## Schedule 6 Outstanding Natural Features Overlay Schedule [rcp/dp]

## Introduction

The factors in B4.2.2(4) have been used to determine the features included in Schedule 6 Outstanding Natural Features Overlay Schedule, and will be used to assess proposed future additions to the schedule.

ID	Name	Location	Site type	Description	Unitary Plan criteria
2	Algies Beach melange	Algies Bay	E	This site is one of the best examples of an exposure of the contact between Northland Allocthon and Miocene Waitemata Group rocks.	a, b, g
3	Ambury Road lava cave	Mangere Bridge	F	A complex 140m long lava cave with two branches and many well-preserved flow features. Part of the cave contains unusual lava stalagmites with corresponding stalactites above.	a, b, c, d, g, i
4	Anawhata gorge and beach	Waitākere	A	This locality includes a combination of unmodified landforms, produced by the dynamic geomorphic processes of the Waitakere coast.  Anawhata Beach is an exposed sandy beach, accumulated between dramatic rocky headlands. Inland from the beach, the Anawhata Stream has incised a deep gorge into the surrounding conglomerate rock.	a, c, e, g, i, l
5	Anawhata intrusion	Waitākere	Е	A well-exposed, and unusual mushroom-shaped andesite intrusion in sea cliffs in a small embayment around rocks at the north side of Anawhata Beach.	a, b, g, l
6	Arataki volcanic breccia and sandstone	Titirangi	E	The best and most easily accessible exposure in the eastern Waitākere Ranges illustrating the interfingering nature of	a, c, l

Waitākere Volcano with the volcanic-poor Waitematā Basin sandstone and siltstones. Road cutting on south side of Scenic Drive.  7 Auckland Parnell V Auckland Domain a, c g, h Volcano consists of a large tuff ring about 700m in diameter, which	d f
Waitematā Basin sandstone and siltstones. Road cutting on south side of Scenic Drive.  7 Auckland Parnell V Auckland Domain volcano consists of a large tuff ring about 700m	d f
Road cutting on south side of Scenic Drive.  7 Auckland Parnell V Auckland Domain a, c yolcano consists of a large tuff ring about 700m	d f
Side of Scenic Drive.   7   Auckland   Parnell   V   Auckland Domain   a, c.	d f
7 Auckland Parnell V Auckland Domain a, c. Domain Volcano Volcano large tuff ring about 700m	d f
Domain volcano consists of a g, h	
Volcano large tuff ring about 700m	
in diameter, which	, , -
extends between the Auckland War Memorial	
Museum and Auckland	
City Hospital. A central	
scoria cone, Pukekaroa,	
forms a knoll surrounded	
with alluvium (castle and moat) at the centre of the	
tuff ring. The adjoining	
Outhwaite Park scoria	
mound is associated with	
the neighbouring Grafton volcano. An accessible	
example of lithic tuff	
deposits from the volcano	
occurs in a natural cliff	
exposure about 300m north of the Domain duck	
pond. Features of note	
include Lovers Lane tuff	
exposure and a scoria cone lava bomb.	
	, d, f,
Grammar of a very thick lava unit g	, , ,
School lava from Mount Eden volcano	
exposures areas located in the former prison guarry. The	
rock faces are up to 25m	
high and exhibit columnar	
jointing that formed as	
9 Barriball Road Waiuku A This site is one of the a, c.	d
tuff ring and larger and best-	
cone preserved tuff rings in the	
South Auckland basalt	
field. It has a diameter of approximately 1.8km,	
with Bald Hill forming a	
high point on the	
southern rim. A small scoria cone is preserved	
within the east side of the	

				tuff ring.	
10	Beachlands fault	Pohutukawa Bay	В	Best exposure of a fault in the Auckland area that has been active during the Quaternary.	a, b, g, h
11	Beehive Island, Kawau Bay	Kawau Bay	В	This small 'old hat' island surrounded by large intertidal platform with contrasting white shell sand high tide beach is a landform of scientific/educational and scenic value.	a, c, e, g, i, l
12	Belmont Cliffs fault	Belmont	В	Belmont Cliffs Fault is a spectacular minor reverse fault clearly exposed in the cliff and on the shore platform, with associated flysch deposition.	a, c, g, i
13	Blockhouse Bay to Green Bay cliffs	Blockhouse Bay	D	This site consists of cliff and foreshore exposures from west side of Blockhouse Bay around Te Whau Pt and along coast to east side of Green Bay. The area contains excellent exposures of a wide range of features that characterise this part of the Waitemata Basin. These include: thick and thin sandstone turbidite beds, graded and massive; thin- bedded and laminated siltstones and fine sandstone beds with carbonaceous laminae, ripples, trace fossils, micro-faulting, sand fluidisation structures; large and small scale folding, vertical bedding, large and small scale normal, reverse and keystone faults; complex soft sediment deformation. Coastal landforms include a cliffed promontory (Te Whau Point) and a small sea stack.	a, c, g
14	Boggust Park	Favona	V	One of the oldest	a, b, c,

			1	T	
	crater			volcanoes in the Auckland Volcanic field, consisting of a 400-m-diameter explosion crater surrounded by a 9-m-high, semi-circular tuff ring. The tuff ring has been breached and eroded by the sea during the Last Interglacial period (~130,000 years ago) and the crater filled up to the level of the breach with sediment creating a flat floor, 5m above sea level. The crater and inner walls of the tuff ring form Boggust Park, Favona	d, h, i, l
15	Browns Island (Motukōrea)	Browns Island (Motukōrea)	V	Motukōrea is an entire volcanic system in miniature and is the least damaged of Auckland's volcanoes. Partly submerged by rising post-glacial sea level, the volcano features a main scoria cone and crater, surrounded by several smaller scoria mounds within a tuff ring remnant. Extensive, submerged, lava fields extend up to 2km from the central cone. The island is of international significance as the type locality for the mineral motukoreaite, which forms a cement in tuff and beach rock on the southern beach.	a, b, c, d, e, f, g, i, l
16	Cascade Falls and conglomerate bluffs	Waitākere	В	An unusual waterfall eroded so far into a narrow slot in a Piha Conglomerate bluff that the actual fall is hidden.	a, b, e, f,
17	Cave of a Thousand Press-ups	Greenlane	F	The Cave of a Thousand Press-ups is a complex network of small lava tubes totalling about 270m in length. It is one of the best for cleanliness, complexity,	a, b, c, d, i

				and size. The name for the cave stems from its low height, which varies	
				from 0.2m to 1.2m. It ranges from 0.8m to 10m	
				wide. There are rock falls partly infilling the cave in	
				several places. The	
				general lava flow direction appears to have been to	
				the east, with feeders	
18	Claude Stream	Whitford	E	joining from the north.  This 300m section of	a, c, i
	basal	· · · · · · · · · · · · · · · · · · ·		stream contains the best-	α, ο, .
	Waitematā Group			exposed and most complete basal	
	sediments			Waitematā sequence of	
				limestone and greensand in southeast Auckland.	
				Three lenses of shallow	
				limestone interbedded with shelf greensands	
				rest on greywacke and	
				pass up into Waitematā flysch.	
19	Cochranes	Pollok	Е	A low sea cliff forming a	a, c, g,
	Gap accretionary			small point on the south side of Cochranes Gap	h, i
	lapilli			contains the best	
				example of large (5-20mm diameter)	
				accretionary lapilli	
				(chalazoidites) within a	
				pyroclastic flow deposit in New Zealand. These	
				occur within 3-5m thick	
				rhyolitic ignimbrite that is 1 million years old.	
20	Cochrane's	Pollok	Е	This site contains	a, b, g
	Gap Quaternary			well-exposed Quaternary coastal zone sediments	
	sands			and is the type section	
				for the Awhitu formation. The sands are poor in the	
				black sand minerals	
				ilmenite and magnetite, so pre-date the eruptions	
				of Taranaki and Taupo	
				volcanic centres and the	
				subsequent current transport of black sands	
				northwards along the	
21	Cornwallis	Cornwallis	D	coast.  High cliffs and intertidal	a, c, g, I

	Danie I		I		
	Peninsula			rocks bearing a good	
	proximal			exposure of a sequence	
	volcanic- rich			of volcanic-rich flysch	
	flysch			beds that accumulated	
	,			close to the	
				contemporaneous late	
				Miocene Waitākere	
				volcanoes.	
22	Crater Hill	Mangere	VF-	Crater Hill is one of the	a, b, c,
	Orator rim	Marigoro	Caves	two best remaining	d, e, g, i
			Caves		u, e, g, i
				explosion craters and tuff	
				rings in Manukau City. It	
				is a complex volcanic	
				centre including a large,	
				embayed tuff ring 600m	
				in diameter, enclosing a	
				(quarried) scoria cone	
				and small lava flow.	
				Crater Hill has a unique	
				example in the Auckland	
				volcanic field of the	
				cooled remnants of a	
				lava lake that filled the	
				crater and later withdrew	
				down the vent. It is also	
				the only remaining	
				explosion crater in the	
				Auckland field where the	
				external slopes of the	
				volcano outside the crater	
				rim are nearly entirely	
				intact and unmodified.	
				Two lava caves are	
				present. Selfs lava cave	
				is about 48m long and	
				circumferentially oriented	
				within the volcanic crater.	
				Underground Press lava	
				cave is 40m long lava	
				cave with a large main	
				•	
				chamber, reputedly used	
				as a base for	
				clandestine, subversive	
				publishing during World	
				War II. The Crater Hill	
				quarry exposures are a	
				useful educational site	
				with excellent exposures	
				of lithic tuff, basaltic	
				lapilli, crater rim collapse	
				features and a thin layer	
				of rhyolitic tephra from	
				the central North Island.	
22	Cualin Daint	Mohumanari	D		0 6 6 1
23	Cudlip Point	Mahurangi	D	Excellent and easily	a, c, g, I
	deformed	West		accessible examples of	

