limit public exposure to electric and magnetic fields, in accordance with the recommendations in Section 1 of the World Health Organisation monograph No. 238.

Advice Note: Policy 9 of the National Policy Statement on Electricity Transmission refers to both the ICNIRP guidelines and the WHO monograph.

Landscaping

6. Landscaping must proceed in general accordance with the Landscaping Plan (figure 4) drawn by Boffa Miskell Ltd and contained within their report entitled Landscape and Visual Effects Assessment dated September 2008.
7. The landscaping plan must be implemented within the first planting season following the completion of works on site.
8. The landscaping is to use screen planting with species capable of providing 15m high evergreen dense continuous screen around the site (with the exception of land underneath the pylons where low native planting will be grown).
9. All landscaping must be maintained in a healthy condition in order to give effect to the Landscaping Plan for the duration of the designation. Once a continuous row and/or canopy has been established, this maintenance shall include the replanting of any gaps created by the death or damage of trees, in order to allow continuous row and/or canopy to re-establish.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lighting

10. All exterior on-site lighting shall be positioned and directed downwards within the site, away from adjacent properties, existing dwellings and public roads so as to minimise the level of spill light and glare.

Site Management

11. Stock proof fencing will be provided to exclude stock from all water bodies shown on the Landscaping Plan (figure 4) drawn by Boffa Miskel Ltd and contained within their report entitled Landscape and Visual Effects Assessment dated September 2008, should the site be used for grazing.

Electrical Interference

12. The switchyard shall be operated, managed and controlled so that there is no additional electrical interference with television or radio reception at any existing residence as a consequence of the construction and operation of the switchyard.

Operational Noise of the Switchyard

13. The switchyard shall be designed, constructed and operated in such a manner so that the noise level measured at the site boundaries of 261 Quarry Road shall not exceed the following limits:

	Leq Levels	L _{max}
Monday – Sunday 7am – 8pm	55 dBA	-
Monday – Sunday 8pm – 7am	45 dBA	75 dBA

a. The noise levels shall be measured and assessed in accordance with the requirements of NZS 6801:1999 Measurement of Sound and NZS 6802:1999 Assessment of Environmental Sound.

b. The noise shall be measured by a sound level meter complying with the International Standard IEC 651(1979): Sound Level Meters, Type 1.

c. Should the above standards be superseded then the most up to date standards shall apply.

14. Circuit breaker maintenance noise shall not exceed 75 dBA L_{max} at all times.

Signage

15. No advertising signs shall be placed on any structure, wall or fence within the site (directional and safety signs are exempted).

Earth Potential Rise or Induced Voltage Hazards

16. The requiring authority shall ensure that any earth potential rise or induced voltage hazards caused by the switchyard comply with the NZ Electrical Code of Practice 35 and shall not adversely affect the operation of existing infrastructure.

Construction Noise

17. The requiring authority must comply with the noise standards set out in NZS 6803:1999 Acoustics – Construction Noise at all times while any construction works are being carried out on site.

Archaeological Deposits

18. If any urupa, traditional sites, taonga (significant artefacts), koiwi (human remains) or other archaeological sites are exposed during site works then the following procedures shall apply:

a. Immediately it becomes apparent that an urupa, traditional site, taonga, koiwi or other archaeological site has been exposed, all site works in the immediate vicinity shall cease.

b. The site supervisor shall immediately secure the area in such a way that ensures that any artefacts

The Proposed Auckland Unitary Plan (notified 30 September 2013)

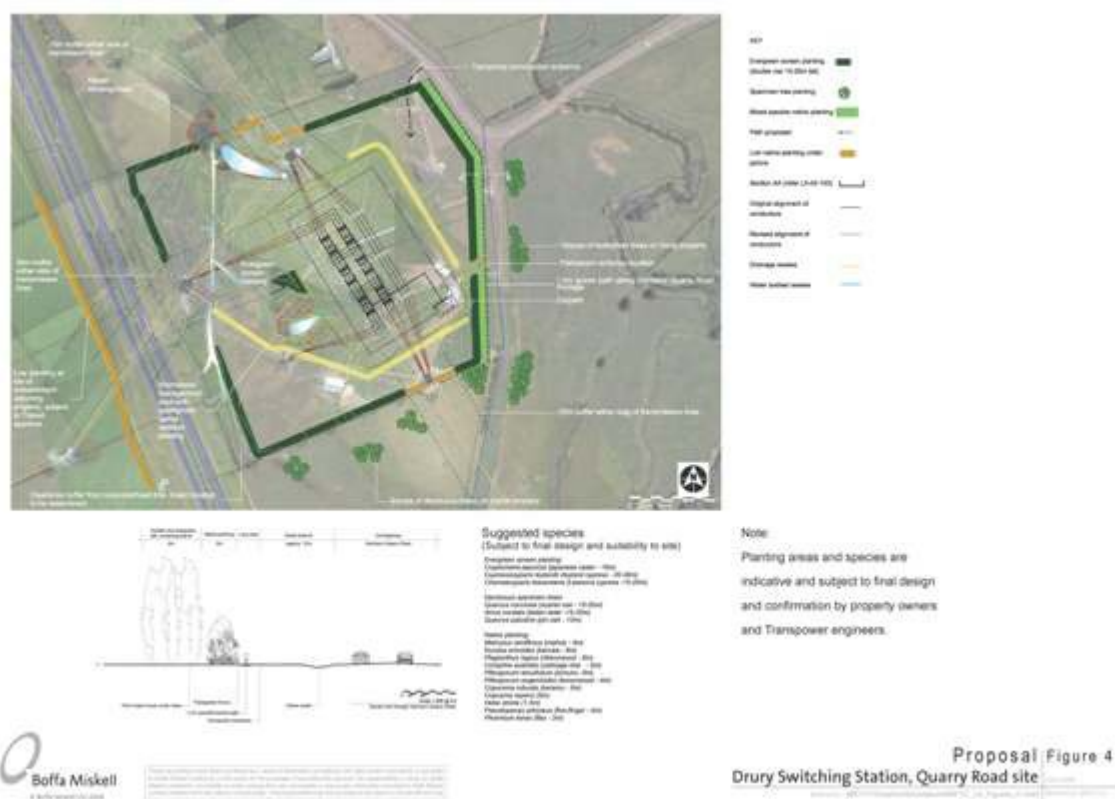

or remains are not further disturbed; and

c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation, the Auckland Council, and, in the case of human remains, the NZ police, that an archaeological or traditional site has been exposed so that appropriate action can be taken. This includes such persons being given reasonable time as determined by the Council to record and recover archaeological features discovered before work may commence.

19. That the requiring authority consult with the Kaitiaki Unit (Te Roopu Kaitiaki O Papakura) in regard to the proposed creation of a wetland and riparian planting to mitigate the diversion of one of the springs on the site.

8522 Wellsford Electricity Substation

Designation Number	8522
Requiring Authority	Transpower New Zealand Ltd
Location	69 School Road, Wellsford
Rollover Designation	Yes
Legacy Reference	Designation 940, Auckland Council District Plan (Rodney Section) 2011

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Electricity transmission - Wellsford electricity substation.

Conditions

1. That any extension of substation equipment (not otherwise being a permitted activity) beyond the existing substation footprint, as identified in Appendix 15U(i), is first authorised by way of an alteration of the designation in accordance with section 181 of the Resource Management Act 1991 (or any future equivalent Provision). Until such time as there is an extension to the substation footprint by way of an alteration of the designation, the additional area will be retained as a buffer.

Cultural / Spiritual

2. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
- Works in the immediate vicinity of the site that has been exposed shall cease;
 - The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

3. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics—Construction Noise at locations set out in section 6.2 of that standard.

4. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).

5. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.

6. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

7. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

8. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

9. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

10. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

11. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

12. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

13. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

14. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

15. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

Electricity transmission - Silverdale electricity substation.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

2. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics—Construction Noise at locations set out in section 6.2 of that standard.
3. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).
4. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.
5. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

6. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

7. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

8. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Radio Frequency Interference

9. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

10. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

11. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

12. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

13. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Lot 6 DP 60254	

8524 Huapai Electricity Substation

Designation Number	8524
Requiring Authority	Transpower New Zealand Ltd
Location	108 Matua Road, Huapai
Rollover Designation	Yes
Legacy Reference	Designation 942, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Huapai electricity sub-switching station.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

General

1. The purpose of the designation is to provide for a switching station at Huapai.
2. The nature of the proposed work is to erect, operate, maintain and upgrade a switching station in accordance with the designation and subject to the conditions set out in the concept plan.
3. The designated site comprises 2.6752 hectares and includes the permanent accessway to the site, the proposed switching station facility and landscape buffers to the river (refer Figure 1 Dwg TX41442B).

Height

4. The maximum height of equipment within the switching station will be as follows:
 - a. Circuits 5 - 7 metres;
 - b. High level bus conductors 9 metres;
 - c. Transmission Pole 18.5 metres;
 - d. Control Room 4.5 metres; and
 - e. Telecommunication Pole 23 metres;

The Height of the two existing towers within the designated area will not be altered as a result of the switching station.

Yards

5. The switching station equipment (including the security fence) is to be sited a minimum of 5 metres from all boundaries of the designated site.

Site Coverage

6. The switching station footprint (demarcated by the security fence) is not to exceed an area of 5650m². This footprint will include all switching station structures except for the earthgrid, which is underground and the 18.5 metre transmission pole securing conductors on the 110kV line.

Security Fence

7. A security fence is to be erected around the switching station. Warning signs are to be placed on this fence and a sign identifying the site as being owned by Transpower New Zealand Ltd (Transpower) is to be erected at the site entrance. The sign at the site entrance shall comply with the Council's signs bylaw.

Landscape Mitigation

8. Planting
 - a. The site will be planted in locations shown in the outline landscape plan (Figure 2 Dwg W00022/01).
 - b. A detailed landscape plan will be submitted for approval by Council as part of the outline plan of works required by section 176A of the Resource Management Act 1991.
 - c. The planting will be completed within the first planting season after the construction of the switching station and shall be maintained (including the replacement of any diseased specimen or failed plantings) in accordance with the approved Plan.
 - d. Landscaping shall be retained and maintained for the duration of the switching station.
9. Screening
 - a. The use of fabric fencing (up to 6m in height) is to be incorporated into the mitigation planting area as a temporary visual mitigation measure.
 - b. The fabric is to be a dark green colour and placed on both sides of screening support structures.
 - c. Locations for the fabric screening and timing of removal is to be confirmed by way of the landscape plan to be submitted for approval by Council as part of the outline plan of works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. Colours of Structures

- a. The 18.5 metre transmission pole and the 23 metre telecommunications pole are to be painted a dark green colour to blend in with the background hills.
- b. The control room and tubular buswork (7m and 9m components) excluding couplings will be a similar colour.
- c. Final colours to be approved by the Manager Resource Consents and Compliance, Auckland Council.
- d. The drop wires and other flexible equipment are to be non-reflective with a matt finish.
- e. The galvanised steel supports are to have a matt or weathered finish.
- f. The switching yard gravel is to be a dark grey colour.

Resource Consents

11. Prior to commencement of construction Transpower will obtain all necessary consents from the Regional and/or District Council and carry out the proposed work in accordance with those consents.

Performance Standards

Lighting

12. The site shall not be illuminated at night except during emergency works or other maintenance work requiring out of hours activity (eg programmed outage). The illuminance of the site lighting installations shall not exceed: 5 lux (lumens per square metre) spill (horizontal or vertical) of light at any window of an adjacent household unit.

Noise

13. The noise level generated by the switching station shall comply at all times with the following noise levels. All activities on the site shall be conducted so as to ensure the following noise limits are not exceeded at any point within the notional boundary of any dwelling:
 - a. Monday to Saturday 7am — 6pm 50dBA L₁₀;
 - b. At all other times including Public Holidays 45dBA L₁₀; and
 - c. Monday to Sunday 6pm — 7am 70dBA L_{max}

Notional Boundary is defined as a line 20 metres from the façade of any dwelling or the legal boundary where the boundary is closer than 20 metres to the dwelling. Sound levels shall be measured in accordance with the requirements of NZS 6801:1999 Measurement of Sound and assessed in accordance with the requirements of NZS 6802:2008 Acoustic - Assessment of Environmental Sound except that all measurements shall be carried out within the notional boundary of any dwelling as defined above.

14. Noise levels during the construction period shall comply with the requirements NZS 6803:1999 Acoustics — Construction Noise.

Construction Noise

15. Construction activity shall be undertaken between the hours of 7.30am - 6pm Monday to Saturday. If is essential for construction to be carried out outside these hours, Transpower shall give the occupants of immediately adjoining properties not less than five working days notice of the period during which construction will take place outside the normal construction period, and when those extended hours will commence.

16. Prior to the commencement of work on the site a Construction Management Plan will be prepared and submitted for approval of the Consents Manager. This Plan is to include details of Earthworks and Silt Control Measures. Specifically the management plan will require the following:

- a. The stripping of vegetation, overburden and soil shall be kept to a minimum i.e. cleared areas will be limited to only those areas where work is about to commence; and
- b. A dust management plan.

17. A traffic management plan will be prepared for the construction period and incorporated into the Outline Plan.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

EMF and EMR

18. The switching station shall comply with the guidelines for public exposure to electric and magnetic fields as published in 1998 by the International Commission on Non-Ionizing Radiation Protection (ICNIRP).

19. The telecommunication facility on the site shall be operated so that it satisfies the requirements of NZS 2772.1:1999 in respect of all areas to which the public may have access. A report from a suitably qualified person shall be submitted to the satisfaction of the Consents Manager within three months of the installation commencing operation, confirming that the site is operating in accordance with the guidelines and the requirements of NZS 2772.1:1999. If these levels do not comply with the guidelines site operations will be amended to ensure compliance.

Archaeological Sites

20. In the event of an archaeological site being uncovered, work is to cease immediately in the vicinity of the discovery and the New Zealand Historic Places Trust Regional Archaeologist and Te Tao U ki Ngati Whatua will be contacted so that appropriate action can be taken before work may recommence.

Access

21. The designated access to the site shall not be used for heavy vehicles during the construction period.

Lot 3 DP 148022	

8525 Henderson Electricity Substation

Designation Number	8525
Requiring Authority	Transpower New Zealand Ltd
Location	1-12, 41-49 and 35 Lincoln Park Avenue, Massey
Rollover Designation	Yes
Legacy Reference	Designation TP1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Henderson electricity substation.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

appropriate:

- a. A statement on the relevant Plan objectives, policies and rules; and
- b. A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

3. Work which affects the exterior of the group of three buildings located near the site entrance, described in the Heritage Schedule as CH1 1173, shall be limited to repairs, maintenance and works such as security lighting, alarms and cameras which are required for security purposes. Such work may be carried out without an outline plan of works.

Cultural / Spiritual

4. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been exposed shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
- d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

5. Subject to condition 3, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics—Construction Noise at locations set out in section 6.2 of that standard.

6. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).

7. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.

8. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

9. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

10. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Electric and Magnetic Fields (EMF)

11. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 μ T for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

12. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

13. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

14. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

15. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

16. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

17. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

8526 Hepburn Road Electricity Substation

Designation Number	8526
--------------------	------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requiring Authority	Transpower New Zealand Ltd
Location	167-217 Hepburn Road, Glendene
Rollover Designation	Yes
Legacy Reference	Designation TP2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Hepburn road electricity substation.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:
 - a. A statement on the relevant Plan objectives, policies and rules; and
 - b. A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out
2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Cultural / Spiritual

3. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and
 - d. the notification in (c) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and Maintenance Noise

4. Subject to condition 6, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
5. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (eg, at night-time).
6. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.
7. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

8. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous Substances

9. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TPG:GS.54.01), Issue 2, June 2002.

Electric and Magnetic Fields (EMF)

10. Any new works or equipment shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

11. Any new works or equipment shall be designed to comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

12. In designing and constructing any new works or equipment, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

13. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard TP.DS.52.01, Issue 2, January 2005.

Light Spill

14. Any new exterior lighting shall be designed to comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Requirements for Outdoor Switchyard Lighting Policy, TP GS 41.01, Issue 3, April 2006; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

15. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

16. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic - Assessment of Environmental Sound.

Advice Note

1. Any new works or equipment means those works which were not existing prior to the notification of the Auckland Unitary Plan.

Schedule of Legal Descriptions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Parcel ID	
Lot 1 DP 139739	

8527 Rua o te Whenua Telecommunications Facility

Designation Number	8527
Requiring Authority	Transpower New Zealand Ltd
Location	600 Scenic Drive, Waiatarua
Rollover Designation	Yes
Legacy Reference	Designation TP3, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - Rua o te Whenua telecommunications facility.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:
 - a. A statement on the relevant Plan objectives, policies and rules;
 - b. A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out; and
 - c. A visual impact and mitigation assessment where the proposed work is a new tower structure at Rua o te Whenua (Designation 101: Airways Corporation of New Zealand Ltd: Communication facility) (as provided for in condition 4(c)(i)).
2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.
3. This designation affects a site which is the subject of an earlier designation (AC1) and the following conditions apply to any development on the site.
 - a. All development on the site shall be within the "defined development area" as defined in Designation 101: Airways Corporation of New Zealand Ltd: Communication facility;
 - b. The maximum height of any development on the site shall be not more than 25 metres above ground level;
 - c. Development which is additional to that on the site as at 1 February 2000 (which included a tower structure, three "slim-line" masts, the Airways Corporation equipment building and the Transpower repeater building) shall be limited to:
 - i. The replacement of the existing tower structure with another facility, provided that when the new facility is completed and commissioned, the existing tower is decommissioned and demolished;
 - ii. Antennae attached to the existing tower or new tower (provided that these do not exceed the overall height limit);
 - iii. Up to four additional "slim-line" masts of similar design to the three existing masts;
 - iv. Accessory buildings with a maximum height of 4.5 metres; and
 - v. The extension of the site access road.
 - d. Native vegetation alteration (including removal) shall be restricted to:
 - i. Removal of vegetation from within the "defined development area"; and
 - ii. Removal or pruning of any vegetation which compromises the operation of the facility.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Schedule of Legal Descriptions

Parcel ID	
Lot 1 DP 137549	

8528 Massey North Underground Electricity Transmission Cables

Designation Number	8528
Requiring Authority	Transpower New Zealand Ltd
Location	13 Westgate Drive, Massey to 97D Fred Taylor Drive, Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation TP4, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission - the Massey North Underground Cable Project, comprising a 110kV underground transmission line for the conveyance of electricity and ancillary structures associated with the works to be located between existing Towers 6 and 12 of the Albany – Henderson A 110kV overhead transmission line.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:
 - a. A statement on the relevant Plan objectives, policies and rules;
 - b. A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out;
 - c. A visual impact and mitigation assessment where the proposed work is a new tower structure at Rua o te Whenua (Designation TP3 and AC1) (as provided for in condition 4(c)(i)).
2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.
3. "Works" has the same meaning as in the Notice of Requirement by Transpower New Zealand Limited for a designation for "Underground Transmission Line" dated January 2011 ("Notice of Requirement"). Works shall be conducted and maintained generally in accordance with the information provided by the requiring authority as shown on all information and plans titled:
 - a. Form 18 titled 'Notice of Requirement by Transpower New Zealand Limited for designation for "Underground Transmission Line', signed by Brian Warburton – Environmental Strategy and Approvals Group, Transpower NZ Ltd
 - b. Plan Prepared by Beca, titled 'Massey North Underground Cable Project: Land Requirement Plan' Dwg no. GIS-4213785-2-1, GIS-4213785-2-2, GIS-4213785-2-3 all Rev 1.1, all dated 27/05/2011
 - c. Documentation from Beca titled 'Notice of Requirement for a Designation: Massey North Underground Cable Project' dated April 2011
 - d. Letter from Andrew Renton of Transpower titled 'Transpower Approval of Works within Massey North Underground Cable Designation' dated 23 September 2011.
 - e. Letter from Alan Wallace of Auckland Transport titled 'Transpower Approval of Works within Massey North

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Underground Cable Designation v2' dated 28 September 2011.

Designation Review Condition

4. As soon as practicable following completion of the Project, the requiring authority shall:

- a. Review the area designated for the Project;
- b. Identify:
 - i. Any areas of designated land (including public reserve) that are no longer necessary for the ongoing operation, maintenance, renewal and protection of the underground cables and ancillary activities;
 - ii. Any areas of designated land within the legal road boundaries that are more than 1.3 metres from the centreline of the outermost cable (excluding joint bays and associated link pits);
- c. Remove the designation over the areas identified in (b) above in accordance with section 182 of the Resource Management Act and provide a plan of the final designated areas to the Council for inclusion in the District Plan; and
- d. Provide as-built plans to the Council.

Advice Note

1. Where section 176 approvals under the Resource Management Act 1991 are required by utility operators (other than the Requiring Authority) for their works within the designation, the Requiring Authority will provide a timely response, in order to facilitate co-ordination of section 176 approvals sought by the utility operator and the road opening notice process.

R8529 Mangere Electricity Substation

Designation Number	R8529
Requiring Authority	Transpower New Zealand Ltd
Location	11, 14 and 16 Driver Road and 307 Massey Road, Mangere
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission – Mangere electricity substation.

Conditions

Cultural / Spiritual

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:

- a. Works in the immediate vicinity of the site that has been exposed shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
- c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and the notification in (c.) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Construction and maintenance noise

2. Subject to condition 3 below, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics—Construction Noise at locations set out in section 6.2 of that standard.

3. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g. at night-time).

4. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.

5. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Vibration

6. Vibration from all construction activities shall not exceed the limits of, and shall be measured and assessed in accordance with, German Standard DIN 4150-3 (1999-02) Structural Vibration – Effects of Vibration on Structures.

Hazardous substances

7. Any new part of the facility containing oil shall be designed to comply with Transpower's Oil Spill Management Policy (TP: GS.54.01), Issue 3, December 2011.

Electric and Magnetic Fields (EMF)

8. The works shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (ie, when there are no faults in the transmission system).

Radio Frequency Interference

9. Any new works or equipment shall comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Earth Potential Rise

The Proposed Auckland Unitary Plan (notified 30 September 2013)

10. In designing and constructing new works, Transpower shall give consideration to third-party conductive services to ensure compliance with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997 as in force at the date of confirmation of the designation.

11. Any new substation earth grids shall be designed, built, and tested to ensure electrical safety at or beyond the designation boundary in accordance with Transpower Standard Design of Substation Earthing TP.DS.52.01, Issue 2, January 2005.

Light spill

12. All exterior lighting shall comply with:

- a. AS/NZS 1158 Lighting for Roads and Public Spaces 2005 Part 3.1; and
- b. Transpower's Guidelines and Information for Switchyard and Grounds Lighting, TP DS 40.03, Issue 1, April 2012; and
- c. AS 4282 1997, Control of Obtrusive Effects of Outdoor Lighting.

Operational Noise

13. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.

14. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic – Assessment of Environmental Sound. Note: Any new works or equipment means those works or equipment which did not exist prior to the notification of the Auckland Unitary Plan.

Outline Plan of Works

15. At the time of submitting an Outline Plan of Works to the Auckland Council Transpower will provide the following:

- a. An Erosion and Sediment Control Plan for any earthworks that exceed 500m² and/or 250m³;
- b. A Construction Management Plan; and
- c. An arboricultural report where any future works will occur within the dripline of any tree and/or any tree trimming is proposed.

R8532 Highbrook Business Park Underground Electricity Transmission Cable

Designation Number	R8532
Requiring Authority	Transpower New Zealand Ltd
Location	Highbrook Business Park
Rollover Designation	No
Legacy Reference	N/A

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Given effect to (i.e. no lapse date)
------------	--------------------------------------

Purpose

Electricity Transmission – the operation, maintenance and upgrading of underground transmission lines comprising of two 110kV cable circuits and termination structures to convey electricity between Otahuhu and Penrose.

Conditions

Cultural / Spiritual

1. If any urupā, traditional sites, taonga (significant artefacts), or kōiwi (human remains) are exposed during site works, then the following procedures shall apply:
 - a. Works in the immediate vicinity of the site that has been exposed shall cease;
 - b. The site supervisor shall immediately secure the area in a way that ensures that any remains or artefacts are untouched;
 - c. The site supervisor shall notify representatives of relevant tāngata whenua, the New Zealand Historic Places Trust, the Auckland Council and, in the case of human remains, the New Zealand Police; and the notification in (c.) above shall allow such persons being given a reasonable time to record and recover archaeological features discovered before work may recommence on the exposed site.

Electric and Magnetic Fields (EMF)

2. The works shall be designed and constructed to limit the EMF exposure at or beyond the secure boundary of the substation site to the International Commission on Non-Ionising Radiation Protection Guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz) (Health Physics, 1998, 74(4): 494–522) (ICNIRP Guidelines) public reference levels of 5 kV/m for electric fields and 100 µT for magnetic flux density at one metre above ground level under maximum normal operating conditions (i.e., when there are no faults in the transmission system).

Earth Potential Rise / Induced Voltages

3. The works shall be designed and constructed to comply with regulations 58, 60, 69 and 87 of the Electricity Regulations 1997.

Radio frequency interference

4. Any new works or equipment shall comply with NZS 6869:2004 Limits and Measurement Methods of Electromagnetic Noise from High-Voltage a.c. Power Systems, 0.15 to 1000 MHz.

Operational noise

5. A noise management plan shall be submitted for any new equipment (such as transformers, fans and circuit breakers) that is likely to generate noise audible at the designation site boundary.
6. Sound levels shall be measured and assessed in accordance with NZS6801:1999 Measurement of Sound and NZS6802:2008 Acoustic – Assessment of Environmental Sound. Note: Any new works or equipment means those works or equipment which did not exist prior to the notification of the Auckland Unitary Plan.

Construction and maintenance noise

7. Subject to condition 8 below, all construction and maintenance work shall be designed, managed and conducted to ensure that construction and maintenance noise from the site does not exceed the limits in NZS6803:1999 Acoustics–Construction Noise at locations set out in section 6.2 of that standard.
8. The noise limits shall not apply to emergency work required to re-establish continuity of supply, work urgently required to prevent loss of life or other personal injury, or commissioning works at the substation site, but all

The Proposed Auckland Unitary Plan (notified 30 September 2013)

practicable steps shall be undertaken to control noise and to avoid adverse noise effects, particularly at times when the stricter noise limits apply (e.g., at night-time).

9. Prior to any significant construction work taking place, including any earthworks, a noise management plan shall be prepared, with the assistance of a suitably qualified and experienced person, that sets out the management procedures in terms of section 8 and Annex E of NZS6803:1999 and the works shall be undertaken in accordance with that noise management plan.

10. The noise management plan required by the above condition 4 shall be submitted to Council's Consents Manager for approval, at least 20 working days prior to the works commencing. The Council's Consents Manager shall respond within 20 working days indicating whether approval is given or refused. Approval shall not be unreasonably withheld.

Existing Utilities

11. The Requiring Authority shall consult and liaise with all utility operators whose activities or interests may be affected by proposed construction or maintenance works prior to undertaking any work pursuant to this designation to confirm that:

- a. The Requiring Authority is aware of the location of all utility services existing at the time of construction in, or adjacent to, the designation and to identify any necessary exploratory excavation and evaluations of potential effects on the proper functioning of the utility services (including potential for earth potential rise or induction hazards) that should be undertaken;
- b. As far as practicable, all utility services (existing at 30 July 2013) located in or adjacent to the designated route are protected from the Works and any associated activities that may interfere with the proper functioning of those services; and
- c. Reasonable access to existing utility services located in or adjacent to the designation is maintained during construction.

12. Construction or maintenance works shall be designed and constructed so as not to cause existing assets of other utilities to be non-compliant with AS/NZS 4853:2000 — Electrical Hazard on Metallic Pipelines.

Hours of Work

13. The hours of work shall be restricted to 7 am to 6 pm Monday to Friday, 8 am to 6 pm Saturday, with no construction or maintenance work undertaken on Sundays and Public Holidays.

Property Access

14. Construction and maintenance of the cables shall be undertaken in such a manner as to ensure that reasonable access to properties on the cable route shall be maintained at all times.

Laying of Cables

15. All new cables shall be installed in accordance with the relevant New Zealand Codes of Practice, including NZECP 34 and 35.

16. When laying new cables close to existing metallic pipelines Transpower shall ensure the associated service does not breach the requirements of AS/NZS 4853:2000 - Electrical Hazards on Metallic Pipelines.

Completion of Construction

17. On completion of works, all carriageways, road markings, signs, property access ways, drainage systems and other structures shall be restored to a standard at least comparable to their condition before the commencement of construction and shall be made good as soon as practicable.

Outline Plan of Works

18. At the time of submitting an Outline Plan of Works to the Auckland Council Transpower will provide the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

following:

- a. An Erosion and Sediment Control Plan for any earthworks that exceed 500m² and/or 250m³;
- b. A Construction Management Plan;
- c. An arboricultural report where any future works will occur within the dripline of any tree and/or any tree trimming is proposed; and
- d. Visual assessment, if the works are to be located within 200 metres of Pukekiwiri Volcanic Crater.

Designation Review

19. The Requiring Authority may, in consultation with the Council, as the road controlling authority:

- a. Review the width of the area designated for the project;
- b. Identify:
 - i. Any areas of designated land that are no longer necessary for the ongoing operation, maintenance, renewal and protection of the underground cables and ancillary activities; and
 - ii. Any areas of designated land within the legal road boundaries that are more than 2.5 metres from the centreline of the cables (excluding joint bays, which should be 3 metres in width) ; and
- c. Remove the designation over the areas identified in (b) above in accordance with section 182 of the Act and provide a plan of the final designated areas to the Council for inclusion in the Auckland Unitary Plan.

8831 Penrose Portal

Designation Number	8831
Requiring Authority	Vector Ltd
Location	19 Gavin Street, Ellerslie
Rollover Designation	Yes
Legacy Reference	Designation F12-42, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission purposes: Penrose Portal (Gavin Street), Penrose to Hobson Street tunnel for the purposes of conveying electricity to the CBD.

Conditions

1. General

1.1 Except as modified by the conditions below, the work shall be undertaken in general accordance with the information provided by Vector at the hearing; the notice of requirement and supporting documents, namely: "Electricity Reinforcement Project, Tunnel to Auckland Central Business District, Assessment of Environmental Effects", February 1996, Tonkin and Taylor Ltd, and the associated Addendum dated 8 March 1996.

1.2 All activities, works and buildings not able to be fully disclosed in the notice of requirement (including the associated Assessment of Effects) and not provided for as a permitted activity shall be the subject of either:

- A new notice of requirement, which shall be publicly notified, pursuant to Section 168 of the Resource Management Act; or
- A notice to alter the designation, pursuant to section 181 of the Resource Management Act, which notice shall be publicly notified unless the alteration is minor and the affected persons agree in accordance with the provisions of Section 181(3) of the Act; or
- A resource consent.

1.4 During the construction of the tunnel and associated works this designation shall include that area of the Transpower site at Penrose ("All that parcel of land containing 7.7452 hectares more or less being Lot 1

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Deposited Plan 141417 situated in Block 1 Otahuhu Survey District" being all the land comprised in Certificate of Title 83D/707 North Auckland Registry) ("Transpower Site") which is shown as shaded on the attached plan marked "A" together with the land for the tunnel alignment.

1.5 On the completion of construction Vector shall advise in writing the Council's Manager - Regional and Local Planning and Transpower that construction is complete. On the date on which this advice is given the extent of this designation as it relates to the Transpower Site shall be reduced to the area which is shown as shaded on the attached plan marked "B", together with the land for the tunnel alignment.

1.6 The design of the tunnel and associated works shall be sufficient to ensure that the tunnel structure lasts for a minimum life of 200 years.

1.7 The tunnel shall be constructed in such a way as to prevent damage, loss of amenity or injury to people, buildings, and other property due to erosion, subsidence, or loss of support of the land adjacent to the tunnel.

1.8 When the tunnel, or any length of it, is no longer required, the length no longer required shall be backfilled to prevent subsidence.

1.9 All heated air and contaminated air from the tunnel and associated work shall be disposed of in a way which avoids creating a nuisance or hazard to people and other property.

1.10 The cables and associated equipment shall be designed, installed, and operated so as to, as far as practicable, minimise public exposure to electric and magnetic fields.

1.11 Upon request from Council, at no lesser intervals than annually, Vector shall provide written confirmation that the maximum levels of the electric and magnetic fields set out in the AEE are not exceeded.

1.12 Dust arising from construction activities shall be suppressed by the use of water sprays and other appropriate methods so as to prevent nuisance to adjacent occupiers and landowners.

1.13 Prior to the commencement of construction at each of the following tunnel sites, management plans shall be produced to the satisfaction of the Council's Manager - Resource Consents regulating construction activities at the Penrose Portal, Ellerslie Portal, Newmarket Portal, Liverpool substation, and Hobson substation. The management plans shall address the following issues:

- a. Traffic movements;
- b. Dust, including the effect of dust on the operation of electrical equipment at the Penrose site;
- c. Stock piling and storage of excavated material;
- d. Storage of construction equipment;
- e. Hours of operation by trucks;
- f. The effect of any vibration on sensitive plant (whether from blasting or otherwise) such as printing presses, and electrical equipment at the Transpower site;
- g. Wheel wash facilities;
- h. Screening of construction activities from residential properties and public places;
- i. Parking of workers' vehicles;
- j. Security fencing;
- k. Lighting in relation to adjacent residential properties.

1.14 Without limiting the effect of Condition 1.13 above the management plan relating to the Penrose Portal shall comply with Conditions 6.19 and 6.20.

1.15 All internal and external Council costs of monitoring the conditions are to be borne by the requiring authority.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.16 Vector shall not permit access to the tunnel for use by any third party which would negate the opportunity for Vector, Trans Power New Zealand Limited, Power New Zealand Limited, Northpower Limited and/or Top Energy Limited (or their successors) to use the tunnel for the purpose of installing transmission lines at a voltage at or exceeding 110 kV and up to 220 kV, without first advising each of such companies.

2. Noise (Excluding Blasting)

2.1 During the period of tunnel construction the daytime (7.30am to 8.00pm) L10 noise levels measured at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed 70 dBA.

2.1A For the Penrose and Hobson sites only.

During the period of tunnel construction the day time (7.00am to 8.00pm) L10 noise levels measured at 1m for the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed 70 dBA.

2.2 During the period of tunnel construction the night time (8.00pm to 7.30am) noise levels as measured at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed 45 dBA L10 and a maximum level (Lmax) of 75 dBA.

2.2A For the Penrose and Hobson sites only

During the period of tunnel construction the night time noise levels as measured at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed the following noise levels and a maximum level (Lmax) of 75 dBA:

Penrose site:

Monday to Saturday	8.00 pm to 11.00 pm	60 dBA L10
Monday to Saturday	11.00 pm to 7.00 am	50 dBA L10
Sunday night to Monday morning	8.00 pm to 7.00 am	45 dBA L10

Hobson Site:

Monday to Saturday	8.00 pm to 9.00 pm	60 dBA L10
Monday to Saturday	9.00 pm to 11.00 pm	55 dBA L10
Monday to Saturday	11.00 pm to 5.00 am	55 dBA L10
Monday to Saturday	5.00 am to 7.00 am	55 dBA L10
Sunday night to Monday morning	8.00 pm to 7.00 am	55 dBA L10

Other sites:

Unless otherwise stated all other sites shall comply with the noise levels contained in Conditions 2.1 and 2.2.

2.2B That, on confirmation by a Council Noise Control Officer that noise complaints received are correctly attributed to activities associated with the Tunnel project, Vector will undertake whatever steps are necessary to ensure that night time noise levels at the Hobson site comply with Condition 2.2A, and will undertake whatever monitoring the Council may reasonably require. Records shall be made available to the Council on request.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.3 During the period of tunnel construction, subject to Conditions 2.1 and 2.2 above, the L10 noise level generated by the project as measured at any time at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A", and which has a business activity zoning shall not exceed 80 dBA.

2.4 All plant associated with the long term operation of the tunnel (not including Transpower's operations at the Transpower site) is to be designed, constructed, and maintained to ensure that the following noise levels are not exceeded:

a. Noise measured at or within the boundary of any property except those with a business activity zoning:

Monday to Saturday	7.00am-10.00pm	L10 55 dBA
Sunday and Public Holidays	9.00am-6.00pm	L10 55 dBA
	At all other times	L10 45 dBA Lmax 75 dBA, or background (L95) plus 30 dBA, whichever is the lower

b. Noise measured at any time at or within the boundary of any property zoned business activity: L10 65 dBA.

2.5 Measurement and assessment shall be in accordance with the requirements of NZS 6801:1999 "Measurement of Environmental Sound" and NZS 6802:1999 "Assessment of Environmental Noise". The noise shall be measured with a sound level meter complying at least with the International Standard IEC 651 (1979): Sound Level Meters, Type 1.

3. Blasting

3.1 For the purpose of Conditions 3.1A - 3.8 blasting means the use of explosives to loosen or dislodge rock material.

3.1 A Prior to blasting within the tunnel, Vector shall give at least 12 hours written notice of the location and timing of the blast(s) to the following parties:

- a. Occupants of buildings within 100m of the blast site; and
- b. The Manager, Resource Consents and Compliance.

3.2 Notwithstanding Condition 3.1 hereof trial blasting shall be undertaken in accordance with Conditions 6.1 - 6.4 inclusive.

3.3 Blasting activities shall be so controlled as to ensure that any ground vibration as the result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full story of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 "Structural Vibration in Buildings - Effect on Structures", will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetres per second (mm/s).

3.4 The noise created by the use of explosives for blasting shall either not exceed a peak overall sound pressure level of 128 dB (ie a peak over pressure of 0.05 kPa) or alternatively the noise shall not exceed a peak sound level of 122 dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not connected with the Transpower site).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3.5 The maximum number of blasts shall be limited to three times per day per location. The locations are on land included in this designation and comprise the following places where the tunnel exits to ground level: Hobson substation, Liverpool substation, Newmarket portal, Ellerslie egress shaft and Penrose portal.

3.6 Except with the permission of Manager - Resource Consents and Compliance, and subject to Condition 3.5, blasting for the Penrose Portal shall only occur between the hours of 7.30am and 8.00pm Monday to Sunday and no blasting shall occur on public holidays.

3.7 Except with the permission of Manager - Resource Consents and Compliance, blasting at all other tunnel sites shall only occur between the hours of 7.30am and 8.00pm Monday to Saturday and no blasting shall occur on Sundays and public holidays.

3.8 Vector will take whatever steps are necessary to ensure that blasting complies with Conditions 3.3 and 3.4, and will undertake whatever monitoring the Council may reasonably require. Records shall be made available to Council on request. The monitoring sites and methods shall be agreed with Manager - Resource Consents and Compliance prior to the commencement of work.

3.9 The requirement for monitoring and recording may be relaxed at the discretion of Manager - Resource Consents and Compliance after Vector has provided written evidence of consultation by Vector with Transpower in respect of the Trans Power Site if it is considered that the noise and vibration level from blasting at any one location has decreased sufficiently. Any blast undertaken on Sundays and public holidays, or between the hours of 8.00pm and 7.30am, shall be monitored.

4. Vibration

4.1 Activities other than blasting shall not generate vibrations which may cause discomfort or adversely affect the health and well being of the occupants of premises outside the designation as shown on the attached plan marked "A" during construction and the attached plan marked "B" after construction is completed. Vibrations which do not exceed the limits referred to below as set out in the provisions of International Standard ISO 2631-2:1989 "Evaluation of human exposure to whole body vibration - Part 2 Continuous and shock-induced vibration in buildings (1 to 80 Hz)" will be deemed to meet this requirement. These particular limits are that the vibration levels (acceleration measured in metres per second) relative to the frequency shall not exceed the base curves of Figure 2A (z axis), 3a (x, y and z axes) and 4a (combined x, y and z axes) of ISO 2631-2:1989.

4.2 The assessment of continuous, intermittent and transient (impulsive) vibrations shall be carried out by a suitably qualified and experienced person in accordance with Annex A and Table 2 of ISO 2631-2:1989.

4.3 The instruments used to measure vibrations and the methods of measurement shall comply with a recognised standard such as Australian Standard AS 2973:1987 Vibration and Shock - Human response.

4.4 Subject to Conditions 4.5 and 6.2, Manager: City Planning may approve vibration levels above the standards specified in Condition 4.1 where he/she is satisfied that they are necessary for construction or demolition work of a limited duration.

4.5 All tunnel construction activities shall be so controlled as to ensure that any ground vibration created will not adversely affect the structural stability of any building or structure (that is not connected with the land covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3: 1986 "Structural Vibration in Buildings - Effects on Structures", will be deemed to meet these requirements. Such monitoring as is necessary to ensure compliance with this condition shall be undertaken. Records shall be made available to the Council on request.

5. Traffic

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.1 On site manoeuvring for trucks shall be provided so that no reverse manoeuvring onto the street will occur at any of the tunnel sites.

5.2 Wheel-wash facilities shall be provided for all trucks exiting the tunnel sites so that no excavation material is tracked onto the streets.

5.3 Vector will undertake measures to keep the roads in the vicinity of the tunnel construction sites free from any debris resulting from the construction work.

5.4 Programming of truck movements shall be arranged so that trucks do not wait or queue on the street other than for normal traffic movements when their way is obstructed by opposing traffic. The movements of trucks and other construction traffic shall be regulated in accordance with the management plans referred to in Condition 1.13.

5.5 Hobson Portal

a. There shall be no right turn movements into Fanshawe Street for trucks leaving the site at any time. There shall be no right turn movements from vehicles entering the site from Fanshawe Street between the hours of 4.30pm to 6.00pm, Monday to Friday.

b. The right turn pocket on Fanshawe St shall be widened and lengthened by Vector in accordance with the attached sketch plan 2289/2 by Traffic Design Group (see B08-03(d)) in order to facilitate the right turn movement of trucks during permitted hours. The costs of these roadworks are to be borne by Vector.

c. A sign to warn Fanshawe St traffic of slow trucks merging shall be installed to the satisfaction of the Manager - Resource Consents and Compliance.

5.6 Newmarket Portal

a. The primary truck routes to and from the site shall be as indicated in the attached plan B08-03(c) being Figure 6, page 16 of the report entitled Assessment of Effects on the Environment: Traffic, January 1996, Traffic Design Group, or such alternative truck routes as agreed by Council as part of the management plan required under Condition 1.13.

5.7 Penrose Portal

a. Right turn movements of trucks at the Gavin St/Penrose Rd intersection shall not be permitted between 7.00am to 9.00am and 4.00pm to 6.00pm, Monday to Friday.

b. There shall be no use by heavy construction vehicles of the northern section of Gavin St which serves residential zoned properties, or of any of Eaglehurst Road.

5.8 Liverpool Street Substation

a. No trucks shall be permitted to use City Rd or Liverpool St between Karangahape Rd and Turner St.

6. Penrose Site

Wilson and Horton Limited

6.1 Notwithstanding the requirements of Conditions 3.3, the following conditions shall apply in respect of the Herald printing press site owned by Wilson and Horton:

a. That vibration at the boundary of the Herald site during the construction of the Penrose Portal shall not exceed 5mm per second or half of any vibration level that is found to interfere with the operation or printing quality of presses on the Herald site, whichever is the lesser;

b. Subject to the requirements of Condition 3.6 and the requirements as to trial blasting in Condition 6.4 hereof, the first blast following the completion of trial blasting at the Penrose Portal and as many subsequent blasts as possible shall occur between the hours of 3.30pm on Saturday and 10.30pm on Sunday;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. That Vector shall prior to the commencement of the construction of the Penrose Portal install and monitor equipment where agreed with Wilson & Horton to gauge the level of vibration experienced at the Herald site as a result of blasting. If Vector and Wilson & Horton are unable to reach agreement, then monitoring shall occur at the direction of the Manager: City Planning. Records shall be made available to the Council on request; and

d. That if monitoring at any stage shows a level of vibration induced by the tunnel blasting which is interfering with an accepted standard of print register for those presses, then Vector shall use an alternative method of excavation which does not interfere with the printing process; or blast only between the hours of 3.30pm Saturday and 10.30pm Sunday (subject to the Condition 3.6 hereof).

Transpower New Zealand Limited

Transpower New Zealand Limited

6.2 Vector shall undertake the construction of the tunnel, portal and associated equipment (including plant room) at the Transpower site in such a manner that avoids as far as practicable a level of vibration induced by such activities which causes or is likely to cause a partial or total shut down of transmission of electricity through the substation.

6.3 Prior to the commencement of construction, Vector shall undertake trial blasting and trial truck movements for the purpose of determining levels of vibration which, if not exceeded, would ensure that the obligation arising under Condition 6.2 hereof is satisfied. Such trials shall be undertaken in the presence of a representative or representatives of Transpower New Zealand Limited. Records shall be made available to the Council on request.

6.4 Such trial blasts as required by Condition 6.3, shall occur between the hours of 3:30 pm to 6:00 pm Saturday and 9:00 am to 6:00 pm Sunday over four consecutive weekends. Three days notice of such trial blasting shall be given to the Manager - Resource Consents and Compliance

6.5 Vector shall install equipment for the purpose of measuring and monitoring the level of vibration induced at Trans Power's Penrose substation site as a result of construction, the location of such equipment to be agreed with Transpower New Zealand Ltd. If Vector and Transpower are unable to reach agreement about the location, such monitoring shall be undertaken as required by the Manager - Resource Consents and Compliance, Auckland Council. Records shall be made available to Council on request.

6.6 In the event that the monitoring undertaken pursuant to Condition 6.4 hereof indicates that levels of vibration induced by construction activities have resulted in or are likely to result in a failure to comply with Condition 6.2 hereof, Vector shall adopt alternative methods to ensure that Condition 6.2 is satisfied.

Dust

6.7 Vector shall undertake the construction of the tunnel, portal and associated equipment (including plant room) at the Transpower site in such a manner that avoids as far as practicable the generation of dust from such activities which causes or is likely to cause a partial or total shutdown of transmission of electricity through the substation.

6.8 Without limiting the effect of Condition 6.7, no construction activity shall generate more than 60 micrograms per cubic metre of dust or air suspended particulate matter, as measured over any 5 day period at the boundary of the Transpower site.

6.9 Any measures adopted to remedy the effects of dust generation (including live line washing) shall be undertaken so as to avoid or mitigate as far as practicable any potential adverse effects of such activities on adjacent residential properties in Gavin Street.

6.10 Vector shall undertake monitoring of any dust generated by construction activities, for the purpose of determining whether Conditions 6.7 and 6.8 hereof are being complied with. Monitoring will be undertaken daily for the first month of tunnel blasting (not including any trial blasting). Further monitoring shall be undertaken

The Proposed Auckland Unitary Plan (notified 30 September 2013)

during the construction period to determine compliance with Conditions 6.7 and 6.8 hereof as appropriate or as a result of any complaints by owners and/or occupiers of adjoining residential properties. The further monitoring shall be at the discretion of the Manager: City Planning. Copies of the monitoring results shall be provided to Trans Power. Records shall be made available to Council on request.

6.11 In the event that the monitoring undertaken in accordance with Condition 6.10 hereof indicates a failure to comply with Conditions 6.7 and 6.8 hereof, Vector shall adopt alternative methods to ensure that those conditions are satisfied.

Visual

6.12 Any visual effects of construction activities on adjoining residential properties in Gavin Street, including the effects of any stockpile, shall be minimised.

6.13 Without limiting Condition 6.12, prior to the commencement of other work on the site Vector shall construct an acoustical fence of a height not less than 1.8 metres (being at least a concrete block wall of a single block width) on Trans Power's site, in the location shown on the attached plan marked "A".

6.14 As soon as practicable after construction of the fence referred to in paragraph 6.13 hereof, permanent landscaping of the area between this fence and the boundary of adjacent residential properties in Gavin Street shall be undertaken, to the satisfaction of the Manager - Resource Consents and Compliance.

Access

6.15 The construction area shall be separated from the balance of Transpower's site by an appropriate security fence.

6.16 The only access and egress to the construction site shall be via a gate as shown on the attached plan marked "A" as Transpower's Gate 2 on Gavin Street.

Management Plan

6.17 Condition 1.13 shall apply to any management plan developed under Conditions 6.19 and 6.20 below.

6.18 Vector shall, at least 20 working days before the commencement of construction on the Transpower site, submit to the Manager - Resource Consents and Compliance, for approval, a Penrose Portal and Plantroom Construction Management Plan for the land as shown on the attached plan marked "A" setting out:

- a. Portal and plantroom design details (including site development, landscaping, and access details), construction plans and methods, and proposed maintenance methods and practices.
- b. The manner in which the requirements of the above Conditions relating to vibration, dust, lighting and access are to be complied with and shall include a driver awareness programme.

6.19 The Management Plan submitted in accordance with Condition 6.18 here of shall:

- a. Be to a standard satisfactory to the Manager - Resource Consents and Compliance, Auckland City Council.
- b. Be prepared in consultation with Transpower New Zealand Limited.
- c. Contain a statement from Trans Power acknowledging that consultation in accordance with paragraph (b) hereof has been undertaken.

6.20 The Council shall approve the plan or advise Vector of any recommended amendments thereto or additional information required within 10 working days of the receipt of the Management Plan.

6.21 The portal and plantroom and associated activities shall be constructed in general accordance with the requirements of the Management Plan approved by the Council.

7. Liverpool Street and Hobson Street Sites

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.1 Prior to the installation of transformers at these sites, a hazard mitigation plan shall be produced for the transformers at the Liverpool and Hobson substations to the satisfaction of Manager - Resource Consents and Compliance. The plan shall cover operating and maintenance procedures to prevent oil leaks from contaminating the environment and detail cleanup procedures including disposal of any wastes in the event of an oil leak.

7.2 An archaeologist shall be present during the initial stages of work at Liverpool St and Hobson St egresses. The archaeologist shall remain at the sites until the archaeologist considers his/her presence is no longer required. The archaeologist shall advise the Manager - Resource Consents and Compliance in writing when his/her attendance is no longer required.

7.4 Prior to any building occurring across the boundaries of Lot 1 DP 112657, Lot 1 51978 and Lot 1 DP 52038 in conjunction with the extension to the Liverpool St substation, the affected Certificates of Title shall be held together in such a way they cannot be dealt with separately without the prior written consent of Council.

7.5 Prior to commencing work under Hobson St:

- a. Vector, in consultation with a representative of the Roman Catholic Bishop of Auckland, shall arrange for establishment of survey measuring points at St Patrick's Cathedral and the Cathedral Presbytery; and
- b. Vector shall participate with the Bishop's representative in updating the existing survey of the physical condition of St Patrick's Cathedral

7.6 The survey measuring points established in accordance with Condition 7.5(a) above shall be surveyed regularly by an independent surveyor during construction works until sufficient time has elapsed to give a high level of confidence that no deformations are likely to occur .

7.7 The survey measurements taken in accordance with Conditions 7.5(a) and 7.6 above shall be supplied to the Roman Catholic Bishop of Auckland and to Manager - Resource Consents and Compliance.

7.8 If the survey measurements taken in accordance with Conditions 7.5(a) and 7.6 above indicate that movement has occurred then Vector shall, in conjunction with the Bishop's representative, resurvey St Patrick's Cathedral and any new physical damage which is verified by an independent engineer as being caused by the construction of the tunnel shall be rectified at Vector's expense.

7A. Hazardous Substances

7A.1 The storage and use of hazardous substances at the Hobson, Newmarket, and Penrose Portals shall be in accordance with the "Vector Tunnel Project Hazardous Substances Assessment of Environmental Effects" undertaken by Tonkin and Taylor Ltd and dated May 1999.

