

## Schedule 1 Wetland Management Areas Schedule

All provisions in this schedule are regional plan [rcp/rp].

### Introduction

Wetlands have been identified as nationally threatened ecosystems that have been reduced significantly from their former extent. Wetlands are characterised as being permanently or intermittently wet areas of shallow water, with land/water margins that support a natural ecosystem of predominantly indigenous plants and animals that are adapted to wet conditions.

The provisions for wetlands listed in this schedule are in D8 Wetland Management Areas Overlay. The areas are listed below and/or identified on the planning maps under the Wetland Management Areas Overlay.

This schedule has been compiled from existing information on significant freshwater wetlands in Auckland identified in publicly available documents and existing databases. These information sources include:

- Auckland Department of Conservation Management Strategy;
- Department of Conservation Sites of Special Wildlife Interest Database (sites of outstanding, high, moderate-high or moderate ranking);
- WERI (Wetlands of Ecological and Representative Importance) database;
- Regional and District Plans, including Appendix B of the Auckland Regional Policy Statement 1999;
- Protected Natural Area Programme survey reports;
- Local reports such as Waiheke Island Sites of Significance.

The schedule identification numbers are the same numbers used in Auckland Council's Natural Heritage Information Database, to enable easy cross-referencing where further information is required for a wetland.

The schedule reflects the range of wetland types in Auckland, including raupo, cabbage tree, flax, and rush and sedge swamps, kahikatea swamp forest, wetlands associated with lakes, streams and volcanic systems, and wetlands associated with freshwater-estuarine ecological sequences. The schedule contains a number of wetlands that are associated with natural lakes. The wetlands associated with these lakes have been identified separately for their ecological and wildlife values.

The schedule also contains freshwater wetlands that are associated with significant estuarine ecosystems such as the Kaipara, Waitemata and Manukau Harbours.