	T		Γ		
	Waitematā			structurally deformed	
	Group rocks			Waitematā Group	
				sandstones and Parnell	
				Grit occur in sea cliffs	
				around Cudlip Point. A	
				•	
				wide variety of	
				deformational faults and	
				folds are visible here.	
24	Dispute Cove	Dispute Cove	E	Excellent exposure of a	a, b, i
	channelled	'		small channel within the	, ,
	flysch,			basal Waitematā Group	
				-	
0.5	Kawau Is	51111	_	flysch deposit.	
25	East Pakatoa	Pakatoa Island	D	A world-class example of	a, c, i
	Island broken			broken formation in	
	formation			argillite and greywacke	
				rocks, exposed in	
				extremely fresh high tidal	
				exposures. A wide variety	
				of structural features is	
				visible in the base of the	
				cliff and out onto the	
				shore platform.	
26	Eastern Beach	Eastern Beach	В	The best example in the	a, c, e,
20		Lastelli beach	Ь	-	
	anticline			Auckland region of an	g, I
				anticline visible in a shore	
				platform and coastal cliff,	
				giving a 3- dimensional	
				view of a fold in	
				Waitematā Group	
				_ ·	
				alternating sandstone	
				and mudstone. Of	
				educational, as well as	
				scientific importance.	
27	Fairy Falls and	Henderson	B - dikes	One of best examples of	a, b, c,
	dikes	Valley	C -	a waterfall in the	
	uinos	vancy	•		e, f, g, l
			waterfall	Waitākere Ranges, and	
				the best place to see	
				rarely occurring dikes in	
				the eastern Ranges. This	
				scenic waterfall cascades	
				over several drops	
				-	
				separated by plunge	
				pools.	
28	Flat Top Hill	Kaukapakapa	E	The site contains the only	a, b, d
	Tangihua			Tangihua volcanics in the	
	pillow lavas,			Auckland Region. Current	
	Kaukapakapa			exposures in a cutting	
	ιταυπαμαπαμα				
				beside an access road to	
				Flat Top Hill quarry will	
				be lost through future	
				quarrying, but once	
				quarrying ceases the new	
				quarry wall will include an	
				exposure of these	

				volcanics.	
29	Frenchmans Cap (Kahakaha), Pakatoa	Frenchmans Cap	В	A rare and excellent example of a 'top- hat' island with its surrounding intertidal rock platform.	a, c, e, g, i, l
30	Goat Island Bay Sedimentary rocks	Te Rere Bay	D	A well exposed basal sequence of Waitematā flysch overlying basement rocks and the type section for the thick-bedded sandstones of the Pakiri Formation occurs in cliffs from beneath Leigh Marine Laboratory, extending west for 2km beyond Goat Island Bay.	a, c, g, I
31	Grants Island old hat	Mahurangi Harbour	В	One of the best examples in New Zealand of a small island surrounded by broad intertidal rock platforms, giving it the classic 'old hat' shape.	a, c, e, g, i, l
32	Great Barrier Island, Harataonga Bay conglomerate	Great Barrier Island (Aotea Island)	D	Clean coastal exposure of Waipapa Terrane Group basement greywacke rock consisting of granite-bearing conglomerate. These are some of the oldest rocks in Auckland, and derive from deep ocean trench sediments.	a, b, I
33	Great Barrier Island, Kaitoke Beach dunefield	Great Barrier Island (Aotea Island)	С	One of the best remaining examples of a relatively unmodified active dunefield anywhere on Auckland's eastern coastline.	c, e, f, g, h, i, l
34	Great Barrier Island, Man o' War Passage	Great BarrierIsland (AoteaIsland)	A	Best example in the Auckland region of a narrow sea passage between cliffed shorelines. Man o' War Passage is a scenic feature of landscape value.	c, e, f, I
35	Great Barrier Island, Waterfall Bay Miocene	Great Barrier Island (Aotea Island)	Е	One of best examples of the Miocene volcanic intrusions into the greywacke rock of	a, b

	intervals	1	I	nonthone One - ( Demi-	
	intrusions			northern Great Barrier Island occurs around 'Waterfall Bay'. Here, early Miocene quartz porphyry dikes and a stock intrude greywacke and provide only evidence of the earliest volcanic activity on Great Barrier Island, some 18 million years ago.	
36	Great Barrier Island, Whangapoua Estuary	Great Barrier Island (Aotea Island)	С	The best example of a pristine estuary in the Auckland region. Whangapoua Estuary was formed by sea level rise and the damming of a drowned river valley by a sand barrier at the end of the last glaciation.	a, c, e, f, h, I
37	Great Barrier Island, Whangapoua sand spit & tsunami deposits	Great Barrier Island (Aotea Island)	С	To the north of the Whangapoua Harbour entrance are excellent unmodified examples of a sand spit and dunefield. A sheet of gravel extending from the toe of the foredune to over 14m above mean sea level and 200m inland from the beach is the best example of a tsunami deposit in the Auckland Region.	a, c, e, f, h, l
38	Hamlins Hill sandstone ridges and rhyolitic tuff	Penrose	A - ridge E - rhyolite	Hamlins Hill is one of the least modified sandstone ridge complexes remaining in Auckland. Ridges like it are some of the most common landforms beneath urban Auckland, but unmodified and undeveloped examples are rare. Hamlins Hill also includes the best inland exposure of rhyolitic tuff in Auckland City, in an exposure 10m wide and up to 2m high. Its position on top of the hill suggests the rhyolitic ash is from airfall or a pyroclastic flow and not	a, b, c, e, f, g, h, i

				reworked by water as is	
				more common.	
39	Hampton Park scoria cone	East Tamaki	V	This small but complete volcanic centre includes a small scoria cone and tuff ring within the outer flank of the Ōtara Hill tuff ring. An initial explosive eruption formed a tuff ring 330m in diameter. Lava partly filled this crater and flowed over the tuff ring to spread on to the flat ground to the west. A scoria cone with a complex crater built up around the volcanic vent. (Hampton Park is also the site of Smale's Church, St John, built in 1862).	a, c, d, e, f, i
40	Harbour View Pleistocene terraces	Te Atatu Peninsula	A	One of the last remaining undeveloped Pleistocene terrace surfaces around the Waitematā Harbour, with two distinctive terrace surfaces (15-20m above sea level, and 2-4m ASL) separated by a former coastal cliff. The terraces are cut into Waitematā Sandstone and Pleistocene deposits.	a, c, e, f, g, h, i, l
41	Hays Stream cliffs limestone	Hunua	E	This 3m thick, fine pebbly, crystalline, slightly flaggy limestone lying between 2 beds of greywacke pebble conglomerate in cliffs beside Hays Creek is the reference section for Papakura Limestone.	a, b, h
42	Helena Rubinstein and Ratcliffe lava caves	Onehunga	F	Helena Rubinstein lava cave is a complex branched lava cave, totalling about 320m in length and featuring many lava rolls. Teat stalactites formed by surface melting cover some ceilings and walls.  Located about 20m up-flow from the Helena Rubinstein cave, Ratcliffe	a, b, d, i

		1	ı	T	1
				lava cave is a blister cave about 130m long, with no natural entrance. Tunnels connect four chambers in the cave. It varies in width from 3-9m wide and has rock fall material on the floor in a number of places.	
43	Hillsborough Rd tuff	Hillsborough	E	Hillsborough Rd tuff is an easily accessible example of bedded tuff in a more distal part of the Three Kings volcano tuff ring. Excellent examples of bomb impact depressions and weathered chalazoidites (volcanic hailstone) are visible here.	a, c, d, g, i
46	Hopua explosion crater and tuff exposure	Onehunga	В	Hopua volcano is a small explosion crater with a low tuff ring about 500m in diameter. The original crater was breached by the sea and filled with marine sediments. Although damaged by reclamation and motorway construction, the tuff ring is still discernable as a volcanic feature. An intertidal exposure of Hopua tuff in the ManukauHarbour foreshore contains large blocks of basalt.	a, d, g, h, e
47	Horuhoru Island (Gannet Rock) red chert	Horuhoru Rock (Gannet Rock)	В	One of best examples of red chert in the region occurs at Horuhoru Island, where the rock is freshly exposed in sea cliffs. The entire island is composed of bedded red chert, some of which is intricately folded.	a, c, e, i,
48	Hōteo hogback bluffs and unconformity	Mangakura	A	A unique calcareous sandstone with pseudokast rocks (Hōteo Member), associated with an exposed sedimentary unconformity forms the largest and most	a, c, e, f, g, i

49	Hoteo River incised meanders	Wellsford	A	prominent hogback ridge in the Auckland region. The 4km ridge of prominent thick sandstone bluffs is conspicuous from State Highway 1, 2 - 3km south of Wellsford.  The Hōteo River is the longest in the Auckland Region. It flows in a deeply incised meandering gorge through broken hill country for some 30km	a, c, e
				and is one of the outstanding landforms in this part of the region.	
50	Huaroa Point shore platform	Army Bay	D	An extensive intertidal platform cut across dipping Waitematā sandstones and siltstones.	a, c, e, g, l
51	Hunua Falls volcanic neck	Hunua	С	The Wairoa River forms a scenic 30m high waterfall where it cascades over a basalt plug in the neck of a volcano, which has intruded up a fault line (an unusual feature). Volcanic tuff ring deposits and lava bombs are exposed in true right bank of the waterfall.	a, b, d, e, f, g, i
52	Ihumātao buried forests	Mangere	E	Best example in New Zealand of a fossilised mature kauri forest, and of a fossil forest, buried and preserved beneath volcanic ash. Trunks and stumps of large kauri trees are preserved in ancient swamp deposits. This is overlain by the remains of a younger, more diverse forest that was killed and buried by tuff from Maungataketake volcano and subsequently exhumed by coastal erosion.	a, b, d, g, h, i
53	Ingram Road III tuff ring	Bombay	A	The Ingram Road III tuff ring is a fairly well-defined tuff ring remnant,	a, c, d, e, i

				annuncius e (e.b., 4)	1
				approximately 1km in diameter. It joins with the smaller Ingram Road IV tuff ring in the south.	
54	Jordans Road Miocene fossils	Kaukapakapa	E	A small roadside quarry face contains a well - preserved and diverse bathyal molluscan and coral fauna fossils from the early Miocene.	a, b, g, h, i
55	Karamatura, Marama catchments & Mt Donald McLean	Huia	A	This locality includes a range of scenic landforms that are both characteristic and extraordinary examples of their type. These include inland bluffs, waterfalls, gorges and steep hill slopes. Mt Donald McLean is one of very few exfoliated domes in the Ranges.	c, e, f, g, i, l
56	Karekare Falls	Karekare	С	This 20m high waterfall flowing over Piha Formation conglomerate is spectacular and the most easily accessible waterfall in the Waitākere Ranges.	c, e, f, g, i, l
57	Karekare South stratified conglomerate	Karekare	D	High cliffs at the southern end of Karekare beach contain excellent exposures of planar-stratified volcanic conglomerate, deposited on the slopes of the Miocene Waitakere volcano and subsequently exposed by uplift and coastal erosion.	a, c, e, g, i, l
58	Kariotahi Quaternary sands	Waiuku	D	A well-exposed sequence of Quaternary coastal sediments showing the beginning of black sand deposition, with the current transport northwards of ilmenite and magnetite-rich sediments, following the commencement of volcanism in the central North Island and Taranaki. The younger deposits have a relatively	a, b, g