7A.2 The areas of the Hobson, Newmarket and Penrose Portals immediately involved in the storage, loading, unloading, using or otherwise handling of waste and other hazardous substances, shall be protected by spill containment systems that shall comply with the following:

- a. Be constructed of impervious material that are resistant to the hazardous substances involved;
- b. Be able to contain the maximum volume of the largest tank used; and
- c. Be designed, constructed and managed so that any spill or release of any hazardous substance and any stormwater that may have entered and become contaminated in the spill containment system is prevented from entering the stormwater system and is prevented from discharging into or onto the land or groundwater, any water body, or potable water supply.

7A.3 Prior to construction of the spill containment systems referred to in Condition 7A.2 above, Vector shall produce a spill contingency plan, an emergency evacuation plan, a health and safety plan, and a fire safety plan for the Hobson, Newmarket and Penrose Portals to the satisfaction of Council. Vector shall comply with these plans at all times.

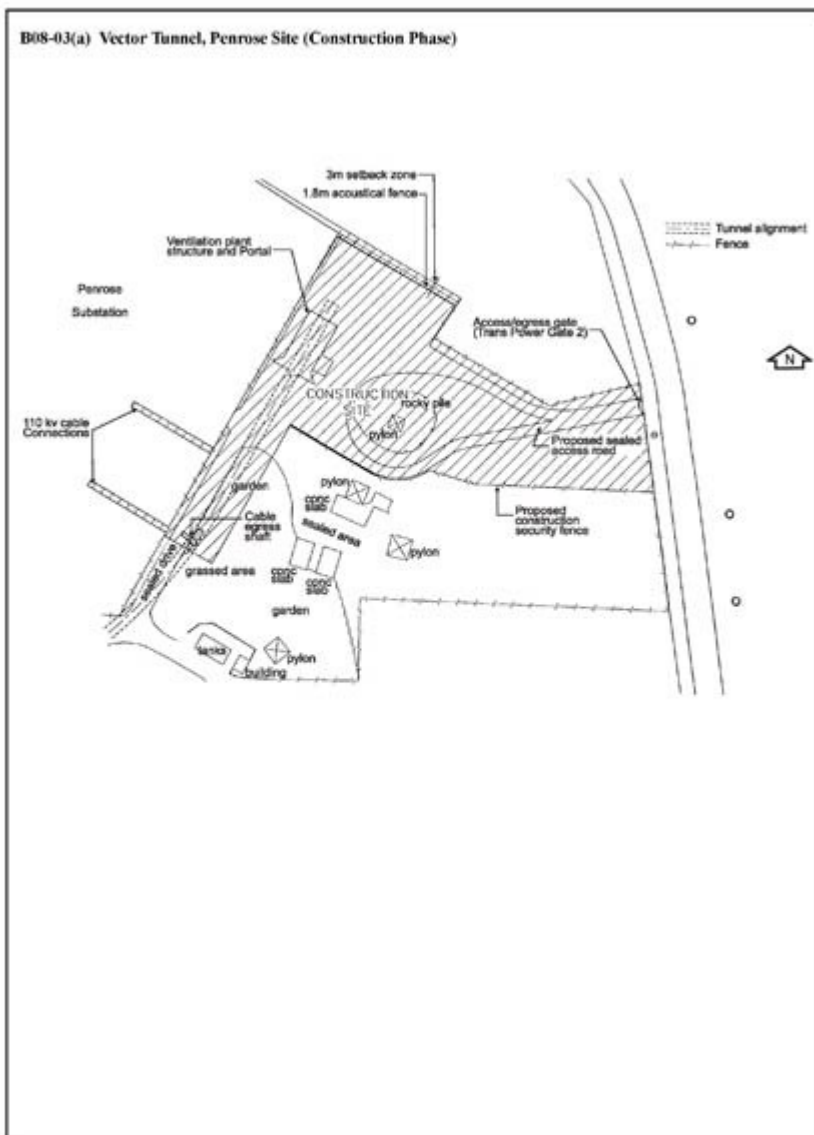

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Advice Notes

1. The requiring authority needs to obtain all other necessary consents and permits, including those under the Building Act 1991, and comply with all relevant Council bylaws.
2. The Penrose substation site is subject to an existing Transpower designation (Penrose Substation) and an existing Council designation (Proposed Accessway, Gavin St to McNab St Subway). As such the Vector designation is to be identified as the later designation in the District Plan. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.

Legacy Reference	Designation 288, Auckland Council District Plan (Central Area Section) 2005; and Designation B08-03, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity transmission for the purposes of conveying electricity to the Auckland CBD.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

The construction, operation and maintenance of:

- a. An underground tunnel from Transpower New Zealand Limited's ("Transpower") existing substation at Gavin Street, Penrose, to Vector Limited's ("Vector") existing substations at Liverpool Street and Hobson Street for the purpose of conveying electricity to the Auckland Central Business District ("CBD"), together with all ancillary and related infrastructure including portals and ventilation fans. The tunnel will contain electric cables, with a maximum anticipated capacity of three 220kV circuits of 500MVA each and ancillary equipment;
- b. Electric cables contained within the tunnel. It is initially proposed to install two circuits of 110kV circuits at 230MVA each, and ancillary equipment. It is intended to upgrade the electricity supply carried through the tunnel over the next 10-20 years in response to load growth and other alterations to the network. It is anticipated that any future upgrades will result in a maximum capacity of three 220kV circuits at 500MVA each and ancillary equipment; and
- c. The construction and operation of a building containing 110kV and future 220kV gas insulated switch gear and three future 220/110kV transformers at an extension to Vector's Liverpool substation site.

Conditions

1. General

1.1 Except as modified by the conditions below, the work shall be undertaken in general accordance with the information provided by Vector at the hearing; the notice of requirement and supporting documents, namely: "Electricity Reinforcement Project, Tunnel to Auckland Central Business District, Assessment of Environmental Effects", February 1996, Tonkin and Taylor Ltd, and the associated Addendum dated 8 March 1996.

1.2 All activities, works and buildings not able to be fully disclosed in the notice of requirement (including the associated Assessment of Effects) and not provided for as a permitted activity shall be the subject of either:

- a. A new notice of requirement, which shall be publicly notified, pursuant to Section 168 of the Resource Management Act; or
- b. A notice to alter the designation, pursuant to section 181 of the Resource Management Act, which notice shall be publicly notified unless the alteration is minor and the affected persons agree in accordance with the provisions of Section 181(3) of the Act; or
- c. A resource consent.

1.4 During the construction of the tunnel and associated works this designation shall include that area of the Transpower site at Penrose ("All that parcel of land containing 7.7452 hectares more or less being Lot 1 Deposited Plan 141417 situated in Block 1 Otahuhu Survey District" being all the land comprised in Certificate of Title 83D/707 North Auckland Registry) ("Transpower Site") which is shown as shaded on the attached plan marked "A" together with the land for the tunnel alignment.

1.5 On the completion of construction Vector shall advise in writing the Manager - Regional and Local Planning and Transpower that construction is complete. On the date on which this advice is given the extent of this designation as it relates to the Transpower Site shall be reduced to the area which is shown as shaded on the attached plan marked "B", together with the land for the tunnel alignment.

1.6 The design of the tunnel and associated works shall be sufficient to ensure that the tunnel structure lasts for a minimum life of 200 years.

1.7 The tunnel shall be constructed in such a way as to prevent damage, loss of amenity or injury to people, buildings, and other property due to erosion, subsidence, or loss of support of the land adjacent to the tunnel.

1.8 When the tunnel, or any length of it, is no longer required, the length no longer required shall be backfilled to prevent subsidence.

1.9 All heated air and contaminated air from the tunnel and associated work shall be disposed of in a way which

The Proposed Auckland Unitary Plan (notified 30 September 2013)

avoids creating a nuisance or hazard to people and other property.

1.10 The cables and associated equipment shall be designed, installed, and operated so as to, as far as practicable, minimise public exposure to electric and magnetic fields.

1.11 Upon request from Council, at no lesser intervals than annually, Vector shall provide written confirmation that the maximum levels of the electric and magnetic fields set out in the AEE are not exceeded.

1.12 Dust arising from construction activities shall be suppressed by the use of water sprays and other appropriate methods so as to prevent nuisance to adjacent occupiers and landowners.

1.13 Prior to the commencement of construction at each of the following tunnel sites, management plans shall be produced to the satisfaction of the Manager: Resource Consents and Compliance regulating construction activities at the Penrose Portal, Ellerslie Portal, Newmarket Portal, Liverpool substation, and Hobson substation. The management plans shall address the following issues:

- a. Traffic movements;
- b. Dust, including the effect of dust on the operation of electrical equipment at the Penrose site;
- c. Stock piling and storage of excavated material;
- d. Storage of construction equipment;
- e. Hours of operation by trucks;
- f. The effect of any vibration on sensitive plant (whether from blasting or otherwise) such as printing presses, and electrical equipment at the Transpower site;
- g. Wheel wash facilities;
- h. Screening of construction activities from residential properties and public places;
- i. Parking of workers' vehicles;
- j. Security fencing;
- k. Lighting in relation to adjacent residential properties.

1.14 Without limiting the effect of Condition 1.13 above the management plan relating to the Penrose Portal shall comply with Conditions 6.19 and 6.20.

1.15 All internal and external Council costs of monitoring the conditions are to be borne by the requiring authority.

1.16 Vector shall not permit access to the tunnel for use by any third party which would negate the opportunity for Vector, Trans Power New Zealand Limited, Power New Zealand Limited, Northpower Limited and/or Top Energy Limited (or their successors) to use the tunnel for the purpose of installing transmission lines at a voltage at or exceeding 110 kV and up to 220 kV, without first advising each of such companies.

2. Noise (Excluding Blasting)

2.1 During the period of tunnel construction the daytime (7.30am to 8.00pm) L10 noise levels measured at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed 70 dBA.

2.1A For the Penrose and Hobson sites only.

During the period of tunnel construction the day time (7.00am to 8.00pm) L10 noise levels measured at 1m for the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed 70 dBA.

2.2 During the period of tunnel construction the night time (8.00pm to 7.30am) noise levels as measured at 1m

The Proposed Auckland Unitary Plan (notified 30 September 2013)

from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed 45 dBA L10 and a maximum level (Lmax) of 75 dBA.

2.2A For the Penrose and Hobson sites only

During the period of tunnel construction the night time noise levels as measured at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A" and which is not zoned business activity shall not exceed the following noise levels and a maximum level (Lmax) of 75 dBA:

Penrose Site:

Monday to Saturday	8.00 pm to 11.00 pm	60 dBA L10
Monday to Saturday	11.00 pm to 7.00 am	50 dBA L10
Sunday night to Monday morning	8.00 pm to 7.00 am	45 dBA L10

Hobson Site:

Monday to Saturday	8.00 pm to 9.00 pm	60 dBA L10
Monday to Saturday	9.00 pm to 11.00 pm	55 dBA L10
Monday to Saturday	11.00 pm to 5.00 am	55 dBA L10
Monday to Saturday	5.00 am to 7.00 am	55 dBA L10
Sunday night to Monday morning	8.00 pm to 7.00 am	55 dBA L10

Other sites:

Unless otherwise stated all other sites shall comply with the noise levels contained in Conditions 2.1 and 2.2.

2.2B That, on confirmation by a Council Noise Control Officer that noise complaints received are correctly attributed to activities associated with the Tunnel project, Vector will undertake whatever steps are necessary to ensure that night time noise levels at the Hobson site comply with Condition 2.2A, and will undertake whatever monitoring the Council may reasonably require. Records shall be made available to the Council on request.

2.3 During the period of tunnel construction, subject to Conditions 2.1 and 2.2 above, the L10 noise level generated by the project as measured at any time at 1m from the most exposed window or door of any occupied building on any land which is not the subject of this designation as shown on the attached plan marked "A", and which has a business activity zoning shall not exceed 80 dBA.

2.4 All plant associated with the long term operation of the tunnel (not including Transpower's operations at the Transpower site) is to be designed, constructed, and maintained to ensure that the following noise levels are not exceeded:

a. Noise measured at or within the boundary of any property except those with a business activity zoning:

Monday to Saturday	7.00am-10.00pm	L10 55 dBA
Sunday and Public Holidays	9.00am-6.00pm	L10 55 dBA
	At all other times	L10 45 dBA Lmax 75 dBA, or background (L95) plus 30 dBA, whichever is the lower

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. Noise measured at any time at or within the boundary of any property zoned business activity: L10 65 dBA.

2.5 Measurement and assessment shall be in accordance with the requirements of NZS 6801:1999 "Measurement of Environmental Sound" and NZS 6802:1999 "Assessment of Environmental Noise". The noise shall be measured with a sound level meter complying at least with the International Standard IEC 651 (1979): Sound Level Meters, Type 1.

3. Blasting

3.1 For the purpose of Conditions 3.1A - 3.8 blasting means the use of explosives to loosen or dislodge rock material.

3.1 A Prior to blasting within the tunnel, Vector shall give at least 12 hours written notice of the location and timing of the blast(s) to the following parties:

- a. Occupants of buildings within 100m of the blast site; and
- b. Manager: Resource Consents and Compliance

3.2 Notwithstanding Condition 3.1 hereof trial blasting shall be undertaken in accordance with Conditions 6.1 - 6.4 inclusive.

3.3 Blasting activities shall be so controlled as to ensure that any ground vibration as the result of any blasting will not adversely affect the structural stability of any building or structure including electrical equipment (that is not connected with the site covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full story of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3:1986 "Structural Vibration in Buildings - Effect on Structures", will be deemed to meet these requirements. Peak particle velocity means the maximum particle velocity in any of the three mutually perpendicular directions. The units are millimetres per second (mm/s).

3.4 The noise created by the use of explosives for blasting shall either not exceed a peak overall sound pressure level of 128 dB (ie a peak over pressure of 0.05 kPa) or alternatively the noise shall not exceed a peak sound level of 122 dBC. The measurement shall be made in either case at 1m from the most exposed window or door of any occupied building (that is not connected with the Transpower site).

3.5 The maximum number of blasts shall be limited to three times per day per location. The locations are on land included in this designation and comprise the following places where the tunnel exits to ground level: Hobson substation, Liverpool substation, Newmarket portal, Ellerslie egress shaft and Penrose portal.

3.6 Except with the permission of Manager: Resource Consents and Compliance, and subject to Condition 3.5, blasting for the Penrose Portal shall only occur between the hours of 7.30am and 8.00pm Monday to Sunday and no blasting shall occur on public holidays.

3.7 Except with the permission of Manager: Resource Consents and Compliance, blasting at all other tunnel sites shall only occur between the hours of 7.30am and 8.00pm Monday to Saturday and no blasting shall occur on Sundays and public holidays.

3.8 Vector will take whatever steps are necessary to ensure that blasting complies with conditions 3.3 and 3.4, and will undertake whatever monitoring the Council may reasonably require. Records shall be made available to Council on request. The monitoring sites and methods shall be agreed with Council's Manager: Resource Consents and Compliance prior to the commencement of work.

3.9 The requirement for monitoring and recording may be relaxed at the discretion of Manager: Resource Consents and Compliance after Vector has provided written evidence of consultation by Vector with Trans

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Power in respect of the Trans Power Site if it is considered that the noise and vibration level from blasting at any one location has decreased sufficiently. Any blast undertaken on Sundays and public holidays, or between the hours of 8.00pm and 7.30am, shall be monitored.

4. Vibration

4.1 Activities other than blasting shall not generate vibrations which may cause discomfort or adversely affect the health and well being of the occupants of premises outside the designation as shown on the attached plan marked "A" during construction and the attached plan marked "B" after construction is completed. Vibrations which do not exceed the limits referred to below as set out in the provisions of International Standard ISO 2631-2:1989 "Evaluation of human exposure to whole body vibration - Part 2 Continuous and shock-induced vibration in buildings (1 to 80 Hz)" will be deemed to meet this requirement. These particular limits are that the vibration levels (acceleration measured in metres per second) relative to the frequency shall not exceed the base curves of Figure 2A (z axis), 3a (x, y and z axes) and 4a (combined x, y and z axes) of ISO 2631-2:1989.

4.2 The assessment of continuous, intermittent and transient (impulsive) vibrations shall be carried out by a suitably qualified and experienced person in accordance with Annex A and Table 2 of ISO 2631-2:1989.

4.3 The instruments used to measure vibrations and the methods of measurement shall comply with a recognised standard such as Australian Standard AS 2973:1987 Vibration and Shock - Human response.

4.4 Subject to Conditions 4.5 and 6.2, Manager: City Planning may approve vibration levels above the standards specified in Condition 4.1 where he/she is satisfied that they are necessary for construction or demolition work of a limited duration.

4.5 All tunnel construction activities shall be so controlled as to ensure that any ground vibration created will not adversely affect the structural stability of any building or structure (that is not connected with the land covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3: 1986 "Structural Vibration in Buildings - Effects on Structures", will be deemed to meet these requirements. Such monitoring as is necessary to ensure compliance with this condition shall be undertaken. Records shall be made available to the Council on request.

5. Traffic

5.1 On site manoeuvring for trucks shall be provided so that no reverse manoeuvring onto the street will occur at any of the tunnel sites.

5.2 Wheel-wash facilities shall be provided for all trucks exiting the tunnel sites so that no excavation material is tracked onto the streets.

5.3 Vector will undertake measures to keep the roads in the vicinity of the tunnel construction sites free from any debris resulting from the construction work.

5.4 Programming of truck movements shall be arranged so that trucks do not wait or queue on the street other than for normal traffic movements when their way is obstructed by opposing traffic. The movements of trucks and other construction traffic shall be regulated in accordance with the management plans referred to in Condition 1.13.

5.5 Hobson Portal

a. There shall be no right turn movements into Fanshawe Street for trucks leaving the site at any time. There shall be no right turn movements from vehicles entering the site from Fanshawe Street between the hours of 4.30pm to 6.00pm, Monday to Friday.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. The right turn pocket on Fanshawe St shall be widened and lengthened by Vector in accordance with the attached sketch plan 2289/2 by Traffic Design Group (see B08-03(d)) in order to facilitate the right turn movement of trucks during permitted hours. The costs of these roadworks are to be borne by Vector.

c. A sign to warn Fanshawe Street traffic of slow trucks merging shall be installed to the satisfaction of Council's Manager: Resource Consents and Compliance.

5.6 Newmarket Portal

a. The primary truck routes to and from the site shall be as indicated in the attached plan B08-03(c) being Figure 6, page 16 of the report entitled Assessment of Effects on the Environment: Traffic, January 1996, Traffic Design Group, or such alternative truck routes as agreed by Council as part of the management plan required under Condition 1.13.

5.7 Penrose Portal

a. Right turn movements of trucks at the Gavin St/Penrose Rd intersection shall not be permitted between 7.00am to 9.00am and 4.00pm to 6.00pm, Monday to Friday.

b. There shall be no use by heavy construction vehicles of the northern section of Gavin St which serves residential zoned properties, or of any of Eaglehurst Road.

5.8 Liverpool Street Substation

a. No trucks shall be permitted to use City Rd or Liverpool St between Karangahape Rd and Turner St.

6. Penrose Site

Wilson and Horton Limited

6.1 Notwithstanding the requirements of Conditions 3.3, the following conditions shall apply in respect of the Herald printing press site owned by Wilson and Horton:

a. That vibration at the boundary of the Herald site during the construction of the Penrose Portal shall not exceed 5mm per second or half of any vibration level that is found to interfere with the operation or printing quality of presses on the Herald site, whichever is the lesser;

b. Subject to the requirements of Condition 3.6 and the requirements as to trial blasting in Condition 6.4 hereof, the first blast following the completion of trial blasting at the Penrose Portal and as many subsequent blasts as possible shall occur between the hours of 3.30pm on Saturday and 10.30pm on Sunday;

c. That Vector shall prior to the commencement of the construction of the Penrose Portal install and monitor equipment where agreed with Wilson & Horton to gauge the level of vibration experienced at the Herald site as a result of blasting. If Vector and Wilson & Horton are unable to reach agreement, then monitoring shall occur at the direction of the Manager: City Planning. Records shall be made available to the Council on request; and

d. That if monitoring at any stage shows a level of vibration induced by the tunnel blasting which is interfering with an accepted standard of print register for those presses, then Vector shall use an alternative method of excavation which does not interfere with the printing process; or blast only between the hours of 3.30pm Saturday and 10.30pm Sunday (subject to the Condition 3.6 hereof).

Transpower New Zealand Limited

Transpower New Zealand Ltd

6.2 Vector shall undertake the construction of the tunnel, portal and associated equipment (including plant room) at the Transpower site in such a manner that avoids as far as practicable a level of vibration induced by such activities which causes or is likely to cause a partial or total shut down of transmission of electricity through the substation.

6.3 Prior to the commencement of construction, Vector shall undertake trial blasting and trial truck movements for the purpose of determining levels of vibration which, if not exceeded, would ensure that the obligation arising under Condition 6.2 hereof is satisfied. Such trials shall be undertaken in the presence of a representative or

The Proposed Auckland Unitary Plan (notified 30 September 2013)

representatives of Transpower New Zealand Limited. Records shall be made available to the Council on request.

6.4 Such trial blasts as required by Condition 6.3, shall occur between the hours of 3:30 pm to 6:00 pm Saturday and 9:00 am to 6:00 pm Sunday over four consecutive weekends. Three days notice of such trial blasting shall be given to the Manager: Resource Consents and Compliance.

6.5 Vector shall install equipment for the purpose of measuring and monitoring the level of vibration induced at Trans Power's Penrose substation site as a result of construction, the location of such equipment to be agreed with Trans Power New Zealand Ltd. If Vector and Trans Power are unable to reach agreement about the location, such monitoring shall be undertaken as required by the Manager: Resource Consents and Compliance, Auckland City Council. Records shall be made available to Council on request.

6.6 In the event that the monitoring undertaken pursuant to Condition 6.4 hereof indicates that levels of vibration induced by construction activities have resulted in or are likely to result in a failure to comply with Condition 6.2 hereof, Vector shall adopt alternative methods to ensure that Condition 6.2 is satisfied.

Dust

6.7 Vector shall undertake the construction of the tunnel, portal and associated equipment (including plant room) at the Transpower site in such a manner that avoids as far as practicable the generation of dust from such activities which causes or is likely to cause a partial or total shutdown of transmission of electricity through the substation.

6.8 Without limiting the effect of Condition 6.7, no construction activity shall generate more than 60 micrograms per cubic metre of dust or air suspended particulate matter, as measured over any 5 day period at the boundary of the Transpower site.

6.9 Any measures adopted to remedy the effects of dust generation (including live line washing) shall be undertaken so as to avoid or mitigate as far as practicable any potential adverse effects of such activities on adjacent residential properties in Gavin Street.

6.10 Vector shall undertake monitoring of any dust generated by construction activities, for the purpose of determining whether Conditions 6.7 and 6.8 hereof are being complied with. Monitoring will be undertaken daily for the first month of tunnel blasting (not including any trial blasting). Further monitoring shall be undertaken during the construction period to determine compliance with Conditions 6.7 and 6.8 hereof as appropriate or as a result of any complaints by owners and/or occupiers of adjoining residential properties. The further monitoring shall be at the discretion of the Manager: City Planning. Copies of the monitoring results shall be provided to Trans Power. Records shall be made available to Council on request.

6.11 In the event that the monitoring undertaken in accordance with Condition 6.10 hereof indicates a failure to comply with Conditions 6.7 and 6.8 hereof, Vector shall adopt alternative methods to ensure that those conditions are satisfied.

Visual

6.12 Any visual effects of construction activities on adjoining residential properties in Gavin Street, including the effects of any stockpile, shall be minimised.

6.13 Without limiting Condition 6.12, prior to the commencement of other work on the site Vector shall construct an acoustical fence of a height not less than 1.8 metres (being at least a concrete block wall of a single block width) on Trans Power's site, in the location shown on the attached plan marked "A".

6.14 As soon as practicable after construction of the fence referred to in paragraph 6.13 hereof, permanent landscaping of the area between this fence and the boundary of adjacent residential properties in Gavin Street

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall be undertaken, to the satisfaction of the Manager: Resource Consents and Compliance.

Access

6.15 The construction area shall be separated from the balance of Transpower's site by an appropriate security fence.

6.16 The only access and egress to the construction site shall be via a gate as shown on the attached plan marked "A" as Transpower's Gate 2 on Gavin Street.

Management Plan

6.17 Condition 1.13 shall apply to any management plan developed under Conditions 6.19 and 6.20 below.

6.18 Vector shall, at least 20 working days before the commencement of construction on the Transpower site, submit to the Manager: Resource Consents and Compliance, for approval, a Penrose Portal and Plantroom Construction Management Plan for the land as shown on the attached plan marked "A" setting out:

- a. Portal and plantroom design details (including site development, landscaping, and access details), construction plans and methods, and proposed maintenance methods and practices.
- b. The manner in which the requirements of the above Conditions relating to vibration, dust, lighting and access are to be complied with and shall include a driver awareness programme.

6.19 The Management Plan submitted in accordance with Condition 6.18 here of shall:

- a. Be to a standard satisfactory to the Council's Manager: Resource Consents and Compliance.
- b. Be prepared in consultation with Transpower New Zealand Limited.
- c. Contain a statement from Trans Power acknowledging that consultation in accordance with paragraph (b) hereof has been undertaken.

6.20 The Council shall approve the plan or advise Vector of any recommended amendments thereto or additional information required within 10 working days of the receipt of the Management Plan.

6.21 The portal and plantroom and associated activities shall be constructed in general accordance with the requirements of the Management Plan approved by the Council.

7. Liverpool Street and Hobson Street Sites

7.1 Prior to the installation of transformers at these sites, a hazard mitigation plan shall be produced for the transformers at the Liverpool and Hobson substations to the satisfaction of Manager: Resource Consents and Compliance. The plan shall cover operating and maintenance procedures to prevent oil leaks from contaminating the environment and detail cleanup procedures including disposal of any wastes in the event of an oil leak.

7.2 An archaeologist shall be present during the initial stages of work at Liverpool St and Hobson St egresses. The archaeologist shall remain at the sites until the archaeologist considers his/her presence is no longer required. The archaeologist shall advise the Manager: Resource Consents and Compliance in writing when his/her attendance is no longer required.

7.4 Prior to any building occurring across the boundaries of Lot 1 DP 112657, Lot 1 51978 and Lot 1 DP 52038 in conjunction with the extension to the Liverpool St substation, the affected Certificates of Title shall be held together in such a way they cannot be dealt with separately without the prior written consent of Council.

7.5 Prior to commencing work under Hobson St:

- a. Vector, in consultation with a representative of the Roman Catholic Bishop of Auckland, shall arrange for establishment of survey measuring points at St Patrick's Cathedral and the Cathedral Presbytery; and
- b. Vector shall participate with the Bishop's representative in updating the existing survey of the physical condition of St Patrick's Cathedral

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.6 The survey measuring points established in accordance with Condition 7.5(a) above shall be surveyed regularly by an independent surveyor during construction works until sufficient time has elapsed to give a high level of confidence that no deformations are likely to occur .

7.7 The survey measurements taken in accordance with Conditions 7.5(a) and 7.6 above shall be supplied to the Roman Catholic Bishop of Auckland and to Manager: Resource Consents and Compliance.

7.8 If the survey measurements taken in accordance with Conditions 7.5(a) and 7.6 above indicate that movement has occurred then Vector shall, in conjunction with the Bishop's representative, resurvey St Patrick's Cathedral and any new physical damage which is verified by an independent engineer as being caused by the construction of the tunnel shall be rectified at Vector's expense.

7A. Hazardous Substances

7A.1 The storage and use of hazardous substances at the Hobson, Newmarket, and Penrose Portals shall be in accordance with the "Vector Tunnel Project Hazardous Substances Assessment of Environmental Effects" undertaken by Tonkin and Taylor Ltd and dated May 1999.

7A.2 The areas of the Hobson, Newmarket and Penrose Portals immediately involved in the storage, loading, unloading, using or otherwise handling of waste and other hazardous substances, shall be protected by spill containment systems that shall comply with the following:

- a. Be constructed of impervious material that are resistant to the hazardous substances involved;
- b. Be able to contain the maximum volume of the largest tank used; and
- c. Be designed, constructed and managed so that any spill or release of any hazardous substance and any stormwater that may have entered and become contaminated in the spill containment system is prevented from entering the stormwater system and is prevented from discharging into or onto the land or groundwater, any water body, or potable water supply.

7A.3 Prior to construction of the spill containment systems referred to in Condition 7A.2 above, Vector shall produce a spill contingency plan, an emergency evacuation plan, a health and safety plan, and a fire safety plan for the Hobson, Newmarket and Penrose Portals to the satisfaction of Council. Vector shall comply with these plans at all times.

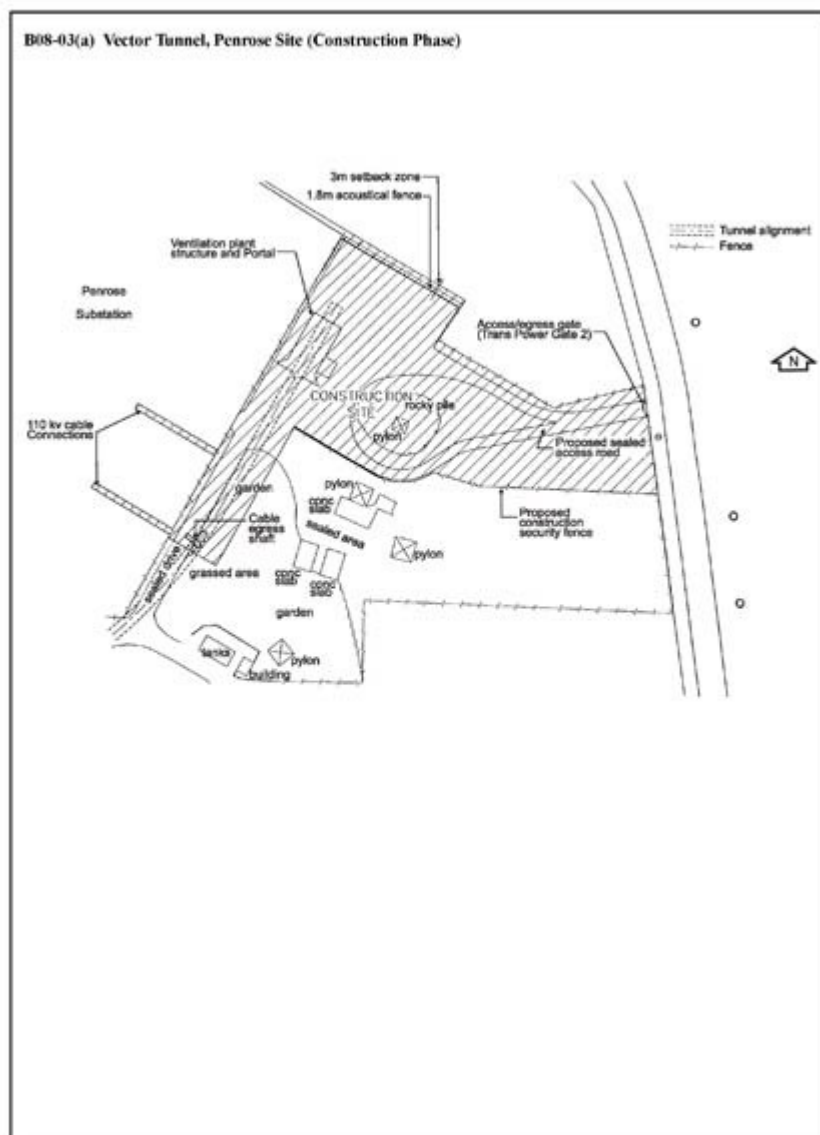

Advice Notes

1. The requiring authority needs to obtain all other necessary consents and permits, including those under the Building Act 1991, and comply with all relevant Council bylaws.
2. The Penrose substation site is subject to an existing Transpower designation (Penrose Substation) and an existing Council designation (Proposed Accessway, Gavin St to McNab St Subway). As such the Vector designation is to be identified as the later designation in the District Plan. The provisions of Section 177 of the Resource Management Act 1991 apply accordingly.

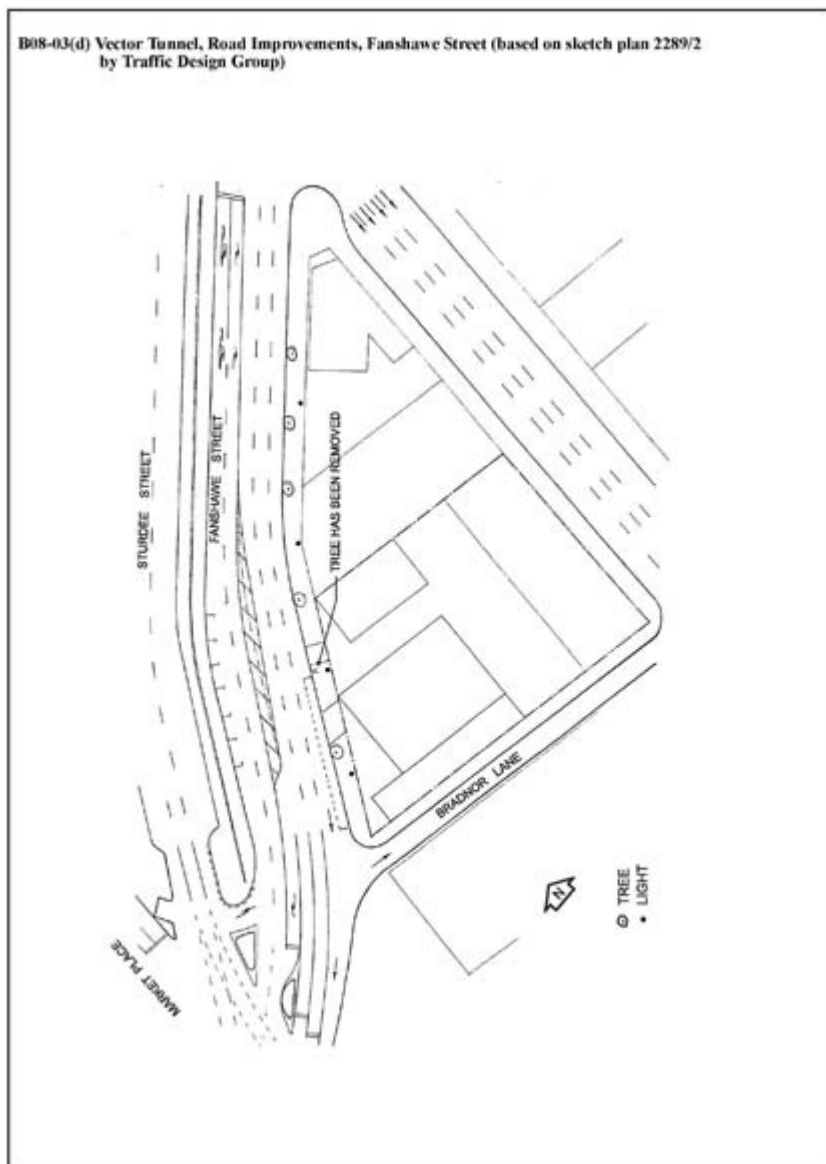

Diagram 288a Electricity Transmission Purposes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8842 110kV Electricity Line

Designation Number	8842
Requiring Authority	Vector Ltd
Location	410 Albany Highway to State Highway 1 (Constellation Drive), Rosedale and Currys Lane, Wairau Valley
Rollover Designation	Yes
Legacy Reference	Designation 179, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The installation, maintenance, repair, replacement, inspection and operation of one 110kV underground electricity transmission line and associated telecommunication cables and the minor above ground structures associated therewith, within a corridor.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

1. The alignment and width of the North Shore Transmission Corridor shall be generally in accordance with that described in Appendix A to the 2001 Notice of Requirement as amended by the 2005 Alteration to the Designation (LUC/2120374) and the 2012 Alteration to the Designation and shall be demarcated on the Auckland Unitary Plan Maps accordingly.
2. That prior to any works being commenced, Vector Limited shall obtain all requisite regional resource consents required by the Auckland Council under the Resource Management Act 1991.
3. Any land taken or held for the works shall be maintained to a reasonable standard until physical works commence.
4. Subject to Section 184 of the Resource Management Act 1991, the designation shall lapse on the expiry of 15 years after the date on which it is included in the District Plan.
5. The cables and associated equipment shall be designed, installed and operated so as to meet the NZ National Radiation Laboratory guidelines (as confirmed by the International Commission on Non-Ionizing Radiation Protection, ICNIRP) for general public 24hrs/day exposure.
6. In the event that electricity supply will need to be shut down for planned periods during construction, Vector Limited shall advise Watercare Services Ltd of the time and duration of the intended shut down at least 48 hours in advance.
7. Vector Limited shall submit an Outline Plan of Works to Auckland Council in accordance with Section 176A of the Resource Management Act 1991. In addition to the matters listed in Section 176A(3), the Outline Plan shall describe and include details on the following:
 - a. The alignment of the cable(s) within the corridor and the width of the corridor.
 - b. The distance that any trench will be located from residential zoned properties and the depth of that trench and any measures to prevent the movement of earth on adjoining properties.
 - c. The location, size, function and effects (including noise) of all above-ground structures.
 - d. Measures to avoid, remedy or mitigate the potential effects of construction and maintenance activities on existing water, stormwater and wastewater services;
 - e. Measures to avoid, remedy or mitigate the potential effects arising from the physical presence of the cable on the operation of water, stormwater and wastewater services;
 - f. Measures to avoid, remedy or mitigate the potential effects arising from the physical presence of the cable on the future construction of water, stormwater and wastewater services;
 - g. The minor extension to the Wairau Road substation; and
 - h. Such other matters as required to satisfy the conditions of this designation.

Services

8. During the detailed design and subsequent construction activities, Vector Limited and its agents shall liaise with Watercare Services Ltd prior to undertaking any work in relation to the designation and shall ensure that all existing utility services located in or adjacent to the designation are:
Protected from any activity which may interfere with the proper functioning of the services; and
If damaged, repaired or replaced; Any costs associated with the protection, repair or replacement of existing services maintained by the Council shall be at Vector's expense, to the reasonable satisfaction of Watercare Services Ltd.
9. All cables shall be installed in accordance with the relevant New Zealand Codes of Practice, including NZECP 34 and 35. 10. When laying the cable close to existing metallic pipelines Vector Limited shall ensure the associated service does not breach the requirements of AS/NZS 4653:2000.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Vector Limited shall undertake a safety study, as part of the detailed design process, to demonstrate that induced and transferred potentials to other services would not be hazardous to personnel working on those services. An appropriate independent body shall review the study and recommend any relevant design modifications.

12. Vector Limited shall review the possible effects that electric and magnetic fields may have on other existing underground services within the corridor, ensuring that all practicable measures are taken to minimise those effects.

13. The 'as-built' plans (in accordance with the Council's Asset Data Standards manual) shall be submitted to the Council immediately after the completion of all construction.

Property Access

14. Vehicular and pedestrian access shall be maintained to the Wastewater Treatment Plant, Rosedale Park and Rosedale Park South at all times during construction.

15. In the event that Vector Limited requires access to the North Shore Transmission Corridor via the Wastewater Treatment Plant site for construction and maintenance activities, all personnel and contractors of Vector Limited are to comply with access controls and health and safety requirements applying to the Wastewater Treatment Plant site.

Trees

16. A Vegetation Mitigation Plan shall be prepared prior to the commencement of construction works within the corridor and shall be subject to the prior approval of the Auckland Council's Manager - Parks, Sports and Recreation Department. The purpose of the Vegetation Mitigation Plan is to set out the measures for works around any protected trees and shall contain appropriate measures:

- a. To minimise the impact on protected trees, wherever possible;
- b.. To develop a staged landscape plan for the remnant orchard trees in the George Pannill Reserve which includes suitable consultation with the Manager - Parks, Sports and Recreation Department and with local residents. The purpose of this landscape plan is to retain the general character of the orchard remnant and improve the overall amenity of the area;
- c. To indicate that where trees are required to be removed, these be replaced or replaced in close proximity, on a tree for tree basis, unless otherwise directed by the Manager - Parks, Sports and Recreation Department and that the replacement planting is maintained in accordance with the design infrastructure manual for a period of 18 months following planting; and
- d. To reasonably minimise the need for removal of large trees and other vegetation which provide visual screening of the Wastewater Treatment Plant site from residential areas, Rosedale Park and Rosedale Park South.

The landscape plan for the George Pannill Reserve shall be prepared well in advance of construction to enable discussion with the Manager - Parks, Sports and Recreation Department and reflect suitable consultation with local residents. For the purposes of this condition, the monetary limit of any Vector Limited contribution pursuant to both this designation and Designation 179A to fruit tree replacement in the George Pannill Reserve shall be \$2500 (plus GST). As part of the Vegetation Mitigation Plan, Vector Limited shall provide suitable planting within that part of the corridor that adjoins the rear boundary of 16 Jade Court, Albany.

17. In the event that trees providing visual screening to the Wastewater Treatment Plant Site need to be removed as a result of the installation of proposed underground cables, Vector Limited, in consultation with Watercare Services Ltd and the Council's Manager - Infrastructure and Environmental Services, shall, where practicable, plant suitable replacement trees to provide a similar level of visual screening from residential areas, Rosedale Park and Rosedale Park South as existed prior to the removal of the trees.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Watercourses/Open Channels

18. Crossings over open channels and watercourses will need to be above the 1% AEP flood plain level with an adequate freeboard provided. Alternatively if a cable crossing is proposed to go under a watercourse, then adequate cover and protection will need to be provided to allow for possible future channel erosion and for channel maintenance activities. Adequate cover and protection will also be required where the cables cross pipes and other stormwater assets. Details of the channel and watercourse crossings shall be submitted to the Council's Manager - Infrastructure and Environmental Services for approval. In particular the following crossings need to be fully assessed:

- a. The Oteha Stream tributary between Albany Highway and Vanderbilt Parade;
- b. The Oteha Stream tributary between Vanderbilt Parade and Northwood Avenue;
- c. The Alexandra Stream near Bush Road;
- d. The concrete lined channels between Sunnynook Road and Porana Road; and
- e. The Wairau channel near the substation.

Traffic Disturbance

19. A Traffic Management Plan shall be submitted to the Road Controlling Authority (i.e. Auckland Transport) for approval, at least 20 working days prior to the commencement of construction of each cable length. Construction activity shall be undertaken in accordance with the approved Traffic Management Plan. The primary purpose of the Traffic Management Plan is to set out the mitigation measures that will be put in place for that phase of the project to ensure that traffic disruption associated with construction activities is minimised as far as it is practicable.

Dust

20. Best practicable measures shall be employed (e.g. watering of the construction area) to ensure any dust nuisance beyond the boundary of the corridor is minimised.

21. All spoil shall be removed from the site so that no spoil or construction materials likely to generate dust are stored or stockpiled on site.

Water Quality

22. Best practicable measures shall be employed to ensure that the discharge of sediment into any water body is avoided or minimised.

23. Excess material shall be placed directly into trucks or bins for removal off site thereby minimising the amount of loose sediment bearing materials on the site.

24. Cesspit filters shall be installed prior to the excavations commencing where there is a risk of runoff to an existing drainage network. This is to be augmented by the use of silt fences where these are able to be installed or are necessary. It is anticipated that silt fences will be primarily used in areas where the works pass close to an open watercourse.

25. Should the excavation require dewatering, then the contractor shall be expected to either discharge the liquids into another part of the trench (e.g. with scoria backfilling) via a portable settling tank, or across a grassed strip (provided the grass was long and a silt fence or cesspit filter was in place down gradient).

26. Backfilling, compaction and grading shall be undertaken as soon as possible after the laying of trenches, followed by re-sowing to re-instate surfaces to a condition which existed before the trenching.

Distance from Residential Boundaries

27. The trenches for laying underground cables shall be located a minimum distance of 1.5m from any residentially zoned property.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Hours of Work

28. The hours of work shall be restricted to 7 am to 6 pm Monday to Friday, 8 am to 6 pm Saturday, with no construction work undertaken on Sundays and Public Holidays.

Property Access

29. Construction of the cable shall be undertaken in such a manner as to ensure that reasonable access to properties on the cable route shall be maintained at all times.

Construction Noise

30. During construction, New Zealand Noise Standard 6803 NZS: 1999 Acoustics - Construction Noise shall be complied with.

31. Vector Limited and its contractors shall, in addition to complying with all other construction related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

Archaeological

32. If any archaeological remains are uncovered during construction, Vector Limited shall immediately notify the Council and engage an archaeologist (to be approved by Council) to investigate and report on the importance of the remains.

33. Vector Limited shall immediately advise local kaumatua and the New Zealand Historic Places Trust and cease working in the affected area until all necessary authority required by the New Zealand Historic Places Trust is obtained.

Completion of Construction

34. On completion of construction, all carriageways, road markings, signs, property access ways, drainage systems and other structures shall be restored to a standard at least comparable to their condition before the commencement of construction and shall be made good as soon as practicable.

Monitoring

35. Within six (6) months of the commencement of operation of the 110kV underground line Vector Limited shall supply to Council's Manager - Resource Consents and Compliance the results of a magnetic field survey that measures and appropriately illustrates the combined effect of the existing overhead and new underground lines, such field strength measurements to be taken at one metre above ground level and at intervals of not less than 400m or more than 800m along the length of the corridor (excluding roads). The Council may, depending on the significance of the results compared with recognised acceptable thresholds (see eg, condition 5), require a repeat of the survey at a future date to be agreed between the parties.

36. That provision be made for the removal of existing trees located in the corridor directly affected by the proposed location of the cable trenches, and that any replacement planting that may be required be determined by consultation and agreement between Vector Limited and Council's Manager - Infrastructure and Environmental Services.

8843 Glenvar Substation

Designation Number	8843
Requiring Authority	Vector Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	375 Glenvar Road, Torbay
Rollover Designation	Yes
Legacy Reference	Designation 185, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	14 August 2019 or five years from being operative in the Unitary Plan, whichever is the latter unless given effect to prior

Purpose

Electricity works (substation).

Conditions

- i. That the scope and extent of the works within the designated area be in accordance with the Notice of Requirement for a Designation dated 12 March 2009; and in accordance with the approved designation conditions.
- ii. Any proposal which would breach the conditions will require either an alteration to the designation in order to specifically alter the condition to which it is subject (section 181 of the Resource Management Act 1991), or will be considered in terms of the District Plan's underlying zoning provisions (section 176(2) of the Act).

1. General

a. That pursuant to Section 184 of the Resource Management Act 1991, this designation SHALL LAPSE 10 years after the granting of this consent unless given effect to before that date, or an extension is given in terms of Section 184(2)(b).

b. The electricity substation shall be constructed in general accordance with the Notice of Requirement by Vector Limited for a designation for a "Substation – Glenvar Road, dated 12 March 2009 at 375 Glenvar Road, Torbay being Allotment 320 Parish of Okura. This includes the following plans prepared by Vector Limited: Drawing number 4259-8002 - Revision G Sheet 1 dated 06 March 09 Drawing number 4259-8004 - Revision E Sheet 1 dated 06 March 09 Drawing number 4259-0020 - Revision D Sheet 1 dated 06 March 09 Drawing number 4259-0020a- Revision B Sheet 1 dated 06 March 09 Drawing number 4259-8010 - Revision C Sheet 1 dated 06 March 09 Drawing number 4259-8003 - Revision E sheet 1 dated 23 June 2009

2. Outline Plan

a. If either the final design and layout of the substation does not reflect the design and layout submitted with the Notice of Requirement or if there are any future additional works proposed that are not permitted by the District Plan, an Outline Plan shall be submitted in accordance with Section 176A of the Resource Management Act, 1991 before any construction is commenced. However, where the future additional work is in accordance with the Notice of Requirement or is permitted by the District Plan, then the requirement for an Outline Plan is waived under s176A(2).

3. Building Height, Bulk and Location

The development of any further buildings or structures on the site shall comply with the following development controls:

- a. Fences: Security fencing is not to exceed a maximum height of 2 metres;
- b. Minimum Distance of Buildings from Designation Boundaries: 5 metres;
- c. Maximum Building Height: 8 metres; and
- d. Height in Relation to Boundary: No part of any building is to exceed a height equal to 2.5 metres plus the shortest horizontal distance between that part of the building and the designation boundary.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Noise

a. Operational noise (including noise from mechanical ventilation systems) from the substation shall not exceed the following levels:

Maximum Permitted Noise Levels				
	Mon-Sat Inclusive 0700hrs - 2000hrs	Mon-Sat Inclusive 2000hrs - 2300hrs	Public Holidays 0700hrs - 2400hrs	All Other Times
As measured at any residential zone boundary and any residential site boundary in the rural zone	50 dBA L10	45 dBA L10	45 dBA L10	40 dBA L10 75 dBA Lmax

Note:

Noise levels specified in this table shall be measured and assessed in accordance with the requirements in NZS 6801:2008: 'Measurement of Sound' and NZS 6802:2008: 'Assessment of Environmental Sound'. The noise shall be measured with a sound level meter complying with the international standard Sound Level Meters, Type 1.

b. Noise from construction activities shall not exceed the limits recommended in and shall be measured and assessed in accordance with, the new Zealand Standard NZS 6803:1999, Acoustics – Construction Noise.

5. Tree Protection and Landscaping

a. During the period of site development works relating to this proposal, there shall be no disturbance or removal of any vegetation outside of the affected construction area except as shown on the landscaping plan prepared Vector Drawing No: 4259-8003 Revision E sheet 1 dated 23 June 2009.

b. Prior to the commencement of any works on the subject site (including site preparation and clearance activities) tree protection fencing (fit for the purpose of excluding construction activity) shall be erected around all retained trees under the supervision of a qualified arborist.

c. Within the current or next planning season (i.e. autumn to spring) immediately following completion of all construction works relating to this proposal, the Requiring Authority shall implement the landscaping of the site as shown on the landscaping plan prepared by Vector Drawing number 4259-8003 - Revision E sheet 1 dated 23 June 2009.

d. The growth and development of the newly planted landscape plants shall be monitored for FIVE years following completion of planting of those plants. It shall be the responsibility of the Requiring Authority to ensure that any new plantings that die or decline, to a point that in the opinion of the Council's Monitoring Officer are of no value, at any time over the next FIVE years following the initial planting, shall be replaced. The replacement plants shall be of the same species, grade and size as shown on the landscaping plan prepared by Vector Drawing No: 4259-8003 Revision E sheet 1 dated 23 June 2009 and planted no later than the following planting season (i.e. autumn to spring), following instruction to do so by Council.

6. Earthworks, Erosion and Sediment Control and Dust and Noise

a. The Requiring Authority shall comply with the approved Erosion and Sediment Control Plan prepared by Vector Limited dwg: 4259-8009 – Rev D sheet 1 of 1 to Councils satisfaction.

b. The Requiring Authority shall ensure all necessary measures indicated in the Plan approved by Council and as outlined in report prepared by SKM dated 15 October 2008 referenced ZP00017 are implemented.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. A certificate of establishment shall be submitted to Council prior to the commencement of any construction works confirming that all necessary measures proposed in the approved Erosion and Sediment Control Plan are implemented.

d. All personnel working on the site shall be made aware of the 'Erosion and Sediment Control Plan' and its requirements. The approved 'Erosion and Sediment Control Plan' shall be kept on site for inspection by Council's Compliance Officer.

e. The Requiring Authority shall institute appropriate measures to control or mitigate any potential dust nuisance. All such measures initiated shall be maintained throughout the entire duration of the construction period.

f. The Requiring Authority shall implement, to the satisfaction of Council's Development Engineer, suitable measures to prevent depositing of earth on surrounding streets by trucks moving fill and other materials to and from the site. In the event that any material is deposited on the street, the Requiring Authority shall take immediate action, at their expense, to clean the street. The loading of earth, fill and other materials shall be confined to the subject site.

g. The Requiring Authority shall engage a qualified professional engineering consultant to observe bulk earthworks and construction of any temporary or permanent works associated with the establishment of excavated or filled areas or building platforms or protecting the land. Work methodologies shall be in accordance with the recommendations outlined in the Notice of Requirement or as amended by the engineer.

h. The engineer shall be engaged so that he is able to direct the contractor as may be required. The construction monitoring service shall be at a level not less onerous than CM4 as defined by the IPENZ.