				high black sand content.	
59	Kawakawa Bay deformed chert beds	Kawakawa Bay	E	In shore platforms at Tawhitikino Beach and near Waiti Bay, chert pods appearing to be of Triassic age among Jurassic greywackes give a useful indication of the melange nature of Waipapa Terrane.	a, b, g, i,
60	Kawau Island pillow lavas	Kawau Island	Е	One of the best examples of tubular pillow lavas in New Zealand. An excellent three-dimensional exposure of pillow lava tubes is visible in a coastal section at Point Fowler.	a, c, d, i,
61	Kawau Island, Slater Point fossil sea stack	Kawau Island	В	This exposure of a greywacke sea stack buried by shallow marine conglomerate is possibly the best example of a fossil sea stack in New Zealand.	a, c, i, I
62	Kennedy Park deformed Waitemata strata	Castor Bay	D	Cliffs below JF Kennedy Memorial Park contain excellent and easily accessible exposures of complex deformed Waitematā strata, folds and faults.	a, c, e, g, l
63	Kepa Rd landslip	Ōrākei	В	This site is an unusual example of a largely intact landslide. Volcanic tuff and ash plastered on the steep slope of an original sandstone ridge on the inside wall of Ōrākei Basin volcano is sliding slowly downwards. There are several excellent head scarps and landform features typical of slow moving landslides. It remains undeveloped due to its instability.	a, b, e, g, i
64	Keyhole Rock	Keyhole Rock	В	Excellent example of wind and salt erosion producing a small opening through a sea stack.	b, e, f, g,

65	Kidds Beach Pliocene conglomerate	Karaka	E	The beach and foreshore platforms here contain the best and most extensive exposures of Pliocene jasper and quartz-rich conglomerate that provide evidence for the former existence of a west-flowing 'Clevedon River' sourced from the Coromandel and Waiheke area and depositing in the Manukau Harbour.	a, b, g, h
66	Kidds Beach shell spits	Karaka	С	This series of shell spits is the largest area and best example of actively accreting shell spits in the Manukau Harbour. Some of the elongate shell spits are up to 2m high.	c, e, g
67	Kitekite Falls	Piha	С	One of highest and most easily accessible falls in Waitākere Ranges. Kitekite Falls cascade over a cliff of Piha Formation volcanic conglomerate, in which three dikes are visible.	c, e, f, g, i, l
68	Kitenui Ave lava cave	Mount Albert	F	Kitenui Ave lava cave is one of the longest and best-preserved lava caves in Auckland. The cave floor also features some of the best lava stalagmites. The cave extends for 250m and is up to 20m wide in places.	a, c, d, i
69	Kohuora explosion crater	Papatoetoe	V	Kohuora is a large, low-profile, double- lobed explosion crater and tuff ring. It is the only one of this shape in the Auckland volcanic field. Although modified by erosion and subdivision, the crater walls indicate that there were at least four explosive vents. The crater floor has been artificially drained, leaving only a small part of the original wetland intact.	a, b, c, d, e, f, g, h

70	Kotanui Island stack (Frenchmans Cap)	Whangaparaoa	В	A prominent and well defined contemporary sea stack eroded out of Waitematā Group rocks.	a, c, e, g, i, l
71	Kuataika rocky peak	Waitakere	В	A good exposure of partly exfoliated Piha Formation stratified volcanic conglomerate forms the most prominent high point in the northwest Waitākere Ranges. Kuataika Track passes beside the peak and leads to panoramic views.	a, c, e, I
72	Lake Okaihau	Lake Okaihau	С	Lake Okaihau is a good example of a dunedammed lake, formed when active dunes dammed a small valley eroded in older Pleistocene sediments.	a, c, e, f, i
73	Lake Ototoa dune lake	Lake Ototoa	С	Relatively complex and excellent example of a freshwater lake between sand dunes.	a, c, e, f, i
74	Lake Pupuke volcano	Lake Pupuke	E	Pupuke volcano is large compound explosion crater (about 1500m diameter) partly filled with a fresh water lake covering 104 ha and 55m deep. Lava is mostly mantled with tuff, but has been quarried inside the crater. A lapilli knoll to the southwest forms the highest point. Lava chemistry supports two eruptions from this volcano.	a, b, c, d, e, f, g, h
75	Lake Tomarata and Spectacle dune lakes	Te Ārai	С	Tomarata and Spectacle Lakes are the best examples of dune-dammed lakes on the east coast of Auckland or Northland.	a, c, e, f, h, i
76	Landscape Road Lava Cave	Mount Eden	F	An excellent example of a lava cave, this relatively simple tunnel is 100m in length and 10m in diameter.	a, c, d, g, i
77	Leigh reef and Panetiki Island	Omaha Bay	В	Leigh Reef and Panetiki Island provide excellent	a, c, e, g, h, l

		1			1
				examples of the characteristic rocky shores and reefs of the region's east coast and a top-hat islet. An excellent example of basal Waitematā conglomerate.	
78	Lion Rock neck	Piha	A	Lion Rock is a large rocky stack with a lion-shaped profile, and is one of the region's iconic landforms. The rock is formed from a volcanic neck filled with a wide range of volcanic eruption and erosion products as well as andesite intrusions.	a, b, e, f, g, i, l
79	Liverpool Street tuff exposure and chalazoidites	Epsom	E	One of best and most accessible exposures of bedded tuff in Auckland, this site consists of an exposure of fine to coarse tuff and thin scoriaceous layers, erupted from nearby Three Kings volcano. Also visible are small slump faults and a bed rich in chalazoidites (volcanic hailstone).	a, c, d, g, h, i
80	Lunn Avenue baked sediments, Mt Wellington	Mount Wellington	E	At the western foot of Mt Wellington scoria cone, sediments are baked beneath and within the thick accumulation of basalt lava. Lenses of natural brick are visible in the dark, jointed, quarry face.	a, b, d
81	Lynfield cliffs Waitematā Group section	Lynfield	D	This section provides a wide diversity of the rock types, sedimentary structures and structural styles that characterise the mixed volcanic/non-volcanic facies of this part of the Waitematā Basin on the lower flanks of the Waitakere Volcano.	a, c, e, g
82	Mahurangi limestone, Wilsons Cement works	Mahurangi East	E	Wilsons cement quarry is the type locality of Mahurangi Limestone, an Oligocene muddy limestone. It is also	a, f, g, j, e

	1	1	1	T	1
				historically important as the first Portland cement plant in the Southern Hemisphere.	
83	Mahurangi North Parnell Grits	Warkworth	D	Best exposed sequence of more than one Parnell Grit bed within the Waitematā Basin. Here, three Parnell Grit beds occur within a Waitematā Sandstone exposure.	a, c, i
84	Mangatāwhiri Barrier Spit (Omaha Spit)	Omaha	С	Mangatāwhiri barrier spit is composed of unconsolidated Holocene coastal sediments deposited either side of an initial barrier ridge. The landform records the episodic depositional history of the area, and although modified by urban development, still contains good examples of sand dunes and a small area of fossil beach ridges. The spit has been the site of historic beach erosion issues affecting dwellings built on the dunes.	a, c, e, g, l
85	Mangatu Stream Parnell Grits	Kaipara Flats	D	Mangatu Stream and its tributaries provide good exposures of the thickest sequence of volcanic mass flow deposits within the WaitemataBasin, with thick and thin volcanogenic mass flow beds visible. 1km stretch of Mangatu Stream.	a, c, d, i
86	Māngere Lagoon explosion crater	Māngere Bridge	V	A large explosion crater (23 ha) with low-profile tuff ring and a small, central scoria cone. Invaded by rising sea level and filled with tidal sediments to form a tidal lagoon. Mangere Lagoon is contiguous to and partly overlain by lava from Mangere Mountain.	a, c, d, e, f, g, h, i
87	Māngere Mountain	Māngere Bridge	V	Māngere Mountain is one of the best examples in	a, b, c, d, e, f, g,

	volcano (Te Pane o Mataoho)			the Auckland volcanic field of a large, well-preserved scoria cone with a breached crater. Two features of the volcano are unique in the Auckland field: The crater lava plug (surrounded by gas vents) and the presence of a deep, secondary, explosion crater in the rim of the main scoria cone.	h, i
88	Manukapua Island (Big Sand Island)	Tāpora	С	Excellent and rare example of a fetch-limited barrier island with Holocene sand dune belts at Tāpora on the Kaipara Harbour.	a, b, e, g, h, i
89	Manukau foreshore lava flows	Māngere Bridge	В	This area contains the best example of pahoehoe lava surfaces in New Zealand. Many small areas of well-formed pahoehoe lava from Mangere Mountain volcano occur in the foreshore north of Kiwi Esplanade. Lava flow exposures extend westward around the coastal edges of Ambury Regional Park.	a, c, d, e, g, i
90	Māori Bay sea cave	Muriwai	F	A well-visited, easily accessible, typical sea cave eroded along joints through the volcanic sandstone of Otakamiro Point.	b, e, f, g,
91	Mathesons Bay basal Waitematā Group rocks and fossils unconformity and Miocene reef corals		E	Easily accessible, well-exposed educational site showing onlap of early Miocene Waitematā sediments on Waipapa Group, with an excellent example of thrusting. This is also the richest locality in New Zealand for unusual chaliciform reef corals.	a, b, c, g, l
93	Matukutūreia and Matukuturua	Wiri	V	The Matukuturua lava field is one of the best-preserved lava fields	a, c, d, e, g, h, i

	love field and		1	romaining in the Avalder I	<u> </u>
	lava field and tuff ring			remaining in the Auckland volcanic field and is an important representative example of the volcanic lava terrain that underlies much of the city. The lava field erupted from McLaughlin's Mountain (Matukutūreia) volcano. Most of the original scoria cone and a section of the lava field in the north have been quarried away. Associated with the lava field is a section of tuff ring remaining from the early phases of the eruption. A small wetland has formed behind the ridge of tuff.	
95	Meola Creek and estuary	Point Chevalier	С	The lower end of Meola Creek is the best example in Auckland of a stream that was displaced by a lava flow and now meanders around its irregular edge. This is also one of the least modified sections of a natural stream remaining on the Auckland isthmus.	a, c, g, i,
96	Meola Reef (Te Tokaroa)	Waitematā Harbour	В	This is longest lava flow in Auckland Volcanic Field. It originated at Mt St John volcano (prior to the eruption of Mt Eden) and extends over 10km, nearly crossing the present-day Waitemata Harbour to within 600m of Kauri Point on the North Shore.	a, b, d, e, f, g, i, I
97	Mercer Bay chimney and sea cave	Piha	В	This site is a particularly good example of a sea cave that has eroded vertically upwards along joint planes to form a 100m high chimney.  Eroded into the south side of Te Ahu Ahu Point, the chimney opens near the top of the high cliffs above the north end	a, b, c, e, i, l

98	Mission Bay thrust	Orakei	E	of MercerBay. A sea tunnel through which a small stream flows provides access at low tide around to the chimney cave.  This is the best-exposed example of Waitematā Group strata in the cliffs of the Tamaki Drive. A thrust (low angle fault) with folded sediment along it is the most interesting structural	a, c, g, i,
99	Mokoroa Falls	Waitākere	С	feature in these prominent cliffs.  This scenic waterfall is the best example in west Auckland of a fall held up by erosion-resistant thick sandstone.	c, e, f
100	Mortimer Pass lava cave	Epsom	F	This is the only rift cave known in Auckland, formed by the solidifying top of a lava flow sliding forward over more molten material underneath. The cave is about 35m long, with an S-shaped vertical cross section at right angles to the direction of flow.	a, b, d, g, i
101	Motor Holdings lava cave	Mount Wellington	F	This lava cave is about 114m long, and averages about 1m wide. Features within the cave include lava rolls, a chamber (3m wide and 3m high), a small ponded flow, and a rough 'coral' floor. The cave had two entrances near the southern end, but both are now filled.	a, c, d, i
102	Motuihe Island, Limestone Point basal Waitemata Group sedimentary rocks	Waihaorangata hi Bay	D	A 300m coastal section around 'Limestone Point' contains a small (50m by 30m) example of well-developed coastal karst, which is the only limestone karst in the Auckland region. The section consists of shallow water, sandy bioclastic limestone, and	a, b, e, g, i, l

103	Motuihe Island, Ocean Beach basal Waitemata Group sedimentary rocks	Motuihe Island	D	conglomerate overlain by deep-water Waitematā flysch, all resting on greywacke basement rock.  Easily accessible cliffs contain a well- exposed greywacke stack buried by basal Waitemata sandstones and mudstones, shelly sandstone and finally a thick Parnell Grit bed.	a, c, e, g, i, I
104	Motuketekete Island Waitemata Group Miocene basal limestone	Motuketekete Island	E	Geological exposure of shallow water shelly conglomerate and bioclastic limestone of the Kawau Subgroup passing up into deep water Waitematā Group flysch. This is one of only three known localities in New Zealand where reef corals are preserved in growth position and is the only occurrence of early Miocene limestone between Auckland and Bream Tail. It is also a good exposure of the sequence passing up into flysch.	a, b, g, i,
105	Motuora Island Parnell Grit	Motuora Island	D	One of best and largest exposures of a Parnell Grit bed forms the intertidal shore platform right around Motuoralsland. The bed contains large rip-up blocks of upslope sedimentary facies.	a, c, d, e, I
106	Motutapu folded chert, Administration Bay	Motutapu Island	D	The best-known and most easily accessible exposure of tightly folded chert beds within the greywacke sequence of the Waipapa Terrane.  Exposure in shore platform.	a, c, g, l
107	Motutapu Island coastal features incl.basal Waitemata	Motutapu Island	D	This locality is important for historic and educational reasons for showing the sedimentary relationship of the early	a, b, c, e, g, i, l

	Group contact, with fossil giant barnacles			Miocene Waitematā Group to the underlying basement, and the character of the early Miocene coastline. It is the type locality for a giant barnacle species, with fossil plates found at the base of the fossil sea stack on which the barnacles once grew. Geomorphic features include well-developed shore platforms cut in greywacke, Parnell Grit and Waitematā	
108	Mt Albert (Ōwairaka)	Mount Albert	V	sandstone.  Mt Albert is the western-most eruptive centre in the Auckland volcanic field. The volcano consists of a large scoria cone (now severely modified by quarrying), which overlies obscured tuff ring remnants. Lava flows spread in three directions from the volcano to cover some 3.3 km².	a, c, d, e, f, g, h, i
109	Mt Eden (Maungawhau)	Mount Eden	V	Mt Eden consists of a complicated scoria cone structure with a deep, well- preserved, conical crater about 50m deep. Basalt lava flowed in all directions and good lava outcrops are now exposed within the extensive lava fields. More viscous, thicker lava flows later in the eruption accumulated to form a thick pedestal. The former quarry occupied by EdenGardens provides good exposures of the features of the lower scoria cone, such as bedded scoria, in places intruded by dikes and irregular intrusions of basalt. Mt Eden is one of Auckland's most	a, c, d, e, f, g, h, i, k

	T	1	T	· · · ·	
				prominent volcanic features, and considered to be of national importance.	
110	Mt Hobson (Ōhinerua)	Remuera	V	Mt Hobson is a small, well-preserved scoria cone, with a horseshoe crater (about 250m diameter) and minor lava flows to the south.	a, c, d, e, f, g, h, l, k, i
111	Mt Richmond (Ōtahūhū)	Mount Wellington	V	Mt Richmond volcano consists of a partially intact tuff ring (about 800m diameter) surrounding a swampy depression with a group of small cratered scoria cones at the centre. There are many vents associated with the scoria cones but no known lava flows.	a, c, d, e, f, g, h, i
112	Mt Robertson (Sturges Park)	Ōtahūhū	V	Mt Robertson volcano consists of a large, swamp-filled, tuff ring forming a "castle-andmoat" structure around a small, cratered, scoria cone. Part of the Ōtahūhū commercial area is built on the northeastern rim of the tuff ring.	a, c, d, e, f, g, h, i
113	Mt Roskill volcano (Puketāpapa)	Mount Roskill	V	Mt Roskill volcano is a simple scoria cone with an initial tuff ring almost buried beneath it. The cone originally had two shallow craters (now destroyed by a water reservoir). Small lava flows extend northwest along Oakley Creek to reach the Mt Albert lava flows.	a, c, d, e, f, g, h, i
114	Mt Royal lava cave	Mount Albert	F	Mount Royal lava cave is an excellent example of a lava cave, with the largest and best-developed lava stalactites and dribbles in New Zealand. It extends about 54m from the back of a garage under a private	a, c, d, i

				vocidonos. The estimic	
				residence. The cave is about 2-3m in diameter	
				and also features several	
				excellent examples of	
115	Mt Smart	Penrose	V	gas chimneys.  Mt Smart scoria cone	a, c, d, f,
113	volcano	reniose	V	originally stood about	g, e
	remnant			50m higher than the	9, 0
	(Rarotonga)			surrounding terrain. Now,	
	( 3 3 3 5 7			only the southern base of	
				the cone remains to	
				define its original size	
				and shape. The rest has	
				been quarried away, with	
				the site occupied by a	
				major sports stadium. A large area of lava flows	
				extends south to	
				Manukau Harbour.	
116	Mt St John (Te	Epsom	V	Mt St John is a	a, c, d,
	Kōpuke)	'		reasonably well-	e, f, g, h,
				preserved, simple scoria	i
				cone with a crater about	
				180m in diameter and	
				20m deep. A thin mantle	
				of Three Kings tuff forms	
				an impervious layer in the crater that allows an	
				ephemeral pond to fill.	
				Recent research into	
				rock chemistry has	
				revealed that Mt St John	
				is the source of the	
				longest lava flow in the	
				Auckland volcanic field,	
				which extends over 10km to form Meola Reef (Te	
				Tokaroa).	
117	Mt Victoria	Devonport	V	Mt Victoria is a steep	a, c, d,
	volcano			sided scoria cone, the	e, f, g, h,
	(Takarunga)			largest north of the	i
				harbour with a summit	
				crater breached towards	
				the south east from	
				whence lava flowed towards the former	
				Waitemata valley. Duders	
				Hill was a small welded	
				scoria cone (now	
				quarried) on the harbour	
				shore.	
118	Mt Wellington	Mount	V, F	Mt Wellington is the	a, b, c,
	(Maungarei)	Wellington		largest scoria cone in the	d, e, f, g,
				Auckland volcanic field.	h, i