7. Geotechnical

a. All development on the site shall be designed and undertaken in accordance with the recommendations and limitations of the geotechnical report reference number ZP00017-RPT-GT-1.

8. Stormwater

a. The detailed design of the stormwater management system for the site shall be designed and constructed to the satisfaction of the Council and shall be in accordance with the report and supporting plans and documents prepared by SKM titled Glenvar Road substation – Erosion/Sediment Control Plan & Stormwater Connection / Mitigation Details dated 15 October 2008 referenced ZP00017.

9. Traffic

a. A Traffic Management Plan shall be prepared and submitted to the Auckland Council prior to the commencement to the construction of the substation.

b. That the vehicle access, parking and manoeuvring areas be formed and surfaced to the Council's satisfaction.

c. That a new vehicle crossing shall be designed and constructed to commercial vehicle crossing standard in accordance with the Council's Infrastructure Design Standards to Council's satisfaction, having first obtained a Road Opening Notice.

10. Lighting

a. At no time between the hours 2200 and 0700 shall any outdoor lighting be used in a manner that the use of such lighting causes an added illuminance in excess of 20 lux measured horizontally or vertically at any point along any boundary of any adjoining site which is zoned Residential (and outside the designated area).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. All outdoor lighting shall be shielded in such a manner that light emitted by the fixture is projected below a horizontal plane running through the lowest point in the fixture where that light is emitted, or is shielded in such a manner that the lowest edge of the shield is at or below the centre line of the light source.

11. Services

a. That all services, including power supply to and output from, the substation be underground.

12. Electricity Supply and Distribution Statues and Regulations

a. The installation shall at all times not exceed the reference levels for public exposure to 50 Hz electric and magnetic fields set out in the International Commission on Non-Ionising Radiation Protection (ICNIRP) at all times: electric field strength: 5 kV/m and magnetic flux density: 100 microtesla.

b. The Requiring Authority shall engage an electrical engineer to carry out measurement of the electric and magnetic fields emitting from this substation to confirm the compliance with the ICNIRP guidelines. An engineer's report with measurement results shall be provided to Council within two months of the substation commencing operation and within two months of the commencement of operation of the second transformer.

8844 McLeod Substation

Designation Number	8844
Requiring Authority	Vector Ltd
Location	135 McLeod Road, Te Atatu South
Rollover Designation	Yes
Legacy Reference	Designation V1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity works (substation).

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:

- A statement on the relevant Plan objectives, policies and rules; and
- A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

designated site.

Note:

That major earthworks may require a regional consent from the Auckland Council.

8853 Ranui Substation

Designation Number	8853
Requiring Authority	Vector Ltd
Location	37 Don Buck Road, Massey
Rollover Designation	Yes
Legacy Reference	Designation V18, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity works (substation).

Conditions

1. The electricity substation shall be constructed in general accordance with "Notice of A Requirement by a Requiring Authority for a Designation Under Section 168 of the Resource Management Act 1991" (being the notice by Vector Limited for a designation for Electricity Supply Purposes - Substation), received by Council on 3rd March 2008 and referenced by Council as LUC 2008 - 351, including further information submitted to Council as part of the notice of requirement. This includes the proposed landscaping and 1.8 metre high visually permeable fencing along the front and rear boundaries of the site (with the installation of a gate along the front boundary). The landscaping shall be implemented in the first planting season after the construction of the electricity substation.

2. If the final design and layout does not reflect that submitted with the Notice of Requirement, an Outline Plan shall be submitted in accordance with section 176A of the Resource Management Act. This Outline Plan is to include confirmation that the substation has been designed so that it can continue to operate during 1% annual exceedance probability flood events.

3. An Outline Plan shall be submitted in accordance with section 176A of the Resource Management Act prior to the construction of the second transformer. This Outline Plan is to include confirmation that the substation has been designed so that it can continue to operate during 1% annual exceedance probability flood events.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Operational noise from the electricity substation shall not exceed the following levels as measured at any residential boundary:

- a. At all times - 35dBA, L10 (10 minutes); and
- b. Noise shall be measured and assessed in accordance with "NZS6801:2008 Measure of Sound", and "NZS6802:2008 Assessment of Environmental Sound".

5. The requiring authority shall, at its expense, provide an acoustic report from a suitably qualified, experienced and recognised acoustic engineer within three months of the installation and commissioning of each of the proposed two transformers demonstrating compliance with the noise levels permitted in condition (d) above. The acoustic report shall be submitted to the Manager, Resource Consents and Compliance.

6. The electricity substation shall be designed and constructed so that it can continue to operate during 1% annual exceedance probability flood events.

7. The electricity substation shall comply with New Zealand electric and magnetic field reference limits as documented in the National Radiation Laboratory publication "Electric Magnetic Fields and Your Health" (2001).

8. The requiring authority shall, at its expense, provide a report from a suitably qualified, experienced and recognised electrical engineer within three months of the installation and commissioning of each of the proposed two transformers demonstrating compliance with the electric and magnetic field reference limits permitted in condition (g) above. The report shall be submitted to the Manager, Resource Consents and Compliance.

9. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

10. Noise from construction activities shall not exceed the limits specified in, and shall be measured and assessed in accordance with, the New Zealand Standard NZS 6803:1999, Acoustics - Construction Noise.

11. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:

- a. A statement on the relevant Plan objectives, policies and rules; and
- b. A statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out.

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

12. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Advice Notes

1. The requiring authority has confirmed that if, at the time of construction, the adjoining property owners agree, it will replace the existing side boundary fences with 1.8m close boarded fences.
2. That major earthworks may require a regional consent from the Auckland Council.

8865 Kaukapakapa Substation

Designation Number	8865
Requiring Authority	Vector Ltd
Location	1 Wyn Close, Kaukapakapa
Rollover Designation	Yes
Legacy Reference	Designation 616, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	29 July 2021

Description

Electricity works (substation).

Conditions

General

1. The activity shall proceed in general accordance with the Notice of Requirement submitted to Council dated March 2009 and plans drawn by Construkt Architects Limited numbered 202, 401 and 402 (all dated July 2009), provided that the colours shall be as set out below (or their current equivalent if those colours are no longer manufactured):

- i. Roof - Colorsteel "karaka";
- ii. Base panels, steel doors, and timber work - Resene "karaka"; and
- iii. Balance wall panels - Resene "double ash".

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Provided further that no element of the proposed substation building shall exceed the 9m height limit above existing ground level and the height in relation to boundary control on the eastern boundary shall not be infringed.

Outline Plan

2. If either the final design and layout of the substation does not reflect the design and layout submitted with the Notice of Requirement, or if there are any future additional works proposed that are not permitted by the District Plan, an outline plan shall be submitted in accordance with section 176A of the Resource Management Act 1991 to the Auckland Council, before any construction is commenced. However, where the future additional work is in accordance with the Notice of Requirement or is permitted by the District Plan, then the requirement for an Outline Plan is waived under section 176A(2).

Landscape Plan

3. The landscaping plan (Isthmus Group Ltd, Job No. 2658 Figure 5, dated March 2009) shown in Appendix 15Z(i), shall be implemented during the first planting season after the construction of the substation. (Provided that the 15 phormium tenax (flax) along the eastern boundary shown on that landscape plan shall be replaced with griselinia littoralis.) The landscaping shall be maintained thereafter for the term of the designation.

Boundary Planting

4. The boundary planting comprising both the new planting and the existing planting, and which occupies the area shown on the Covenant Plan (dated July 2009), shall be retained on site for the period which the site is occupied by the substation provided that this condition shall not prevent cables or other services (including stormwater) that may need to be installed across the covenanted area.

Notwithstanding condition 3, the new boundary planting identified in the landscaping plan shall be planted within the first planting season after the designation is incorporated into the Auckland Unitary Plan and shall thereafter be maintained for the duration of the designation.

Arborist Supervision

5. An independent suitably qualified arborist is required to be onsite to supervise the earthworks associated with any works which may affect the driplines and root systems of the boundary trees. Any boundary trees that die as a result of the earthworks will be immediately replaced, in accordance with condition 4 above.

Arborist Work

6. Any alteration to vegetation on the site shall be undertaken in accordance with the report prepared by Nigel Clough of Tree Solutions dated 01 June 2009. This includes:

- a. The proposed works hereby approved shall proceed in strict accordance with the details set out in the description of works attached to this consent along with any recommendations noted.
- b. The removal of the subject vegetation shall be undertaken by a suitably qualified arborist, using currently accepted arboricultural dismantling methods and practices, in a manner so as to cause no damage to other vegetation on the site.
- c. That the trimming of the boundary vegetation shall be undertaken by a suitably qualified arborist, using currently accepted arboricultural pruning methods and standards.
- d. That the trimming of the boundary vegetation be undertaken prior to the commencement of development works on site.
- e. That no more of the canopy of boundary vegetation be removed than is necessary to accommodate the proposed substation and allow an unimpeded work space.
- f. That suitable fencing is erected around all vegetation prior to the commencement of works on the site.
- g. The protective fencing is to remain in place until the completion of works on the site.
- h. That Council is informed as to when the proposed planting works have been completed.

Stormwater

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7. Provide onsite detention to limit post development flows to pre development flows in the 1 in 10 year storm events. Details of the design and management of any stormwater infrastructure required shall be prepared and shall be submitted to the Council at least 3 months prior to commencement of construction of the substation.

Fencing

8. The applicant shall construct a post and batten fence matching the existing fence around the perimeter of the substation site (which will be gated) prior to the substation becoming operational.

Traffic Management Plan

9. Prior to any construction being undertaken, a temporary Traffic Management Plan shall be submitted to the Council and be approved by the Team Leader Resource consents in consultation with the Road Controlling Authority (i.e. Auckland Transport), should any on-street loading or reversing of trucks onto the road be required.

Access

10. The following measures shall be implemented prior to the operation of the substation:

- a. Driveway, access and parking/loading area to be constructed to a best practice standard; and
- b. A turning area of a permeable surfacing to reduce stormwater runoff shall be provided to allow vehicles to perform a 180° turn to avoid reversing onto the street.

Operation Noise

11. The noise level (L10) as measured within the boundary of any other site should not exceed the following limits:

Mon to Friday: 0700-1800 hours	45dBA
At all other times including public holidays	40dBA

The noise level shall be measured in accordance with the requirements of NZS6801:2008 Measurement of Sound and assessed in accordance with the requirements of NZS6802:2008 Assessment of Environmental Sound.

12. (construction noise) Construction activity on the site shall only occur between the following hours:

- a. Monday to Friday 7:00am to 7:00pm; and
- b. Saturday 8:00am to 1:00pm.

All construction noise shall comply with and be measured and assessed in accordance with, NZS6803:1999, Acoustics — Construction Noise.

13. (archaeological) If any artefact, including human remains is exposed during any site works the following procedures shall apply:

- a. Immediately when an artefact is unearthed, all site works shall cease;
- b. The site supervisor shall immediately secure the area in a way that ensures any artefacts or remains are untouched; and
- c. The site supervisor shall notify the following groups that an archaeological site has been unearthed, so that appropriate action can be taken:
 - i. Tangata whenua;
 - ii. The New Zealand Historic Places Trust;
 - iii. The Department of Conservation;
 - iv. The Council's RMA Compliance Administration Officer (telephone 0800426 5169); and
 - v. In the case of human remains the police.

Electric Magnetic Field Measurements

The Proposed Auckland Unitary Plan (notified 30 September 2013)

14. The installation shall at all times not exceed the reference levels for public exposure to 50 Hz electric and magnetic fields set out in the International Commission on Non-Ionising Radiation Protection (ICNIRP): electric field strength: 5 kV/m and magnetic flux density: 100 microtesla.

Electric Magnetic Field Measurements

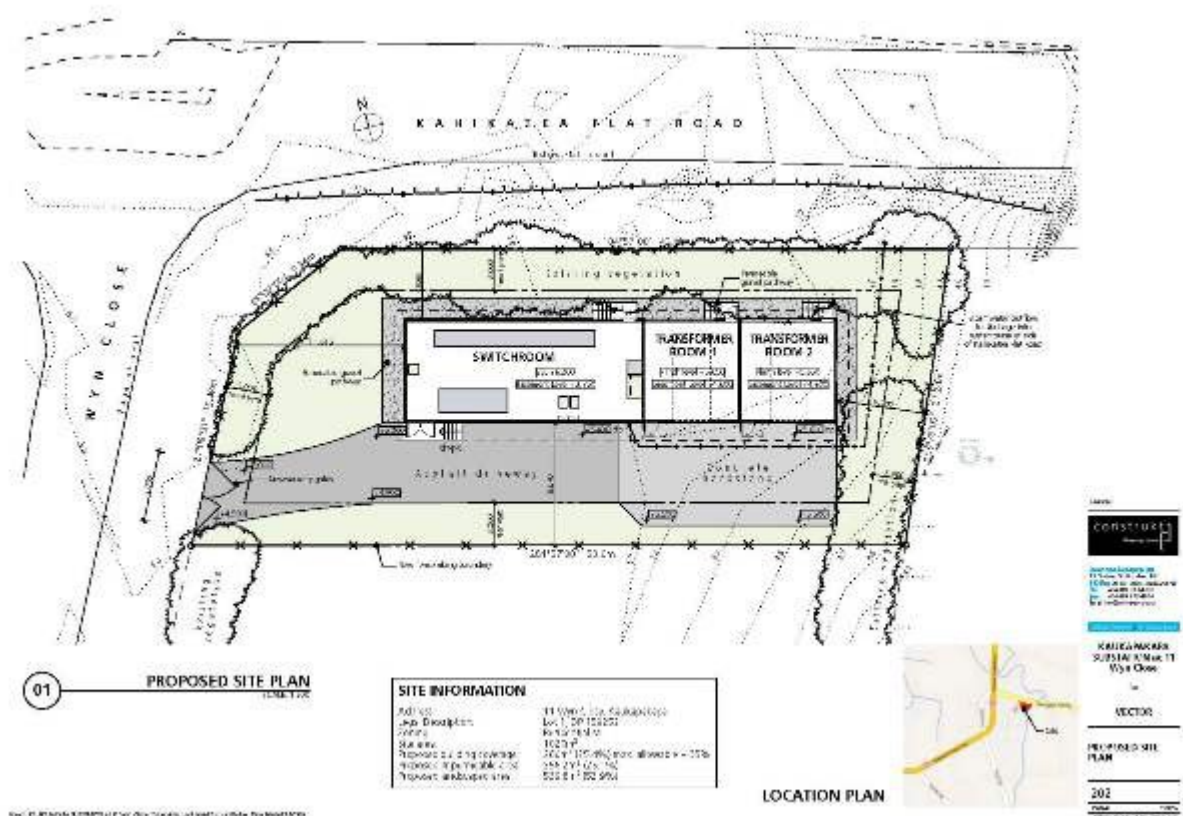

15. The Requiring Authority shall engage a suitably qualified person to carry out measurement of the electric and magnetic fields emitting from this substation to confirm the compliance with the ICNIRP guidelines in effect at the time the substation is constructed. A report with measurement results shall be provided to Council within two months of the substation commencing operation and again within two months of the commencement of operation of the second transformer. The measurement results will be made available for viewing by the public.

Lapse of Designation

16. This designation shall lapse 10 years from the date it has been confirmed.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8866 Sandspit Substation

Designation Number	8866
Requiring Authority	Vector Ltd
Location	Mahurangi East Road (Lot 1 DP 426584), Snells Beach
Rollover Designation	Yes
Legacy Reference	Designation 617, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	29 July 2021 or five years from being operative in the Unitary Plan, whichever is the latter unless given effect to prior

Purpose

Substation.

Conditions

General

1. The activity shall proceed in general accordance with the Notice of Requirement submitted to Council dated 2 April 2009 and the plans drawn by Construkt Architects Limited, including the Proposed Site Plan dated 20/04/09, Basement & Ground Floor Plans and Building Sections plans dated 1/04/09, and the Building Elevation plan dated 7/07/09 all numbered L55148 and signed by Processing Planner Laura Christian, dated 08/06/09.

Outline Plan

2. If either the final design and layout of the substation does not reflect the design and layout submitted with the Notice of Requirement, or if there are any future additional works proposed that are not permitted by the District

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Plan, an outline plan shall be submitted in accordance with section 176A of the Resource Management Act 1991 to the Rodney District Council, before any construction is commenced. However, where the future additional work is in accordance with the Notice of Requirement or is permitted by the District Plan, then the requirement for an Outline Plan is waived under s176A(2).

Landscape Plan

3. The landscaping plan (Isthmus Group Ltd, Drawing 2633, Figure 5, dated 6/07/09) shown in Appendix 15AA(i), shall be implemented during the first planting season after the construction of the substation. The landscaping shall be maintained thereafter.

Fencing

4. The applicant shall construct a post and batten fence around the perimeter of the substation site prior to the substation becoming operational.

Traffic Management Plan

5. Prior to any construction being undertaken, a temporary Traffic Management Plan is required to be submitted to Council and approved by Manager - Resource consents and Compliance in consultation with Auckland Transport (the road controlling authority).

Access

6. The following measures shall be implemented prior to the operation of the substation:

- a. ☐ Driveway and access to be constructed to a best practice standard;
- b. A sightline covenant as shown in the plans provided with the subdivision application (to the east if the driveway) is to be established;
- c. The small bunch of agapanthus within the road reserve near the driveway crossing for 836 Sandspit Road is to be removed at the cost of the applicant, to the approval of the Manager - Resource Consents and Compliance;
- e. Further details of the drainage design for the driveway should be provided by the applicant, including culvert size and end treatment; and
- f. The open channel surrounding the driveway shall be built up to a slope no steeper than 1 in 4 on either side of the driveway.

Construction Noise

7. Noise from construction activities shall not exceed the limits recommended in and shall be measured and assessed in accordance with, NZS6803:1999, Acoustics — Construction Noise. Note that the noise limit between the hours of 2000 to 0630 weekdays, 1800 to 0630 Saturdays and at all times on Sundays and Public Holidays, may mean that no construction work can take place.

8. (operation noise) The operational noise from the substation shall not exceed the following limits at the notional boundary (notional boundary is defined as a line 20m from the side of a rural dwelling existing as at 1 April 2009, or the legal boundary where this is closer to the dwelling):

- a. Monday to Saturday: 6:00am to 6:00pm 55 dBA Leq;
- b. Sundays & Public Holidays: 6:00am to 6:00pm 50 dBA Leq; and
- c. At all other times: 45 dBA Leq 75 dBA Lmax.

Archaeological

9. If any artefact, including human remains is exposed during any site works the following procedures shall apply:

- a. Immediately when an artefact is unearthed, all site works shall cease; and
- b. The site supervisor shall immediately secure the area in a way that ensures any artefacts or remains are untouched; and
- c.. The site supervisor shall notify the following groups that an archaeological site has been unearthed,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

so that appropriate action can be taken:

- Tangata whenua,
- The New Zealand Historic Places Trust;
- The Department of Conservation;
- The Council's RMA Compliance Administration Officer (telephone 301 0101); and
- In the case of human remains the New Zealand Police.

Lapse

10. This designation shall lapse 10 years from the date it has been confirmed.

8891 Omaha Substation

Designation Number	8891
Requiring Authority	Vector Ltd
Location	Leigh Road (Pt Allot 31 SO 64696), Big Omaha
Rollover Designation	Yes
Legacy Reference	Designation 603, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Ten years from being operative in the Unitary Plan unless given effect to prior

Purpose

Electricity works (substation).

Conditions

Outline Plan

1. An outline plan shall be submitted in accordance with section 176A of the Resource Management Act 1991 to the council before any construction is commenced.

Landscape Plan

2. An outline plan submitted to council shall include a detailed landscape plan, including an implementation and maintenance programme.

3. The plan shall include details of the plant sizes at the time of planting and intended species. Preference should be given to the use of indigenous species, with a further preference for the use of local genetic stock. Such a plan shall include appropriate measures to reduce adverse effects on visual amenity and to provide screening of the substation building viewed from neighbouring properties and Omaha Valley Road, Leigh Road and Quintal Road.

Operational Noise

4. Table 16.9.2.1.2(i): Noise Received in Rural Zones (Leq) of the Auckland Council District Plan (Rodney Section) 2011.

	Noise Limits dBA Leq
--	----------------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Within the Notional boundary ¹	Mon-Sat 6.00am-6.00pm	Sundays and Public Holidays 6:00am-6:00pm	Sundays and Public Holidays 7:00am-10:00pm
Low background noise level ²	50 dBA	45 dBA	40 dBA and 70 dBA Lmax
High background noise level ³	50 dBA	50 dBA	45 and 75 dBA Lmax

Notes:

1. For the purposes of this Rule the notional boundary is a line 20m from the side of a building used for residential purposes, or used as a childcare facility for not more than 10 children, or the legal boundary where this is closer to the building used for residential purposes or used as a childcare facility for not more than 10 children.
2. Group A background noise level sites include all those not specified as Group B.
3. Group B background noise level sites are those located adjacent to Retail Service, Mixed Use and Industrial Zones, or where the site is located within 70m of any Strategic Route, Regional Arterial Road, Future Arterial Road or District Arterial Road.

8905 Rosedale Substation

Designation Number	8905
Requiring Authority	Vector Ltd
Location	115 Rosedale Road, Rosedale
Rollover Designation	Yes
Legacy Reference	Designation 81, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior

Purpose

Electricity works (substation).

Conditions

1. General

a. That the scope and extent of the works within the designated area be in accordance with the Notice of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Requirement, dated 20 December 2012, for the designation of land for “Electrical Works (Substation)”, at 115 Rosedale Road, Pinehill, being Lot 2 DP 459157. For reference, the design and layout plans submitted with the Notice of Requirement are:

Plan	Drawing Number	Dated:
Concept Site Plan – Stage 2	V7-SK02 - Revision 1	07.12.2012
Site Layout and Services	4528-8021 – Revision E Sheet 1	14.12.2012
Concept Sections	V7-SK06 – Revision 1	07.12.2012
Elevations	4258-8022 – Revision 3 Sheet 1	14.12.2012
Concept Elevations	V7-SK05	07.12.2012
Concept Site 3D Images	V7-SK07	07.12.2012
Landscape Plan	4258-8024 – Revision 4 Sheet 1	14.12.2012
Civil Layout and Stormwater Plan	CV-0001 – Revision D	18.12.2012
Erosion and Sediment Control Plan	CV-0003 – Revision A	13.12.2012

b. The designation shall lapse on the expiry of a period of 10 years after the date it is included in the Auckland Council District Plan (North Shore Section) in accordance with section 184(1)(c) of the Resource Management Act 1991, unless:

- i. It is given effect to before the end of that period; or
- ii. The Auckland Council determines, on an application made within 3 months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period under section 184(2)(b) of the Act.

2. Outline Plan

The requirement for an Outline Plan has been waived but if the design and layout of the substation does not reflect the design and layout submitted with the Notice of Requirement in accordance with Condition 1, or in the case of any future works, an Outline Plan shall be submitted in accordance with section 176A of the Resource Management Act 1991 to the Auckland Council – Northern Resource Consenting and Compliance (Takapuna Service Centre) unless the works are permitted under the provisions of the Auckland Council District Plan (North Shore Section).

3. Noise

a. The substation will comply with the following noise control:

At the boundary of any other site	At all times	70dBA L _{eq}
-----------------------------------	--------------	-----------------------

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. Noise shall be measured in accordance with the requirements of NZS6801.2008 'Acoustics – Measurement of Environmental Sound' and assessed in accordance with NZS 6802:2008 'Acoustics – Environmental Noise'. Noise shall be measured with a sound level meter complying with the international standard Sound Level Meters, Type 1.

4. Electricity Supply and Distribution Statutes and Regulations

a. The substation shall at all times not exceed the reference levels for public exposure to 50Hz electric and magnetic fields set out in the International Commission on Non-Ionising Radiation Protection 2010 (ICNIRP) at the site boundaries.

b. Within 6 months of the substation commencing operation, a noise monitoring report and EMF report with measurement results shall be provided to Auckland Council Northern Office to confirm the compliance with noise limits set in Condition 3(a) and EMF limits set in Condition 4(a) when the substation is at full capacity and at peak loads.

5. Tree Protection and Landscaping

The landscaping shall be undertaken in general accordance with the Vector Limited Drawing 4258-8024 Revision 4 and shall be completed in the first planting season after the construction of the substation.

6. Earthworks, Erosion and Sediment Control

a. The sediment and erosion control plan (SKM Drawing CV-0003 Revision A) shall be implemented during the bulk earthworks.

b. Development shall take account of any recommendations of existing or future geotechnical reports. A copy of any future report obtained shall be provided for the records of the Council.

7. Stormwater and Flooding Potential

The detailed design of the stormwater management system for the site shall be designed and constructed in accordance with the report and supporting plans and documents prepared by SKM titled "Rosedale Flood Assessment Report" (Reference ZP01221), dated 13 December 2012 (Reference ZP01221), and SKM Drawing No. CV-001 – Revision D dated 18 December 2012.

8. Traffic Management

A Traffic Management Plan shall be prepared and submitted to Auckland Transport prior to commencement of the construction of the substation.

9. Hazardous Substances

A site management plan shall be prepared and implemented to address the following:

- a. Monitoring and maintenance of the transformer and the containment systems.
- b. Site housekeeping.
- c. Emergency and spill contingency procedures.

10. Archaeology

In the event that any archaeological sites or remains are discovered during the earthworks, then the works at that place of discovery will cease immediately. The New Zealand Historic Places Trust, kaumatua representing the local Tangata Whenua, the Auckland Council, and the New Zealand Police as appropriate, shall be contacted. Work shall only recommence in the affected area when any necessary statutory authorisations or consents have been obtained.

11. Fencing

The site shall be fully fenced and gated.

R8906 Hillsborough Substation

Designation Number	R8906
Requiring Authority	Vector Ltd
Location	105 Hillsborough Road, Hillborough
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity works (substation).

Conditions

1. The substation equipment is to be fully enclosed within a building.
2. The maximum height of the substation building will be 8.5m.
3. The substation building will have a minimum set-back from the Hillsborough Road boundary of 2.5m.
4. The substation building will have a minimum set-back from the northern residential boundary of 6m.
5. The substation will comply with the following noise controls:

At the boundary of any Residential Zoned Site	At all times	L _{eq} 45dBA
---	--------------	-----------------------

6. The substation shall at all times not exceed the reference levels for public exposure to 50 Hz electric and magnetic fields set out in the International Commission on Non-Ionising Radiation Protection 2010 (ICNIRP) at the site boundary.

R8908 Waitakere Substation

Designation Number	R8908
Requiring Authority	Vector Ltd
Location	3 Bethells Road, Waitakere Village
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	10 years from being operative in the Unitary Plan unless given effect to prior

Purpose

Electricity works (substation).

Conditions

1. The substation equipment is to be fully enclosed within a building.
2. The substation building will have a minimum set-back from the front boundary of 6m.
3. The maximum height of the substation building will be 8.5m.
4. The substation will comply with the following noise controls at the boundary of other adjoining sites at all times:

At the boundary of any other Working Environment Zoned Site	At all times	Leq 65dBA
At the boundary of any Residential Zoned Site	At all times	Leq 45dBA

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5. At no time between the hours of 2200 and 0700 shall any outdoor lighting be used in a manner that the use of such lighting causes an added luminance in excess of 20 lux measured horizontally or vertically at any point along the boundary of any adjoining residential zoned site.

6. The substation shall at all times not exceed the reference levels for public exposure to 50 Hz electric and magnetic fields set out in the International Commission on Non-Ionising Radiation Protection 2010 (ICNIRP) at the site boundary.

7. A landscaping plan shall be submitted with the first Outline Plan and will be implemented in the first planting season after the construction of the substation.

8. Appropriate sediment and erosion control measures shall be employed for any earthworks on the site.

R8911 Clevedon Substation

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Designation Number	R89011
Requiring Authority	Vector Ltd
Location	1 Papakura-Clevedon Road, Papakura
Rollover Designation	No
Legacy Reference	N/A
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Electricity works (substation).

Conditions

1. The substation equipment is to be fully enclosed within a building.
2. The substation shall at all times not exceed the reference levels for public exposure to 50 Hz electric and magnetic fields set out in the International Commission on Non-Ionising Radiation Protection 2010 (ICNIRP) at the site boundary.

Attachments

No attachments.

Vector Gas Ltd

Designation Schedule - Vector Gas Ltd

Number	Purpose	Location
9100	Gas transmission pipeline	102 Amreins Road, Taupaki to Inland Road (near Kaipara Coast Highway), Kaukapakapa
9101	Gas transmission pipeline	102 Amreins Road, Taupaki to 109 Vipond Road, Topuni
9102	Gas transmission pipeline	100 Highbrook Drive, Waiouru Peninsula to 102 Amreins Road, Taupaki
9104	Gas transmission pipeline	Mill Road (Waikato District Council boundary), Pukekohe to 65 Highbrook Drive, East Tamaki

9100 Taupaki to Kaukapakapa Gas Pipeline

Designation Number	9100
Requiring Authority	Vector Gas Ltd
Location	102 Amreins Road, Taupaki to Inland Road (near Kaipara Coast Highway), Kaukapakapa
Rollover Designation	Yes
Legacy Reference	Designation 618, Auckland City Council District Plan (Rodney Section) 2011
Lapse Date	10 years from being operative in the Unitary Plan unless given effect to prior

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Purpose

1. Purpose of the Designation

1.1 The designation by Vector Gas Limited (Vector) is for:

- a. The design, construction, operation, maintenance, repair, upgrade and renewal of a new gas transmission pipeline and ancillary facilities between Vector's Taupaki Compressor Station (known as the Henderson Valley Compressor Station) at Amreins Road, Taupaki and Ararimu Road near Waitoki (a length of approximately 19.5 kilometres).
- b. The design, construction, operation, maintenance, repair, upgrade and renewal of a new gas transmission pipeline and ancillary facilities between Ararimu Valley Road and Punganui Station, Kaukapakapa (a length of approximately 9.5 kilometres).
- c. The design, construction, operation, maintenance, repair, upgrade and renewal of new off take and other facilities at the Henderson Valley Compressor Station.
- d. The design, construction, operation, maintenance, repair, upgrade and renewal of new gas metering and pressure regulation equipment and ancillary facilities (known as a "delivery point") at Punganui Station, Kaukapakapa.

1.2 For the purposes of these conditions following construction of the pipeline the designation is subject to the following limitations:

- i. Renewal shall be limited to works on the gas transmission pipeline and will be limited to the replacement of sections of the pipeline with sections having equivalent diameter and maximum allowable operating pressure, and no more than 50 lineal metres of pipeline will be excavated at any particular time.
- ii. Upgrade will be limited to adding or replacing above ground components, provided the relevant district plan permitted activity standards are complied with.

1.3 The designation affects land legally described in Appendix 2 "Schedule of Affected Land" of Volume 3 of the Notice of Requirement for Designation submitted to Rodney District Council, entitled "Rodney Natural Gas Pipeline Route Designation" (Reference 5672-R-002, Volume 1 Rev 0, Volume 2 Rev 1 and Volume 3 Rev 1, including amended plan 5672-504-0185 Rev 1) and the plan 5672-504-0100 Rev 1 attached as Appendix 15AC(i) to these conditions.

Conditions

2. Description of the Designation

2.1 The designation shall be described in the Unitary Plan as "Gas Transmission Purposes".

3. Lapsing Period

Pursuant to s 184(1)(c) of the Resource Management Act 1991 (RMA), the period during which the designation shall not lapse, unless given effect to, shall be ten years commencing from the date the designation is included in the Unitary Plan. In relation to the property identified as Lots 4, 6, 7 and 8 DP 211520 the lapse period shall be five years commencing from the date the designation is included in the Unitary Plan.

4. Outline Plan

Council's acceptance of the Construction Management Plan, Traffic Management Plan, Construction Noise Management Plan and Reinstatement Management Plan required to be submitted under Conditions 7.1, 7.8, 7.23 and 10.1 respectively shall constitute approval under the RMA, of the details of that part of the proposed project or work that comprises conventional cut and cover excavation, and trenchless construction techniques including horizontal directional drilling for the purposes of s176A(2)(a) RMA, so that no Outline Plan for that part of the construction phase of the project or work need be submitted to the Council.

For the avoidance of doubt, the Council waives any requirement for the Requiring Authority to submit an Outline Plan for the construction phase of project or work under s176A(2)(c) RMA where the work comprises conventional cut and cover excavation and trenchless construction techniques including horizontal directional

The Proposed Auckland Unitary Plan (notified 30 September 2013)

drilling but may require an Outline Plan for future maintenance, repair, renewal or upgrading activities.

5. Conditions

The Designation shall be subject to the following conditions:

Unless the context otherwise requires, references in the following conditions to "the Council" shall be deemed to be references to the Auckland Council's Chief Executive Officer or nominee.

6. General Conditions

6.1 Subject to these conditions, all works shall be undertaken in general accordance with:

- a. The plans and information submitted by Vector in support of the Notice of Requirement in the documents entitled "Rodney Natural Gas Pipeline Route Designation" (Reference 5672-R-002, Volume 1 Rev 0, Volume 2 Rev 1 and Volume 3 Rev 1), and the plan 5672-504-0100 Rev 1 attached as Appendix 15AC(i) to these conditions; and
- b. The evidence and submissions presented on behalf of Vector at the Hearings before Rodney District Council Commissioners on 5 June and 29 June 2009, including, in particular, Appendix 8 to Mr Owen McBride's evidence dated 5 June 2009 as elaborated on in Mr Owen McBride's evidence dated 22 June 2009.

Notice

6.2 The Requiring Authority shall give written notice of:

- a. The likely commencement date for the works pursuant to the designation; and
 - b. The expected timeframe for the construction programme;
- to the Council, NZTA, KiwiRail and landowners along and adjacent to the designation not less than twelve months and again not less than six months prior to entry for construction. The Requiring Authority shall provide to the Council a list of the landowners notified pursuant to this condition and a copy of the information supplied to them.

Designation Width

6.3 The maximum width of the designation shall be as follows:

- a. For land within road reserve (along road reserve) – the width of the road or 25 metres whichever is the lesser. Within 3 months following the completion of construction Vector shall reduce the width to 6 metres pursuant to s182 of the Act;
- b. For land within road and/or rail reserve (across road reserve/state highway/rail) – 25m. Within 3 months following the completion of construction Vector shall reduce the width to 6 metres pursuant to s182 of the Act; and
- c. Areas other than road reserve - 25 metres or as shown on the plans attached as Appendix 3 of Volume 3 Rev 1 of the NOR except that, in relation to the property identified as Lot 1 DP 170384, the designated area shall be the area shown on Plan 5672-504-0100 Rev 1 attached as Appendix 15AC(i) to these conditions. Within 3 months following the completion of construction and registration of the easements Vector shall reduce the width to 12 metres pursuant to s182 of the Act.

6.3A In relation to the property identified as Lots 4, 6, 7 and 8 DP 211520 the designated area shall be the area shown on Plan 5672-504-0115 Rev 3 attached as Appendix 15AC(ii) to these conditions. The width of the designation shall be as shown on Plan 5672-504-115/118A Rev 1 attached as Appendix 15AC(iii) to these conditions (width labelled as "construction designation"). Within 3 months following the completion of construction and registration of easements Vector shall reduce the width to 12 metres pursuant to s182 of the Act, as also shown on Appendix 15AC(iii) (width labelled as "final designation"). For the avoidance of doubt the widths are:

- a. For lots 4, 6 and 7, an 18m construction designation, to be reduced to a 12m final designation within 3

The Proposed Auckland Unitary Plan (notified 30 September 2013)

months following the completion of construction and registration of easements. The 12m final designation shall entirely overlap the existing easement area for the Vector and NZ Refining Company pipelines located on the property prior to this designation (existing easement area). See cross section “A” on Appendix 15AC(iii);

b. For the northern section of Lot 8 (being from the southern boundary of Lot 7 to the point marked “Point Y” on Appendix 15AC(iii) to these conditions), an 18m construction designation, to be reduced to a 12m final designation within 3 months following the completion of construction and registration of easements. The 12m final designation shall part overlap the existing easement area, with a 3m offset of additional area to the west of the existing easement area. See cross section “B” on Appendix 15AC(iii); and

c. For the southern section of Lot 8 (being from the point marked “Point Y” on Appendix 15AC(ii) to these conditions to the southern boundary of Lot 8), a 25m construction designation, to be reduced to a 12m final designation within 3 months following the completion of construction and registration of easements. The 12m final designation shall part overlap the existing easement area, with a 3m offset of additional area to the west of the existing easement area. See cross section “C” on Appendix 15AC(iii).

7. Construction

Construction Management Plan

7.1 The Requiring Authority shall submit a preliminary Construction Management Plan to the Council three months prior to commencing construction. The Requiring Authority shall then submit a detailed Construction Management Plan in final form to the satisfaction of the Council at least one month prior to commencing construction. The Construction Management Plan shall include the construction drawings and procedures, methods and measures to be applied during the construction phase to address:

- a. Liaison with the Council, affected parties, utility owners and the general public;
- b. Construction methodology for conventional cut-and-cover excavation;
- c. Construction methodology for trenchless construction techniques including horizontal directional drilling;
- d. Construction work within road reserves and state highways;
- e. Likely work programme;
- f. Noise control;
- g. Dust control, including:
 - i. specific reference to protection of power transmission lines; and
 - ii. the avoidance or remediation of dust effects on residential dwellings and residential water supplies;
- h. Earthworks and sediment control, including vegetation control, and disposal of unsuitable and/or surplus material;
- i. Provision for fencing so as to enable continued operation of the land use activities on the properties through which the designation passes;
- j. Location, protection and provision of alternative supply in the event of disruption of existing utilities;
- k. Management of issues raised by affected parties during construction including contact details for key Vector construction personnel and systems for investigation, recording and reporting actions taken to resolve issues raised;
- l. Construction techniques for the crossing of waterways; and
- m. An environmental mitigation plan setting out the management of fauna and flora associated with natural areas (aquatic, riparian and terrestrial) within the designation.

Construction Plans

7.2 The construction plans described in Condition 7.1 shall include detailed engineering plans of the pipeline route. The plans shall include long sections and cross sections (where necessary) detailing the alignment and level of the pipeline and associated works with respect to ground levels, structures and services. The construction plans for the crossings of roads, state highways and railways shall be approved by the relevant transport authority and the utility operators for the particular crossings.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Engineering Standards

7.3 All works in, on or under Council roads shall be carried out in accordance with industry best practice.

Geotechnical

7.4 Pipeline construction shall be carried out in accordance with the requirements of the “Geotechnical Risk Assessment: Proposed Gas Transmission Pipeline Route – Taupaki to Punganui” from Pattle Delamore Partners Ltd, dated February 2007.

Overland Flow Paths

7.5 Existing overland flow paths shall not be impeded by any works.

Earthworks

7.6 Where works involving excavation are undertaken pursuant to the designation, appropriate sediment and erosion measures shall be employed. Prior to any earthworks within the designation the adequate silt retention structures shall be installed in accordance with industry best practice. These structures shall be maintained and cleaned out as necessary until such time a complete grass cover, or other non-erodable surfacing, has been re-established over the site.

Health and Safety Management Plan

7.7 The Requiring Authority shall submit a preliminary Health and Safety Management Plan to the Council three months prior to commencing construction. The Requiring Authority shall then submit a detailed Health and Safety Management Plan in final form to the Council at least one month prior to commencing construction.

Traffic Management Plan

7.8 The Requiring Authority shall submit a preliminary Traffic Management Plan (TMP) in accordance with the Code of Practice for Temporary Traffic Management 3rd edition November 2004, three months prior to commencing construction. The Requiring Authority shall then submit a detailed TMP in final form, specifically addressing control of construction access to the site and traffic control adjacent to the site, and the protection of the public, to the satisfaction of the Council and NZTA. The TMP is to be submitted with the Road Opening Notice application not less than one month before any construction is carried out within a road that is formed and maintained by the Council or the NZTA. Specific areas to be addressed in the Traffic Management Plan shall include but not be limited to:

- a. Control of construction access to the site;
- b. Traffic control adjacent to the site;
- c. The protection of the public;
- d. The temporary diversion of traffic during construction
- e. Traffic safety;
- f. Control at intersections;
- g. Consideration of hours of work for heavily trafficked roads;
- h. Maintenance of road and property accesses; and
- i. Movement of construction traffic on local roads.

Verification that the TMP meets the Council's and NZTA's requirements shall have been received in writing, prior to the commencement of any works on the site. A copy of the Traffic Management Plan, together with the verification letter shall be kept on the site at all times. All measures for the protection of the public and other personnel set out in the verified TMP shall be maintained and complied with at all times until such time as the works are completed.

Location of Pipeline within Roads

7.9 The location of the pipeline within formed and unformed roads shall be determined in consultation with the Council but shall be no closer than 3m to the road boundary.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Pre-construction Meeting

7.10 Not less than two weeks prior to the commencement of works, the Requiring Authority shall meet with the Council for a pre-construction meeting.

Guide to Land Access

7.11 All works outside road reserves shall be in accordance with the "Guide to Land Access for the Oil and Gas Industry and Landowners" published by Federated Farmers of New Zealand Incorporated in 2002.

Property Access

7.12 The Requiring Authority shall at all times ensure that access between parts of any single property temporarily severed by construction is maintained to a level that will enable, as far as is practicable, normal operations on the property to continue.

Hours of Work

7.13 Except within the boundaries of formed roads and state highways, pipeline construction and associated activities shall not occur during the hours of darkness as defined in the Traffic Regulations 1976 except in the case of urgent work necessary to prevent injury to persons or damage to property.

Hours of Work in Road Reserves

7.14 Within the boundaries of formed roads and state highways pipeline construction and associated activities shall be limited to between the hours of 7am and 7pm Monday to Saturday (excluding public holidays) except:

- a. Where otherwise stated in a Traffic Management Plan to the satisfaction of the roading authority submitted pursuant to Condition 2.4; or
- b. With the prior written approval of the roading authority.

Length of Works in Roads

7.15 Within formed road reserves, all construction activities at any one location shall be limited to a linear distance of 500 metres except with the prior written approval of the roading authority.

Construction Activities on Private Property

7.16 Construction activities on land other than road and state highway shall be limited to the period between 1 October in any given year, and 30 April in the following year except with the prior written approval of the Council and the relevant property owner.

Pipeline Cover

7.17 Except as otherwise provided, the new pipelines shall have a minimum cover of at least 1.5 metres. In road and state highway reserves the minimum cover shall be at least 2.0 metres unless otherwise agreed with the roading authority.

Utility Services

7.18 The Requiring Authority shall liaise with the operators of existing utilities and pipelines located in or adjacent to the designation during the detailed design phase and subsequent construction processes and shall ensure that all existing pipelines and utilities are:

- a. Accurately located prior to the preparation of the plans detailed in Condition 7.1. If necessary, this location work shall include exploratory excavation;
- b. Either protected from any activity which may interfere with the proper functioning of the pipeline or utility or relocated to a location approved by the operator of that pipeline or utility;
- c. If damaged, then repaired at the Requiring Authority's expense, to the reasonable satisfaction of the affected pipeline or utility operator; and
- d. Where practicable able to be accessed during construction.

Separation from Existing Utilities

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.19 Where existing pipelines and other buried utilities are encountered the new pipelines shall, where practicable be installed underneath them, with a minimum 500mm vertical separation. Where practicable a 1m horizontal separation shall be provided between the existing pipelines and other buried utilities and the new pipelines. If the minimum clearances cannot be achieved during construction, measures such as concrete protection slabs or similar barriers shall be provided to protect the existing pipelines and/or utility from damage as a result of installation of the new pipelines.

Construction Methods

7.20 The new pipeline shall be installed at crossings of sealed or paved roads and state highways for the full width of the reserve using trenchless construction techniques unless otherwise agreed with the roading authority. Where the Requiring Authority identifies that trenchless construction techniques are not feasible, it shall provide information to the roading authority for approval of alternative construction methods.

Existing Overhead Lines

7.21 All works or activities related to the designation shall be designed and undertaken in compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances 2001 (NZECP 34:2001).

Noise

7.22 The noise from construction (including commissioning activities), shall be measured, assessed and controlled in accordance with the procedures set out in NZS 6803:1999 Acoustics – Construction Noise or alternative strategies shall be implemented for ensuring that the noise from such activities will be acceptable to the occupants of the dwellings.

Construction Noise Management Plan

7.23 The Requiring Authority shall submit a preliminary Construction Noise Management Plan to the Council three months prior to commencing construction. The Requiring Authority shall then submit a Construction Noise Management Plan in final form to the satisfaction of Council at least one month prior to commencing construction. The Plan shall be developed and implemented in accordance with Condition 7.23 for construction works along the pipelines and shall:

- a. Identify all occupied dwellings which are located within 40 metres of any area to be used for pipeline construction and installation purposes;
- b. Provide predicted construction noise levels for all dwellings identified in sub-clause (a);
- c. Provide that the noise levels at the Henderson Valley (Taupaki) Compressor Station during the commissioning period, between 7pm and 7am (night time) shall not exceed 42 dBA (Leq) unless specific arrangements are made with residents; and
- d. Specify mitigation measures needed to achieve compliance with Condition 7.23 for all dwellings where required, or alternative strategies for ensuring that construction noise levels will be acceptable to the occupants of identified dwellings.

Road Opening

7.24 All pipeline construction activities within formed road reserves shall be in accordance with the requirements of the Code of Practice for Working in Roads, published by the Auckland Utilities Group and held on the relevant Council File. The Requiring Authority shall submit a Road Opening Notice for each work location within the formed road reserve as required by Standards New Zealand Handbook 'Code of Practice for Working in the Road' SNZ HB 2002:2003 prior to work commencing at that particular location.

Utility Repairs

7.25 All repair works on existing public wastewater, stormwater and water mains shall be carried out by a Council-approved licensed contractor at the Requiring Authority's expense.

Surplus Soil

7.26 Surplus soil may be dispersed on the site where it originated with the written consent of the relevant

The Proposed Auckland Unitary Plan (notified 30 September 2013)

property owner, or if it is to be disposed of off-site, it shall be disposed of at a location approved by, and to the satisfaction of, the Council.

8. Heritage

Heritage and Cultural Survey

8.1 The Requiring Authority shall, not less than three months prior to the commencement of construction, undertake a detailed Heritage and Cultural Survey along the pipeline route, in consultation with the New Zealand Historic Places Trust, affected tangata whenua and the Department of Conservation, to confirm the location of any features of heritage and cultural significance. Before the commencement of construction, the Requiring Authority shall submit documentation to the Council advising the outcomes of that survey and specifically identifying:

- a. Any features of heritage and cultural significance within or adjacent to the designation; and
- b. Appropriate protection measures for those features or the provision of the relevant authority to modify damage or destroy any archaeological site from the New Zealand Historic Places Trust.

Heritage Protocol

8.2 Prior to commencement of construction, the Requiring Authority shall implement a protocol for management of construction activities where those activities are in close proximity to known cultural and/or heritage sites and for discovery of taonga, koiwi or artefacts during design and construction ("the Heritage Protocol"). The Heritage Protocol shall be based on the draft protocol contained in Appendix 11.2 of Volume 3 of the Notice of Requirement for Designation.

9. Henderson Valley (Taupaki) Compressor Station

Noise

9.1 Noise from activities other than construction (including commissioning), maintenance and repair within the Henderson Valley Compressor Station shall not exceed the following limits when measured at the outer boundary of the restrictive covenant surrounding the station site:

- a. Day Time 7:00am - 7:00pm 40 dBA L10; and
- b. Night Time 7:00pm - 7:00am 40 dBA L10.

Measurement of Noise

9.2 The noise levels required by Condition 9.1 shall be measured in accordance with the requirements of NZS 6801:1991 Measurement of Sound and assessed in accordance with the requirements of NZS 6802:1999 Assessment of Environmental Sound.

Predicted Noise Levels

9.3 The Requiring Authority shall submit to Council a report from a suitably qualified and experienced acoustic engineer that states that the predicted noise levels to be generated from activities within the site will comply with the noise levels required by Condition 9.1, and specifies details of noise control treatment, if necessary. The report shall be submitted to the Council in draft form at least three months prior to the commencement of any construction works at the Henderson Valley Compressor Station, and again in final form at least one month prior to the commencement of any construction works at the Henderson Valley Compressor Station.

Noise Report

9.4 The Requiring Authority shall submit a report by a suitably qualified and experienced acoustic engineer on the noise generated from the operation of the facilities at Henderson Valley Compressor Station within three months of completion of commissioning of the new facilities. The report shall detail the noise measurements and specify any noise control treatment identified that may be necessary.

Lighting

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9.5 All lighting installed at Henderson Valley Compressor Station shall be sited and designed to ensure that illumination does not exceed 10 lux measured vertically at the boundary of the site.

Advice to Residents

9.6 The Requiring Authority shall no less than one week prior to it undertaking any 24 hour construction work at Henderson Valley Compressor Station, advise the Council and all owners and occupiers of all residential buildings located on properties within 300m of the site, if night lighting will be required.

10. Monitoring and Reinstatement

Reinstatement Management Plan

10.1 For land other than formed road, state highway and rail reserves, the Requiring Authority shall submit a preliminary Reinstatement Management Plan to the Council three months prior to the commencement of construction and again in final form to the Council at least one month prior to the commencement of construction. The Plan shall provide a written and photographic record of the area affected by works and shall include the procedures, methods and measures to be applied to address:

- a. Reinstatement of affected areas to pre-existing conditions;
- b. Reinstatement of existing utilities including property infrastructure; and
- c. Post construction monitoring measures to monitor effectiveness of the reinstatement measures.

The reinstatement measures identified in the Reinstatement Management Plan shall encompass the measures set out in Appendix 17 to the NOR (unless alternative measures are approved in writing by the relevant property owner). These reinstatement measures shall be implemented as soon as practicable after areas become available for reinstatement due to the progress of the works.

Monitoring

10.2 For land other than formed road, state highway and railway reserves, the Requiring Authority shall monitor reinstated areas at three monthly intervals for a period of 12 months after construction and six monthly for the following 12 months. The Requiring Authority shall submit a Reinstatement Report to the Council within one month of completion of each monitoring inspection. The Requiring Authority shall as soon as practicable undertake any remedial work identified in the Reinstatement Report as necessary to achieve the outcomes specified in the Reinstatement Management Plan submitted pursuant to Condition 10.1.

Reinstatement in Roads

10.3 Where the designation is within formed roads and state highways, the Requiring Authority shall engage a Council and NZTA approved suitably qualified roading engineer to undertake a before and after construction assessment based on a Road Asset Management rating survey of every formed road in which the pipelines are located. The consultant shall prepare an Initial Road Reinstatement Report as soon as practicable after completion of construction works and submit that report to Council and NZTA. The Requiring Authority shall as soon as practicable as required by the roading authority undertake any remedial work identified in the Initial Road Reinstatement Report as necessary to ensure that the roads are reinstated to the same standard as prior to construction.