	T	T		T	1
				The high, circular scoria cone encloses a 60m deep crater (about 220m diameter) with three vents. Mt Wellington is associated with nearby Purchas Hill, which consisted of two small, cratered, scoria cones in the centre of a large tuff ring. The centre of the Mt Wellington cone is just outside the southern rim of this tuff ring. Scoria and extensive lava deposits overlie the tuff deposits from early eruptions. Lava flows streamed from the volcano towards Penrose and thence to the Manukau Harbour. At the western foot of Mt Wellington scoria cone is the 16m deep, bell-shaped Ruapōtaka lava shaft; a vertical cave which is regionally significant in its own right. The best example of partially fused cowpat lava bombs in the Auckland volcanic field is located near the top of the inner slopes of Mt Wellington's crater.	
119	Muriwai and Rangitira Beaches	Muriwai	С	Muriwai and Rangitira Beaches form the longest beach in the Auckland region. This area provides an almost unmodified example of an exposed sandy beach in a high-energy coastal environment.	c, e, f, g, i
120	Muriwai andesitic pillow lava flows	Muriwai	D	Some of the best-preserved pillow lava formations in the world occur in four separate locations in a quarry, coastal cliffs and intertidal platforms near Muriwai. The pillow lavas are interbedded with fossiliferous sediments	a, b, e, f, g, h, i

				that give an indisputable	
				bathyal depth for the lava	
121	Muriwai	Muriwai	D	emplacement. Unusual, bathyal	a, b, g
121	Miocene fauna, Maori Bay	Iviuriwai		molluscan fauna and also a conglomerate bed with redeposited shallow water reef corals occur in cliffs at the south end of Maori Bay.	a, b, g
122	Muriwai volcaniclastic sediments	Muriwai	D	The best exposures in New Zealand of submarine canyons and channels filled with volaniclastic sediments are well- exposed in coastal cliffs and intertidal platforms here. Outcrops consist of mostly fine-grained volcaniclastic sediments with several pillow lava flows. There are also exposures of canyon wall contacts and canyon fill sediments, lensing conglomerates and cross-bedded sandstones.	a, c, e, g, i
123	Musick Point cannon- ball concretions	Bucklands Beach	D	One of the best and most easily accessible examples of spherical concretions in the Auckland region. Concretions are both loose on the foreshore and embedded in the lower cliffs on the west side of Musick Point.	a, c, g, i,
124	Musick Point overthrust	Bucklands Beach	В	The northern tip of Musick Point contains an overthrust fold involving flysch beds.	a, c, e, f, g, i, l
125	Narrow Neck structural discordance	Narrow Neck	D	The shore platform at Takapuna Head displays a classic example of a structural discordance, with a 90 degree difference in the dip of strata within the Waitematā Group.	a, c, g, l,
126	New North Rd lava cave (HebronCollege	Mount Albert	F	Located in the Mt Albert lava field, the New North Rd lava cave is one of the	a, c, d, i

	Γ.			T	1
407	)			better examples of a meandering lava cave. The cave is 60m long, 5m wide and 1.5m high and contains some of the best lava rolls in Auckland lava caves.	
127	Nihotupu Gorge volcaniclastic flysch	Huia	D	The Nihotupu Gorge contains the best-exposed section through this interfingering lateral facies boundary between Waitematā basin flysch and the Waitākere volcaniclastic pile.	a, c, i, I
128	Nihotupu pillow lavas and falls	Waiatarua	D - lavas C - waterfall	Well-exposed examples of the easternmost pillow lavas in the Waitākere Group form the Nihotupu Falls at head of the Upper Nihotupu Reservoir and also occur in an old quarry nearby.	a, c, e, f, g, i, l
129	Ninepin Rock volcanic neck	Ninepin Rock	В	Ninepin Rock is an excellent example of a coastal stack. It is formed from an eroded volcanic neck combining intrusive tongues of lava and agglomerate fill with bombs.	a, c, e, f, g, l
130	North Head volcano (Maungauika)	Devonport	V	A small, steep-sided scoria cone fills and overtops the crater rim of a basaltic tuff cone. A small lava flow to the west does not extend beyond the foot of the tuff cone. Good exposures of basaltic tuff can be seen in tunnels and along the coast. This notable landmark at the entrance to Auckland Harbour has been considerably eroded by the sea.	a, c, d, e, f, g, h, I, I
131	North Pararaha Cliffs submarine slide	Karekare	D	This site contains the best exposure of a large submarine slide on the slope of an early Miocene Waitākere volcano and the largest slide deposit in the Miocene rocks of	a, b, c, e, g, i, l

				northern New Zealand.	
132	North-west Motorway lava flow, Western Springs	Mount Albert	D	This 500m section of motorway cuttings is one of best and most commonly seen cuttings through a basalt lava flow in Auckland. It provides good visual evidence of the route of Auckland's longest lava flow, from Mt St John to Meola Reef via Western Springs. It also contains excellent examples of columnar jointing.	a, c, d, g
133	O'Neill Bay crater	Muriwai	D	One of the best-exposed craters in the Waitakere region occurs in cliffs at the north end of O'Neill Bay. The 200m wide crater is filled with andesite flows and cutting stratified breccias.	a, c, e, g, l
134	Oakley Creek waterfall	Point Chevalier	С	An 8m high waterfall formed over thick sandstone beds is the largest and highest waterfall on the Auckland isthmus. This section of Oakley Creek is also one of least modified streams and stream valleys in the area.	b, e, f, g, i
135	Ōhaka Head dike swarm	Huia	D	Two sets of dikes intruding into andesite conglomerate at the base of Ōhaka Head comprise the best-exposed dike swarm in the Waitākere Ranges.	a, c, e, g, i, l
136	Ōkahu Bay bayhead fill	Ōrākei	В	A 10 ha flat behind Ökahu Bay is the best-preserved example of an early Holocene bayhead fill on the Auckland isthmus. The flat composed of intertidal shell-bearing mud, is about 1m above sea level and provides obvious evidence of a higher early Holocene sea level.	a, c, f, g, h, I, e
137	Omokoiti/ Waioneke salt	South Head	С	One of the best and largest examples of salt	a, c, g, h, l, e

			1		
	meadows			meadows, salt marsh,	
				high tide islets and sand	
				spits along the coast of	
400	O T 1111	O T 1131		the Kaipara Harbour.	
138	One Tree Hill	One Tree Hill	V	One Tree Hill is one of	a, c, d,
	(Maungakiekie			the region's iconic	e, f, g, i,
	)			landforms. It is among	k
				the largest of all the	
				volcanoes in the	
				Auckland volcanic field.	
				The complex scoria cone	
				was built up around	
				several vents and features	
				a central, oval crater	
				(30m deep) and two large	
				horse-shoe craters. Thick	
				and extensive lava flows	
				probably cover more than	
				20 km², and extend to the	
				coast at Onehunga. The	
				lava field contains lava	
				caves and is partially	
				mantled with tephra from	
100				Three Kings volcano.	
139	Onehunga	Onehunga	С	Bycroft Spring provides	a, b, g
	Springs			visual evidence for the	
	(Bycroft			Onehunga freshwater	
	Spring)			aquifer system that flows	
				within the base of the	
				One Tree Hill lava field.	
				The springs originally	
				arose on the Manukau	
				Harbour foreshore in its	
				former position near here,	
				but are now largely fed by	
				overflow from freshwater	
				springs located within the	
				WaterCare facility across	
				Princes St. Although this	
				site is currently in less	
				than excellent condition,	
				freshwater springs	
				naturally flowing out from beneath lava flows are	
140	Onobungs	Onobungs	С	regionally rare.	2 h c
140	Onehunga	Onehunga		Captain Springs provides visual evidence for the	a, b, g
	Springs				
	(Captain			Onehunga freshwater	
	Springs)			aquifer system that flows	
				within the base of the	
				One Tree Hill lava field.	
				The springs originally	
				arose on the Manukau	
				Harbour foreshore in its	

				former position near here.	
141	Hochstetter Pond (The Grotto or Grotto St pond)	Onehunga	В	This unusual circular depression in part of the One Tree Hill lava flow was probably formed by the collapse of a lava cave roof. The depression, surrounded on three sides by basalt lava, is filled with a pond supporting wetland vegetation. The presence of diatomite in the pond floor shows it was in existence for thousands of years. 'The Grotto' is shown on Hochstetter's geological map of Auckland.	a, b, g, j
142	Onepoto explosion crater	Northcote	V	This large, simple explosion crater (about 700m diameter) is breached to the south by the sea and partly infilled with intertidal mud. The floor of the crater is now almost completely reclaimed. Tree moulds encountered during quarrying show that Onepoto volcano overwhelmed a forest.	a, c, d, e, f, h, i
143	Ōrākei Basin volcano	Ōrākei Basin	V	Ōrākei Basin is a volcanic explosion crater and large tuff ring (1km in diameter). The tidal inlet was formed when the sea entered Purewa Creek valley and breached a former freshwater lake that occupied the crater. Subsequently, the basin was closed off by the railway embankment and the water level and flushing of the basin is now controlled. Sediment cores taken from Ōrākei Basin revealed 90 ash layers deposited by eruptions from other volcanoes over the past 90,000 years.	a, c, d, e, f, h, i, l, b, k
144	Ōrākei	Ōrākei	Е	This greensand exposure	a, c, g, j,

	Greensand Miocene fossils, Hobson Bay			is historically important as the type locality for several Mollusca and numerous Foraminifera, collected by Hochstetter in 1859 and described by Karrer in 1864.  Exposures still remain on the muddy foreshore.	
145	Örere River terraces	Orere Point	A	The Ōrere River valley contains excellent examples of terraces cut into alluvial gravel and sediment along a section approximately 4km long from the river mouth at Ōrere Point. Stream terraces are rare in the Auckland region.	a, b, e, g, h, l
146	Ōruawharo hyaloclastite	Tapora	D	The best example of hyaloclastic breccia and associated vent complex in the Miocene volcanics of Northland is exposed in the foreshore and cliffs on the north side of Ōkahukura Peninsula.	a, c, g
147	Otuataua lava flows	Mangere	V	One of the least modified remaining areas of lava flows in the Auckland volcanic field. Western lava flows from Otuataua volcano feature very rocky surfaces, some of which have been modified in prehistoric and historic times. The scoria cone has mostly been quarried away.	a, c, d, e, f, g, h, i
148	Paihia Rd lava cave	One Tree Hill	F	This cave is one of the best-preserved examples of a small meandering (U- shaped) lava cave. It is located within the One Tree Hill lava field and contains some of the best lava rolls and benches in Auckland's lava caves.	a, c, d, i
149	Pakiri Beach		С	Pakiri Beach is the only exposed east coast surf beach free of housing and backed by extensive sand dunes and dune lakes. It is a rare and	c, e, f, g, i, l

				significant example of a	
				wild and scenic coastline.	
150	Panmure Basin volcano	Panmure Basin	V	Panmure Basin is a volcanic explosion crater and associated tuff ring (about 1400m diameter) formed in relatively soft alluvial ground by a series of explosive eruptions. It is still relatively complete and was naturally breached by postglacial sea level rise to form a tidal lagoon. Lapilli deposits from Mt Wellington mantle the northwest rim of the crater.	a, c, d, e, f, h, i, l
151	Papakanui dune field and spit	Woodhill Forest	A	Papakanui spit is a mobile sandspit, which usually encloses Waionui inlet. The spit is associated with a large area of mobile dune fields containing a varied complex of sand dunes rising to over 60m. This extensive area of unmodified dunes and coastline is unique in the Region.	a, c, e, f, h, i
152	Pararaha gorge and exfoliation domes	Huia	A	This locality includes a group of scenically spectacular erosional landforms cut into the volcanic conglomerate rock. The steeply incised Pararaha gorge contains several waterfalls while some of the precipitous hillslopes culminate in weathered exfoliation domes on the ridgetops high above.	c, e, f, g, i, l
153	Paratutae wave-cut notch	Huia	В	The best example of a wave-cut notch on the west coast of Auckland is situated on the northeast side of Paratutae Island.	a, c, e, g, i, l
154	Parnell Baths Parnell Grit	Parnell	D	The type locality for Parnell Grit, a thick submarine volcanic lahar (mudflow) interbedded in Waitematā Group	a, c, f, g, i, j

	1		1	T	
				turbidites. This important educational site is located	
				in cliffs behind Parnell Baths carpark.	
155	Patauoa Creek mouth Last	South Head	В	This 200m by 100m terrace is one of the best	a, c, g, i
	Interglacial			examples of 6m high	
	terrace			coastal terrace, formed as a result of higher sea	
				level during the Last	
156	Diggon	Holf Moon Boy	V	Interglacial.	0 0 d
156	Pigeon Mountain	Half Moon Bay	V	Pigeon Mountain is a prominent landform	a, c, d, e, f, g
	scoria cone			despite major damage by	, , 0
				quarrying. The volcano consisted of a tuff ring	
				(about 500m in diameter)	
				with a scoria cone, several small scoria	
				mounds and a small	
				explosion crater on the	
				northwest rim of the tuff ring. A small, lava flow is	
				still visible at	
157	Piha Gorge	Piha	Α	Wakaaranga Creek. This site is the best	c, e, f, g,
107	Tina Corge	T IIIG	,	example of a gorge in the	i, I
				Waitakere Ranges. Piha	
				gorge is a narrow (5-20m wide) and deeply incised	
				gorge, with vertical walls	
				cut in breccia 50-100m high.	
158	Point Chevalier	Point Chevalier	Е	This site is one of the	a, c, g, i
	Waitemata Group			best exposures of Waitemata Group strata	
	sedimentary			in the central Auckland	
	structures			area, for educational	
				purposes. Excellent examples of trace fossils,	
				faults, intraformational	
				slump folding, ripple-drift cross-bedding and water	
				escape structures are	
				exposed in 5m high cliffs around the tip of Point	
				Chevalier.	
159	Point England	Point England	E	An exposure of rhyolitic,	a, c, g, i
	accretionary lapilli			co-ignimbritic deposits from the Taupo Volcanic	
				Zone. A thin bed of	
				accretionary lapilli (chalazoidites or	
				'volcanic hailstones') is	

				visible near the base of a low eroded sea cliff in the TamakiRiver foreshore.	
160	Pokorua dune- dammed lake	Lake Pokorua	С	Lake Pokorua and the surrounding wetland is the best example of a dune-dammed lake on the Awhitu Peninsula.	a, c, vi, f, g ,h, I, e
161	Pollen and Traherne Islands and mudflats	Waitematā Harbour	A	This is an area of low islands, saltmarsh, mangroves, shellbanks, and estuarine and harbour mud flats. It is the best remaining largely unmodified area of its type in the Waitematā Harbour. The biggest and least disturbed area of saltmarsh remaining in the Waitemata Harbour grows in the shelter of Pollen Island. The majority of this area is protected within the Motu Manawa (Pollen Island) Marine Reserve.	a, c, g, f, h, i, l, e
162	Ponui Island pillow lava	Third Bay	E	This excellent example of a pillow lava flow within Waipapa Terrane greywackes forms a small point at northern end of ThirdBay. Sea cliff and shore platform.	a, c, d, I
163	Puhinui intertidal banks and shellbanks	Manukau Harbour	С	An area of dynamic shellbanks at the mouth of Puhinui Creek is one of the best examples on the ManukauHarbour. The shellbanks and intervening intertidal banks also form a complex of habitats for a variety of animal and plant communities.	a, c, e, g, h, i
164	Puhinui volcanic explosion craters	Wiri	V	Three, small, elongate (200-250m) craters (Pond, Arena, Eroded) each sit at the top of a small (7-8m high) tuff cone forming the hills of Puhinui Reserve. Pond Crater retains a small freshwater lake in the	a, b, c, d, g, h, i, l

				crater; Arena Crater is filled to the overflow level	
				with lake sediment; and Eroded Crater has a small stream eroded	
				through the middle of it. This is the only cluster of	
				small explosion craters in the Auckland Volcanic field.	
165	Puka Street grotto	Onehunga	В	This is the best-preserved example of a deep, steep-sided depression within a lava flow. The pit formed by	b, d, g, i, j
				roof collapse of a lava tube from One Tree Hill, while presumably still-flowing lava rafted the collapsed debris	
				away. Puka St grotto is shown on Hochstetter's geological map of Auckland.	
166	Pūkaki Lagoon volcano	Māngere	V	Pūkaki Lagoon is one of the best two remaining examples of an explosion	a, c, d, e, f, h, i
				crater and tuff ring in Manukau City. It is a simple circular explosion	
				crater, which erupted about 60,000 to 70,000 years ago. Thick lapilli	
				mantles the northeast side of the tuff ring, which is breached on the	
				seaward side by a narrow channel. The crater filled with intertidal mud when	
				sea level rose. Cores taken from the crater sediments have provided	
				a record of volcanic ash fall and information about	
				the environmental history of the district. The landform is largely unspoiled by urban development.	
167	Pukapuka Quarry unconformity	Põhuehue	E	A small limestone quarry visible from State Highway 1 contains one of very few exposures of	a, b, g
				a sedimentary contact of	

		1		I	T
				basal Waitematā Group	
				conglomerate on top of	
				Northland Allochthon	
				limestone.	
168	Pukeiti scoria	Mangere	B, <u>F</u>	Pukeiti is the only	a, c, d,
	cone and lava			remaining example of a	e, f, g, h,
	field			small, cratered scoria	İ
	(Puketapapa)			cone in the Auckland	
				volcanic field and the	
				only remaining, largely	
				intact scoria cone of four	
				originally in this area. A	
				very small scoria cone	
				with a shallow crater	
				marks the site of the vent	
				from which lava flows	
				spread in a northerly	
				direction. Pukeiti is	
				contiguous to Otuataua	
				lava and tuff. Two lava	
				caves are known to occur	
				here (Lino lava cave and	
				Rubbish Pit lava cave).	
169	Pukekōhe	Pukekōhe	V	Pukekōhe East tuff ring	a, c, d,
	East tuff ring	East		is the best preserved tuff	e, f, g, h,
				ring in the South	i
				Auckland volcanic field.	
				The volcano erupted	
				through a fringe of lava	
				from Rutherford's cone,	
				which lies just to the	
				northeast. The tuff ring is	
				approximately 1km in	
				diameter and 80m deep,	
				with erosion resistant	
				lava around two thirds of	
				the crater accounting for	
				its well-preserved	
				morphology.	
170	Puketutu	Māngere	V	Puketutu Island is an	a, c, d,
	Island volcano			isolated compound	e, f, h, g
				volcanic centre, with tuff	
				ring remnants, several	
				scoria cones, and many	
				lava flows, some	
				submarine, covering an	
				area of 2.1km <sup>2</sup> . Although	
				it is extensively quarried,	
				Puketutu is one of only	
				three examples in the	
				Auckland volcanic field	
				where a complete	
				volcano consisting of tuff	
				ring remnants, scoria	

	1		1	I	1
		_		cones and lava fields is nearly intact. It is one of only three island volcanoes in the field and the only one in the Manukau Harbour. On the west side of the island is the best example in New Zealand of a lava flow intruding and baking soft sediment, pushing up an anticline of tuff and intruding as dikes along the fractured anticline crest.	
171	Purewa Estuary	Ōrākei	С	This is the best example of a small, drowned stream valley estuary on the Auckland isthmus, where near pristine estuaries are rare. The mud and mangrove-filled estuary remains unmodified upstream of Meadowbank Railway Station. The estuary played an important role in the geological history of Ōrākei Basin.	c, e, g, i,
172	Rakino greywacke and basal Waitematā section	Rakino Island, Hauraki Gulf	D	The coast between Orange Bay and the north end of Māori Garden Bay contains good examples of a chert and grey argillite sequence; a well-rounded argillite boulder beach; and basal Waitematā sequence sediments.	a, c, l
173	Rakitu Island Black and White Rock	Rakitu Island (Arid Island), Hauraki Gulf	Е	A basalt lava flow within a rhyolitic sequence is located on a large intertidal rock off Ora Point. This is the only known basalt in the Great Barrier region.	a, b, d, I
174	Rakitu Island obsidian breccia	Rakitu Island (Arid Island), Hauraki Gulf	E	Pyroclastic rhyolite breccia with blocks of brown and grey obsidian occurs in the lower part of Ora Point, Rakitu Island. This is the only coastal occurrence of obsidian in the Great	a, b, d, I

				Barrier region.	
175	Rangiriri Spit (Pollock Spit)	Pollok	С	Rangiriri Spit is an excellent unmodified example of an active shell spit, located at the entrance to a small inlet on the on the western side of Manukau Harbour.	a, c, e, g, h, i
176	Rangitoto	Rangitoto Island, Hauraki Gulf	V	Rangitoto Island perhaps the most iconic landform in the Auckland region. It is the youngest and largest volcano in the Auckland volcanic field and has an uneroded lava surface formed from numerous a lava flows covering approximately 23km². The summit consists of several scoria mounds, with a main central scoria cone containing a 60m deep crater. Recent research has confirmed that Rangitoto volcano is the result of two separate eruptions, which may have occurred as long as several decades apart. A cone to the north of the main summit cone was formed during the earlier eruption. Rangitoto Island also has smaller lava features of geological significance, including several lava caves and examples of a lava flow surfaces and levees. Near Rangitoto wharf is the only known example in New Zealand of pillow lava lobes that flowed into the sea and were rapidly cooled in the intertidal zone.	a, b, c, d, e, f, g, h, i, k, l
177	Raventhorpe tuff ring	Bombay	A	The reasonably well-preserved Raventhorpe tuff ring is the largest of five tuff rings in this part of the South Auckland volcanic field. Lavas from the	a, c, d, e, i