Monitoring within Roads

10.4 Within formed road reserves and state highways, the Requiring Authority shall monitor the areas where work has been undertaken pursuant to the Initial Road Reinstatement Report at three monthly intervals for a period of 12 months after remediation. The Requiring Authority shall submit a Further Road Reinstatement Report to the roading authority within one month of completion of each monitoring inspection. The Requiring Authority shall as soon as practicable as required by the roading authority undertake any remedial work identified in any Further Road Reinstatement Report as necessary to ensure that the roads are reinstated to the same standard as prior to construction.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Specifications

10.5 The Requiring Authority shall submit to the roading authority a detailed specification of any road works reinstatement undertaken within three months of completion of the works.

11. Completion

As-built Drawings

11.1 The Requiring Authority shall submit to the Council detailed as-built pipeline drawings within three months of the commissioning of the new pipelines. The as-built drawings shall include geodetic coordinates for all key locations in an agreed electronic format.

12. Maintenance, Repair, Upgrading and Renewal

Engineering Standards

12.1 All works in, on or under Council roads shall be carried out in accordance with industry best practice.

Road Opening

12.2 Any maintenance, repair, upgrade or renewal works associated with the pipelines within public roads within the designation shall be carried out in accordance with the document "Working in the Roads Requirements" and a Road Opening Notice obtained from the Road Controlling Authority prior to the works commencing.

Pipeline Maintenance

12.3 All pipeline maintenance, repair, upgrade and renewal activities outside road reserves shall be in accordance with the "Guide to Land Access for the Oil and Gas Industry and Landowners" published in 2002

Utility Services

12.4 Any utilities within the designation shall be protected from the adverse effects of maintenance, repair, upgrade or renewal works.

Overland Flow Paths

12.5 Existing overland flow paths shall not be impeded by any maintenance, repair, upgrade or renewal works carried out within the designation.

Existing Overhead Lines

12.6 All works or activities related to the designation shall be undertaken in compliance with the New Zealand Code of Practice for Electrical Safe Distances (NZECP 34:2001).

Earthworks

12.7 Where works involving excavation are undertaken pursuant to the designation, appropriate sediment and erosion measures shall be employed. Prior to any earthworks within the designation the appropriate sediment control devices shall be installed in accordance with industry best practice.

Hours of Maintenance

12.8 Scheduled maintenance, repair, upgrade and renewal work and associated activities shall be limited to between the hours of 7am and 7pm, Monday to Saturday (excluding public holidays) unless the prior approval of the Council has been obtained, except in the event of an emergency.

Noise

12.9 The noise from maintenance, repair, upgrade and renewal activities shall be measured, assessed and controlled in accordance with the procedures and limits set out in NZS 6803:1999 Acoustics – Construction Noise.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Consultation with NZTA

12.10 Vector shall consult with the New Zealand Transport Agency (NZTA) at least 30 working days prior to carrying out any works or activities on, in or under State Highways, except in emergency situations.

Consultation with NZRC

12.11 Vector shall consult with The New Zealand Refining Company Limited (NZRC) at least 30 working days prior to carrying out any works or activities on, in or under NZRC's existing pipeline easement, except in emergency situations.

Maintenance

12.12 Where any maintenance, repair, upgrade or renewal works result in amendments to the as-built pipeline alignment drawings, updated drawings shall be provided to the Council within three months of the commissioning of those new works.

Written Approval from the Requiring Authority

12.13 The Requiring Authority shall respond within 15 days of receiving any request for its written approval under section 176 of the Resource Management Act.

13. Post Construction Restrictions

13.1 No person shall:

- a. Erect any building or structure; or
- b. Erect a fence with supports which extend more than 0.4m into the ground from the surface; or
- c. Plant any tree or shrub; or
- d. Disturb the soil below a depth of 0.4m from the surface; or
- e. Do anything on or to the land which would or could damage or endanger the pipelines within the designated corridor without first obtaining the written consent of Vector.

For the avoidance of doubt, such written consent shall not be required for ordinary cultivation, digging, excavating, tilling and working soil to a depth of less than 0.4m or where Vector has provided specific written approval prior to the designation coming into effect. A minimum of 1.5m cover shall remain above the top of the pipe after any ordinary cultivation, digging or excavation has taken place.

Landowners and/or developers can apply to Vector for consent to do any work on the land within the designation corridor. Vector will review each application with the landowner and/or developer and work to achieve the most suitable outcome for all parties. Vector may give its written consent subject to reasonable circumstances. Vector agrees to not unreasonably withhold its consent.

Works or activities that would or could damage or endanger the pipeline include, for example, the use of heavy compaction or vibration machinery and equipment, pile-driving machinery and equipment, trenching, excavation or drilling (including micro drilling and directional drilling).

13.2 No person shall undertake road opening, trenching, excavation or drilling (including micro drilling and directional drilling), or lay underground high voltage power lines >450v either in parallel with or intersecting Vector's pipelines, without first obtaining Vector's written approval.

13.3 However, the restrictions in 13.1 and 13.2 above do not apply, and Vector's consent is not required under section 176 of the Resource Management Act 1991 to the following activities:

- a. Any works authorised by an earlier designation.
- b. Any repair, maintenance or upgrade to any existing network utility infrastructure, provided that:
 - A Road Opening Notice has been obtained from the Auckland Council; and
 - Soil is not disturbed below a depth of 0.4m from the surface; and
 - After works, the finished surface level is not reduced below the pre-existing surface datum.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Where works other than those authorised by an earlier designation would exceed a depth of 0.4m from the surface and/or after completion of such works the finished surface level is proposed to be reduced below the pre-existing surface datum then application shall be made to Vector for consent to do the works. Vector will review each application with the applicant and work to achieve the most suitable outcome for all parties. Vector may give its written consent subject to reasonable circumstances. Vector agrees to not unreasonably withhold its consent.

Advice Notes

1. Access to overhead electricity transmission lines, poles or supporting structures shall be maintained at all times in accordance with the Electricity Act 1992.

2. Any new structures within the designation corridor may be subject to a Building Consent where applicable.

3. Guidelines for consultation, agreement for entry for construction and grant of easement, and construction damage release are contained in the Guide to Land Access for the Oil and Gas Industry and Landowners published by Federated Farmers of New Zealand Incorporated in 2002. Vector is encouraged to engage in a review of the Land Access Code with Federated Farmers.

4. Where this designation traverses land that was designated pursuant to section 176 and 177 of the Resource Management Act 1991 prior to the date of this designation (such as Public Road, Railway, the New Zealand Refining Company Ltd and NZTA designations and state highways which are protected pursuant to sections 51 and 52 of the Government Rounding Powers Act 1989), the Requiring Authority may only carry out its activities with the written consents of the earlier requiring authority.

5. The Requiring Authority is obliged to operate the pipelines and ancillary facilities in accordance with the requirements of NZ/AS2885: Pipelines – Gas and liquid petroleum, and the Health and Safety in Employment (HSE) Pipelines Regulations 1999 and any relevant provisions of the Crown Minerals Act 1991.

6. All necessary consents must be obtained from the Auckland Council prior to the construction of the new facilities. Consultation with affected parties is recommended as part of obtaining these consents.

7. It is possible that archaeological sites may be affected by the proposed work. Evidence of archaeological sites may include burnt and fire cracked stones, charcoal, rubbish heaps including shell, bone and/or glass and crockery, ditches, banks, pits, old building foundations, artefacts of Māori and European origin or human burials. The requiring authority is advised to contact the New Zealand Historic Places Trust if the presence of an archaeological site is suspected. Work affecting archaeological sites is subject to consent process under the Historic Places Act 1993. If any activity associated with this proposal, such as earthworks, fencing or landscaping, may modify, damage or destroy any archaeological site(s), an authority (consent) from the New Zealand Historic Places Trust must be obtained for the work to proceed lawfully. The Historic Places Act 1993 contains penalties for unauthorised site damage.

8. Emergency works may be performed in line with the Vector advice booklet by excavation to 0.4m depth and thereafter the use of hand tools only. Emergency operations should be notified immediately to Vector or their agent who provide an on-call service outside of normal working hours.

9. Pursuant and subject to s. 36 RMA the actual and reasonable costs incurred by the Council in monitoring conditions of the designation shall be paid by the Requiring Authority.

10. Vector has given an undertaking that following construction of, and registration of an easement over, the new pipelines, it will give notice under s. 182 RMA removing part of the designation so that the width of parts of the designation is reduced as set out in s. 2.7 of Volume 2 of the Notice of Requirement.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

11. Once notice has been given by Vector in accordance with condition 6.2, the Council and Vector shall meet to discuss the requirements of any updated documents referenced within the designation conditions (conditions 7.3, 7.6, 7.7, 7.9, 7.22, 7.25, 9.2, 12.1, 12.3, 12.6, 12.7). Vector shall consider the relevance of the updated documents and the implications which the changes may have on Vector's proposal, and advise the Council of these. Vector's agreement to comply with the requirements of any updated documents shall not be unreasonably withheld.

Plan 5672-504-115/118A Rev 1 - Pipeline Cross-section Jubilee Trust Property

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9101 Taupaki to Topuni Gas Pipeline

Designation Number	9101
Requiring Authority	Vector Gas Ltd
Location	102 Amreins Road, Taupaki to 109 Vipond Road, Topuni
Rollover Designation	Yes
Legacy Reference	Designation 619, Auckland City Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

1. Purpose of the Designation

1.1 The designation by Vector Gas Limited (Vector) is for the operation, maintenance and repair, upgrade and renewal of the existing gas transmission pipeline and ancillary facilities as required for the transportation of gas and described as follows:

- The existing 200mm gas transmission pipeline between McEntee Road and the Henderson Valley

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Compressor Station at Amreins Road;

- b. The existing 150mm gas transmission pipeline between the Henderson Valley Compressor Station and the Kaipara District Council boundary near Vipond Road;
- c. The Henderson Valley Compressor Station;
- d. The Delivery Points at Waimauku, Waitoki, Warkworth and Wellsford;
- e. The Main Line Valve station at Kanohi; and
- f. The Offtake station at Kaipara Flats.

1.2 For the purposes of these conditions the designation is subject to the following limitations:

- a. Renewal shall be limited to works on the gas transmission pipeline and will be limited to the replacement of sections of the pipeline with sections having equivalent diameter and maximum allowable operating pressure, and no more than 50 lineal metres of pipeline will be excavated at any particular time; and
- b. Upgrade will be limited to adding or replacing above ground components, provided the relevant permitted activity standards are complied with.

1.3 The designation affects land legally described in Appendix 2 “Schedule of Affected Land” of Volume 3 of the Notice of Requirement as submitted to the Rodney District Council.

Conditions

2. Restrictions

2.1 No person shall:

- a. Erect any building or structure; or
- b. Erect a fence with supports which extend more than 0.4m into the ground from the surface; or
- c. Plant any tree or shrub; or
- d. Disturb the soil below a depth of 0.4 from the surface; or
- e. Do anything on or to the land which would or could damage or endanger the pipeline within the designated corridor without first obtaining the written consent of Vector.

For the avoidance of doubt, such written consent shall not be required for ordinary cultivation, digging, excavating, tilling and working soil to a depth of less than 0.4m or where Vector has provided specific written approval prior to the designation coming into effect. A minimum of 1 m cover shall remain above the top of the pipe after any ordinary cultivation, digging or excavation has taken place.

Landowners and/or developers can apply to Vector for consent to do any work on the land within the designation corridor. Vector will review each application with the landowner and /or developer and work to achieve the most suitable outcome for all parties. Vector may give its written consent subject to reasonable conditions including the power to revoke the consent in specified circumstances. Vector agrees to not unreasonably withhold its consent.

Works or activities that would or could damage or endanger the pipeline include, for example, the use of heavy compaction or vibration machinery and equipment, pile-driving machinery and equipment, trenching, excavation or drilling (including micro drilling and directional drilling).

2.2 No person shall undertake road opening, trenching, excavation or drilling (including micro drilling and directional drilling), or lay underground high voltage power lines > 450v either in parallel with or intersecting Vector's gas pipeline, without first obtaining Vector's written approval.

2.3 However, the restrictions in 2.1 and 2.2 above do not apply, and Vector's consent is not required under section 176 of the Resource Management Act 1991 to the following activities:

- a. Any works authorised by an earlier designation;
- b. Any repair, maintenance or upgrade to any existing network utility infrastructure;
- c. Provided that:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- i. A Road Opening Notice has been obtained from the Auckland Council / Auckland Transport;
- ii. Soil is not disturbed below a depth of 0.4m from the surface; and
- iii. After works, the finished surface level is not reduced below the pre-existing surface datum.

2.4 Where works other than those authorised by an earlier designation would exceed a depth of 0.4m from the surface and/or after completion of such works the finished surface level is proposed to be reduced below the pre-existing surface datum then application shall be made to Vector for consent to do the works. Vector will review each application with the applicant and work to achieve the most suitable outcome for all parties. Vector may give its written consent subject to reasonable conditions, and agrees not to unreasonably withhold its consent.

3. Conditions

General

3.1 Subject to these conditions, all works shall be undertaken in general accordance with the plans and information submitted by Vector Gas Limited (Vector) in the documents entitled “Manukau to Whangarei Gas Pipelines — Notice of Requirement for a Designation” (Volumes 1, 2 and 3).

Designation Width

3.2 The maximum width of the designation shall be as follows:

- a. For land within road reserve (along road reserve/state highway) — 6 metres;
- b. For land within road reserve (across road reserve/state highway) — 6 metres;
- c. Non-road reserve — 12 metres (other than those areas where the existing easement width is less than 12 metres wide — In such circumstances the designation shall be the width of the easement); and
- d. Within Rail reserve — 6 metres.

Engineering Standards

3.3 All works in, on or under Council roads shall be carried out in accordance with the requirements of the Council's then current Standards for Engineering Design and Construction.

Road Opening

3.4 Any maintenance, repair, upgrade or renewal works associated with the pipeline within public roads within the designation shall be carried out in accordance with the document “Working in the Roads Requirements” and a Road Opening Notice obtained from the Road Controlling Authority prior to the works commencing.

Pipeline Maintenance

3.5 All pipeline maintenance, repair, upgrade and renewal activities outside road reserves that involve excavation shall be in accordance with the Guide to Land Access for the Oil and Gas Industry and Landowners.

Utility Services

3.6 Any utilities within the designation shall be protected from the adverse effects of maintenance, repair, upgrade or renewal works carried out within the designation.

Overland Flow Paths

3.7 Existing overland flow paths shall not be impeded by any maintenance, repair, upgrade or renewal works carried out within the designation.

Existing Overhead Lines

3.8 All works or activities related to the designation shall be undertaken in compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001).

Earthworks

3.9 Where maintenance, repair, upgrade and renewal activities involving excavation are undertaken pursuant to

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the designation, appropriate sediment and erosion measures shall be employed. Prior to any earthworks within the designation the appropriate sediment control devices shall be installed in accordance with industry best practice.

Hours of Maintenance

3.10 Scheduled maintenance, repair, upgrade or renewal work and associated activities shall be limited to between the hours of 7am and 7pm, Monday to Saturday (excluding public holidays) unless the prior approval of the Council has been obtained.

Noise

3.11 The noise from maintenance works, repair, upgrade and renewal activities shall be measured, assessed and controlled in accordance with the procedures and limits set out in NZS 6803:1999 Acoustics- Construction Noise.

Consultation with New Zealand Transport Agency

3.12 Vector shall consult with New Zealand Transport Agency at least 30 working days prior to carrying out any works or activities on, in or under State Highways, except in emergency situations.

Written Approval from the Requiring Authority

3.13 The Requiring Authority shall respond within 15 working days of receiving any request for its written approval under section 176 of the Resource Management Act 1991.

Advice Notes

1. Access to overhead electricity transmission lines, poles or supporting structures shall be maintained at all times in accordance with the Electricity Act 1992.

2. Any new structures within the designation may be subject to a Building Consent where applicable.

3. Vector has confirmed that it will consult with land owners and occupiers who may be affected by maintenance works, repair, upgrade and renewal activities to reach fair and reasonable arrangements for entry, and to address any matters regarding effects of maintenance, repair, upgrade and renewal activities, including restoring the surface of the land following maintenance, in accordance with its relevant obligations under the pipeline easement.

4. This designation traverses earlier Auckland Council / Auckland Transport roading, Railway and New Zealand Transport Agency designations that are protected pursuant to sections 176 and 177 of the Resource Management Act 1991, and State Highways which are protected pursuant to sections 51 and 52 of the Government Rounding Powers Act 1989. Where that occurs, the Requiring Authority may only carry out its activities with the written consent of the earlier requiring authorities.

5. The Requiring Authority is obliged to operate the pipelines and ancillary facilities in accordance with the requirements of AS2885: Pipelines — Gas and Petroleum Liquids, the Health and safety in Employment (Pipelines) Regulations 1999 and in accordance with the authorisations issued for those facilities in terms of the Petroleum Act (1937).

6. Emergency works may be performed in line with the Vector advice booklet by excavation to 0.4m depth and thereafter the use of hand tools only. Emergency operations should be notified immediately to Vector or their agent who provide an on-call service outside of normal working hours.

7. An authority may need to be obtained from the New Zealand Historic Places Trust to destroy, damage or modify an archaeological site in accordance with the Historic Places Act (1993).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. Where any maintenance works, repair, upgrade and renewal activities affect any stream or river or where earth works are undertaken the requiring authority will need to obtain any necessary consents from the Auckland Council prior to the works commencing.

9. For the avoidance of doubt, the Requiring Authority has confirmed that it accepts that nothing in the conditions limits, or is intended to limit, the potential obligation under s. 176A of the Resource Management Act (1991) to provide an Outline Plan of works in appropriate circumstances.

9102 East Tamaki to Taupaki Gas Pipeline

Designation Number	9102
Requiring Authority	Vector Gas Ltd
Location	100 Highbrook Drive, Waiouru Peninsula to 102 Amrein Road, Taupaki; and 114-119 and 164-220 Hugo Johnson Drive, Southdown (along Sylvia Park Road) To 453 Mt Wellington Highway, Mt Wellington
Rollover Designation	Yes
Legacy Reference	Designation G03-07, Auckland Council District Plan (Isthmus Section) 1999; Designation VGL1, Auckland Council District Plan (Waitakere Section) 2003; Designation 293, Auckland Council District Plan (Manukau Section) 2002; and Designation H13-26, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

1. Purpose of the Designation

1.1 The designation by Vector Gas Limited (Vector) is for the operation, maintenance and repair, upgrade and renewal of the existing gas transmission pipeline and ancillary facilities as required for the transportation of gas and described as follows:

- The existing 350 mm gas transmission pipeline between Waiouru Main Line Valve at Highbrook Drive and Westfield Delivery Point at Mount Wellington Highway;
- The existing 300 mm gas supply pipeline between Waiouru Main Line Valve at Highbrook Drive and Otahuhu Power Station;
- The existing 200 mm gas transmission pipeline between Westfield Delivery Point at Mount Wellington Highway and McEntee Road, Taupaki;
- The existing 350mm gas transmission pipeline between Westfield Delivery Point at Mount Wellington Highway and Southdown Delivery Point at Hugo Johnston Drive; and
- The existing Delivery Points and Main Line Valve stations.

Located between the Waiouru Main Line Valve in Highbrook Drive, East Tamaki and McEntee Road, Taupaki.

1.2 The designation is subject to the following limitations:

- Renewal shall be limited to works on the gas transmission pipeline and will be limited to replacement with sections having equivalent diameter and maximum allowable operating pressure, being 6,600 kilopascals, and no more than 20 lineal metres of gas transmission pipeline will be excavated within any one 14 calendar day period;
- Upgrade will be limited to adding or replacing above ground components provided the district plan relevant permitted activity standards are complied with and the maximum allowable operating pressure is not increased.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Above ground components are limited to the existing pipeline valve stations and existing delivery points which consists of:

- i. Pipeline offtake and station inlet piping, isolation valves;
- ii. Filters;
- iii. Pressure regulation and safety valves;
- iv. Metering equipment and all weather enclosure;
- v. Foundations;
- vi. Electrical and earthing systems;
- vii. Other ancillary systems;
- viii. Surface marker posts; and
- ix. Warning signage.

Note:

- Upgrade does not include increasing the height or foot print of any building or structure containing any of the above listed above ground components.
- All activities within road reserve shall be in accordance with the requirements of the Auckland Transport Code of Practice for Working in Roads.
- All activities within land other than road reserve shall be in accordance with the Guide to Land Access for the Oil and Gas Industry and Landowners.

1.3 The designation affects land legally described in Appendix 2 “Schedule of Affected Land” of Volume 3 of the Notice of Requirement as submitted to the Auckland City Council, Manukau City Council and Waitakere City Council (the Council).

Conditions

2. Restrictions

2.1 No person shall:

- a. Erect any building or construction on the designated corridor;
 - b. Erect any fence or other improvement or plant any tree or shrub;
 - c. Disturb the soil below a depth of 0.4 metres from the surface; or
 - d. Do anything on or to the Land within the designated corridor which would or could damage or endanger the Pipelines;
- without first obtaining the written consent of Vector.

For the avoidance of doubt, such written consent shall not be required for ordinary cultivation, digging, excavating, tilling and working soil to a depth of less than 0.4m. A minimum of 1m cover shall remain above the top of the pipe after any ordinary cultivation, digging or excavation has taken place.

Landowners and/or developers can apply to Vector for consent to do any work on the land within the designation corridor. Vector will review each application with the landowner/developer and work to achieve the most suitable outcome for all parties. Vector may give its written consent to reasonable conditions including the power to revoke the consent in specified circumstances.

Vector agrees to not unreasonably withhold its consent.

Works or activities that would or could damage or endanger the pipeline include, for example, the use of heavy compaction or vibration machinery and equipment, pile-driving machinery and equipment, trenching, excavation or drilling (including micro drilling and directional drilling).

2.2 No person shall undertake road opening, trenching, excavation or drilling (including micro drilling and directional drilling), or lay underground high voltage power lines either in parallel with or intersecting with

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Vector's gas pipelines, without first obtaining Vector's written approval.

2.3 However, the restrictions in 2.1 and 2.2 above do not apply, and Vector's consent is not required under s. 176 of the Resource Management Act (1991) to the following activities, provided that a Road Opening Notice has been obtained from the council for:

- a. Any road widening or associated works in accordance with any existing road designation;
- b. Any repair, maintenance or upgrade to existing road surface;
- c. Any repair, maintenance or upgrade to any existing network utility infrastructure; and
- d. Provided in all cases that:
 - i. Soil is not disturbed below a depth of 0.4m from the surface; and
 - ii. After works, the finished surface level is not reduced below the pre-existing surface datum.

Where works in the above categories would exceed 0.4m in depth from the surface and/or after completion of such works the finished surface level is proposed to be reduced below the pre-existing surface datum then application shall be made to Vector for consent to do the works. Vector will review each application with the applicant and work to achieve the most suitable outcome for all parties. Vector may give its written consent subject to reasonable conditions, and agrees to not unreasonably withhold its consent.

Emergency works may be performed in line with the Vector advice booklet by excavation to 0.4m depth and thereafter the use of hand tools only. Emergency operations should be notified immediately to Vector Gas Ltd who provide an on-call service outside of normal working hours.

3. Conditions

3.1 The works to give effect to the designation shall be generally in accordance with the plans and information submitted by Vector Gas Ltd in support of the Notice of Requirement in the documents entitled "Manukau – Whangarei Gas Pipelines – Notice of Requirement for a Designation" (Volumes 1, 2 and 3).

3.2 The maximum width of the designation shall be as follows:

- a. Area: Within Road or Rail reserve

Proposed designations width: 6 metres to the extent that the designation shall not extend over road or rail boundaries onto freehold land except to the extent that that private property is subject to an easement in favour of Vector.

- b. Area: Non road reserve

Proposed designations width: 12 metres (other than those areas where the existing easement width is less than 12 metres wide – in such circumstances the designation width shall be the width of the easement).

3.3 All pipeline maintenance, repair, upgrade or renewal activities within road reserve that involve excavation shall be subject to Road Opening Notice requirements of Auckland Council / Auckland Transport and carried out in accordance with National Code of Practice for Utility Operators' Access to Transport Corridors (10 November 2011)

3.4 Where maintenance, repair, upgrade and renewal activities involving excavation are undertaken pursuant to the designation, appropriate sediment and erosion measures shall be employed.

3.5 Vector shall at all times ensure that access between parts of any property held in single ownership temporarily severed by maintenance, repair, upgrade or renewal activities is maintained to a level that will enable, as far as is practicable, normal activities on the property to continue.

3.6 Within road reserves scheduled maintenance, repair, upgrade or renewal work and associated activities shall be limited to between the hours of 7am and 7pm, Monday to Saturday (excluding public holidays) except:

- a. Where otherwise stated in a Traffic Management Plan, to the satisfaction of the Council; or
- b. With the prior approval of the Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

3.7 All works or activities related to the designation shall be undertaken in compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances 2001 (NZECP 34:2001).

3.8 The noise from maintenance, repair, upgrade and renewal activities shall be measured, assessed and controlled in accordance with the procedures and limits set out NZS 6803:1999 Acoustics – Construction Noise.

3.9 Vector shall consult with the New Zealand Transport Agency (NZTA) at least 30 working days prior to carrying out any works or activities on, in or under State Highways, except in emergency situations.

3.10 Vector shall consult with the Council at least 15 working days prior to carrying out any works or activities on, in or under Council-controlled roads or land, except in emergency situations.

3.11 The Requiring Authority shall respond within 15 working days of receiving any request for its written approval under section 176 of the Resource Management Act 1991.

Advice Notes

1. Access to overhead electricity transmission lines, poles or supporting structures shall be maintained at all times in accordance with the Electricity Act 1992.

2. Vector has confirmed that it will consult with land owners and occupiers who may be affected by maintenance or repair works to reach fair and reasonable arrangements for entry, and to address any matters regarding effects of maintenance activities, including restoring the surface of the land following maintenance, in accordance with its relevant obligations under the pipeline easement.

3. The Requiring Authority is obliged to operate the pipelines and ancillary facilities in accordance with the requirements of AS2885: Pipelines – Gas and Petroleum Liquids, the Health and Safety in Employment (Pipelines) Regulations 1999 and in accordance with the authorisations issued for those facilities in terms of the Petroleum Act 1937.

4. This designation traverses earlier New Zealand Transport Agency (NZTA) designations that are protected pursuant to sections 176 and 177 of the Resource Management Act 1991, and State Highways which are protected pursuant to sections 51 and 52 of the Government Roadings Powers Act 1989. Where that occurs, the Requiring Authority may only carry out its activities with the written consent of the New Zealand Transport Agency.

9104 Pukekohe to East Tamaki Gas Pipeline

Designation Number	9104
Requiring Authority	Vector Gas Ltd
Location	Mill Road (Waikato District Council boundary), Pukekohe to 65 Highbrook Drive, East Tamaki
Rollover Designation	Yes
Legacy Reference	Designation 290, Auckland Council District Plan (Manukau Section) 2002; Designation 41, Auckland Council District Plan (Papakura Section) 1999; and Designation 149, Auckland Council District Plan (Franklin Section) 2000

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapse Date	Five years from being operative in the Unitary Plan unless given effect to prior
------------	--

Description

1. Purpose of the Designation

1.1 The designation by Vector Gas Limited (Vector) of land is for:

- a. The operation, maintenance, upgrade and renewal of the existing 350mm diameter gas transmission pipeline and all ancillary structures and activities associated with these works for transportation of natural gas; and
- b. The design, construction, operation, maintenance and renewal of a new pipeline generally alongside the existing pipeline and all ancillary structures and activities associated with these works for transportation of natural gas.

1.2 The designation affects land legally described in Appendix 2 "Schedule of Affected Land" of Volume 3 of the Notice of Requirement for Designation submitted to Manukau City Council, Papakura District Council and Franklin District Council.

1.3 The designation shall be described in the Auckland Unitary Plan as "Gas Transmission Purposes".

Conditions

The designation shall be subject to the following conditions:

Unless the context otherwise requires, references in the following conditions to "the Council" shall be deemed to be references to the Auckland Council's Chief Executive Officer or nominee.

1. General

1.1 The works to give effect to the designation shall be generally in accordance with the plans and information submitted by NGC in support of the Notice of Requirement in the documents entitled "Rotowaro – East Tamaki Pipeline Route Designation" (Reference 5104-R-04, Rev 1 Volumes 1, 2 and 3), and as amended by Drawings numbered:

- a. P5107/0605/01 (Sheets 1, 5 and 6 - Revision 2);
- b. P5107/0504/015 (Sheets 1 and 2 - Revision 1); and
- c. Except as varied by the conditions herein.

1.2 The maximum width of the designation shall be as follows excepting any lesser widths specified in Appendix 3 – Property Plans, Volume 3 Notice of Requirement:

Non Road Reserve (land zoned other than Rural):

	Construction Width	Post-Construction Width
Within Road Reserve (along road)	6 metres	6 metres
Within Road Reserve (across road)	8 metres	8 metres
	18 metres	12 metres
Non Road Reserve (land zoned Rural)	25 metres	12 metres

1.3 The Requiring Authority shall give written notice of:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. The likely commencement date for the works pursuant to the designation; and
- b. The expected timeframe for the construction programme;

To the Council and landowners not less than two years and then again not less than one year prior to entry for construction. The Requiring Authority shall provide to the Council a list of the landowners notified pursuant to this condition and a copy of the information supplied to them.

1.4 The Requiring Authority will minimise as far as practicable the construction width used in all land zoned Rural. Where a reduced width is practicable, the Requiring Authority shall give notice to the Council that it no longer wants the relevant portion of the construction width pursuant to Section 182 of the Resource Management Act 1991.

1.5 The designation is subject to the following limitations for the existing pipeline system:

- a. Renewal shall be limited to works on the gas transmission pipeline and will be limited to replacement with sections having equivalent diameter and maximum allowable operating pressure and no more than 50 lineal metres of gas transmission pipeline will be excavated within one 14 calendar day period;
- b. Upgrade will be limited to adding or replacing the above ground components provided the district plan relevant permitted activity standards are complied with the maximum allowable operating pressure is not increased. Above ground components are limited to the existing pipeline valve stations and existing delivery points which consists of:
 - i. Pipeline offtake and station inlet piping, isolation valves;
 - ii. Filters;
 - iii. Pressure regulation and safety valves;
 - vi. Metering equipment and all weather enclosure;
 - v. Foundations;
 - vi. Electrical and earthing systems;
 - vii. Other ancillary systems;
 - viii. Surface marker posts; and
 - ix. Warning signage;
- c. Upgrade will include but not limited to replacing old outdated equipment with updated equipment with similar foot print or height; and
- d. Upgrade does not include significant increases in the height or foot print of any building or structure containing any of the above listed above ground components.

1.6 If the Requiring Authority accepts Conditions 2.1, 2.4, 2.9, and 2.12, being the requirements to submit the Construction Management Plans and associated conditions/matters, that acceptance shall be deemed by Council to be a waiver in relation to that Plan or relevant parts of that Plan pursuant to Section 176A(2)(c) of the Resource Management Act 1991 of the requirement for an Outline Plan of Works under Section 176A. If the Council and the Requiring Authority do not agree on the terms of such Plan and associated matters/conditions, the relevant provisions of Section 176A of the Resource Management Act 1991 shall apply in respect of any part not agreed.

2. Construction

2.1 The Requiring Authority shall submit a detailed Construction Management Plan to the satisfaction of the Council at least three months prior to commencing construction. The Construction Management Plan shall include the construction drawings and procedures, methods and measures to be applied during the construction phase to address:

- a. Liaison with Council, affected parties, utility owners and the general public;
- b. Construction techniques including likely work programme;
- c. Construction work within road reserves;
- d. Noise control;
- e. Dust control including specific reference to protection of power transmission lines;
- f. Earthworks and sediment control plan including vegetation control, disposal of unsuitable and/or surplus

The Proposed Auckland Unitary Plan (notified 30 September 2013)

material;

g. Measures to ensure construction vehicles do not deposit soil or other debris on roads;

h. Provision for fencing so as to enable continued operation of the landuse activities on the properties through which the designation passes;

i. Location, protection and provision of alternative supply in the event of disruption of existing utilities; and

j. Management of issues raised by affected parties during construction including contact details for key construction personnel and systems for investigation, recording and reporting actions taken to resolve the issue raised.

2.2 The construction plans described in Condition 2.1 shall include detailed engineering plans prepared in consultation with landowners. The plans shall include longsections and cross sections (where necessary) detailing the alignment and level of the pipeline and associated works with respect to ground levels, structures and services.

2.3 The Requiring Authority shall submit a detailed Health and Safety Management Plan to the Council at least three months prior to commencing construction.

2.4 The Requiring Authority shall submit a detailed Traffic Management Plan to the satisfaction of the Council at least three months prior to commencing works. All traffic and pedestrian control measures detailed in the Traffic Management Plan shall conform with the Transit New Zealand manual entitled "Code of Practice for Temporary Traffic Management Issue 2" and dated October 2002. Specific areas to be addressed in the Plan shall include:

a. The temporary diversion of traffic during construction;

b. Traffic safety;

c. Control at intersections;

d. Consideration of hours of work for heavily trafficked roads;

e. Maintenance of road and property access; and

f. Movement of construction traffic on local roads.

2.5 Not less than two weeks prior to the commencement of works, the Requiring Authority shall meet with the Council for a pre-construction meeting.

2.6 The Requiring Authority shall at all times ensure that access between parts of any single property temporarily severed by construction is maintained to a level that will enable, as far as is practicable, normal operations on the property to continue.

2.7 Except within road reserves, pipeline construction and associated activities shall not occur during the hours of darkness as defined in the Traffic Regulations 1976 except in the case of urgent work necessary to prevent injury to persons or damage to property.

2.8 Within road reserves, pipeline construction and associated activities shall be limited to between the hours of 7 am and 7 pm Monday to Saturday (excluding public holidays) except:

a. Where otherwise stated in a Traffic Management Plan to the satisfaction of the Council submitted pursuant to Condition 2.4; or

b. With the prior written approval of the Council.

2.9 Within road reserves, all construction activities at any one location shall be limited to a linear distance of 300 metres in accordance with the drawing 9009-SK-001 Rev.B in Attachment 1, except with the prior written consent of the Auckland Council.

2.10 Construction activities in private property shall be limited to the period between 1 October in any given year, and 30 April in the following year except with the prior written approval of the Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

2.11 Except as otherwise provided, the pipeline shall have a minimum cover of at least 1.5 metres in land zoned rural and 2.0 metres in road reserves and land with a zoning other than rural.

2.12 The Requiring Authority shall liaise with all relevant utility operators during the detailed design and subsequent construction processes prior to undertaking any work pursuant to this designation and shall ensure that all existing utility services located in or adjacent to the designation are:

- a. Accurately located prior to the preparation of the plans detailed in Condition 2.1. If necessary, this shall include exploratory excavation;
- b. Either protected from any activity which may interfere with the proper functioning of the services or relocated;
- c. If damaged, repaired at the Requiring Authority's expense, to the reasonable satisfaction of the affected utility operator; and
- d. Able to be accessed during construction.

2.13 Where existing buried services are encountered the new pipeline shall, where practicable be installed underneath them, with a minimum 0.5 metre vertical separation. Where practicable a 1.0 metre horizontal separation shall be provided from any existing pipeline. If the minimum clearance cannot be achieved during construction, measures such as concrete protection slabs or similar barriers shall be provided to protect the utility from damage as a result of installation of the pipeline.

2.14 The pipeline shall be installed across road carriageways using trenchless construction techniques unless otherwise agreed with Council.

2.15 All works or activities related to the designation shall be designed and undertaken to comply with the New Zealand Electrical Code of Practice for Electrical Safe Distances 2001 (NZECP 34:2001).

2.16 The noise from construction and maintenance works shall be measured, assessed and controlled in accordance with the procedures and limits set out NZS 6803:1999 Acoustics – Construction Noise.

2.17 All pipeline construction activities within road reserves shall be in accordance with the requirements of the Code Of Practice For Working on Roads, jointly published by the Combined Working Group of the Auckland region's territorial authorities and the Auckland Utilities Operators Group, included as Appendix G of evidence presented at the Public Hearing 12 July 2004 by Owen McBride.

2.18 Any damage caused to the road traffic signal inductive loops as a result of construction activities shall be reported to the Council immediately. Any costs associated with the reinstatement of these loops shall be met by the Requiring Authority.

2.19 All works on existing public wastewater, stormwater and water mains shall be carried out by a Council-approved licensed contractor at the Requiring Authority's expense.

3. Heritage

3.1 The Requiring Authority shall, not less than six months prior to the commencement of construction, undertake a detailed Heritage and Cultural Survey along the pipeline route, in consultation with New Zealand Historic Places Trust, affected tangata whenua and Department of Conservation, to confirm the location of any features of heritage and cultural significance. Before the commencement of construction, the Requiring Authority shall submit documentation to the Council advising the outcomes of the survey and specifically identifying:

- a. Features within or adjacent to the construction designation; and
- b. Appropriate protection measures for those features or the provision of the relevant authority to modify or destroy from the New Zealand Historic Places Trust.

3.2 Prior to commencement of construction, the Requiring Authority shall implement a protocol for management

The Proposed Auckland Unitary Plan (notified 30 September 2013)

of construction activities where these activities are in close proximity to known cultural and/or heritage sites and for discovery of taonga, koiwi or artefacts during design and construction ("the Heritage Protocol"). The Heritage Protocol shall be based on the draft protocol contained in Appendix 11.2 of Volume 3 of the Notice of Requirement for Designation (Rev 1).

4. Monitoring and Reinstatement

4.1 For areas outside road reserves, the Requiring Authority shall submit a Reinstatement Management Plan to the satisfaction of the Council at least three months prior to commencing construction. The Plan shall provide a written and photographic record of the area affected by works and shall include the procedures, methods and measures to be applied to address:

- a. Reinstatement of affected areas;
- b. Reinstatement of existing utilities including property infrastructure; and
- c. Post construction monitoring measures to monitor effectiveness of the reinstatement measures.

The reinstatement measures identified in the Reinstatement Management Plan shall be implemented as soon as practicable after areas become available for reinstatement due to the progress of the works.

4.2 For areas outside of road reserves, the Requiring Authority shall monitor reinstated areas at three monthly intervals for a period of 12 months after construction and six monthly for the following 12 months. The Requiring Authority shall submit a Reinstatement Report to the Council within one month of completion of each monitoring inspection. The Requiring Authority shall as soon as practicable undertake any remedial work identified in the Reinstatement Report as necessary to achieve the outcomes specified in the Reinstatement Management Plan submitted pursuant to Condition 4.1.

4.3 Where the designation is within road reserves, the Requiring Authority shall engage a Council-approved suitably qualified independent consultant to undertake a before and after construction assessment based on a Road Asset Management requirement including RAMM condition rating survey and High Speed Data rating survey of every road in which the pipeline is located. The consultant shall prepare an Initial Road Reinstatement Report as soon as practicable after completion of construction works and submit that Report to the Council. The Requiring Authority shall as soon as practicable as required by the Council undertake any remedial work identified in the Initial Road Reinstatement Report as necessary to ensure that the roads are reinstated to the same standard as prior to construction.

4.4 Within road reserves, the Requiring Authority shall monitor the areas where work has been undertaken pursuant to the Initial Road Reinstatement Report at three monthly intervals for a period of 12 months after remediation. The Requiring Authority shall submit a Further Road Reinstatement Report to the Council within one month of completion of each monitoring inspection. The Requiring Authority shall as soon as practicable as required by the Council undertake any remedial work identified in any Further Road Reinstatement Report as necessary to ensure that the roads are reinstated to the same standard as prior to construction.

5. Completion

5.1 The Requiring Authority shall submit to the Council detailed as-built pipeline alignment drawings of both pipelines within three months of the commissioning of the new pipeline. The as built drawings shall include geodetic coordinates for all key locations in agreed electronic format.

5.2 Where any maintenance, upgrade or renewal works result in amendments to the as-built pipeline alignment drawings, updated drawings shall be provided to the Council within three months of the commissioning of those new works.

5.3 The Requiring Authority shall submit to the Council a detailed as-built specification of the road works reinstatement undertaken in accordance with industry best practice within one month of completion of the works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

5.4 The Requiring Authority shall give notice to the Council that it no longer wants the construction width of the designation pursuant to Section 182 of the Resource Management Act 1991 within three months of completion of the work.

6. Specific Conditions

6.1 All activities excluding construction and maintenance at the stations along the route shall be conducted and buildings located, designed and used to ensure that the noise levels within the notional boundary of any rural dwelling or the boundary of any residential dwelling does not exceed the following limits:

- a. Monday to Sunday 7:00am - 7:00pm 50dBA (L10);
- b. Monday to Sunday 7:00pm - 7:00am 40dBA (L10);

Noise levels shall be measured in accordance with the requirements of NZS 6801:2008 Measurement of Sound and assessed in accordance with the requirements of NZS 6802:2008 Assessment of Environmental Sound.

6.2 The Requiring Authority shall submit a Construction Noise Management Plan to the satisfaction of Council at least three months prior to commencing construction. The Plan shall be developed and implemented in accordance with Condition 2.16 for construction works along the pipeline and shall:

- a. Identify all occupied dwellings which are located within 40 metres of any area to be used for pipeline construction and installation purposes;
- b. Provide predicted construction noise levels for all dwellings identified in clause (a); and
- c. Specify mitigation measures needed to achieve compliance with Condition 2.16 for all dwellings where required, or alternative strategies for ensuring that construction noise levels will be acceptable to the occupants of identified dwellings to ensure that these are acceptable to them.

6.3 Unless otherwise agreed with Council, trenchless technology shall be used where the pipeline crosses a road pavement transversely.

6.4 Unless otherwise agreed with Council, open trench construction must be used where the pipeline runs longitudinally within the road.

The length of open trench at any one time and at any one location shall be in accordance with drawing 9009-SK-001 Rev.B, such that the length of trench open at the end of each days work is no greater than 10m, and that the trench will be backfilled completely where two lanes of traffic cannot otherwise be achieved.

Traffic management shall be in accordance with the Traffic Management Plan required in Condition 2.4. Where two lane traffic cannot be maintained past the open trench, the trench shall be backfilled, with a temporary surfacing provided to a safe and trafficable condition. A council approved temporary method of bridging the open trench may be used to ensure that two lanes of traffic can pass safely over this section of road at the end of each day.

Elsewhere trenches shall be backfilled flush with the adjacent road surface to a safe and trafficable condition at the end of the working day.

6.5 The road reinstatement detailed in Condition 4.3 must include the full resurfacing with the same surface material of either the lane width occupied by the pipeline or one half of the road carriageway including road marking, and repair to traffic islands. If construction activities affect both halves of the road carriageway to the extent that the ride quality is affected over the full width of the road carriageway then the full width of the carriageway must be resurfaced in accordance with Condition 6.6. Assessment of the width of the carriageway to be resurfaced will be as determined by the roading consultant appointed in accordance with Condition 4.3.

6.6 Reinstatement of the areas affected by construction activities within the road carriageway shall comply with the requirements of Condition 2.17 except that the carriageway areas must be resurfaced with TNZ Mix 15.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Where the existing surface is asphalt, the existing surface shall be milled and a Council approved membrane seal shall be applied to the milled surface to an approved Council standard, prior to placement of the asphalt.

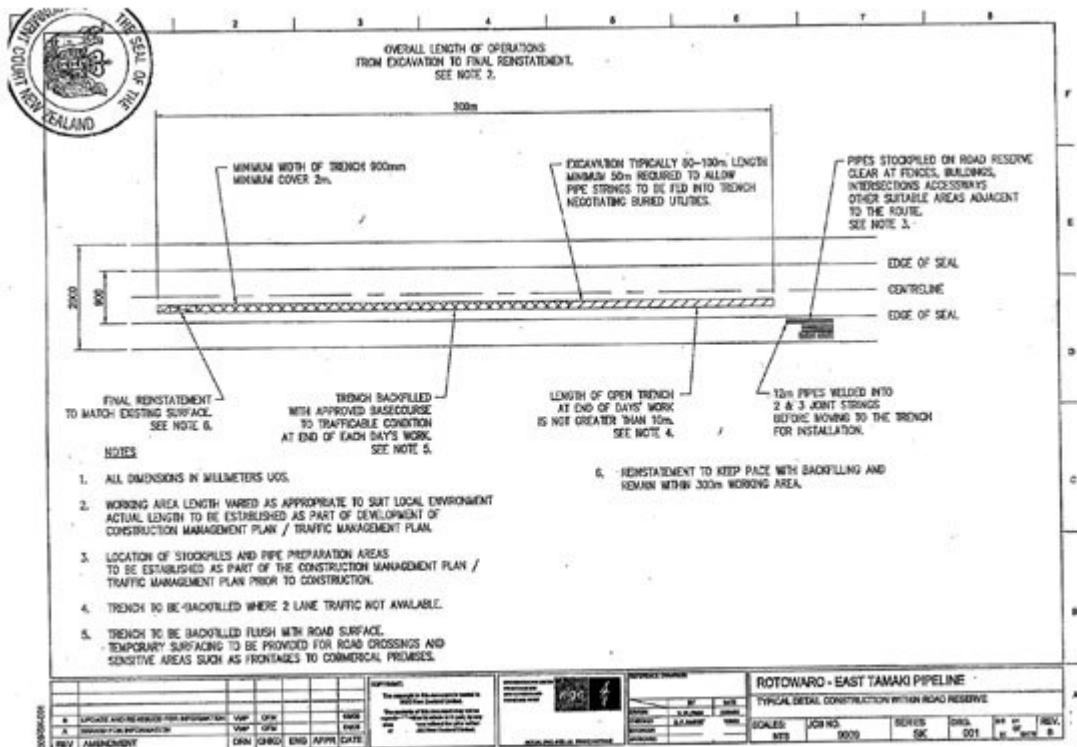

6.7 Regarding the requirement to provide as-built information in accordance with the asset data standards for Auckland Council, Vector and their consultant shall provide as-built data for all Council assets that are disturbed or reinstated as a result of installation of the gas pipeline.

Advice Notes

1. Access to overhead electricity transmission lines, poles or supporting structures shall be maintained at all times in accordance with the Electricity Act 1992.
2. Guidelines for land consultation, agreement for entry for construction and grant of easement, and construction damage release are contained in the Land Access Code jointly published by Federated Farmers Institute of New Zealand Incorporated and the Petroleum Exploration Association of New Zealand and dated May 1997. Vector is encouraged to engage in a review of the Land Access Code with Federated Farmers.
3. The Requiring Authority is obliged to operate the pipelines and ancillary facilities in accordance with the requirements of NZ/AS2885: Pipelines – Gas and Petroleum Liquids, and the Health and Safety in Employment (HSE) Pipelines Regulations 1999 and for the existing pipeline in accordance with the authorisation issued for those facilities in terms of the Petroleum Act 1937.
4. All necessary regional consents must be obtained prior to the construction of the new facilities. Consultation with Department of Conservation and other affected parties may be required as part of obtaining these consents.
5. A resource consent to authorise the transmission of gas beneath State Highway 1 will need to be obtained from the Council prior to commissioning of the pipeline.
6. An authority may need to be obtained from the New Zealand Historic Places Trust to destroy, damage or modify an archaeological site(s) in accordance with the Historic Places Act 1993.
7. Pursuant and subject to Section 36 of the Resource Management Act 1991 the actual and reasonable costs incurred by the Council in monitoring conditions of this recommendation shall be paid by the Requiring Authority.
8. The cost of repairing poorly reinstated trenches has been estimated at 5-15% of the maintenance programme for local authorities. This was analysed in detail in Transfund Research report No. 249 entitled “Impact of Poorly Reinstated Trenches on Roughness”. The key performance indicators for assessing trench reinstatement are riding quality and surface defects which include corrugations, rutting and settlement. An assessment of the pavement performance can be made by back-calculation of Falling Weight Deflectometer (FWD) deflection data. The above noted surface defects can be measured before and after trenching using a laser profilometer (high speed data capture) for rutting, roughness, and texture depth.

9310 Rosedale Wastewater Treatment Plant Odour Buffer Area

Designation Number	9310
Requiring Authority	Watercare Services Ltd
Location	Rosedale park and reserves, roads and motorway in the vicinity of Wastewater Treatment Plant
Rollover Designation	Yes
Legacy Reference	Designation 163, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Wastewater purposes - wastewater treatment plant odour buffer.

Conditions

1. The extent of the odour buffer zone shall be as indicated on the Plan annexed to this decision (No.54 from the Figures Booklet produced to the hearings) and the boundary of the odour buffer zone shall be the boundary marked on that Plan.

2. The Requiring Authority shall prepare an Odour Management Plan (which may form part of a Plant Operations Management Plan) that accurately records all management and operational procedures, methodologies and contingency plans necessary to achieve the 'no offensive or objectionable odour' threshold test, measured at the boundary of the odour buffer zone, by 1 July 2004. The Odour Management Plan required by this condition is to be submitted to the Team Leader, Environmental Protection of the North Shore City Council for written approval by 1 July 2001. The Odour Management Plan is to be reviewed from time to time to ensure that the best practicable options are being pursued in order to attain the 'no offensive or objectionable odour' threshold test. Any review is to be submitted to the Team Leader, Environmental Protection for approval prior to its forming part of the Odour Management Plan.

a. Notwithstanding the 'no offensive or objectionable odour' threshold timeframe, the Odour Management Plan shall contain a time bound procedure designed to minimise odour risk for the users of the Rosedale Parks when any regional, national or international event is hosted at those parks. The Requiring Authority shall request from the Rosedale Park users groups at 4 monthly intervals (or within such other time period agreed to by individual user groups) a list detailing the timing of such events.

3. On completion of the Stage 3 upgrade works at the WWTP site in 2001 and the decommissioning of the trickling filters by July 2004, there shall be no odour, dust or fumes caused by discharges from the WWTP site beyond the boundary of the odour buffer which, in the opinion of an enforcement officer, are noxious, offensive or objectionable.

4. Should pond odours continue to be objectionable or offensive as measured at the odour buffer boundary by 2008, the Requiring Authority shall commence a process of consultation to determine the future of the ponds.

5. There shall be no restrictions on existing users of Rosedale Park, Rosedale Park North or Rosedale Park South as a result of the odour buffer designation. This shall include no restrictions imposed as a result of the designation on such extensions of existing buildings and playing surfaces as are reasonably necessary for the support of existing uses and associated growth.

6. The operator of the Wastewater Treatment Plant shall invite representatives of those groups which use either Rosedale Park or Rosedale Park South on a regular basis to form a Users Liaison Group to meet with the Plant operator on an ongoing basis.

a. The purpose of the Users Liaison Group is to facilitate communication and dialogue between the Plant operator and those groups with facilities within the odour buffer zone and which regularly use the Rosedale Parks. The members of the Users Liaison Group are to be kept informed of the operation of and upgrades to the Treatment Plant (including the findings of any peer review reports), and the effects which any works are expected to have on odour levels within the Parks or on use of the Parks.

b. The Requiring Authority (or any other operator of the Treatment Plant) shall use its best endeavours to ensure that any upgrade works or plant operations which could result in odour or other adverse effects are avoided or deferred during all major events held at the Parks (such as prize-givings, championships, regional, national or international events). In order to achieve this, the Requiring Authority (or other operator) is to ascertain from the Users Liaison Group the timing of all such major events and details of any applications to secure such events.

c. Meetings of the Users Liaison Group may be called by any Group member and are to be convened at least twice each year to coincide approximately with the beginning and end of the various codes' playing seasons. It is the responsibility of the Requiring Authority (or other Plant operator) to coordinate such meetings and to prepare the agenda for each meeting. A minimum ten days' notice shall be given to all Users Liaison Group

The Proposed Auckland Unitary Plan (notified 30 September 2013)

members of any proposed meeting, which shall be held at the Treatment Plant site. A representative of the Auckland Regional Council, and the Parks Officer of the North Shore City Council who is responsible for the Rosedale Parks shall be invited to attend all Users Liaison Group meetings. The Requiring Authority shall keep minutes of each meeting, and will circulate such minutes to all members, the ARC and the North Shore City Council (Parks Department) as soon as reasonably practicable following each meeting.

7. In accordance with Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of 35 years after the date on which it is included in the District Plan unless:

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the district plan ceasing to be operative.

9311 Rosedale Wastewater Treatment Plant

Designation Number	9311
Requiring Authority	Watercare Services Ltd
Location	Rosedale Road and Upper Harbour Highway, Albany then via various properties and roads to Mirangi Bay
Rollover Designation	Yes
Legacy Reference	Designation 164, Auckland Council District Plan (North Shore Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Wastewater purposes - wastewater treatment plant and underground route of outfall to Mairangi Bay.

Conditions

General Conditions

1. Except as modified by the conditions below, the scope and extent of the works within the designated area shall be undertaken generally in accordance with the information provided by the North Shore City Council Notice of Requirement dated 17 December 1999, the supporting document 'Project Rosedale Assessment of Effects on the Environment (AEE), December 1999', the plans contained in the Appendices and Technical Reports accompanying the Notice of Requirement, and in the evidence called by the requiring authority at the hearings of the Notice of Requirement held at North Shore City Council between 26 October and 8 November 2000 subject to the approved Outline Plan(s) and in accordance with the conditions set out below.

Bulk and Location of Buildings at Treatment Plant Site

2. Where practicable, new buildings are to be located in Zones A and C as shown on Drawing 24 of the AEE. Other buildings which have a functional need to locate outside of these areas shall be designed in a manner that is sympathetic to the open space and wildlife values surrounding the main treatment pond (sometimes known as Lake Rosedale). Any land taken or held for the works shall be maintained to reasonable standard until construction of the facilities commences, to the intent that no nuisance is created to properties in the vicinity.

3. In all cases, buildings shall be located no closer than 5.0 metres to the boundary of the site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. The maximum height of any building shall not exceed 14.0 metres above natural ground level.

Outline Plan(s)

5. Before any construction is commenced an Outline Plan(s) shall be submitted in terms of Section 176A of the Resource Management Act 1991 to the North Shore City Council. The outline plan(s) may be submitted in stages to reflect any proposed staging of the physical works. The outline plan(s) is to be submitted to an independent party appointed by the Chief Executive Officer of the North Shore City Council for assessment and recommendations to the Council. The outline plan(s) shall include those matters required to be included by section 176A(3) of the Act and those matters specified in conditions 6, 7, 9, 11-27, 33-35, 37, 38, 40 below:

6. During both the preparation of the outline plan(s) and the construction period, the Requiring Authority shall take into account the location of existing infrastructure and utility services, including particular regard to the existing UnitedNetworks electricity transmission line which traverses the treatment plant site, and also have regard to the likely location of future infrastructure and utility services, and undertake consultation with such appropriated North Shore City Council departments and network utility operators as necessary to achieve this.

7. Should the existing 110kV overhead transmission lines within part of the WTP site need to be relocated as a result of construction works, the Requiring Authority shall, prior to March in any year, provide United Networks Limited ("United Networks") with at least 6 months' notice of such relocation being required.

Construction Management Plan

8. Prior to the commencement of any earthworks or construction activity on the designation site (excluding site investigations, but including tunnelling and the deposit of excavated material), the Requiring Authority shall consult with UnitedNetworks in preparing a Construction Management Plan to ensure that the maintenance and operation of UnitedNetwork's infrastructure located within the designation site are not adversely affected by earthworks or construction activity within 20 metres of that infrastructure.

9. At least 1 month prior to the commencement of any earthworks or construction activity on the designation site (excluding site investigations, but including tunnelling and the deposit of excavated material), the Requiring Authority shall ensure that a Construction Management Plan is submitted:

- a. In its entirety to the Team Leader, Resource Consents of the North Shore City Council; and
- b. Those parts relating to earthworks or construction activity within 20 metres of UnitedNetworks' infrastructure, to UnitedNetworks;
- i. subject to conditions of Auckland Regional Council resource consents.

10. The Construction Management Plan required by condition 9 shall identify amongst other things:

- a. Method to avoid, remedy or mitigate any adverse effects of earthworks or construction activity on UnitedNetworks infrastructure located within the designation site;
- b. The area and volume of earthworks, together with erosion and silt control measures;
- c. Transportation, stock piling and storage of excavated material including sludge and spoil (and including measures to ensure that there is no stockpiling or storage within the root zone of any protected tree);
- d. Storage of construction equipment (including measures to ensure that there is no stockpiling or storage within the root zone of any protected tree);
- e. Fencing of construction activities from residential properties and public places;
- f. Security fencing;
- g. Cleaning of spilled debris from public places;
- h. Specific methods by which dust will be managed, including cleaning vehicle tyres before vehicles enter public roads, wetting or covering surfaces and replanting disturbed areas;
- i. Contingency measures to ensure that, in the event of any dust nuisance arising, immediate remedial measure are implemented;
- j. A dilapidation survey of such nature and extent as should be considered reasonable and necessary by the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Team Leader, Resource Consents of the North Shore City Council;

- k. The effects of, and procedures for prior notification of the use of, machinery or blasting likely to generate vibration effects to properties where such vibrations may be felt;
- l. Procedures for handling any dust and vibration complaints;
- m. Traffic movements;
- n. Hours of operation by trucks and service vehicles;
- o. Parking of workers' vehicles;
- p. Lighting in relation to adjacent residential properties;
- q. The extent of and quality control measures for reinstatement of public areas;
- r. A single point of contact to field general inquiries from the public relating to the project;
- s. A 24 hour point of contact for the Council;
- t. How compliance with the appropriate NZS noise and construction standards is to be achieved;
- u. How the NZ Electrical Code of Practice 34 (or any other code in substitution for or amendment of that Code) is to be complied with in respect of any works which would affect the existing 110kV overhead electricity transmission lines within part of the WWTP site;
- v. The measures to be adopted to filter odours which may be emitted through tunnel shafts or openings;
- w. Any matters required to be included as a result of conditions of any relevant consents granted by the Auckland Regional Council; and
- x. Any other measures required on the approval, pursuant to condition 5 above, or an Outline Plan(s) for the works.

11. The Requiring Authority shall ensure that the Construction Management Plan is complied with at all times during construction work.

Construction Works

12. All contract documentation for physical works shall include the designation conditions, the approved outline plan(s) and any other resource consents (including conditions) held for the project.

13. The Requiring Authority and its contractors shall, in addition to complying with all other construction-related conditions, take all reasonable steps to prevent or mitigate any nuisance or damage to adjacent properties during construction.

14. Dust arising from construction activities shall be suppressed by the use of water sprays and other appropriate methods so as to prevent nuisance to adjacent occupiers and landowners.

15. The construction of the tunnel (including the spreading of spoil) and the treatment plant upgrading works shall be undertaken in such a manner as to avoid as far as is practicable the generation of dust from such activities which causes or is likely to cause nuisance beyond the boundary of the designated area.

16. The activities or works shall not generate vibrations that may cause discomfort or adversely affect the health and well being of the occupants of premises outside the designation, except when the written consent of the occupants is obtained. Vibrations which do not exceed the limits referred to below as set out in the provisions of International Standard ISO 2631-2: 1989 "Evaluation of human exposure to whole body vibration – Part 2 Continuous and Shock-induced Vibration in Buildings (1 to 80 Hz)" will be deemed to meet this requirement. These particular limits require that the vibration levels (acceleration measured in metres per second) relative to the frequency shall not exceed the base curves of figure 2A (z axis), 3a (x, y and z axes) and 4a (combined x, y and z axes) of ISO 2631-2:1989.

17. The assessment of continuous, intermittent and transient (impulsive) vibrations shall be carried out by a suitably qualified and experienced person in accordance with Annex A and Table 2 of ISO 2631-2:1989.

18. The instruments used to measure vibrations and the methods of measurement shall comply with a

The Proposed Auckland Unitary Plan (notified 30 September 2013)

recognised standard such as Australian Standard AS2973:1987 Vibration and Shock – Human response.

19. The Team Leader, Resource Consents of the North Shore City Council may approve vibration levels above the standards specified in Condition 16 when satisfied that higher levels are necessary for construction or demolition work of limited duration.

20. All tunnel construction activities shall be controlled so as to ensure that any ground vibration will not adversely affect the structural integrity of any building or structure or facility (that is not connected with the land covered by this designation) or cause a reduction in its utility value. Peak particle velocities measured on any foundation or uppermost full storey of any building not related to the site, which do not exceed the limits set out in Table 1 of German Standard DIN 4150 Part 3: 1986 “Structural Vibration in Buildings – Effects on Structures”, will be deemed to meet these requirements. Such monitoring as is necessary to ensure compliance with this condition shall be undertaken. Records of monitoring undertaken shall be made available to the Council on request.

21. Prior to the commencement of tunnelling works, the Requiring Authority shall consult with those property owners and occupiers whom it may reasonably expect would experience vibrations from the tunnelling. Persons involved in this consultation shall be advised of the duration and anticipated effects of the project.

22. The disposal tunnel shall be constructed in such a way as to prevent damage, loss of amenity or injury to people, buildings, and other property and facilities due to erosion, vibration, subsidence, or loss of support of the land adjacent to the tunnel.

23. The Requiring Authority shall advise all neighbouring owners and occupiers of the date on which construction is to start, the expected duration of the works, and the telephone number of a contact person who is able to respond to queries.

24. At least one month before any construction works take place upon and in the immediate proximity of the Mairangi Bay reserve, a public notice shall be provided in an appropriate place on the reserve advising of the general nature of the works and the date of their commencement.

25. At all times reasonable physical access shall be maintained to other properties in vicinity of all the construction works.

26. Measures shall be undertaken to keep the roads in the vicinity of the tunnel construction site, public places and treatment plant construction area free from any debris resulting from the construction works.

27. The programming of truck and other large vehicle movements shall be arranged so that such vehicles do not wait or queue on the street other than for normal traffic movements when opposing traffic obstructs their way.

28. Should construction work uncover any archaeological remains, the Requiring Authority shall immediately advise local Kaumatua of iwi claiming tangata whenua status in the immediate area and the New Zealand Historic Places Trust and cease working in the affected area until any necessary authority required by the New Zealand Historic Places Trust is obtained. All archaeological sites are protected under the provision the Historic Places Act 1993, whereby it is unlawful to modify, damage or destroy an archaeological site, whether recorded or not, without the prior consent of the Historic Places Trust.

Discharges

29. The Requiring Authority shall prepare an Odour Management Plan which accurately records all management and operational procedures, methodologies and contingency plans necessary to achieve the ‘no offensive or objectionable odour’ threshold test, measured at the boundary of the odour buffer zone, by 1 July 2004. This Management Plan shall include an odour monitoring component. The Odour Management Plan required by this

The Proposed Auckland Unitary Plan (notified 30 September 2013)

condition is to be submitted to the Team Leader, Environmental Protection of the North Shore City Council for written approval by 1 July 2001. The Odour Management Plan is to be reviewed from time to time to ensure that the best practicable options are being pursued in order to attain the no offensive or objectionable odour threshold test. Any review is to be submitted to the Team Leader, Environmental Protection for approval prior to its forming part of the Odour Management Plan.

i. Notwithstanding the no offensive or objectionable odour threshold timeframe, the Odour Management Plan shall contain a time bound procedure designed to minimise odour risk for the users of the Rosedale Parks when any regional, national or international event is hosted at those parks. The Requiring Authority shall request from the Rosedale Park users groups at 4 monthly intervals (or within such other time period agreed to by individual user groups) a list detailing the times of such events.

30. On completion of the Stage 3 upgrade works in 2001 and the decommissioning of the trickling filters by 1 July 2004 (or within 2 years of the designation being included in the District Plan) there shall be no odour, dust or fumes caused by discharges from the site beyond the boundary of the odour buffer which, in the opinion of an enforcement officer, are noxious, offensive or objectionable.

31. The trickling filters at the Plant are to be either fully enclosed (with appropriate biofilters) or decommissioned as soon as practicably possible. A programme to achieve this is to be submitted to the satisfaction of the Council and the ARC by 31 January 2001.

32. Other odour reducing actions as outlined in the documentation which accompanied the Requirement and as described in the evidence of the Requiring Authority, namely the evidence in November 2000 of Dr M Jones (page 17, paragraph 12.2), and Mr J Hodges (page 85, paragraph 17.3, and page 97, paragraph 21.3(d)), including (but not restricted to) the treatment of odorous gases from the screening building, covering the primary sedimentation tanks and treatment of odour gases, treatment of gases from the biosolids dewatering plant and reduction of oxidation pond loads is to progress as soon as practicably possible until the 'no objectionable or offensive' odour test is met at the amended odour buffer boundary.

33. No discharges from any activity on site shall give rise to visible emissions, other than water vapour and steam, to an extent that, in the opinion of any enforcement officer is noxious, offensive or objectionable.

34. Should pond odours continue to be noxious, offensive or objectionable as monitored at the odour buffer boundary by 2008, the Requiring Authority is to commence a process of consultation to determine the future of the ponds.

Visual Impact Mitigation Conditions

35. As part of the outline plan(s) the Requiring Authority shall prepare a landscape mitigation plan, based on the landscape plan prepared by LA4 Landscape Architects (drawing 34) and included in the AEE.

36. The landscape plan is to be implemented as works progress, with the planting proposed to mitigate the effects of development within Area C being implemented as soon as practicably possible. To facilitate this a planting plan illustrating the manner in which the visual impact of future development in Zone C shall be addressed is to be produced as soon as practicably possible, and no later than 12 months prior to construction commencing.

37. This plan shall include all proposed planting (including species, species sizes, densities, areas and locations), the planting programme and the maintenance programme. Such planting shall be implemented in the first planting season following commencement of operations at the station.

38. The landscape maintenance programme shall extend for a minimum of five years following implementation. It shall include performance standards specifying the minimum average growth rates and survival rates for planting, and shall include any practicable and reasonable maintenance measures including control of invasive

The Proposed Auckland Unitary Plan (notified 30 September 2013)

weed species.

39. The surface materials of structures and facilities on the WWTP site are to be finished in natural tones.

Noise Impact Mitigation Conditions

40. The day to day operation of the treatment plant in non extreme weather conditions shall comply with the noise levels set out in Section 10 of the Proposed North Shore District Plan for the Residential Zones or be inaudible against the normally present background noise. The plan upgrades are to include specific design elements as directed by a suitably qualified acoustic engineer. The characteristics of all noise sources on site (including tonal components) should be addressed in the design criteria.

41. The Environmental Protection Department of the North Shore City Council is to be informed of any interim measures to protect the residential areas adjacent to the Plant prior to further plant upgrades.

42. The Requiring Authority shall ensure that all construction works comply with NZS6803P:1999 The Measurement and Assessment of Noise from Construction, Maintenance, and Demolition Work with a best practicable option approach being adopted to minimise noise exposure (particularly from tunnel access shafts) at all residential site boundaries. Prior to tunnel construction commencing, a noise management plan is to be submitted and approved by the Council showing how construction noise will be attenuated.

Traffic and Parking Conditions

43. On site manoeuvring for all vehicles shall be provided so that no reverse manoeuvring onto streets will occur from the treatment plant site or any construction site associated with this designation.

44. The Requiring Authority will maintain a sufficient number of parking and loading spaces within the WWTP site to comply with Table 12.1 "Parking Standards" of the Proposed District Plan.

Duration of the First Designation

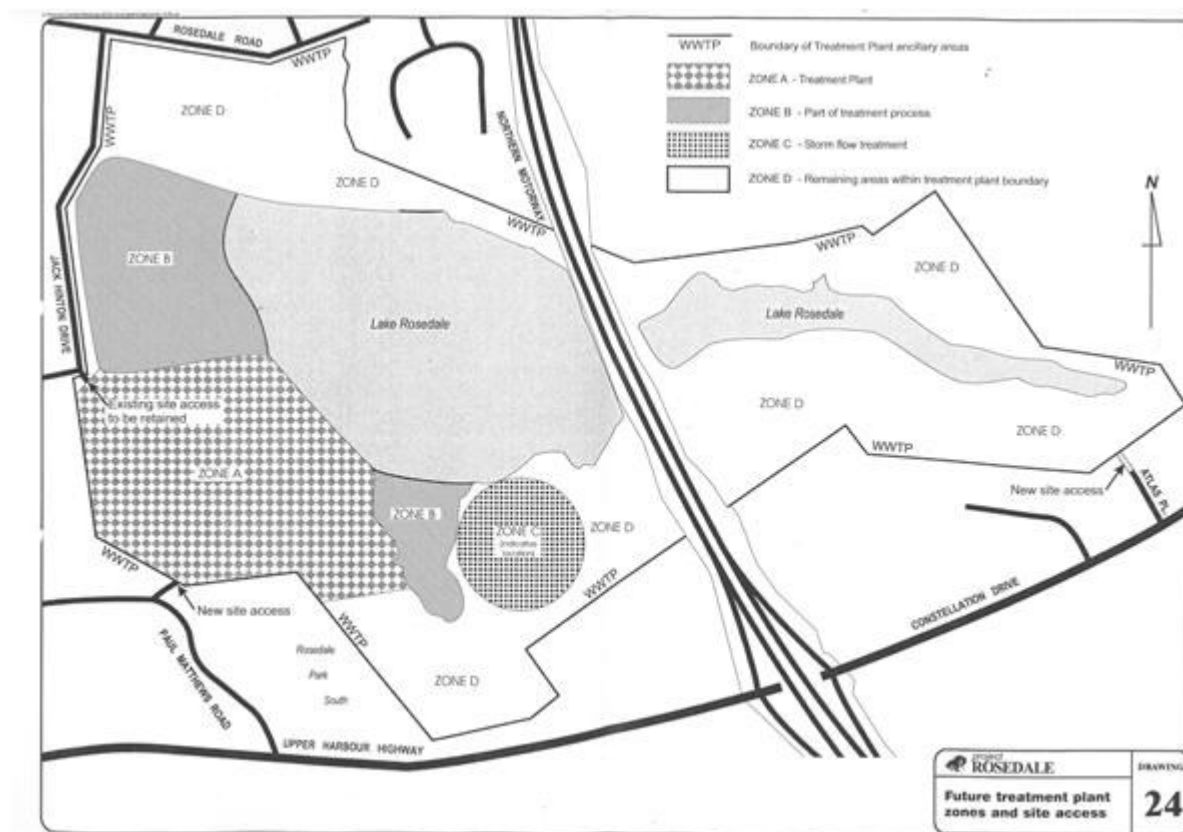

45. In accordance with Section 184A(2)(c) of the Resource Management Act 1991, the designation will lapse on the expiry of 35 years after the date on which it is included in the District Plan unless;

- a. It is given effect to before the end of that period; or
- b. The territorial authority resolves that it has made, and is continuing to make, substantial progress or effort towards giving effect to the designation and fixes a longer period to give effect to the designation; or
- c. The designation lapses earlier by virtue of the district plan ceasing to be operative.

Drawing No. 24 - Future Treatment Plant Zones and Site Access

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Drawing No. 34 - Landscape Development Plan

9312 Easter Parade Pump Station

Designation Number	9312
Requiring Authority	Watercare Services Ltd
Location	22B Easter Parade, Glen Eden
Rollover Designation	Yes
Legacy Reference	Designation WCCSPS1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Wastewater purposes - pump station and associated structures.

Conditions

1. Except as provided in Condition 2 below, the Requiring Authority shall submit an Outline Plan of Works in accordance with Section 176A of the RMA.
2. An Outline Plan of Works need not be submitted if the Council has waived the requirement for an Outline Plan of Works in accordance with Section 176(2)(c) of the RMA.
3. Appropriate sedimentation and erosion control measure shall be employed for any earthworks on the designated site.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

4. Construction activities shall be managed to generally achieve compliance with the requirements of NZ6803:1999 - Acoustics - Construction Noise.

9321 Waitakere Ranges Catchment Headworks Areas

Designation Number	9321
Requiring Authority	Watercare Services Ltd
Location	Waitakere Ranges
Rollover Designation	Yes
Legacy Reference	Designation WSL1, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - water catchment headworks areas.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:
- a statement on the relevant Plan objectives, policies and rules; and
 - a statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out.

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold, with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 2. Note that major earthworks may require a consent from the Regional Council.

- 3a. Works shall not adversely affect those elements of the Huia Filter Station (WSL 4), the Nihotupu Filter

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Station (WSL 4) or the Waitakere Filter Station (WSL 3) which are identified in the Heritage Appendix of this Plan, CHI numbers 1257, 1283 and 1289 respectively, under the columns headed "Description" and "Interiors".

b. Works shall not adversely affect the stringer dam in WSL 2, the sawpit in WSL 2 or the mill and holding dam in WSL 1, as described in the Heritage Appendix CHI numbers 1543, 1392 and 638 respectively.

Explanation:

Works otherwise in accordance with the designation but which adversely affect the items or elements of items identified as being of heritage significance may only be carried out if the designation is altered to specifically alter (or remove) the condition. As part of the requirement to alter the designation, the requiring authority would be expected to carry out a form of heritage assessment. For general guidance about the content of such an assessment, reference can be made to the City- Wide Rules:- Heritage.

9322 Waitakere Ranges Catchment Headworks Services Land

Designation Number	9322
Requiring Authority	Watercare Services Ltd
Location	Waitakere Ranges
Rollover Designation	Yes
Legacy Reference	Designation WSL2, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - headworks service land.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:

- a statement on the relevant Plan objectives, policies and rules; and
- a statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out.

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the designated site.

Explanation:

This Plan outlines erosion and sediment control measures for earthworks which are above a certain threshold,

The Proposed Auckland Unitary Plan (notified 30 September 2013)

with that threshold varying according to the particular environment. Compliance with these measures would generally satisfy condition 2. Note that major earthworks may require a consent from the Regional Council.

3a. Works shall not adversely affect those elements of the Huia Filter Station (WSL 4), the Nihotupu Filter Station (WSL 4) or the Waitakere Filter Station (WSL 3) which are identified in the Heritage Appendix of this Plan, CHI numbers 1257, 1283 and 1289 respectively, under the columns headed "Description" and "Interiors".

b. Works shall not adversely affect the stringer dam in WSL 2, the sawpit in WSL 2 or the mill and holding dam in WSL 1, as described in the Heritage Appendix CHI numbers 1543, 1392 and 638 respectively.

Explanation:

Works otherwise in accordance with the designation but which adversely affect the items or elements of items identified as being of heritage significance may only be carried out if the designation is altered to specifically alter (or remove) the condition. As part of the requirement to alter the designation, the requiring authority would be expected to carry out a form of heritage assessment. For general guidance about the content of such an assessment, reference can be made to the City- Wide Rules:- Heritage.

9323 Waitakere Water Treatment Plant

Designation Number	9323
Requiring Authority	Watercare Services Ltd
Location	105-121 Christian Road, Swanson; 21 Long Road, Bethells
Rollover Designation	Yes
Legacy Reference	Designation WSL3, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - water treatment plant and associated structures.

Conditions

1. To ensure that section 176A 3(f) of the Act has been adequately addressed, an outline plan shall include, as appropriate:

- a statement on the relevant Plan objectives, policies and rules; and
- a statement on any adverse effects the works will have on the environment and the mitigation measures to be carried out.

Explanation:

While it is accepted that the project or works will be (or should be) in accordance with the designated purpose, the Council wishes to be reasonably assured that the specific works to be carried out will not unnecessarily compromise the objectives, policies and rules of the Plan or adversely affect the environment. The Council's principal opportunity to influence the works to assist the requiring authority to meet its environmental responsibilities is through the outline plan, and the assessment of compliance and effects will assist it in determining whether to request changes.

2. Appropriate sedimentation and erosion control measures shall be employed for any earthworks on the

9334 Fred Taylor Drive Pump Station

Designation Number	9334
Requiring Authority	Watercare Services Ltd
Location	97B Fred Taylor Drive, Whenuapai
Rollover Designation	Yes
Legacy Reference	Designation WSL15, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	13 September 2022

Purpose

Wastewater Purposes – Construction and operation of a wastewater pump station pump station and associated structures to service the new town centre of Massey North. The proposed wastewater pumping station includes: an underground storage tank, wet well with submersible pumps, control building, mechanical and electrical installation, siteworks, planting and permanent access road.

Conditions

General Condition

1. Except as modified by the conditions, the works shall be undertaken in general accordance with the information provided by the requiring authority in the Notice of Requirement and all information and plans being:
 - a. Form 18 titled 'Notice of Requirement by for Designation Under Section 168 of the Resource Management Act 1991' for 'wastewater purposes', signed by General Counsel for Watercare Services Ltd, dated 27 January 2012;
 - b. plan prepared by Watercare Services Ltd titled 'Proposed Design for Massey North Watercare Pumping

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Station Proposed Designation', drawing number 131837.100 R2 dated 24 January 2012;

c. report prepared by Watercare Services Ltd titled 'Assessment of Effects on the Environment – Massey North Wastewater Pumping Station', dated May 2012;

d. plan prepared by Watercare Services Ltd titled 'Massey North Pump Station Control Building Elevations, drawing number 131837.021, dated 1 March 2012; and

e. letter from Nick Grala of Harrison Grierson titled 'Watercare Services Ltd, NoR for Massey North Pumping Station', dated 17 May 2012.

Outline Plan of Works

2. The Requiring Authority shall submit an outline plan of works for the project in accordance with section 176A of the Resource Management Act 1991, except that an outline plan of works does not need to be submitted for earthworks authorised by regional consent 40357.

Construction Noise

3. Construction activities shall be managed to generally achieve compliance with the requirements of NZS6803:1999 Acoustics – Construction Noise.

Archaeology and Heritage

4. If any archaeological sites, including human remains are exposed during site works then the following procedures should apply:

a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;

b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and

c. The Requiring Authority shall be notify the New Zealand Historic Places Trust, tangata whenua, and the council (and in the case of human remains, the New Zealand police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historic Places Trust has been obtained.

Planting

5. The Requiring Authority shall plant around the periphery of the pumping station with an emphasis on the planting of the riparian margin, in areas not required for proposed or future works, servicing and maintenance, and any public walkway created in accordance with Condition 6. Planting shall be designed in consultation with council Parks, Sports and Recreation to ensure that plant species are generally consistent with the overall planting concept for the area as set out in the Totara Creek Stormwater and Open Space Master Plan dated April 2011. Details of the proposed planting shall be included with the Outline Plan of Works referred to in Condition 2.

Public Access

6. If council seeks approval under s. 176 (1) (b) Resource Management Act (1991) for a public walkway over part of the site, the Requiring Authority shall unreasonably withhold its approval provided that any public walkway does not interfere with the construction, operation and maintenance of the site for wastewater purposes and meets all health and safety requirements.

Lapsing of the Designation

7. The designation shall lapse on expiry of period 10 years after the date it is included in the District Plan in accordance with section 184(1)(c) of the RMA, unless:

a. It is given effect before the end of that period; or

b. The council determines, on an application made within 3 months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period for the purposes of this subsection.

Requiring Authority	Watercare Services Ltd
Location	1535 Whangaparaoa Road, Army Bay
Rollover Designation	Yes
Legacy Reference	Designation 157, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Description

Wastewater purposes - wastewater treatment plant.

Conditions

1. That development shall be in general accordance with the notice of requirement dated 28 August 1996, plan numbers ss1, ss2, ss3, re1, re2, and l1 relating to job number 18206 and the concept plan, drawing number Rodney District Council 12558.
2. That the lone pohutukawa tree on the northern side of the wetland be fenced off and protected, in consultation with Ngati Whatua, within three months of the approval of this requirement notice, in recognition of the cultural significance of the tree.
3. That in the event of any archaeological remains being uncovered during the establishment and operation of the site, work shall cease immediately and the New Zealand Historic Places Trust and Te Hao o Ngati Whatua

The Proposed Auckland Unitary Plan (notified 30 September 2013)

shall be notified so that the appropriate action can be taken.

4. That the visible exterior of the SBR tanks be finished and maintained in the following, or similar, colours with the prior agreement of the district planner - resource management within six months of the construction of the tanks.

9367 Glenvar Reservoir (Lonely Track Road)

Designation Number	9367
Requiring Authority	Watercare Services Ltd
Location	2 Lonely Track Road, Glenvar
Rollover Designation	Yes
Legacy Reference	Designation 951, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - reservoir and associated structures (including power supply and telemetry).

Conditions

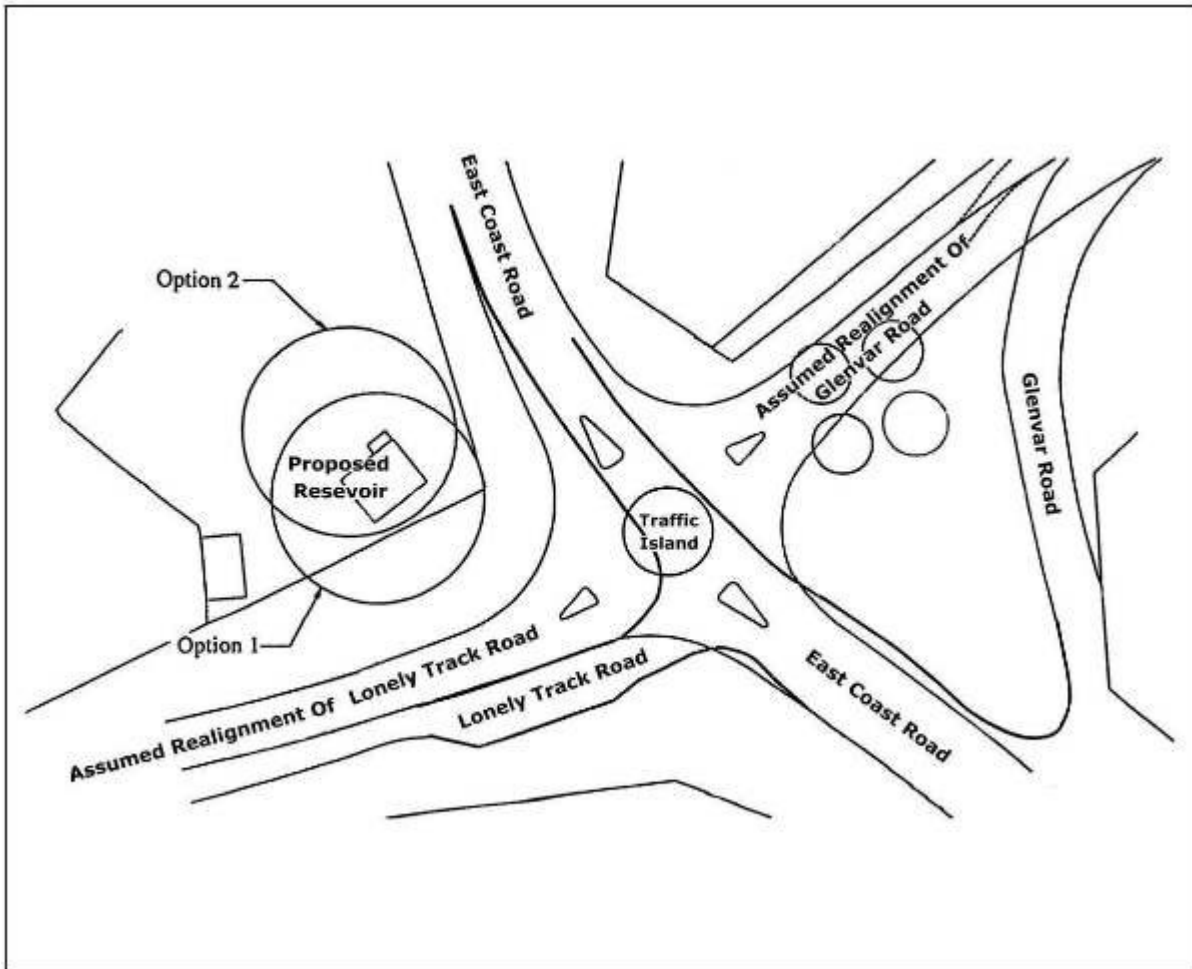

1. That development shall proceed in general accordance with the notice of requirement and attached plans submitted on 4 March 1996, (Plan Number 2001111-03).
2. That "Option 2" on Plan Number 2001111-03 be adopted.
3. That provision of vehicular access to the site be made from Lonely Track Road, and that access to the balance land be located at the most practicable northernmost point onto East Coast Road.
4. That the reservoir and associated structures are painted in visually recessive colours appropriate to the setting when viewed from East Coast Road and Lonely Track Road.
5. That a detailed landscape plan and implementation programme shall be submitted and approved by the Council's Parks Officer, prior to the construction of the reservoir.
 - a. The landscape plan is to take into account the safety problem caused by landfill debris on the site.
 - b. A rehabilitation programme is to be included in the landscape plan to address amenity and safety issues.
 - c. The landscape plan is to include appropriate measures for the screening of the reservoir and associated structures by earth mounding and vegetation.
 - d. Subsoil shall be ripped and drained and the depth of topsoil shall be no less than 500mm where planting is to be undertaken.
 - e. Irrigation and mulching is to be provided for the first three years after planting.
 - f. Priority shall be given to the retention of as much of the existing vegetation on the site as is practicable and to the selection of native species for replanting.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

g. New planting shall be implemented and maintained in accordance with the approved plan.

9368 Redvale Pump Station (East Coast Road)

Designation Number	9368
Requiring Authority	Watercare Services Ltd
Location	East Coast Road - vicinity of Bawden Road, Redvale
Rollover Designation	Yes
Legacy Reference	Designation 952, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Give effect to (i.e. no lapse date)

Purpose

Water supply purposes - pump station and associated structures.

Conditions

1. This requirement is to operate, maintain and replace, add to or upgrade if necessary the existing Water Pump Station together with any associated:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. pipelines or tunnels;
- b. power supply and telemetry; and
- c. other ancillary structures.

2. That the buildings and structures are painted in a visually recessive colour appropriate to the rural setting.

3. That a detailed landscape plan be maintained, to include appropriate measures for the screening of the building from the adjacent roads, and the planting shall be implemented and maintained in accordance with the approved plan.

9369 Wade Heads Reservoir (Scott Road)

Designation Number	9369
Requiring Authority	Watercare Services Ltd
Location	125 Scott Road, Wade Heads
Rollover Designation	Yes
Legacy Reference	Designation 953, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	Given effect to (i.e. no lapse date)

Description

Water supply purposes - reservoir and associated structures.

Purpose

General

1. The activity shall proceed in general accordance with the Notice of Requirement and further information submitted to council, and plans drawn by Watercare Services Limited, dated 26/06/2003 and numbered 2003768.001/2.

Note:

Consent may be required from council for sediment control relating to the necessary earthworks.

Outline Plan

2. An outline plan shall be submitted to council prior to the commencement of work on the site.

Landscape Plan

3. A detailed landscape plan, including an implementation and maintenance programme shall be submitted to and approved by the Team Leader — Resource Consents prior to any works commencing on the site:

a. The plan shall include details of the plant sizes at the time of planting and intended species. Preference should be given to the use of indigenous species, with a further preference for the use of local genetic stock.

Such a plan shall include appropriate measures to reduce adverse effects on visual amenity and to provide screening of the water supply structures viewed from neighbours and the road; and

b. The landscaping shall be implemented and maintained in accordance with the approved landscaping plan within the first planting season (May to October) following the completion of the works on the site. The landscaping shall be maintained thereafter.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Review Condition

4. Pursuant to s. 128 of the Resource Management Act (1991), the council may serve notice on the requiring authority of its intention to review conditions of this consent after three years of operation of the activity. The purpose of this review will be to ensure that the visual effects associated with the bulk of the reservoir structure are being mitigated by the conditions of this consent and if additional measures, such as the painting of the structure, are to be taken. This review condition will ensure that any adverse effects not anticipated at the time consent was granted are duly mitigated.

Stormwater

5. It is recommended that Watercare Services Ltd mitigate the discharge of stormwater from the site in terms of the joint RDC/ARC publication "Management of Stormwater in Countryside Living Zones (Rural and Town) — A Toolbox of Methods".

Site Access

6. It is recommended that all construction and long term access to the site be from Scott Road as indicated on Watercare Services Ltd Drawing 2003768.001 dated 23/6/2003, clear of the intersection Defined Road Boundary and Wade River Road.

Construction Activities

7. Construction activities shall be restricted to 7.30am to 6.00pm Monday to Saturday.

Noise

8. The activity shall not exceed the following noise limits:

a. Corrected noise level L10 as measured on or at the boundary of any site shall not exceed the following limits:

Monday to Friday 7.00am to 6.00pm 52 dBA

At all other times including public holidays 47 dBA

The background noise level as measured on or close to the boundary of any site shall not exceed the following limits:

Monday to Friday 7.00am to 6.00pm 47 dBA

At all other times including public holidays 42 dBA

i. Sound levels shall be measured with a sound level meter complying with international standard IEC 60651:1979 Sound Level Meters — Type 1.

Exposure of Archaeological Artefacts

9. If any artefact, including human remains is exposed during any site works the following procedures shall apply:

a. Immediately when an artefact has been exposed, all site works shall cease; and

b. The site supervisor shall immediately secure the area in a way that ensures that any artefacts or remains are untouched; and

c. The site supervisor shall notify tangata whenua, the New Zealand Historic Places Trust, the Department of Conservation and the Council's RMA

Compliance Administration Officer (telephone 0800 4265169) and in the case of human remains, the Police, that an archaeological site has been exposed, so that appropriate action can be taken. This includes such people being given a reasonable time as determined by the Council to record and recover the archaeological features discovered before work may recommence on the site.

Monitoring Charges

10. The applicant shall pay to the Council within one month prior to the activity commencing the cost, including specialist services, staff time and administration for the processing of this application together with initial charges for the following inspections:

a. Specialist 1 @ \$150.00; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

b. Environmental protection 1 @ \$150.00

Monitoring deposits will be invoiced by the Council together with the consent processing charges. Should further monitoring be required to ensure compliance, the Council will recover the actual and reasonable costs that are incurred for this monitoring as set out in the Council's Schedule of Fees and Charges.

9370 Orewa Pump Station and Associated Network (Millwater Parkway)

Designation Number	9370
Requiring Authority	Watercare Services Ltd
Location	228 Millwater Parkway, Silverdale
Rollover Designation	Yes
Legacy Reference	Designation 954, Auckland Council District Plan (Rodney Section) 2011
Lapse Date	10 years from inclusion in the plan

Purpose

Wastewater purposes - pump station constructed overflow and associated structures.

Conditions

General

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by Watercare Services Limited in the Notice of Requirement dated 13 August 2012 and in supporting report "Orewa Pump Station Constructed Overflow, Application for Resource Consents and Assessment of Effects on the Environment", dated June 2012.
2. The designation shall lapse on the expiry of a period of 10 years after the date it is included in the Auckland Council District Plan (Rodney Section) in accordance with section 184(1)(c) of the Resource Management Act 1991, unless:
 - a. It is given effect to before the end of that period; or
 - b. The Auckland Council determines, on an application made within 3 months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period under section 184(2)(b).

Outline Plans of Works

3. Except as provided for in Condition 4 below, the Requiring Authority shall submit an Outline Plan of Works for the any future works associated with the Project in accordance with section 176A of the Resource Management Act 1991.
4. An Outline Plan of Works need not be submitted for the construction works associated with the construction of the controlled overflow pipeline as these works are sufficiently described in the resource consents (40740, 40736, 40737) granted by Auckland Council in February 2013.

Construction Noise

5. Construction Activities shall be managed to achieve compliance with the requirements of NZS6803:1999, Acoustics – Construction Noise.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Archaeology and Heritage

6. If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. The Requiring Authority shall notify the New Zealand Historic Places Trust, tangata whenua and the Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historic Places Trust has been obtained.

Orewa Pump Station Landscape Plan

7. Within one year of the construction of the pipeline the Requiring Authority shall prepare and implement a landscape plan that shall provide appropriate and suitable screening of the existing Orewa Pump Station. The landscape plan shall be prepared in consultation with the Manager Local and Sports Parks – North. Implementation and maintenance of the landscaping shall be the responsibility of the Requiring Authority.

Integration of work with future park development

8. The overflow pipeline from the pump station shall be installed at a sufficient depth to allow for development of sports fields and a pedestrian walkway to occur on top of the wastewater pipeline, as described in Metro Park East Reserve Management Plan (amended February 2010).

9. If Auckland Council seeks approval under section 176(1)(b) of the Resource Management Act to undertake works as described in the Metro Park East Management Plan (amended February 2010), the Requiring Authority shall not unreasonably withhold approval provided that the park development does not interfere with the construction, operation or maintenance of the wastewater infrastructure and meets all health and safety requirements.

10. The Requiring Authority shall consult with the Manager of Auckland Council's Local and Sports Parks – North regarding the location and design of future wastewater infrastructure and the integration of this with the Metro Park West Management Plan (amended February 2010).

9371 Massey Pump Station (Triangle Road)

Designation Number	9371
Requiring Authority	Watercare Services Ltd
Location	2-12 Lincoln Park Avenue, Massey
Rollover Designation	Yes
Legacy Reference	Designation WSL16, Auckland Council District Plan (Waitakere Section) 2003
Lapse Date	10 years from inclusion in the plan

Purpose

Water supply purposes - pump station and associated structures.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Conditions

General Conditions

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority in the Notice of Requirement dated 17 May 2013 and supporting report titled "Assessment of Effects on the Environment — Triangle Road Water Pump Station", dated 17 May 2013 ("the AEE").
2. As soon as practicable following completion of commissioning of the Project, the Requiring Authority shall:
 - a. Remove any areas of designated land that are no longer necessary for the ongoing operation and maintenance of the pump station. For avoidance of doubt, the designation to be removed over land to remain in Transpower ownership includes all that between the red and blue dashed lines on Triangle Road Pump Station Massey Designation Plan: 2010135.006 Issue 1 included in Appendix K of the AEE.
 - b. Give notice to the Council in accordance with Section 182 of the RMA for the removal of the part of the designation identified in (a) above.

Outline Plan of Works

3. Except as provided for in Condition 4 below, the Requiring Authority shall submit an Outline Plan (OPW) for the Project in accordance with Section 176A of the RMA.
4. An OPW need not be submitted for the Phase 1 earthworks and valve chamber components of the project as the detail of this work is sufficiently described in the AEE.

Construction Noise

5. Construction activities shall be managed to achieve compliance with the requirements of NZS6803:1999 Acoustics – Construction Noise.

Contaminated Soil Management

6. The management of any contaminated soil discovered on site shall be in accordance with the consent conditions approved for LUC 2013-629 and Soil Management Plan (SMP) compiled for the works and included in the AEE document supporting the Notice of Requirement.

Archaeology and Heritage

7. If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:
 - a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
 - b. The Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
 - c. The Requiring Authority shall notify the New Zealand Historic Places Trust, tangata whenua and the Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historic Places Trust has been obtained.

Landscaping

8. The Requiring Authority shall prepare a Landscape Plan with the Outline Plan of Works referred to in Condition 3. Details of the proposed planting shall be included in the Landscape Plan with an emphasis on providing planting along the designation's front road boundary, in areas not required for proposed or future works, servicing and maintenance. Planting shall be designed in consultation with Auckland Council Parks, Sports and Recreation to ensure that plant species are consistent with existing road reserve planting adjoining Triangle Road.

Stormwater

9. The Outline Plan of Works referred to in Condition 3 shall be accompanied by a stormwater assessment report which includes measures to mitigate any increased risk of flooding that may arise from the proposed works.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Lapsing of designation

10. The designation shall lapse on the expiry of a period of 10 years after the date it is included in the District Plan in accordance with section 184(1)(c) of the RMA, unless:

- a. It is given effect to before the end of that period; or
- b. The Council determines, on an application made within 3 months before the expiry of that period, that substantial progress or effort has been made towards giving effect to the designation and is continuing to be made, and fixes a longer period for the purposes of this subsection.

9446 Bycroft Reserve Water Protection Reserve

Designation Number	9446
Requiring Authority	Watercare Services Ltd
Location	122R and 122S Neilson Street (Bycroft Reserve) and 43 Galway Street, Onehunga
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation H10-31, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse dates)

Purpose

Water supply purposes - water protection reserve.

Conditions

1. Establishment of a Water Protection Reserve will be a permitted activity provided that:
 - a. Activities shall be in accordance with the rules for the Open Space 2 zone and the following relevant parts of the District Plan;
 - b. Measures shall be taken to protect the existence of the aquatic moss *Fissidens bertaroi*, indigenous vegetation and wildlife; and
 - c. The Requiring Authority will discuss appropriate measures with the Auckland Council to ensure minimum water flow of 30m³/day (0.31 l/sec) in the Bycroft Stream is maintained to protect the wetland.

9447 Hunua No. 4 Watermain

Designation Number	9447
Requiring Authority	Watercare Services Ltd
Location	Onehunga Harbour Road, Onehunga to the corner of Campbell and Rawhiti Roads, Epsom
Rollover Designation	Yes
Legacy Reference	Designation H10-54, Auckland Council District Plan (Isthmus Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - Hunua No.4 Watermain.

Conditions

General

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority in the Notice of Requirement dated 3 March 2010 and supporting documents being "Hunua No. 4 Watermain Assessment of Effects on the Environment", Volumes 1, 2 and 3, dated 3 March 2010.
2. As soon as practicable following completion of construction of the Project, the Requiring Authority shall, in consultation with the Council:
 - a. review the width of the area designated for the Project;
 - b. identify:
 - i. any areas of designated land that are no longer necessary for the ongoing operation, maintenance, renewal

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and protection of the pipeline and ancillary activities; and

- ii. any areas of designated land within the legal road boundaries that are more than 2.5 metres from the centreline of the pipeline (excluding any special chambers/facilities or other associated structures);
- c. give notice to the Council in accordance with Section 182 of the RMA for removal of those parts of the designation identified in (b) above which are not required for the long term operation and maintenance of the Project; and
- d. provide as-built plans to the Council's Team Leader, Compliance and Monitoring, Resource Consents.

3. A liaison person shall be appointed by the Requiring Authority for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons arising from the Project. If the liaison person will not be available for any reason, an alternative contact person shall be nominated to ensure that a Project contact person is available by telephone 24 hours per day / seven days per week during the construction phase.

4. The designation shall lapse if not given effect within 10 years from the date on which it is included in the District Plan.

5. Those stages of the works within the designation and previously approved under separate resource consent are exempt from the following conditions 6-48, namely:

Auckland City Council Resource Consent LUC/2009/1080

Auckland City Council Resource Consent LUC/2009/5543

Outline Plan of Works

6. Except as provided for in Condition 7, the Requiring Authority shall submit an OPW for the Project or for each Project stage in accordance with Section 176A of the RMA.

7. An OPW need not be submitted if the Council has waived the requirement for an OPW in accordance with Section 176A (2) (c) of the RMA.

8. The OPW shall include the following Management Plans for the relevant stage(s) of the Project: Construction Management Plan ("CMP"); Construction Noise and Vibration Management Plan ("CNVMP") and Network Utility Management Plan ("NUMP").

Construction

9. The Requiring Authority shall prepare a Construction Management Plan or Plans for the Project overall or for each of the relevant Project stages. The purpose of the CMPs is to set out the detailed management procedures and construction methods to be undertaken in order to avoid, remedy or mitigate potential adverse effects arising from construction activities. The CMPs shall be provided to the Council with the relevant OPW for the stage that they relate to.

10. The CMPs required by Condition 9 shall include specific details relating to the management of all construction activities associated with the Project or relevant Project stage, including:

- a. Details of the site or project manager and the construction liaison person identified in Condition 3, including their contact details (phone, facsimile (if any), postal address, email address);
- b. An outline construction programme, indicating in particular the likely time periods for road closures and anticipated traffic diversion effects;
- c. The hours of construction;
- d. Measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal/storage of rubbish, storage and unloading of construction materials and similar construction activities;
- e. Location of site infrastructure including site offices, site amenities, contractors yards, site access, equipment

The Proposed Auckland Unitary Plan (notified 30 September 2013)

unloading and storage areas, contractor car parking, and security;

f. Procedures for controlling sediment run-off, dust and the removal of soil, debris, demolition and construction materials (if any) from public roads or places adjacent to the work site;

g. Procedures for the protection of significant trees and other vegetation;

h. Procedures for ensuring that residents, road users and businesses in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration and effects of the works;

i. Means of providing for the health and safety of the general public;

j. Procedures for responding to complaints about construction activities;

k. Procedures for management of traffic incidents within the works area;

l. Procedures for the management of works which directly affect or are located in close proximity to existing network utility services;

m. Construction noise and vibration management;

n. Protocols for the management of ground breaking activities along the pipeline route to manage effects on the environment and human health should any contamination issues be encountered;

o. Means of avoiding damage to the stone walls at the entry to Maungakiekie / Cornwall Park during construction on Campbell Road;

p. Procedures for the refuelling of plant and equipment; and

q. Engineering design and construction drawings.

11. The CMP shall be implemented and maintained throughout the entire construction period for the Project or relevant Project stage to manage potential adverse effects arising from construction activities to the greatest practicable extent.

Network Utilities Management Plan

12. Notwithstanding anything in Condition 7, the Requiring Authority shall prepare and implement a NUMP so that design and construction of the Project adequately takes account of and includes measures for the safety, integrity, protection or, where necessary, relocation of existing network utilities.

13. A copy of the NUMP shall be provided to the Council's Team Leader Compliance and Monitoring, Resource Consents prior to construction commencing.

14. The NUMP shall include, but not be limited to, the following matters:

a. Provisions for liaison with all network utility operators and other infrastructure providers whose assets are directly affected by or located in close proximity to the Project;

b. Provisions to enable other utility operators to access existing infrastructure for maintenance at all reasonable times, or emergency works at all times, while construction activities associated with the Project are occurring; and

c. Provisions to ensure that all construction personnel, including contractors, are aware of the presence and location of the various utility services which traverse, or are in close proximity to the Project, and the restrictions in place in relation to those services. This shall include plans identifying the service locations and appropriate physical indicators on the ground showing specific surveyed locations.

15. The NUMP shall be prepared in consultation with the relevant network utility operators and other infrastructure providers and, in addition to the matters listed in condition 14, shall address the following matters in respect of works or activities in proximity to the relevant utility services:

a. Measures to identify the location of existing utility services accurately;

b. Measures for protection, relocation and / or reinstatement of network utility infrastructure;

c. Measures to provide for the safe operation of plant and equipment and the safety of workers in proximity to live utility services;

d. Measures to manage potential induction hazards;

e. Procedures to manage dust and any other material potentially able to cause damage to overhead

The Proposed Auckland Unitary Plan (notified 30 September 2013)

transmission lines;

f. Earthworks management, depth and extent of earthworks;

g. Vibration management; and

h. Incident emergency management.

16. The Requiring Authority shall consult with, and provide detailed design and construction plans and specifications to the New Zealand Refining Company Limited, Wiri Oil Services Limited and Transpower at least 20 working days prior to the intended commencement of any physical construction works that have the potential to come within 12 metres of their assets.

17. In the development of the NUMP, the Requiring Authority shall also investigate opportunities for other network utility operators or infrastructure providers, where practicable, to undertake upgrading works at the same time as construction of the Project.