_	1	1		T	1
				Bombay cones are	
				thought to have partially	
				filled the Raventhorpe tuff	
				ring forming a lava lake	
				up to 3m thick, before	
				overflowing northward via	
				a breach in the tuff ring	
				wall.	
178	Red Beach	Red Beach	E		0 0 0 1

				greywacke with	
				well-exposed faults and	
				folds of varying kinds.	
183	Scotlands lava	Onehunga	F	This lava cave is a	a, c, d, i
100	cave	Ononunga	Ι'	simple straight tube,	a, o, u, i
	cave				
				about 200m long, which	
				varies in width from 10m	
				to 2m and is 2-3m in	
				height. In the northern	
				portion, roof sags form	
				two pillars in the middle	
				of the cave.	
184	Shackleton	Mount Eden	F	A good example of a lava	a, c, d, i
	Road caves -			cave, about 90m in	
	Carrads lava			length. The cave is up to	
	cave			6m wide and 2-3m high	
				and is accessed from a	
				large entrance on the	
				southern side of	
				Shackleton Road. The	
ĺ	i	i		JIIAUNIEIUII RUAU. IIIE	1

				negotiable part of the cave terminates in at a rock fill, about 20m beyond which there is a continuation of the same lava tube. This is the larger of two subparallel caves (see also Easties lava cave), and it was modified for use as an air raid shelter during World War II.	
185	Shackleton Road caves - Easties lava cave	Mount Eden	F	This 70m long lava cave is the smaller of two subparallel caves (see also Carrads lava cave). The cave consists of two main sections separated by rockfill, a sewer pipe and debris. Near the entrance, the passage is 10m wide and 3m high, while the second part of the cave is 4m wide, 2-3m high and 40m long.	a, c, d, i
186	Shoal Bay chenier shell spits	Shoal Bay	С	Several narrow shell spits on west and north sides of Shoal Bay provide good examples of shell cheniers accreted parallel to the shore and now separated from it by low mangrove forest.	a, c, e, g, h, i, l
187	Snells-Algies point siliceous mudstone	Kawau Bay	D	The freshest and most extensive exposure of Cretaceous siliceous mudstone (Whangai facies) in the Auckland Region is exposed in Snells-Algies point cliffs and shore platform.	a, c, g, i, I
188	South Kaipara dune lakes	Woodhill Forest	С	Lake Kereta and the associated lakes to north and south provide excellent examples of elongate freshwater lakes between dunes of different ages.	a, c, e, f, h, i
189	South Pakatoa shore platform	Pakatoa Island	В	This is a good representative example of a high tidal shore platform eroded into thin-bedded argillite and greywacke. An incipient	a, c, l

	1				
				sea stack has almost	
				formed by erosion on the	
				end of the point.	
190	South	Rotoroa	В	Located in coastal cliffs,	a, c, i, l

195	St Leonards Beach, Takapuna, flysch and slump unit	Takapuna	D	swampy floor now occupied by Glover Park. The northern crater rim has been eroded to form a sea cliff, in which tuff from the volcano is visible.  An intertidal reef and section of cliffs provides a well-exposed outcrop and well studied sequence of typical Waitemata Group deep water flysch, with a wide range of sedimentary structures, including a parcel of	a, c, g, l
196	Stewarts lava cave (Mortimer's Cave)	Mount Eden	F	intensely folded beds.  This is an excellent example of a relatively complex lava cave. The two-part lava cave is about 180m long, with three levels, and a cave-in-cave feature. It also contains typical lava cave wall features such as lava rolls and drip formations.	a, c, d, i
197	Tāhuna Tōrea cuspate foreland and shell spit	Glendowie	С	Tāhuna Tōrea is the largest, most accessible and outstanding example of a cuspate foreland formed from two sand/shell spits in the Auckland region. A low triangular shell and sand spit encloses salt marsh and ponds at the western end, with a narrow shell spit extending a further 1km out across the Tamaki Estuary. The distal shell spit shifts in response to wind, wave and tidal action.	a, b, e, f, g, i, l
198	Takanini pumicite	Takanini	E	An excellent example of a primary tephra deposit from Taupo Volcanic Zone is exposed in the eroded face of a low coastal cliff at Pahurehure Inlet. The non-welded ignimbrite was not extensively	a, c, g, h, i

	1	Ι	1		
				modified by estuarine	
				processes during	
400	T.	<b>-</b> .	_	deposition.	
199	Takapuna	Takapuna	E	The most silica-poor	a, b
	chabazite			reported, sedimentary	
				chabazite occurs in thin	
				tuff beds composed	
				dominantly of chabazite,	
				with minor amounts of	
				andesine, quartz and	
				chlorite	
200	Takapuna	Hauraki	В	This site encompasses	a, b, d,
	Reef fossil			two contiguous areas of	e, f, g, i,
	forest and cliff			lava flows from Pupuke	I
	lava exposures			volcano in which there	
				are well preserved lava	
				moulds and casts of	
				trees, many of which	
				appear to have been in	
				growth position at the	
				time of the eruption.	
				Takapuna Reef Fossil	
				Forest is one of the best	
				examples in the world of	
				a lava- preserved fossil	
				forest. There is evidence	
				that multiple lava flows	
				passed through a	
				standing forest here. In	
				the cliffs to the north,	
				there are tree moulds up	
				to 2m in diameter as well	
				as good examples of gas	
				blisters and segregation	
				vesicles in the lava.	
201	Tamaki	Saint Johns	Е	This cutting is the only	a, c, g, i
201	Campus basalt	Jank Johns	-	exposure and remaining	a, c, g, i
	Campus basan			evidence of lava spilling	
				northwards over ridge	
				from Mt Wellington	
				towards Glen Innes.

	estuary			exposures in the	h, I, I
	rhyolitic			Auckland region of	
	ignimbrite			rhyolitic ignimbrite flow	
				deposits, showing that	
				Auckland is within the	
				range of superheated	
				pyroclastic flows erupted	
				from the centre of the	
				North Island. The	

	ı	1	1	T	1
				southernmost part of the site includes a section through fossil forest, peat deposited during three climate cycles, ignimbrite with branch moulds, a small incised valley and further rhyolitic tephra. The deposits here are 3m thick and bury charred vegetation.	
203	Tank Farm volcano	Shoal Bay	V	Tank Farm volcano is a simple but well-preserved explosion crater and tuff ring (about 800m diameter), breached by the sea to the southeast and partially filled with intertidal mud. No lava or scoria appears to have been erupted.	a, c, d, e, g, h, i, l
204	Tāpapakanga Stream terraces	Orere Point	A	The lower reaches of the Tāpapakanga Stream valley contain excellent examples of terraces cut into alluvial gravel and sediment. Welldeveloped alluvial stream terraces are rare in the Auckland region.	a, b, e, g, h, l
205	Tapora dunes	Tapora	A	This area consists of a large Holocene sand dune system, now mostly stabilised beneath pasture. Dune patterns are relatively complex due to the position of the dune field opposite the Kaipara Harbour entrance. The sand topography has produced a varied coastline including sand islands and sheltered inlets such as Gum Store Creek.	a, c, e, h
206	Tauhoa River multi- coloured mudstone	Wharehine	Е	An easily accessible foreshore exposure of the clay-rich multicoloured Paleocene mudstones that helped lubricate the sliding of Northland allochthon.	a, b, g

207	Tauhoa Road serpentinite	Mangakura	Е	This roadside exposure of a serpentinite lense entrained by Northland allochthon is the only exposure of serpentinite blocks remaining in the Auckland Region after others have been quarried away completely.	a, b, g
208	Tāwharanui Beach and dunes	Tāwharanui Peninsula	С	The beach and dunes on the northern side of Tāwharanui Peninsula are some of the least modified and best-protected examples remaining on the east coast of the region. Elsewhere, beaches and dunes are frequently threatened by development or coastal structures. A tsunami deposited sand sheet occurs among the dunes.	a, c, e, g, h, i, l
209	Tāwharanui fossiliferous Jurassic section, Anchor Bay	Anchor Bay	В	The shore platform on the northern side of Tāwharanui Peninsula features an exposure of basement fossils in Jurassic rocks. This is a very rare occurrence in Northland.	a, b, g, I
210	Taylor Hill scoria cone (Taurere)	Glendowie	V	Taylor Hill volcano produced a simple tuff crater about 900m in diameter, with several small scoria cones around at least five vents. Two small lava flows moved down valleys to the east (where there is now a freshwater spring) and northwest. Much of the central scoria cone cluster is within Taylors Hill Reserve.	a, c, d, e, f, g, h, i
211	Te Atatu fossil forest	Te Atatu	Е	Remnants of forest vegetation of Pleistocene age are exposed at intertidal levels near the northern end (eastern side) of Te Atatu peninsula.	a, c, g, h, i

212	Te Henga - Erangi Pt. Kauwahaia Island and sea caves	Waitākere Bay	A	Erangi Point and Kauwahaia Island provide an excellent and scenic example of the exposed rocky coastline and islands of Auckland's west coast. Erangi Point features two of the best examples of sea caves that pass right through a point, anywhere in New Zealand.	b, c, g, f,
213	Te Henga/ Bethells dune dammed swamp	Muriwai	С	This is the largest wetland remaining on the Auckland mainland and is a landform of scientific, educational and scenic importance. Holocene sand dunes dammed the Waitakere River to form the wetland, which extends c.5km inland. Beneath the wetland, there are sandy cockle-shell bearing sediments that accumulated here when this was a tidal estuary in the middle Holocene.	a, c, e, f, g, h, i, l
214	Te Komoki exfoliation dome (Jackie Hill)	Huia	В	The weathered exfoliation dome of Te Komoki is a prominent landform of primarily scenic value on the south side of Little Huia Bay.	c, e, f, I
215	Te Muri Beach and Estuary, Mahurangi	Puhoi	С	One of the least modified examples of a small estuary remaining on the east coast of the region. Partially enclosed behind a Holocene beach deposit (Te Muri Beach).	c, g, i, l
216	Te Muri salt marsh and shell spits	Wairoa Bay	С	One of best examples of salt marsh and shell spit in the Auckland region.	c, g, I, I
217	Te Toro Quaternary sands	Pollok	E	This site contains an exposure of sands which predates the eruptions of Taranaki and Taupo volcanic centres and the subsequent current transport of black sands northwards along the	a, b, g