18. The NUMP may be prepared as a standalone management plan or may form part of the Construction Management Plan, as determined by the Requiring Authority.

Construction Noise and Vibration

19. A CNVMP shall be prepared for the Project or relevant Project stage, by a suitably qualified expert.

20. The CNVMP shall include specific details relating to the control of noise and vibration associated with all Project works. The CNVMP shall be formulated and the works implemented to achieve, as far as practicable, compliance with the requirements of:

a. NZS6803: 1999 Acoustics - Construction Noise; and

b. German Standard DIN 4150-3:1999 Structural Vibration - Effects of Vibration on Structures.

21. The CNVMP shall, as a minimum, address the following aspects with regard to construction noise:

a. Noise sources, including machinery, equipment and construction techniques to be used;

b. Predicted construction noise levels;

c. Hours of operation, including times and days when noisy construction work and blasting would occur;

d. Construction noise criteria for specific areas and sensitive receivers such as schools, child care centres, medical or aged care facilities;

e. The identification of activities and locations that will require the design of noise mitigation measures such as temporary barriers or enclosures and the details of such measures where the Project noise criteria are predicted to be exceeded;

f. The measures that will be undertaken by the Requiring Authority to communicate noise management measures to affected stakeholders;

g. Development of alternative management strategies where full compliance with NZS6803: 1999 cannot be achieved;

h. Methods for monitoring and reporting on construction noise; and

i. Methods for receiving and responding to complaints about construction noise.

22. The CNVMP shall also describe measures adopted to meet the requirements of German Standard DIN4150, and as a minimum shall address the following aspects:

a. Vibration sources, including machinery, equipment and construction techniques to be used;

b. Provision for the determination of buildings that require pre-condition surveys to be re-evaluated following test blasts at the commencement of blasting;

c. Preparation of building condition reports on 'at risk' buildings prior to, during and after completion of works, where for the purposes of this condition an 'at risk' building is one at which the levels in the German Standard DIN4150 are likely to be approached or exceeded;

d. Provision for the use of building condition surveys to determine the sensitivity of the building(s) on the adjacent sites to ground movement in terms of the Line 1-3 criteria of the DIN standard;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- e. Identification of any particularly sensitive activities in the vicinity of the pipeline route (e.g. commercial activity using sensitive equipment such as radiography or mass-spectrometry);
- f. Alternative management and mitigation strategies where compliance with German Standard DIN 4150-3:1999 cannot be achieved;
- g. The measures that will be undertaken by the Requiring Authority to communicate vibration management measures to affected stakeholders;
- h. Methods for monitoring and reporting on construction vibration; and
- i. Methods for receiving and responding to complaints about construction vibration.

23. The CNVMP shall be implemented and maintained throughout the entire construction period and shall be updated when necessary.

Roading and Traffic Management

24. The Requiring Authority shall undertake a condition survey of the carriageway along the designated route and submit it to the Council's Team Leader Compliance and Monitoring, Resource Consents prior to the commencement of construction. The condition survey shall include but not be limited to a photographic or video record of the carriageway along the designated route.

25. An overarching Traffic Management Plan ("TMP") shall be prepared for the Project. The TMP should set out general processes for the submission of the appropriate Site Specific Traffic Management Plan ("SSTMP") to the Council and should address the following:

- a. The staging of the works including details of any proposals to work on multiple sections of the route concurrently;
- b. General methodology for determining when works will be undertaken on various road types (e.g. arterials, local roads etc);
- c. General methodology for selecting detour routes; and
- d. Identification of any potential road closures and provision for emergency vehicles.

26. The TMP shall be provided to the Council at least one month prior to commencement of the Project or relevant Project stage.

27. SSTMPs shall be prepared for the Project or relevant Project stage, by a suitably qualified person. SSTMPs are to be provided to the Council with an application for the required Road Opening Notice (RON) prior to any work commencing on the relevant Project stage to which the SSTMP relates.

28. SSTMPs shall be provided to the Council no less than 15 working days prior to the commencement of construction.

29. SSTMPs shall describe the measures that will be taken to avoid, remedy or mitigate the traffic effects associated with construction of the Project or relevant Project stage. In particular, SSTMPs shall describe:

- a. Traffic management measures to mitigate impact on traffic capacity at peak hours during weekdays and weekends;
- b. Where road closures are deemed necessary by the Council, details of any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- c. The capacity of proposed detour route(s) and their sufficiency to carry the additional traffic volumes and any safety issues associated with the detour route, including mitigation measures where required;
- d. Specific traffic management plans across arterial intersections;
- e. Provisions for safe and efficient access of construction vehicles and methods to manage the effects of the delivery of construction material, plant and machinery, including the potential effects of High Sided Vehicles (HSV) and construction machinery on trees that overhang the designation;
- f. Measures to maintain, where practicable, existing vehicle access to property in order to enable, as far as

The Proposed Auckland Unitary Plan (notified 30 September 2013)

practicable, normal operations on the property to continue, or to provide alternative access arrangements;

- g. Measures to maintain, where practicable, pedestrian and cyclist access on roads and footpaths adjacent to the construction works. Such access shall be safe, clearly identifiable and seek to provide the shortest and most convenient detours where such detours are necessary;
- h. Proposed monitoring to measure the impact of the works on traffic and the impact of the traffic management measures;
- i. Definition of the proposed construction zone and area available for traffic; and the location of barriers and fences to protect the construction site;
- j. Measures to maintain the normal day-to-day operations of public transport providers, or proposed alternatives where changes are required;
- k. Any temporary changes in speed limit;
- l. Provision of safe and efficient access of construction vehicles to and from the construction site, including the movement of construction traffic on local roads; and
- m. The measures that will be undertaken by the Requiring Authority to communicate traffic management measures to affected road users and stakeholders.

30. SSTMPs shall be prepared following consultation with the following key stakeholders:

- a. road controlling authorities;
- b. emergency services (police, fire and ambulance);
- c. local business associations;
- d. Auckland Regional Transport Authority (or its successor) and any bus operators which operate scheduled services along the route; and
- e. schools and childcare centres with frontage or access to roads where works are taking place.

31. The Requiring Authority shall provide, where practicable, two temporary traffic lanes adjacent to the construction works on roads carrying more than 5000 vehicles per day. In this respect the construction equipment and process shall be modified where practicable to achieve the lane provisions required. In addition, details of the hours of work for works on or adjacent to these roads shall be provided.

32. All TMPs (including SSTMPs) shall be consistent with the New Zealand Transport Agency Code of Practice for Temporary Traffic Management which applies at the time of construction.

33. All TMPs (including SSTMPs) shall be subject to an independent safety and traffic operational audit prior to being submitted to the Council.

34. As soon as practicable following completion of construction, the Requiring Authority shall:

- a. repair any damage to public carriageways and footpaths (and associated road components) resulting from the impacts of construction. Such repair may involve short-term maintenance to allow for settling and consolidation of carriageways prior to final repair by the Requiring Authority; and
- b. re-grass areas (including berms) that were previously grassed.

Works Within Road Reserve

35. On completion of construction within Council roads and State Highways, all works shall be reinstated in accordance with the Code of Practice for Working in Roads which applies at the date that the contract for the relevant Project stage is awarded, unless otherwise agreed between the Requiring Authority and the road controlling authority.

36. A completion report for each Project Stage shall be submitted to the Council detailing the reinstatement works on all public roads including Quality Assurance records.

Construction Hours

37. Construction hours shall be generally as follows, except where work is necessary outside the specified

The Proposed Auckland Unitary Plan (notified 30 September 2013)

days or hours for the purposes specified in condition 38a.-e. below.

Monday to Friday: 7am to 9pm;

Saturday: 8am to 5 pm;

Sundays and public holidays: No Work.

38. Purposes for which work may occur outside of the specified days or hours are:

- a. where work is specifically required to be planned to be carried out at low traffic times (for example, excavation across busy intersections);
- b. for delivery of large equipment;
- c. in cases of emergency;
- d. for securing of the site or removing a traffic hazard; and/or
- e. for any other reason specified in the CMP or SSTMP.

Community Information and Liaison

39. The Requiring Authority shall prepare a Communications Plan ("CP") setting out:

- a. The method/s of consultation and liaison with key stakeholders and the owners/occupiers of neighbouring properties regarding the likely timing and duration of works, alternative routes, access to properties and any proposed alterations to public transport services;
- b. Details of prior consultation or community liaison undertaken with the owners/occupiers of neighbouring properties, key stakeholders, schools, public transport providers, emergency services or representative groups regarding proposed road or lane closures, potential diversions and delays, including outlining any measures developed with such persons or groups to manage or to mitigate any adverse effects or inconvenience that may arise; and
- c. Full contact details for the person appointed to manage the public information system and be the point of contact for related inquiries.

40. The Requiring Authority shall submit the CP to the Council at least one (1) month prior to construction commencing on any defined stage.

Tree Management

41. When providing details as to how impacts of construction on trees and vegetation will be managed in the CMP, as required by condition 10, the following shall apply:

- a. The Requiring Authority's arborist shall provide an updated accurate list of all trees affected. This shall include a description of potential root loss, pruning, proximity of excavations and a brief statement on proposed outcome. The list shall also include protection status and specific tree protection requirements;
- b. All excavation work within the dripline or root zone of any tree in a Council street or Council reserve, any scheduled tree or any tree that would otherwise be generally protected under the District Plan and is located upon private land (and extends over the work site), shall be supervised by a Council approved arborist;
- c. Any root or limb with a diameter in excess of 35mm where severance is required shall be supervised by the approved arborist in accordance for the long-term health and vitality or stability of the subject tree(s);
- d. Any scheduled tree or any tree that would otherwise be generally protected under the District Plan and considered by the Requiring Authority's arborist to be at risk of damage from the construction works, adjacent to construction areas, will be fenced off to minimise and/or avoid any damage to the rootplate area of the subject tree;
- e. Where a Council owned tree has been damaged and a Council arborist assesses that remedial work is necessary, the works shall be undertaken by a competent Council approved arborist and the Requiring Authority shall be directly liable for all remedial costs. Should a Council owned tree be damaged beyond repair or destroyed then the Requiring Authority shall be directly liable for all costs relating to tree removal and replacement planting; and
- f. Where replacement planting is required to remediate the loss of a Council owned tree, the species and location of the replacement tree shall be approved by the Council.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

42. Following the completion of construction the Requiring Authority shall provide a monitoring report to the Council that lists all trees, in accordance with condition 39(a), that were subject to any cutting or damage of the roots, trunk, or canopy to an extent deemed more than minor by the Requiring Authority's arborist.

Archaeology and Heritage

43. In the event that a lava cave is discovered during construction of the pipeline, the Council's Heritage Team shall be immediately notified and, subject to compliance with traffic management and health and safety requirements, provided with an opportunity to inspect the cave. The Requiring Authority shall keep photographic or other records of the extent of any lava cave discovered during construction of the Project and shall provide GPS coordinates for the discovery.

44. Some caves in this area have been found to contain bones. Should any cave encountered have bones present, then the cave is to be additionally regarded as an archaeological site and archaeological protocols are to be followed.

45. Detailed protocols for the management of archaeological and waahi tapu discoveries shall be developed by the Requiring Authority in consultation with tangata whenua and the New Zealand Historic Places Trust prior to construction.

46. Subject to Condition 44, if any archaeological sites including human remains are exposed during site works then the following procedures shall apply:

- a. immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. the Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. the Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust and the Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historic Places Trust has been obtained.

47. Condition 43 shall not apply where the Requiring Authority holds all relevant approvals under the Historic Places Act 1993, apart from the requirement in the case of discovery of human remains to contact tangata whenua and the New Zealand Police.

Contamination

48. The Requiring Authority shall notify the Team Leader Compliance and Monitoring, Resource Consents at the Council immediately on identification of any contamination found along the pipeline route which was not identified in the reports submitted in support of the Notice of Requirement, including contaminated soil, surface water or groundwater. Any contamination that is discovered shall be investigated, remediated, disposed of and reported on (including validation) in accordance with the Ministry for the Environment Contaminated Land Management Guidelines and the relevant guidelines addressing contaminants from specific industries or activities.

Site Reinstatement

49. When contractors' yards or other temporary works areas are no longer required for any construction or operational purpose, site offices, storage and equipment sheds, fencing and hard stand areas shall be removed and the area reinstated to at least the standard which existed prior to commencement of works.

9457 Constitution Hill Pump Station

Designation Number	9457
Requiring Authority	Watercare Services Ltd

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Location	2 Alten Road and Churchill Street (road reserve) and Constitution Hill (road reserve), Auckland Central
Rollover Designation	Yes
Legacy Reference	Designation 292, Auckland Council District Plan (Central Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Wastewater purposes - pump station and associated structures.

Existing pump station and associated structure including a control and odour filter building. The station was built in 1920. The purpose of the pump station is to pump the wastewater collected from the area around Beach Road and Custom Street to the Orakei Main Sewer where it crosses Stanley Street. The work will include operation, maintenance, upgrading and refurbishing of the station and associated structures and any necessary temporary works.

Designation Schedule - Watercare Services Ltd (3/3)

South

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Number	Purpose	Location
9500	Water supply purposes - water catchment headworks land	Cosseys Road and 201 Moumoukai Hill Road, Clevedon
9501	Water supply purposes - headworks service land	201 Moumoukai Hill Road, Clevedon
9502	Wastewater purposes - Mangere Wastewater Treatment Plant	500 Island Road, Mangere Bridge
9503	Wastewater purposes - Area 1A - wastewater treatment purposes; Area 1B and 2 - buffer area and application of biosolids from wastewater treatment plant	Area 1 Ascot Road North; Area 2 Greenwood Road, Mangere
9504	Wastewater purposes - pipelines, chambers and associated structures	4W Wilta Court, Mangere
9505	Water supply purposes - pump station and associated structures	58 Murphys Road, Flat Bush
9506	Water supply purposes - reservoirs, pump station and associated structures	396B, 390V and part of 394B Redoubt Road, Manukau
9507	Water supply purposes - reservoir and associated structures	477A Redoubt Road (Pt Lot 1 DP 24865 and SO 60815), Manukau
9508	Water supply purposes - reservoirs, pump stations and associated structures	38 Mill Road, Alfriston
9509	Water supply purposes - reservoir and associated structures	95 Mill Road, Alfriston
9510	Water supply purposes - pump station, reservoir and associated structures	28 Alfriston Ardmore Road, Alfriston
9511	Wastewater purposes and Ambury Regional Park	66 Wellesley Road (Ambury Regional Park), Mangere Bridge
9512	Water supply purposes - reservoir and associated structures	17A and part of 17R Gracechurch Drive, East Tamaki
9513	Water supply purposes - Ardmore Water Treatment Plant	250 Creightons Road, Clevedon
9514	Wastewater purposes - pump station and associated structures	27 Diversey Lane, Manukau Central
9515	Wastewater purposes - pump station and associated structures	51 Hillside Road, Papatoetoe
9516	Wastewater purposes - pump station and associated structures	4R and 6R Granger Road (Rangitoto View Road Esplanade Reserve), Howick
9517	Wastewater purposes - pump station and associated structures	140 and part of 100 Hospital Road, Otahuhu
9518	Wastewater purposes - pump station and associated structures	39R Wattle Farm Road, Wattle Downs
9519	Wastewater purposes - pump station and associated structures	283R Mahai Road (Pt Lot 1 DP 25887 and SO 46795), Manurewa
9520	Wastewater purposes - pump station and associated structures	51 Ben Lomond Crescent, Pakuranga Heights

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9521	Wastewater purposes - pump station and associated structures	2A Vivian Wilson Drive and part of 150 Bucklands Beach Road, Bucklands Beach
9522	Wastewater purposes - pump station and associated structures	207 and part of 201 Highbrook Drive, East Tamaki
9523	Wastewater purposes - pump station and associated structures	137 Gadsby Road and road reserve, Favona
9524	Wastewater purposes - pump station and associated structures	84R Wymondley Road and Allot 295 Parish of Manurewa (Billington Esplanade Reserve), Otara
9525	Wastewater purposes - pump Station and associated structures	103R Prince Regent Drive (Wakaaranga Creek Reserve), Half Moon Bay
9526	Wastewater purposes - pump station and associated structures	13 and 15R Milen Avenue, Pakuranga
9527	Wastewater purposes - pump station and associated structures	7D Kiwi Esplanade, Mangere Bridge
9528	Wastewater purposes - pipeline and associated structures	5 St Leger Close to 30 Matarangi Road, East Tamaki
9529	Wastewater purposes - Southwestern Interceptor	257 Roscommon Road, Manurewa to Jimmy Ward Crescent (400 George Bolt Memorial Drive), Mangere
9530	Wastewater purposes - pump station and associated structures	107 Golfand Drive (Corta Bella Place Reserve), Howick
9531	Wastewater purposes - pump station and associated structures	54R Pitt Avenue, Weymouth
9532	Wastewater purposes - pump station and associated structures	18R Hazards Road and 29R Greers Road, Weymouth
9533	Wastewater purposes - pump station and associated structures	Browns Road (unformed road reserve adjoining 257 Roscommon Road), Clendon Park
9534	Wastewater purposes - pump station and associated structures	2A and 4 Hinaiu Street, and 6R Walmsley Road (Tarata Creek Reserve), Mangere
9535	Wastewater purposes - pump station and associated structures	Te Puru Park, 954R Whitford-Maraetai Road, Maraetai
9536	Water supply purposes - reservoir and associated structures	37 Walpole Avenue, Manurewa
9537	Wastewater purposes - Beachlands Wastewater Treatment Plant	100 Okaroro Road, Beachlands
9538	Wastewater purposes -Tamaki South East Branch Sewer and wastewater pump stations	Ormiston Road (road reserve adjoining No. 123), East Tamaki to Murphys Road (road reserve adjoining No. 251), Flat Bush
9539	Wastewater purposes - Kawakawa Bay Wastewater Treatment Plant	123 Kawakawa-Orere Road, Kawakawa Bay

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9540	Water supply purposes - Hunua No. 4 Watermain	396B Redoubt Road to Mangere Bridge, Hugh Watt Drive, Mangere
9541	Water supply purposes - Cosseys Dam	Hunua Ranges
9542	Water supply purposes - Wairoa Dam	Hunua Ranges
9543	Water supply purposes - headworks service land	Hunua Ranges
9544	Wastewater purposes - Waiuku Wastewater Treatment Plant	Williams Road (Lot 1 DP 73307 and Lot 1 DP 154681), Glenbrook
9545	Wastewater purposes - Clarks Beach Wastewater Treatment Plant	Torkar Road and part of 100 Stevenson Road, Clarks Beach
9546	Wastewater purposes - Bombay Wastewater Treatment Plant	Barber Road (Lot 10 DP 134365), Bombay Township
9547	Wastewater purposes - Kingseat Wastewater Treatment Plant	16A Buchanan Road, Kingseat
9548	Water supply purposes - reservoir and associated structures	End of Totara Avenue (Rosesville Park), Pukekohe
9549	Water supply purposes - reservoirs and associated structures	176 Kitchener Road, Pukekohe
9550	Water supply purposes - Pukekohe Water Reservoir	Anzac Road (Lot 1 DP 85420), Pukekohe
9551	Water supply purposes - reservoir and associated structures	327-339 Anzac Road (Pukekohe Hill Reserve), Pukekohe
9552	Water supply purposes - reservoir and associated structures	Leaming Place (Lot 145 DP 90274 and part of Lot 415 DP 90274), Clarks Beach
9553	Water supply purposes - reservoir and associated structures	Part of 129 Wharf Road (lot 2 DP 458020), Waiau Beach
9554	Water supply purposes - reservoir and associated structures	40 Ronald Avenue (Glenbrook Beach Recreation Reserve), Glenbrook
9555	Water supply purposes - reservoir and associated structures	6 Carter Road, Pukekohe
9556	Water supply purposes - reservoir and associated structures	518 Buckland Road, Buckland
9557	Water supply purposes - reservoirs and associated structures	Corner Paparata Road and Barber Road (road reserve), and part of Sec 1 SO 66791, Bombay
9558	Water supply purposes - reservoir and associated structures	83 Victoria Avenue (Lot 2 DP 134302), Waiuku
9559	Water supply purposes - hydraulic balancing tank	Corner Rutherford Road and Runciman Road (part of Lot 1 DP 201876), Pukekohe East
9560	Water supply purposes - Hays Creek Dam	120 Hays Creek Road and 902 Hunua Road, Drury
9561	Water supply purposes - reservoir, pump station and associated structures	279 Kaipara Road, Papakura

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9562	Water supply purposes - water treatment plant and associated structures	241 Hunua Road, Drury
9563	Water supply purposes	251 Creightons Road, Ardmore
9564	Water supply purposes	Part of 2 and 9 Jones Road (corner Creighton and Jones Road), Drury
9565	Wastewater purposes - pump station and associated structures	Part of 152 and 158 Park Estate Road, Hingaia
9566	Water supply purposes - pump station and associated structures	103 Flanagan Road, Drury
9567	Wastewater purposes - Puketutu Island rehabilitation	600 Island Road (Puketutu Island), Mangere

9500 Cosseys Dam

Designation Number	9500
Requiring Authority	Watercare Services Ltd.
Location	Cosseys Road and 201 Moumoukai Hill Road, Clevedon
Rollover Designation	Yes
Legacy Reference	Designation 142, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - water catchment headworks land.

Conditions

No conditions.

Attachments

No attachments.

9501 Headworks Service Lands (Cosseys)

Designation Number	9501
Requiring Authority	Watercare Services Ltd
Location	201 Moumoukai Hill Road, Clevedon
Rollover Designation	Yes
Legacy Reference	Designation 143, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - headworks service lands.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

No conditions.

Attachments

No attachment.

9502 Mangere Wastewater Treatment Plant

Designation Number	9502
Requiring Authority	Watercare Services Ltd
Location	500 Island Road, Mangere Bridge
Rollover Designation	Yes
Legacy Reference	Designation 144A, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Wastewater purposes - Mangere Wastewater Treatment Plant.

Conditions

1. Introduction

a. The Mangere Wastewater Treatment Plant ("MWTP") is an essential regional facility serving the needs of the Auckland Metropolitan area (with the exception of the North Shore). Under ARC Resource Consent No. 9610853 the MWTP is "capped" meaning that the quantity of wastewater to be discharged by the MWTP is limited to "1,209,600 cubic metres per day at a design maximum discharge rate of 25 cubic metres per second provided that the mean daily flow of treated effluent discharged over any one year period shall not exceed 390,000 cubic metres per day at a design maximum discharge rate of 25 cubic metres per second".

b. The MWTP is to be upgraded to enhance the environmental performance of the MWTP, particularly in relation to odour, to address social and cultural considerations and, as a result of population growth, to accommodate increasing volumes of wastewater requiring treatment in the region.

c. Odour problems have occurred at various times since the plant was commissioned and were the subject of legal proceedings commenced by Manukau City Council in 1993. By consent of the parties a Planning Tribunal enforcement order was issued to minimise the discharge of odours by October 1995. The order covered all major odour sources except the oxidation ponds. This work has now been successfully completed. The order requires that the MWTP be upgraded in accordance with certain resource consents obtained from the Auckland Regional Council for that purpose, and that the upgraded plant be fully operational by 1 October 2003.

d. The existing MWTP is designated for "Watercare Services Ltd: Wastewater Treatment Plant". The upgrading of the MWTP will take place within this designation ("main site"). However, two other areas of land adjacent to the existing MWTP have also been designated. Area 1A to the south of the existing MWTP has been designated "Wastewater treatment purposes" to make appropriate provision for the construction, operation and maintenance of future wastewater facilities, establishment of an odour buffer area and to allow for the application of biosolids to the land, and the use of sludge in landscaping and land forming. Area 1B to the south of the existing MWTP and Area 2 have been designated as odour buffer areas and to allow the application of biosolids to the land.

e. A number of resource consents administered by the Auckland Regional Council ("ARC") regulate the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

discharges to air, land, and water from the MWTP and regulate aspects of the upgrading works including earthworks and coastal permits. Conditions (or any subsequent modifications of these conditions) are contained in the following resource consents: 9610850 Discharge contaminants to air 9611016 Diversion of inner coastal water into the area occupied by the oxidation ponds H/10852 Dredging of seabed 9610853 Discharge of treated effluent 9610854 Discharge of stormwater 9610855 Temporary pond discharges 9610857 Divert groundwater and surface water SC10858 Sediment control 9610859 Discharge of contaminants onto and into ground These consents contain requirements for various management plans to be approved by the Auckland Regional Council. In addition, the written approval of the Council (delegated to the Director Environmental Management, Manukau City Council) is required in relation to the Coastal and Foreshore Restoration Plan and to those aspects of the Outline Management Plan which concern the Coastal and Foreshore Management Plan, or which are within the jurisdiction of Manukau City Council under the Resource Management Act 1991.

Definition of Biosolids

For the purposes of this designation, biosolids are defined as dewatered, stabilised sewage sludge that satisfies the standards of Ministry of Health document “Public Health Guidelines for the Safe Use of Sewage, Effluent and Sewage Sludge on Land — 1992”

2. Resource Management Issues

Issue 1 Wastewater needs to be managed, treated and discharged in an efficient and sustainable manner.

The social and economic well-being and the health and safety of Manukau and the Auckland Region, are dependent on the availability and efficient operation of central infrastructural services such as the MWTP. The region’s sustained population and economic growth and increasing environmental expectations require the upgrading and expansion of these services. The region has a significant capital investment in the MWTP and the expansion and upgrading of the MWTP enables efficient use to be made of those resources. The volume of wastewater to be treated and disposed of at the MWTP, could, in the future, require the establishment of new wastewater treatment plants. The Council supports continued investigation into supplementary sites for treatment plants within the region and the implementation of proposals for satellite plants.

Issue 2 The MWTP adjoins the Manukau Harbour and there is the potential that the MWTP will have adverse effects on the ecological, cultural, spiritual, recreational and landscape values of the coastal environment.

The coastal environment in the vicinity of the MWTP contains both natural and modified elements and has important ecological, cultural, spiritual, recreation and landscape values. The upgrading of the MWTP must be undertaken in a manner that maintains, and where possible, enhances these values.

Issue 3 The MWTP has the potential to generate adverse effects on the environment of the surrounding land.

The MWTP has generated adverse environmental effects on the surrounding neighbourhood, particularly in respect of nuisances caused by odour and insects. The upgraded MWTP needs to be effectively managed to ensure adverse environmental effects are avoided or mitigated.

3. Objectives and Policies

Objective 3.1

To promote the efficient use and development of the MWTP and all ancillary activities in the site. (This objective relates to issue 1).

Objective 3.2

To support the establishment of wastewater treatment facilities elsewhere in the region to supplement the facilities of the MWTP. (This objective relates to issue 1).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Objective 3.3

To ensure that the MWTP is operated in a manner that avoids, remedies, or mitigates any actual or potential adverse effects on ecological, cultural, spiritual, recreation and landscape values of the coastal environment of the Manukau Harbour. (This objective relates to issue 2).

Objective 3.4

To maintain and enhance environmental quality and amenity values of the neighbourhood surrounding the MWTP. (This objective relates to issue 3).

Policies 3.5

- a. The operation of the MWTP is to be undertaken in a manner that does not generate any adverse effects that are more than minor on the surrounding land and the Manukau Harbour.
- b. Prior to October 2003, the MWTP is to be operated, maintained, supervised, monitored and controlled in relation to all activities undertaken on the site so that discharges of odour are maintained at the minimum practicable level. From 1 October 2003 the MWTP is to be operated in a manner that does not generate any noxious, objectional or offensive odours beyond the southern boundary of Areas 1A and 1B, the eastern boundary of Area 2, or the northern and western boundaries of the adjoining designated areas "Water Services Limited: Wastewater Treatment Plant" and designation No 153 "Watercare Services Ltd/A.R.C Wastewater purposes and Ambury Regional Park" shown on the planning maps. From 1 October 2003, the objective will also be that the plant be operated in a manner that should enable the area required for the purpose of an odour buffer to be reduced and to remove from the odour buffer any area not reasonably required, including Ambury Farm Park and the area used for the oxidation ponds. The rules attaching to this designation would need to be changed at that time accordingly.
- c. Buildings and structures are to be designed and located and landscaping undertaken so that the visual amenity values of the surrounding neighbourhood and coastal environment are maintained and enhanced.

4. Implementation

4.1 Regulatory methods

- a. Watercare Services Limited is a requiring authority with financial responsibility for works at the MWTP and has designating rights under section 168 of the Resource Management Act. WSL has required Areas 1A, 1B and 2 be designated within the district plan. The designation is subject to a number of conditions designed to minimise the adverse environmental effects from MWTP activities. WSL has also sought that the previous designation for the existing MWTP be included in the district plan, for "Watercare Services Ltd: Wastewater Treatment Plant". Council will be responsible for implementing the rules in the district plan relating to the designation while the Auckland Regional Council will be responsible for compliance with the resource consents.

4.2 Non-regulatory methods

- a. The Council will work closely with Auckland Regional Council to ensure that the plant operates in an efficient and sustainable manner. The Council will continue to cooperate with Watercare Services Limited in promoting measures to reduce the volume of trade waste discharged into the sewerage system. Reducing the level of stormwater entering the sewerage system will continue to be actioned by the Council.

5. Anticipated Results

The anticipated environmental results are:

- a. Minor adverse environmental effects arising from wastewater treatment activities;
- b. From 1 October 2003, no offensive, objectionable or noxious odours beyond the southern boundary of Areas 1A and 1B, the eastern boundary of Area 2 or the northern and western boundaries of the main designated area "Watercare Services Limited: Wastewater Treatment Plant", and the area designated for Ambury Regional Park shown on the planning maps;
- c. From 1 October 2003, the objective will also be that the MWTP be operated in a manner that should enable the area required for the purpose of an odour buffer to be reduced and to remove from the odour buffer any area

The Proposed Auckland Unitary Plan (notified 30 September 2013)

not reasonably required, including Ambury Farm Park and the area used for the oxidation ponds. The rules attaching to this designation would need to be changed at that time in terms of the Resource Management Act 1991.

d. That the buildings and structures associated with the MWTP will be relatively unobtrusive when viewed from the adjoining land and coastal waters;

e. The visual appearance of the MWTP will be enhanced through the comprehensive landscaping of the site; and

f. The minimisation of noise, dust and other nuisances associated with the plant.

6. Monitoring

The environmental standards now required under the ARC consents and in terms of the conditions of this designation are not able to be achieved by the current MWTP. To ensure the upgraded MWTP meets the new environmental standards the Council will undertake the following:

a. Monitor complaints about the operation of the MWTP; and

b. In conjunction with the ARC, review the results of monitoring undertaken by Watercare Services Ltd in relation to the environmental performance of the MWTP. Watercare Services Ltd will undertake monitoring of the matters set out in general condition 2 (13) (c) (i–vi) of the ARC consents which states that the Consent Holder shall complete and comply with a Monitoring Management Plan which shall stipulate the precise technical details of monitoring programmes.

7.0 Provisions for the Main Site

7.1 Explanatory statement

The designation for the main site covers an area of approximately 725 hectares, comprising 500 hectares of oxidation ponds, 195 hectares of Mangere Sludge lagoons and existing MWTP site, and 21 hectares covering Oruarangi Creek. The provisions of this designation are intended to provide for the works associated with the upgrading, ongoing operation and modification of the MWTP, as authorised by the resource consents obtained from the ARC, while providing an appropriate degree of protection to surrounding activities and ensuring that development is consistent with the surrounding environment. The rules in this plan attaching to this designation complement the conditions of the ARC consents and the Council will take the ARC conditions into account.

7.2 Activities

Rule 7.2.1 Permitted Activities

The following activities shall be permitted activities, provided they meet the Development Standards in Rule 7.5, and provided that activity (h) shall be subject to 7.5.6, 7.5.7, 7.5.8, and 7.5.11 Development Standards, and activity (i) shall be subject to 7.5.11 Development Standard only:

a. Wastewater treatment plant processes and ancillary activities;

b. Laboratories ancillary to the MWTP;

c. Administrative offices ancillary to the MWTP;

d. Workshop and parts storage ancillary to the MWTP;

e. Staff and visitor amenities including carparking;

f. Depositing of earth and biosolids to land;

g. Deposition of sludge and biosolids to landfills;

h. Earthworks in accordance with the requirements of the Auckland Regional Council; and

i. Temporary offices, storage sheds, builders workshops, scaffolding, and other similar buildings and activities which are associated with the upgrading, ongoing operation and modification of the MWTP provided that buildings and structures directly associated with the upgrade of the plant must be removed by October 2006 or such later date as approved in writing by the Director Environmental Management, Manukau City Council.

Rule 7.2.2 Controlled Activities

All Controlled Activities shall comply with Development Standards in Rule 7.5. Buildings exceeding 10m but not more than 15m in height (refer rule 7.5.1).

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Rule 7.2.3 Restricted Discretionary Activities

The following activities shall be restricted discretionary activities:

- a. Buildings exceeding 15m but not more than 25m in height;
- b. The sale of biosolids produced by the MWTP; and
- c. Any permitted or controlled activity which fails to meet the Development Standards in Rule 7.5. Unless special circumstances exist a resource consent for restricted discretionary activities as listed in Rule 7.2.3 need not be publicly notified, and the written approval of affected persons need not be obtained.

7.3 Assessment criteria for Controlled Activities

When assessing a building higher than 10m but not exceeding 15m the Council shall have regard to the following matters and may impose conditions in respect of these:

- a. Landscape design, screening and site layout should ensure that the adverse effects of the MWTP on the amenity values of the surrounding area are minimised;
- b. Design and external appearance of buildings should relate to the character of the locality, i.e. the coastal environment and its amenity values; and
- c. The visual effects of the MWTP buildings with respect to views from the coastal environment and views from public places such as roads and public open space shall be avoided, remedied, or mitigated as far as practicable.

7.4 Assessment criteria for Restricted Discretionary Activities

When assessing any restricted discretionary activity the Council shall have regard to the following matters:

- a. The objectives and policies for the designation.
- b. As a general guide, buildings should be recessive features and should not dominate the natural landscape particularly when viewed from the Manukau Harbour and coastal edge and when viewed from public places such as roads and public open spaces.
- c. The extent to which the design, external appearance and colour of buildings and other methods (such as the construction of buildings underground) will facilitate the integration of the buildings into the landscape so that they are not dominant features in the landscape.
- d. The proposed landscaping and the extent to which it will screen and soften the visual impact of buildings and development on the site from all views.
- e. Without limiting the generality of the foregoing, regard shall be had to the extent to which landscaping within the site itself will diminish the visual impact of buildings and development on the site and/or their combined mass on views from elevated locations, so that the buildings are recessive features in the landscape.
- f. The extent to which the presence and visual effects of the proposed buildings would adversely affect the relationship of Māori and their culture and tradition with their ancestral lands, water, sites, waahi tapu, and other taonga, including effects on cultural landscape views.
- g. The extent to which the building or activity will promote the maintenance or enhancement of the amenity values of the coastal environment. • Whether the activity will have adverse effects on public places, waahi tapu, or archaeological sites.
- h. The extent to which the proposed building promotes efficient use and development of the MWTP having regard to the functional purpose of the proposed building or the operational management of the existing MWTP; and
- i. Whether the proposed hours of operation has the potential to create a noise nuisance to local residents. As a guide additional controls may be placed on activities, including servicing and deliveries, that operate between the hours of 10.00 pm and 7.00 am. Conditions may be imposed as part of any resource consent.

7.5 Development standards — Permitted and Controlled Activities

Rule 7.5.1 Maximum Height

The maximum permitted height for buildings and structures shall be 10m, except that this limit shall not apply to silos, stacks, cranes, lift towers or machinery rooms. The maximum permitted height for silos, lift towers and machinery rooms shall not exceed 15m, and the maximum height for stacks and permanently installed cranes shall not exceed 25m.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Explanation:

Buildings, particularly larger buildings have the potential to detract from the amenity values of the surrounding area. The maximum height control will protect visual amenity values of the adjoining land and the Manukau Harbour from intrusive building developments. In the longer term there may be a need to erect buildings higher than 10m and provision has been made for this outcome through the resource consent process in terms of the rules of this designation.

Rule 7.5.2 Yards

Front Yard — 15m No buildings or carparking areas shall be established within this yard The yard shall be landscaped in accordance with Rule 7.5.4.

Explanation:

The 15m yard along Greenwood Road will provide an adequate separation distance between the MWTP and adjoining uses to the east.

Rule 7.5.3 Depositing of Matured Sludge and Biosolids

a. Depositing of matured sludge

Matured sludge applied to land shall be confined to matured, dried sludge, excavated from the drying beds. With the exception of the approved landfills, sludge deposition shall not include any sludge obtained from the oxidation ponds.

b. Depositing of biosolids

The depositing of biosolids to land (other than approved landfills) shall be undertaken in accordance with the Ministry of Health document “Public Health Guidelines for the safe use of sewage, effluent and sewage sludge on land (1992)” or any amendment to or replacement for those guidelines. Depositing of biosolids to approved landfills shall be undertaken in accordance with the requirements of the ARC consents.

Explanation:

The operator may deposit, within the site, some of the matured sludge in the drying beds. As the matured sludge is a contaminant, the application of the matured sludge is subject to Discharge Permit 9610859 issued by the ARC which approves certain landfills for this purpose. The depositing of biosolids is also subject to the same discharge permit.

Rule 7.5.4 Landscaping

The site shall be landscaped in accordance with the provisions of the Coastal and Foreshore Restoration Plan, prepared in accordance with Coastal Permit 9610851. Without limiting the generality of the foregoing, trees to be used for landscaping purposes shall be a combination of native and exotic species which, within 10 years, are capable of forming an effective screen at varying heights up to 15m with the largest specimens reaching 20–25m above natural ground level within 20 years. For the purposes of consistency, exotic species which are currently found on site and/or in the near vicinity (for example pines, gums and macrocarpa trees) should be used. Native trees of a height more than 6m shall be retained but may be transplanted where practicable provided that transplanting shall be undertaken with sound arboricultural practices. Where retention or relocation is not practicable, any native tree of a height more than 6m which is removed shall be replaced by a native tree of similar height within the site as part of the overall landscaping undertaken. The removal of the pine tree shelter belts may be undertaken at such time as effective screening of the plant is provided by other trees and plants on the site. The landscaping shall be properly maintained at all times and in accordance with sound landscaping practice.

Explanation:

Exotic species are promoted in the early stages of landscaping to provide the initial screening of the MWTP and related buildings. While native trees are preferred for their ecological value it is recognised that exotic species because of their speed of growth relative to native species will ensure that over a relatively quick period of time

The Proposed Auckland Unitary Plan (notified 30 September 2013)

large trees will have the effect of softening buildings up to 15m in height. Also the screening ability of many native trees is not always as effective as some of the exotic species so a mixture of both will ensure effective screening from a height perspective and an area perspective is achieved. Once the native trees have reached heights where they effectively screen buildings then provision is made for the shelter belts to be removed. Every precaution is to be taken to protect existing native trees and the shelter belts in order to maintain the visual screening of the Wastewater Treatment Plant and related buildings.

Rule 7.5.5 Design and External Appearance of Buildings

All new buildings and structures shall be designed and finished in a manner that is deemed to be visually recessive by a suitable expert.

Explanation:

This rule is to encourage sensitive design and to ensure that buildings are finished in recessive colours that do not detract from the amenity values of the surrounding areas and coastal waters. Details of the design and finish of the proposed buildings and structures will be submitted to the Council at the same time as an outline plan of works.

Rule 7.5.6 Submission Of An Outline Plan Of Works

Before commencing any construction activity on the designated land, an Outline Plan of Works shall be submitted to the Council for its consideration and approval. No construction work shall be commenced until the Outline Plan of Works is approved pursuant to section 176A of the Resource Management Amendment Act 1993. The outline plan of works must show the height, shape and bulk of the work, its location on the site, the likely finished contour of the site, vehicular access, circulation and the provision for parking, the landscaping proposed, and any other matters to avoid, remedy, or mitigate any adverse effects on the environment (pursuant to section 176A, Resource Management Amendment Act 1993).

Explanation:

The designation only indicates in broad terms the nature of activities to be undertaken within the designated land. This rule provides the Council with prior notice of the detailed nature of any works proposed within the designated land and the ability to control any adverse effects of those works or project.

Rule 7.5.7 Dust

That beyond the southern boundary of Area 1A and 1B, the eastern boundary of Area 2 and the Main Site, there shall be no dust caused by discharges from the site which are noxious, dangerous, offensive or objectionable.

Explanation:

Activities that generate dust have the potential to create significant adverse health effects and nuisance conditions. This rule ensures that there are adequate means to identify a dust nuisance so that remedial action can be taken to the satisfaction of Council.

Rule 7.5.8 Movement Of Materials

All earth, sludge and biosolids being transported on public roads to and from the site shall be contained to prevent the release of particulate material into the environment.

Explanation:

Large quantities of biosolids are to be removed from the MWTP each day. In addition, other materials which could contribute to dust nuisance will be delivered and removed from the site. The above rule is designed to avoid any adverse effects from particulate materials being lost from vehicles.

Rule 7.5.9 Noise

a. Any additions to the MWTP shall be so designed and the use of the buildings and site shall be so conducted, that the noise level does not exceed the limits set out below:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

i. When measured at, or within, the boundary of any site zoned Residential or the notional boundary of any site zoned Mangere Puhinui Rural, (as at the date the district plan became operative) which is located beyond the boundary shown on Figure 5.6 attached to this designation. (The notional boundary is a line 20m from the facade of any rural dwelling or the legal boundary where this is closer to the dwelling.)

Day/Time	Noise Level (L10dBA)
At all times	50
At all other times including Sundays and public holidays	45

ii. When measured at or within the boundary of any site zoned Business.

Day/Time	Noise Level (L10dBA)
At all times	60

Lmax 65 dBA (or background plus 30 dBA, whichever is lower) shall apply between the houses of 2200–0700, seven days a week.

b. The noise levels shall be measured and assessed in accordance with NZS 6801: 1991 “Measurement of Sound” and NZ 6802: 1991 “Assessment of Environmental Sound”.

c. Any construction noise (as defined in Section 2 of the Construction Act 1959) emanating from the site shall comply with the requirements of NZS 6803P:1984 “The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work”.

d. Prior to the commencement of any new activities, the applicant shall provide Council with a certificate from a qualified Acoustic Engineer demonstrating that the above performance standards will be met.

e. Notwithstanding the noise standards above, the Council reserves the power conferred on it under the relevant sections of the Resource Management Act 1991, to control any noise which contravenes the provisions of the abovementioned Act.

Explanation

The noise standards above are similar to those that apply to activities in the Business zones. During the construction period from 1997–2003 noise levels will exceed those specified in clause (a) above, but will be below the daytime construction noise limit of 75dBA set out in NZS 6803P: 1984 “The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work”.

Rule 7.5.10 Odour

Up to and including 1 October 2003, The MWTP is to be operated, maintained, supervised, monitored and controlled in relation to all activities undertaken on the site so that discharges of odour are maintained at a minimum practicable level. From 1 October 2003 there shall be no discharge of a noxious, offensive or objectionable odour arising from within Areas 1A, 1B or 2 beyond the southern boundary of Area 1A and 1B and the eastern boundary of Area 2 (as shown on Figure 5.8), or the northern and western boundaries of the Main Site designated as “Watercare Services Limited: Wastewater Treatment Plant” and designation No. 153: “Watercare Services Ltd/A.R.C Wastewater purposes and Ambury Regional Park”, as shown on Figure 5.6.

Rule 7.5.11 Stormwater Drainage

a. Adequate provision is to be made for the protection and/or redirection of any existing stormwater overland flowpaths within the site, which are affected by the upgrading works. All proposed works shall be undertaken prior to the commencement of the activity, in accordance with Council’s engineering performance standards, and at no cost to the Council.

b. In order to protect these stormwater overland flowpaths a ‘right to drain water’ easement in favour of the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Council is to be placed over the final defined overland flowpaths prior to commencement of the activity and at no cost to Council. Any easement will need to be defined by a registered surveyor, to be arranged by the applicant, and the subsequent easement documents prepared by the City Solicitor at the applicant's expense. The easement documents will need to include a provision that no buildings, structures, fences or filling be placed in the easement area or other works carried out thereon, except with specific Council approval and that the level and profile of the overland flowpath is to remain unchanged thereafter. The easement documents will also need to include plans showing levels in terms of DOSLI datum, a suitably located datum mark and boundary dimensions for the proposed easement.

c. Minimum floor level restrictions may be required adjoining overland flowpaths and at no cost to Council prior to commencement of the activity.

d. Conditions (a), (b) and (c) require compliance through the submission of full engineering plans to the Council for its approval at the time an Outline Plan of Works is submitted to the Council and the completion of all works prior to commencement of the activity.

Explanation:

The above rule will ensure that no stormwater problems are generated by the proposed upgrading.

Rule 7.5.12 Roothing

Access to Puketutu Island shall be retained at all times, including during the upgrading of the MWTP.

Rule 7.5.13 Business Development Reserve Contributions

7.5.13.1

All development authorised by this designation, other than Project Manukau, in excess of \$250,000 and proposed to be used solely or principally for administrative, commercial or industrial purposes, or any two or more such purposes, may be subject to a reserve contribution calculated at a rate of not more than 0.5% of the assessed value of the development, provided that:

7.5.13.2

a. The amount of reserve contribution required under this clause may be reduced at the Council's discretion, pursuant to an application for a restricted discretionary activity resource consent. In considering an application under this provision, the Council shall have regard to the following matters:

- i. the extent to which the development generates an overall positive environmental effect or has no additional adverse environmental effects;
- ii. the extent to which the development adversely affects the environment;
- iii. the extent to which any facility (land or works) provided by WSL benefit the public and are visible and/or accessible to the public;
- iv. the extent of any restrictions on public access to the nominated facilities/areas provided by WSL;
- v. the cost to WSL of providing the nominated facilities/areas for public amenity and use; and (vi) the extent to which WSL makes provision for public open space. (b) Unless special circumstances exist, any resource consent application made pursuant to 7.5.13.2(a) above shall not be notified and the written approval of affected parties need not be obtained.

7.5.13.3

WSL will pay the reserve contribution of 0.5%, or such lesser amount (if any) as may be required by the Council pursuant to 7.5.13.2(a) above, by a cash payment to the Council of 0.15% or, if the reserve contribution is assessed as being less than 0.15%, then such lesser amount; and

- i. by deducting the remaining reserve contribution (if any) from the Credit, until such time as the Credit is exhausted; and/or
- ii. if the Council agrees, transferring land to the Council of an equivalent value to the whole or part of the remaining reserve contribution.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

7.5.13.4

The Council shall maintain a record of WSL's current financial contribution credit (Credit). The value of the Credit shall be \$835,000, as at 10 August 2001, and arises from WSL's commitment to undertake the works set out below. The difference between the Credit and the Agreed Value of the following works is the agreed amount of reserve contribution for development occurring under Project Manukau.

a. Visitor facilities including (parking, lookouts, hides, signs & planting) \$316,000

Pathways, board walks, bridges and associated planning \$455,000

Roads and fencing (access roads, cycle tracks, fencing & planting) \$334,000

Oruarangi Landing including boat ramp \$550,000

Community Involvement (preparation nursery etc) \$80,000

Total \$1,735,000

(Less allowance for planting) \$135,000

Agreed value \$1,600,000 (the Works' Areas)

b. The Credit will be extinguished in 20 years from 10 August 2001 or when it is exhausted in terms of rule 7.5.13.3, whichever event occurs first.

Provided that: During the hours of daylight, the public is to be provided with access to any of the Works' Areas in respect of which the Credit has been calculated. In the event that access to any Works' Area is denied, the Council shall reduce the credit attributed to that Works' Area as set out in rule 7.5.13.4(a). This proviso is subject to WSL or its agents temporarily restricting public access where that is necessary for safety or operational reasons.

Provided Further that: If any of the works described in rule 7.5.13.4(a) do not occur, the Council shall reduce the Credit attributed to that work.

Provided Further that: The calculation of the Credit took into account all Project Manukau works, including those specified in the schedule in rule 7.5.13.4(a) and, for the avoidance of doubt, none of those works shall be assessed under Rule 7.5.13.1.

Explanation:

As at 10 August 2001, the Council and WSL agreed that a reserve contribution of \$765,000 was payable on the works undertaken as part of Project Manukau. That reserve contribution will be met by the provision of the works set out in rule 7.5.13.4(a). The difference between the Agreed Value of those works and the reserve contribution required as at 10 August 2001 is the Credit.

7.5.13.5

Upon the Credit being extinguished in terms of rule 7.5.13.3, WSL shall continue to pay a reserve contribution of 0.5%, or such lesser amount (if any) as may be required by the Council pursuant to 7.5.13.2(a) above.

7.5.13.6

The reserve contribution shall become due and payable upon the occurrence of any of the following events as may be appropriate to the proposed development provided that if more than one of the following events applies, the contribution shall be paid on the event which occurs first:

a. The issuance of a building consent for proposed works;

b. The commencement of proposed works.

Explanation:

All development is liable to the payment of reserve contributions in order to offset the adverse effects of development on the environment which includes the community. Generally, the Business Development Reserve Contribution rule ensures that businesses that have not previously had to pay reserve contributions on subdivision and yet intensify the development on their site, are able to be levied for a contribution to offset the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

effects of the business on the environment. It is the intention of WSL and the Council that the Credit will be exhausted within 20 years. If the Credit is not exhausted within the life of this Plan, it is WSL's intention to carry this rule in WSL's designation into any new district plan while still retaining the 20 year cut off proposal. It is accepted by both the Council and WSL that this rule and therefore the agreed Credit may change as a result of public participation in the formulation of any new district plan. The rule contains an element of discretion as to how much reserve contribution may be payable in order to promote the opportunity for the recognition of facilities or works WSL may provide which contribute to public open space purposes and to recognise that some aspects of the development might have little or no adverse effects (eg the replacement of underground pipes). In applying the threshold limit of \$250,000, WSL shall consider whether the proposed works are part of a series of scheduled works that cumulatively total more than \$250,000, and whether it would be more appropriate to seek approval for all the proposed or scheduled works at the same time and pay a financial contribution on the total value of those works.

Rule 7.5.14 Coastal And Foreshore Restoration Management Plan (CFRP)

- a. The Requiring Authority shall complete and comply with a Coastal and Foreshore Restoration Plan (CFRP) for the area shown on Figure 5.7.
- b. The CFRP shall be completed and submitted to the Director Environmental Management, Manukau City Council for approval not later than December 1998 or such later date as approved in writing by the Director, and any changes required by the Director shall be incorporated in the CFRP upon request.
- c. The CFRP shall be fully implemented not later than 1 October 2006.
- d. The CFRP shall provide for the matters described in Special Condition 6 of the Auckland Regional Council resource consent number 9610851.

Explanation:

Such a plan has been seen in the context of the ARC consents as a suitable method to achieve an integrated approach on the part of both the ARC and Manukau City Council.