218	The Arches, Tiritiri Matangi Island	Tiritiri Matangi Island, Hauraki Gulf	В	coast. The base of the section is unconformable upon much older weathered Waitematā Group sediments.  A spectacular series of four, 4-8m high arches is eroded through greywacke cliffs midway along the east coast of Tiritiri Island, 50m north of Fisherman Bay.	b, e, I
219	The Gap volcaniclastic conglomerate and Taitomo Cave, South Piha	Piha	A C - Blowhole	This site, including Nun Rock, Taitomo Island, The Gap and nearby cliffs forms the best example of contemporary sea arches and blowholes on the west coast of Northland and Auckland. It is also the best exposure of high energy, marine coarse volcaniclastic facies in the Waitākere Ranges. A marine volcaniclastic conglomerate sequence contains features such as lenses, wedges, low angle cross-beds and dikes. Two tunnels are cut through the breccia, the Kaiwhare Blowhole along a joint plane, and Taitomo Island tunnel along a dike	a, b, c, e, f, g, I
220	The Tor - Torbay stack	Torbay	В	'The Tor' at Torbay is a well formed sea stack of geological and scenic significance.	c, e, f, I
221	The Watchman dacite dome and crater	Karekare	A	At the foot of the northern cliffs of The Watchman and in cliffs behind UnionBay, are the only flow-banded dacite in the Waitakere Ranges (a good example of flow structures in volcanic rocks) and a well-exposed crater from an initial explosive eruption. The large, multiple crater is filled by a thick pile of rubbly	a, b, c, e, f, i, l

				breccia (andesite and	
				dacite) and several	
				extrusional tongues of	
				folded, flow-banded dacite	
				(forming The Watchman).	
222	Three Kings	Mount Roskill	V	Three Kings volcano was	a, c, d,
	volcano (Te			formerly the most	e, f, g, h
	Tatua A			complex centre in the	
	Riukiuta)			Auckland volcanic field,	
				but has now mostly been	
				quarried away. The initial	
				explosive phases of the	
				eruption produced a large	
				tuff ring, 1km in diameter,	
				and spread substantial	
				lapilli and ash deposits	
				more than 2km to the	
				east and north. Five	
				moderately sized scoria	
				cones and many other	
				smaller cones	
				surrounded some 20	
				discernible vents. Of the	
				scoria cones, only Big	
				King has been partly	
				protected by its reserve	
				status. Lava flows spread	
				around the crater, and	
				northwestwards to the	
				vicinity of Western	
				Springs. A quarry face	
				exposes tuff on the eastern side of Mt	
				Eden Rd.	
223	Ti Point basalt	Ti Point	Α	The type locality for Ti	a, b, e, I
223	TTT OITE Dasait	111 01111		Point basalt, which	a, b, c, i
				erupted in the mid-late	
				Miocene. The exposed	
				eastern coast of Ti Point	
				contains scenic cliffs	
				eroded from this rock.	
224	Tiritiri	Tiritiri Matangi	D	An excellent example of	a, c, e, i,
	Matangilsland	Island, Hauraki		a well- developed shore	1
	shore platform	Gulf		platform cut in greywacke	
				surrounds most of Tiritiri	
				Matangi.	
225	Toroanui and	Waimauku	С	Two prominent falls within	b, e
	Okiritoto Falls			300m of each other on	
				the Okiritoto Stream flow	
				over near-horizontal early	
				Miocene sedimentary	
				strata. Significant	
				waterfalls are rare in this	
				area.	

226	Waiatarua Swamp	Remuera	С	One of best examples in Auckland of a freshwater lake formed by the damming of a valley by a lava flow (from Mt Wellington). Lake sediments contain tephras from Mayor Island and central North Island volcanoes and a pollen record of vegetation changes in Auckland.	b, e, g, h
227	Waiheke Island, Blackpool spilite pillow lava	Huruhi Bay, Waiheke Island	E	The Blackpool spilite is a 3m dark green spilitic pillow lava with calcite interstices bearing pyrite. It is of Triassic age and a good example of basement volcanics in the region.	a, c, d, l
228	Waiheke Island, Double "U"Bay shallow marine Miocene fossils	Waiheke Island, Hauraki Gulf	E	This site contains rich shallow water macrofauna in a deepening sequence and is type locality of a number of fossil molluscs. The cliff and intertidal exposure is one of three rich Miocene fossil localities on Waiheke Island.	a, b, g, h, i, I
229	Waiheke Island, Fossil Bay fossils and rock sequence	Waiheke Island, Hauraki Gulf	E	This site contains well-exposed shallow water fossiliferous sediments overlying bored and eroded basement rocks and is the type locality of many unusual fossil species. The sediments contain a rich shallow macrofauna including in-situ reef corals.	a, b, c, h, l
230	Waiheke Island, Island Bay submarine volcanics	Waiheke Island, Hauraki Gulf	D	This site contains an easily accessible, well-exposed coastal section through fresh Waipapa greywacke sequences, containing pillow lavas and chert. It differs from most of the greywacke sequences on Waiheke	a, b, d, g, l

	1	Т	ı	T	
				Island, which are	
				dominantly thick	
				sandstone.	
231	Waiheke	Church Bay,	С	This is the best example	c, e, g, i,

				volcanic sediment gravity	
	foreshore tuff with sedimentary bombs			tuff deposits are cut into the outer slopes of Waitomokia volcano in the foreshore near Oruarangi Creek. The tuff contains bombs including 'samples' of older sedimentary rocks torn from beneath the Manukau lowlands by the erupting volcano.  An easily accessible	a, c, c

				interbedded with flysch.	
243	Watchman Islet	Watchman Island	В	Watchman Islet is a small top hat islet eroded from a drowned Waitemata Sandstone ridge. The shore platform is more resistant to erosion than the islet. The islet is a small but well-known landscape feature of the Waitemata Harbour.	c, e, f, i,
244	Wēiti River shell spits	Karepiro Bay	C A1	Some of the best examples in New Zealand of actively forming intertidal shell spits. These have been used to derive a record of past sea level change. (The 'A1' identification applies to the motor camp at the end of Duck Creek Road which is a more modified but still recognisable part of the feature).	a, b, e, g, h, i, l
245	Wenderholm Sand Barrier & Puhoi Estuary	Puhoi	С	Puhoi Estuary is an excellent example of a drowned river valley contained by a bay-mouth sandspit (Wenderholm Sand Barrier). Former beach ridges emplaced prior to the formation of the sandspit are visible on a flat to the south side of the estuary.	a, c, e, f, g, h, i, l
246	Wesley Bay-Cape Horn section	Waikowhai Bay	D	This site consists of shore platform and exposed cliffs along the coast from the east end of Wesley Bay to 200 m west of Cape Horn. The area contains excellent exposures of a wide range of features that characterise this part of the Waitemata Basin on the lower flanks of the Waitākere Volcano. It is also the type locality for a few microfossils and macrofossils.	a, c, e,i g
247	Western Springs and	Western Springs	В	Western Springs contains exposures of the natural	a, c, d, e, g, i

	lava outcrops			edge of Auckland's longest lava flow, with excellent examples of columnar jointing, vesicles and small lava tongues, some with pahoehoe surfaces. Natural springs flow from cracks in the lava flow. These features were much more common prior to the urban development of Auckland.	
248	Whangaparaoa Peninsula Waitemata Group deformation	Army Bay	D	The cliffs and intertidal platforms of the rocky coastline at the end of the Whangaparaoa Peninsula are made up of sedimentary Waitemata Group rocks that were deposited during the Miocene. Together the cliffs and shore platform in the northern part of the area are one of several sites on the Whangaparaoa Peninsula that display a regionally important three dimensional exposure of folds and faults in these rocks. The shore platform is extensive and is considered to be a landform of regional geological importance. Whangaparaoa Head has two significant geological features, a vertically tilted strata and an area of Parnell Grit with huge blocks of displaced basalt forming the point east of Army Bay.	a, c, e, g, I
249	Whatipu Caves and pyroclastic breccia dikes	Huia	F	At back of the Whatipu coastal flat is a group of 4-5 caves, eroded by the sea along the joints and old volcanic necks and pipes in Waitakere Group volcanic breccias. The caves were abandoned by the sea due to the aggrading coastline. The site also includes the	a, b, e, f, g, i, l

				best- exposed group of pyroclastic dikes of volcanic origin in northern	
250	Whatipu coastal flats	Huia	A	New Zealand.  The Whatipu coastal flat is an extensive and impressive wilderness area of sandf lats and low dunes, most of which were deposited between 1900-1930. A shifting network of wetlands occupies poorly drained areas among the dunes The site is the best example of rapid recent sand aggradation in New Zealand. Significant coastal erosion has affected the area in recent years.	a, b, e, f, g, i, l
251	White Bluff structures	Hillsborough	D	One of the best exposures of complexly deformed Waitemata Group rocks, showing faults and folds in coastal cliffs and on the foreshore.	a, c, e, g
252	Whites Beach crater	Anawhata	D	One of the three best exposed craters in Waitakere Ranges, Whites Beach crater is a 1km wide vent filled with pahoehoe flows, autoclastic breccia, a small pillow lava flow, and intruded by andesite.	a, c, e, g, I
253	Wiri lava cave	Wiri	F	Wiri lava cave is the best example of a lava cave in New Zealand and at 290m, is also the longest known lava cave in the country. The cave lies within the northeast slopes of Manurewa, a small volcanic cone (now mostly quarried away). The cave is a linear tube that has conveyed molten lava through the lower slopes of the scoria cones and out into the lava flow field. The	a, b, c, d, l, k

				passage cross- sections vary in shape to include circular, semi- circular, gothic, triangular and irregular, and terraces, benches, and kerbs modify these shapes. The floor displays areas of smooth pahoehoe, and clinkered a surfaces and the main gutter shows festooning of the surface. Small teat stalactites are common and refluxing of the walls has caused minor flowstone to develop in places.	
254	Wonga Wonga Bay submarine slide	Huia	E	A unique example, probably in New Zealand, of a section of dike caught up in a submarine slide deposit is visible in the cliffs of Wonga Wonga Bay. A 4m x 1m section of andesite dike is enclosed in chaotic deposits of a submarine slide that slid down the slopes of the early Miocene Waitākere Volcano.	a, b, g, I
255	Ascot – Mitchelson Roads lava caves	Remuera	F	A small group of lava caves identified by ground penetrating radar, without access from the surface.	a, d, i