Figure 5.6 - Odour Boundary and Wastewater Treatment Plant Site

The Proposed Auckland Unitary Plan (notified 30 September 2013)

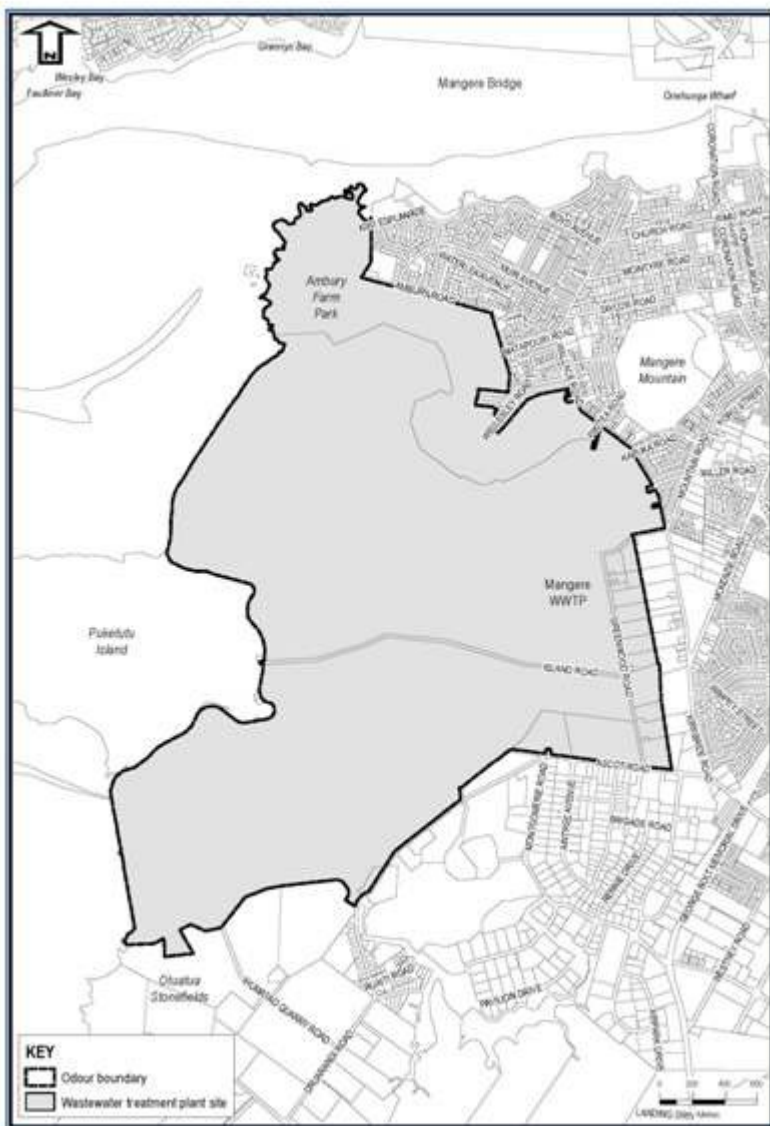

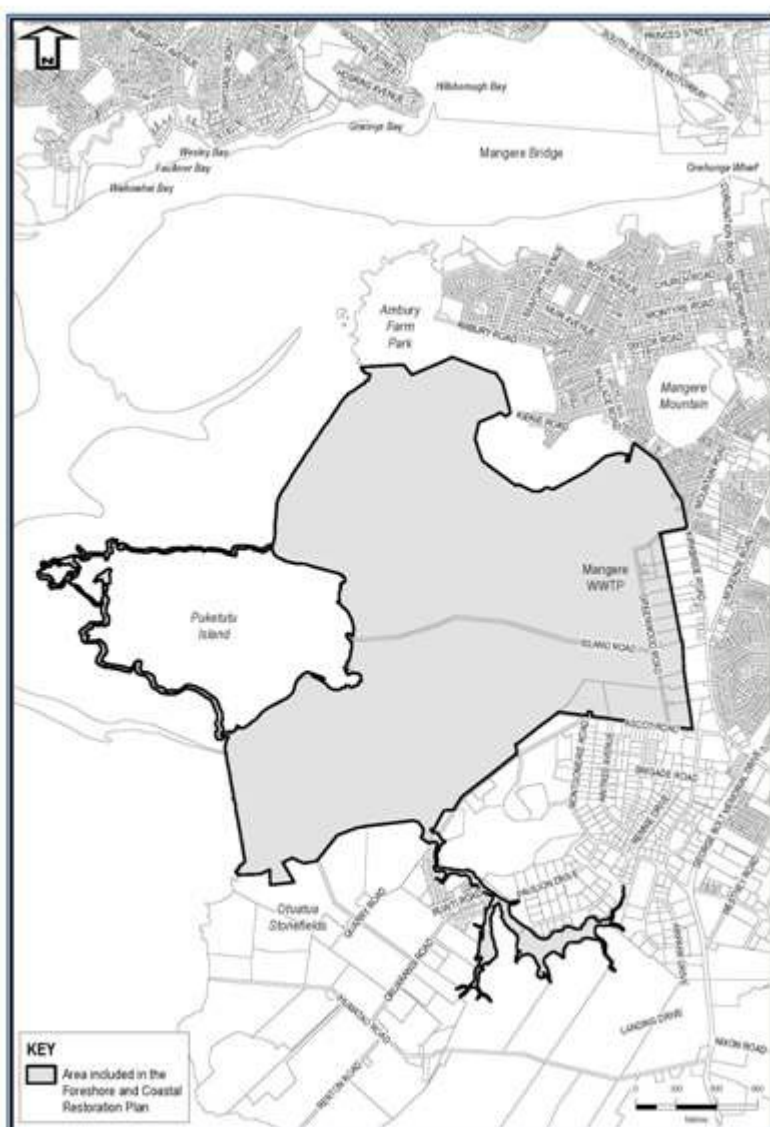

Figure 5.7 - Area Included in the Foreshore and Coastal Restoration Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

9503 Odour Buffer Area - Mangere Wastewater Treatment Plant

Designation Number	9503
Requiring Authority	Watercare Services Ltd
Location	Area 1: Ascot Road North, Area 2: Greenwood Road, Mangere
Rollover Designation	Yes
Legacy Reference	Designation 144B, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Area 1A - Wastewater Treatment Purposes.

Area 1B - Odour Buffer Area and Application of Biosolids from the Wastewater Treatment Plant.

Area 2 - Odour Buffer Area and Application of Biosolids from the Wastewater Treatment Plant.

Conditions

The Proposed Auckland Unitary Plan (notified 30 September 2013)

1.0 Introduction

The Mangere Wastewater Treatment Plant ("MWTP") is an essential regional facility serving the needs of the Auckland Metropolitan area (with the exception of the North Shore). The MWTP currently (1996) services 750,000 persons plus associated commercial and industrial waste producers and treats an average of 300,000m³ of wastewater per day. The MWTP is to be upgraded to enhance the environmental performance of the MWTP, particularly in relation to odour, to address social and cultural considerations and, as a result of population growth, to accommodate increasing volumes of wastewater requiring treatment in the region.

Odour problems have occurred at various times since the plant was commissioned and were the subject of legal proceedings commenced by Manukau City Council in 1993. By consent of the parties a Planning Tribunal enforcement order was issued to minimise the discharge of odours by October 1995. The order covered all major odour sources except the oxidation ponds. This work has now been successfully completed. The order also sets in place a timetable for obtaining resource consents for a new or reconstructed plant by the year 2000.

The existing MWTP is designated for "drainage purposes". The expansion of the MWTP includes two main areas of land adjacent to the existing plant, as shown on figure 5.8. Area 1A to the south of the existing MWTP has been designated "wastewater treatment purposes" to make appropriate provision for the construction, operation and maintenance of future wastewater facilities, establishment of an odour buffer area and to allow for the application of biosolids to the land, and the use of sludge in landscaping and land forming. Area 1B to the south of the existing MWTP and Area 2 to the east of the existing MWTP have been designated as odour buffer areas and to allow for the application of biosolids to the land.

A number of resource consents administered by the Auckland Regional Council (ARC) regulate the discharges to air, land, and water from the MWTP and regulate aspects of the upgrading works including earthworks and coastal permits. Conditions (or any subsequent modifications of these conditions) are contained in the following resource consents:

9610850 Discharge contaminants to air
9611016 Diversion of inner coastal water into the area occupied by the oxidation ponds
H/10852 Dredging of seabed
9610853 Discharge of treated effluent
9610854 Discharge of stormwater
9610855 Temporary pond discharges
9610857 Divert groundwater and surface water
9610858 Sediment control
9610859 Discharge of contaminants onto and into ground Definition of biosolids

For the purposes of this designation, biosolids are defined as dewatered, stabilised sewage sludge that satisfies the standards of the Ministry of Health document "Public Health Guidelines for the Safe Use of Sewage, Effluent and Sewage Sludge on Land – 1992" relating to limits for heavy metals and the USEPA Class B Pathogen levels, or any subsequent amendment to or replacement of the document.

2.0 Resource Management Issues

Issue 1 Wastewater needs to be managed, treated and discharged in an efficient and sustainable manner.

The social and economic wellbeing and the health and safety of Manukau and the Auckland Region, are dependent on the availability and efficient operation of central infrastructural services such as the MWTP. The region's sustained population and economic growth and increasing environmental expectations require the upgrading and expansion of these services. The region has a significant capital investment in the MWTP and the expansion and upgrading of the MWTP enables efficient use to be made of those resources. The volume of wastewater to be treated and disposed of at the MWTP, could, in the future, require the establishment of new wastewater treatment plants. The Council supports continued investigation into supplementary sites for

The Proposed Auckland Unitary Plan (notified 30 September 2013)

treatment plants within the region and the implementation of proposals for satellite plants.

Issue 2 The MWTP adjoins the Manukau Harbour and there is the potential that the MWTP will have adverse effects on the ecological, cultural, spiritual, recreational and landscape values of the coastal environment.

The coastal environment in the vicinity of the MWTP contains both natural and modified elements and has important ecological, cultural, spiritual, recreation and landscape values. The upgrading of the MWTP must be undertaken in a manner that maintains, and where possible, enhances these values.

Issue 3 The MWTP has the potential to generate adverse effects on the environment of the surrounding land.

The MWTP has generated adverse environmental effects on the surrounding neighbourhood, particularly in respect of nuisances caused by odour and insects. The upgraded MWTP needs to be effectively managed to ensure adverse environmental effects are avoided or mitigated.

3.0 Objectives and Policies

Objective 3.1

To promote the efficient use and development of the MWTP and all ancillary activities on the site. (This objective relates to issue 1).

Objective 3.2

To support the establishment of wastewater treatment facilities elsewhere in the region to supplement the facilities of the MWTP. (This objective relates to issue 1).

Objective 3.3

To ensure that the MWTP is operated in a manner that avoids, remedies or mitigates any actual or potential adverse effects on the ecological cultural, spiritual, recreation and landscape values of the coastal environment of the Manukau Harbour (This objective relates to issue 2).

Objective 3.4

To maintain and enhance environmental quality and amenity values of the neighbourhood surrounding the MWTP (This objective relates to issue 3).

Policies 3.5

a. The operation of the wastewater treatment plant is to be undertaken in a manner that does not generate any adverse effects that are more than minor on the surrounding land and the Manukau Harbour.

b. The plant is to be operated, in a manner that does not generate any noxious, objectionable or offensive odours beyond the southern boundary of Areas 1A and 1B, the eastern boundary of Area 2, or the outer boundaries of the adjoining designated areas "Water Services Limited: Wastewater Treatment Plant" and designation No 153 "Watercare Services Ltd/A.R.C Wastewater purposes and Ambury Regional Park" shown on the planning maps. From 2003, the objective is that the plant be operated in a manner that will enable the area required for the purpose of an odour buffer to be reduced and to remove from the odour buffer any area not reasonably required, including Ambury Farm Park and the area used for the oxidation ponds. The rules attaching to this designation would need to be changed at that time accordingly.

c. Buildings and structures are to be designed and located and landscaping undertaken so that the visual amenity values of the surrounding neighbourhood and coastal environment are maintained and enhanced.

4.0 Implementation

4.1 Regulatory Methods

Watercare Services Limited (WSL) is a requiring authority with financial responsibility for works at the MWTP

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and has designating rights under section 168 of the Resource Management Act. WSL has required Areas 1A, 1B and 2 be designated within the district plan. The designation is subject to a number of conditions designed to minimise the adverse environmental effects from MWTP activities. Council will be responsible for implementing the rules in the district plan relating to the designation while the Auckland Regional Council will be responsible for compliance with the resource consents.

4.2 Non-regulatory methods

The Council will work closely with Auckland Regional Council to ensure that the plant operates in an efficient and sustainable manner. The Council will continue to collocate with Watercare Services Limited in promoting measures to reduce the volume of trade waste discharged into the sewerage system. Reducing the level of stormwater entering the sewerage system will continue to be actioned by the Council.

5.0 Anticipated Environmental Results

The anticipated environmental results are:

- a. Minor adverse environmental effects arising from wastewater treatment activities;
- b. No offensive, objectionable or noxious odours beyond the southern boundary of Areas 1A and 1B, the eastern boundary of Area 2 or the outer boundaries of the adjoining designated areas "Watercare Services Limited: Wastewater Treatment Plant", and "Watercare Services Ltd/A.R.C Wastewater purposes and Ambury Regional Park" as shown on the planning maps;
- c. From 2003, the objective is that the plant be operated in a manner that will enable the area required for the purpose of an odour buffer to be reduced and to remove from the odour buffer any area not reasonably required, including Ambury Farm Park and the area used for the oxidation ponds. The rules attaching to this designation would need to be changed at that time accordingly;
- e. That the buildings and structures associated with the MWTP will be relatively unobtrusive when viewed from the adjoining land and coastal waters;
- f. The visual appearance of the plant will be enhanced through the comprehensive landscaping of the site; and
- g. The minimisation of noise, dust and other nuisances associated with the plant.

6.0 Monitoring

The environmental standards now required are not able to be achieved by the current plant. To ensure the upgraded MWTP meets the new environmental standards the Council will undertake the following:

- a. Monitor complaints about the operation of the MWTP; and
- b. In conjunction with the ARC, monitor the environmental performance of the plant.

7.0 Provisions For Area 1

7.1 Explanatory Statement

Area 1 comprises 18 ha. Part of this area remains undeveloped (Area 1A) and part has been developed for intensive horticultural activity (Area 1B), as shown on Figure 1. In order to recognise the existing land use activities, different provisions apply to Area 1A and Area 1B. Within Area 1A, a number of wastewater treatment processes and ancillary activities are proposed to be established and an odour buffer area maintained. Within Area 1B an odour buffer area will be maintained and biosolids applied to land. This will allow the existing horticultural activities to continue. Special conditions and restrictions are set out for Areas 1A and 1B for the future protection of the neighbourhood and the coastal environment. Watercare Services Limited has a number of consents from the ARC covering aspects of the upgrading and discharges. The rules in this plan complement the conditions of the ARC consents and the Council will take the ARC conditions into account.

7.2 Activities

7.2.1 Permitted Activities

All permitted activities shall comply with Development Standards in Rule 7.5

The following activities shall be permitted activities for Area 1A on Part Allotment 83, Parish of Manurewa and a portion of Part Lot 1 DP 43557:

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- a. Wastewater treatment plant processes and ancillary activities;
- b. Laboratories ancillary to the treatment plant;
- c. Administrative offices ancillary to the treatment plant;
- d. Workshop and parts storage ancillary to the treatment plant;
- e. Staff and visitor amenities including carparking;
- f. Depositing of no more than 50,000m³ of matured sludge (excluding sludge from the oxidation ponds) to land;
- g. Application of biosolids to land.

The following activities shall be permitted activities for Area 1B on a portion of Part Lot 1 DP 43557 and Lot 1 DP 49323:

- a. Deposition of biosolids.

Rule 7.2.2 Controlled Activities

All Controlled Activities shall comply with Development Standards in Rule 7.5.

The following activities shall be controlled activities for Area 1A on Part Allotment 83, Parish of Manurewa and a portion of Part Lot 1 DP 43557:

- a. Buildings exceeding 10m but not more than 15m in height (refer rule 7.5.1).
- b. Depositing in excess of 50,000m³ but not exceeding more than 100,000 m³ of matured sludge (excluding sludge from oxidation ponds) to land.

Rule 7.2.3 Restricted Discretionary Activities

The following activities shall be restricted discretionary activities for Area 1A on Part Allotment 83, Parish of Manurewa and a portion of Part Lot 1 DP 43557:

- a. Buildings exceeding 15m but not more than 25m in height.
- b. Any permitted or controlled activity which fails to meet the Development Standards in rule 7.5.

7.2.3.1

Unless special circumstances exist a resource consent for restricted discretionary activities need not be publicly notified.

7.3 Assessment Criteria for Controlled Activities

7.3.1 When assessing a building higher than 10m but not exceeding 15m the Council shall have regard to the following matters and may impose conditions in respect of these:

- a. Landscape design, screening and site layout should ensure the effects of the MWTP are internalised within the site and adverse effects on the amenity values of the area are minimised;
- b. Design and external appearance of buildings should relate to the character of the locality, i.e. the coastal environment and its amenity values; and
- c. The visual effects of the MWTP buildings with respect to views from the coastal environment and views from public places such as roads and public open space shall be avoided, remedied, or mitigated as far as practicable.

7.3.2

When assessing the deposition of more than 50,000m³ but not exceeding 100,000m³ of matured sludge to land, the Council shall have regard to the following matters and may impose conditions in respect of these:

- a. The visual effects of the deposition of sludge shall be avoided, remedied or mitigated; and
- b. The works shall be designed and undertaken so as to ensure that no damage or nuisance is caused to adjacent or adjoining lots.

7.4 Assessment Criteria for Restricted Discretionary Activities

When assessing any restricted discretionary activity the Council shall have regard to the following matters:

- a. The objectives and policies for the designation;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. As a general guide, buildings should be recessive features and should not dominate the natural landscape particularly when viewed from the Manukau Harbour and coastal edge and when viewed from public places such as roads and public open spaces;
- c. The extent to which the design, external appearance and colour of buildings and other methods (such as the construction of buildings underground) will facilitate the integration of the buildings into the landscape so that they are not dominant features in the landscape;
- d. The proposed landscaping and the extent to which it will screen and soften the visual impact of buildings and development on the site from all views;
- e. Without limiting the generality of the foregoing, regard shall be had to the extent to which landscaping within the site itself will diminish the visual impact of buildings and development on the site and/or their combined mass on views from elevated locations, so that the buildings are recessive features in the landscape;
- f. The extent to which the presence and visual effects of the proposed buildings would adversely affect the relationship of Māori and their culture and tradition with their ancestral lands, water, sites, waahi tapu, and other taonga, including effects on cultural landscape views;
- g. The extent to which the building or activity will promote the maintenance or enhancement of the amenity values of the coastal environment; and
- h. Whether the activity will have adverse effects on public places, waahi tapu, or archaeological sites.

Conditions may be imposed as part of any resource consent.

7.5 Development standards — Permitted and Controlled Activities

Rule 7.5.1 Maximum Height

The maximum permitted height for buildings and structures shall be 10m, except that this height limit shall not apply to silos, stacks, cranes, lift towers or machinery rooms. The maximum permitted height for silos, lift towers and machinery rooms shall not exceed 15m, and the maximum height for stacks and permanently installed cranes shall not exceed 25m.

Explanation:

Buildings, particularly larger buildings have the potential to detract from the amenity values of the surrounding area. The maximum height control will protect visual amenity values of the adjoining land and the Manukau Harbour from intrusive building developments. In the longer term there may be a need to erect buildings higher than 10m and provision has been made for this outcome through the resource consent process in terms of the rules of this designation.

Rule 7.5.2 Yards

Front Yard — 20m No buildings or carparking areas shall be established within this yard except for the provision of a vehicular accessway to Ascot Road. The yard shall be landscaped in accordance with Rule 7.5.4.

Explanation:

The 20m yard along Ascot Road and Greenwood Road (as far north as Island Road) will provide an adequate separation distance between the sewage treatment facilities and adjoining uses to the south and east.

Rule 7.5.3 Depositing of Matured Sludge and Biosolids

a. Depositing of matured sludge

Matured sludge shall be confined to matured, dried sludge, excavated from the drying beds. It shall not include any sludge obtained from the oxidation ponds.

b. Depositing of biosolids

The depositing of biosolids shall be undertaken in accordance with the Ministry of Health document “Public Health Guidelines for the safe use of Sewage, Effluent and Sewage, Sludge on Land (1992)” or any amendment to or replacement for those guidelines.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. Application of matured sludge

All matured sludge shall only be applied to the area of the mound as generally illustrated on the landscaping plan entitled "Landscape Development Plan" Ref 679 LDP July 1996.

d. Stabilisation details of the mound

The detailed design of the mound shall be assessed by the Council when Watercare lodge an outline plan of works with the Council.

e. Traffic movement

All vehicles transporting matured sludge and biosolids to Area 1A or biosolids to Area 1B shall not use any public roads except Island Road.

f. Surface rehabilitation

When the capping layer containing a suitable amount of topsoil has been applied to the mound, it shall be grassed immediately and continuously maintained and irrigated thereafter.

g. Siltation controls

Works shall be undertaken so that all drainage from the mound will drain into Area 1A and become part of the site's stormwater system.

h. For works within 20m of the southern or eastern boundary of Area 1A, and for Area 1B a landscape plan and planting schedule shall be prepared prior to the depositing of any matured sludge for implementation following completion of those works.

Rule 7.5.4 Landscaping

Prior to the commencement of any permitted activities within Area 1A and 1B, other than the deposition of biosolids, landscaping along Ascot Road as far west as Aintree Avenue and along Greenwood Road as far north as Island Road shall be undertaken, completed and maintained in accordance with the Landscape Development Plan Reference 679 LDP2 November 1997 (LDP). The trees to be used for landscaping purposes shall be a combination of native and exotic species which, within 10 years, will form an effective screen at varying heights up to 15m with the largest specimens reaching 20–25m above natural ground level within 20 years. For the purposes of consistency, exotic species which are currently found on site and/or in the near vicinity (for example pines, gums and macrocarpa trees) should be used.

The following existing exotic and native trees shall be retained:

- a. Shelter belt adjoining Ascot Road to the south of Areas 1A and 1B;
- b. Shelter belt to the west of Area 1B;
- c. Totara tree, item (a) on the LDP;
- e. Cabbage tree, item (b) on the LDP;
- f. Pohutukawa tree, item (c) on the LDP;
- g. English Oak, item (d) on the LDP; and
- h. Magnolia tree, item (e) on the LDP.

The above shelter belts may be replaced when the landscaping has achieved a sufficient height and mass to provide replacement screening of equivalent or similar height and mass to that achieved by the shelter belt. Other native trees of a height more than 6m shall be retained and may be transplanted provided that transplanting shall be undertaken in accordance with sound arboricultural practises. The landscaping required by the LDP shall be properly maintained at all times and in accordance with sound landscaping practice.

Explanation:

When fully established with mature trees and shrubs, the landscaped mound along parts of Ascot Road and Greenwood Road will provide a suitable visual screen between the sewage treatment facilities and adjoining

The Proposed Auckland Unitary Plan (notified 30 September 2013)

uses to the south and east. The landscaped mound will only be required on Part Lot 1, DP 43557(101 Ascot Road) and the smaller Lot 1, DP 49323 (89 Ascot Road) when it is proposed to establish permitted activities within 200m of Ascot Road. This will enable the current owners of these lots, or their successors, to continue cultivating horticultural crops for the immediate future.

Exotic species are promoted in the early stages of landscaping to provide the initial screening of the MWTP and related buildings in Area 1A.

While native trees are preferred for their ecological value it is recognised that exotic species because of their speed of growth relative to native species will ensure that over a relatively quick period of time large trees will have the effect of softening buildings up to 15m in height. Also the screening ability of many native trees is not always as effective as some of the exotic species so a mixture of both will ensure effective screening from a height perspective and an area perspective is achieved.

Once the native trees have reached heights where they effectively screen buildings then provision is made for the shelter belts to be removed. Every precaution is to be taken to protect existing native trees and the shelter belts in order to maintain the visual screening of the MWTP and related buildings planned for Area 1A.

Rule 7.5.5 Design and External Appearance of Buildings

All new buildings and structures shall be architecturally designed and finished in natural earthy tones that are visually recessive.

Explanation:

This rule is to encourage sensitive design and to ensure that buildings are finished in recessive colours that do not detract from the amenity values of the surrounding areas and coastal waters. Details of the design and colour of the proposed buildings and structures will be submitted to the Council at the same time as an outline plan of works.

8.0 Provisions For Area 2

8.1 Explanatory Statement

Area 2 contains 31 ha of land which is mainly used for market gardening and some glass house production. The topography is mainly flat with a moderate rise in the north-eastern corner. A stream flows through the north-eastern corner of Area 2. Area 2 will be used as an odour buffer and for the application of biosolids to land. Special conditions and restrictions are set out for Area 2 and for the future protection of the neighbourhood and watercourse.

Watercare Services Limited has a number of consents from the ARC covering aspects of biosolid trials. The rules in this plan complement the conditions of the ARC.

8.2 Activities

8.2.1 Permitted activities

a. Deposition of biosolids.

8.3 Rules

Rule 8.3.1 Depositing of Biosolids (as defined in section 1)

The depositing of biosolids shall be undertaken in accordance with the Ministry of Health document "Public Health Guidelines for the Safe Use of Sewage, Effluent and Sewage Sludge on Land (1992)" or any amendment to or replacement for those guidelines, and in accordance with the terms of any resource consent issued by the Regional Council in relation to that activity. No biosolids shall be deposited within 15m of any stream or drainage path or within 5m of any site boundary.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Explanation:

This rule will enable WSL to undertake biosolids use trials within the confines of Area 2 to demonstrate the resource value of MWTP biosolids to potential users and confirm that significant adverse effects do not arise. The operator has produced a protocol for applying biosolids to land and this will limit the application of biosolids to levels appropriate for arable land and prevent contamination of the ground or streams.

9.0 Common Rules For Areas 1 And 2: Development And Performance Standards

Rule 9.1 Submission of an Outline Plan of Works

Before commencing any activity on the designated land, an outline plan of works shall be submitted to the Council for its consideration. The outline plan must show the height, shape and bulk of the work, its location on the site, the likely finished contour of the site, vehicle access and circulation and landscaping provisions

Explanation:

The designation only indicates in broad terms the nature of activities to be undertaken within the designated land. This rule provides the Council with prior notice of the detailed nature of any works proposed within the designated land.

Rule 9.2 Dust

That beyond the southern boundary of Area 1A and 1B, the eastern boundary of Area 2, there shall be no dust caused by discharges from Areas 1A, 1B and 2 which is noxious, dangerous, offensive or objectionable.

Rule 9.3 Movement of Materials

All earth, sludge or biosolids being transported on public roads to and from the site shall be contained to prevent the release of particulate material into the environment.

Explanation:

Approximately 500m³ of biosolids are to be removed from the treatment plant each day. In addition there are other materials to be delivered and removed from the site. The above rule is designed to avoid any adverse effects from particulate materials being lost from vehicles.

Rule 9.4 Noise

a. Any additions to the MWTP shall be so designed and the use of the buildings and site shall be so conducted, that the noise level does not exceed the limits set out below:

i. When measured at, or within, the boundary of any site zoned Residential or the notional boundary of any site zoned Mangere Puhinui Rural. (The notional boundary is a line 20m from the facade of any rural dwelling or the legal boundary where this is closer to the dwelling.)

Daytime	Noise Level (L10 dBA)
Mon – Sat 0700 – 2200	50
At all other times, including Sundays and public holidays	45

ii. When measured at or within the boundary of any site zoned Business.

Daytime	Noise Level (L10 dBA)
At all other times	60

iii. An L_{max} 65 dBA (or background noise level plus 30 dBA, whichever is lower) shall apply between the hours of 2200–0700, seven days a week.

b. The noise levels shall be measured and assessed in accordance with NZS 6801: 1991 “Measurement of Sound” and NZS 6802: 1991 “Assessment of Environmental Sound”.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

c. Any construction noise (as defined in Section 2 of the Construction Act 1959) emanating from the site shall comply with the requirements of NZS 6803P:1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

d. Prior to the commencement of any new activities, the applicant shall provide Council with a certificate from a qualified Acoustic Engineer demonstrating that the above performance standards will be met. (e)
Notwithstanding the noise standards above, the Council reserves the power conferred on it under the relevant sections of the Resource Management Act 1991, to control any noise which contravenes the provisions of the Act.

Explanation:

The noise standards above are similar to those that apply to activities in the Business zones. During the construction period from 1997–2003 noise levels will exceed those specified in clause (a) above, but will be below the daytime construction noise limit of 75dBA set out in NZS 6803P: 1984 "The Measurement and Assessment of Noise from Construction, Maintenance and Demolition Work".

9.5 Odour

There shall be no discharge of a noxious, offensive or objectionable odour arising from within Areas 1A, 1B or 2 beyond the southern boundary of Area 1A and 1B and the eastern boundary of Area 2 (as shown on Figure 5.8), or beyond the outside boundaries of the adjoining areas designated as "Watercare Services Limited: Wastewater Treatment Plant" and "Watercare Services Ltd/A.R.C Wastewater purposes and Ambury Regional Park", as shown on the planning maps.

Explanation:

The reason for adopting odour controls is to provide a practicable means of controlling objectionable odours which are not satisfactorily regulated by controls on air discharges.

Rule 9.6 Stormwater Drainage

- a. Adequate provision is to be made for the protection and/or redirection of any existing stormwater overland flowpaths within both Areas 1 & 2. All proposed works shall be undertaken prior to the commencement of the activity, in accordance with Council's engineering performance standards, and at no cost to the Council.
- b. In order to protect these stormwater overland flowpaths a 'right to drain water' easement in favour of the Council is to be placed over the final defined overland flowpaths prior to commencement of the activity and at no cost to Council. Any easement will need to be defined by a registered surveyor, to be arranged by the applicant, and the subsequent easement documents prepared by the City Solicitor at the applicant's expense. The easement documents will need to include a provision that no buildings, structures, fences or filling be placed in the easement area or other works carried out thereon, except with specific Council approval and that the level and profile of the overland flowpath is to remain unchanged thereafter. The easement documents will also need to include plans showing levels in terms of DOSLI datum, a suitably located datum mark and boundary dimensions for the proposed easement.
- c. Minimum floor level restrictions may be required adjoining overland flowpaths and at no cost to Council prior to commencement of the activity.
- d. Conditions a., b. and c. require compliance through the submission of full engineering plans to the Council for its approval at the time an Outline Plan of Works is submitted to the Council and the completion of all works prior to commencement of the activity.

Explanation:

The above rule will ensure that no stormwater problems are generated by the proposed works.

9.7 Roading

Prior to the commencement of any wastewater activities in Area 1A, Ascot Road is to be upgraded at no cost to the Council along the frontage of Areas 1A and 1B as far west as the Oruarangi/Montgomerie Roads

The Proposed Auckland Unitary Plan (notified 30 September 2013)

intersection. This upgrading shall include the widening of Ascot Road to provide for a total carriageway width of 10.5m (2m parking lane, two 3.5m lanes and 1.5m shoulder). The upgrading shall also include the provision of a non-standard berm, kerb and channel and footpath and the relocation of all necessary network and public utility services within the existing legal road. Proposed works at the intersection of Oruarangi/Montgomerie Roads shall be aligned with the extension of Ascot Road to Island Road. These works are to be undertaken in accordance with Council's engineering performance standards (except the non-standard berm) to the satisfaction of the Manager — Infrastructure Policy and at no cost to Council.

Explanation:

Upgrading of the northern side of Ascot Road, adjacent to Area 1A will provide for kerb and channelling. The future road works described above (the proposed works at the intersection of Oruarangi and Mongomerie Roads may require additional land) are capable of being undertaken within the existing legal road boundaries of Ascot Road. However further development within Area 1 may require an increase in the width of Ascot Road as indicated on the planning maps.

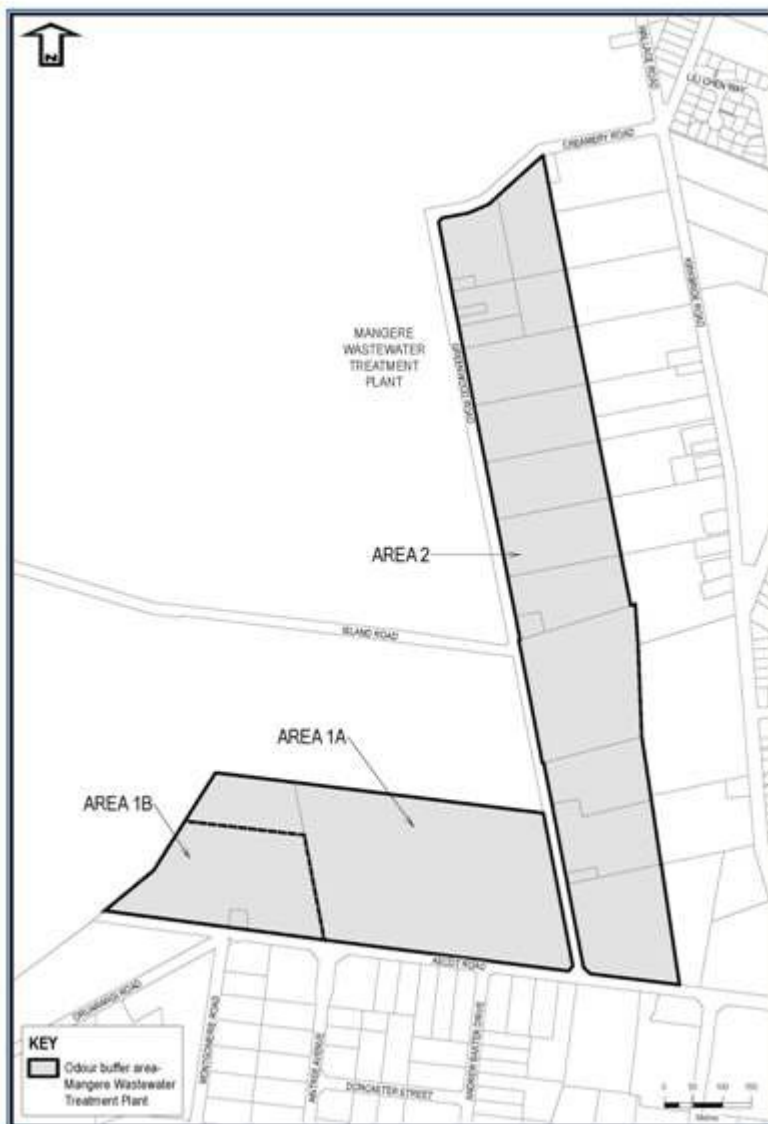

Currently (1996) that part of Ascot Road to the west of Mongomerie road is unsealed. However this part of Ascot Road will be formed and sealed by WSL in order to construct a road embankment enclosing the north-eastern corner of Pond 2 and providing road access to the Island Road causeway from Ascot Road. The proposed extension of Ascot Road to Island Road will provide an alternative route to Puketutu Island which would bypass that part of Island Road between Greenwood Road and the new road embankment.

WSL intend to seek the closure of Island Road between Greenwood Road and the new road embankment. This will enable the integration of those parts of the treatment plant to the north and south of Island Road. However before any statutory procedures to close part of Island road are commenced the proposed Ascot Road extension would need to comply with the Council's roading standards including the provision of a suitable walkway linking Kirkbride Road with Puketutu Island.

9538 Tamaki South East Branch Sewer

Designation Number	9538
Requiring Authority	Watercare Services Ltd
Location	Ormiston Road (road reserve adjoining No. 123), East Tamaki to Murphys Road (road reserve adjoining No. 251), Flat Bush
Rollover Designation	Yes
Legacy Reference	Designation 268, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Wastewater purposes - Tamaki South East branch sewer and wastewater pump stations.

Conditions

1. That an Outline Plan of Work be submitted prior to the proposed construction of the sewer. This Outline Plan shall include details in respect of depth, size of pump stations, and the nature of incoming sewers and verification as to the catchment they will serve.
2. That proposed Pump Station 61 be amended to avoid encroachment on the downstream face of the Rongomai Dam and to be located outside of the overflow zone of this dam.
3. An alternative provision for access to Pump Station 61 shall need to be provided to avoid stress to the Rongomai Dam.
4. Construction activities shall be managed to generally achieve compliance with the requirements of NZ6803:1999 - Acoustics - Construction Noise
5. That an archaeologist shall be present to monitor an excavation of the higher land to the east of Preston Road Reserve, in the general vicinity of proposed Pump Station No 61 as identified in the 7 June 1996 report by Clough and Associates – Tamaki South East Interceptor Route – Preliminary Archaeological Survey for the Feasibility Investigation, at the time works are undertaken to construct the sewer.
6. That all land shall be fully reinstated as soon as practicable upon completion of installation of the sewer.
7. All land modification works associated with the activity involving either removal of soil from the site to an approved cleanfill location or its relocation on site, are to be undertaken in such a manner as to ensure that beyond the boundary of the site there should be no dust or soil erosion/siltation which, in the opinion of an enforcement officer who is employed by Council, is objectionable offensive, or has the potential to create an adverse effect on the receiving environment.

9539 Kawakawa Bay Wastewater Treatment Plant

Designation Number	9539
Requiring Authority	Watercare Services Ltd
Location	123 Kawakawa-Orere Road, Kawakawa Bay
Rollover Designation	Yes
Legacy Reference	Designation 295, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Wastewater purposes - Kawakawa Bay Wastewater Treatment Plant.

Conditions

1. That the development and operation of the Wastewater Treatment Plant shall be in accordance with the plans and information supplied with the Requirement, and numbered Proposal 28184 by Council, and in particular with the following:

The AEE notated Kawakawa Bay Wastewater Scheme Wastewater Treatment and Disposal, Glen Forest. by Manukau Water Ltd dated September 2006 and as amended by the following:

- a. The letter dated 27 October 2006 from Hill Young Cooper including Attachments.
- b. The letter dated 31 October 2006 from Hill Young Cooper including Attachments.

2. Prior to any works commencing on the site, Manukau Water Ltd shall prepare and submit to the Manager — Resource Consents for approval a landscape plan for the site.

a. The plan shall provide for:

- i. Details (including species and plant size) of the planting of suitable native trees along that part of the site adjoining Kawakawa-Orere Road as illustrated on Drawing No 120731-Landscape submitted to the Council on 31 October 2006;
- ii. Condition 3(i) above shall include the planting of at least ten suitable native trees with a minimum size of Pb200 along the frontage of Kawakawa-Orere Road;
- iii. The rehabilitation and landscaping of all areas subject to earthworks; and
- iv. Such other planting and related works to mitigate the adverse visual effect of the building. Riparian planting on the Rautawa Stream riparian strip between the proposed discharge location and the Manukau Water property boundary and between potential flow pathway spray irrigation zones and any Category 1 streams. The objective of the riparian planting is for it to be self-sustaining. Sections 2.3 through to 2.5 of the ARC TP 148 Strategy as well as the entire TP 148 Planting Guide shall be implemented in this regard.

b. Subject to any amendments or additional planting or landscaped works required by the Manager — Resource Consents, the approved landscape plan shall be implemented in the first planting season following commencement of works.

c. All landscaping works required by the site landscape plan shall be maintained and watered postplanting and any failed, damaged or removed planting shall be reinstated as soon as practical. At the end of the second year post-planting, an arborist's report shall be submitted to the Manager — Compliance and Enforcement to verify that the landscaping plan has been successfully implemented. (Note: The preparation and implementation of the Landscaping and Planting Plan required above, is also required of ARC consent 30833).

3. All works shall be in general accordance with the application and plans submitted and shall be subject to the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

following requirements:

- a. All materials, workmanship and testing shall be in accordance with the current Manukau City Council Engineering Quality and MANARC Standards or Manukau Water Limited Design and Material Standards as appropriate;
- b. All construction work, shown on the attached plans, shall be supervised by an engineering representative appointed by the owner — refer to MCC Engineering Quality Standards and Manukau Water Limited Design and Material Standards;
- c. On completion of the work, as-built plans and a completion certificate, in accordance with the Council's Quality Assurance Manual and Manukau Water Limited Design and Material Standards, shall be forwarded to Council's appointed field officer; and
- d. A 'pre-construction' meeting shall be arranged a minimum of 48 hours prior to commencement of the works. Please contact the Council's Legal Administrator, Resource Compliance Team, (Phone 2628900 extension 5877).

4. Prior to any works commencing on site, an Auckland Regional Council Soil Conservation consent shall be obtained for the proposed works and a copy supplied to the Council.

5. The earthwork construction shall be undertaken in accordance with the recommendations of the Geotechnical Report prepared by Harrison Grierson Consultants Ltd referenced June 2005, the application submitted including the Environmental Management Plan prepared by Fulton Hogan Ltd dated June 2006 and in compliance with all conditions of the Auckland Regional Council sediment control consent 30831. As the earthworks are progressively completed, the site shall be stabilised against erosion.

6. The earthworks shall be supervised as required by a geotechnical engineer to ensure that the subsurface conditions and procedures are compatible with the recommendations of the geotechnical report. Where substantive amendments are necessary they shall be referred and approved by the authors of the report.

7. All land modification works shall be undertaken in such a manner as to ensure that beyond the boundary of the site there should be no 'dust' or 'soil erosion / siltation', which in the opinion of the Manager - Compliance and Enforcement, is objectionable, offensive or has the potential to create an adverse effect on the receiving environment.

8. The applicant shall be responsible to ensure that the land within the above site and the land on adjoining properties remains stable at all times in respect to the approved works.

9. Control measures shall be in place to ensure that any trucks leaving the site do not deposit soil or other debris on public roads. Any such material deposited on any public road shall be cleaned up immediately at the applicant's expense.

10. Prior to development commencing, the applicant shall provide Council's Manager - Compliance and Enforcement with details of the level of communication with neighbouring property owners/occupiers and identification of the liaison person. The applicant shall ensure that, before commencement of the development, the owners of all adjoining properties are notified in writing of the development in general, its expected duration, the times at which it will be undertaken, and the name of a responsible person with whom neighbours can liaise if the need arises. (Any queries in the foregoing should be referred to the Manager - Sustainable Environment and Infrastructure).

11. A foundation completion report for the site shall be submitted to the satisfaction of the Manager — Compliance and Enforcement for approval upon completion of the land modification works. The report shall readdress the previous recommendations for this site and provide further amendments and recommendations as necessary.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

12. Prior to any work commencing on the site, the Requiring Authority shall undertake a survey of the background ambient noise levels at the closest boundary of 128 Kawakawa-Orere Road and any other appropriate locations. The survey shall be undertaken over a typical 24 hour period and shall be carried out in accordance with New Zealand Standards NZS6801:1991 Measurement of Sound and NZS6802:1991 Assessment of Environmental Sound. The results of the survey shall be sent to the Manager — Resource Consents and the Manager — Development Compliance as soon as practical.

13. Construction activities shall be managed to generally achieve compliance with the requirements of NZS6803:1999 - Acoustics - Construction Noise

14. The operational noise of the treatment plant shall at all times comply with the following noise limits when measured at or within the notional boundary of any site zoned rural:

Activity Average Maximum Level L10dBA Maximum LmaxdBA

Monday to Saturday 7.00am-6.00pm (0700-1800) Monday to Saturday 6.00pm-10.00pm (1800-2200) At all other times 10.00pm-7.00am (2200-0700)

Business and Recreational activities (at or within the notional boundary) 50 45 40 70 (or the background plus 30 whichever is the lower)

15. The operational noise of the treatment plant shall at all times comply with the following noise limits when measured at or within the notional boundary of any site zoned Residential Settlement Unserved:

Average Maximum Level L10dBA Maximum LmaxdBA

Monday to Saturday 7.00am-6.00pm (0700-1800) Monday to Saturday 6.00pm-10.00pm (1800-2200)

Sundays and Public Holidays 7.00am-10.00pm (0700-2200) At all other times 10.00pm-7.00am (2200-0700)

45 40 35 65

16. Notwithstanding compliance with Condition 18 above, the plant shall be designed and operated so that the background noise levels determined by condition 15 are not exceeded to the extent that an adverse noise level is generated within the boundaries of the sites zoned Residential Settlement Unserved from 100 to 128 Kawakawa-Orere road.

17. At one month, six months and twelve months after the commencement of the operation of the wastewater treatment plant, the Requiring authority shall submit to the Council a certificate from a recognised acoustics specialist specifying that the noise levels generated by the wastewater treatment plant comply with conditions 17, 18 and 19.

18. In the event that an aerator or similar device is required to aerate the effluent in the seasonal pond, the Requiring Authority shall prior to the installation of the device submit to the Council a certificate from a recognised acoustics specialist specifying that the noise levels generated by the aerator or similar device complies with conditions 17, 18 and 19.

19. The noise conditions 15–21 above may be reviewed by Council, pursuant to Section 128 of the Resource Management Act 1991 by the giving of notice pursuant to section 129 of the Act one year after the commencement of the operation of the Water Treatment Plant.

20. That if subsurface archaeological evidence should be unearthed during construction (e.g. intact shell midden, hangi, storage pits relating to Māori occupation, or cobbled floors, brick or stone foundation, and rubbish pits relating to 19th century European occupation), work should cease in the immediate vicinity of the remains and the Manukau City Council, Historic Places Trust and tangata whenua should be contacted so that appropriate action can be taken. This includes such persons being given a reasonable time to record and recover archaeological features discovered before work may commence.

21. That if modification of an archaeological site is necessary, an Authority to modify must be applied for under

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Section 11 of the Historic Places Act 1993 in addition to any required approval of the Manukau City Council (Note that this is a legal requirement).

22. That in the event of human remains being uncovered, work should cease in the immediate vicinity and the tangata whenua, Historic Places Trust and NZ Police should be contacted so that appropriate arrangements can be made.

23. The Requiring Authority shall:

- a. Consult with tangata whenua and representatives of local residents (Including the Kawakawa Residents Association) to facilitate the establishment of a Community Committee as soon as practicable after the designation becomes operative.
- b. The Committee shall comprise eight persons as follows:
 - i. A representative of the Clevedon Community Board.
 - ii. A representative of the Kawakawa Residents Association.
 - iii. A representative of tangata whenua.
 - iv. A representative of the community in general, preferably a resident living in proximity to the treatment plant.
 - v. Up to two representatives appointed by Manukau Water Ltd.
 - vi. Up to two representatives appointed by the Manukau City Council.
 - vii. Up to two representatives appointed by the Auckland Regional Council.
- c. The purpose of the Committee shall be to discuss matters relevant to the installation, operation and maintenance of the wastewater treatment system including, but without limitation, any concerns and complaints of residents and visitors and the timeliness and method of alleviating them.
- d. Manukau Water Ltd shall ensure its representatives attend meetings of the Committee which should be held on a quarterly basis.
- e. At the quarterly meetings, Manukau Water Ltd shall disseminate information to the Committee about the operation of the wastewater treatment system including the results of any monitoring, the timing and extent of any discharges of treated effluent to the Rautawa Stream and present logs of all complaints including what action was taken and the results of that action.

9540 Hunua No. 4 Watermain

Designation Number	9540
Requiring Authority	Watercare Services Ltd
Location	Williams Road (Lot 1 DP 73307 and Lot 1 DP 154681), Glenbrook
Rollover Designation	Yes
Legacy Reference	Designation 307, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - Hunua No. 4 Watermain.

Conditions

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority in the Notice of Requirement dated 3 March 2010 and supporting documents being "Hunua No. 4 Watermain Assessment of Effects on the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Environment", Volumes 1, 2 and 3, dated 3 March 2010.

2. As soon as practicable following completion of construction of the Project, the Requiring Authority shall, in consultation with the Council:

- a. review the width of the area designated for the Project;
- b. identify:
 - i. any areas of designated land that are no longer necessary for the ongoing operation, maintenance, renewal and protection of the pipeline and ancillary activities;
 - ii. any areas of designated land within the legal road boundaries that are more than 2.5 metres from the centreline of the pipeline (excluding any special chambers/ facilities or other associated structures);
- c. give notice to the Council in accordance with Section 182 of the RMA for removal of those parts of the designation identified in (b) above which are not required for the long term operation and maintenance of the Project and provide a plan of the final designated areas to Council; and
- d. provide as-built plans to the Council.

3. A liaison person shall be appointed by the Requiring Authority for the duration of the construction phase of the Project to be the main and readily accessible point of contact for persons affected by the designation and construction work. The liaison person's name and contact details shall be advised to affected parties by the Requiring Authority. This person must be reasonably available for on-going consultation on all matters of concern to affected persons arising from the Project. If the liaison person will not be available for any reason, an alternative contact person shall be nominated, to ensure that a project contact person is available by telephone 24 hours per day / seven days per week during the construction phase.

4. The designation shall lapse if not given effect within 10 years from the date on which it is included in the District Plan.

5. Those stages of the works within the designation and previously approved under separate land use resource consents are exempt from the following conditions 6 -51, namely:

- a. Manukau City Council Resource Consent P35070 granted 29 October 2008;
- b. Manukau City Council Resource Consent P36892 granted 3 February 2010;
- c. Manukau City Council Resource Consent P37244 granted 21 May 2010; and
- d. Manukau City Council Resource Consent P37514 granted 15 July 2010;

6. Except as provided for in Condition 7, the Requiring Authority shall submit an OPW for the Project or for each Project stage in accordance with Section 176A of the RMA.

7. An OPW need not be submitted if the Council has waived the requirement for an OPW in accordance with Section 176A(2)(c) of the RMA.

8. The OPW shall include the following Management Plans for the relevant stage(s) of the Project: Construction Management Plan ("CMP"); Construction Noise and Vibration Management Plan ("CNVMP"); Network Utility Management Plan ("NUMP"); and the Traffic Management Plan ("TMP").

9. The Requiring Authority shall prepare a CMP or Plans for the Project overall or for each of the relevant Project stages. The purpose of the CMPs is to set out the detailed management procedures and construction methods to be undertaken in order to avoid, remedy or mitigate potential adverse effects arising from construction activities. The CMPs shall be provided to the Council with the relevant OPW for the stage it relates to.

10. The CMPs required by Condition 9 shall include specific details relating to the management of all construction activities associated with the Project or relevant Project stage, including:

- a. details of the site or project manager and the construction liaison person identified in condition 3, including their contact details (phone, facsimile (if any), postal address, email address);

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- b. an outline construction programme, indicating in particular the likely time periods for road closures and anticipated traffic diversion effects;
- c. the hours of construction;
- d. measures to be adopted to maintain the land affected by the works in a tidy condition in terms of disposal / storage of rubbish, storage and unloading of construction materials and similar construction activities;
- e. location of site infrastructure including site offices, site amenities, contractors yards, site access, equipment unloading and storage areas, contractor car parking, and security.
- f. the layout of the construction yard at the manukau sports bowl, including associated buildings, fencing and site access;
- g. procedures for controlling sediment run-off, dust and the removal of soil, debris, demolition and construction materials from the work site or places adjacent to the work site;
- h. procedures for the protection of significant trees and other vegetation;
- i. procedures for ensuring that residents, road users and businesses in the immediate vicinity of construction areas are given prior notice of the commencement of construction activities and are informed about the expected duration and effects of the works;
- j. a health and safety plan;
- k. procedures for responding to complaints about construction activities;
- l. procedures for management of traffic incidents within the works area;
- m. procedures for the management of works which directly affect or are located in close proximity to existing network utility services;
- n. construction noise and vibration management;
- o. protocols for the management of ground breaking activities along the pipeline route to manage effects on the environment and human health should any contamination issues be encountered;
- p. procedures for the refuelling of plant and equipment;
- q. engineering design and construction drawings; and
- r. the provision for the storage of fuels, lubricants and refuelling to be managed in such a manner so as to prevent the discharge of contaminants from spillages.

11. The CMP shall be implemented and maintained throughout the entire construction period for the Project or relevant Project stage to manage potential adverse effects arising from construction activities to the greatest practicable extent.

12. The Requiring Authority shall:

- a. use trenchless construction methods to lay the pipeline under State Highway 1 at Reagan Road;
- b. not undertake any works or associated activities on State Highway 20B within the vicinity of the SH20/Puhinui Road (SH20B) interchange in a manner that alters the current level of service at this interchange without NZ Transport Agency prior approval; and
- c. locate the pipeline as close as is practicable to the centreline of the legal width of Campana Road, Papatoetoe.

13. The Requiring Authority shall prepare a detailed site management plan for the two directly affected market garden properties between Campana Road and Pukaki Road, in consultation with the owners of those properties. The site management plan shall be prepared with assistance from a suitably qualified expert with experience in market garden practices. In addition to matters covered elsewhere in these conditions, the site management plan shall include consideration of:

- a. methods to prevent contamination of soil;
- b. methods to prevent weed infestation;
- c. programming of works to take account of seasonal variations and other business activities;
- d. management and replacement of subsoil and topsoil;
- e. provision for 24 hour access for the landowners' business activities;
- f. reinstatement and maintenance provisions;
- g. dust management measures; and

The Proposed Auckland Unitary Plan (notified 30 September 2013)

h. other relevant matters as agreed in consultation with the property owners.

The appointment of this specialist and the preparation of the site specific plan shall be undertaken in consultation with the landowners.

13A. To avoid conflict with any future upgrading of this intersection, and if requested to do so by the Road Controlling Authority responsible for the intersection upgrading, the Requiring Authority shall reconfigure or relocate the proposed scour chamber at the intersection of Ascot Road and Kirkbride Road, Mangere, to an alternative agreed position at the Requiring Authority's own cost.

14. Notwithstanding anything in Condition 7, the Requiring Authority shall prepare and implement a NUMP so that design and construction of the Project adequately takes account of and includes measures for the safety, integrity, protection or, where necessary, relocation of existing network utilities.

15. A copy of the NUMP shall be provided to the Council prior to construction commencing.

16. The NUMP shall include, but not be limited to, the following matters:

- a. provisions for liaison with all network utility operators and other infrastructure providers whose assets are directly affected by or located in close proximity to the project;
- b. provisions to enable other utility operators to access existing infrastructure for maintenance at all reasonable times, or emergency works at all times, whilst construction activities associated with the project are occurring; and
- c. provisions to ensure that all construction personnel, including contractors, are aware of the presence and location of the various utility services which traverse, or are in close proximity to the Project, and the restrictions in place in relation to those services. This shall include plans identifying the service locations and appropriate physical indicators on the ground showing specific surveyed locations.

17. The NUMP shall be prepared in consultation with the relevant network utility operators and other infrastructure providers and, in addition to the matters listed in Condition 16, shall address the following matters in respect of works or activities in proximity to the relevant utility services:

- a. measures to identify the location of existing utility services accurately;
- b. measures for protection, relocation and / or reinstatement of network utility infrastructure;
- c. measures to provide for the safe operation of plant and equipment and the safety of workers in proximity to live utility services;
- d. measures to manage potential induction hazards;
- e. procedures to manage dust and any other material potentially able to cause damage to overhead transmission lines;
- f. earthworks management, depth and extent of earthworks;
- g. vibration management; and
- h. incident emergency management.

18. The Requiring Authority shall consult with, and provide detailed design and construction plans and specifications to the New Zealand Refining Company Limited, Wiri Oil Services Limited and Transpower at least 20 working days prior to the intended commencement of any physical construction works that have the potential to come within 12 metres of their assets.

19. The Requiring Authority shall ensure that the power supply to the New Zealand Refining Company Limited densitometer site located at the end of Campana Road is not interrupted as a result of the proposed construction works. Should power supply to the densitometer site be required to be isolated for the Project, Watercare shall ensure that back-up supply is maintained by way of a suitable generator.

20. In the development of the NUMP, the Requiring Authority shall also investigate opportunities for other network utility operators or infrastructure providers, where practicable, to undertake upgrading works at the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

same time as construction of the Project.

21. The NUMP may be prepared as a standalone management plan or may form part of the Construction Management Plan, as determined by the Requiring Authority.

22. A CNVMP shall be prepared for the Project or relevant Project stage, by a suitably qualified expert

23. The CNVMP shall include specific details relating to the control of noise and vibration associated with all Project works. The CNVMP shall be formulated and the works implemented to achieve, as far as practicable, compliance with the requirements of:

- a. NZS6803:1999 Acoustics — Construction Noise; and
- b. German Standard DIN 4150-3:1999 Structural Vibration – Effects of Vibration on Structures.

24. The CNVMP shall, as a minimum, address the following aspects with regard to construction noise: ‘

- a. noise sources, including machinery, equipment and construction techniques to be used;
- b. predicted construction noise levels;
- c. hours of operation, including times and days when noisy construction work and blasting would occur;
- d. construction noise criteria for specific areas and sensitive receivers such as schools, child care centres, medical or aged care facilities;
- e. the identification of activities and locations that will require the design of noise mitigation measures such as temporary barriers or enclosures and the details of such measures where the Project noise criteria are predicted to be exceeded;
- f. the measures that will be undertaken by the Requiring Authority to communicate noise management measures to affected stakeholders;
- g. development of alternative management strategies where full compliance with NZS6803:1999 cannot be achieved;
- h. methods for monitoring and reporting on construction noise; and
- i. methods for receiving and responding to complaints about construction noise.

25. The CNVMP shall also describe measures adopted to meet the requirements of German Standard DIN4150, and as a minimum shall address the following aspects

- a. vibration sources, including machinery, equipment and construction techniques to be used;
- b. provision for the determination of buildings that require pre-condition surveys to be re-evaluated following test blasts at the commencement of blasting;
- c. preparation of building condition reports on ‘at risk’ buildings prior to, during and after completion of works, where for the purposes of this condition an ‘at risk’ building is one at which the levels in the German Standard DIN4150 are likely to be approached or exceeded;
- d. provision for the use of building condition surveys to determine the sensitivity of the building(s) on the adjacent sites to ground movement in terms of the Line 1-3 criteria of the DIN standard;
- e. identification of any particularly sensitive activities in the vicinity of the pipeline route (e.g. commercial activity using sensitive equipment such as radiography or mass-spectrometry).
- f. alternative management and mitigation strategies where compliance with German Standard DIN 4150-3:1999 cannot be achieved;
- g. the measures that will be undertaken by the Requiring Authority to communicate vibration management measures to affected stakeholders;
- h. methods for monitoring and reporting on construction vibration; and
- i. methods for receiving and responding to complaints about construction vibration.

26. The CNVMP shall be implemented and maintained throughout the entire construction period and shall be updated when necessary.

27. The Requiring Authority shall undertake a condition survey of the carriageway along the designated route

The Proposed Auckland Unitary Plan (notified 30 September 2013)

and submit it to the Council prior to the commencement of construction. The condition survey shall include but not be limited to a photographic or video record of the carriageway along the designated route.

28. An overarching TMP shall be prepared for the Project and any future major programmed maintenance renewal or replacement works. The TMP should set out general processes for the submission of the appropriate Site Specific Traffic Management Plan ("SSTMP") to the Council and should address the following:

- a. the staging of the works including details of any proposals to work on multiple sections of the route concurrently;
- b. general methodology for determining when works will be undertaken on various road types (e.g. arterials, local roads etc);
- c. general methodology for selecting detour routes; and
- d. identification of any potential road closures and provision for emergency vehicles.

29. The TMP shall be provided to the Council at least one month prior to commencement of the Project or relevant Project stage.

30. SSTMPs shall be prepared for the Project or relevant Project stage, by a suitably qualified person. SSTMPs are to be provided to the Council with an application for the required Road Opening Notice (RON) prior to any work commencing on the relevant Project stage to which the SSTMP relates.

31. SSTMPs shall be provided to the Council no less than 15 working days prior to the commencement of construction.

32. SSTMPs shall describe the measures that will be taken to avoid, remedy or mitigate the traffic effects associated with construction of the Project or relevant Project stage. In particular, SSTMPs shall describe:

- a. traffic management measures to mitigate impact on traffic capacity at peak hours during weekdays and weekends;
- b. where road closures are deemed necessary by the Council, details of any road closures that will be required and the nature and duration of any traffic management measures that will result, including any temporary restrictions, detours or diversions for general traffic and buses;
- c. the capacity of proposed detour route(s) and their sufficiency to carry the additional traffic volumes and any safety issues associated with the detour route, including mitigation measures where required;
- d. specific traffic management plans across arterial intersections such as Aspiring Avenue/Mathews Road, Te Irirangi Drive, and Great South Road;
- e. where the route crosses intersections with Regional Arterial roads, measures to maintain the existing number of lanes during the weekday peak periods of 7am – 9am and 4pm – 6pm except with prior approval of the Road Controlling Authority.
- f. provisions for safe and efficient access of construction vehicles and methods to manage the effects of the delivery of construction material, plant and machinery, including the potential effects of High Sided Vehicles and construction machinery on trees that overhang the designation;
- g. measures to maintain, where practicable, existing vehicle access to property in order to enable, as far as practicable, normal operations on the property to continue, or to provide alternative access arrangements;
- h. measures to maintain, where practicable, pedestrian and cyclist access on roads and footpaths adjacent to the construction works. Such access shall be safe, clearly identifiable and seek to provide the shortest and most convenient detours where such detours are necessary;
- i. proposed monitoring to measure the impact of the works on traffic and the impact of the traffic management measures;
- j. definition of the proposed construction zone and area available for traffic; and the location of barriers and fences to protect the construction site;
- k. measures to maintain the normal day-to-day operations of public transport providers, or proposed alternatives where changes are required;
- l. any temporary changes in speed limit;

The Proposed Auckland Unitary Plan (notified 30 September 2013)

- m. provision of safe and efficient access of construction vehicles to and from the construction site, including the movement of construction traffic on local roads; and
- n. the measures that will be undertaken by the Requiring Authority to communicate traffic management measures to affected road users and stakeholders.

33. SSTMPs shall be prepared following consultation with the following key stakeholders:

- a. road controlling authorities;
- b. emergency services (police, fire and ambulance);
- c. local business associations;
- d. Auckland Regional Transport Authority (or its successor) and any bus operators which operate scheduled services along the route;
- e. schools and childcare centres with frontage or access to roads where works are taking place; and
- f. Auckland Airport.

34. The Requiring Authority shall provide, where practicable, two temporary traffic lanes adjacent to the construction works on roads carrying more than 5000 vehicles per day. In this respect the construction equipment and process shall be modified where practicable to achieve the lane provisions required. In addition, details of the hours of work for works on or adjacent to these roads shall be provided.

35. All TMPs (including SSTMPs) shall be consistent with the New Zealand Transport Agency Code of Practice for Temporary Traffic Management which applies at the time of construction.

36. All TMPs (including SSTMPs) shall be subject to an independent safety and traffic operational audit prior to being submitted to the Council.

37. As soon as practicable following completion of construction the Requiring Authority shall:

- a. repair any damage to public carriageways and footpaths (and associated road components) resulting from the impacts of construction. Such repair may involve short-term maintenance to allow for settling and consolidation of carriageways prior to final repair by the Requiring Authority; and
- b. re-grass areas (including berms) that were previously grassed.

38. The Requiring Authority shall review the design details of the works in the vicinity of Hodges Road and Thomas Road having regard to the Council's future development plans for the Flat Bush Area. In this respect, the Requiring Authority shall, inter alia, for that portion of the pipeline east of Adamson Road:

- a. design the vertical alignment of the pipeline such that any future public road constructed over the pipeline can be designed in accordance with the 'Austroads Guide to Road Design' – Part 3, Geometric design and Part 4, Intersections and crossings; and
- b. review the vertical alignment of the pipeline across the Hodges Road gullies in consultation with the Council, including review of options to place the pipeline across the gullies on a pipe bridge, in an embankment, or in a trench following the current vertical profile of the ground, with the objective of the review being to confirm a vertical alignment for the pipeline which does not result in unreasonable constraints on the Council at the time the road is constructed.

The Requiring Authority shall submit detailed plans for the watermain in the Flat Bush area to the Council at least six months prior to construction, to provide an opportunity for the Council to co-ordinate their future development works with the proposed construction of the watermain.

39. On completion of construction within Council roads and State Highways, all works shall be reinstated in accordance with the Code of Practice for Working in Roads which applies at the date that the contract for the relevant Project stage is awarded, unless otherwise agreed between the Requiring Authority and the road controlling authority.

40. A completion report for each Project Stage shall be submitted to the Council detailing the reinstatement

The Proposed Auckland Unitary Plan (notified 30 September 2013)

works on all public roads including Quality Assurance records.

41. The Requiring Authority shall submit to the Council, detailed as-built drawings in accordance with the Council's Quality Assurance Manual (QAM) within three months of the commissioning of each stage of the pipeline.

42. Construction hours shall be generally as follows, except where work is necessary outside the specified days or hours for the purposes specified in Conditions 42(a) to (e) below.

- Monday to Friday: 7am to 9pm;
- Saturday: 8am to 5pm; and
- Sundays and public holidays: No Work.

43. Purposes for which work may occur outside of the specified days or hours are:

- a. where work is specifically required to be planned to be carried out at low traffic times (for example, excavation across busy intersections);
- b. for delivery of large equipment;
- c. in cases of emergency;
- d. for securing of the site or removing a traffic hazard; and / or
- e. for any other reason specified in the CMP or SSTMP.

44. The Requiring Authority shall prepare a Communications Plan ("CP") setting out:

- a. the method/s of consultation and liaison with key stakeholders and the owners/ occupiers of neighbouring properties regarding the likely timing and duration of works, alternative routes, access to properties and any proposed alterations to public transport services;
- b. details of prior consultation or community liaison undertaken with the owners/occupiers of neighbouring properties, key stakeholders, schools, public transport providers, emergency services or representative groups regarding proposed road or lane closures, potential diversions and delays, including outlining any measures developed with such persons or groups to manage or to mitigate any adverse effects or inconvenience that may arise; and
- c. full contact details for the person appointed to manage the public information system and be the point of contact for related inquiries.

45. The Requiring Authority shall submit the CP to the Council at least one (1) month prior to construction commencing on any defined stage.

46. When providing details as to how impacts of construction on trees and vegetation will be managed in the CMP, as required by condition 10, the following shall apply: [six detailed criteria included in conditions]

47. Following the completion of construction the Requiring Authority shall provide a monitoring report to the Council that lists all trees, in accordance with condition 39(a), that were subject to any cutting or damage of the roots, trunk, or canopy to an extent deemed more than minor by the Requiring Authority's arborist.

48. Detailed protocols for the management of archaeological and waahi tapu discoveries shall be developed by the Requiring Authority in consultation with tangata whenua and the New Zealand Historic Places Trust prior to construction.

49. The Requiring Authority shall employ a qualified archaeologist who shall:

- a. prior to the commencement of works in the vicinity of the south bank of the Waiohauri Creek, engage an archaeologist to mark out the extent of the intact lens of site R11/ 1111;
- b. be on site to monitor earthworks in rural land adjoining the Waiohauri Creek, including surface stripping of the site, to establish whether any sub-surface archaeological features are present; and
- c. upon completion of the works, the archaeologist shall certify to the Council in writing whether or not any

The Proposed Auckland Unitary Plan (notified 30 September 2013)

archaeological features have been discovered.

50. Subject to Condition 51, if any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:

- a. immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
- b. the Requiring Authority shall immediately secure the area so that any artefacts or remains are untouched; and
- c. the Requiring Authority shall notify tangata whenua, the New Zealand Historic Places Trust and the Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate vicinity of the archaeological site until any approval required from the New Zealand Historic Places Trust has been obtained.

51. Condition 50 shall not apply where the Requiring Authority holds all relevant approvals under the Historic Places Act 1993, apart from the requirement in the case of discovery of human remains to contact tangata whenua and the New Zealand Police.

52. The Requiring Authority shall notify the Council immediately on identification of any contamination found along the pipeline route which was not identified in the reports submitted in support of the Notice of Requirement, including contaminated soil, surface water or groundwater. Any contamination that is discovered shall be investigated, remediated, disposed of and reported on (including validation) in accordance with the Ministry for the Environment Contaminated Land Management Guidelines and the relevant guidelines addressing contaminants from specific industries or activities.

53. When contractors' yards or other temporary works areas are no longer required for any construction or operational purpose, all buildings, structures and associated activities (including site offices, storage and equipment sheds, fencing and hard stand areas) shall be removed and the area reinstated to at least the standard which existed prior to commencement of works.

54. Reinstatement of the Manukau Sports Bowl (1 & 19R Boundary Road) shall be undertaken in accordance with a specific site reinstatement plan, including proposed landscaping and maintenance, as agreed with Council's Manager – Parks.

9566 Drury Pump Station

Designation Number	9566
Requiring Authority	Watercare Services Ltd
Location	103 Flanagan Road, Drury
Rollover Designation	Yes
Legacy Reference	Designation 42, Auckland Council District Plan (Papakura Section) 1999
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Water supply purposes - pump station and associated structures

Conditions

1. Except as modified by the conditions below, the works shall be undertaken in general accordance with the information provided by Watercare in the Notice of Requirement dated 2 March 2012 and supporting report titled "Assessment of Effects on the Environment – Drury Pumping Station", dated March 2012 as well as the "Notice of Requirement – Drury Pumping Station 103 Flanagan Road, Drury Response to RMA Section 92 Request for Further Information" dated 23 March 2012.

Archaeology and Heritage

2. If any archaeological sites, including human remains are exposed during site works then the following procedures shall apply:
 - a. Immediately after it becomes apparent that an archaeological or traditional site has been exposed, all site works in the immediate vicinity shall cease;
 - b. Watercare shall immediately secure the area so that any artefacts or remains are untouched; and
 - c. Watercare shall notify the New Zealand Historic Places Trust, tangata whenua and the Auckland Council (and in the case of human remains, the New Zealand Police) as soon as practicable that an archaeological site has been exposed so that appropriate action can be taken. Works shall not recommence in the immediate

The Proposed Auckland Unitary Plan (notified 30 September 2013)

vicinity of the archaeological site until any approval required from the New Zealand Historic Places Trust has been obtained.

Construction

Earthworks and Excavations

3. Prior to the works commencing there shall be a pre-commencement meeting on site with the Team Leader Compliance and Monitoring - Southern (301 0101), the consent holder, and the project manager / site supervisor. This meeting shall discuss the proposed work, how it is to be done, and conditions of consent.

4. Watercare shall implement suitable sediment control measures during all earthworks to ensure that all stormwater runoff from the site is managed and controlled such that no silt, sediment or water containing silt or sediment is discharged into stormwater pipes, drains, channels or soakage systems in accordance with Auckland Council's Technical Publication No. 90. In the event that material is deposited on the street, Watercare shall take immediate action at Watercare's own expense to clean the street. These measures shall remain in place until the completion of the development.

Dust Suppression

5. During construction the consent holder shall at all times control any dust in accordance with the Good Practice Guide for Assessing and Managing the Environmental Effects of Dust Emissions, Ministry for the Environment (2001). Mitigation measures shall be undertaken to the satisfaction of the Council's Team Leader Compliance and Monitoring – Southern.

Storage of Materials and Equipment

6. There shall be no storage of construction materials, portable toilets and any other construction equipment or parking of vehicles, including sub-contractors' vehicles on Flanagan Road, except for site meetings. The above shall be stored or parked on-site.

Noise

7. Construction activities shall be managed to generally achieve compliance with the requirements of NZ6803:1999 - Acoustics - Construction Noise

Noise - Operational

8. The following noise levels, measured at or within the boundary of any land zoned Residential or the notional residential boundary of any Rural zoned land, will be achieved by the proposed facility: Monday to Saturday 7.00am to 9.00pm 50 dBA L10 At all other times including Public Holidays 45 dBA L10.

Within 3 months of commencement of the activity on this site a suitably qualified acoustic engineer is to measure the actual noise levels of the facility and is to confirm to Council's Team Leader Compliance and Monitoring – Southern that the above noise standards are being met. The noise levels shall be measured and assessed in accordance with the requirements of New Zealand Standard NZS6801:1991 "Measurement of Sound" and New Zealand Standards NZS6802:1991 "Assessment of Environmental Sound" or other subsequent appropriate standard existing at the time.

Transport and Access

9. The vehicle entrance, vehicle access ways, vehicle manoeuvring areas and parking shall be formed, sealed and provided with stormwater drainage to the appropriate standards of the Auckland Council. The vehicle entrance shall be constructed to Plan R31 from the Auckland Council (Papakura) Development Code with the entrance being at right angles to the road side. The engineering plans for the entrance are to be approved by Council's Senior Development Engineer (Papakura) prior to works commencing.

Drawings and Plans

10. The engineering drawings and specifications are to be in general accordance with the plans submitted with

The Proposed Auckland Unitary Plan (notified 30 September 2013)

the application except that proposed SW MH3 could instead be connected directly to the 2100mm pipeline as a private connection without crossing Flanagan Road.

11. Certified as-built plans are to be provided for all piped drainage with these plans being provided to the Council to the satisfaction of Council's Senior Development Engineer (Papakura)

Outline Plan of Works (OPW)

12. An OPW need not be submitted for the construction, operation and maintenance of the Drury pumping station for water reticulation purposes as the detail of this work is sufficiently described in documents provided in support of the Notice of Requirement (as described within condition 1 above) and has been assessed against Section 176A as required.

13. Watercare shall submit an OPW in accordance with Section 176A of the Resource Management Act 1991 for future water pump additions to the pumping station.

Removal of Existing Designation

14. Within 1 month after the date that the new requirement for the Drury pumping station for water reticulation purposes is confirmed, Watercare shall serve notice to Auckland Council that pursuant to Section 182(1) of the Act that it no longer requires the existing designation for the boost pumping station as described by existing Designation 237 within the Auckland Council District Plan (Papakura section) / Designation 42 within Plan Change 13 to the Auckland Council District Plan (Papakura section).

9567 Puketutu Island Rehabilitation

Designation Number	9567
Requiring Authority	Watercare Services Ltd
Location	600 Island Road (Puketutu Island), Mangere
Rollover Designation	Yes
Legacy Reference	No number, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Description

Wastewater purposes - Puketutu Island Rehabilitation. Including but not limited to application of biosolids to land, landform rehabilitation and associated activities.

Conditions

General

1. Except as modified by the conditions below and subject to final design, the works shall be undertaken in general accordance with the information provided by the Requiring Authority, being Watercare Services Limited (Watercare), the Notice of Requirement dated 30 June 2008 and supporting documents being "Puketutu Island Rehabilitation Assessment of Effects on the Environment' Volumes 1, 2 and 3 dated 30 June 2008 and Section 92 Response Reports to Manukau City Council dated 1 October 2008 and 27 March 2009, as modified by Revised URS Drawings 2005210.301-342, 2005210.344-345, 2005210.347-359, 2005210.361-366, 2005210.368-371, 2005210.373-375, 2005210-377-378,2005210.382,2005210.388-389 and 2005210.391-392, July 2010.

2. Watercare shall continue to consult with tangata whenua and representatives of local residents (including the

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Mangere Bridge Residents and Ratepayers Association) through the existing Mangere Wastewater Treatment Plant (WWTP) Community Liaison Group to facilitate the Group extending its role to:

- a. Addressing matters relevant to the biosolids application on Puketutu Island including any concerns of tangata whenua and / or local residents and ways of alleviating them; and
- b. Discussing and selecting options for and disseminating information to the community about future management and use of the Island.

3. The period within which this designation shall lapse if not given effect to shall be 10 years from the date on which it is confirmed in accordance with Section 184(1) of the Resource Management Act 1991.

3A. As soon as practicable following completion of construction of the Project, the Requiring Authority shall, in consultation with the Council:

- a. review the width of the area designated for the Project;
- b. identify:
 - i. any areas of designated land that are no longer necessary for the ongoing operation, maintenance, renewal and protection of the pipeline and ancillary activities;
 - ii. any areas of designated land within the legal road boundaries that are more than 2.5 metres from the centreline of the pipeline (excluding any special chambers/facilities or other associated structures);
- c. give notice to the Council in accordance with Section 182 of the RMA for removal of those parts of the designation identified in (b) above which are not required for the long term operation and maintenance of the Project and provide a plan of the final designated areas to Council; and d. provide as-built plans to the Council.

Construction Noise

4. Construction noise arising from all construction, demolition or maintenance activities on the designated land shall comply with, and be measured and assessed in accordance with NZS6803: 1991 Acoustics - Construction Noise.

"Construction, demolition and maintenance" activities are defined in accordance with the definition provided in the same standard.

Noise

5. The noise arising from any operational activities undertaken on the designated land, measured at or within the notional boundary of any dwelling outside the boundary of the designated land shall not exceed the following limits.

Monday to Saturday 17.00 a.m.-10.00 p.m	50 dBAL10
At all other times including Sundays and public holidays	45 dBA L 10
Monday to Sunday, 10.00pm - 7.00 am	75 dBA Lmax

The notional boundary shall be taken to be a line 20 metres from the facade of any dwelling or the legal boundary where this is closer to the dwelling. Noise levels shall be measured and assessed in accordance with the requirements of New Zealand Standards (NZS 6801:1991 Measurement of sound and NZS 6802:1991 Assessment of Environmental Sound).

6. The requiring authority shall undertake noise measurements upon the reasonable request of the Council to determine compliance or otherwise with conditions 4 or 5. The objectives and specific requirements of the measurements and reporting shall be at the reasonable discretion of the Council.

Archaeology and Heritage

7. Watercare shall, with the assistance of a suitably qualified archaeologist, collate all available documentation and background material relating to the heritage of Puketutu Island. This information shall be collated prior to commencement of works, in consultation with tangata whenua, New Zealand Historic Places Trust, and the Council. The collated information shall have the general objective of providing a framework for the future management of the island's cultural heritage in the longer term.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

8. Detailed cultural protocols for the management of archaeological discoveries shall be prepared in consultation with tangata whenua and the New Zealand Historic Places Trust and shall be provided to MCC and ARC prior to any work commencing. These detailed protocols shall confirm the names and contact details for tangata whenua to be contacted in accordance with Condition 9 below.

9. In the event of koiwi (skeletal remains) or archaeological evidence being uncovered work shall immediately cease in the vicinity of the discovery and the New Zealand Historic Places Trust archaeologist and tangata whenua shall be contacted so that the appropriate action can be taken before work recommences at that location. Resumption of work shall not occur until the required authorisation from the Historic Places Trust, has been received.

10. The stormwater discharge channel, associated spillway and stormwater trenches shall be designed so that recorded archaeological sites in the vicinity are avoided (with the exception of the two sections of dry stone walling). Where archaeological sites cannot be avoided an authority to destroy or modify under the Historic Places Act is first sought from the New Zealand Historic Places Trust.

11. An Authority shall be sought from the New Zealand Historic Places Trust prior to the start of earthworks associated with permanent stormwater soakage channels and the stormwater discharge channel to provide for the possibility that unrecorded subsurface features may be exposed when constructing stormwater channels.

Geological Heritage

12. Any significant geological features discovered in areas unmodified by past quarrying, such as surface features or lava caves, shall be recorded and damage to those features shall, where practicable, be avoided or minimised. Records of any such geological discoveries shall be provided to the Auckland Regional Council and the Manukau City Council for information and future reference.

Dust

13. Beyond the boundary of the designated land there shall be no dust caused by the activities undertaken by Watercare which is noxious, dangerous, offensive or objectionable.

Traffic, Access and Utilities

14. The Requiring Authority shall submit a detailed Traffic Management Plan to Manukau City Council for their approval one month prior to commencing works. All traffic and pedestrian control measures detailed in the Traffic Management Plan shall conform to the New Zealand Transport Agency manual entitled 'Code of Practice for Temporary Traffic Management Issue 2' and dated October 2002 (or successors). Specific matters to be addressed in the Traffic Management Plan shall include:

- a. The temporary diversion of traffic during construction;
- b. Traffic safety;
- c. Control at intersections;
- d. Consideration of hours of work for heavily trafficked roads;
- e. Maintenance of road and property access;
- f. Movement of construction traffic on local roads; and
- g. Ensuring that access between parts of any property temporarily severed by works is maintained to a level that will enable, as far as is practicable, normal operations on the property to continue. This shall specifically include the operations on Puketutu Island of Living Earth Limited and the Marae Precinct, identified on Boffa Miskell Drawing A06072R-004 dated 7 July 2010.

14A. Road access from Island Road to the biosolids application area on the Island shall be:

- a. during the operation of the LEL greenwaste and composting facility, by way of the alternative access route marked in pink on the Plan titled Puketutu Island Rehabilitation drawing number 2005213.003 Rev B;
- b. after the operation ceases, or at such earlier time as may be approved in writing by the operator of the greenwaste and composting facility, by way of either the permanent access route marked in blue on the Plan

The Proposed Auckland Unitary Plan (notified 30 September 2013)

titled Puketutu Island Rehabilitation drawing number 2005213.003 Rev B or the alternative access route marked in pink on the Plan titled Puketutu Island Rehabilitation drawing number 2005213.003 Rev B.

Site Reinstatement

15. When the contractors' yard or other temporary works areas are no longer required for any construction or operational purpose, site offices, storage and equipment sheds, fencing and hard stand areas shall be removed and the areas landscaped and planted.

16. Once the transitional operational enablement area or parts of that area are no longer required by Watercare for any purpose associated with construction of the perimeter embankment or the ongoing biosolids application, the area shall be reinstated in a manner which does not preclude subsequent development of those areas by others for outdoor passive recreational purposes.

17. As soon as practicable following completion of construction, Watercare shall repair any damage to Island Road resulting from the impacts of construction. Such repair may involve short-term maintenance to allow for settling and consolidation of carriageways prior to final repair by Watercare.

Rehabilitation Management Plan

18. The final Rehabilitation Management Plan described in Technical Report N shall be submitted to the Council for written approval. If no response from the Manager of Resource Consents is received within 30 working days of the Rehabilitation Management Plan being submitted, then approval is deemed to have been given.

Outline Plan of Works

19. An Outline Plan of Works shall be submitted to MCC in accordance with Section 176A of the Resource Management Act 1991.

Tangata Whenua

20. Watercare shall:

- a. Actively engage with local Iwi representatives through the WWTP Community Liaison Group, Te Motu a Hiaroa Charitable Trust and Te Motu a Hiaroa (Puketutu Island) Governance Trust so as to establish and implement a process by which Iwi can provide input into the future planning, development and monitoring of the Island;
- b. Report to the Council on the outcome of the Iwi liaison outlined in (a) above. In the event that no progress has been made in developing a process, Watercare shall appoint an Iwi Liaison person to assist with the development and implementation of the process set out in (a) above;
- c. At all times keep Iwi representatives apprised of the progress with the works and any proposals for the transfer of the Island into public ownership; and
- d. Watercare shall provide copies to the Te Motu a Hiaroa Charitable Trust and Te Motu a Hiaroa (Puketutu Island) Governance Trust of the Rehabilitation Management Plan and Landscape Management Plan identified in Conditions 18 and 21 at the same time as these Plans are provided to Council. Watercare shall consult with the two Trusts in relation to these Plans and consider any feedback received in relation to the Plans. To be considered by Watercare, any feedback must be provided within 20 working days of receipt of the Plans from Watercare.

Landscape Management

21. Watercare shall prepare and implement a Landscape Management Plan for the whole designation area. The Landscape Management Plan shall be prepared prior to commencement of works. The purpose of this plan is to ensure:

- a. That ongoing screening of the rehabilitation activities is maintained throughout construction of the embankment, utilising both existing and proposed planting;
- b. That the existing plantations and woodlots are appropriately managed to assist with this screening; and
- c. That the completed landform is integrated with the island and its coastal environment.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

22. The Landscape Management Plan shall generally be in accordance with the following:

- a. Drawing No 2005210 - 560 to 564 Revision July 2010 Puketutu Island Rehabilitation: Landform and Staging Plan 2013, 2018, 2028, 2038 and Completion; and
- b. Technical Report I: Assessment of Landscape & Visual Amenity, prepared by Boffa Miskell Ltd, 30 June 2008, but modified to give effect to the drawings in Condition 22(a) and the Vision and Island Enhancement Plan Drawing 06072R002 - Revision D, 9 July 2010, specifically:
 - i. Appendix 1 - Boffa Miskell: Puketutu Rehabilitation – Plant List;
 - ii. Appendix 2 - Sir Henry Kelliher Charitable Trust – Plantations I Woodlot Information;
 - iii. Appendix 3 - Restoration Plan for Coastal Fringe of Puketutu Island, prepared by Landcare Research; and
 - iv. Appendix 5 - Auckland Regional Council - Park Vision for Puketutu Island January 2008.

23. In preparing the Landscape Management Plan Watercare shall take account of any known archaeological or heritage features in the location of the proposed landscape works, including identified features recorded in the Puketutu Island Archaeological Assessment (Clough and Associates) and the Landscape Survey and Assessment of Stone Walls on Puketutu Island (Clough and Associates) and any relevant information available under Condition 7 at the time that the Landscape Management Plan is prepared.

24. A draft copy of the Landscape Management Plan shall be provided to the New Zealand Historic Places Trust. Watercare shall consult with the New Zealand Historic Places Trust in relation to the draft Land Management Plan and consider any feedback received. To be considered by Watercare, any feedback must be provided within 20 working days of receipt of the Landscape Management Plan by the New Zealand Historic Places Trust.

25. The Landscape Management Plan shall be submitted to the Council as part of the Outline Plan of Works.

Definitions

"Designated land" - refers to all areas of land included in the proposed designation as shown on Watercare Drawing Numbers 2005213-002 and 2005213003 Rev B included in Attachment 1 of the Notice of Requirement.

"Biosolids" - refers to sewage solids that are treated in order to comply with the requirements of USEPA Code of Federal Regulations Part 503 Pathogen and Vector Attraction Reduction Measures or other applicable standard submitted to the Manager ARC for approval.

Wiri Oil Services Ltd

Designation Schedule - Wiri Oil Services Ltd

Number	Purpose	Location
9700	Jet fuel transmission purposes	149 Roscommon Road (Wiri Oil Terminal) to the intersection of Orrs Road and Puhinui Road (Auckland International Airport), Wiri

9700 Wiri to Auckland International Airport Jet Fuel Pipeline

Designation Number	9700
Requiring Authority	Wiri Oil Services Ltd
Location	149 Roscommon Road (Wiri Oil Terminal) to the intersection of Orrs Road and Puhinui Road (Auckland International Airport), Wiri
Rollover Designation	Yes

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Legacy Reference	Designation 309, Auckland Council District Plan (Manukau Section) 2002
Lapse Date	Given effect to (i.e. no lapse date)

Purpose

Jet fuel transmission purposes.

Conditions

General

1. For the purpose of these conditions:

- a. Renewal means the replacement of above ground components and the excavation and renewal of sections of the pipe up to 200 mm in diameter. Where practicable the requiring authority shall endeavour to limit excavation and renewal of pipelines to a maximum of 20 lineal metres of pipeline per 14 calendar day period;
- b. Upgrade means adding aboveground components relating to existing isolation valves, cathodic protection terminals, surface markers and warning signage, that are of a similar scale and character; and
- c. Road has the same meaning as in section 2 of the Resource Management Act 1991 ("the RMA").

2. The stated purpose of the designation shall be included in Part 7 of the Auckland Unitary Plan as follows: jet fuel transmission purposes.

3. The works undertaken to give effect to the designation shall be generally in accordance with the plans and information submitted by Wiri Oil Services Limited ("the Requiring Authority") including Proposal 36647, pipeline route maps, Sheets No 1 – No 11 included as attachment B to the Notice of Requirement.

4. The designation corridor shall be a 12 m wide strip on land other than roads, and a 6 m wide strip on land comprising road, as shown on the pipeline route maps - Sheets No 1 - No 11 included as Attachment B to the Notice of Requirement.

5. For the avoidance of doubt, where the designation applies to road corridors the designation shall not extend across any adjacent private property unless that private property is subject to an easement in relation to the WAP.

6. The Requiring Authority shall respond within 15 working days of receiving any request for its written approval under Sections 176 or 177 of the RMA.

7. Prior to the commencement of any physical works within the Designation, the Requiring Authority shall submit to Council an Outline Plan of Works pursuant to Section 176A of the RMA unless condition 27 applies.

8. In the event of archaeological features being uncovered (e.g. shell midden, hangi, oven stones, pit depressions, defensive ditches, artefact material, or koiwi tangata [human skeletal remains]), non-emergency works shall cease within a 10 m radius of the discovery and the council, the New Zealand Historic Places Trust and the appropriate iwi authorities shall be contacted within 72 hours so that appropriate action can be taken. In the event of emergency works, all reasonable steps shall be taken to protect archaeological features and all parties shall be contacted as soon as practicable.

9. The Requiring Authority shall meet all its own costs associated with reviewing any proposal by council to undertake roading works or activities.

10. Access to overhead electricity transmission lines, poles or supporting structures is permitted at all times in accordance with the Electricity Act 1992.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

Land Comprising Roads

11.

- a. On land comprising roads the maximum width of the designation shall be 6 m.
- b. On land comprising roads within the designation corridor, no person other than the Requiring Authority shall disturb the soil below a depth of 0.4 m from the surface without the prior written approval of the Requiring Authority or its authorised agent pursuant to sections 176 and/or 177 of the RMA.
- c. Within the designation corridor no person shall undertake road opening, trenching, excavation or drilling (including micro drilling and directional drilling), or lay underground high voltage power lines, either in parallel with or intersecting the Requiring Authority's pipeline, without first obtaining the latter's written approval.
- d. The Requiring Authority's approval is not required under sections 176 or 177 of the RMA for the following works or activities:
 - i. Road widening or associated works in accordance with an existing road designation;
 - ii. Repair, maintenance or upgrading of an existing road surface;
 - iii. Repair, maintenance or upgrading of any existing network utility infrastructure where a Road Opening Notice ("RON") has been obtained from the Council, provided in all cases that:
 - Soil is not disturbed below a depth of 0.4 m from the surface; and
 - The finished surface level is not reduced below the pre-existing surface datum; and
 - No structure is erected or tree or shrub planted within the designated corridor.
- e. Emergency works may be performed in line with the Vector advice booklet (dated 2004) by excavation to 0.4m depth below the surface and thereafter the use of hand tools only. Emergency operations should be notified immediately to Vector Gas Ltd or their agent who provide an on-call service outside of normal working hours.

Land other than Roads

12.

- a. For land other than roads the maximum width of the designation shall be 12 metres.
- b. Within the designation corridor no person other than the Requiring Authority shall:
 - i. Erect any structure;
 - ii. Plant any tree or shrub;
 - iii. Disturb the soil below a depth of 0.4 m; or
 - iv. Do anything on or to land which may damage or endanger the pipeline without the prior written approval of the Requiring Authority or its authorised agent pursuant to sections 176 and/or 177 of the RMA.
- c. For the avoidance of doubt, such written approval is not required for ordinary cultivation, digging, or excavating, tilling and working soil to a depth of less than 0.4 m.

13. A minimum of 1.5 m cover shall remain above the top of the pipe after any ordinary cultivation, digging or excavation has taken place.

Pipeline Works

14. All pipeline maintenance, repair, upgrade and renewal works or activities that involve excavation on land comprising road within the designation corridor shall be done pursuant to a RON, shall be subject to the RON requirements of council, and shall be carried out in accordance with the Code of Practice for Working in the Road, SNZ HB 2002:2003.

15. All pipeline maintenance, repair, upgrade, and renewal works or activities that involve excavation on land other than road within the designation corridor shall be in general accordance with section 5 "Notice of Entry and Programme of Works" pages 29-30 of Federated Farmers' Guide to Land Access for the Oil and Gas Industry and Landowners: 2002.

16. The Requiring Authority shall at all times ensure that access between parts of any property held in single ownership temporarily severed by works or activities is maintained to a level that will, as far as is practicable, enable normal activities on the property to continue.

The Proposed Auckland Unitary Plan (notified 30 September 2013)

17. On land comprising road within the designation corridor:

a. Scheduled maintenance, repair, upgrade or renewal and associated activities shall take place between the hours of 7am and 7pm Monday to Saturday (excluding public holidays) except:

i. where otherwise approved in a Traffic Management Plan ("TMP") submitted under the RON process to the satisfaction of Council; or

ii. in the event of an emergency; or

iii. with the prior written approval of Council; and

b. Non-emergency works or associated activities shall take place between 7am to 9am and 4pm to 6pm weekdays on all arterial roads except:

i. with the prior written permission of Council; or

ii. in the event of an emergency.

c. The above restrictions do not apply to site works and trenches which may remain open, subject to approved provisions of the TMP required by Condition 18.

18. The Requiring Authority shall submit a detailed TMP to the satisfaction of the Council at least 30 working days prior to commencing major programmed maintenance, repair, upgrade or renewal works.

19. Specific areas to be addressed in the TMP required by condition 18 must include:

a. the temporary diversion of traffic during construction;

b. traffic safety;

c. control at intersections;

d. hours of work for heavily trafficked roads;

e. maintenance of road and property access;

f. movement of construction traffic on local roads; and

g. ensuring that access between parts of any property temporarily severed by works is maintained to a level that will enable, as far as is practicable, normal operations on the property to continue.

20. All traffic and pedestrian control measures detailed in the TMP must conform to the New Zealand Transport Agency's manual: Code of Practice for Temporary Traffic Management 2004 ("CoPTTM").

21. All works or activities related to the designation shall be undertaken in compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances 2001 (NZECP 34:2001).

22. The noise from works shall be measured, assessed and controlled in accordance with the procedures and limits set out in NZC6803:1999 Acoustics – Construction Noise.

23. Where excavation activities are undertaken pursuant to the designation, appropriate sediment and erosion control measures shall be employed, in accordance with Technical Publication 90 - TP90 Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region.

Consultation

24. The Requiring Authority shall consult with the New Zealand Transport Agency at least 30 working days prior to carrying out any works or activities on, in or under State Highway 20B, except in emergency situations.

25. The Requiring Authority shall consult with Council at least 30 working days prior to carrying out any works or activities on, in or under Council controlled roads, except in emergency situations or as otherwise agreed with the Council.

26. The Requiring Authority shall consult with and obtain Section 177 RMA approval from the NZ Refining Company Ltd ("NZRC") at least 30 working days prior to carrying out any proposed works or activities within designation 6501 RAP Petroleum Pipeline (Urban Section) - except in emergency situations where excavation below 0.4 m shall be performed by hand. The Requiring Authority shall notify NZRC or its authorised agent of

The Proposed Auckland Unitary Plan (notified 30 September 2013)

any emergency works undertaken as soon as practicable.

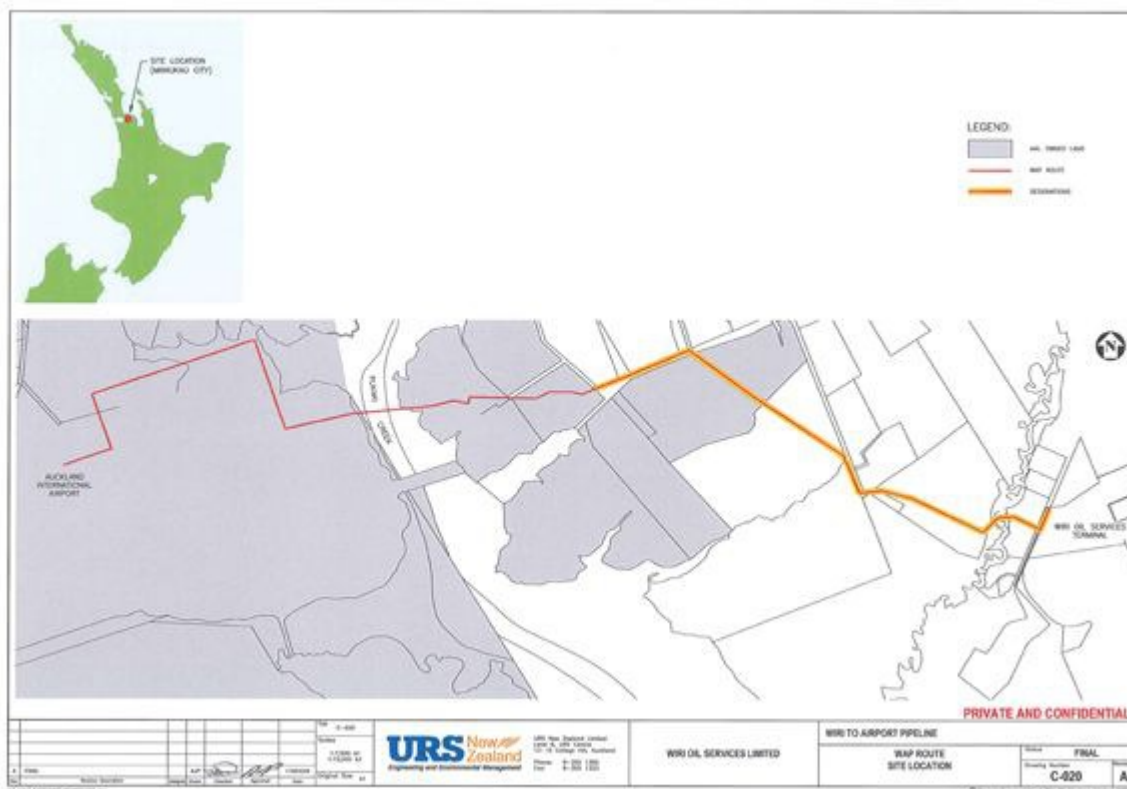

27. Prior to undertaking any works within 10 metres of the centreline of the Puhinui Stream the Requiring Authority shall either submit an Outline Plan of Works or seek the agreement of Council – Stormwater Policy and comply with all their relevant conditions at no cost to Council.

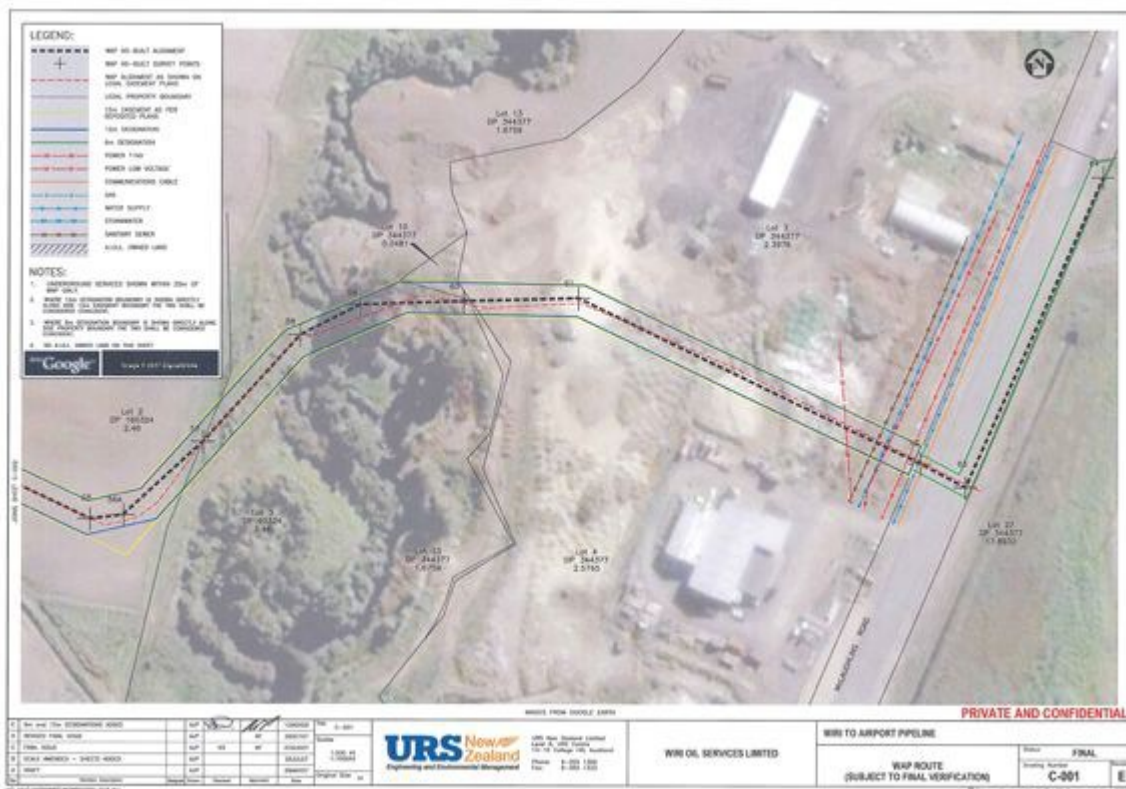

28. The Requiring Authority shall consult with and provide written notice to all directly affected landowners regarding any proposed excavation works or activities on, in or under land within the designation corridor at least 21 working days prior to carrying out any such works or activities, except in emergency situations or as otherwise agreed with the landowners.

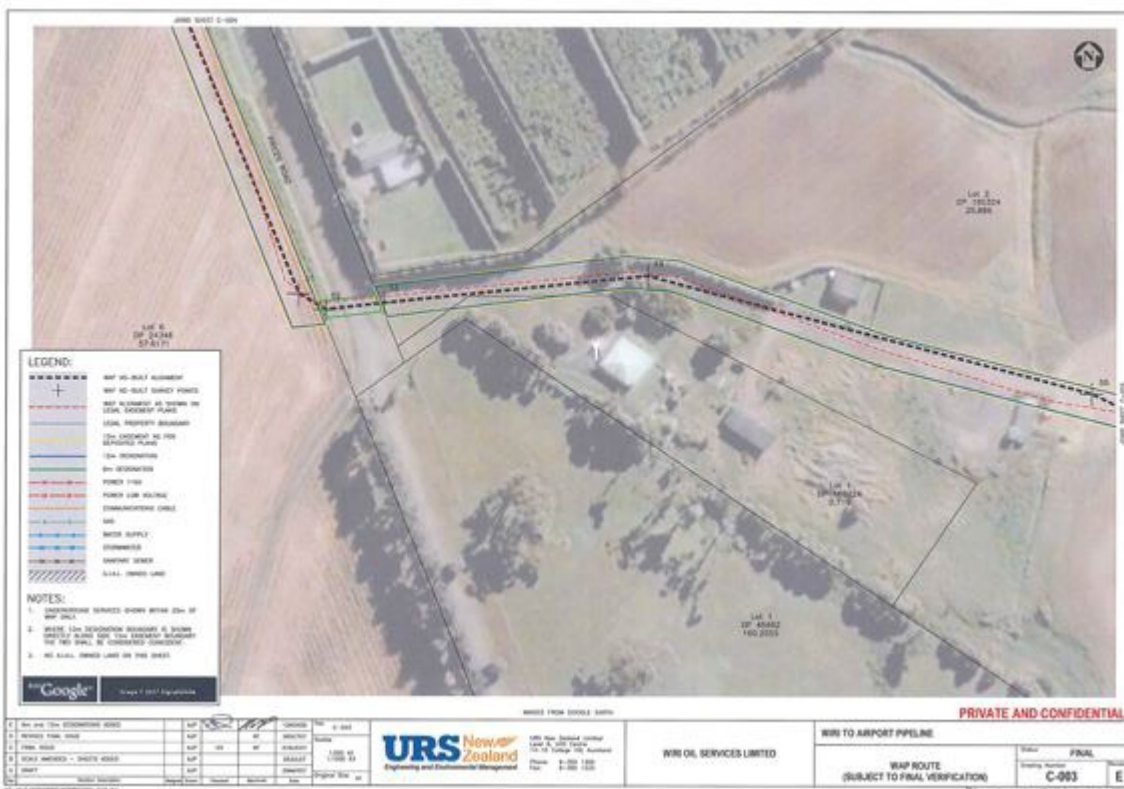

29. The Requiring Authority shall advise Council and any potentially affected landowner as soon as practicable following any WAP leak or spillage of fuel that may affect land either within or outside of the designation corridor.
